Cases with missing information not included.

[1] Individuals were asked two separate questions regarding whether anyone in the household identified as Latino, and then were asked to identify all races in the household. It is possible that due to how these questions were phrase the race percentages represented in this table could vary slightly because it could reflect one individual or multiple in a household.

[2] Of the households that provided household race information, 53% identified as White Hispanic, and 11% identified as White non-Hispanic.
