Appendix P.1  
**Responses to Comments on the Draft EIR**

---

## **APPENDIX P1 RESPONSE TO COMMENTS ON THE DRAFT EIR**

The Draft Environmental Impact Report (Draft EIR) for San Diego Forward: The 2021 Regional Plan (the Regional Plan) was distributed for public review on August 27, 2021, for a 45-day public review period that ended October 11, 2021. The Draft EIR and all appendices were available for review online at [www.sdforward.com](http://www.sdforward.com); at San Diego Association of Governments (SANDAG) offices located at 401 B Street, Suite 800, San Diego, California 92101; and at the San Diego Central Library located at 330 Park Boulevard, San Diego, California 92101. The Central Library facilitates inter-library transfers upon request by a member of the public in order to provide access at local libraries. On a case-by-case basis, the San Diego Central Library can also digitize documents and transfer them to other libraries. No such requests were made of the Central Library with respect to the Draft EIR, nor were any requests made of SANDAG with respect to providing access to the Draft EIR during the public comment period.

A total of 51 comment letters, web comments, or other written documents such as emails (hereinafter collectively referred to as “comment letters”) were received before the close of the public review period. Table P-1 provides a list of all comments received, including the name of the public agency, organization, or individual that submitted the letter and the date of the letter. Each comment letter also has been assigned an identification number in Table P-1.

In this appendix, each comment letter is reproduced in its entirety and is aligned side-by-side with the response(s) to the letter. Where commenters provided multiple comments, each comment is identified with a bracket and an identifying number in the margin of the comment letter. All comment letters received on the Draft EIR were evaluated for significant environmental issues, and written responses to comments on environmental issues were prepared. In addition to comments related to environmental issues, several of the comment letters submitted on the Draft EIR also include individual comments on the content of the Plan itself that are not related to the adequacy of the Draft EIR. In those cases, this document identifies the specific reference number assigned to that comment in the matrix of Regional Plan comments and responses where the response can be found (e.g., “Please see the response to Plan comment 901”). For ease of reference the matrix of responses to comments on the Regional Plan is included as Appendix P.2 to the Final EIR.

### **MASTER RESPONSES**

SANDAG has prepared the following two Master Responses dealing with common themes raised in the comment letters:

- Master Response 1: Draft EIR Evaluates a Reasonable Range of Alternatives
- Master Response 2: Mitigation Measures that Other Agencies “Can and Should” Implement

The text of each Master Response is provided below. Individual responses reference the Master Response number when all or part of a response is included within a Master Response (e.g., “Please see Master Response 1”).

**Table P1-1**  
**List of Comment Letters on the Draft EIR for the Draft 2021 Regional Plan**

Identification Number	Public Agency, Organization, or Individual	Date of Letter
1	Office of Joel Anderson	10/11/2021
2	Dr. Tim Bilash	10/11/2021

\*Original comment submitted by Mr. Marple was inadvertently left blank. SANDAG subsequently contacted Mr. Marple and received the full comment letter on November 11, 2021.

## **MASTER RESPONSE 1: DRAFT EIR EVALUATES A REASONABLE RANGE OF ALTERNATIVES**

### **INTRODUCTION**

Comments assert that the range of alternatives evaluated in the EIR does not meet the California Environmental Quality Act's (CEQA's) requirement to evaluate a reasonable range of potentially feasible alternatives that would avoid or substantially reduce the project's significant environmental impacts. Comments also assert that all alternatives evaluated in the Draft EIR are infeasible for financial and other reasons because they accelerate all transit and alternative transportation projects to the first 10 years of the Plan with insufficient funding. Comments also state that the Draft EIR should have considered a number of additional alternatives, including:

- A feasible alternative that would substantially reduce vehicle trips and vehicle miles traveled (VMT).
- Save Our Forests and Ranchlands' (SOFAR's) and Cleveland National Forest Foundation's (CNFF's) Climate, Housing, Transit Alternative.
- An alternative that substantially lessens significant impacts on biological resources.
- An alternative with VMT reduction features such as subsidized transit fares and microtransit.
- Southwest Wetlands Interpretive Association's (SWIA's) alternative that prioritizes transit over managed lanes, institutes a much more rigorous monitoring system, adds a regional habitat conservation fund, and ensures enforcement of Plan compliance.
- An alternative that reduces greenhouse gas (GHG) emissions consistent with State goals or achieves net zero emissions.

As explained below, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives and that are potentially feasible. The discussion also explains why the Draft EIR was not required to consider the alternatives listed above.

## **RANGE OF ALTERNATIVES**

As discussed in Chapter 6, *Alternatives Analysis*, of the Draft EIR, nine potential alternatives were initially considered for further detailed analysis. Of these, three alternatives to the proposed Plan were evaluated in detail. In addition to the no project alternative, the alternatives evaluated in detail included an alternative that consists of the 2019 Federal Regional Transportation Plan (RTP) transportation network and land use pattern with new value pricing and user fees policies; and an alternative that consists of the proposed Plan transportation network, a land use pattern that restricts regional growth to mobility hubs, and includes more progressive value pricing and user fees policies than what is included in the proposed Plan. The three alternatives evaluated in detail are described in Draft EIR Section 6.2 (pages 6-2 through 6-8).

They are as follows:

- Alternative 1: No Project
- Alternative 2: 2019 Transportation Network with New Value Pricing and User Fee Policies
- Alternative 3: All Growth in Mobility Hubs and More Progressive Value Pricing and User Fee Policies

Draft EIR Section 6.5 (pages 6-9 to 6-16) explains why other alternatives suggested by the public during EIR scoping were not evaluated in detail, either because they did not meet the project objectives, they were potentially infeasible, or they were similar to the alternatives already evaluated in detail.

## **ALTERNATIVES RESPOND TO PUBLIC CONCERNS EXPRESSED DURING SCOPING**

As the Draft EIR explains (p. 6-1), SANDAG listened to public input expressed during the EIR scoping process, and used this input to develop the reasonable range of alternatives. Public input requested alternatives that reduce GHG emissions, air quality impacts, and VMT. The alternatives selected for detailed consideration incorporate many of the major transportation investments and policy options that commenters suggested, such as providing more compact land use patterns, substantially lowering transit fares, and substantially increasing the cost of driving.

Notably, alternatives do not need to be environmentally superior in all respects to the proposed Plan. Courts have noted that for complex projects with a wide scope, “it is practically impossible to imagine an alternative that would provide substantial environmental advantages in all respects” (*Sierra Club v. City of Orange* (2008) 163 Cal. App. 4th 523).

## **FEASIBILITY OF ALTERNATIVES EVALUATED IN DETAIL**

The feasibility of alternatives is considered twice in the CEQA process. At the outset, the Draft EIR considered a reasonable range of alternatives that are “potentially feasible” (CEQA Guidelines Section 15126.6(a)). At the conclusion of the EIR process, the decision-makers (in this case the SANDAG Board of Directors) makes final determinations as to the feasibility of alternatives, considering information in the Draft EIR, additional information in the Final EIR and elsewhere in the administrative record, and policy factors. (See Guidelines Section 15091(a)(3).)

This final determination of feasibility may include policy considerations. Where the feasibility of alternatives evaluated in the EIR is dependent upon changes in existing laws, regulations, or funding patterns for transportation improvements, the SANDAG Board must consider the likelihood that such changes will occur within the time frame for implementation of relevant elements of the proposed Plan.

## ALTERNATIVES SUGGESTED BY COMMENTERS

**General Principles.** Alternatives suggested by commenters include, but are not limited to:

- A feasible alternative that would substantially reduce vehicle trips and VMT.
- SOFAR’s and CNFF’s Climate, Housing, Transit Alternative.
- An alternative that substantially lessens significant impacts on biological resources.
- An alternative with VMT reduction features such as subsidized transit fares and microtransit.
- SWIA’s alternative that prioritizes transit over managed lanes, institutes a much more rigorous monitoring system, adds a regional habitat conservation fund, and ensures enforcement of Plan compliance.
- An alternative that reduces GHG emissions consistent with State goals or achieves net zero emissions.

Some of the alternatives suggested by commenters are variations of alternatives that the Draft EIR evaluated in detail. CEQA does not require an EIR to consider multiple variations on the alternatives analyzed in a Draft EIR, or to consider additional potential alternatives that are not “considerably different” than those already evaluated in the EIR. Other alternatives suggested by commenters are alternatives to one component of the proposed Plan, e.g., transit-emphasis alternatives, rather than comprehensive alternatives addressing the Sustainable Communities Strategy (SCS) and highway network improvements as well as transit. To be legally adequate under federal transportation law and Senate Bill (SB) 375, the proposed Plan is required to address transit projects, highway projects, and sustainable land use patterns; all three components are integrated into the basic project objectives described in EIR Section 2.4 (page 2-6). An EIR must discuss alternatives to a project in its entirety but is not required to discuss alternatives to each particular component of a project. Also, an EIR need not evaluate in detail alternatives that would not substantially lessen the proposed project’s significant environmental impacts.

The potential alternatives proposed for evaluation in comments on the Draft EIR either are not considerably different than those evaluated in the Draft EIR, do not address all project components, do not meet most basic project objectives, do not substantially reduce the proposed Plan’s significant impacts, and/or are infeasible. Selected individual potential alternatives are discussed below

### Alternative that Substantially Reduces VMT Below Existing Levels

Commenters suggest the Draft EIR should have evaluated a project alternative that substantially reduces VMT below existing levels. Alternative 3 consists of the proposed Plan transportation network, a land use pattern that restricts all regional growth to the mobility hubs, and more progressive value pricing and user fees policies than what is included in the proposed Plan; it achieves lower total VMT than the proposed Plan, though still above existing levels. An alternative including *further* VMT-reduction measures to reduce total VMT below existing levels is not currently feasible for several reasons, including:

- *Further* substantial changes needed in State and federal policy and legislation. These would include still *further* changes in State road pricing policy, land use policies, and parking policies—beyond those included in the proposed Plan and Alternatives 2 and 3—that are not reasonably foreseeable.
- Lack of funding for *further and accelerated* major transit service improvements (recognizing that, as discussed in additional detail in subsequent discussion, increased transit investments alone cannot achieve substantial VMT reductions). The request to switch funding from roadways to transit fails to recognize that there are regulatory constraints on directing roadway funds to transit, and on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or

collected on an annual basis and much funding cannot be advanced. There are also constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network.

- Severe economic and social impacts caused by substantial increases in driving costs. Alternative 3 already raises the fees compared to the proposed Plan. From a consumer standpoint, increases in fuel or vehicle user costs can be a trade-off with discretionary expendable income for purchasing food, clothing, and other personal items, especially for lower income households. A significant increase in fuel cost or vehicle user fees would also result in lower spending in other areas of the economy, and economic disruption would occur in adjusting to higher fuel or vehicle registration prices.
- Lack of authority for SANDAG and local governments to implement such *further* measures. For example, SANDAG has no authority to increase State road pricing, or require local governments to implement land use or parking policies.
- SANDAG's inability to control the total regional population growth that is the main cause of total VMT increases. As SANDAG modeling indicates, population growth is the main driver of future VMT growth. Alternative 3 would result in VMT per capita of 15.6 (home-based) compared to the proposed Plan VMT per capita of 16.03 in 2050. Alternative 3 would result in a total VMT increase of 2,756,715 miles per day in year 2050, which is approximately 39 percent lower than the proposed Plan (total VMT increase of 4,519,230 miles per day in year 2050). Population growth under the proposed Plan, however, increases by 13 percent. Even with decreases in driving per capita, under Alternative 3 total VMT still increases by 3.2 percent compared to 2016 because population growth outpaces driving reductions. As courts have noted, "CEQA is not intended as a population control measure" (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 220).

#### **SOFAR's and CNFF's Climate, Housing, Transit Alternative**

This alternative was proposed in scoping, but considered and rejected from detailed consideration in the Draft EIR; in response to a later Draft EIR comment letter reiterating it should have been included, further explanations for rejection are included in the Final EIR's responses to SOFAR's and CNFF's Draft EIR comment letter.

As explained in the Draft EIR (pp. 6-14 and 6-15), some specific feasible components of this alternative are already included in the proposed Plan and/or Alternative 3. These include comprehensive transit investments in: high-speed commuter rail; tunneling and double-tracking where feasible; rail line straightening, higher-speed and higher-frequency transit with separate rights-of-way, fewer stops, grade separation, and new high-speed lines; a Central Mobility Hub that connects to the airport as well as to transit elements offering further interconnectivity throughout the San Diego region; and expanded local transit and shared mobility. The proposed Plan and Alternative 3 also include an intensified, compact land use, as well as expanded active transportation infrastructure improvements.

This alternative includes the following major components that were not included in the proposed Plan or EIR alternatives, for the reasons discussed below:

- A "transit first" plan that substantially reduces VMT and provides substantive benefits in transit/bike/walk mode share and advancing all transit projects to the first 10 years of the Plan.
- Prioritize transit/active transit over managed lanes.
- Accelerate implementation of the Los Angeles–San Diego–San Luis Obispo Rail Corridor (LOSSAN) double-track rail project and Miramar tunnel and rail line straightening project.

With regards to accelerating transit to the first 10 years of the Plan, there are regulatory constraints on redirecting roadway funds to transit, and on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced. There are also constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network. For instance, federal formula funds such as Federal Transit Administration (FTA) Section 5307 or Regional Surface Transportation Program (RSTP), are apportioned annually; SANDAG can make assumptions about how much can be anticipated in the future based on historical data but cannot advance any project(s) that need the funding in years prior to apportionment. Other funds that SANDAG cannot advance and re-direct to transit include funds going to other agencies, such as the State Highway and Protection Program (SHOPP) funds, which are managed by the California Transportation Commission and are used for safety, operations, and rehabilitation projects on the state highway system by the California Department of Transportation (Caltrans).

With regards to prioritizing transit over managed lanes and accelerated implementation of rail projects, SANDAG conducted a modeling analysis to compare the proposed Plan network with managed lanes investments to the Climate, Housing, Transit Alternative. The model run assumed no new managed lanes (only transit lanes), and accelerated the Miramar Tunnel rail line and straightening project to 2035. As discussed in detail in responses to SOFAR's and CNFF's Draft EIR comment letter, converting managed lanes to transit lanes and accelerating the Miramar Tunnel rail line results in similar VMT and GHG impacts as the proposed Plan, and does not substantially reduce them.

In summary, the Climate, Housing, Transit alternative was not selected for detailed consideration in the EIR because:

- Some specific feasible components of this alternative are already included in the proposed Plan and/or Alternative 3.
- It is infeasible to accelerate transit to the first 10 years of the Plan and redirect all roadway funding to transit.
- The Climate, Housing, Transit alternative results in similar VMT and GHG impacts as the proposed Plan, and does not substantially reduce them.
- It is infeasible to achieve the GHG and VMT reduction goals proposed in the Climate, Housing Transit alternative; see Draft EIR p. 6-15 through 6-16 and the discussion below regarding the infeasibility of an alternative that reduces GHG emissions consistent with State goals.

#### **Alternative that Substantially Lessens Significant Impacts on Biological Resources**

A commenter suggested an alternative that would avoid or substantially lessen impacts on biological resources. As discussed in Section 4.4, *Biological Resources*, of the EIR the impacts on biological resources were analyzed at a programmatic level based on best available information. Impacts were analyzed based on the programmatic footprint developed for the 2021 Regional Plan, and mitigation measures were identified accordingly that achieve substantial reductions to impacts. Additional analysis will be conducted on a project-specific level under CEQA, including project-specific impact analysis of biological resources and identification of mitigation measures. Mitigation measures would be refined and implementation methods identified, as required by CEQA, the local jurisdictions, and Wildlife Agencies on a project-specific level.

The Plan places emphasis on maximizing the use of existing facilities and focusing growth within urban areas to preserve habitat and open space. In addition, Alternative 3 has a smaller footprint and would further reduce impacts on biological resources. In summary, the proposed Plan and Alternative 3 both substantially reduce

biological resources with the implementation of mitigation measures and the proposed footprints, and a new alternative that also reduces such impacts is not required for an adequate range of alternatives.

### **Alternative with Subsidized Transit Fares and Microtransit**

Another commenter requested that alternatives that include features such as subsidized transit fares and microtransit be considered. SANDAG considered public input provided during the EIR scoping process, and used this input to develop the reasonable range of alternatives. Public input requested alternatives that reduce GHG emissions, air quality impacts, and VMT. The alternatives selected for detailed consideration incorporate many of the major transportation investments and policy options that commenters suggested, including subsidized transit fares and microtransit. As discussed in Chapter 6, Alternative 3 (All Growth in Mobility Hubs and More Progressive Value Pricing and User Fee Policies) includes free transit and microtransit by 2035. Because Alternative 3 would not reduce any of the Plan's significant impacts to less-than-significant levels, just modifying the transportation network to include subsidized transit fares and microtransit would not be enough to substantially reduce VMT and GHG emissions as compared to the proposed Plan.

In addition, one of the Implementation Actions listed in Appendix B of the proposed Plan is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by fiscal year (FY) 2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, Metropolitan Transit System (MTS), and North County Transit District (NCTD) are working with stakeholders on a 1-year pilot that may provide free fares for youth under age 19.

### **SWIA's Alternative that Prioritizes Transit Over Managed Lanes, Institutes a Much More Rigorous Monitoring System, Adds a Regional Habitat Conservation Fund, and Ensures Enforcement of Plan Compliance**

Reasons for not including each of the four components in an EIR alternative are discussed below. In addition, there is no evidence that collectively, they would substantially reduce any of the proposed Plan's significant impacts.

#### ***Prioritizing Transit over Managed Lanes***

Comments suggest that the proposed Plan should prioritize transit over managed lanes. The Managed Lanes network of the proposed Plan uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to transit, carpools, vanpools, and low-emission vehicles with appropriate decals. The system of Managed Lanes and supporting connectors support Transit Leap and High-Occupancy Vehicles (HOVs) to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes. The Managed Lane system is important for supporting the transit network and Flexible Fleets envisioned in the Regional Plan.

As discussed above under SOFAR's and CNFF's Climate, Housing, Transit Alternative, SANDAG conducted a modeling analysis to compare the proposed Plan network with managed lanes investments to the Climate, Housing, Transit Alternative, which focuses on prioritizing transit. The model run assumed no new managed lanes (only transit lanes), and accelerated the LOSSAN double-track rail project and the Miramar Tunnel rail line and straightening project to 2035. As discussed in detail in responses to SOFAR's and CNFF's Draft EIR comment letter, converting managed lanes to transit lanes and accelerating the two suggested rail projects results in similar VMT and GHG impacts as the proposed Plan, and does not substantially reduce them.

Furthermore, there are regulatory constraints on redirecting roadway funds to transit, and on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved

or collected on an annual basis and much funding cannot be advanced. There are also constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network, as described further under the SOFAR and CNFF Climate, Housing, Transit Alternative above.

### ***Monitoring System for Transportation System's Buildout and Performance***

Comments suggest that SANDAG implement clear and definitive mechanisms to monitor future population growth, jobs, and housing development in accordance with the proposed Plan to ensure that transportation system investments are in line with development and growth trends.

As identified in Appendix B of the Regional Plan, SANDAG will continue to monitor the implementation of the Regional Plan on a 4-year cycle and make the data accessible to the public. Monitoring would occur 2 years after adoption of the Regional Plan. Furthermore, SANDAG has committed to monitor the implementation for the SCS on a 2-year cycle pursuant to California Assembly Bill 1730 (Gonzalez 2019). A performance monitoring report using the indicators from Appendix E of the Regional Plan is developed halfway between each 4-year regional plan cycle. The report is shared with the SANDAG Board of Directors to provide a high-level status update on critical areas across the region. This information helps inform the Board of Directors in their development of regional goals for the subsequent regional plan. The indicators use available observed data that also informs how each indicator is calculated. In summary, some specific feasible components of this alternative are already included in the proposed Plan.

### ***Regional Habitat Conservation Fund***

Comments suggest that an alternative that includes a regional habitat conservation fund be included in the EIR. Appendix AA of the Regional Plan describes the status of the Habitat Conservation Plans (HCPs) within the region. Each local jurisdiction that signed an Implementing Agreement for their HCP has been granted “take” authorization for impacts on endangered and threatened species. By way of the take authorizations, the local jurisdictions have made commitments to fund the local costs for acquisitions, management, and monitoring. Funds to cover these local costs will be raised on a regional or plan area basis as outlined in the Implementing Agreements.

SANDAG will continue its existing grant programs, partner with member agencies on State funding opportunities, and provide data and technical support to assist local jurisdictions with land use planning efforts in line with the 2021 Regional Plan. To meet the region’s habitat conservation goals, the 2021 Regional Plan identifies approximately \$3 billion for habitat-related efforts. This includes \$2,087 million for an enhanced habitat conservation, management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan and mitigation measure GHG-5c in Section 4.8, *Greenhouse Gas Emissions*, of the EIR), and \$300–\$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan).

As such, because HCP funding is already included in the proposed Final Plan, no additional alternative with this component is necessary.

### ***Ensuring enforcement***

Comments suggest that an alternative should ensure enforcement of the jurisdictions’ compliance with the Plan. Land use authority is reserved to local jurisdictions: the cities and the County. The cities and the County are best positioned to effectively implement and monitor the objectives outlined in the 2021 Regional Plan as

those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program, and it will meet the goals of the proposed Final 2021 Regional Plan.

The 2021 Regional Plan envisions forecasted growth to be concentrated in Mobility Hubs throughout the region, which will be implemented in close coordination with local jurisdictions to align with the unique needs of each community. Many Mobility Hubs are employment centers or other popular destinations, and SANDAG would work with local jurisdictions to update plans and policies to allow for more housing in these locations where feasible. Local jurisdictions maintain land use authority and are responsible for decisions regarding density, zoning, and housing policies.

In addition, for second-tier transportation projects, SANDAG will implement mitigation measures for those projects that SANDAG directly approves or carries out as the CEQA lead agency or where discretionary TransNet funds are used. Where SANDAG acts as a pass-through agency for funding, it is the funding agency's responsibility to place conditions on grant funding. When using discretionary TransNet funds, which support TransNet grant programs funding local agency capital projects, SANDAG will require as a grant condition the implementation of all feasible EIR mitigation measures that are applicable to the project type being funded.

In summary, a number of enforcement provisions are already included in the proposed Plan, and an additional alternative with this component is not required.

#### ***Alternative that Reduces GHG Emissions to Net Zero or Consistent with State Goals***

Multiple commenters assert that the range of alternatives is not reasonable because the alternatives would still be inconsistent with statewide GHG reduction and climate goals. The Draft EIR Impact GHG-5 analysis explains why it is infeasible for the proposed Plan to be consistent with the State's ability to meet the 2030 reduction target of SB 32 and the long-term reduction goals of Executive Orders B-55-18 (2045) and S-3-05 (2050). Similar feasibility constraints apply to other potential proposed Plan alternatives. In addition, as identified in Section 4.8 of the EIR, the proposed Plan would reduce GHG emissions for all three horizon years. As discussed in the Draft EIR, p. 4.8-40, the State has yet to develop or adopt an overarching plan that provides the framework for how California will achieve carbon neutrality by 2045. California's 2017 Climate Change Scoping establishes the statewide framework for achieving the goal of a 40 percent reduction from 1990 GHG levels in 2030 and put post-2030 statewide emissions on a downward trajectory toward the long-term statewide GHG reduction goals for 2045 and 2050. The 2017 Scoping Plan indicates that to achieve these targets and goals, long-term investments in renewable energy generation, electrified transportation, energy efficient and decarbonized buildings, enhanced industry efficiency, restoration of California's natural and working lands, and sustainable solid waste management are among many actions the State must take. The State has not adopted a plan analogous to the 2017 Scoping Plan since that addresses achieving the EO S-3-05 goal of reducing statewide GHG emissions by 80 percent below 1990 levels by 2050 or the B-55-18 goal of achieving statewide carbon neutrality no later than 2045.

The proposed Plan would assist in meeting the statewide 2030 GHG target in putting statewide emissions on a downward trajectory toward statewide post-2030 goals by reducing GHG emissions in the passenger vehicle sector through the implementation of transportation network improvements and programs and efficient land use patterns to ultimately reduce VMT and the combustion of gasoline and diesel fuels pursuant to SB 375. However, it is unknown at this time what combination of reduction and removal strategies will be pursued in California to achieve this goal. Available research and reports, discussed in detail in Section 4.8 of the EIR, indicate that achieving statewide GHG reduction goals will require major shifts or even fundamental transformations in the economic, social, technological, and political fabric of life in California and beyond, including the development of new technologies; large-scale deployment of new and existing technologies; and

the roles of local, State, and the federal government in regulating economic activities and personal behaviors that affect GHG emissions.

Furthermore, as discussed in Chapter 2, *Project Description*, of the EIR SANDAG updates the Regional Plan every 4 years, and future iterations of the Plan and, as the State continues to identify new plans and technologies to meet the mid-century GHG emission targets, SANDAG will be able to implement these features into future plans to further the region's progress toward the State's goal of carbon neutrality by 2045. The required GHG reductions from the aforementioned sectors will be achieved through a coordinated effort by, at minimum, State, regional, and local agencies, organizations, and stakeholders, and is well beyond the scope and jurisdiction of SANDAG alone. As such, a proposed Plan alternative that further reduces GHG emissions consistent with State GHG reduction goals was not included for detailed consideration in the EIR because it is beyond SANDAG's or local agencies' current ability to implement.

## **MASTER RESPONSE 2: MITIGATION MEASURES THAT OTHER AGENCIES "CAN AND SHOULD" IMPLEMENT**

### **INTRODUCTION**

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects. Many Draft EIR mitigation measures for second-tier projects, recognizing that agencies other than SANDAG (e.g., local governments, transit districts, and Caltrans) are responsible for implementation, state that such agencies "can and should" implement them. Comments assert that there is no guarantee these agencies will actually implement these mitigation measures, question whether they will be imposed on second-tier projects, and allege that, to the extent SANDAG has any discretion over awarding funds for such projects, SANDAG must require the mitigation measures as conditions of approval.

One comment asserted that "can and should" is discretionary language and makes the mitigation measure non-enforceable, and that SANDAG should mandate implementation of mitigation measures for its own projects and for other agencies implementing projects under the Regional Plan.

As discussed in the Draft EIR (page 4-4), SANDAG is responsible for implementing those mitigation measures within its responsibility, jurisdiction, and statutory authority. Mitigation can also include measures that are within the responsibility and jurisdiction of another public agency (CEQA Guidelines Section 15091 (a)(2)). In many instances, mitigation measures included in the EIR that would avoid or substantially lessen significant impacts of the proposed Plan fall under the responsibility and jurisdiction of other implementation agencies, such as cities, the County, Caltrans, public transit agencies, or other special districts. In other words, SANDAG will not be the lead agency for the majority of the second-tier projects that implement the proposed Plan.

Because other project agencies would be responsible for certain mitigation measures identified in this EIR, SANDAG in its CEQA findings may find that those measures, if feasible, can and should be adopted by those other agencies (CEQA Guidelines Section 15091(a)(2)). Further details regarding responsibilities for mitigation measure implementation will be provided in a separate mitigation monitoring and reporting program (MMRP) that the SANDAG Board of Directors will consider for approval in conjunction with approval of the proposed Plan.

## EIR MITIGATION APPROACH

When CEQA findings are adopted, SANDAG will commit to those feasible mitigation measures that are within its responsibility and jurisdiction by making the finding that its mitigation measures “have been required in, or incorporated into, the project” (Public Resources Code Section 21081(a)(1); CEQA Guidelines Section 15092(a)(1)). For second-tier transportation projects, SANDAG will implement mitigation measures for those projects that SANDAG directly approves or carries out as the CEQA lead agency or where discretionary TransNet funds are used.<sup>1</sup> Where SANDAG acts as a pass-through agency for funding, it is the funding agency’s responsibility to place conditions on grant funding. When using discretionary TransNet funds, which support TransNet grant programs funding local agency capital projects, SANDAG will require as a grant condition the implementation of all feasible EIR mitigation measures that are applicable to the project type being funded.

Therefore, the assertion that “can and should” language is unenforceable is incorrect, in that SANDAG would enforce these measures by requiring them as grant conditions for transportation projects whenever it has discretionary authority to do so.

When SANDAG makes “can and should” findings at the end of the CEQA process, there is no further requirement that SANDAG find that mitigation measures that are solely within the responsibility and jurisdiction of another agency have been incorporated into the project (Public Resources Code Section 21081; CEQA Guidelines Section 15091(a)(2)). Nevertheless, as discussed below, it is reasonable to expect that the other agencies will actually implement the mitigation measures assigned to them.

The Draft EIR (pages 4-3 through 4-4) describes the intended use of a mitigation measure and the general approach to the mitigation measures in the EIR.

“The EIR includes three broad types of mitigation measures: (1) plan- and policy-level mitigation measures assigned to SANDAG; (2) mitigation measures for transportation network improvements and programs, assigned to SANDAG and other transportation project sponsors; and (3) mitigation measures for development projects implementing regional growth and land use changes, which local jurisdictions implement.”

“While the EIR provides as much detail as needed in the mitigation measures to evaluate their ability to avoid or substantially lessen impacts, some flexibility must be maintained to present mitigation approaches for impacts occurring under different circumstances. Many of the mitigation measures include lists of mitigation actions that can be implemented in connection with individual future transportation and development projects that would implement the proposed Plan; development projects would be undertaken under the land use authority of local governments. These individual future projects will occur over a wide and diverse geographic scope over the 30-year time span addressed in the proposed Plan. Some will require approvals from multiple public agencies, each with different legal, regulatory, or other authority relevant to the proposed Plan. Because the nature of individual future projects, resources, and legal authority of the approving agency or agencies, physical circumstances of the project, and local policy considerations for all future projects implementing the proposed Plan will vary widely, the mitigation actions included, while generally feasible for many projects, may not be feasible for specific projects. In each case, the lead agency (and any responsible agencies) for an individual project will have to determine

---

<sup>1</sup> SB 1703 consolidated the region’s transit capital construction with SANDAG from the two transit operators. SANDAG also coordinates with Caltrans as the lead agency for highway projects. Local jurisdictions construct arterial and local roadway projects.

which mitigation actions are specifically applicable to the project, and the degree to which the recommended mitigation actions can feasibly be implemented based on project-specific circumstances.

### **GREENHOUSE GAS EMISSIONS MITIGATION**

In addition, the Draft EIR (pages 4.8-35 and 4.8-36) explains the EIR's general approach to GHG mitigation. This approach is applicable to other significant impacts described in the EIR.

"Many features currently included in the proposed Plan (e.g., the SCS, increased transit, and active transportation investments) have the effect of reducing GHG emissions that might otherwise occur. Mitigation measures presented in this section are additional feasible GHG reduction measures not included in the proposed Plan that SANDAG would or other agencies could implement."

"While SANDAG has the authority to implement the mitigation measures it has committed to, it has no legal or jurisdictional authority to require other transportation project sponsors or local jurisdictions to implement mitigation measures for specific projects for which they have responsibility and jurisdiction. As explained in the introduction to Chapter 4, mitigation can include measures that are within the responsibility and jurisdiction of another public agency. SANDAG in its CEQA findings may find that those measures assigned to other agencies can and should be adopted by those other agencies (CEQA Guidelines Section 15091(a)(2))."

### **TRANSPORTATION PROJECT MITIGATION**

SANDAG has limited authority to approve individual second-tier transportation network improvement projects in the RTP. Many individual transportation projects in the RTP would be implemented by Caltrans and local governments. For example, Caltrans would implement most of the managed lane projects, and local governments would implement the arterial project shown on Figures 2-23 through 2-25 of the EIR. As required by CEQA and agency-specific CEQA procedures (e.g., the Caltrans Standard Environmental Reference), these agencies routinely implement the types of mitigation measures assigned to them during project design, CEQA review, and/or project construction, and the Draft EIR has made a preliminary determination that these mitigation measures are feasible and effective. Therefore, it is reasonable to expect that these agencies will actually implement them. Additionally, SANDAG is the direct source of funding (versus a pass-through agency) for TransNet grant programs funding local agency capital projects and will require as a grant condition the implementation of all feasible EIR mitigation measures that are applicable to the project type being funded.

### **LAND USE PLAN AND PROJECT MITIGATION**

SANDAG has no authority to adopt local land use plans or approve local land use projects that will implement the SCS. SB 375 specifically provides that nothing in SB 375 supersedes the land use authority of cities and counties, and that cities and counties are not required to change their land use plans and policies, including general plans, to be consistent with an RTP/SCS (Government Code Section 65080(b)(2)(K)). Local governments are the main agencies responsible for mitigation of the impacts of land use plans and projects that implement the SCS, and SANDAG has no concurrent authority to mitigate the impacts of land use plans and policies. Local governments routinely implement the types of mitigation measures assigned to them during project design, CEQA review, and/or project construction, and the Draft EIR has made a preliminary determination that these mitigation measures are feasible and effective. Therefore, it is reasonable to expect that local governments will actually implement them.

A recent, relevant example of local government implementation of mitigation measures addressing the land use change and regional growth projected to occur as a result of implementation of local general plans is provided below.<sup>2</sup>

- An Air Quality Impact Analysis shall be prepared for projects within the General Plan Update boundary that exceed one of the air quality study trigger criteria in Table 4.3-12, Air Quality Impact Analysis Trigger Criteria.

Land Use	Project Site that would Trigger Air Quality Impact Assessment	Single Family Dwelling Unit Equivalent
Single Family Residential 300 du 1 du/1 du	300 du	1 du/1 du
Apartments: 6-20 du/acre	370 du	1 du/1.23 du
Apartments: - > 20 du/acre	420 du	1 du/1.4 du
Condominiums	370 du	1 du/1.23 du
Mobile Home Park	400 du	1 du/1.33 du
Supermarket	25,000 sf	1 du/83.33 sf
Restaurant, Fast Food w/drive through	6,500 sf	1 du/21.67 sf
Restaurant, Quality Sit Down	43,000 sf	1 du/143.33 sf
Neighborhood/County Park (undeveloped)	880 acres	1 du/2.93 acre
Motel	480 rooms	1 du/1.6 room
Standard Commercial Office (<100,000 sf per office site)	190,000 sf	1 du/633.33 sf
Neighborhood shopping center	35,000 sf	1 du/116.67 sf

- Siting Sensitive Receptors near sources of Toxic Air Contaminants. A Health Risk Assessment (HRA) shall be prepared by a qualified air quality professional for development of new sensitive receptors proposed in the General Plan Update planning area within 500 feet of a waste transfer facility. A Health Risk Assessment (HRA) shall be prepared for development of new sensitive receptors in the General Plan Update planning area proposed within one mile of industrial land uses, medical facilities, or research and development facilities that generate a potential source of Toxic Air Contaminants (TACs). The project shall not be considered for approval until an HRA has been completed and approved by the City. The methodology for the HRA shall follow the Office of Environmental Health Hazard Assessment and SDAPCD guidelines for the preparation of HRAs. If a potentially significant health risk is identified, the HRA shall identify appropriate measures to reduce the potential health risk to below a significant level, or the sensitive receptor shall be sited in another location.

#### PROJECT-SPECIFIC MITIGATION MEASURES MAY NOT APPLY TO EVERY PROJECT

Comments suggest that the text in the EIR should remove the “can and should” language and require all agencies to implement the mitigation measures. Although second-tier lead agencies routinely implement the types of mitigation measures assigned to them during project design, CEQA review, and/or project construction, the Draft EIR recognizes that due to project- or site-specific circumstances, it may not be feasible for individual lead agencies to implement all of the “can and should” mitigation measures listed for a particular significant impact; in this case, the Regional Plan EIR programmatic mitigation measures still meet CEQA

<sup>2</sup> City of Escondido. 2015. *Escondido General Plan, Downtown Specific Plan and Climate Action Plan EIR, 4.3 Air Quality*. Available: <https://www.escondido.org/Data/Sites/1/media/PDFs/Planning/GPUpdate/Vol1AirQuality.pdf>.

requirements, but in the later project-specific CEQA review, the Regional Plan EIR could not be used as a first-tier Program EIR for the significant impact proposed for mitigation. As stated on p. 4-4 of the Draft EIR:

“Because the nature of individual future projects, resources and legal authority of the approving agency or agencies, physical circumstances of the project, and local policy considerations for all future projects implementing the proposed Plan will vary widely, the mitigation actions included, while generally feasible for many projects, may not be feasible for specific projects. In each case, the lead agency (and any responsible agencies) for an individual project will have to determine which mitigation actions are specifically applicable to the project, and the degree to which the recommended mitigation actions can feasibly be implemented based on project-specific circumstances.”

Similarly, lead and responsible agencies for an individual project will have to determine whether the lead agency, the project proponent, or another entity is responsible for implementation of particular mitigation measures.

Mr. Hasan Ikhata  
 October 11, 2021  
 Page 2

1-3 **Investing in Emerging Technologies**  
 Although micromobility options such as scooters and bicycles are not realistic options for most East County communities, I appreciate SANDAG's willingness to explore innovative solutions. I encourage you to continue to investigate the benefits and potential to invest in emerging technologies that lower emissions while maximizing the use of existing transportation infrastructure. One example is the emergence of autonomous electric vehicles that can be charged via renewable energy while providing convenient and equitable door-to-door transportation service to all San Diego County residents.

1-4 **Uphold Projects Promised in TransNet Program**  
 It is my understanding that SANDAG plans to eliminate over twenty projects included in the TransNet Extension Ordinance and Expenditure Plan approved by voters in 2004. Included in the list of canceled projects are several that, if eliminated, would adversely impact my district, which again, has almost no alternatives to motor vehicle use. I urge you to continue to move forward with the following projects, which were promised to the region's residents to secure their votes for TransNet:

- Interstate 8 Widening (2nd Street to Los Coches Road)
- State Route 52 Express Lanes (Interstate 15 to Interstate 805)
- Interstate 805/State Route 52 HOV Connectors
- State Route 94 Widening (State Route 125 to Steele Canyon)

1-5 **Investment in East County Transportation Options**  
 Although the draft Regional Plan proposes to focus significant funding on new rail and trolley line infrastructure along the region's coast, it does not include similar investments for alternative transportation options in East County. As a result, most of my constituents must continue to rely on motor vehicles for their commutes to work and school and for other daily mobility needs, as investments in freeways decrease and road user costs increase. This approach will increase traffic congestion in East County while impeding the region's efforts to meet vehicle miles traveled and emissions reductions goals or attempts to achieve carbon neutrality. Therefore, I urge you to consider adding alternative transportation infrastructure options in East County where feasible.

1-6 **Housing**  
 The Draft Regional Plan and DEIR make land use assumptions for jurisdictions based on Regional Housing Needs Allocations (RHNA). It is stated that the Mobility Hubs encourage a diversity of housing options, mixed-use development, and travel options within a centralized area. But the planning of transportation and housing does not match in the years 2025, 2035, or even 2050.

**RESPONSE TO COMMENT 1-3**

Transit Leap will offer people a network of high-capacity, high-speed, and high-frequency transit services that will incorporate new modes of transit while also providing improved existing services. Transit Leap includes Next Gen Rapid Bus Service, local bus, and Flexible Fleet services to complete the Transit Leap network. This bus network would offer faster and more reliable service with increased frequencies and longer service hours.

Flexible Fleets can range from bikes and scooters to autonomous shuttles that provide on-demand service that are ADA compliant and provide options for users that may not have access to a smartphone or internet device to hail a ride.

**RESPONSE TO COMMENT 1-4**

The TransNet measure approved by San Diego County voters in 2004 focused on congestion relief and included a set of transportation improvements, many of which have been completed. The remaining projects in the TransNet measure may not be constructed due to changes in regional needs, changes in State law, and technology advancements that would suggest a different transportation solution.

CAL536, shown in the 2021 Regional Transportation Improvement Program (RTIP), is a project for Operational Improvements to SR 52, which include a truck climbing lane, a bike lane, and an auxiliary lane. This project is currently expected to open to traffic in September of 2024. The project shown in the Regional Plan in 2035 includes the addition of three Managed Lanes to SR 52. When TransNet was adopted the anticipated future land use pattern included significant development in East County. Those developments are no longer expected due to expanded land preservation, slower regional growth rates, and state regulations focusing development near existing infrastructure. Many of the TransNet projects that have not yet been built were designed to support the East County growth that has not happened and is no longer anticipated.

The SANDAG Board of Directors may review the TransNet ordinance and discuss possible updates. This process is outside of the development the proposed Plan.

**RESPONSE TO COMMENT 1-5**

The proposed Plan includes Mobility Hubs for East County which can facilitate creating additional economic opportunities within that hub.

Mobility Hubs are communities with a high concentration of people, destinations, and travel choices. They offer on-demand travel options and supporting infrastructure to enhance connections to high-quality Transit Leap services while helping people make short trips around the community on Flexible Fleets. Mobility Hubs will be implemented in close coordination with local jurisdictions to align with the unique needs of each community.

Several corridors were evaluated for their travel times between the 2016 baseline and future build scenarios (2025, 2035, and 2050). Two of these corridors were rural corridors between Ramona and Downtown San Diego via SR 67 and El Cajon to Kearny Mesa. In both of those corridors travel times were improved for auto travel (both solo vehicle and carpool) for all three build scenarios compared to the base year. These travel times will be included in Appendix T of the Final Plan.

SANDAG is also developing a Flexible Fleet Implementation Strategic Plan to identify near-term opportunities for Flexible Fleet pilots that support mobility, equity, and sustainability goals.

Also, the proposed Plan has been shown to meet the State GHG goals (19% reduction from 2005 levels by 2035). While related, no VMT goals are included in the Plan

#### **RESPONSE TO COMMENT 1-6**

The 6th Cycle Regional Housing Needs Assessment (RHNA) Plan sets a strategy for sustainability that focuses housing and job growth in urban areas where there is existing and planned transportation infrastructure, protects the environment and helps ensure the success of smart growth land use policies by preserving sensitive habitat and open space, and addresses the housing needs of all economic segments of the population. In the long term, housing located near transit and jobs should provide opportunities for residents to take more trips by bus or train and live closer to where they work, reducing VMT and GHG emissions. A specific effort was made in the proposed Plan to match transportation with land use (including housing).

Mr. Hasan Ikhrata  
October 11, 2021  
Page 3

1-6 cont. For example, the DEIR states that most of the transportation network improvements in the next decade are addition of managed lanes along Interstate 5 through the coastal cities of Encinitas, Carlsbad, and Oceanside. Yet, the DEIR also states that the rates of housing unit increases are forecasted to be lower than the regional average in the coastal cities of Oceanside (8.4 percent), Carlsbad (14.2 percent), Encinitas (6.3 percent), Solana Beach (13.3 percent), Del Mar (6.4 percent), Coronado (9.5 percent), and Imperial Beach (18.7 percent).

1-7 Further, there is no mechanism to ensure the RHNA numbers are actually met by all jurisdictions. Until each city commits to meeting these RHNA numbers, the substantial housing shortage will continue. If, as the DEIR states in Chapter 4.14, that there will be no housing constructed in the unincorporated area from 2036 to 2050, each city should have a more comprehensive Housing Element that includes penalties for not meeting the planned growth.

1-8 The DEIR states that impacts related to induced substantial increases in population under the proposed Plan would be significant and unavoidable. As Lead Agency, SANDAG is required to consider all feasible mitigation measures. SANDAG should consider, develop, and adopt a mitigation measure that enacts a financial penalty for the cities that cannot meet their RHNA numbers.

Thank you for the opportunity to submit my comments on the Draft Environmental Impact Report for the 2021 Regional Plan. If you have any questions concerning my comments, please feel free to contact me at (619) 531-5522.

Sincerely,

Joel Anderson  
Supervisor, Second District

Cc: Kirsten Uchitel, Associate Planner, SANDAG

**RESPONSE TO COMMENT 1-7**

Land use authority is under the purview of local jurisdictions: the cities and the County. The cities and the County are best positioned to effectively implement the housing objectives outlined in the proposed Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program, and it will meet the goals of the proposed Plan. SANDAG's Housing Incentive Program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs.

**RESPONSE TO COMMENT 1-8**

The commentor is requesting that SANDAG consider, develop, and adopt a mitigation measure that enacts a financial penalty for the cities that cannot meet their RHNA numbers. This mitigation measure is not within the authority of SANDAG to enact. SANDAG will continue to collaborate and coordinate with cities as applicable to meet RHNA numbers. Thank you for your comment, SANDAG appreciates your input.

SANDAG

2-1 I fear the following is beyond the time period for inclusion in the EIR. The issues are so severe I would ask for it to be forwarded to the appropriate agencies and committees.  
 The Emergent Nature of Wildfires which are increasing and Ultrafine Particles appears to relate to increasing Health Risks and outcomes we are experiencing. Forgive the hastiness of this organization - I am only recently alerted to it's importance in health issues. I thank to SANDAG Members and Participants for their contributions.

2-2 1) From a discussion on the recent Medpage Today, Johns Hopkins Medicine Podcast, "TTHHealthWatch" (August 21, 2021) citing an article in Science Advances  
 They noted:  
 -short-term exposure to wildfire smoke PM 2.5, particulate matter 2.5 is associated with health conditions such as heart attack  
 -wildfire smoke was associated with the increased risk of COVID-19 cases and deaths.  
 -wildfires contribute up to 25% of the PM 2.5 concentrations in the atmosphere in the United States. Most of those wildfires in 2020 occurred in California, Washington, and Oregon

**RESPONSE TO COMMENT 2-1**

Thank you for your participation in the environmental review process. It is acknowledged that the body of knowledge regarding health risks associated with ultrafine particles originating from wildfires is rapidly evolving. Further elaboration regarding your concerns related to wildfires and ultrafine particles will be addressed in additional details in subsequent responses below.

**RESPONSE TO COMMENT 2-2**

As shown in Table 4.3-7 of the EIR, PM2.5 emissions would decrease by 9 percent between 2016 and 2050. In addition, as discussed in additional detail in Section 4.19, *Wildfire*, regional growth, land use change, and transportation network improvements associated with the proposed Plan would expose additional people and structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildland. Wildfires would also potentially expose the region's population to harmful pollutant concentrations in the form of wildfire smoke. Mitigation measure WF-1 will reduce this impact by requiring measures to preclude or substantially reduce risks from wildland fires by requiring specific design features for new development and by requiring that adequate emergency response is in place to serve new development when wildfires occur. To the extent that these measures reduce risk of wildfire, they would also reduce the exposure of county residents to uncontrolled wildfire spread and to harmful pollutant concentrations in the form of wildfire smoke. However, given the uncertain nature of wildfires, it cannot be concluded that wildland fire risks and the risks associated with wildfire smoke pollution would be reduced to less than significant in all locations for all future development projects. Therefore, impacts remain significant and unavoidable.

The following text regarding newly published data concerning the association of elevated levels of PM2.5 from wildfires with increased incidence of COVID-19 was added to page 4.19-21 of Section 4.19, *Wildfire*:

A recent study suggests that the airborne PM2.5 can carry harmful microbes as evidenced by an increase in fungal infections in areas

characterized by recent wildfires (Kobziar and Thompson III, 2020). Another recent study showed an association between elevated levels of COVID-19 cases and high PM2.5 concentrations originating from wildfires in the four weeks after exposure in counties with large wildfires in 2020 (Zhou et al 2021).

2-2 cont. They also looked at what they called the lag effect: how much did this wildfire exposure affect COVID-19 cases 14 and 21 days post exposure?

- found daily increases in PM 2.5 of 10 µg per cubic meter
- found an almost 12% increase in COVID-19 cases at 28 subsequent days
- found that 17 of 92 counties had strong evidence of a positive association between exposure to these particles and increased risk of death 4 weeks later.
- the average increase of death is about 8% and the increase in cases is about 12% for every 10 µg/m3 increase. In some counties it was as high as 60% or 70% in terms of deaths and rates.

The plausibility is that wildfires increase inflammation in the lung, and may suppress the immune system, and therefore make it more likely for people to get COVID several weeks after the wildfire was reported.

The other possibility is perhaps that particulate matter helps the virus to transport further distances. It looks like this association does have some biologic plausibility.

[https://www.medpagetoday.com/podcasts/healthwatch/94147?xid=nl\\_mpt\\_DHE\\_2021-08-23&utm-e=1493923d0r&utm\\_source=Salithru&utm\\_medium=email&utm\\_campaign=Daily%20Headlines%20Top%20Cat%20HeC%20%202021-08-23&utm\\_term=NL\\_Daily\\_DHE\\_dual-email-definition](https://www.medpagetoday.com/podcasts/healthwatch/94147?xid=nl_mpt_DHE_2021-08-23&utm-e=1493923d0r&utm_source=Salithru&utm_medium=email&utm_campaign=Daily%20Headlines%20Top%20Cat%20HeC%20%202021-08-23&utm_term=NL_Daily_DHE_dual-email-definition)

2-3 2) The COVID-19 pandemic also highlights the persistent inequities among several communities in terms of their infection rate, their morbidity, or mortality associated with wildfires -- particularly for the American Indians, Blacks, Latinos, and even Native Hawaiians and Pacific Islanders. The largest risk factor for COVID-19 is Smoking, and young persons have high rates of Vaping associated with the disease.

<https://scitechdaily.com/a-little-known-threat-infectious-microbes-harmful-living-bacteria-and-fungi-in-wildfire-smoke/>

2-4 3) A recent article from the American Association for the Advancement of Science highlights an additional risk from wildfire smoke microbes.

"According to Kobziar and Thompson, wildfire smoke contains living microbes bacteria and fungi known to affect human health — aerosolized from burning materials such as soils, detritus and wild woods and transported in smoke plumes.

2-4 However, while the pulmonary and cardiovascular consequences of smoke exposure are well known and recognized, the potential for wildfire smoke to be a source of infection has been overlooked and remains unaddressed in public health and wildfire science. To date, very little research has been done to determine whether the transport of smoke-borne microbes poses a health risk, in addition to the risk known from particulate inhalation, despite compelling evidence that shows increasing rates of certain fungal infections in areas with increased levels of wildfire smoke."

2-5 4) Wildfires in the US were noted low in 2016, 2018; but high in 2017 & 2020 when Total US Deaths were also high.

**RESPONSE TO COMMENT 2-3**

The referenced podcast, available at <https://www.medpagetoday.com/podcasts/healthwatch/94147>, discusses several different issues. The first issue discussed is the health effects of PM2.5 from wildfires. The large contribution of wildfires to PM2.5 levels in the western U.S. is outlined, and the adverse health effects are discussed. The second issue addressed in the podcast is inequalities in access to health care between different ethnic groups, and how these inequities have been exacerbated by COVID-19. These issue discussions are distinct however, and neither wildfires nor PM2.5 are mentioned in the healthcare inequality discussion. Also, note that under CEQA, social equity is not an environmental issue required to be analyzed in an EIR.

**RESPONSE TO COMMENT 2-4**

Recent data suggesting that airborne PM2.5 originating from wildfires can carry harmful microbes, as evidenced by an increase in fungal infections in areas characterized by recent wildfires, was added to the impact discussion of Section 4.19, *Wildfire*, of the Final EIR.

**RESPONSE TO COMMENT 2-5**

The association between more prevalent wildfires and increased deaths is acknowledged. The existing conclusions state that the healthcare effects of wildfire include increased risk of death.

As discussed above under response to comment Bilash 2-2, mitigation measure WF-1 will reduce wildfires by requiring measures to preclude or substantially reduce risks from wildland fires in VHFSZs by requiring specific design features for new development and by requiring that adequate emergency response is in place to serve new development when wildfires occur.

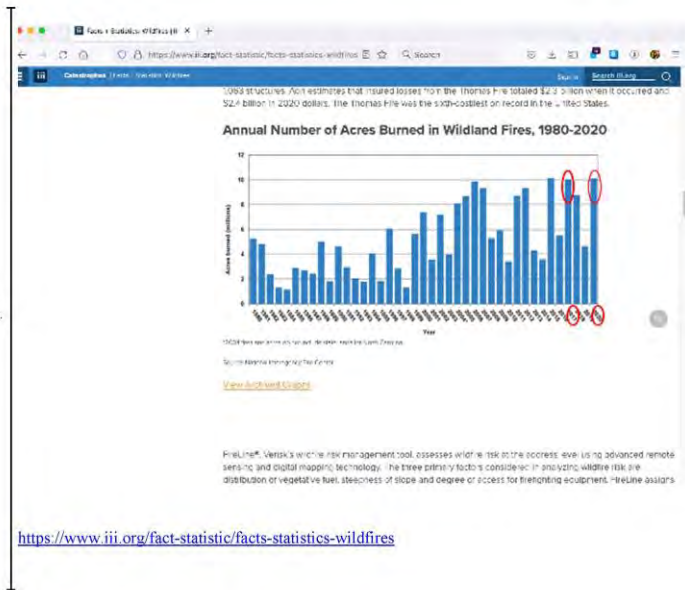

In addition, mitigation measure WF-2, as discussed in greater detail in Section 4.19, *Wildfire*, of the EIR, combined with other mitigation measures resulting from project-level CEQA conducted by the implementing agency, including adherence to existing fire prevention regulations and BMPs, will reduce the impact of transportation-related infrastructure on wildfire risk.

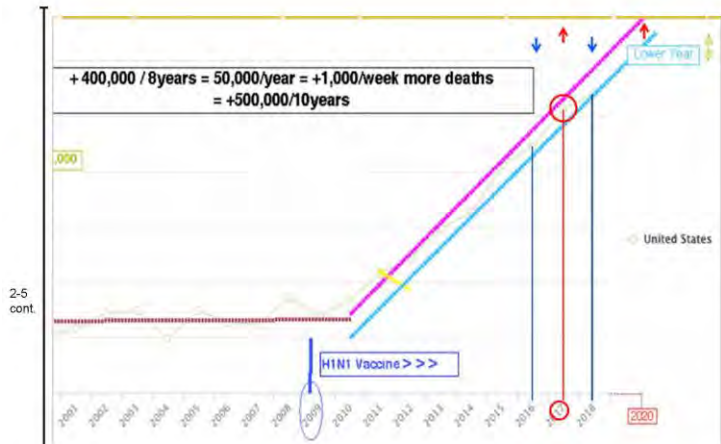

However, as noted in the EIR, because there are no other feasible mitigation measures to reduce the proposed Plan's contribution to

wildland fires to less than significant, impacts remain significant and unavoidable.

Thank you for providing a wide range of references for studies related to the effects of PM1, PM2.5, and PM10 on health and the environment. SANDAG will take these into consideration, as appropriate, during future air quality analyses.

2-5  
cont.

<https://www.prb.org/usdata/indicator/deaths/chart/>

I have attached a wide range of references for these small particles. I believe this demands new resources to monitor and find ways to mitigate the severe environmental impacts of population expansion, transportation and encroachment into high fire areas and transportation roadwear pollution.

Please do not fail to include appropriate studies for these hazards.

Sincerely,  
 Timothy Bilash MD MS FACOG

**Subject:** Public Comment on SANDAG 2021 Regional Plan EIR, Need to focus on Appendix AA, Regional Habitat Conservation Vision (May 2021)

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

Public Comment on SANDAG 2021 Regional Plan EIR, Need to expand body of Regional Plan to focus on Appendix AA, Regional Habitat Conservation Vision (May 2021)

3-1 I join many other stakeholders who want to see **Appendix AA, Regional Habitat Conservation Vision (May 2021)** be brought forward into the body of the SANDAG Regional Plan, instead of taking a backseat by being concealed in an appendix that is largely unseen. In fact, the Draft EIR is incomplete, since this essential Appendix AA is not even listed in the EIR Table of Contents, or appendices.

3-2 The important policy priorities identified in **Appendix AA** need to play a central role in shaping SANDAG policy, and drive transportation options considered by decision makers to make informed choices on SANDAG 2021 Regional Plan. Stakeholders in San Diego highly value the region's biodiversity which makes San Diego the home to the highest diversity of endemic plants and animals found nowhere else in the world, so it is reasonable to demand an EIR which more fully reflects the hotspot resources which are at risk. Additionally, stakeholders demand that the SANDAG 2021 Regional Plan be expanded to analyze a transportation system in San Diego that applies a cohesive policy framework to support a land use pattern that accommodates our region's future employment and housing needs and **protects sensitive habitat and resource areas in San Diego for current and future generations.** Unless and until the EIR reflects the policy framework necessary to conform with SB 375 (Steinberg, 2008), then it appears that the Draft EIR and SANDAG 2021 Regional Plan (as currently written) fail to meet the Sustainable Communities Strategy (SCS) requirement.

3-4 On page AA-12 of the Regional Habitat Conservation Plan, the document states: *"While several barriers have been identified in implementing the vision for regional habitat conservation, the role of SANDAG as the regional planning agency and its commitment in its development of a Sustainable Communities Strategy will provide new opportunities to fulfill the promises made during the adoption of the region's various regional habitat conservation plans. SANDAG will establish a Nature-Based Climate Solutions Program that will provide the natural infrastructure that uses or mimics natural processes to benefit people and wildlife. SANDAG will prioritize resilience and innovative solutions in transportation infrastructure..... There are also further opportunities to expand upon ongoing efforts to assess the amount of carbon storage and sequestration potential of open space lands and the co-benefits from preserved open space, land management, and restoration activities."*

**RESPONSE TO COMMENT 3-1**

Appendix AA is part of the proposed Plan, which the EIR analyzes. Therefore, the EIR does not need to include Appendix AA because, by default, it is part of the Plan analysis. A description of conservation efforts as a key component of SANDAG's Sustainable Communities Strategy, including benefits to habitat preservation from the SCS land use pattern, has been added to Chapter 2 of the proposed Plan.

**RESPONSE TO COMMENT 3-2**

An analysis of biological impacts has been provided in Section 4.4, *Biological Resources*, of the EIR that addresses "hotspot resources," including sensitive vegetation communities, endemic plants and animals, and special-status species. These hotspot resources are conserved through the NCCPs and subregional plans, the approved documents of which are described in the EIR (see Section 4.4.2 of the EIR), and addressed in Impact BIO-4. For example, the California's NCCP Program focuses largely on conserving large areas of native habitat and the habitats that link those areas to help preserve California's native fauna and flora at the landscape and regional levels. While NCCPs are governed by the California NCCP Act, the FESA requires the issuance of HCPs. The proposed Plan protects the County's sensitive biological resources through consistency with the NCCPs, and commits to funding and implementing future conservation efforts, including \$2,087 million for an enhanced habitat conservation, management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan and mitigation measure GHG-5c in Section 4.8, *Greenhouse Gas Emissions*, of the EIR), and \$300 to \$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan).

**RESPONSE TO COMMENT 3-3**

The proposed Plan meets SB 375 requirements. The proposed Plan is required to reduce GHG emissions from passenger vehicles and light-duty trucks by 19 percent per capita by 2035 compared to 2005 levels,

as mandated by SB 375. Implementation of the proposed Plan would not conflict with SB 375 emission reduction targets for 2035 because it would result in a 20 percent reduction in per capita CO<sub>2</sub> emissions from passenger cars and light-duty trucks from 2005 levels by 2035, which exceeds the 2035 target of a 19 percent reduction for the SANDAG region.

Also, SB 375 requires that the collective land use plans of the region identify areas sufficient to house all economic segments of the population. The 6th Cycle Regional Housing Needs Assessment (RHNA) Plan sets a strategy for sustainability that focuses housing and job growth in urban areas where there is existing and planned transportation infrastructure, protects the environment and helps ensure the success of smart growth land use policies by preserving sensitive habitat and open space, and addresses the housing needs of all economic segments of the population. In the long term, housing located near transit and jobs should provide opportunities for residents to take more trips by bus or train and live closer to where they work, reducing VMT and GHG emissions.

#### **RESPONSE TO COMMENT 3-4**

As an initial matter, this comment raises issues with the proposed Plan, not the Draft EIR.

Multiple resource topic discussions in the EIR and Appendix C, *Climate Change Projections, Impacts, and Adaptation*, acknowledge that increased temperatures and decreased rainfall will likely result in decreased plant productivity and reproduction. As fewer or less robust plants pull less carbon dioxide out of the atmosphere, soil erosion and loss will increase and there will be less carbon from dead plants available to become incorporated into the soil, thus reducing soil carbon sequestration. As such, SANDAG acknowledges that it is important to continue monitoring innovative new technologies and methods of increasing carbon storage and sequestration potential in the region. SANDAG, in collaboration with relevant resource agencies, will present additional details as a part of the Nature-Based Climate Solutions Program. As detailed in response to comment Borchmann 3-2, SANDAG has committed to funding future habitat conservation, land acquisition, and land management and monitoring to conserve and manage the County's biodiversity in perpetuity.

3-4  
cont.

My personal observation is the current SANDAG 2021 Regional Plan fails to meet the promises outlined in Appendix AA, Regional Habitat Conservation Vision, and is unacceptable in its current form. Please do not allow a substandard Regional Plan by SANDAG diminish the unparalleled biodiversity hotspot characteristics in San Diego that are found nowhere else in the world. We are counting on SANDAG to honor the promises and opportunities identified in Appendix AA to protect and preserve natural resources in San Diego for current, and future generations.

*Thank you for thoughtful consideration of my personal comments.*

**To:** James Chagala <[jchagala@hotmail.com](mailto:jchagala@hotmail.com)>  
**Subject:** RE: SANDAG's 2021 Regional Plan

Hi Jim.

Not sure if I give my comments to you or who, but here is my stab at this.

Pg 22

4-1 Managed lanes – good concept of re-purposing of shoulders, but what happens if breakdown or emergency vehicles to utilize this space?

4-2 Rural Corridors – curve straightening. At what cost and purpose? These type of items are why people like to live rural. The assumption is a lot of the items is that we will be happy with one big metropolis

Pg 23

**RESPONSE TO COMMENT 4-1**

The comments in this letter relate to the contents of the proposed Plan, and not the analysis contained within the Draft EIR.

Many of the Complete Corridor projects in the proposed Plan utilize existing right-of-way and, in many cases, existing roadway shoulders without encroaching into any additional land. This will greatly reduce environmental impacts, speed project delivery, and reduce costs.

SANDAG will continue to coordinate with Caltrans for detailed engineering and environmental studies for Managed Lanes projects.

Public safety impacts of the proposed Plan are discussed in Section 4.16, *Transportation*, of the Draft EIR, specifically under Impact TRA-3, which analyzes any increases in hazards due to design features.

**RESPONSE TO COMMENT 4-2**

Rural corridors, such as SR 67, include investments such as shoulder widening, curve realignment, and technology improvements to address safety and operational improvements to facilitate ingress/egress during peak travel and emergency evacuation conditions. The costs of the rural corridor projects in the proposed Plan range from \$1M to approximately \$700M.

- 4-3 Smart Infrastructure – question the privacy laws on this about monitoring people. How did this really work in the public emergency situation of COVID App and tracking? (I don't think it did).
- 4-4 Electric Vehicle Infrastructure – while the system is needed for Public Charging it needs to be fee based or privately operated as fee based (this is not addressed in the commentary). The CA grid cannot accommodate current demand, so this needs to be addressed as well.
- Pg 24
- 4-5 Commuter Rail – would think I-15 up to Escondido would be included here
- Pg 26
- Mobility Hubs
- 4-6 Safe Streets – with volume of people expected, just like, Grand Central or Penn Station in NY, these Hubs will require additional security and needs to be addressed
- Supporting Amenities – should be pay for use vs taxes to masses
- Pg 38
- Regional Pricing Strategy
- 4-7 Trains, buses, public transportation, etc to pay for themselves and not subsidized by add'l or current taxes (current drivers pay similarly). (Pg 46 and other mentions are subsidies not fare or fee). These items need clarified.
- Road User charges vs an additional fee should be implemented by removing the CA gas tax.
- 4-8 What is not mentioned that I can see is dealing with the current I-5, I-15, Hwy 78, I-8 congestion. While this is the future plan, this issue exists now and will for most of our future as well.
- If I need help understanding my role, please let me know.
- Thanks
- 4-9 I will also go back to my comments of our meeting. The governmental entities, in this case SANDAG, need to be financially conscience and responsible as well.

**From:** James Chagala <[jchagala@hotmail.com](mailto:jchagala@hotmail.com)>  
**Sent:** Tuesday, September 7, 2021 4:33 PM  
**To:** Sponsor Group 2 <[SponsorGroup2@groups.outlook.com](mailto:SponsorGroup2@groups.outlook.com)>  
**Subject:** Fw: SANDAG's 2021 Regional Plan

These are more details on the SANDAG plan. Please review as comments are due October 12. This is only one stage and there will be other points to comment. I will be establishing a subcommittee on September 23 to deal with this, so be thinking if you would like to be involved. The members we recommended in August are also eligible, as you do not have to be a member of the group to serve on a sub-committee.

**RESPONSE TO COMMENT 4-3**

SANDAG will rely on coordination with other agencies in California and the State Department of Transportation to integrate the selection of technology, collection methods, and account management. California has strict data privacy laws to protect consumer privacy. In line with this, SANDAG remains committed to protecting personal privacy, and it will be a strong consideration for SANDAG and other agencies around California when selecting technology and methods to administer the program.

**RESPONSE TO COMMENT 4-4**

The proposed Plan commits SANDAG to making investments to support the region’s transition to electric cars, trucks, and buses. As SANDAG develops vehicle and infrastructure programs, it will continue to coordinate with SDG&E as well as community choice energy (CCE) providers in the region on their programs to provide clean power and manage load. San Diego Community Power is committed to providing entirely clean and renewable electricity by 2035 or sooner, and the State requires utilities, including SDG&E, to provide a minimum of 50 percent renewable power by 2030 leading up to the State’s carbon neutrality goal for 2045.

In addition to regional scale load management that is led by the utility, CCEs, and larger power users, SANDAG’s EV programs will encourage the use of load management tools and integrated renewable energy at the project level. SANDAG’s current EV charger rebate program is the CALeVIP San Diego County Incentive Project, with information available at <https://calevip.org/incentive-project/san-diego-county>. This and future charger programs will provide rebates for workplace chargers to enable a greater number of drivers to charge during the day when renewable energy is most available.

SANDAG continues to support progress toward an adequate EV charging infrastructure for both freight and passenger vehicles in collaboration with public agency and private industry stakeholders. This support includes planning through the Comprehensive Multimodal Corridor Plans (CMCPs) that include federally designated zero-emission vehicle corridors and commensurate charging infrastructure as well as the development of a Blueprint for Medium-/Heavy-Duty (MD/HD) ZEV Infrastructure. A SANDAG Board resolution was passed to work collaboratively to establish the framework and agreement for a joint EV

charging incentive program with the California Energy Commission, County Air Pollution Control District, and Center for Sustainable Energy as part of the Regional Vehicle Charging Program partnership program. SANDAG will continue to coordinate with Caltrans in their efforts to plan the deployment of potential medium- and heavy-duty truck charging infrastructure in conjunction with parking identified through the California State Truck Parking Study that is currently underway.

**RESPONSE TO COMMENT 4-5**

Regarding commuter rail along the I-15 corridor, the I-15 Corridor is difficult to serve with rail because of the development patterns that resulted in widely spread out communities. This area is served by Rapid bus routes, which will be expanded in the future with more services. However, the California High Speed Rail project is reflected in Figure 2.3 of the proposed Plan as it is slated to connect Los Angeles to San Diego via the Inland Empire with stations planned in Murrieta/Temecula and Escondido, which would provide some rail service in the vicinity of I-15. This project would be implemented and funded by the California High Speed Rail Authority. SANDAG will track the project as it is developed by the State.

**RESPONSE TO COMMENT 4-6**

Mobility Hubs will be centers of activity where transportation investments of the proposed Plan will come together along with strategic decisions about land use. Each Mobility Hub will require different services and amenities depending on the surrounding community. SANDAG will work closely with local jurisdictions, community members, and other stakeholders within each Mobility Hub area to identify specific needs of the area, such as safety, security, accessibility, first-last mile connections, and increased amenities.

Each regional Mobility Hub coverage area was identified based on a variety of factors, including existing and projected population and job growth along with information on where and how people travel. Many existing trip destinations fall within areas that have been identified as a regional Mobility Hub, yet some of these communities lack convenient transit service or safe streets to walk, bike, or use other micro-mobility options.

**RESPONSE TO COMMENT 4-7**

Various funding sources are being considered to implement the proposed Plan. The proposed Plan assumes local, State, and federal

revenue sources including sales tax, impact fees, fuel tax, tolls, passenger fares, fees, general funds, ridehailing service fees, a road usage charge, cap and trade, and financing. New sources of revenue such as the road usage charge or a new sales tax will be studied and will include input from the public and other stakeholders.

Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals such as GHG emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenue currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.

The road usage charge, which is being studied by both the federal and State governments, is being considered to replace an old tax system that is no longer relevant. SANDAG recognizes that this is a challenge and respects the concerns raised. SANDAG is committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, and fair to all.

Fare subsidies would likely be attached to sales tax measures, but could be paid for by other sources as they become available.

Further details regarding funding and revenue can be found in Appendix V of the proposed Plan..

#### **RESPONSE TO COMMENT 4-8**

State laws have changed from requiring congestion relief (usually solved in the short term by widening roadways) to reducing VMT and GHG emissions (usually solved by people living closer to destinations and using alternative modes of transportation such as walking, biking, carpooling, and public transit). These bold changes are necessary to address unprecedented challenges facing the region and state. SANDAG understands the near-term need for congestion relief and is working to

find near-term ways to implement flexible fleet pilot projects and expand service and frequency of public transportation.

**RESPONSE TO COMMENT 4-9**

SANDAG will maintain transparency with the public and stakeholders regarding funding sources for projects outlined in the proposed Plan through associated project and program implementation, in addition to activities related to the development of Plan updates.

thanks,

Jim Chagala

 Subject: Regional Plan DEIR

SANDAG,

I appreciate the opportunity to comment on this important subject.

Since the DEIR is based on the 2021 Regional Transportation Plan, I will start by considering that plan and what environmental impacts it will cause.

**Environmental Impact Consideration of the Region Transportation Plan**

**Chapter 1: A Bold New Vision for the 2021 Regional Plan**

You introduce the 5 "Big Moves," an approach which seems to reflect a recognition that we need fundamental change. However, before you even identify the strategies, this sentence appears, suggesting a falsehood. The falsehood it suggests is that the primary task is to enhance mobility while achieving "state and federal requirements", regarding climate change and air pollution.

You write, regarding the 5 Big Move, that you are about to identify (emphasis added in bold type):

*These interdependent strategies are designed to address the greatest transportation and mobility challenges that we face: safety and traffic congestion, social inequities, and **state and federal requirements to reduce greenhouse gas (GHG) emissions and air pollution.***

This statement shows a fundamental misunderstanding of the climate emergency that we face. By far, our greatest "mobility challenge" is to design and adopt a regional transportation plan (RTP) that will guarantee that the GHG emissions from *cars and light-duty trucks* (the "Light-Duty Vehicle" or "LDV" category called out in SB 375) will meet the climate-stabilizing requirements provided by climate science. The first climate-stabilizing requirement is for LDVs to emit GHG at no more than 80% below the level they emitted in 1990, by no later than the end of 2030 (Reference 1). The later requirement will be relatively easy, if we meet the 2030 requirement, or "target."

Comments on SANDAG's Draft EIR for Its 2021 RTP

1 of 16

**RESPONSE TO COMMENT 5-1**

SANDAG recognizes that substantial reductions in global, state, and regional GHG emissions are an urgent priority, and strives in its regional plans and programs to do its part in reducing GHG emissions from all sources. The proposed Plan includes many strategies to reduce GHG emissions from light-duty vehicles.

Draft EIR Section 4.8.1 properly describes existing conditions related to GHG emissions, including background information on various greenhouse gases, their sources, and their potential to trap heat in the Earth's atmosphere and contribute to global warming. The Draft EIR describes the main sources of GHG emissions in the state and in the San Diego region. The effects of climate change ("climate destabilization") are summarized, with detailed description based on scientific studies of how climate change is anticipated to impact California and the San Diego region provided in Draft EIR Appendix C. Section 4.8 also describes the regulatory setting for GHG emissions, including descriptions of State legislation and EOs B-30-15 and S-3-05 goals for statewide GHG reductions. The statewide GHG reduction goals adopted by the Legislature and expressed by the Governor's EOs are based on limiting global warming to levels necessary to avoid potentially catastrophic climate change impacts.

The Draft EIR properly evaluates the significant environmental impacts of the proposed Plan and concludes that the Plan would have significant and unavoidable GHG emissions impacts. The Draft EIR then identifies mitigation measures and alternatives to the proposed Plan that would reduce this significant impact. For more detail see Draft EIR Section 4.8 and Chapter 6, *Alternatives Analysis*.

5-1 cont.

The later requirement is to have LDVs and all other GHG emitters emit no more than what can be offset by carbon sequestration. This is the "net zero" emission level of 2045 or perhaps 2050. Often, governments only speak of the "net zero" requirement of 2045 or 2050, without mentioning the more-difficult 2030 requirement. This may be because plans to achieve the 2030 requirement must be built upon the math connecting fleet efficiency in year 2030 and the per-capita driving in 2030 with the 2030 climate-stabilization requirement. The math must account for the percent of our electricity that is renewable.

Therefore, the math must derive the following two items:

- So-called, "fleet efficiency" (CO2 emitted per mile of all the cars on the road, for a given year, given the percent of electricity that is from renewables) and
- per-capita driving

that will combine to achieve the "90% below 1990 level" requirement.

The peer-reviewed Reference 1 does this. It shows 4 cases of fleet-efficiency requirements and the per-capita driving that could be allowed, given the 2030, climate-stabilization requirement stated above.

For the benefit of readers that don't want to look at Reference 1, here is Table 1, showing the 4 cases:

**Table 1 4 Cases that Support the 2030 Climate-Stabilizing Requirement**

**Note: Purple denotes difficult; red, impossible.**

	Case Designations			
	Balanced_1	Balanced_2	2005 Driving	Mary Nichols
% Renewable Electricity	85.0%	90.0%	90.0%	90.00%
% ZEVs, Year 2018	2.0%	2.0%	2.0%	2.70%
% ZEVs, Year 2017	2.0%	2.0%	2.0%	2.70%
% ZEVs, Year 2016	3.0%	3.0%	3.0%	5.11%
% ZEVs, Year 2019	4.0%	4.0%	4.0%	7.53%
% ZEVs, Year 2020	6.0%	6.0%	6.0%	9.94%
% ZEVs, Year 2021	20.0%	15.0%	82.0%	12.35%
% ZEVs, Year 2022	35.0%	25.0%	97.0%	14.76%
% ZEVs, Year 2023	55.0%	45.0%	99.0%	17.18%
% ZEVs, Year 2024	60.0%	70.0%	99.0%	19.59%
% ZEVs, Year 2025	94.0%	95.0%	99.0%	22.00%
% ZEVs, Year 2026	97.0%	97.0%	99.0%	37.60%
% ZEVs, Year 2027	98.0%	98.0%	99.0%	53.20%
% ZEVs, Year 2028	99.0%	99.0%	99.0%	68.80%
% ZEVs, Year 2029	99.0%	99.0%	99.0%	84.40%
% ZEVs, Year 2030	99.0%	99.0%	99.0%	100.00%
% Reduction in Per-Capita Driving With Respect to Year 2005	32.0%	32.0%	0%	50.5%

5-2

**RESPONSE TO COMMENT 5-2**

This comment provides background information about Reference 1, but does not identify any specific deficiencies in the EIR's GHG impact analysis. SANDAG recognizes that substantial reductions in global, state, and regional GHG emissions are an urgent priority, and strives in its regional plans and programs to do its part in reducing GHG emissions from all sources. The proposed Plan includes many strategies to reduce GHG emissions from light-duty vehicles. Draft EIR Section 4.8.1 properly describes existing conditions related to GHG emissions, including background information on various greenhouse gases, their sources, and their potential to trap heat in the Earth's atmosphere and contribute to global warming. The Draft EIR describes the main sources of GHG emissions in the state and in the San Diego region. The effects of climate change ("climate destabilization") are summarized, with detailed description based on scientific studies of how climate change is anticipated to impact California and the San Diego region provided in Draft EIR Appendix C. Section 4.8 also describes the regulatory setting for GHG emissions, including descriptions of state legislation and EOs B-30-15 and S-3-05 goals for statewide GHG reductions. The statewide GHG reduction goals adopted by the Legislature and expressed by the Governor's EOs are based on limiting global warming to levels necessary to avoid potentially catastrophic climate change impacts.

**RESPONSE TO COMMENT 5-3**

This comment provides information about the California Democratic Party platform. The “Plan” noted in the comment is a policy position by a private organization and is not a “state plan.”

The only difference between the “Balanced\_1” case and the “Balanced\_2” case is the increased percentage of electricity that is from renewables, goes from 85% to 90%. That improvement allows the per-cent of new cars that are ZEVs to increase at a less-difficult pace. The “2005 Driving” case is done to prove that it is not feasible. It proves that we must reduce driving. The Mary Nichols case is based on statements made by the retired CARB Chair. CARB does not seem capable of understanding the more-complex 2030 requirement. Therefore, I doubt that Former-Chair Nichols understood that her schedule would need per-capita driving to drop 50.5%, which would be very difficult. CARB and indeed the state of California seem to be pretending that if we achieve the net-zero requirement by 2045, the earth’s climate will not destabilize. However, SANDAG cannot go along with this misinformation.

The derivation of the 2030 climate-stabilizing requirement (target) is shown on Page 6 of Reference 1. Reference 2 is used to present Reference 1. The derivation of the 2030 climate-stabilizing requirement (target) is shown on Slides 11 and 12 of Reference 2. That result is shown here in Figure 1.

5-2  
cont.

**Figure 1 The 2030 Climate Stabilization Target Compared to State Mandates**

5-3

It should be noted that Reference 1 is exactly what the most important environmental-advocacy organization in California, the California Democratic Party (the CDP, AKA the CADEM) has in their Platform. The Party Platform is their official policy. This can be seen in Reference 3, where it says, “Demand a state plan specifying how cars and light-duty trucks can meet climate-stabilizing targets by defining enforceable measures to achieve necessary fleet efficiency and per-capita driving limits.”

5-3  
cont.

Such a plan is noted here as a "Plan". CARB has no such Plan. Nor does SANDAG. Given our climate predicament, any project that needs an EIR, that has to do with driving, needs such a Plan. If any discretionary project that has to do with driving needs an EIR, such as the RTP being considered, if it cannot be shown to conform to such a plan, then it must be assumed to be contributing to climate destabilization.

**Critical Information Left Out of Chapter 1 and the Regional Transportation Plan (RTP)**

Many of the fatal errors of Chapter 1, and the RTP/DEIR in general, can be attributed to the RTP not explaining, up front, the parameter of humanity's Code Red Climate Emergency, as if it plays no role in writing an EIR for the 2021 Regional Transportation Plan. At the front of the RTP's EIR, the following information is needed.

5-4

Figure 2 shows the rise of the world's atmospheric CO2 over the last 50 years. Figure 3 shows both atmospheric temperature (averaged over a year and averaged over the earth, derived from an isotope analysis) and atmospheric CO2 (from air bubbles in ice-core samples), over 800,000 years. It could be noted that our species is only around 300,000 years old. Figure 3 shows that when climate deniers say that climate is always changing and so therefore climate change is normal, they are correct, except for one important consideration. There is nothing normal about the outrageous, recent run-up of atmospheric CO2, to over 410 PPM, in such a short time that it appears to be an instantaneous spike, on Figure 3. Figure 4 shows just 1% (which is just 1,000 years) of the distance on Figure 3, from current time to 100,000 years into the past. For Figure 4, the conventions have been switched: the red line is the earth's atmospheric CO2 and temperature is blue. Figure 4 shows that the CO2 spike is the result of our combustion of fossil fuels because it starts at the start of our industrial revolution. Figure 4 covers the time of the development of our civilization. It shows that everything was normal until about 150 years ago, which is the start of our industrial revolution, when we started to burn fossil fuels. By doing extensive calculations, we know how much CO2 we have produced from the combustion of fossil fuels. Then, by directly measuring the atmospheric CO2 and the acidity of the oceans, we know where that CO2 currently resides. We also know that atmospheric CO2 traps heat. There is no doubt that we have an Anthropogenic Global Warming catastrophe in the making. We are living in a spike of CO2. Neither the magnitude nor the slope have occurred in millions of years. Achieving climate-stabilizing requirements (targets) is our only hope.

5-5

It should also be clearly stated that LDVs, by far, emit more GHG than any other category of emission. Electricity emits the 2<sup>nd</sup> most. However, electricity has a good chance to achieve the 2030 climate-stabilization requirement derived in Reference 1 and shown in Figure 1. Unfortunately, that cannot be said for LDVs. The implementation of Reference 1 or some other Plan like Reference 1 is our only hope, for LDVs.

**RESPONSE TO COMMENT 5-4**

Consistent with CEQA requirements, the Draft EIR properly describes the proposed Plan, evaluates the significant environmental impacts of the proposed Plan, and concludes that the Plan would have significant and unavoidable GHG emissions impacts. The Draft EIR then identifies mitigation measures and alternatives to the proposed Plan that would reduce this significant impact. For more detail see Draft EIR Section 4.8 and Chapter 6.

**RESPONSE TO COMMENT 5-5**

SANDAG recognizes that substantial reductions in global, state, and regional GHG emissions are an urgent priority, and strives in its regional plans and programs to do its part in reducing GHG emissions from all sources. The proposed Plan includes many strategies to reduce GHG emissions from light-duty vehicles. Draft EIR Section 4.8.1 properly describes existing conditions related to GHG emissions, including background information on various greenhouse gases, their sources, and their potential to trap heat in the Earth's atmosphere and contribute to global warming. The Draft EIR describes the main sources of GHG emissions in the state and in the San Diego region. The effects of climate change ("climate destabilization") are summarized, with detailed description based on scientific studies of how climate change is anticipated to impact California and the San Diego Region provided in Draft EIR Appendix C. Section 4.8 also describes the regulatory setting for GHG emissions, including descriptions of State legislation and EOs B -30-15 and S-3-05 goals for statewide GHG reductions. The statewide GHG reduction goals adopted by the Legislature and expressed by the Governor's EOs are based on limiting global warming to levels necessary to avoid potentially catastrophic climate change impacts.

Comments on SANDAG's Draft EIR for its 2021 RTP

5 of 16

**RESPONSE TO COMMENT 5-6**

In the Draft EIR, SANDAG properly evaluates the significant environmental impacts of the proposed Plan and concludes that the proposed Plan would have significant and unavoidable GHG emissions impacts. The Draft EIR then identifies mitigation measures and alternatives to the proposed Plan that would reduce this significant impact. For more detail see Draft EIR Section 4.8 and Chapter 6. Also, please see response to comment Bullock 5-5.

5.8  
cont.

**Primary Challenges Misstated**

Figure 5 is from Section 1 of the EIR of the RTP. It is said to show our "three primary challenges"

Our *Code Red Climate emergency* is mankind's primary challenge. It means that our *Region's* primary challenge is to do its part to ensure that the emission of GHG from our LDVs support climate stabilization.

Reference 1 shows how that can be done. We will need to significantly reduce VMT, as proven in Reference 1 and as shown in Table 1. When that is done, there will be no congestion and, given that fact, it is not correct to assert that *Congestion* is a primary challenge. *Social Equity* is a goal, like "*Democracy*" or "*Equal Opportunity*" that we must always move towards, as fast as we can. However, when "*Social Equity*" is discussed in the context of our Anthropogenic climate change problem, the harm of living close to pollution caused by our reliance on fossil fuels is often mentioned. That harm will be reduced and, in some cases (refineries will be closed), eliminated, if we meet our climate-change challenge. The largest "*Social Inequity*" would be climate destabilization because it would cause a "devastating collapse of the human population" to quote from the June 2008 issue of *Scientific American's* article, *Ethics and Economics of Climate Change*. Many reliable sources write that human extinction will be an outcome of climate change failure, which is the path we are on now. This will be the ultimate *inequity* if it happens and make no mistake, it will probably happen.

5.7

**RESPONSE TO COMMENT 5-7**

SANDAG recognizes that substantial reductions in global, state, and regional GHG emissions are an urgent priority, and strives in its regional plans and programs to do its part in reducing GHG emissions from all sources. Draft EIR Section 4.8.1 properly describes existing conditions related to GHG emissions, including background information on various greenhouse gases, their sources, and their potential to trap heat in the Earth's atmosphere and contribute to global warming. The Draft EIR describes the main sources of GHG emissions in the state and in the San Diego region. The effects of climate change ("climate destabilization") are summarized, with detailed description based on scientific studies of how climate change is anticipated to impact California and the San Diego Region provided in Draft EIR Appendix C. Section 4.8 also describes the regulatory setting for GHG emissions, including descriptions of State legislation and EOs B -30-15 and S-3-05 goals for statewide GHG reductions. The statewide GHG reduction goals adopted by the Legislature and expressed by the Governor's EOs are based on limiting global warming to levels necessary to avoid potentially catastrophic climate change impacts.

The purpose of the Draft EIR is "to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided" (PRC Section 21002.1[a]). The Draft EIR analyzes the significant environmental effects of the proposed Plan, identifies feasible mitigation measures to avoid or reduce these impacts, and presents alternatives to the proposed Plan that could avoid or reduce significant impacts.

In the Draft EIR, SANDAG properly evaluated the significant environmental impacts of the proposed Plan and concludes that the Plan would have significant and unavoidable GHG emissions impacts. The Draft EIR then identified mitigation measures and alternatives to the proposed Plan that would reduce this significant impact. For more detail see Draft EIR Section 4.8 and Chapter 6.

5-7  
cont.

Climate destabilization, as described in Reference 1, will end most life forms and almost certainly our own species. This environmental impact must be fully explained in a legal EIR. The DEIR has no such discussion or explanation.

**Figure 5 The DEIR's Erroneous Claim of "Three Primary Challenges", for our Region**

5-8

**Need to Reimagine**  
I agree with Chapter 1's Page 7 statement that there is an "urgent need to reimagine our regional transportation system".

**Reimagine Example Left Out**  
That is one of the places (Chapter 1's Page 7) where SANDAG should state that we must stop widening freeways. Instead of widening freeways, as called for in the current, fatally flawed, version of the *Transnet* sales tax, we should be reducing the size of our freeways. The well-understood principal of *Induced Traffic Demand* informs us that adding more lanes will not reduce congestion, but it will increase VMT. *Induced Traffic Demand* also informs us that removing lanes will not increase congestion, but it will decrease VMT. As shown in Reference 1 and Table 1, we must reduce VMT. The *Transnet Ordinance* can be changed in an emergency. We have an emergency.

**Vision, Goals, Strategies, and Actions Are Useless if Our Earth's Climate is Destabilized**  
Page 13 starts a discussion which seems to be written for some other planet or for some other time on our planet. Climate destabilization would lead to a collapse of our human population that would lead to our extinction. Therefore, Page 13's

5-9

- *Vision, Goals, Strategies, and Actions* must be replaced with
- *A Requirement, Vision, Goals, Strategies, and Actions.*

Comments on SANDAG's Draft EIR for Its 2021 RTP 7 of 16

**RESPONSE TO COMMENT 5-8**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

SANDAG is required to analyze induced demand impacts of the proposed Plan, which are documented in Appendix D to the proposed Plan. The activity-based model and other analyses used to inform the Plan have been reviewed through SANDAG's peer review process and documented in the technical methodology submitted to CARB, also included in Appendix D.

Where possible, the Plan proposes repurposing of general purpose lanes or shoulders to create Managed Lanes. The Managed Lane system is important for supporting the transit network and Flexible Fleets envisioned in the proposed Plan. The Regional Plan is updated every 4 years, providing opportunities to reflect changes in the network. Improvements to the freeway system in the proposed Plan are limited to Managed Lanes using existing infrastructure such as general purpose lane conversion and shoulders to facilitate additional transit and high occupancy vehicle travel.

**RESPONSE TO COMMENT 5-9**

This comment addresses the proposed Plan and aforementioned information about Reference 1. No further response is required.

5-9 cont. The *Requirement* is to ensure that our transportation system supports the climate-stabilization requirement of 2030, as shown in Figure 1 of this letter. Reference 1 shows how this can be done, for LDVs. Most of the fleet-efficiency requirements are show in Table 1 of this letter. (All of the needed fleet-efficiency requirements are described in Reference 1.) Table 1 also shows the driving reduction that is computed in Reference 1. It is a 32% reduction in per-capita VMT, with respect to year 2005. It's expressed using the SB 375 conventions for expressing driving reductions. Even though SB 375 states that it is about a *GHG* reduction, it is really about a *VMT* reduction, because SB 375 clearly states that the Metropolitan Planning Organizations (MPOs, like SANDAG) can take no credit for GHG reductions accomplished by the state. The state has the fleet-efficiency responsibility. The Metropolitan Planning Organizations (MPOs, like SANDAG) have the responsibility to reduce driving. Therefore, the SB 375 reductions in LDV GHG must be produced by SANDAG measures to reduce LDV VMT. In other words, SANDAG's responsibility is to reduce driving.

5-11 **The Fatal Flaw of Not Saying What's Important**  
 On Page 13 of Chapter 1, it says, "The 2021 Regional Plan reduces per capita GHG emissions from cars and light duty trucks by 20% below 2005 by 2035". The document does not say whether-or-not this is enough to support climate stabilization. Tragically, it is *not* enough to support climate stabilization. The 2030 climate-stabilization requirement is derived in Reference 1 and is shown in Figure 1 of this letter. Similarly, Chapter 1 lists key goals, policies, and Executive Orders that were considered. They are shown in Figure 6.

5-12 The problem is that the document is supposed to be an EIR, which is to say it must report on the environmental impacts of what is being done. The environmental impacts are what will happen in the physical world, not in the legislative or judicial world. To figure out what will happen in the physical world, the resulting emissions need to be compared to what the climate scientist are telling us we must accomplish if we want to stabilize the climate at a livable level.

That information is nowhere to be found in the current DEIR. That is clearly illegal because the decision makers and the public need to understand what will happen to our planet if all transportation planning followed the path described by SANDAG as in the "cumulative effects" consideration.

The "cumulative impacts" consideration means that no one can get by using an argument that a discretionary project being considered is "too small to matter".

Figure 6 is an admission of guilt because it is described as containing SANDAG's "key goals". No climate-stabilization requirement is listed. SANDAG might be, technically, within CEQA law for the 2045 to 2050 requirement of zero net emissions because this happens to be covered by the EO B-55-18 executive order. However, SANDAG needs to state that zero net emissions by 2045 is our second climate-stabilizing target and that is covered by EO B-55-18. Where SANDAG clearly is in violation of CEQA law is that it does not state that the industrialized world's first climate-stabilization requirement (target), which is for 2030, is to emit GHG at no more than 80% below

**RESPONSE TO COMMENT 5-10**

Draft EIR Section 4.16 (Impact TRA-2) properly analyzed whether the proposed Plan would achieve the substantial VMT reductions needed to help achieve statewide GHG reduction goals, finding a significant and unavoidable transportation impact. Nevertheless, Impact TRA--2 does show that the proposed Plan would achieve substantial reductions in per capita VMT.

**RESPONSE TO COMMENT 5-11**

This comment addresses the proposed Plan and aforementioned information about Reference 1. Also, please see response to comment Bullock 5-7.

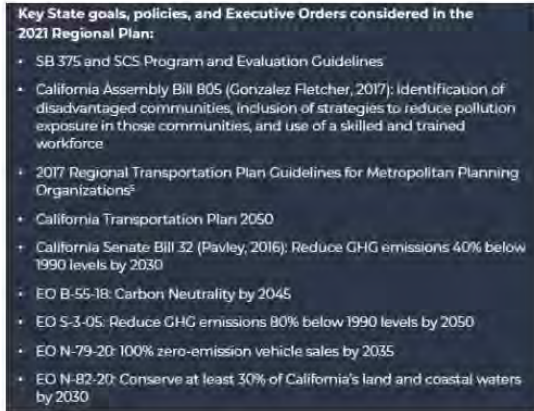

**RESPONSE TO COMMENT 5-12**

The purpose of the Draft EIR is "to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided" (PRC Section 21002.1[a]). Consistent with CEQA requirements, the Draft EIR analyzes the significant environmental effects of the proposed Plan, identifies feasible mitigation measures to avoid or reduce these impacts, and presents alternatives to the proposed Plan that could avoid or reduce significant impacts.

The Draft EIR properly evaluates the significant environmental impacts of the proposed Plan, including using a net-zero significance threshold (Impact GHG-1), and concludes that the Plan would have significant and unavoidable GHG emissions impacts (Impact GHG-5). The Draft EIR then identifies mitigation measures and alternatives to the proposed Plan that would reduce this significant impact. For more detail see Draft EIR Section 4.8 and Chapter 6.

what we emitted in 1990. SANDAG needs to redo its RTP using a Plan like that shown in Reference 1.

**Figure 6 SANDAG's Admission of Guilt Because These Do NOT Cover Achieving the Industrial World's 2030 Climate-Stabilizing Target.**

5-12  
cont.

Achieving the industrialized world's 2030 Climate-Stabilizing Requirement would obviously be a "Key policy" and accomplishment for SANDAG. Figure 6 and the stated organization of the DEIR means that there is no need for me to read further to know that SANDAG has made no effort to consider what it would take for the RTP to conform to achieving the 2030, climate-stabilizing requirement. Page 13 of Chapter 1 presents the RTP's Visions and Goals. There is nothing there about stabilizing the climate at a livable level. That is shown in Figure 6, which is taken from Chapter 1 of the RTP.

5-13

Also, Chapter 2 is defined on Page 15 of Chapter 1. It says there that Chapter 2, the Transportation Plan's Regional Sustainable Community Strategy (SCS, which is required by SB 375), describes "the land use strategies, and programs that will achieve our Vision and Goals."

Chapter 1 has described SANDAG's "Vision and Goals". None of them include achieving the 2030 climate-stabilizing requirement, or "target".

**RESPONSE TO COMMENT 5-13**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

The proposed Plan was developed through a data driven planning process. The forecasted development pattern for the proposed Plan's SCS is driven by regional goals for sustainability, mobility, housing affordability, and economic prosperity. The SCS land use pattern uses areas in the region known as Mobility Hubs to concentrate future development. Mobility Hubs are communities with a high concentration of people, destinations, and travel choices. The SCS land use pattern represents a continuing trend in the San Diego region to provide more housing and job opportunities in the existing urbanized areas of the region.

5-14

5-15

5-16

**RESPONSE TO COMMENT 5-14**

SB 375 required CARB to set regional targets for reducing GHG emissions from passenger vehicle use. SANDAG's State-mandated target is to reduce regional emissions of GHGs from cars and light trucks by 15 percent, per capita, by 2020, compared with a 2005 baseline (CARB 2017). By 2035, a 19 percent reduction is required. The Sustainable Communities Act does not require CARB to establish post-2035 targets.

To achieve the targets, SANDAG and other MPOs are required to develop an SCS as a component of the RTP. The SCS is required by Government Code Section 65080(b)(2)(B) to:

- Identify the general location of uses, residential densities, and building intensities within the region.
- Identify areas within the region sufficient to house all the population of the region, including all economic segments of the population.
- Identify areas within the region sufficient to house an 8-year projection of the regional housing need for the region.
- Identify a transportation network to serve the transportation needs of the region.
- Gather and consider the best practically available scientific information regarding resource areas and farmland in the region.
- Consider specified State housing goals.
- Set forth a forecasted development pattern for the region, which, when integrated with the transportation network, and other transportation measures and policies, will reduce the GHG emissions from automobiles and light trucks, to achieve, if there is a feasible way to do so, the GHG emission reduction targets approved by CARB.
- Allow the RTP to comply with federal Clean Air Act requirements related to air quality conformity.

Appendix D of the proposed Plan documents compliance with these SCS requirements and provides SCS-related background information.

**RESPONSE TO COMMENT 5-15**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

**RESPONSE TO COMMENT 5-16**

In the Draft EIR, SANDAG properly evaluated the significant environmental impacts of the proposed Plan and concludes that the Plan would have significant and unavoidable GHG emissions impacts.

The Draft EIR then identified mitigation measures and alternatives to the proposed Plan that would reduce this significant impact. For more detail see Draft EIR Section 4.8 and Chapter 6.

SANDAG developed a *Parking Strategies for Smart Growth* guide, referenced on page 4.16-13 of the Draft EIR, as part of its *Planning Tools for the San Diego Region*. This guide provides a benchmark and compares the various parking regulations within the region, as well as how those regulations compare to national standards. Additionally, the guide provides example policies on how jurisdictions can implement smart growth parking policies and programs. SANDAG also developed a regional Parking Management Toolbox that provides jurisdictions within the San Diego region with a framework for evaluating, implementing, and managing parking management strategies that support their economic development, sustainability, and mobility goals. One of the proposed Plan's implementation strategies includes updating the Toolbox to account for newer modes and more flexible curb space strategies.

SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and GHG emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.

The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those driving fuel-powered vehicles, are paying more than their fair share.

5-16 cont.

**Table 2 Enforceable Measures to Reduce 2030 Per Capita Driving By 32% With Respect to 2005 Per Capita Driving**

Driving-Reduction Requirments	Per-Cent Reduction	Factor
Legislated (SB 375) Plans to Reduce Driving	12%	0.88
Value-Priced Road Use Charge (RUC)	10%	0.90
Value-Priced Parking (Unbundling the Cost)	8%	0.92
Transfer Highway Expansion Funds to Transit	2%	0.98
Increase Height & Density by Transit Stations	2%	0.98
"Complete Streets", "Road Diet" (walk/bike)	1%	0.99
Pay-to-Graduate Bicycle Traffic-Skills Class	1%	0.99
Bicycle Projects to Improve Access	1%	0.99
<b>Product of Factors</b>		<b>0.68</b>
<b>% Reduction</b>		<b>32%</b>

California designs and implements this

Local governments do this with a 3<sup>rd</sup> party vendor

The first line, "Legislated (SB 375) Plans to Reduce Driving" reflects an assumption that the RTPs in California, which are often required to achieve 19% by 2035, will achieve 12%, five years before the 2<sup>nd</sup> year target of SB 375, which is 2035. Reference 4 has more detail about the 3<sup>rd</sup> line's Value-Priced, car-Parking system. Reference 5 describes the system for all types of parking and even includes a congestion-pricing algorithm. Reference 6 describes the system with an emphasis on employee car parking and how the system could earn extra money for all employees. Reference 7 is a Draft *Requirements Document* that would support an RFP process to identify the best 3<sup>rd</sup> party vendor to design, install, and operate the car-parking system. The selected 3<sup>rd</sup> party vendor would also be good at financing, building, and operating solar canopies; selling electricity to energy districts; and financing, building, and operating charging stations. These tasks need to be added to Reference 7. Reference 8 has more detail about the 2<sup>nd</sup> line's Road Use Charge. It the kind of Road Use Charge (RUC) we need in California. SANDAG and other MPOs need to lobby California to design and implement such a system, ASAP.

5-17

**Consideration of the Draft EIR for the Region Transportation Plan**

Executive Summary

**Table ES-1, Summary of Environmental Impacts and Mitigation Measures**

The GHG-3 line says:

Comments on SANDAG's Draft EIR for Its 2021 RTP

11 of 16

**RESPONSE TO COMMENT 5-17**

This comment addresses the Draft EIR Executive Summary, Table ES-1, Summary of Environmental Impacts and Mitigation Measures (pages ES-4 to ES-24) and asserts that achieving the GHG emissions reductions level of Impact GHG-3 (at least 30 percent reduction in per capita GHG emissions from the entire on-road transportation sector by 2035 compared to existing conditions [2016]) would not be consistent with reducing emissions 80 percent below 1990 levels by 2030, which the commenter refers to as the "industrialized world's 2030 climate stabilizing requirement." As explained in the Draft EIR (page 4.8-28), Impact GHG-3 is based on the target that the SANDAG Board of Directors asked staff to consider when drafting the 2021 Regional Transportation Plan (SANDAG Board Resolution No. 2021-17). Moreover, the Draft EIR also includes four other significance criteria to evaluate GHG emissions generated under implementation of the proposed Plan, including Impact GHG-5, which evaluates regional GHG emissions under proposed Plan implementation using California's targets and goals for Statewide GHG emissions reductions. Specifically, Impact GHG-5 evaluates whether implementation of the proposed Plan would be inconsistent with the State's ability to achieve the Statewide 2030 reduction target of SB 32 and the long-term reductions goals of EO B-55-18 (statewide carbon neutrality no later than 2045) and EO S-3-05 (statewide emissions levels reduced 80 percent below 1990 levels by 2050).

This comment also addresses Impact GHG-5 in Table ES-1, and asserts that the GHG mitigation measures summarized in the table are too vague, with a specific reference to mitigation measure TRA-2, Achieve Further VMT Reductions for Transportation and Development Projects. As explained on Draft EIR page ES-3, this table provides a summary of environmental impacts and mitigation measures to avoid or reduce significant impacts. The full text of mitigation measure TRA-2, which includes a detailed list of project-level VMT reduction measures that SANDAG shall, and the County of San Diego, cities, and other local jurisdictions can and should, implement during the project design and project-level CEQA review phase of transportation network improvements and land development projects (Draft EIR pages 4.16-53 to 4.16-54). No further response is required.

**GHG-3 Conflict with or impede achievement of an at least 30% reduction in per capita GHG emissions from the entire on-road transportation sector by 2035 compared to existing conditions (2016)**

There are no mitigation measures and yet the "Level of Significance After Mitigation" is shown to be "Less-than-significant impact in 2035."

California did not meet its 2020 EO S-3-05 target, which was our 1990 emission level, until around 2019. (This was a case where California achieved a target early.) Therefore, our emission in 2016 exceeded our 1990 level of emission. Therefore, only achieving a "30% reduction in per capita GHG emissions from the entire on-road transportation sector by 2035 compared to existing conditions (2016)" would be an unmitigated environmental disaster. If other MPOs followed this example, we would be unable to stabilize our climate because we would be well past our (the industrialized world's) 2030 climate-stabilizing requirement, of 80% below our 1990 level.

The line for GHG-5 is too vague, in terms of mitigation measures. To have any hope of achieving significant reductions by 2030, measures need to be mature enough to start soon. The mitigation measures shown in this line are little more than wishful thinking. As San Diego County Superior Court Judge Taylor wrote in a ruling in favor of the plaintiffs in their CEQA complaint against the County's woefully inadequate Climate Action Plan, "enforceable measures are needed now". That ruling was issued 9 years ago. SANDAG too often does not listen to me or others that urge enforceable measures that can be started now.

SANDAG instead seems to like words like (these are also from the GHG-5's, "mitigation measures"):

*TRA-2 Achieve Further VMT Reductions for Transportation and Development Projects*,

How would that be done? The "measure" is too ill defined to have any value.

Alternative 3 should be improved upon to conform with Reference 1 and then implemented as fast as possible. TRANSNET need to be modified to align with the improved-upon Alternative 3.

**Table 2-8, Proposed Plan Estimated SB 375 Greenhouse Gas Emissions Reductions for Cars and Light Trucks**

The Proposed Plan's 2035 reduction of 20% is so small that it would help to bring about an environmental disaster.

5-17  
cont.

5-18

5-19

**Phased Next OS Network Improvements and Investments, Page 2-66**

**RESPONSE TO COMMENT 5-18**

Please refer to Master Response 1 for discussion regarding accelerating elements of the Plan. There are constraints on when money becomes available during the lifespan of the proposed Plan. The SANDAG Board of Directors may review the TransNet ordinance and discuss possible updates. This process is outside of the development the proposed Plan. This comment and your support for Alternative 3 is noted for the record and will be forwarded to the SANDAG Board of Directors for its consideration prior to making a decision on adoption of the proposed Plan.

**RESPONSE TO COMMENT 5-19**

Implementation of the proposed Plan would result in a 20 percent reduction in per capita CO<sub>2</sub> emissions from passenger cars and light-duty trucks from 2005 levels by 2035, which exceeds the 2035 target of a 19 percent reduction set by CARB for the SANDAG region. As discussed in Section 4.8 of the EIR, however, the proposed Plan's GHG emissions would be inconsistent with the State's ability to achieve the goals of EO B-55-18 and S-3-05. Mitigation measures would help reduce regional GHG emissions by reducing VMT, increasing use of zero-emission fuels, sequestering carbon from the atmosphere, and other measures; they would reduce inconsistency of the proposed Plan's GHG emissions with the State's ability to achieve the SB 32, EO B-55-18, and EO S-3-05 GHG reduction goals. However, implementation of the many other changes required to achieve these goals is beyond SANDAG's and local agencies' current jurisdiction and authority. As such, impacts were identified as significant and unavoidable.

5-20 Considering our 2030 climate-stabilization target and the derivations of Reference 1, the car-parking system described in References 1 through 7 needs to have numerous successful implementations and be well on the way to being widely implemented by 2025. The words “dynamic curb management”, for 2035, is not encouraging. The car-parking system proposed by this letter and since 2010 by this author certainly includes dynamic curb management. However, SANDAG needs to reach out to get help on this important aspect of the Next OS. I hope we can meet soon.

Likewise, on Pages 2-66 to 2-67 and on Page 2-71 to 2-72, there are hopeful signs that SANDAG could help to foster the changes we need. I would love to meet to discuss these topics.

**Climate Change Destabilization Could Include our Weather**

5-21 Page 3-1 has a description of our current climate and how climate change could change our weather. It needs a statement that destabilization of climate systems (such as the melting of our permafrost or unleashing large amounts of methane from beneath our arctic region, or burning up an enormous expanse of forests, including our Amazon rain forest) could cause much larger variations if these destabilizing systems accelerate and set off other climate-destabilizing systems. The freeze experienced by Texas and measurement of 120 Degrees in Canada show that, when it comes to climate, we are already in uncharted territory. The description of San Diego County’s “current climate” needs a statement that, given the fact that our atmospheric CO2 is at 420 PPM, when it should be at 280 PPM, we really don’t know what might be possible, in terms of current weather.

**Mitigation Measures for Existing Development**

5-22 On Page 4-3, it says, “The EIR includes three broad types of mitigation measures: (1) plan- and policy-level mitigation measures assigned to SANDAG; (2) mitigation measures for transportation network improvements and programs, assigned to SANDAG and other transportation project sponsors; and (3) mitigation measures for development projects implementing regional growth and land use changes, which local jurisdictions implement.”

This will be too little too late and it is an arbitrary decision to do what is easiest. It does not make sense, given the fact of our Code Red Climate Emergency, as explained in this letter. For example, TDM Ordinances need to apply to existing developments. SANDAG should provide no help to municipal governments that fail to have a powerful TDM for their own employees, to set an example, for other employers. The TDM would include the car-parking system described in Reference 1 – 7. SANDAG should do this for their own employees, ASAP, using Reference 7 to start the generation of a Systems Definition document to support an RFP process to identify a good 3<sup>rd</sup> party vendor.

**4.8’s Paragraph on “Global Climate Change”**

Comments on SANDAG’s Draft EIR for Its 2021 RTP

13 of 16

**RESPONSE TO COMMENT 5-20**

Thank you for providing the included resources for SANDAG’s consideration. Between now and 2050, it is anticipated that the drive alone mode share will be significantly reduced. Cars will still play a part in the mobility ecosystem, but effective parking and curb management strategies will be needed as multimodal options within communities increase. The key will be to make the right amount of parking available when it is needed and price it so that alternative commutes are encouraged, and accessibility, equity, and economic development are promoted. Tiered pricing will need to be implemented; for example, free and lower priced parking in outlying, more suburban communities including “gateway” (i.e., end-of-line Transit Leap stations) compared to market-rate pricing in our urban core and other denser communities.

Parking Management is one of the key policy areas included in the proposed Plan. As part of the Plan, SANDAG has designated program funding towards working with local jurisdictions to implement parking management strategies such as parking pricing. In addition, SANDAG develops technical resources to provide jurisdictions with guidance on implementing parking policies, such as the 2014 Parking Management Toolbox. One of the proposed Plan’s implementation strategies includes updating the Toolbox to account for newer modes and more flexible curb space strategies.

**RESPONSE TO COMMENT 5-21**

Appendix C, *Climate Change Projections, Impacts, and Adaptation*, of the EIR describes how climate may change in the San Diego region in the future due to the effects of global warming, and how those changes could affect each of the resource areas discussed in the EIR. The EIR sections evaluate whether the proposed Plan would exacerbate a climate change impact (e.g., creating more housing development in high wildfire risk zones).

**RESPONSE TO COMMENT 5-22**

The Plan proposes a Transportation Demand Management Ordinance that would require employers over a certain size to provide transportation benefits and amenities that encourage sustainable transportation choices. These types of TDM ordinances exist in other regions across the state. A near-term implementation action is to complete a Transportation Demand Management Ordinance Policy Analysis. This policy analysis would detail the employers that the

5-23 This paragraph needs to quantify what we have done to our earth's atmospheric level of CO<sub>2</sub>. We should be at 280 PPM. We are at 420 PPM. This letter's Figures 1, 2, and 3 should be included. The text should make it clear that we are living in a dangerous CO<sub>2</sub> spike.

The paragraph should make the difference between climate change (before the spike) and Anthropogenic climate change (within the spike) clear to the reader.

Thank you for including the 280 PPM and 413 PPM (in 2020) levels in the paragraph on Carbon Dioxide. This needs to be elevated to the first paragraph with the plots. The plot of 800,000 years, showing how outrageous it is that we have created the spike of CO<sub>2</sub>, needs to be shown.

5-23 The discussion at the top of Page 4.8-6 should introduce the reader to the concept of "destabilization" or going over a "climate tipping point" or a "climate cliff." It is a lie by omission to not state that we are in line to experience a devastating collapse of the human population, leading to extinction or near extinction. Our Code Red Climate Emergency should not be hidden. We are in great danger. Some say climate change is an existential threat. In fact, it is a near certainty that anthropogenic climate change will end our existence. Theoretically we could still stabilize the climate at a livable level. We should not give up. However, given what is needed by 2030, along with the public's general disinterest in the details, it is highly unlikely we will avoid destabilization, leading to our demise.

**CARB Does Too Little Too Late**

On Page 4.8-10 it says, "**Mobile Source Strategy**. Developed by CARB to provide an integrated planning perspective and common vision for transforming the mobile sector to achieve air quality and climate change goals."

5-24 We know from the other statements in this document that the "climate change goals" do not include achieving the 2030 climate-stabilizing target of 80% below our 1990 level. This is one reason why Reference 1 is important. Reference 1 derives the mathematical relationships between achieve a reduction in emissions, fleet efficiency, per-capita driving, a low-carbon fuel standard, and the renewable content of electricity.

**Section 4.8: Greenhouse Gas Emissions**

**4.8.4 Significance**

CEQA's Appendix G asks as follows:

VII. GREENHOUSE GAS EMISSIONS. Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly,

ordinance would apply to and mechanisms for implementation and enforcement.

**RESPONSE TO COMMENT 5-23**

This comment addresses the discussion of "Global Climate Change" in Draft EIR Section 4.8.1 (page 4.8-1) and asserts that additional context should be included in this section, including comparison of existing emissions concentrations to pre-industrial levels and information about climate "destabilization" or "tipping points." This section of the DEIR has been revised as follows to include additional information on the latest climate change science as reported by the IPCC in August 2021.

Increases in fossil fuel combustion and deforestation have exponentially increased concentrations of GHGs in the atmosphere since the Industrial Revolution. According to the Intergovernmental Panel on Climate Change (IPCC), human influence has warmed the climate at a rate that is unprecedented in at least the last 2000 years (IPCC 2021). In addition, the IPCC reported with high confidence that in 2019 CO<sub>2</sub> concentrations were higher than at any time in at least 2 million years, and reported with very high confidence that 2019 concentrations of CH<sub>4</sub> and N<sub>2</sub>O were higher than at any time in at least 800,000 years (IPCC 2021). Rising atmospheric concentrations of GHGs in excess of natural levels enhance the greenhouse effect, which contributes to global warming of the Earth's lower atmosphere. This warming induces large-scale changes in ocean circulation patterns, precipitation patterns, global ice cover, biological distributions, and other changes to the Earth's system that are collectively referred to as *climate change*. The scale of recent changes across the climate system as a whole and the present state of many aspects of the climate system are unprecedented over many centuries to many thousands of years (IPCC 2021). The IPCC also reports that many changes in the climate system become larger in direct relation to increasing global warming, including increases in the frequency and intensity of hot extremes, marine heatwaves, and heavy precipitation, agricultural and ecological droughts in some regions, and proportion of intense tropical cyclones, as well as reductions in Arctic sea ice, snow cover, and permafrost (IPCC 2021). In addition, low-likelihood outcomes, such as ice sheet collapse, abrupt ocean circulation changes, some compound extreme events and warming substantially larger than the assessed very likely range of future warming cannot be ruled out (IPCC 2021). Climate change impacts in this analysis are evaluated in the relevant resource sections (e.g., climate change effects

to water supply are discussed in Section 4.18, *Water Supply*, and climate change's influence on wildfire are discussed in Section 4.19, *Wildfire*, and similarly for other sections) and covered in detail in the *Climate Change Projections, Impacts and Adaptation* report in Appendix C.

**RESPONSE TO COMMENT 5-24**

is commenter asserts that the Mobile Source Strategy, which is a plan prepared by CARB to identify the level of transition to cleaner mobile source technologies needed to achieve California air quality, climate change, and community risk reduction goals, does not include a "2030 climate-stabilizing target of 80% below our 1990 level." The 2020 Mobile Source Strategy was approved by the CARB Board on October 28, 2021. This comment is not related to the adequacy of the Draft EIR and no further response is required.

**RESPONSE TO COMMENT 5-25**

This comment references OPR's Discussion Draft report on CEQA and Climate Change and asserts that "a project that will have significant impacts on driving" is required to "conform to a plan showing how LDVs (light-duty vehicles) can achieve our climate-stabilizing targets..." Refer to response to comment Bullock 5-22, which explains that the Draft EIR includes Impact GHG-5, which evaluates regional GHG emissions under proposed Plan implementation using California's targets and goals for statewide GHG emissions reductions. Specifically, Impact GHG-5 evaluates whether implementation of the proposed Plan would be inconsistent with the State's ability to achieve the statewide 2030 reduction target of SB 32 and the long-term reductions goals of EO B-55-18 (statewide carbon neutrality no later than 2045) and EO S-3-05 (statewide emissions levels reduced 80 percent below 1990 levels by 2050).

that may have a significant impact on the environment?

Considering cumulative effects of the proposed RTP, the answer is yes, especially for LDVs. The next question about conflicting with an applicable plan does not matter, given the result of the "letter a" criterion.

Section XVII also applies because it explicitly mentions cumulative impacts and asks:

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Nothing short of a full exchange of nuclear weapons could be worse for people than climate destabilization.

From OPR's Reference 9 with emphasis added:

Each public agency that serves as a CEQA lead agency should develop its own approach to performing a climate change analysis for projects that generate greenhouse gas emissions. A consistent approach should be applied for the analysis of projects, and the analysis must keep pace with scientific knowledge and regulatory schemes. (*Cleveland National Forest Foundation v. San Diego Assn. of Governments, supra*, 3 Cal.5th at 519.) For these projects, compliance with CEQA entails three basic steps: identify and quantify the greenhouse gas emissions; determine the significance of those emissions **in the context of climate change**; and if the impact is found to be significant, identify alternatives and/or mitigation measures that will reduce the impact below significance.

"In the context of climate change" means that the climate science must be applied to the situation. From that, to be legal, a project that will have significant impacts on driving, including its feasible (technologically possible and cost effective) mitigation measures, must conform to a plan showing how LDVs can achieve our climate-stabilizing targets, especially our 2030 target because it occurs so soon. This again shows the importance of Reference 1 or some other such Plan.

Thank you for Tables 4.8-7 and 4.8-8 showing the importance of reducing VMT.

Table 4.8-9 is key. However, its results are insufficient to support climate stabilization. Reference 1 shows we need a 32% value by 2030, which is 5 years sooner than 2035.

Figure 7 shows that the DEIR does not consider what the climate scientists are telling us, which is what we must achieve to stabilize the climate at a livable level. The state mandates shown are not enough to achieve our 2030 climate-stabilizing requirement, which is to emit at a level that is no more than 80% below our 1990 emission level.

**Figure 7 SANDAG's DEIR Section on GHG Does NOT Consider Achieving the Industrial World's 2030 Climate-Stabilizing Target.**

### RESPONSE TO COMMENT 5-26

The proposed Plan is required to reduce GHG emissions from passenger vehicles and light-duty trucks by 19 percent per capita by 2035 compared to 2005 levels, as mandated by SB 375. Reducing GHG emissions and achieving State goals related to carbon neutrality requires actions at all levels of government. SANDAG looks to support and encourage local jurisdictions, State agencies, and other partners to reduce emissions beyond what is achieved by the proposed Plan. The proposed Plan would provide travelers with more travel and mobility options in residential and employment centers that can lead to a reduction in VMT.

### RESPONSE TO COMMENT 5-27

This comment addresses Draft EIR Chapter 7, *Other Considerations Required by CEQA*, Section 7.2.9, which evaluates GHG emissions impacts under a maximum theoretical buildout scenario, and asserts that "state mandates" are insufficient to reduce 2030 emissions to no more than 80 percent below 1990 emissions levels. Refer to response to comment Bullock 5-22, which explains that the Draft EIR includes Impact GHG-5, which evaluates regional GHG emissions under proposed Plan implementation using California's targets and goals for statewide GHG emissions reductions. Specifically, Impact GHG-5 evaluates whether implementation of the proposed Plan would be inconsistent with the State's ability to achieve the statewide 2030 reduction target of SB 32 and the long-term reductions goals of EO B-55-18 (statewide carbon neutrality no later than 2045) and EO S-3-05 (statewide emissions levels reduced 80 percent below 1990 levels by 2050).

5-27  
cont.

**7.2.3 GREENHOUSE GAS EMISSIONS**

Compared to existing conditions, the proposed Plan's GHG emissions would decrease for all horizon years (2025, 2035, and 2050). Under maximum theoretical buildout conditions, regional growth and land use change would result in some increases in GHG emissions, but there would still be net decreases compared to existing conditions.

Development under the maximum theoretical buildout scenario would likely continue in a similar pattern as under the proposed Plan, which encourages compact development, supporting rather than impeding adopted Climate Action Plans (CAPs), GHG reduction plans, and/or sustainability plans relevant to the proposed Plan. Because 2030 GHG emissions under the proposed Plan are higher than the AB 32-based regional reference point, emissions under maximum theoretical buildout are expected to continue to exceed this reference point, which would be a significant impact related to conflicts with AB 32.

Under maximum theoretical buildout, development would likely continue in a similar pattern as under the proposed Plan, which encourages compact development, although per capita GHG emissions from passenger vehicles would somewhat increase. However, the maximum theoretical buildout scenario would likely still achieve, and not conflict with, Senate Bill (SB) 375's per capita GHG emission reduction targets set by the California Air Resources Board (CARB) for the San Diego region.

The proposed Plan would be inconsistent with the State's ability to achieve 2045 and 2050 reference points of net zero and 5.2 million metric tons of carbon dioxide equivalence (MMTCo<sub>2</sub>e), respectively (based on the goals of Executive Orders 2-3-05 and B-5-19). Because GHG emissions would be higher under maximum theoretical buildout, these inconsistencies, which are a significant impact, would be worse. As with the proposed Plan, this would be reduced with the mitigation identified in Section 4.8, Greenhouse Gas Emissions, but impacts would remain significant and unavoidable.

The second paragraph states that the 2030 emissions under the proposed Plan are higher than the AB 32-based regional reference point. Figure 1 of this letter shows that this means the 2030 value is worse than the SB 32 value (40% down from the 1990 value) which is much more emission than the climate-stabilizing value of 80% down.

**In Closing**

Thank you for your leadership in performing your critical work. Thank you for reading this material and for providing the comments and response as required for any comment letter on a DEIR. Please let me know if you would like to meet to discuss this letter or related topics.

5-28

Regards,

Mike Bullock  
1800 Bayberry Drive  
Oceanside, CA 92054  
760-754-8025

5-29

All references were attached to the email sent with this letter. They are all available from Mike Bullock at [mike\\_bullock@earthlink.net](mailto:mike_bullock@earthlink.net)

**RESPONSE TO COMMENT 5-28**

Thank you again for your participation in the environmental review process and for the detailed comments for SANDAG's consideration. Please continue to follow along in this process by visiting [SDForward.com](http://SDForward.com).

**RESPONSE TO COMMENT 5-29**

SANDAG has reviewed the attached reference documents and responded above to those Draft EIR comments that cite or use information from these references documents. No responses to the attachments specifically have been included because they do not contain comments specific to the EIR and/or proposed Plan.

**COMMENT LETTER 6: CLIMATE ACTION CAMPAIGN**

**RESPONSE TO COMMENT 6-1**

Thank you for your comment. SANDAG appreciates your input and support of the proposed Plan.

**RESPONSE TO COMMENT 6-2**

As noted in the comment and as detailed in Section 4.8, *Greenhouse Gas Emissions*, the proposed Plan would be inconsistent with the State's ability to achieve the goals of SB 32, EO B-55-18, and S-3-05. The comment also states that the proposed Plan alone will not achieve these goals. As discussed under Impact GHG-5, additional mitigation measures have been identified at the Plan- and project-specific levels to substantially lessen the amount of proposed Plan GHG emissions in 2030, 2045, and 2050. Furthermore, as discussed in Chapter 2, *Project Description*, SANDAG updates the Regional Plan every 4 years, and, as the State continues to identify new plans and technologies to meet the mid-century GHG emission targets, SANDAG will be able to implement these features into future plans to further the region's progress toward the State's goal of carbon neutrality by 2045.

This comment addresses the proposed Plan and is not related to the adequacy of the EIR.

**RESPONSE TO COMMENT 6-3**

This comment addresses the proposed Plan and is not related to the adequacy of the EIR.

SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the proposed Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, are reflected in Appendix A, Attachment 1 of the proposed Plan.

6-4 Finally, critical to a more sustainable, equitable region is increased affordable housing at existing and future transit stops. The Sustainable Communities Strategy should include a suite of aggressive policies that stop sprawl and support infill. Smart land use is essential to slashing emissions.

6-5 This plan represents an important first step in the shift away from auto-centric planning, and towards a more climate-just, climate-ready transportation future. We look forward to continued engagement with this critical plan, to ensure it is as strong as possible for climate action.

Sincerely,

Noah Harris,  
Policy Advocate  
Climate Action Campaign

**RESPONSE TO COMMENT 6-4**

This comment addresses the proposed Plan and is not related to the adequacy of the EIR.

Appendix B of the proposed Plan presents the Implementation Action strategies proposed to incentivize sustainable growth and development in the San Diego region.

**RESPONSE TO COMMENT 6-5**

Thank you for your participation in this process and for your organization's support of the proposed Plan

**COMMENT LETTER 7: CITY OF CARLSBAD**

Comment Letter 7

Oct. 11, 2021

SANAG Regional Plan EIR  
 San Diego Association of Governments  
 401 B Street, Suite 800  
 San Diego CA 92101  
 C/O Kirsten Uchitel, Associate Planner.  
 Via: [RegionalPlanEIR@sandag.org](mailto:RegionalPlanEIR@sandag.org)

RE: City of Carlsbad Comments on Draft Environmental Impact Report for the 2021 Regional Plan

Dear Ms. Uchitel:

7-1

The City of Carlsbad ("city") appreciates the opportunity to provide comments on the draft Program Environmental Impact Report ("PEIR") for the 2021 Regional Plan ("Plan"), dated Aug. 27, 2021. This is an important plan for the region and will guide the next phase of growth for the member agencies of the San Diego Association of Governments ("SANDAG"), including the city. An effectively designed and implemented regional transportation plan would help ensure improved transportation options for area residents, businesses and other community members, as well as meaningful reductions in greenhouse gas ("GHG") emissions and improved quality of life as we grow our communities.

The city previously submitted comments on the Plan to SANDAG staff on August 6, 2021 (Attachment 1), expressing multiple concerns about the Plan, its implementation and its potential impacts on the environment. Additionally, the city sent a follow up letter on September 30, 2021 (Attachment 2), to clarify the city does not wish to remove El Camino Real (project CB32) from the Regional Arterials Project List. Copies of the city's prior letters are included here as Attachment 1 and Attachment 2, respectively. Both letters are incorporated herein by this reference as additional comments on the adequacy of the PEIR and should be included in the administrative record of SANDAG's proceedings concerning the Plan and the PEIR.

7-2

The California Environmental Quality Act ("CEQA") is intended "to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (*Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.App.3d 247, 259.) With narrow exceptions, CEQA requires an EIR whenever a public agency proposes to approve or to carry out a project or activity that may have a significant effect on the environment. (CEQA Guidelines § 15002(f).) The basic purpose of an EIR is to provide public agencies and the public in general with detailed information about the effect that a proposed project or activity is likely to have on the environment and to identify ways in which the significant effects might be reduced or avoided. (Public Resources Code § 21061; CEQA Guidelines § 15003.) The EIR and its associated process create layers of accountability and must "reflect a good faith effort at full disclosure." (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal. App. 3d 692, 712, citing CEQA Guidelines § 15151.) The EIR process must provide meaningful information for an environmental assessment so that the public will know the basis on which decisions are made on a proposed project or activity and can respond accordingly to action with which it disagrees.

Transportation & Community Development Departments  
 1635 Faraday Avenue | Carlsbad, CA 92008 | 760-602-2710 t

**RESPONSE TO COMMENT 7-1**

This comment includes opening remarks and describes prior letters submitted to SANDAG. No further response is required.

**RESPONSE TO COMMENT 7-2**

This comment largely describes the CEQA framework under which the proposed Plan and Final EIR have been developed. The Final EIR informs decisionmakers and the public generally of the significant environmental effects of the proposed Plan, identifies ways to minimize the significant effects, and describes reasonable alternatives to the proposed Plan (CEQA Guidelines Section 15121(a)). The Final EIR properly considers cumulative impacts (CEQA Guidelines Section 15168(b)(2)), identifies a baseline (CEQA Guidelines Section 15125), describes a range of reasonable alternatives to the proposed Plan (CEQA Guidelines Section 15126.6), and describes feasible mitigation measures that would minimize significant adverse environmental impacts (CEQA Guidelines Section 15126.4).

City of Carlsbad Comments on Draft Environmental Impact Report for 2021 Regional Plan  
 Oct. 11, 2021  
 Page 2

7-2 cont. In this case, the city seeks to ensure that SANDAG prepares an environmental document that is adequate, complete and fully discloses the potential significant adverse effects of the Plan. Further, to implement the principles of CEQA, SANDAG should not truncate the requisite cumulative impact analysis (CEQA Guidelines section 15168(b)(2)), use improper baselines (CEQA Guidelines section 15152), or foreclose the consideration of any alternative or mitigation measure that would ordinarily be part of CEQA review of a regional plan (CEQA Guidelines section 15004(b)(2)(B)). If the EIR fails to provide decision-makers and the public with all of the relevant information regarding a project that is necessary for informed decision-making and public participation, the environmental document is flawed and deficient and the agency's decision will be set aside (*Kings County Farm Bureau v. City of Hanford, supra*, 221 Cal. App. 3d at p. 712).

7-3 CEQA prescribes review procedures a public agency must follow before approving or carrying out proposed projects. Those procedures emphasize the importance of public participation in the CEQA process, including mandatory opportunities for public review and comment and the lead agency's obligation to provide meaningful responses to comments received. A Notice of Preparation (NOP) was issued on November 14, 2016 and a public scoping meeting was held on December 8, 2016. Although the early consultation with affected agencies and organizations was appreciated, and a necessary procedural step per CEQA Guidelines section 15082, SANDAG subsequently made a material change in the scope of the project to encompass the vision of 5 Big Moves, without providing an opportunity for additional scoping and consultation with the public and affected agencies. SANDAG failed to re-engage the public and affected agencies to provide them with sufficient information regarding the revised Plan and its potential environmental effects to enable them to make a meaningful response about the scope and content of the anticipated environmental work. Due to this procedural error, the public and affected agencies have been denied the opportunity to provide SANDAG with specific detail about the significant environmental issues and reasonable alternatives and mitigation measures that needed to be explored in the draft PEIR, early enough in the CEQA process for SANDAG to have considered their comments in preparing the draft PEIR. In addition, SANDAG failed to comply with CEQA by conducting the scoping and public review process for the Plan and the draft PEIR separately, which has resulted in a disconnected, piecemeal and rushed process in which previous comments on the Plan were not responded to or incorporated into the draft PEIR.

7-4 The disjointed and rushed process for public participation continues to the present. According to SANDAG staff, responses to comments on the Plan will be published at the end of October, several weeks after public and agency comments are due on the draft PEIR. Thus, the public and affected agencies like the city must submit comments on the PEIR without knowing whether or how SANDAG has responded to previous comments on the Plan. SANDAG has already indicated that the SANDAG Board will review and consider the Plan and the Final PEIR in December 2021. Thus, there appears to be insufficient time for SANDAG to evaluate comments received on the draft PEIR, prepare meaningful responses and make those responses available as required by CEQA Guidelines sections 15087 and 15088. As such, SANDAG is foreclosing on a "meaningful public participation process" and subjecting itself to a claim that SANDAG is prejudicing the outcome of the environmental review process by ensuring there is little opportunity for public comments to influence the Plan's program and design. ("Environmental review derives its vitality from public participation" (*Ocean View Estates Homeowners Assn. v. Montecito Water Dist.* (2004) 116 Cal. App. 4th 396, 400.) If the issues that were addressed in the city's August 6, 2021 comment letter on the Plan (Attachment 1) are not addressed in the PEIR, the PEIR will be insufficient as an informative document and it will reduce the validity and efficacy of the Plan, including its use of faulty assumptions regarding land use and population growth to comply with

**RESPONSE TO COMMENT 7-3**

This comment inaccurately characterizes the 5 Big Moves as a material change to the scope of the project in the NOP issued on November 14, 2016. In fact, the 5 Big Moves are planning strategies used to develop the proposed Plan, which consists of the Regional Transportation Plan and Sustainable Communities Strategy that identify the San Diego region's future transportation investments and growth through 2050 as described in the NOP.

The statement that the public and affected agencies have been denied the opportunity to provide SANDAG with specific detail about the significant environmental issues and reasonable alternatives and mitigation measures is also inaccurate. As noted by the comment, SANDAG initiated the EIR scoping process on November 14, 2016, through the circulation of a NOP. Receipt of the NOP by the State Clearinghouse (Clearinghouse) at the California Office of Planning and Research on November 14, 2016, initiated a 60-day comment period that ended January 13, 2017.

The NOP provided formal notification consistent with the CEQA Guidelines to all federal, State, and local agencies involved with funding, and to other interested organizations and members of the public, that an EIR will be prepared for the proposed Plan. The NOP was intended to encourage interagency communication concerning the proposed Plan and provide sufficient background information so that agencies, organizations, and individuals could respond to SANDAG

with specific comments and questions on the scope and content of this EIR. Appendix A to the Final EIR summarizes the issues raised in the NOP comments and identifies the EIR section(s) that address that issue or provides another response to the issue raised as appropriate. The NOP is provided in full in Appendix A-1. The written comments are provided in full in Appendix A-2.

In addition, SANDAG noticed and held a public scoping meeting, consistent with CEQA (PRC Section 21083.9), on December 8, 2016, at SANDAG's office at 401 B Street, San Diego, CA 92101. The purpose was to receive perspective and input from agencies, organizations, and individuals on the scope and content of the environmental information to be addressed in the EIR.

The comment also mischaracterizes the CEQA requirements for review of the Draft EIR. There is no CEQA requirement to conduct the public

comment period for the Draft EIR required by CEQA Guidelines Section 15087 simultaneously with the public comment period required by Government Code Section 65080 for the proposed Plan. There is also no CEQA requirement for comments on the Draft Plan to be responded to or incorporated into the Draft EIR. The Draft EIR properly evaluates the Draft Plan and preparation of each has run concurrently consistent with CEQA Guidelines Section 15004. SANDAG has evaluated comments received on environmental issues and prepared written responses consistent with CEQA Guidelines Section 15088. Responses to comments received on the Draft EIR are included herein (Appendix P.1 of this Final EIR)..

#### **RESPONSE TO COMMENT 7-4**

This comment mischaracterizes the process for public participation in the Draft and Final EIRs. There is no CEQA requirement to conduct the public comment period for the Draft EIR required by CEQA Guidelines Section 15087 simultaneously with the public comment period required by Government Code Section 65080 for the proposed Plan. There is also no CEQA requirement for comments on the Draft Plan to be responded to or incorporated into the Draft EIR. The Draft EIR properly evaluates the Draft Plan and preparation of each has run concurrently consistent with CEQA Guidelines Section 15004. SANDAG has evaluated comments received on environmental issues and prepared written responses consistent with CEQA Guidelines Section 15088. Responses to comments received on the Draft EIR are included herein (Appendix P.1 of this Final EIR), and responses to comments received on the proposed Plan are included in Appendix P.2 of the Final EIR.

This comment also incorrectly asserts that the EIR uses faulty land use assumptions. Government Code Section 65080(b)(2)(B) provides that an SCS “use most recent planning assumptions considering local general plans and other factors.” It also requires that the SCS “set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board.” The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the proposed Plan.

Specific to public outreach conducted by SANDAG, there have been extensive opportunities for meaningful public participation in the proposed Plan and EIR. SANDAG initiated the EIR scoping process on November 14, 2016, through the circulation of an NOP. Receipt of the NOP by the State Clearinghouse at the California Office of Planning and Research on November 14, 2016, initiated a 60-day comment period that ended January 13, 2017. The NOP provided formal notification to all federal, State, and local agencies involved with funding, and to other interested organizations and members of the public, that an EIR will be prepared for the proposed Plan. The NOP was intended to encourage interagency communication concerning the proposed Plan and provide sufficient background information so that agencies, organizations, and individuals could respond to SANDAG with specific comments and questions on the scope and content of this EIR. Appendix A summarizes the issues raised in the NOP comments and identifies the EIR section(s) that address that issue or provides another response to the issue raised as appropriate. The NOP is provided in full in Appendix A-1. The written comments are provided in full in Appendix A-2.

Consistent with CEQA (PRC Section 21083.9), SANDAG noticed and held a public scoping meeting on December 8, 2016, at SANDAG's office at 401 B Street, San Diego, CA 92101. The purpose was to receive perspective and input from agencies, organizations, and individuals on the scope and content of the environmental information to be addressed in the EIR.

To support the development of the proposed Plan, SANDAG implemented a comprehensive public outreach and involvement program consistent with State and federal requirements. Early in the planning process, SANDAG developed a Public Involvement Plan (PIP) to guide the public outreach program, which was updated in mid-2019. The PIP identifies public engagement techniques to involve the public and collect input for the proposed Plan, including public workshops, social media, visualizations, and other means. It describes how to connect with hard to reach communities such as tribal nations and low-income and minority populations. A detailed description of the PIP can be found in Appendix G of the proposed Plan.

The Draft EIR for the proposed Plan was released to the public on August 27, 2021, and was available for a 45-day public review period, as required by CEQA. SANDAG published a Notice of Availability (NOA) for the Draft EIR in local newspapers on August 27, 2021, and mailed the

NOA to an extensive distribution list. SANDAG also filed a Notice of Completion (NOC) with the State Clearinghouse to indicate the availability of the Draft EIR for public review and comment on August 27, 2021. The Draft EIR was distributed to the agencies, organizations, and individuals that provided written comments on the NOP, the SANDAG Board of Directors, SANDAG member agencies, and other interested parties and stakeholders. Agencies, organizations, and individuals were invited to provide written comments on the Draft EIR during the public review period from August 27 to October 11, 2021.

The Draft EIR and all appendices were available for review online at [www.sdforward.com](http://www.sdforward.com), at SANDAG offices located at 401 B Street, Suite 800, San Diego, California 92101, and at the San Diego Central Library located at 330 Park Boulevard, San Diego, California 92101. The Central Library will facilitate inter-library transfers upon request by a member of the public in order to provide access at local libraries. On a case-by-case basis, the San Diego Central Library can also digitize documents and transfer them to other libraries. No such requests were made of the Central Library with respect to the Draft EIR, nor were any requests made of SANDAG with respect to providing access to the Draft EIR during the Public Comment Period.

There will be a further opportunity for public participation on December 10, 2021, at the SANDAG Board of Directors meeting where decision makers will consider certification of the Final EIR and adoption of the proposed Plan.

City of Carlsbad Comments on Draft Environmental Impact Report for 2021 Regional Plan  
 Oct. 11, 2021  
 Page 3

state and federal mandates, such as the Sustainable Communities Strategy and greenhouse gas reduction targets. These faulty assumptions misrepresent the vital land use-transportation planning connections and do nothing to reduce greenhouse gasses and will instead result in unplanned increases to traffic, greenhouse gases, and result in increased housing unaffordability.

7-4  
 cont.

While the city supports the main concepts of the Vision in the Regional Plan, the 5 Big Moves, there needs to be an adequate analysis on how the Plan will be implemented, and what will occur if there are changes to the projected growth, technology, and/or state law impacting existing conditions. The city's residents, businesses, and property owners would have benefited from more time to read the details in the Plan and draft EIR. After years of public outreach that lacked detail of the assumptions and projects proposed in the Plan, the Plan is now being rushed to decision by the SANDAG Board of Directors by the end of 2021. This is a procedural error and not adequate for the purposes of CEQA.

7-5

The city also restates its prior request that the following language be added to the Regional Plan for additional clarification on land use authority: "Land use authority is reserved to local jurisdictions because they are best positioned to effectively implement the objectives outlined in the Plan through understanding of the unique needs of their communities and geographies." This language is needed to clarify that land use authority rests with the local jurisdiction. Although this principle should be obvious, the inconsistencies between the Plan and the city's General Plan discussed below suggest that it has been ignored. Further the draft EIR should identify how the Program EIR will be utilized for streamlining with later activities and/or for use with subsequent EIRs and negative declarations in compliance with CEQA Guidelines section 15168(c) and (d).

In addition, the city has the following substantive comments on the adequacy of the PEIR:

1. The PEIR fails to disclose the Plan's inconsistencies with the Carlsbad General Plan and to analyze the related potential environmental impacts. The Legislature has declared a policy "to protect California's land resource, to ensure its preservation and use in ways which are economically and socially desirable in an attempt to improve the quality of life in California." (Gov. Code § 65030.) To further this policy, each of the state's cities and counties is required to adopt a comprehensive, long-term general plan for the physical development of that city or county. (Gov. Code § 65300.) Accordingly, the city adopted a General Plan in compliance with state law and most recently updated it in 2015. the city's General Plan "sets forth land use compatibility policies applicable to future development in the vicinity." These policies are designed to ensure that future land uses in the surrounding area will be compatible with the realistically foreseeable activity in the city.

7-6

Growth projections for the region are based on population, vehicle trends and land use plans developed by the cities and the County of San Diego ("County") as part of their general plans. Many different regional documents rely on the same information to develop water demand projections, air quality performance standards, emission inventories, and emission reductions. The Plan would result in an increase in residential land use resulting in corresponding increases in indirect and cumulative vehicle miles traveled ("VMT"), GHG emissions and air pollutant emissions, as well as inconsistencies with RAQS, SIP, and regional traffic modeling. This is not disclosed in the draft PEIR. CEQA Guidelines section 15125(a) requires EIRs to contain a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the NOP is published, or if no NOP is published, at the time environmental analysis is commenced, from both a local and regional perspective. Existing general plans, including their Land Use Elements, should

**RESPONSE TO COMMENT 7-5**

The following language has been added to Chapter 2 of the proposed Plan: "Land use authority is reserved for local jurisdictions under state law, and because they understand the unique needs of their communities and geographies."

The comment inaccurately suggests that the City's General Plan has been ignored in the developing the proposed Plan. SANDAG relied upon local general plans and other factors to develop the forecasted development pattern for the region consistent with Government Code Section 65080(b)(2)(B). Consistency of the proposed Plan with relevant general plans is analyzed in Section 4.11, *Land Use*, of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions' general plans or other local planning documents. Consistency of individual second-tier projects with these policies would be considered during project-specific CEQA reviews.

The Draft EIR identifies how it can be utilized for streamlining with later activities and/or for use with subsequent environmental analyses in Section 2.6.1.

**RESPONSE TO COMMENT 7-6**

Consistency of the proposed Plan with relevant general plans and LCPs is analyzed in Section 4.11 of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions' general plans, LCPs, or other local planning documents. Consistency of individual second-tier projects with these policies would be considered during project-specific CEQA reviews.

Government Code Section 65080(b)(2)(B) provides that an SCS "use most recent planning assumptions considering local general plans and other factors." It also requires that the SCS "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board." The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and

policies in the Plan. As the comment notes, the SCS land use pattern focuses growth and development in the Mobility Hub areas.

In July 2018, SANDAG received the RHNA Determination from the California Department of Housing and Community Development, requiring that the region plan for 171,685 housing units during the sixth housing element cycle, which covers the years 2021 through 2029. As described on page 4.14-9 of the Draft EIR, the SANDAG Board of Directors adopted the 6th Cycle RHNA Plan in July of 2020, which allocates housing units to jurisdictions based on each jurisdiction's share of transit and jobs within the region. The proposed Plan also accommodates the 6th Cycle RHNA Plan allocations consistent with Government Code section 65080(b)(2)(B).

This comment inaccurately asserts that the Draft EIR does not disclose analysis of VMT, GHG and air pollutant emissions, and inconsistencies with RAQs, SIP, and regional traffic modeling. The EIR evaluates each and the relevant identified impacts in Sections 4.3 (*Air Quality*), 4.8 (*Greenhouse Gas Emissions*), 4.11 (*Land Use*), 4.14 (*Population and Housing*), and 4.16 (*Transportation*), as well as Chapter 5 (*Cumulative Impact Analysis*), among others.

This comment also inaccurately asserts that the Draft EIR does not disclose the land use assumptions in the identified baseline for the proposed Plan. Section 3.3 describes the Existing Land Use and Development Patterns as of 2016, the year in which the NOP for this EIR was published. In addition, Figure 4.11-1 in Section 4.11 depicts the land use pattern for the entire San Diego region in 2016.

The comment inaccurately suggests that the City's General Plan has been ignored in the developing the proposed Plan. SANDAG relied upon local general plans and other factors to develop the forecasted development pattern for the region consistent with Government Code Section 65080(b)(2)(B). The thresholds for land use analysis in Appendix G of the CEQA Guidelines include an evaluation of whether the project causes a significant environmental impact due to a conflict with a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. A conflict alone does not necessarily result in a significant environmental impact. As stated above, consistency of the proposed Plan with relevant general plans is analyzed in Section 4.11 of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions' general plans or other local planning

documents. Consistency of individual second-tier projects with these policies would be considered during subsequent project-specific CEQA reviews.

City of Carlsbad Comments on Draft Environmental Impact Report for 2021 Regional Plan  
 Oct. 11, 2021  
 Page 4

7-8  
 cont.

have been utilized for this baseline analysis and to derive future population and housing estimates. The draft PEIR is legally inadequate because it fails to plainly identify the specific assumptions included in its baseline for land use. (*San Joaquin Rescue Center v. County of Merced* (2007) 149 Cal. App. 4th 645.)

In the draft PEIR, SANDAG should have evaluated and clearly articulated the Plan's potential impacts on land use. Instead, the PEIR states that: "The forecasted development of the proposed Plan is based on the Series 14 Regional Growth Forecast SCS land use pattern, which is, in turn, based on the adopted general plans of the cities and County of San Diego and on the most recent planning assumptions, considering local general plans and other factors, as required by SB 375." This statement is incorrect. The Plan is inconsistent with the city's General Plan because it proposes residential land uses where such uses are not authorized by the General Plan. The PEIR appears to ignore this inconsistency in concluding there will be less than significant impacts for the years 2025, 2035 or 2050.

The city has two mobility hubs in the proposed Plan and draft PEIR: McClellan-Palomar Airport, the fifth largest employment center in the region; and Carlsbad State Beach and Carlsbad Village as "Tier 3 and Tier 4" employment centers. Attachment 1 shows a summary of the Mobility Hubs and housing units assumed in the Series 14 Growth Forecast for the year 2050. The assumptions in the updated Series 14 Growth Forecast contain inconsistencies with respect to at least three locations in which density is shown to be inconsistent with the city's General Plan, the Airport Land Use Compatibility Plan and good planning principles. These three problematic areas are:

- a. 736 units on parcels immediately adjacent to the McClellan-Palomar Airport runway. The location of the airport within this mobility hub was shared with SANDAG staff multiple times at workshops. This is inconsistent with the regulations provided by the San Diego County Regional Airport Authority and conflicts with standard planning principles for siting housing away from hazards;
- b. 2,755 units on existing developed resort properties and open space dedicated lands adjacent to Legoland; and
- c. 65 units in a preserved open space area.

7-7

The Plan proposes residential uses in areas which are not designated for such uses in the city's General Plan. This inconsistency results in potential significant impacts with respect to land use, public safety and noise. (See CEQA Guidelines, Appendix G, §§ IX(e), XI(b), XIII(c).) Because residential use is not authorized in those locations in the city's General Plan, the Plan's assumption that residential use will occur there results in an overstatement of the extent to which other impacts, such as those associated with VMT, GHG and other pollutant emissions, will be reduced and understates those potential impacts of the Plan. The only meaningful evaluation of the Plan's potential impacts is a brief qualitative description of the City of San Diego's community plan process. However, the PEIR does not meaningfully address the inconsistency with the general plans of the other 17 member jurisdictions, which if not implementing this plan will cause a significant environmental impact due to the conflict with any land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

As noted above, the Land Use, Hazards and Noise sections of the draft PEIR must include an evaluation of the inconsistencies with local land use plans. Multiple areas in Carlsbad are controlled as to their use and activity density and intensity through their spatial association with the McClellan-Palomar Airport. The McClellan-Palomar Airport is defined by the Federal Aviation Administration

### RESPONSE TO COMMENT 7-7

Government Code Section 65080(b)(2)(B) provides that an SCS "use most recent planning assumptions considering local general plans and other factors." It also requires that the SCS "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board." The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the proposed Plan.

This comment mischaracterizes the impact of the land use assumptions underlying the proposed Plan on the VMT, GHG, and air quality resource analyses included in the Draft EIR. The proposed Plan focuses growth and development in the Mobility Hub areas. The allocation of housing units to subregional areas represents general areas projected for future growth, not specific parcels, for future housing development or housing unit type. Specifically, outputs are generated at the Master Geographic Reference Area (MGRA)-level for use as inputs to SANDAG's Activity Based Model (ABM). MGRAs are comparable in size to census blocks and cover the entire region. A number of land uses at the parcel level, aggregated up, comprise these general areas and VMT, GHG, and air quality impacts are analyzed at the regional level consistent with the programmatic nature of this EIR.

For Carlsbad, the SCS land use pattern forecasts 6,575 housing units from 2016 to 2050, which is within the total housing unit capacity of the City's general plan as provided to SANDAG (6,992 housing units) and accommodates the City's RHNA allocation of 3,873 housing units by 2035. The precise zoning at the parcel level is within local jurisdictions' land use authority. As such, future development projects would undergo separate, project-specific environmental review, and any impacts associated with conflicts with land use plans, policies or regulations, including the general plan and any applicable airport land use compatibility plans, would be evaluated and mitigated when the timing, location, and other specifications of a specific project have been defined.

The thresholds for land use analysis in Appendix G of the CEQA Guidelines include an evaluation of whether the project causes a

significant environmental impact due to a conflict with a land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect. A conflict alone does not necessarily result in a significant environmental impact. As stated above, consistency of the proposed Plan with relevant General Plans is analyzed in Section 4.11 of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions' general plans or other local planning documents. Consistency of individual second-tier projects with these policies would be considered during subsequent project-specific CEQA reviews.

City of Carlsbad Comments on Draft Environmental Impact Report for 2021 Regional Plan  
 Oct. 11, 2021  
 Page 5

- 7-7 cont. ("FAA") as a commercial service airport that, in addition to private aircraft, has regularly scheduled commercial flights. The McClellan-Palomar Airport Land Use Compatibility Plan ("ALUCP") is prepared according to FAA requirements and adopted by the San Diego County Regional Airport Authority acting as the Airport Land Use Commission for the County of San Diego. Further detail on this is included in the city's August 6, 2021 comment letter (Attachment 1).
- 7-8 2. Additionally, looking at data provided by SANDAG, it is now clear why the citywide numbers only show moderate increases in population. Our analysis has shown that there is an assumed reduction of population by 2,310 persons in the areas within the city but outside of the mobility hubs. This is likely due to assumed reductions in persons per household over time, but SANDAG should clarify the source and reasonableness of this assumption. If housing is provided outside the Mobility Hubs consistent with these areas, is it still reasonable to assume persons per household will be reduced in 2050? The PEIR also fails to consider the effect of Senate Bill 9 ("SB 9"), which will allow duplex or quadplex development in any area previously zoned for single family use. As a result of the new law, housing growth would be expected to increase in single-family residential areas. By failing to take into account the effect on population growth of developing additional housing outside the Mobility Hubs, the PEIR results once again in an understatement of the Plan's potential impacts and an overstatement of the Plan's beneficial effects on VMT, GHG and other pollutant emissions.
- 7-9 3. Furthermore, this reduction in population is not limited to the city of Carlsbad. There is an approximately 85,000 person reduction in population assumed outside of mobility hubs regionwide. SANDAG needs to address if that is a reasonable assumption and if this will result in other impacts to public and private projects that will rely on this growth forecast, and the associated Activity Based Model (2+) to project future impacts to transportation, GHG, air quality and noise.
- 7-10 4. A project will normally have a significant effect on the environment if it will conflict with adopted environmental plans and goals of the community where it is located (see Appendix G to the CEQA Guidelines). The facts and analysis in the PEIR don't support a finding of less than significant impact for consistency with general plans beyond the year 2025, where at least there is a correlation, intentional or otherwise, with the current Regional Housing Needs Allocation that each jurisdiction is planning for. Beyond 2025, the assumptions in the land use chapter have had a more in-depth analysis, and if not substantiated, should be designated as significant and unavoidable. If there are impacts determined to be significant and unavoidable, mitigation measures should be designed to lessen the impact; the current draft EIR includes no related mitigation measures. In *Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal. App. 4th 1036, the Court of Appeal for the First Appellate District held that an EIR must satisfy the substantial evidence standard of review as to all of the required elements of an EIR; address the environmental impacts of the proposed project to a degree of specificity consistent with the underlying activity being approved; and properly allow for supplemental review that may be necessary in the future. Therefore, the draft PEIR must be revised to explain the nature and magnitude of a proposed project or activity with respect to land use and planning checklist criteria (Appendix G to the CEQA Guidelines).
- 7-10 4. Since these projections are related to the GHG reductions and compliance with Senate Bill 375, it puts the entire evaluation and basis for compliance into question. If these assumptions are not made, it will have significant impacts to the GHG emissions, and the metric tons of annual emissions that comprise over 40 percent of the regional total. As currently drafted, the Plan's land use assumptions related to GHG contributions do not comply with other specific state and federal mandates including SB 375, which achieves targets set by the California Air Resources Board and

**RESPONSE TO COMMENT 7-8**

Proposed Plan Appendix F, *Series 14 Regional Growth Forecast and SCS Land Use Pattern*, details the development of the population and job growth projections that are reflected in the Draft EIR. The Series 14 Regional Growth Forecast aligns with the regional population projection from the California Department of Finance released in January 2020 and reflects population declines or lower population growth in certain areas in the region. These assumptions, described in Regional Plan Appendix F, include an increase in the region's vacancy rate to 4 percent by 2040, an accounting of vacation rentals and second homes as "unoccupiable," and a decrease in household size from 2.75 persons per household in 2016 to 2.62 persons per household by 2036. Data for all the counties in the United States show that as the population ages, household size declines, and the Series 14 Regional Growth Forecast assumes that due to the aging population in the region, a similar pattern will be observed. This is achieved by converging to household formation rates from the 2010 decennial census by 2035, which are held at that level through the end of the forecast.

With respect to SB 9, this State legislation was approved in September 2021 and will not take effect until January 1, 2022. The Series 14 Regional Growth Forecast incorporates assumptions for about accessory dwelling units (ADUs) occurring in the local jurisdictions as potential future capacity for housing unit development in recognition of recent legislation that had already been passed at the state level when the forecast was developed. ADUs were assumed to be available on 5 percent of all single-family lots in the region that were 5,000 square feet or larger. This equates to about 20,000 additional units of housing unit capacity throughout the region outside of the rural villages in the unincorporated area. This is consistent with a report from the San Diego Housing Commission that projected a rate of ADUs occurring on about 5 percent of available single-family zoned parcels. Including lots 5,000 square feet or larger ensures that ADUs are assumed to be possible in all areas of the region, including the more urbanized areas where lot size is smaller.

Specific to the SCS Land Use Pattern and its beneficial effects, SB 375 requires the SCS to "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a

feasible way to do so, the greenhouse gas emission reduction targets approved by the state board.” The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the Plan by focusing growth and development in mobility hub areas. Here, the comment describes a speculative impact resulting from SB 9.

With respect to future development projects, the degree of specificity required in an EIR will correspond to the degree of specificity involved in the underlying activity (CEQA Guidelines Section 15146). As a programmatic document encompassing the entire region, the proposed Plan and its EIR do not analyze project-specific impacts of future development projects implemented by the local jurisdictions or private developers.

#### **RESPONSE TO COMMENT 7-9**

This comment inaccurately generalizes the thresholds for land use analysis in Appendix G of the CEQA Guidelines. The thresholds do not include evaluating consistency with the “goals of the community,” but rather an evaluation of whether the project causes a significant environmental impact due to a conflict with a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. To reflect the programmatic level of analysis and the unique characteristics of the proposed Plan, this EIR analyzed whether implementation of the proposed Plan would cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation (including, but not limited to, the general plan, LCP, or zoning ordinance) and result in a physical change to the environment not already addressed in the other resource chapters of this EIR.

The thresholds for land use analysis in Appendix G of the CEQA Guidelines include an evaluation of whether the project causes a significant environmental impact due to a conflict with a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. A conflict alone does not necessarily result in a significant environmental impact. As stated above, consistency of the proposed Plan with relevant general plans is analyzed in Section 4.11 of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions’ general plans or other local planning documents. Consistency of

individual second-tier projects with these policies would be considered during subsequent project-specific CEQA reviews.

**RESPONSE TO COMMENT 7-10**

This comment asserts that the land use assumptions of the proposed Plan do not comply with State and federal mandates including SB 375, federal civil rights (Title VI) requirements, environmental justice considerations, air quality conformity, and public participation. The comment also asserts that CEQA Guidelines Section 15125 regarding discussion of the environmental setting in an EIR “helps establish the basis for compliance” with Government Code requirements regarding the planning assumptions of the proposed Plan’s SCS, and that existing general plan land use maps “should have been used as the most recent planning assumptions” to develop 2035 GHG targets set by CARB.

The proposed Plan has been prepared in compliance with applicable State and federal requirements, as explained below. Proposed Plan Appendix D describes how the proposed Plan fulfills the requirements of an SCS as described in SB 375, including requirements for public involvement. The proposed Plan’s compliance with SB 375 requirements for public involvement are further documented in proposed Plan Appendix G. Proposed Plan Appendix G also addresses how the proposed Plan’s Public Involvement Program is consistent with Title VI of the federal Civil Rights Act of 1964 (42 USC 2000d), Executive Order 12898 on Environmental Justice, and other relevant laws and guidance to ensure social equity, environmental justice, and accessibility in the planning process. Refer to proposed Plan Appendix H for information about social equity and the proposed Plan.

Proposed Plan Appendix F describes how data used to develop the SCS land use pattern are based on the most recent planning assumptions, considering local general plans and other factors, per SB 375 (Government Code Section 65080[b][2][B]). Contrary to the commenter’s assertion, CEQA requirements regarding discussion of the environmental setting in an EIR have no relationship to SB 375 requirements to use the most recent planning assumptions in an SCS.

Proposed Plan Appendix C describes how the proposed Plan complies with transportation air quality conformity determination requirements by providing a demonstration of conformity for the 2008 and 2015 ozone NAAQS for the proposed Plan.

- 7-10 cont. compliance with federal civil rights (Title VI) requirements, environmental justice considerations, air quality conformity, and public participation. Please refer to Attachment 1 for more background discussion about the city's concerns regarding the technical methodology used to estimate GHG emissions from the sustainable communities strategy. Pursuant to CEQA, the environmental baseline for GHG emissions shall be established based upon the physical conditions at the project site at the time of the NOP, or no NOP, at the time the environmental analysis commenced. The environmental setting requirements of CEQA Guidelines section 15125, which directs SANDAG to utilize existing general plan land use maps, helps establish the basis for compliance with Government Code section 65080(b)(2)(H) and (J) as those land use map regulations existed at the time of the NOP or when the environmental analysis commenced; and should have been used as the most recent planning assumptions to develop per capital passenger vehicle-related greenhouse gas emissions targets for 2035 set by the California Air Resources Board.
- 7-11 5. The Transportation chapter of the draft EIR lacks sufficient detail and explanation to adequately understand and provide comment on the transportation analysis that was used to determine the project impacts and related performance metrics such as Average Daily Trips (ADT), VMT and travel mode share. The following comments are intended to provide this additional information and a better understanding of the identified transportation impacts:
- 7-12 a. The analysis methodology used for the Transportation chapter does not provide a description of how the ABM2+ analysis outputs such as Average Daily Trips (ADT), Mode Share, and Vehicle Miles Traveled (VMT) are calculated for each of the travel modes. Without this information, it is difficult to understand how the transportation network improvements impact these analysis metrics for future year conditions and for consideration of potential project mitigations.
- 7-13 b. Section 4.16.4 "Transportation Environmental Impact and Mitigation Measures" should provide a description of the proposed transportation projects for each travel mode by horizon year with reference to Appendix B of the EIR document.
- 7-14 c. In order to directly compare the project list with the project impacts found in section 4.16.4, it is recommended to reorganize the tables found in Appendix B by travel mode and horizon year with indication of project mileage.
- 7-15 d. Does the EIR consider the long term or permanent impact of COVID-19 on travel behavior patterns throughout the region? Was the ABM2+ model adjusted to account for changes in travel behavior due to the COVID-19 pandemic? Were additional adjustments made to key mode choice variables such as rates for tele-work, vehicle ownership, and traveler sensitivity to use transit or carpool as a result of these travel behavior changes?
- 7-16 e. As mentioned above, significant issues need to be addressed in the Plan which should also be addressed in the EIR including:
- 7-17 i. Grade separation in Carlsbad from Cannon Road to the northern border.
- ii. The impacts of implementing roundabouts in the Complete Corridors.
- iii. Alternative analysis for moving the grade separated 110mph transit leap commuter rail to the east thereby reducing all the negative impacts of having the current North County Transit District (NCTD) alignment running along the sensitive coastline, lagoons

**RESPONSE TO COMMENT 7-11**

Footnote 2 on page 4.16-1 of the Final EIR has been updated to include the following link which provides a detailed description of the background, data sources, methodologies, and outputs associated with ABM2+.

Link:

<https://www.sandag.org/index.asp?subclassid=120&fuseaction=home.subclasshome>.

**RESPONSE TO COMMENT 7-12**

References to Appendix B have been added to pages 4.16-31, 4.16-35, and 4.16-39 of the Draft EIR. As the comment notes, the references have been added to direct the reader to the descriptions of the proposed transportation projects for each travel mode by horizon year.

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed 2021 Regional Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects under the Plan are subject to environmental review and will follow applicable laws and regulations, including coordination and permitting requirements of the local jurisdictions within which future development and transportation improvements fall.

**RESPONSE TO COMMENT 7-13**

Appendix A of the proposed Plan has been revised to present proposed transportation projects for each travel mode by horizon year.

**RESPONSE TO COMMENT 7-14**

Due to data/survey availability, ABM2+ largely relies on pre-pandemic survey (2016/2017 household behavior, 2019 SB1 TNC, and 2015 transit onboard surveys); therefore, the pandemic's impact on behaviors such as transit/carpool usage and auto ownership are not reflected in ABM2+. Based on information from the National Household Travel Survey, California Household Travel Survey, 2016/17 Household Behavior Survey, and the ACS, SANDAG developed a telework trend to project future telework rates. Researchers from the Institute of Transportation Studies at UC Irvine reviewed and confirmed the telework assumptions used in the proposed Plan. The increase of telework has a had steady increase that is reflected in ABM2+. It is

unclear what long-term travel behavior has changed as a result of the pandemic and if that change will be the “new normal.” SANDAG has a plan to update ABM2+ to ABM3 to reflect the “new normal” travel behaviors, once surveys conducted in a new normal year become available. The new normal condition is important for creating a long-range planning model. It is unclear at this moment, when and if the new normal has arrived and any modifications to the telework assumption used in ABM2+ would be speculative.

**RESPONSE TO COMMENT 7-15**

The proposed Plan includes a funding category for grade separations on the LOSSAN Corridor (included in Commuter Rail Route 398). Leucadia Boulevard grade separation is included in 2035 plus two yet to be determined locations by 2050. These would be determined at a later date. The degree of specificity required in an EIR corresponds to the degree of specificity involved in the underlying activity (CEQA Guidelines Section 15146). The proposed Plan is a programmatic document, and specific details concerning project-level impacts and mitigation will be evaluated during project-level environmental review (including Commuter Rail Route 398 project-level analysis).

**RESPONSE TO COMMENT 7-16**

Roundabouts, curb extensions, and similar traffic calming measures are included in the Mobility Hub complete streets investments as a means for slowing vehicular traffic in neighborhoods where a higher volume of multimodal travel to/from key destinations, particularly active transportation, is anticipated. The locations for these improvements are not defined in the proposed Plan and would be done in coordination with local jurisdictions.

**RESPONSE TO COMMENT 7-17**

The degree of specificity required in an EIR corresponds to the degree of specificity involved in the underlying activity (CEQA Guidelines Section 15146). The proposed Plan is a programmatic document, and specific details concerning project alternatives will be evaluated during project-level environmental review.

7-17 cont. and coastal open space, and coastal village land use that promote mobility and look to reduce bifurcation issues caused by the current at grade NCTD alignment. The potential bifurcation issues also constitute a potential significant impact on land use in that the Plan will exacerbate the alignment's effect on dividing the established downtown Carlsbad community.

6. The alternatives analysis does not describe a range of reasonable alternatives to the project because it does not include an analysis of an alternative that evaluates what will occur if the faulty land use, and therefore transportation, assumptions do not occur. The alternatives are constructed to reduce impacts through even more focused growth in Mobility Hubs and through increased value pricing and revenue generation. While it may be true these would reduce impacts, it does not provide policy makers or members of the public a reasonable range of alternatives as required by CEQA. Additionally, due to the aforementioned SB 9 being signed by the Governor, the reduction in population assumed in suburban areas outside of the mobility hubs is both inconsistent with reality and with planning principles required by the California Department of Housing and Community Development to not concentrate all future growth in certain locations. CEQA and the CEQA Guidelines require that an EIR describe all reasonable alternatives to the project and any feasible mitigation measures (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal. 3d 400, 404). Because the draft PEIR does not discuss future land use conflicts with applicable general plans, it fails to disclose ways to reduce or eliminate the environmental impacts of the project and to respond to the major environmental issues identified during the planning process (as a project alternative or as a mitigation measure) pursuant to Public Resources Code section 21002 (see *Friends of the Old Trees v. Department of Forestry & Fire Protection* (1997) 52 Cal. App. 4th 1383). The draft PEIR's analysis of the project alternatives and mitigation measures is incomplete and, therefore, inadequate.

7-18

Section 15126 of the CEQA Guidelines requires that all aspects of a project must be considered when evaluating its impact on the environment, including planning, acquisition, development, and operation. The implementation and challenges to fund the Plan have not been appropriately discussed. One of the project alternatives should accommodate transportation investments that can be reasonably funded within the horizon of the plan under the current ("known") funding mechanisms. Because the draft EIR does not discuss a financially constrained alternative, the analysis of the project alternatives and mitigation measures is incomplete, and therefore, inadequate.

7-19

7. Where regional planning processes have not resulted in the adoption of plans or regulations relating to the environment, CEQA requires public agencies to engage in an analysis of the impacts of the proposed project on the environment. (Public Resources Code §§ 21000; 21002.1; 21003.1(b); 21080(d); 21081; 21082.2(a).) Although there is a general analysis of projected growth in the region, there is a lack of detail with respect to growth inducement or reasonably foreseeable future projects implementing Public Resources Code section 21155 – 21155.4 (CEQA streamlining for SCS consistency) and/or other reasonably foreseeable development that may result. The provision or improvement of transportation infrastructure, utilities, water and sewer service to an area can induce growth by removing impediments to development. Once services are extended or improved in an area, economic incentives for development exist. The basic elements and principles of the Plan have been designed to facilitate future smart growth and concentrate population growth in areas that would be efficiently served by transportation facilities. The smart growth concept is the basis

7-20

**RESPONSE TO COMMENT 7-18**

As explained in Master Response 1, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives and that are potentially feasible.

This comment incorrectly asserts that the EIR uses faulty land use assumptions. Government Code Section 65080(b)(2)(B) provides that an SCS “use most recent planning assumptions considering local general plans and other factors.” It also requires that the SCS “set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board.” The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the proposed Plan.

With respect to SB 9, this State legislation was approved in September 2021 and will not take effect until January 1, 2022. The Series 14 Regional Growth Forecast incorporates assumptions about ADUs occurring in the local jurisdictions as potential future capacity for housing unit development in recognition of recent legislation that had already been passed at the state level when the forecast was developed. ADUs were assumed to be available on 5 percent of all single-family lots in the region that were 5,000 square feet or larger. This equates to about 20,000 additional units of housing unit capacity throughout the region outside of the rural villages in the unincorporated area. This is consistent with a report from the San Diego Housing Commission that projected a rate of ADUs occurring on about 5 percent of available single-family zoned parcels. Including lots 5,000 square feet or larger ensures that ADUs are assumed to be possible in all areas of the region, including the more urbanized areas where lot size is smaller.

This comment also inaccurately characterizes the discussion in *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal. 3d 376. The Court does not state that CEQA requires an EIR to describe *all* reasonable alternatives to the project. Rather, the Court in *Laurel Heights* stated that “[a]n EIR’s discussion of alternatives must contain analysis sufficient to allow informed decision making” (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988)

47 Cal. 3d 376, 404). Moreover, CEQA Guidelines Section 15126.6 specifically states that “[a]n EIR need not consider every conceivable alternative to a project.”

Consistency of the proposed Plan with relevant general plans is analyzed in Section 4.11 of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions’ general plans or other local planning documents. Consistency of individual second-tier projects with these policies would be considered during subsequent project-specific CEQA reviews.

#### **RESPONSE TO COMMENT 7-19**

This comment mischaracterizes the requirements for a financially constrained RTP and inaccurately states that the implementation and challenges to fund the proposed Plan have not been appropriately discussed. Federal and State laws require SANDAG to develop a regional plan built on reasonable assumptions of the revenues that will be available during the period covered by that plan (Government Code Section 65080(b)(4); 23 CFR 450.322(f)(10)(ii)). New funding sources are revenues that do not currently exist or that may require additional steps before the MPO or transit agency can commit such funding to transportation project. (2017 RTP Guidelines for MPOs). Strategies for ensuring their availability must be identified and future revenues may be projected based on historical trends, including consideration of past legislative or executive actions (2017 RTP Guidelines for MPOs). The level on uncertainty in projects based on historical trends is generally greatest for revenues in the “outer years” (10 years or more) of an RTP. Appendix V of the proposed Plan explains the anticipated revenues to fund implementation of the proposed Plan. Table V.3 describes the availability assumptions for new revenue sources identified in Appendix V.

As explained in Master Response 1, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives and that are potentially feasible.

#### **RESPONSE TO COMMENT 7-20**

Population and growth impacts are analyzed in Section 4.14 of the EIR. As stated on pages 4.14-16 and 4.14-17: “the regional growth and land use change forecasted in the proposed Plan would be implemented by local jurisdictions through local plans and individual development

projects, and most transportation network improvements would be implemented by transportation project sponsors other than SANDAG. The proposed Plan has been developed to accommodate forecasted regional growth and failing to do so would be inconsistent with the federal and State requirements for RTPs. In addition, precluding growth would conflict with the requirements to provide sufficient housing for the region's population contained in SB 375. As discussed in Section 4.14.2, Government Code Section 65080(b)(2)(B)(ii) requires that the RTP/SCS must house all the population of the region, including all economic segments of the population, over the course of the planning period of the regional transportation plan.”

This comment also addresses future transit priority projects. As described above, future development projects would be implemented by local jurisdictions. CEQA Guidelines Sections 21155 through 21155.4 identify CEQA streamlining provisions for transit priority projects that are consistent with an MPO's SCS that has been accepted by CARB. Figures D.8 and D.9 in Appendix D of the proposed Plan identify potential areas for transit priority projects. The proposed Plan is an iterative planning document that is typically updated every 4 years to account for new data, analysis, policy, and experience. SANDAG looks forward to coordinating with the City on future Plan updates.

City of Carlsbad Comments on Draft Environmental Impact Report for 2021 Regional Plan  
 Oct. 11, 2021  
 Page 8

7-20  
 cont.

for the framework for prioritizing public land use and transportation investments in the region. The smart growth concept identifies areas where smart growth development exists or could be built and provides a basis for planning transportation facilities and transit services in the proposed Plan. Smart growth areas identified receive prioritized infrastructure investments and transit services to support smart growth. This carries true to those smart growth areas that are accommodated by existing general plans, and for other areas that are not covered by existing general plans. CEQA requires that an EIR discuss the ways in which the proposed project could foster economic or population growth or the construction of additional housing, either directly or indirectly, in the environment surrounding the project. CEQA requires this discussion to include ways in which a project would remove obstacles to population growth or encourage and facilitate other activities that could significantly affect the environment (CEQA Guidelines section 15126.2(d)). The level of detail should reflect the level contained in the plan or plan element being considered (*Rio Vista Farm Bureau Center v. County of Solano* (1992) 5 Cal.App.4th 351), inclusive of new smart growth areas as designated.

7-21

City staff looks forward to working with SANDAG on improving mobility and land use access in the region and building sustainable, equitable and healthy modes of transportation. We appreciate the opportunity to comment on the Plan that will help the region realize these goals. While at the same time, city staff also looks forward to helping SANDAG advance a legally adequate PEIR to support the disclosure and decision-making process. Since the major premise of CEQA is that it “be interpreted in such manner as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language” (*Friends of Mammoth v. Board of Supervisors*, supra, 247, 259), SANDAG should take all action necessary to alert the decision-makers and the public to the environmental changes associated with the project (*County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810). There is no shortcut to CEQA - the EIR process protects not only the environment by also informed self-government (*Laurel Heights Improvement Assn. v. Regents of University of California*, supra, 376, 392). The SANDAG Board must certify that the final PEIR has been completed in compliance with CEQA and that it considered all of the information in the final EIR before approving or disapproving the project. As of this writing, the draft PEIR is not in compliance with CEQA.

If you have any questions related to comments on the transportation network, please contact Tom Frank, Transportation Director/City Engineer, at [Tom.Frank@carlsbadca.gov](mailto:Tom.Frank@carlsbadca.gov) or, if you need additional information related to comments on the land use assumptions, please contact Eric Lardy, Principal Planner, at [Eric.Lardy@carlsbadca.gov](mailto:Eric.Lardy@carlsbadca.gov).

Sincerely,

JEFF MURPHY  
 Community Development Director

TOM FRANK  
 Transportation Director/City Engineer

**RESPONSE TO COMMENT 7-21**

SANDAG has fully complied with the requirements of CEQA in the preparation of the Draft and Final EIRs for the proposed Plan.

Regarding disclosure of the proposed Plan’s physical impacts on the environment in the Draft and Final EIRs, SANDAG has disclosed impacts and identified mitigation measures for impacts on aesthetics and visual resources; agricultural and forestry resources; air quality; biological resources; cultural resources; energy; geology, soil, and paleontological resources; GHG; hazards and hazardous materials; land use; mineral resources; noise and vibration; population and housing; public services and utilities; transportation; tribal cultural resources; water supply; wildfire; and cumulative impacts, and has identified alternatives to the proposed Plan consistent with CEQA, the CEQA Guidelines, and the discussion in *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247 referenced in the comment. For clarity with respect to the cited discussion in *County of Inyo v. Yorty* (1973) 32 Cal.App. 3d 795, the court states that an EIR is an “environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return” (*County of Inyo v. Yorty*, p. 810). The court also cites an earlier version of PRC Section 21000, which states that the government of the state should “take all action necessary to protect, rehabilitate, and enhance the environmental quality of the state” (*County of Inyo v. Yorty*, p. 802). The court in *County of Inyo v. Yorty* does not state that lead agencies “should take all action necessary to alert decision-makers and the public to the environmental changes associated with the project,” contrary to the comment’s assertion.

Prior to consideration and certification of the Final EIR, and consistent with the discussion in *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal. 3d 376, SANDAG will provide the SANDAG Board of Directors with a Final EIR completed in compliance with CEQA Guidelines Section 15132 that reflects SANDAG’s independent judgment and analysis as required by CEQA Guidelines Section 15090 (a). SANDAG will also present the SANDAG Board of Directors with Findings consistent with CEQA Guidelines Section 15091, a Statement of Overriding Considerations consistent with Section 15093, and a Mitigation Monitoring and Reporting Program consistent with Section 15097 prior to the SANDAG Board of Directors’ consideration of the proposed Plan and Final EIR.

RE: City of Carlsbad Comments on Draft 2021 Regional Plan

To Whom It May Concern,

The City of Carlsbad appreciates the opportunity to provide comments on the draft 2021 Regional Plan ("Plan"). This is an important plan for this region and will guide the next phase of growth for the member agencies of the San Diego Association of Governments ("SANDAG"). An effectively designed and implemented regional transportation plan would help ensure improved transportation options for area residents, businesses and other community members; meaningful reductions in greenhouse gas ("GHG") emissions; and improved quality of life as we grow our communities.

The City of Carlsbad ("city") is submitting comments based on the policies, projects, programs and other improvements included in the Plan. Our agency's comment letter is divided into two sections. The first section seeks clarity and other considerations that pertain to our agency's review of the Plan. The second section identifies the city's preliminary comments and recommendations.

Implementing the regional transportation network outlined in the Plan requires municipalities to support the regional vision and deliver on local infrastructure and services like the priority bus routes, local bus services, and pedestrian and cycling connections to major transit infrastructure. These components, which are delivered by municipalities, are essential to creating a coherent and comprehensive local transportation network that feeds into regional services. For that reason, an effective public review of the Plan should involve a transparent and thorough process for identifying and evaluating potential hazards, physical changes to the environment and indirect (off-site and cumulative) impacts that might result from implementation activities that may reasonably occur with the Plan.

The city's residents, businesses and other community members will greatly benefit from the involvement and technical assistance from the prospective Draft Environmental Impact Report ("EIR"). Therefore, what follows in this correspondence represents our agency's preliminary comments and recommendations. The city reserves the right to add, amend, change or replace comments and recommendations based on additional review and understanding of the Plan and the environmental analysis provided under the California Environmental Quality Act ("CEQA").

The city thanks SANDAG staff for meeting with city staff on Aug. 2, 2021, to discuss some of these comments in advance of this letter. Following that meeting, SANDAG provided language that they may recommend adding to the Regional Plan for additional clarification on land use authority. The language is, "Land use authority is reserved to local jurisdictions because they are best positioned to effectively implement the objectives outlined in the Plan through understanding of the unique needs of their communities and geographies." This language will be helpful to clarify that land use authority rests with

Transportation & Community Development Departments

 Page 3

2. The city has three mobility hubs, associated with the Employment Centers Published supporting the SANDAG Regional Plan.<sup>1</sup> McClellan-Palomar Airport is the fifth largest employment center in the region, with Carlsbad State Beach and Carlsbad Village as "Tier 3 and Tier 4" employment centers. The city thanks SANDAG for providing data for analysis to determine impacts and provide for accurate comments on the Plan. Attachment 2 shows a summary of the Mobility Hubs and housing units assumed in the Series 14 Growth Forecast for the year 2050. In summary:
- a. The assumptions in the updated Series 14 Growth Forecast contain inconsistencies with the city's General Plan. The Carlsbad Palomar Major Employment Mobility Hub does include increases in density beyond what the citywide numbers appear to show when they are looked at in more detail.
    - i. There are three locations in which density is shown to be inconsistent with good planning principles, the city's General Plan and the Airport Land Use Compatibility Plan. The three most problematic areas (shown in Attachment 3) are:
      1. 736 units on parcels immediately adjacent to the McClellan-Palomar Airport runway. The location of the airport within this mobility hub was shared with SANDAG staff multiple times at workshops. This is inconsistent with the regulations provided by the San Diego County Regional Airport Authority and conflicts with standard planning principles for siting housing away from hazards.
      2. 2,755 units on existing developed resort properties and open space dedicated lands adjacent to Legoland.
      3. 65 units in a preserved open space area.
    - ii. SANDAG should provide additional detail why units were assumed in these areas, what planning principles those decisions were based on, and how SANDAG expects this to be implemented.
    - iii. Concentration of units in the mobility hubs alone appears to conflict with the direction received from the California Department of Housing and Community Development ("HCD") to implement new Affirmatively Furthering Fair Housing ("AFFH"), which seeks to combat housing discrimination, eliminate racial bias, undo historic patterns of segregation, and lift barriers that restrict access in order to foster inclusive communities and achieve racial equity, fair housing choice and opportunity for all Californians. The allocations of land use provided by SANDAG seem to focus all the higher density housing into one area of the city. (This is one of the largest points of analysis that each jurisdiction in the region needs to respond to in order to receive a certified Housing Element.)
  - b. Additionally, looking at the detailed data provided by SANDAG, it is now clear why the citywide numbers only show moderate increases in population. Our analysis has shown that there is an assumed reduction of population by 2,310 persons in the areas within the city but outside of the mobility hubs. This is likely due to assumed reductions in persons per household over time, but SANDAG should clarify the source and reasonableness of this assumption. If housing is not provided consistent with these areas, is it still reasonable to assume persons per household will be reduced in 2050?

Attachment A

City of Carlsbad Comments on Draft 2021 Regional Plan  
 Aug. 6, 2021  
 Page 2

the local jurisdiction. The city still offers the following comments with the intent to support development of a defensible and realistic regional plan.

**SECTION 1: CLARITY AND OTHER CONSIDERATIONS**

City staff have attended the series of workshops that SANDAG hosted during the public review period, and respectfully starts this section with several questions related to the process of the Plan and the Draft EIR. By way of introduction, a jurisdiction's General Plan, such as the city's General Plan, identifies the expected population of the city and any lands outside of the city limits but within their Sphere of Influence where future growth is anticipated to occur. The city's General Plan identifies the subject area adjacent to the McClellan-Palomar Airport for development under the designation for limited and light industrial use.

For future land use planning, land use assumptions must reasonably proxy and be generally consistent with local planning standards and programs, to be considered growth accommodating rather than growth inducing. SANDAG has the authority under Government Code Section 65584 to determine existing and projected housing needs, as well as the share of housing needs to be allocated to cities and counties, but it is unclear if SANDAG has jurisdiction to allocate new housing growth to areas in a manner not consistent with Government Code Section 65584. Attachment 1 includes additional information on the applicable Government Code and standards. Therefore, and as indicated above, the build-out of properties within the Business Park and flight activity zone must be done in accordance with the city's General Plan Land Use Diagram, as amended, in accordance with city approval.

The initial questions on the planning process associated with developing the Plan are provided below:

1. The SANDAG website states, "The SANDAG Sustainable Communities Strategy and Final EIR from its 2015 Regional Plan will remain valid and in compliance for purposes of state funding eligibility and other state and federal consistency purposes until the SANDAG Board of Directors adopts a new Regional Plan and EIR, provided those actions are completed by the end of December 2021." SANDAG needs to clarify how the Draft EIR, Response to Comments and Adoption will be completed this year and what will occur if they are not completed by the end of this year. Additionally, please clarify when the Draft EIR will be available; it is difficult to completely assess the full impacts of this plan when the public review of the documents is piecemealed.
  - a. SANDAG should clarify how public comments on the Plan are going to be addressed in the Draft EIR prior to its release.
  - b. In the Draft EIR, SANDAG needs to clearly articulate the impacts to land use and if the Plan will cause a significant environmental impact due to a conflict with any land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Appendix F: Regional Growth Forecast and Sustainable Communities Strategy Land Use Pattern appears to be inconsistent with the city's General Plan and rezone program to accommodate the Regional Housing Needs Assessment, as well as the general plans of other jurisdictions such as the cities of Coronado, Del Mar and the County of San Diego. The Draft EIR should clarify how implementation of this Plan can occur if those changes are not made.

7-22  
 cont

Attachment A

City of Carlsbad Comments on Draft 2021 Regional Plan  
 Aug. 6, 2021  
 Page 4

7-22  
 cont.

- c. Furthermore, this reduction in population is not limited to the City of Carlsbad. There is an approximately 85,000 reduction in population assumed outside of mobility hubs regionwide. SANDAG needs to address if that is a reasonable assumption and if this will result in other impacts to public and private projects that will rely on this growth forecast, and the associated Activity Based Model (2+) to project future impacts to transportation, GHG, air quality and noise.
  - d. The forecast has decreased in future population based on current trends, but it is not clear if there is enough housing provided with reductions and increases in some jurisdictions. Will the reduced amount of housing that will be provided result in an increased exacerbation of the affordability crisis?
  - e. There is a lack of clarity about how the Plan would be implemented at the municipal level. SANDAG should develop an approach for engaging with municipalities to ensure local support for delivering the regional transportation network. Staff from local jurisdiction have the knowledge and ability to share where there are land use assumptions that conflict with planning and zoning laws. Our analysis focused on the City of Carlsbad, but if these types of assumptions are made regionwide, it presents flaws in the overall analysis. These flaws put the assumed reductions in vehicle miles traveled ("VMT") and ability to implement the Regional Plan into question.
3. The area designated is controlled for use and activity density and intensity through its spatial association with the McClellan-Palomar Airport. The McClellan-Palomar Airport is defined by the Federal Aviation Administration ("FAA") as a commercial service airport that, in addition to private aircraft, has regularly scheduled commercial flights to Los Angeles International Airport ("LAX"). The McClellan-Palomar Airport Land Use Compatibility Plan ("ALUCP") is prepared according to FAA requirements and adopted by the San Diego County Regional Airport Authority acting as the Airport Land Use Commission for the County of San Diego.
- a. The ALUCP provides measures to minimize the public's exposure to excessive noise and safety hazards within areas around the airport and identifies areas likely to be impacted by noise and flight activity created by aircraft operations at the airport. These impacted areas include the Airport Influence Area ("AIA"), the Clear Zone and the Flight Activity Zone.
  - b. Within the AIA, the ALUCP establishes six safety zones for the purpose of evaluating safety compatibility of new/future land use actions. The safety zone boundaries depict relative risk of aircraft accidents occurring near the airport and are derived from general aviation aircraft accident location data and data regarding the airport's runway configuration and airport operational procedures. The ALUCP limits development intensities in these zones by imposing floor area and lot coverage maximums, by incorporating risk reduction measures in the design and construction of buildings, and/or by restricting certain uses altogether. For example, all residential and virtually all non-residential uses are considered incompatible land uses in some zones, while considered to be either compatible or conditionally compatible with the airport in other zones. Attachment 4 shows the McClellan-Palomar Airport, noise contours and SANDAG's proposed housing units.
  - c. If the proposed SANDAG land use assumptions are endorsed, an amendment to the city's General Plan would be required to change the land use designation to Mixed-Use Commercial or residential land uses within the existing Business Park in order to effectuate the underlying assumptions of SANDAG staff. This is not a realistic

## Attachment A

City of Carlsbad Comments on Draft 2021 Regional Plan  
 Aug. 6, 2021  
 Page 5

7-22  
 cont.

- assumption. Further, the protected airspace referenced in the AIA and the ALUCP must also be amended based on SANDAG's regional planning assumptions. (The FAA establishes airspace protection zones in the airspace above and surrounding airports in order to protect aircraft from obstructions such as buildings, towers, etc. in navigable airspace.)
- d. When a General Plan is adopted or amended, the allowable growth pattern of an area is identified and the expansion or updating of the various land uses as specified in the General Plan can occur throughout the planning horizon. Without such growth considerations, the expansion or intensification of existing land uses could be considered "growth inducing." Unplanned and uncontrolled growth may have significant adverse impacts on the environment. CEQA requires a discussion of how a "project" could increase population, employment or housing growth in surrounding areas and the impacts resulting from this growth. The CEQA Guidelines indicate that a "project" would normally have a significant effect on the environment if it would induce substantial growth or a substantial concentration of population.
4. At this point, it is not clear if SANDAG's assumptions adequately contemplate the development patterns included in the Sustainable Communities Strategy ("SCS"/Regional Transportation Plan ("RTP"), and Regional Air Quality Strategy ("RAQS"), local climate action planning business-as-usual estimates, sub-regional traffic modeling, or the airspace assumptions of AIA and the ALUCP.
5. The city seeks clarity on the Plan's underlying assumptions made to justify the proposed extensive high-speed rail network considering the significant changes in travel behavior which have occurred throughout the region as a result of the COVID-19 pandemic and due to the advancements in disruptive technologies such as telecommuting, autonomous vehicles, microtransit, etc.
- a. Recent North County Transit District ("NCTD") Coaster ridership data show riders are not returning to riding the Coaster in comparison to other modes of travel as shown in Attachment 5.
- b. This question is consistent with comments made by SANDAG's panel expert Bob Poole regarding the impact of the COVID-19 pandemic on transit ridership and mega-transit projects. (See comments by Bob Poole during the March 12, 2021 presentation to SANDAG starting at timestamp 1:30 p.m.: [https://youtu.be/q-e6bNYSJ\\_8?t=5410](https://youtu.be/q-e6bNYSJ_8?t=5410))
6. The city seeks clarity on why an alternatives analysis was not conducted with consideration of other transit alternatives such as automated /shared vehicle technologies and personalized zero emissions transit programs that are capable of utilizing the existing regional freeway infrastructure in response to these recent developments explained in the above comment.
7. The city seeks clarity on why the Plan does not incorporate policies to promote roundabouts over signalized intersections and include a budget line item under the Complete Corridors to fund the construction of roundabouts at new locations and to replace signalized intersections when found feasible. This clarification would support the Federal Highway Administration ("FHWA")'s project for *Accelerating Roundabout Implementation in the United States* and the *County of San Diego Air Pollution Control Board's support for implementing roundabouts to address GHG and reduce fatalities*.
8. The city seeks clarity on the project phasing proposed within the Plan. Specifically, the city is seeking to understand the timing of implementation of unfunded TransNet projects related to

Attachment A

City of Carlsbad Comments on Draft 2021 Regional Plan  
 Aug. 6, 2021  
 Page 6

the new projects presented within the Regional Plan. To support this, the city is requesting that SANDAG input the information requested in Table 1 (Attachment 6).

9. The city seeks specific data on the proposed 200 miles of rail service contemplated in the Plan. To support this, the city is requesting that SANDAG input the information requested in Table 3 (Attachment 7). Specific questions:
  - a. Please provide more information about the scope of the high-speed rail alignments, potential vehicle technologies and their cost estimates.
  - b. Will the Coaster keep the same rail alignment?
  - c. What funding is programmed or planned for the Carlsbad Village railroad trench and the other projects along the current NCTD/Coaster Service right-of-way?
  - d. Will some of the tracks be at grade with fencing and trains traveling at 110 miles per hour speeds?

**SECTION 2: COMMENTS AND RECOMMENDATIONS**

In addition to the comments on process and the Draft EIR provided above, city staff remain concerned that there is not enough detail on the feasibility of implementation of this significant shift in transportation strategy. On specific content in the plans, we outline our recommendations and comments below:

1. *Paying for the Plan:*

The draft 2021 Regional Plan sets out an ambitious plan to build and operate a region-wide system of transportation projects, programs and other improvements. This is a substantial role for SANDAG to play in supporting both the construction and operation of these projects, programs and other improvements. SANDAG should set annual revenue targets to directly fund everything and should approve any recommended sustainable revenue tools to help meet these targets. Many of the funding strategies will require legislative changes, or voter-approved taxation. SANDAG should clarify what will occur if the funding is not available, if opposition to projects stops them from construction, and if General Plans in the region are not modified to implement the Plan.

2. *Appendix D: Sustainable Community Strategy Documentation:*

Appendix D includes the Sustainable Communities Strategy, which outlines assumptions included in the Activity Based Model 2+ ("ABM 2+"), updated for this. This model will be necessary for use by publicly and privately initiated land use projects preparing documents for consistency with VMT/CEQA Guidelines and Traffic Impact Analysis ("TIA") Evaluations. City staff respectfully request direction from SANDAG on how to conduct modeling with the service bureau and how to factor in these assumptions applied to ABM 2+. Specifically, the addition of pricing, parking costs for coastal communities, 10% teleworking and micromobility. SANDAG should provide direction on how this could be worked into General Plans that are updated every 5-20 years.

3. *Appendix A: Transportation Projects, Programs, and Phasing:*

Trips to and from school sites result in a significant congestion, VMT generation, and peak hour delay throughout the region. Additional funding and projects should be recommended with a specific focus on improving safety and multimodal access in and around school sites along with programs to incentivize non-single occupancy vehicle trips to schools.

7-22

Attachment A

City of Carlsbad Comments on Draft 2021 Regional Plan  
 Aug. 6, 2021  
 Page 7

Table A.11: Given the proven success of the Carlsbad Connector microtransit pilot program, the city agrees with the Plan's recommendations to provide similar on-demand microtransit systems throughout North County at all mobility hub sites and major transit centers.

Table A.13: The segment of El Camino Real between Poinsettia Lane and Camino Vida Roble is proposed to be widened from two to three lanes to prime arterial standards. With the adoption of the city's General Plan, the city has determined that the widening of this portion of El Camino Real is not feasible due to constrained right-of-way and would result in negative impacts to other travel modes. City staff recommend removal of this proposed project recommendation CB32 (that is, a 'do nothing' scenario, or appraise and evaluate different mobility projects and/or alternative designs).

The preferred Interstate-5 freeway alternative identified in the North Coast Corridor ("NCC") Final EIR/EIS is the refined 8+4 Buffer alternative, with four freeway lanes and two managed lanes in each direction and completion by 2035. Appendix A, Table A.5 describes NCC project IDs CC004, 007 - 009 as "8F to 6F+4ML" with completion by 2050. While this might lead to further study, it is not clear why there is a different freeway configuration (i.e., reduction in freeway lanes) proposed. How does a reduction in lanes continue to meet NCC potential project benefits of maintaining or improving traffic operations and improving the safe and efficient regional movement of people and goods?

4. *Active Transportation:*

The city appreciates the Regional Plan's overall approach of providing a connected network of high-quality bicycle facilities throughout the region. Regional bikeways are recommended throughout the city including along Palomar Airport Road which will provide a key east-west connection and El Camino Real which will provide a new north-south bikeway connection through the city. Both roadways are proposed to include "on-street bikeways". Due to the high traffic volumes and vehicle speeds experienced along most of both corridors, the city recommends considering "off-street bikeways" or Class I facilities where feasible in order to stimulate the shift from personal motor vehicle use to people choosing to bike.

It is extremely important that municipal transportation plans align with regional transportation plans to achieve regional goals for land use and transportation and to promote the region working together to build a cohesive regional transportation network. Considering there are currently no mechanisms in place to ensure municipalities coordinate local transportation plans with regional planning documents, the Plan should provide an approach on how SANDAG plans to engage with municipalities, especially in areas of potential disagreement or conflict (as aforementioned in this subsection and others). It is also recommended that the Plan provide additional direction regarding the application of protected bikeways in a variety of applicable contexts. While vertical measures such as soft hit posts may be appropriate in lower volume and lower speed roadways, arterial roadways with high traffic volumes and high speeds warrant much more substantial physical protection from vehicles. In addition, special consideration should be given at intersections and driveways which may be impacted due to the additional width and visibility impacts created by protected bikeways.

City staff look forward to working with SANDAG on improving mobility and land use access in the region and building sustainable, equitable and healthy modes of transportation, and we appreciate the opportunity to comment on the Plan that will help the region realize these goals.

Attachment A

Attachment 1: Government Code 65020 (S.B. 375) Summary

Government Code section (“GOV §”) 65080, also referred to as California Senate Bill 375 (Steinberg, 2008) (“SB 375”), is one area of law that provides SANDAG with guidance to which a regional transportation plan must be developed.

Among other things, the regional transportation plan that is developed “shall be an internally consistent document” (GOV § 65080 (b)) and shall include a “sustainable communities strategy prepared by each metropolitan planning organizations as follows” (GOV § 65080 (b)(2)(B)):

*Each metropolitan planning organization shall prepare a sustainable communities strategy, subject to the requirements of Part 450 of Title 23 of, and Part 93 of Title 40 of, the Code of Federal Regulations, including the requirement to utilize the most recent planning assumptions considering local general plans and other factors. The sustainable communities strategy shall (i) identify the general location of uses, residential densities, and building intensities within the region, (ii) identify areas within the region sufficient to house all the population of the region, including all economic segments of the population, over the course of the planning period of the regional transportation plan taking into account net migration into the region, population growth, household formation and employment growth, (iii) identify areas within the region sufficient to house an eight-year projection of the regional housing need for the region pursuant to Section 65584, (iv) identify a transportation network to service the transportation needs of the region, (v) gather and consider the best practically available scientific information regarding resource areas and farmland in the region as defined in subdivisions (a) and (b) of Section 65080.01, (vi) consider the state housing goals specified in Sections 65580 and 65581, (vii) set forth a forecasted development pattern for the region, which, when integrated with the transportation network, and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board, and (viii) allow the regional transportation plan to comply with Section 176 of the federal Clean Air Act ( 42 U.S.C. Sec. 7506).*

The 2021 draft Regional Transportation Plan includes a Sustainable Communities Strategy (“SCS”), as required by SB 375 for the San Diego region (herein after called “draft Regional Plan”). The draft Regional Plan indicates that “SB 375 requires the SCS to include a pattern for forecasted growth and development that accomplishes the following: 1) When combined with the transportation network, the SCS will achieve the regional GHG emission–reduction targets; 2). The SCS accommodates the Regional Housing Needs Assessment (“RHNA”) Determination; and 3) The SCS utilizes the most recent planning assumptions. (Reference p. 19 of the 2021 Regional Plan.)

Predicting the effect of transportation plans or projects on land uses and land use planning is critical to developing context sensitive solutions for transportation projects. Therefore, utilization of the most recent planning assumptions is not only necessary but is required as specifically stated therein GOV § 65080. If inconsistencies are found in the land use assumptions or adverse impacts are anticipated, SANDAG should be actively engaged in the development of measures to address these issues.

The SANDAG Board of Directors approved the final RHNA plan with the final housing unit allocation on July 10, 2020, which was based on the most recent land use planning assumptions and an adopted methodology to allocate housing in accordance with GOV §§ 65584.04(d and m). The City of Carlsbad received a total RHNA allocation of 3,873 units as a result of RHNA plan adoption. The adopted April 6, 2021 city’s Housing Element accommodates its housing needs through current zoning and other programs

7-22  
cont.

City of Carlsbad Comment Letter

August 6, 2021

Attachment A

Attachment 1: Government Code 65020 (S.B. 375) Summary

as needed to meet the city's RHNA obligation at all income levels. The land use inputs derived from this local planning document constitutes the most recent land use assumptions. On July 13, 2021 the Department of Housing and Community Development found "the adopted housing element is in substantial compliance with State Housing Element Law (Article 10.6 of the Gov. Code).

The most recent planning assumptions are critical for the development of the draft Regional Plan as the document must comply with other specific state and federal mandates including a SCS per California Senate Bill 375, which achieves GHG emissions reduction targets set by the California Air Resources Board and compliance with federal civil rights (Title VI) requirements, environmental justice considerations, air quality conformity, and public participation. To monitor compliance and attainment of state reduction goals in GHG, GOV § 65080 (b)(2) requires that:

*(H) Prior to adopting a sustainable communities strategy, the metropolitan planning organization shall quantify the reduction in greenhouse gas emissions projected to be achieved by the sustainable communities strategy and set forth the difference, if any, between the amount of that reduction and the target for the region established by the state board.*

*(J)(i) Prior to starting the public participation process adopted pursuant to subparagraph (F), the metropolitan planning organization shall submit a description to the state board of the technical methodology it intends to use to estimate the greenhouse gas emissions from its sustainable communities strategy and, if appropriate, its alternative planning strategy.*

7-22  
cont.

There is inevitably some uncertainty regarding the use of projected future conditions. However, what is certain is that the project will not operate under the conditions that exist today. There will be new residential and employment growth in the intervening years between now and the proposed build-out of the draft Regional Plan. Nonetheless, projections utilized should represent the best available information assembled by the local agencies with jurisdiction and expertise. Judgments about land use assumptions utilized in the draft Regional Plan should be based on and supported by facts, adopted plans, and "most recent planning assumptions," rather than speculation and personal opinions. The land use assumptions for "uses, residential densities, and building intensities within the region" (as required by GOV § 65080 (b)(2)(B)(i)) should also be the same, as that provided to the state board (as required per GOV §§ 65080 (b)(2)(H and J) in estimating and analyzing GHG from the SCS and the effect on growth and whether the effects of that growth would be significant in the context of the region's plans, natural setting, and growth patterns. Ultimately, the SCS must demonstrate whether SANDAG can meet the per capita passenger vehicle-related GHG emissions targets for 2035 set by the California Air Resources Board ("CARB").

SB 375 directs CARB to accept or reject the determination of SANDAG that its SCS submitted to CARB would, if implemented, achieve the region's GHG emissions reduction targets. CARB's technical evaluation of SANDAG's draft Regional Plan would be based on all the evidence provided, including the models, the data inputs and assumptions, the SCS strategies, and the performance indicators.

The transportation and planning assumptions are also extremely important as it is relied on for other master planning exercises. The Regional Air Quality Strategy ("RAQS") relies on information from CARB and SANDAG for information regarding projected growth in the cities and San Diego County. This in turn is utilized to address other state requirements, including the San Diego portion of the California State Implementation Plan ("SIP") and promulgating their own rules and regulations regarding air quality in the region or to address federal requirements.

City of Carlsbad Comment Letter

August 6, 2021

Attachment A

Attachment 1: Government Code 65020 (S.B. 375) Summary

The analysis of land use impacts for transportation projects is guided by FHWA Technical Advisory T 6640.8 and the CEQA Guidelines.

Under the FHWA Technical Advisory T 6640.8 (G)(1), Guidance for Preparing and Processing Environmental, states:

*This discussion [of land use] should identify the current development trends and the State and/or local government plans and policies on land use and growth in the area which will be impacted by the proposed project. These plans and policies are normally reflected in the area's comprehensive development plan, and include land use, transportation, public facilities, housing, community services, and other areas.*

*The land use discussion should assess the consistency of the alternatives with the comprehensive development plans adopted for the area and (if applicable) other plans used in the development of the transportation plan required by Section [23 U.S. Code §] 134. The secondary social, economic, and environmental impacts of any substantial, foreseeable, induced development should be presented for each alternative, including adverse effects on existing communities. Where possible, the distinction between planned and unplanned growth should be identified.*

There is also a requirement to analyze the land use planning inconsistencies per CEQA Guidelines § 15126.2(a), which specifies that an EIR for a proposed project include:

*The Significant Environmental Effects of the Proposed Project. An EIR shall identify and focus on the significant effects of the proposed project on the environment. In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or where no notice of preparation is published, at the time environmental analysis is commenced. Direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects. The discussion should include relevant specifics of the area, the resources involved, physical changes, alterations to ecological systems, and changes induced in population distribution, population concentration, the human use of the land (including commercial and residential development), health and safety problems caused by the physical changes, and other aspects of the resource base such as water, historical resources, scenic quality, and public services. The EIR shall also analyze any significant environmental effects the project might cause or risk exacerbating by bringing development and people into the area affected. For example, the EIR should evaluate any potentially significant direct, indirect, or cumulative environmental impacts of locating development in areas susceptible to hazardous conditions (e.g., floodplains, coastlines, wildfire risk areas), including both short-term and long-term conditions, as identified in authoritative hazard maps, risk assessments or in land use plans addressing such hazards areas.*

Since the new land use assumptions are being utilized, as described by this letter, the EIR that is prepared shall also analyze any significant environmental effects the project might cause by bringing development and people into the area affected. The following are the basic steps in analyzing land use impacts as part of the community impact assessment process:

7-22  
cont.

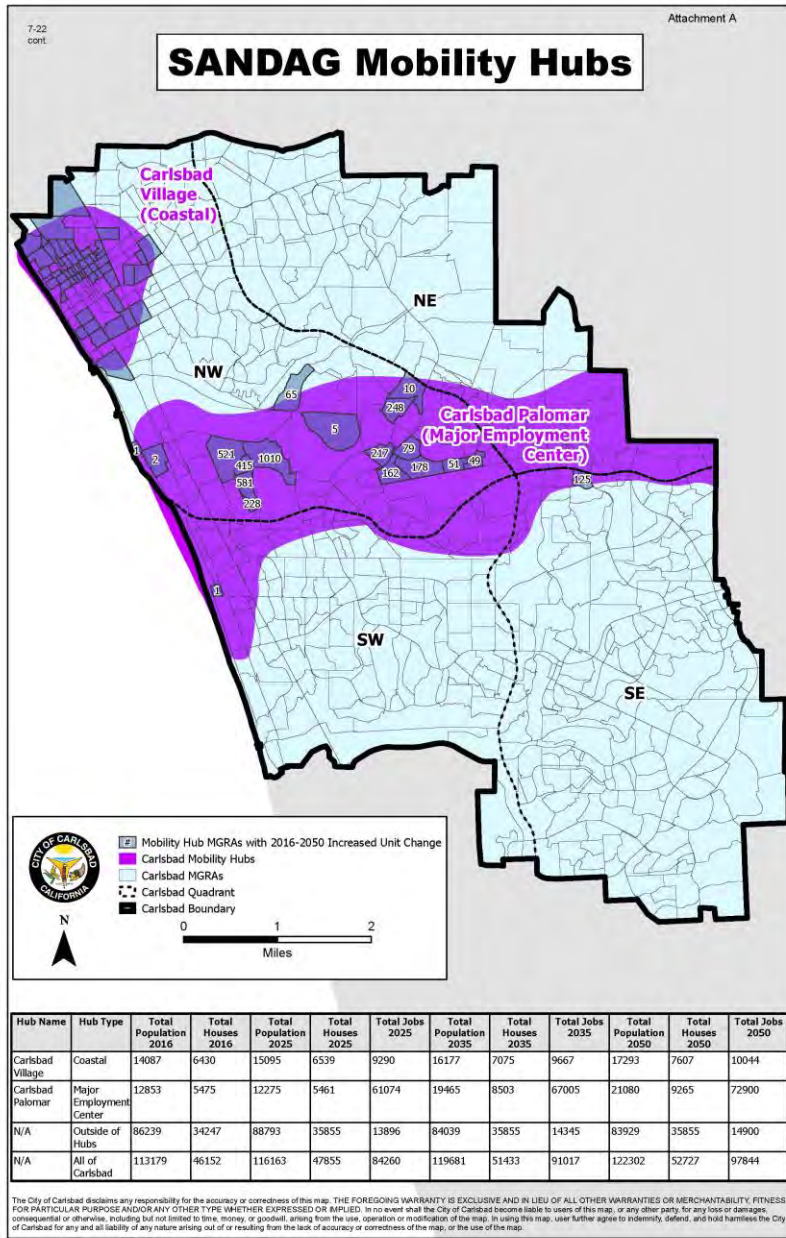

Attachment A

Attachment 1: Government Code 65020 (S.B. 375) Summary

7-22  
cont.

1. Inventory the existing land use patterns (including undeveloped land), development trends, and transportation systems. The inventory of existing land uses should include the following land use types: residential, commercial, industrial, recreational, institutional, public services, community services, emergency services, transportation, utilities, agriculture, and undeveloped land in the study area. The study area should include the surrounding community that is generally associated with the project area within which community impacts could occur. The inventory should also address development trends and identify recent developments in the study area to include the development's name, size, status (planned, built, under construction), and the jurisdiction in which it is located. A map showing the location of existing and planned land uses in the area should also be prepared.
2. Determine whether the project is consistent with local and regional policies that govern land use and development. For the consistency analysis, the policies and programs considered in the analysis should include: transportation plans and programs (MTPs/RTPs and MTIPs/RTIPs), regional growth plans, local General Plans that establish land use and growth management policies for the study area, and any specific or pipeline development proposals. This analysis should also include a discussion of consistency with the Coastal Zone Management Act of 1972, California Coastal Act of 1976, the National Wild and Scenic Rivers Act (16 USC 1271) and the California Wild and Scenic Rivers Act (Pub. Res. Code § 5093.50 et seq.). After preparing a preliminary list of relevant plans to be considered in the analysis, the SANDAG planner should meet with the staff of the various agencies to review the list to determine if it is complete and revise the list as necessary.
3. Assess the changes that would occur in land uses and growth with and without the project.
4. The draft Regional plan and each project alternative should be considered separately since the results may be different.
5. Develop measures to avoid, minimize, and/or mitigate potential adverse effects.

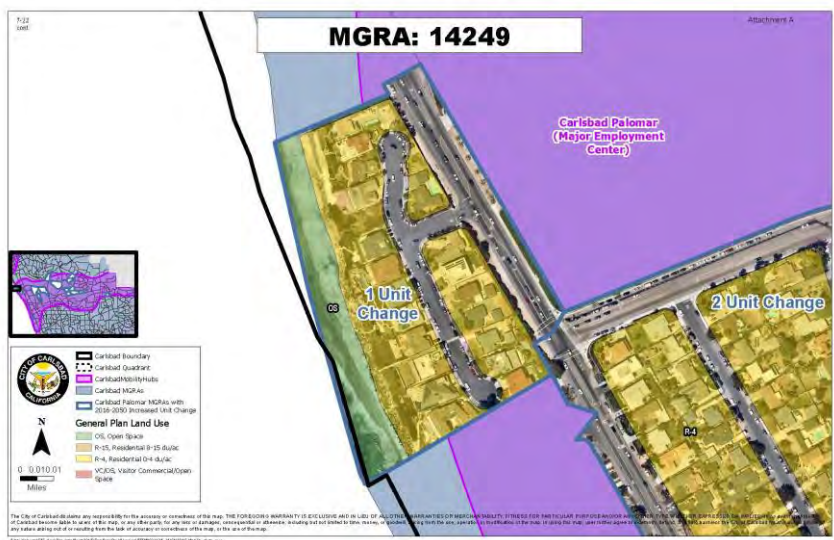

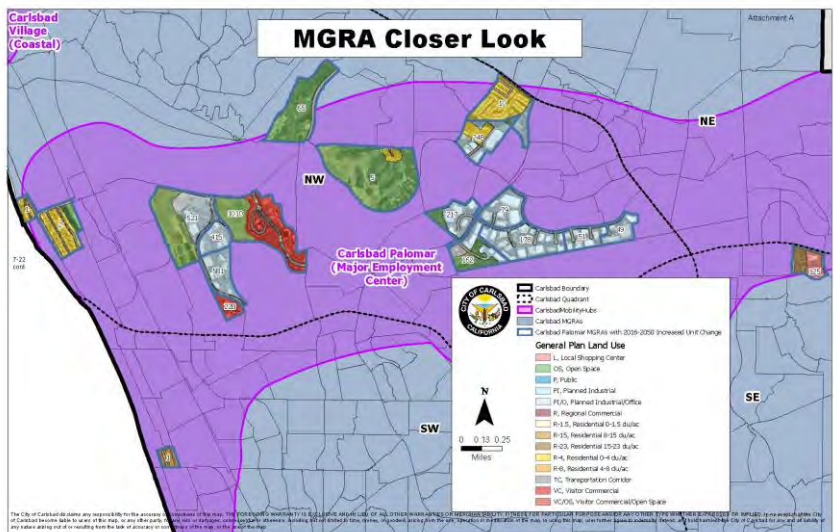

The resulting environmental analysis should identify the current development trends and the State and/or local government plans and policies on land use and growth in the area which will be impacted by the proposed project. These plans and policies are normally reflected in local General Plans. If found to be consistent, then the findings in the EIR should be documented in the report and no further analysis or action is necessary. When found not to be inconsistent with a policy or program, then consideration must be given to modifying the draft Regional Plan alternative to make it consistent, or measures to address the inconsistency must be developed. SANDAG should be actively engaged in the development of measures to address these issues and be prepared to assess the consistency of the draft Regional Plan and alternatives with the comprehensive development plans adopted for the area and (if applicable) other plans used in the development of the transportation plan required by Section 23 U.S. Code § 134. For any new land use growth assumptions, the secondary social, economic, and environmental impacts of any substantial, foreseeable, induced development should be presented for the draft Regional Plan and each alternative, including adverse effects on existing communities. The results should be shared with the public during the public involvement process, e.g., at community meetings, etc. Public input should be considered by SANDAG and if necessary, the findings of the analysis should be revised to reflect information gained through the public involvement process.

RE: City of Carlsbad Comments on Draft 2021 Regional Plan

To whom it may concern,

This letter serves to inform SANDAG that the City does not wish to remove project CB32 from the Regional Arterials Project list.

Please disregard the comment regarding project CB32 from the attached letter sent to SANDAG on Aug. 6, 2021.

Thank you for bringing this to our attention, and please contact me if you have any other questions regarding the 2021 Regional Plan comment letter.

Best Regards,

A handwritten signature in blue ink, appearing to read "Tom Frank".

Tom Frank, PE  
Transportation Director/City Engineer

### RESPONSE TO COMMENT 7-23

This comment is not related to the adequacy of the Draft EIR.

Project CB32 remains on the list of Regional Arterials projects in the proposed Plan.

**COMMENT LETTER 8: CENTER FOR BIOLOGICAL DIVERSITY**

Comment Letter 8

8-1

8-2

**RESPONSE TO COMMENT 8-1**

Thank you for the Center for Biological Diversity’s review of the Draft EIR and expressed support for the EIR objectives. The conservation of native species and their habitat is a key component of SANDAG’s Sustainable Communities Strategy. The land use pattern of the proposed Plan envisions greater compact development in areas served by high frequency, efficient transit. The result is less urban sprawl and fewer impacts on native habitat and species. Appendix AA, *Regional Habitat Conservation Vision*, of the proposed Plan describes the region’s efforts to develop and implement a system of open space for conservation of San Diego’s unique biodiversity. Detailed responses to the Center for Biological Diversity’s other comments can be found below.

**RESPONSE TO COMMENT 8-2**

Thank you for your comment and the valuable citations that document the effects of habitat fragmentation on biological resources. The commenter has requested “... SANDAG to add preservation of existing intact habitat and enhancement of wildlife connectivity at existing barriers, as an additional priority [of the Plan].”

The San Diego region has 30-year history of conservation planning for multiple species and their habitats, including the identification of an interconnected wildlife preserve system aimed at promoting connectivity and decrease the negative effects of habitat fragmentation. As documented in Appendix AA of the proposed Plan, SANDAG continues to be committed to funding regional conservation efforts that include wildlife corridors, and states that “the regional habitat conservation efforts have envisioned “hubs” of protected natural lands connected by wildlife movement corridors.” In order to conserve the region’s biodiversity, the EIR describes the proposed Plan’s intent to conserve unfragmented lands and cores and linkages consistent with adopted local NCCP Subarea Plans. The Plan encapsulated this intent within the Connect and Respect objectives of the Regional Vision (see Appendix AA).

To help meet the region’s habitat conservation goals, the proposed Plan identifies approximately \$3 billion for habitat-related efforts. This includes \$2,087 million for an enhanced habitat conservation,

management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan and mitigation measure GHG-5c in Section 4.8 of the EIR), and \$300 to \$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan). This funding is estimated to be sufficient to provide all the local funding needed to implement the habitat conservation plans as envisioned. Specific details would start to be developed immediately upon adoption as part of the near-term action items of the proposed Plan (Appendix B of the Plan).

At the project-level, as discussed in Section 4.4 of the EIR, projects that implement the proposed Plan will have to discuss impacts on the project on the conservation plans that include direct loss of habitat and species and indirect impacts such as promoting fragmentation and hindering wildlife movement. Furthermore, projects that bring high speed vehicles in proximity to wildlife life will have to address safety from collisions. This analysis would need to be included, as appropriate, into the subsequent (i.e., second tier) environmental review that will occur at the project level. Measures included in mitigation measure BIO-3 address design considerations to facilitate wildlife movement and connectivity on a project-specific level based on best available studies.

8-2 cont. The Center is encouraged to see that “protecting natural lands to absorb carbon and protect communities from the impacts of climate change” (Plan, Chapter 2, Page 35) is a priority in the Plan. However, **we urge SANDAG to add preservation of existing intact habitat and enhancement of wildlife connectivity at existing barriers, as an additional priority.**

Roads and development create barriers that lead to habitat loss and fragmentation, which harms native wildlife, plants, and people. As barriers to wildlife movement, poorly-planned development and roads can affect an animal’s behavior, movement patterns, reproductive success, and physiological state, which can lead to significant impacts on individual wildlife, populations, communities, landscapes, and ecosystem function (Brehme et al., 2013; Ceia-Hasse et al., 2018; Haddad et al., 2015; Marsh & Jaeger, 2015; Mitsch & Wilson, 1996; Trombulak & Frissell, 2000; van der Ree et al., 2011). For example, habitat fragmentation from roads and development has been shown to cause mortalities and harmful genetic isolation in mountain lions in southern California (Ernest et al., 2014; Riley et al., 2014; Vickers et al., 2015), increase local extinction risk in amphibians and reptiles (Brehme et al., 2018; Cushman, 2006), cause high levels of avoidance behavior and mortality in birds and insects (Benítez-López et al., 2010; Kantola et al., 2019; Loss et al., 2014), and alter pollinator behavior and degrade habitats (Aguilar et al., 2008; Goverde et al., 2002; Trombulak & Frissell, 2000). Habitat fragmentation also severely impacts plant communities. An 18-year study found that reconnected landscapes had nearly 14% more plant species compared to fragmented habitats, and that number is likely to continue to rise as time passes (Damschen et al., 2019).

8-3 Beyond direct impacts, edge effects of development in and adjacent to open space will likely impact key, wide-ranging predators, such as mountain lions and bobcats (Crooks, 2002; Delaney et al., 2010; J. S. Lee et al., 2012; Riley et al., 2006; Smith et al., 2015, 2017; Vickers et al., 2015; Wang et al., 2017), as well as smaller species with poor dispersal abilities, such as song birds, small mammals, and herpetofauna (Benítez-López et al., 2010; Cushman, 2006; Kociolek et al., 2011; Slabbekoorn & Ripmeester, 2008). Limiting movement and dispersal can affect species’ ability to find food, shelter, mates, and refugia after disturbances like fires or floods. Individuals can die off, populations can become isolated, sensitive species can become locally extinct, and important ecological processes like plant pollination and nutrient cycling can be lost. Negative edge effects from human activity, such as traffic, lighting, noise, domestic pets, pollutants, invasive weeds, and increased fire frequency, have been found to be biologically significant up to 300 meters (~1000 feet) away from anthropogenic features in terrestrial systems (Environmental Law Institute, 2003)

8-4 Furthermore, making roads more permeable for wildlife by prioritizing the construction of effective wildlife crossing infrastructure will help improve driver safety and save people money. From 2015 to 2018 more than 25,000 wildlife vehicle collisions with large mammals were reported in California, resulting in human deaths, injuries, and property damages estimated to be worth more than \$1 billion (Shilling et al., 2017, 2018, 2019). Alarming, many of these types of collisions go unreported. State Farm estimated more than 92,000 deer collision insurance claims during that same time frame (State Farm Insurance, 2016, 2018). And while car strikes can be immediately fatal for wildlife, many animals that are struck by vehicles may survive the collision but then slowly die from their injuries away from the road (T. S. Lee et al., 2021). Additional deaths from collisions include young that are orphaned and unable to survive

**RESPONSE TO COMMENT 8-3**

Thank you for the Center of Biological Diversity’s participation in the environmental review process. Further elaboration regarding your organization’s comments are addressed in subsequent responses below. SANDAG appreciates the summary of and citations for edge effects and potential effects of limiting wildlife movement.

**RESPONSE TO COMMENT 8-4**

SANDAG appreciates the summary and citations for potential effects on wildlife movement.

8-4 cont after their parent is killed. Such data should not be ignored in planning a regional transportation plan where lack of wildlife connectivity is causing harm to wildlife, ecosystems, and people.

In addition, connectivity between high quality habitat areas in heterogeneous landscapes is important to allow for range shifts and species migrations as climate changes (Cushman et al., 2013; Heller & Zavaleta, 2009; Krosby et al., 2018). Increasing variability and extremes in temperature, wind, and precipitation are all products of a warming climate, leaving species struggling to adapt. As a result, species' genes are changing, physiological and physical features such as body size are changing, ranges are shifting as species try to maintain a suitable climate space, and numerous species are expressing new breeding and migration behaviors (Scheffers et al., 2016). Reportedly, climate change is already impacting 82% of key ecological processes that form the foundation of healthy ecosystems (Scheffers et al., 2016). If climate change goes unabated, more than one third of all plant and animal species could become extinct in the next 50 years (Román-Palacios & Wiens, 2020). Wildlife connectivity is critical for biodiversity resilience and climate change adaptability. A permeable landscape that has multiple pathways or linkages between habitat patches allows a wide variety of species to adjust to shifts in resource availability (Mcrae et al., 2012; Olson & Burnett, 2013; Pinto & Keitt, 2008). Multiple connections help populations persist after extreme events worsened by climate change. During floods, landslides or wildfires, these pathways provide escape routes or refugia for animals seeking safety (Cushman et al., 2013; Mcrae et al., 2008). Prior to roads and development severely fragmenting and degrading habitats, a species could persist because individuals from neighboring populations would be able to recolonize an area that experiences a local extinction. But without adequate connectivity, recolonization and species persistence are improbable.

8-5 If the Plan truly aims to promote sustainable land-use, increase driver safety and mitigate impacts of climate change, then enhancing wildlife connectivity must be stated as a priority. **This should include funding that would go towards identifying roadkill hotspots; implementing wildlife crossing infrastructure** (e.g., upgrading existing culverts to make them more wildlife-friendly, installing crossings and directional fencing at roadkill hotspots, etc.) in those hotspots; **and protecting, managing, and restoring lands in perpetuity on both sides of the constructed wildlife crossings to facilitate wildlife movement.** Wildlife crossing structures have been shown to be a cost-effective means of reducing such collisions and facilitating wildlife movement. States that have invested in wildlife crossing infrastructure, like Utah, Colorado, and Wyoming, have seen 81-98.5% reductions in wildlife vehicle collisions on sections of highways where they have implemented wildlife crossings (Bissonette & Rosa, 2012; Kintsch et al., 2019, 2021; Sawyer et al., 2012; Kintsch et al., 2021). The savings over the long-term from the avoided wildlife vehicle collisions more than pay for the upfront costs to build the crossings (Center for Large Landscape Conservation, 2020). Priority implementation action #9 ("Expand regional programs on low-carbon transportation options, roadway safety and maintenance, and nature-based climate solutions") should include wildlife crossing infrastructure as a safety measure and the proposed Plan's \$441 billion going towards maintaining and optimizing the existing system should specifically allocate funding towards implementing wildlife crossing infrastructure.

**RESPONSE TO COMMENT 8-5**

This comment addresses the proposed Plan and is not related to the adequacy of the EIR. The comment asserts that the proposed Plan must enhance and fund wildlife connectivity. Appendix AA of the proposed Plan describes the status of the HCPs within the region and states SANDAG's commitment to funding regional conservation efforts that include wildlife corridors. For additional elaboration regarding habitat fragmentation and project-specific mitigation, please see response to comment CBD 8-2.

**IV. The DEIR fails to adequately describe, assess, and mitigate impacts to wildlife movement and habitat connectivity.**

8-6 The DEIR states that the MSCP cores and linkages maps (City of San Diego 1998) and the climate resilient wildlife movement models developed by San Diego State University (SDSU 2019), were used for the quantitative analysis of connectivity. Although these are important resources to identify areas for wildlife movement, there are additional resources that are additive and therefore should also be included when assessing the impact to wildlife connectivity in the area. For example, the UC Davis Road Ecology Center’s reports on wildlife vehicle collisions and roadkill hotspots also provide information regarding where wildlife are moving and being hit on roads (Shilling et al., 2017, 2018, 2019). And UC Davis and The Nature Conservancy researchers helped to define a connectivity “roadmap” for mountain lions across the region, and they identified where safe crossings can occur and where barrier effects are present (Vickers, 2020). These data should be considered when assessing the region’s wildlife connectivity and barriers to connectivity.

In addition, the DEIR states that the statewide habitat connectivity model and the SC Wildlands linkages models are “relatively coarse-scaled” (DEIR at 4.4-36) and therefore were excluded from the analysis. But both the SC Wildlands’ 2008 South Coast Missing Linkages Report and CDFW’s 2019 Areas of Conservation Emphasis data (which include terrestrial connectivity) are often used in such analyses; they provide more recent models compared to the 1998 MSCP cores and linkages maps by the City of San Diego and should be included here, or a more thorough explanation of why they are inappropriate to use here should be provided. Also, because San Diego County is located within the Pacific Flyway and is important for global connectivity for millions of birds that migrate along the West Coast, areas identified as Important Bird Areas (IBAs) by Audubon should also be included in the connectivity analysis. And there are likely other studies that provide more information regarding important wildlife connectivity throughout the region. The Plan and DEIR should provide the best available science when describing existing conditions and assessing potential impacts of the Plan. The DEIR fails to do this by only providing a fraction of the available information regarding wildlife movement and habitat connectivity.

8-7 The DEIR states that a total of 6,617 acres by 2025; 3,519 acres from 2026-2035; and 633 acres from 2036-2050 of mapped wildlife connectivity areas will be impacted by regional growth and transportation network improvements, but it does not provide the map of essential connectivity areas that would be impacted. This omission prevents the public from understanding where these development footprints overlap with connectivity areas or if the footprints are designed in a way to avoid and/or minimize impacts to wildlife connectivity. This information is essential to quantifying the impact and creating targeted mitigation measures. In addition, the number of acres that will be lost in connectivity areas due to growth could be much greater if other connectivity areas mentioned above and IBAs are included in the analysis.

8-8 The DEIR downplays and dismisses the impacts of the transportation projects on wildlife connectivity, stating that “transportation network improvements that would impact wildlife corridors are planned for existing highways, transit projects, or arterials that already act as wildlife barriers. Widening these transportation corridors would not necessarily cut off these

**RESPONSE TO COMMENT 8-6**

SANDAG appreciates the citations provided, including studies conducted by UC Davis Road Ecology Center, and the “roadmap” for mountain lions developed by UC Davis and The Nature Conservancy (Vickers 2020). Although some of the Shilling et al. studies were conducted in Northern California, they still provide valuable information for the design of wildlife crossings to avoid noise and light pollution, and to appropriately mitigate for impacts on wildlife movement. These citations have been included in mitigation measure BIO-3 as references to be consulted when developing project-specific wildlife crossing design.

The EIR uses best available data at the time the analysis was conducted. The Vickers 2020 dataset was not included in the county-wide wildlife movement model analyzed in this EIR because the data were not available yet at the time the model was produced (Jennings pers. comm.). The Vickers (2020) and Shilling (2019) data were used for local modeling (for example modeling conducted for SR 67), but a county-wide model using these datasets has not yet been developed. However, SANDAG has committed to funding regional conservation efforts that include wildlife corridors, and states that “the regional habitat conservation efforts have envisioned “hubs” of protected natural lands connected by wildlife movement corridors”(see Appendix A of the propose Plan). Please see also response to comment CBD 8-2 regarding habitat fragmentation.

SANDAG agrees that the South Coast Mission Linkages Report and CDFW Area of Conservation Emphasis data provide valuable information on wildlife corridors and linkages. EIR preparers reviewed and evaluated these and many more studies providing information on wildlife movement and connectivity in San Diego County on a programmatic level. However, the recent model prepared by SDSU provides more detailed and County-specific data on wildlife movement. The model was specifically prepared with the goal to provide climate change resiliency and adaptation. It incorporates the information from the referenced studies and builds upon them. Therefore, SANDAG did not evaluate the South Coast Wildlands and CDFW studies independently but rather used them in coordination with the SDSU

model. See also response to comment USFWS 38-12, which discusses the data used in the EIR for MHCP cores and linkages.

The Pacific Flyway is addressed in the EIR. It is described on page 4.4-39. Impacts are discussed on pages 4.4-98 and 4.4-106. Furthermore, the Audubon Society identifies Important Bird Areas (IBA) in San Diego County. All IBAs identified in the Plan footprint are either not developable (i.e., lakes, reservoirs, lagoons, and bays), or are already conserved through various designations (e.g., National Wildlife Refuges, State Preserves, City of San Diego Cornerstone Lands, etc.) and included in the Conserved Lands layers that were part of the GIS dataset analyzed in both Impact BIO-3 and Impact BIO-4 (see also Figure 4.4-16). A reference to the Audubon IBAs has been added to the text.

#### **RESPONSE TO COMMENT 8-7**

Figure 4.4-15 in the Final EIR has been updated to show the transportation network footprint impacts on wildlife connectivity areas. The model used for identification of wildlife corridors and linkages encompasses the most recent data available for San Diego County, including the Audubon IBAs (by way of the Conserved Lands layer), and therefore reflects a conservative assessment of impacts. In reality, once projects evaluate avoidance measures under project-specific CEQA and include wildlife corridor designs in the project design, the impacts on wildlife movement, corridors, and linkages are expected to be much less than reported in the EIR. A statement explaining the likely overestimation of impacts is included in the Impact BIO-3 direct impact section.

#### **RESPONSE TO COMMENT 8-8**

SANDAG acknowledges that widening of infrastructure would discourage wildlife movement (see the following statement on Draft EIR pages 4.4-99/100: “they may make existing crossings less attractive for use by wildlife species, and the greater width may lead to additional highway mortality for terrestrial and avian species that attempt to cross transportation corridors at grade.” Measures required under mitigation measure BIO-3 address design considerations to facilitate wildlife movement based on best available studies, including wildlife movement studies. In response to this comment, the following text has been added to measure BIO-3: Conduct wildlife movement studies and Before-After-Control-Impact-Studies (BACI) where data are lacking and consider balancing conservation and recreation (Mitrovich et al. 2020). Include

adaptive management and monitoring measures in the CEQA review, mitigation measures, and project design.

The participation of other project sponsors in the implementation of the EIR and mitigation measures is addressed in Section 4, *Environmental Impact Analysis Approach*. Specifically, the section identifies the following: “The EIR includes three broad types of mitigation measures: (1) plan- and policy-level mitigation measures assigned to SANDAG; (2) mitigation measures for transportation network improvements and programs, assigned to SANDAG and other transportation project sponsors; and (3) mitigation measures for development projects implementing regional growth and land use changes, which local jurisdictions implement.” Mitigation measures would be refined and implementation methods identified, as required by CEQA, the local jurisdictions, and Wildlife Agencies on a project-specific level. In addition, please see Master Response 2.

For more information regarding the use of “can and should” language regarding mitigation measures for other responsible agencies, please see Master Response 2.

8-8 cont. corridors because bridges that would be widened would likely be designed to allow for continued wildlife movement” (DEIR at Page 4.4-99). Such claims are unsubstantiated and dismiss how species move through landscapes. Widening transportation corridors can make a once feasible passage completely infeasible and the assumption that such widenings “would likely be designed to allow for continued wildlife movement” is not substantiated with the necessary information for the public to determine that this would indeed be true. While the DEIR states that SANDAG “shall implement project designs that provide for continued movement of wildlife,” it also says that “other transportation project sponsors can and should,” which suggests that not all network improvements will implement such measures.

SANDAG must also analyze and fully mitigate impacts of the Plan on local mountain lions in the Santa Ana Mountains (SAM) and the Eastern Peninsular Range (EPR) because they are provisionally listed under the California Endangered Species Act (“CESA”). Under CESA, SANDAG may not approve projects (including the Plan) that could jeopardize the continued existence of protected populations or result in destruction of essential habitat (Cal. Fish & Game Code § 2053(a) and ABAG must require that appropriate mitigation measures be implemented for projects that could destroy mountain lion habitat or impair connectivity (Cal. Fish & Game Code § 2054). The Santa Ana Mountains puma population is of particular concern. According to the 2019 CESA petition (Yap et al., 2019):

8-9 The SAM mountain lion population has been found to have the lowest genetic diversity of all populations in California, with levels nearly as low as the endangered Florida panther (Benson et al., 2019; Ernest et al., 2014; Gustafson et al., 2017, 2018). This population is also estimated to have a low effective population size ( $N_e = 5.1$  to  $15.6$ ) and high levels of relatedness and inbreeding (Ernest et al. 2014; Gustafson et al. 2018; Benson et al. 2019). The SAM population was found to be a genetic sink population, with limited gene flow with the EPR population (Gustafson et al. 2018). In a 16-year study (2001-2016) seven migrants (out of 146 sampled animals), were detected via genetics and GPS collar tracking to have crossed the I-15 between the EPR and SAM (three males from the EPR to SAM, four males from the SAM to the EPR); only one migrant is known to have reproduced (Gustafson et al. 2017). Low genetic diversity and effective population size in the SAM are indicative of a genetic bottleneck that is estimated to have occurred 40-80 years ago, around the time when urban development and multi-lane highway construction boomed in Southern California (Ernest et al. 2014; Gustafson et al. 2018). This population was also found to be largely disconnected from all the other California populations, along with the EPR population.

A recent population viability analysis found that if the population remains isolated with little or no immigration (similar to what is currently being observed in the area), the population could experience further genetic erosion, with 28-49% loss of predicted heterozygosity within 50 years (Benson et al. 2019). When considering just demographic processes with little or no immigration and no inbreeding depression, the population was predicted to have a 16-21% chance of extinction within 50 years. However, to avoid inbreeding depression in wild

**RESPONSE TO COMMENT 8-9**

SANDAG appreciates your concern regarding the peril of the Santa Ana Mountains and Eastern Peninsula Range mountain lion population.

Since 2012 SANDAG has funded work totaling \$989,384 by Winston Vickers and his team at UC Davis Wildlife Health Center to research mountain lions in the San Diego Region. The conclusions of these studies showed: (1) low annual survival rates for mountain lion populations both east and west of I-15, primarily due to interactions with humans – collisions with vehicles and mortalities secondary to depredation permits being the most prominent causes of death, and (2) connectivity between conserved habitat areas is severely compromised, especially between San Diego, Orange, and Riverside (Vickers 2020). The two major connections into San Diego County are through Orange County into Camp Pendleton and then through San Luis Rey River. The other contention is outside of San Diego County located in Riverside County and connects Camp Pendleton/Fallbrook to lands east of I-15 and Palomar Mountain. The projects in the Plan are outside these identified connections and, therefore, would not further impede existing movements of mountain lion in these two corridors.

This work is being done as part of SANDAG’s commitment to funding regional conservation efforts under its TransNet-funded Environmental Mitigation Program (EMP), which is referenced in the EIR (pg. 4.4-53), together with its implementing entity, the San Diego Monitoring and Management Program (SDMMP). The SDMMP’s charter is “to assist with the alignment of regional efforts to implement activities identified in the Management Strategic Plan” (MSP, SDMMP 2017). The MSP identifies priority species, and has developed and is currently developing, best management practices (BMPs) and protocols for sensitive plants and animals, wildlife movement, fire management, and grazing management” (EIR page 4.4-54). The MSP identifies the MSCP-covered mountain lion as a high priority species (SL Category) and has conducted and is currently conducting studies identifying connectivity and genetics of mountain lions in San Diego County. These studies and other best available information will be considered on the project-specific level as identified in mitigation measure BIO-3.

Lastly, please note that Fish and Game Code Sections 2053(a) and 2054 are statements of legislative intent.

8-9  
cont.

populations, loss in heterozygosity should be less than 5-10% over 100-200 years (Benson et al., 2016; Soule et al., 1986), which suggests that inbreeding depression in the SAM population is a strong possibility. In addition, evidence of potential inbreeding depression has been observed in the population (e.g., kinked tails coupled with low genetic diversity, Figure 2, Ernest et al. 2014). When inbreeding depression was considered in the population viability analysis, population growth will likely decline and chances of extinction within 50 years is predicted to be 100%, with a median time to extinction of 11.7 years (Benson et al. 2019).

To improve the outlook for local mountain lions and prevent their extirpation, transportation and land-use planning in the SANDAG region must proactively account for puma movement and behavioral needs.

8-10

The DEIR's proposed mitigation measures are vague and insufficient to mitigate impacts to special-status species and sensitive habitats, designated critical habitat, and wildlife movement and habitat connectivity. For example, BIO-1b states that SANDAG shall "design compensatory mitigation to result in the conservation, establishment, or creation of self-sustaining sensitive natural and native communities, replacing the lost habitat and/or habitat value as required to offset those lost from project implementation" (DEIR, Page 4.4-75). However, there is no detail on how this will be measured assessed or maintained over time. Additionally, mitigation measure BIO-2 calls for the "establishment of appropriate habitat mitigation ratios," but it does set a minimum threshold. Avoidance of impacts to sensitive habitats and designated critical habitat should be prioritized, after which in-kind mitigation should be a minimum of 3:1 given that critical habitat is designated for threatened and endangered species that are on a trajectory towards extinction without protective action and are already struggling to survive in the long-term, and 5:1 for off-site restoration or habitat creation with continued monitoring, adaptive management strategies, and well-defined success criteria, to be funded in perpetuity (not just for five years).

The DEIR lacks sufficient mitigation for wildlife connectivity as well. **It should require project proponents to implement wildlife connectivity into the design and budget of the projects when planning starts**, being sure to consider the local, regional, and global context of landscape connectivity for a given project in a given area. Opportunities to upgrade existing culverts or implement directional fencing to guide animals to existing culverts or underpasses, as outlined in BIO-3 Mitigation Measures, should be actively sought when conducting maintenance, expansion, or enhancement projects on existing roads. Additionally, acquiring habitat on both sides of wildlife crossings should also be prioritized. And the different needs of the diverse species should be taken into account when designing crossings for wildlife passage. For example, mountain lions have been documented using culverts that are about 4 meters (~13 feet) in diameter (Clevenger & Waltho, 2005; Kintsch & Cramer, 2011; Riley et al., 2018), while smaller animals, including small mammals, reptiles, and amphibians, might require smaller passageways to actually use them. In addition, smaller species with poor dispersal abilities would require more frequent intervals of crossings to increase their chances of finding a crossing compared to more mobile animals, like mountain lions or deer. And for some amphibian and reptile species, such as California red-legged frogs and western pond turtles, undercrossings could include elevated roads or tunnels with grated tops so that the light and moisture inside the

**RESPONSE TO COMMENT 8-10**

Mitigation ratios cannot be identified on a programmatic basis due to the widely differing circumstances of second-tier transportation and land use projects. The appropriate mitigation ratios will be calculated on a project-specific level based on regulatory agency requirements, and will be applied consistent with local requirements and ordinances. Mitigation measure BIO-3 requires incorporation of wildlife connectivity into project design on a project-specific level and identifies ways to do so (see response to comment CDB 8-12). Mitigation measure BIO-1b states that using approved mitigation banks is the preferable alternative to provide compensatory mitigation. Approved mitigation banks, through the approval process with the Wildlife Agencies, are required to monitor, manage and maintain in perpetuity the biological resources for which mitigation credits were approved by the Wildlife Agencies. The Wildlife Agencies monitor the mitigation banks' commitments on an annual basis by way of annual reports prepared by the mitigation banks' management entity; all management entities managing mitigation banks must also be approved by the Wildlife Agencies. Furthermore, mitigation measure BIO-1b also identifies "requirement for and financing of long-term conservation and management requirements of the mitigation projects." Mitigation measures BIO1-c and BIO-1d provide detail on the compensatory mitigation requirements in the form of native habitat restoration planning and design, and the requirement for long-term management and monitoring in perpetuity to assure that all mitigation continues to function over time. Text was added to mitigation measure BIO-1a to require early coordination with the Wildlife Agencies and respective local jurisdictions to design alignments (see also response to comment CDFW 9-8).

8-10  
cont. crossings are similar to that of the ambient environment (Brehme & Fisher, 2020; Langton & Clevenger, 2021).

Mitigation Measure BIO-3 should include long-term monitoring of the crossing structures to help understand if the crossings are effective and/or how to improve upon them so that animals use the crossings and roads are safer for wildlife and people. And while Mitigation Measure BIO-3 includes maintenance of the crossing infrastructure, such maintenance should include adaptive management so that lessons learned from the monitoring can be applied to improve functionality of the crossings. Protecting, managing, and restoring lands in perpetuity on both sides of the constructed wildlife crossings should also be included to facilitate wildlife movement. Mitigation Measure BIO-3 should also include measures to reduce impacts of light and noise in connectivity areas and at crossing infrastructure both during construction and operation of projects. Some examples of noise and light mitigation that are not already provided include:

8-11

- Use high pressure sodium and/or cut-off fixtures instead of typical mercury vapor fixtures for outdoor lighting.
- Design exterior lighting to confine illumination to the project site.
- Provide structural and/or vegetative screening from light-sensitive uses.
- Use non-reflective glass or glass treated with a non-reflective coating for all exterior windows and glass used on building surfaces.
- Architectural lighting shall be directed onto the building surfaces and have low reflectivity to minimize glare and limit light onto adjacent properties.
- Install temporary noise barriers during construction
- Include permanent noise barriers and sound-attenuating features as part of the project design. Barriers could be in the form of outdoor barriers, sound walls, buildings, or earth berms to attenuate noise at adjacent sensitive uses.
- Ensure that construction equipment is properly maintained per manufacturers' specifications and fitted with the best available noise suppression devices (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds silencers, wraps). All intake and exhaust ports on power equipment shall be muffled or shielded.
- Use hydraulically or electrically powered tools (e.g., jack hammers, pavement breakers, and rock drills) for project construction to avoid noise associated with compressed air exhaust from pneumatically powered tools.
- Use rubberized asphalt or "quiet pavement" to reduce road noise for new roadway segments, roadways in which widening or other modifications require re-pavement, or normal reconstruction of roadways where re-pavement is planned.
- Use equipment and trucks with the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible) for project construction.
- Use techniques such as grade separation, buffer zones, landscaped berms, dense plantings, sound walls, reduced-noise paving materials, and traffic calming measures.

## RESPONSE TO COMMENT 8-11

Mitigation measure BIO-3 provides programmatic mitigation measures to reduce indirect impacts on wildlife movement corridors. Monitoring and adaptive management was added to the text (see response to comment CBD 8-8). Avoidance, minimization, and mitigation of indirect impacts on wildlife, including mitigation for noise and light impacts, will be addressed at the project-specific CEQA level. These include specific requirements, including prohibiting night-time trail use, use of shielded and dimmed lighting and non-reflective surfaces near wildlife corridors, and installing physical barriers to limit encroachment by humans and noise pollution on wildlife corridors.

In addition, please see response to comment USFWS 38-7, which further describes how the EIR addresses impacts on wildlife movement corridors.

8-11 In addition, Mitigation Measure BIO-3 should include banning the use of anticoagulant rodenticides, at least in areas near open space and identified connectivity areas. Secondary poisoning has been documented in many non-target animals, especially predators (e.g., coyotes (Riley et al., 2003), bobcats (Riley et al., 2007; L E K Serieys et al., 2015; Laurel E.K. Serieys et al., 2021), San Joaquin kit fox (McMillin et al., 2008), California fishers (Gabriel et al., 2012), raptors (Lima & Salmon, 2010), and many more). And a recent study found that rodenticides contributed to reduced functional connectivity in an already constrained landscape (Laurel E.K. Serieys et al., 2021). Therefore, to reduce edge effects of roads and development on wildlife and wildlife movement, the use of anticoagulant rodenticides should be restricted.

The Center appreciates SANDAG's efforts and vision towards wildlife-friendly growth, but more can be done to protect biodiversity and ensure public safety. Here the Center aims to provide just a few examples of how the mitigation measures provided in the DEIR could be more robust and effective at minimizing impacts to sensitive and special-status species, designated critical habitat, and wildlife connectivity. But these recommendations are not comprehensive, and further assessments and analyses should be conducted by SANDAG to improve the Plan and the DEIR to adequately disclose, assess, and mitigate impacts to wildlife connectivity due to the proposed Plan.

#### 8-12 E. Conclusion

Thank you for the opportunity to submit comments on the DEIR and the 2021 Regional Plan. We look forward to working with SANDAG to foster land use policy and growth patterns that promote the preservation and enhancement of wildlife movement and habitat connectivity, facilitate public health and safety, and move towards the State's biodiversity conservation and climate change goals. Please add the Center to your notice list for all future updates to the Plan and do not hesitate to contact the Center with any questions at the emails listed below.

Sincerely,

### RESPONSE TO COMMENT 8-12

lease see Chapter 4, *Environmental Impact Analysis Approach*, for more discussion regarding SANDAG's approach to proposed mitigation measures. In addition, specific text has been added to mitigation measure BIO-3, including the following:

Conduct wildlife movement studies and Before-After-Control-Impact-Studies (BACI) where data are lacking, identify corridor widths and wildlife crossing structures, and consider balancing conservation and recreation (Mitrovich et al. 2020) in project design. Include adaptive management and monitoring measures in the CEQA review, mitigation measures and project design.

- Where feasible, site linear projects, including pedestrian trails, away from wildlife corridors and conserved lands or NCCP lands.
- Where feasible, prohibit night-time trail use, enforce seasonal trail closure, and plan access points and infrastructure carefully to minimize the effects on biological resources and wildlife corridors.
- As feasible, within 200 feet of a wildlife corridor, use non-reflective glass or glass treated with non-reflective coating for all exterior windows and building surfaces.
- Incorporate dimmed, shielded and directed lighting in areas near corridors that only illuminate the project site; consider high pressure sodium or cut-off fixtures as feasible, and provide vegetative screening to reduce light pollution on corridors.
- Include permanent noise barriers and sound-attenuating features as part of the project design, and incorporate temporary noise barriers and noise-reduction devices on equipment during construction; require the use of hydraulically or electrically powered tools, as feasible. Barriers could be in the form of outdoor barriers, sound walls, buildings, or earth berms to attenuate noise at adjacent sensitive uses.
- Install physical barriers (e.g., wildlife fencing) that prevent human and/or domestic predator entry into the corridor and, if appropriate, limit the amount of noise and lighting that enters the corridor. Use techniques such as grade separation, buffer zones, landscaped berms.

- dense plantings, sound walls, reduced-noise paving materials (i.e. rubberized asphalt), and traffic calming measures.
- Minimize the number of road crossings through identified wildlife corridors.
    - Incorporate the appropriate wildlife crossing infrastructure into project design. Wildlife crossing infrastructure shall be designed following the latest scientific information, and should include upgrading existing culverts to facilitate functional wildlife movement, installing crossing and directional fencing at roadkill hotspots, install wildlife bridges or undercrossing, and manage in perpetuity both sides of the wildlife crossings. Construct or retrofit with features such as open span bridges instead of closed culverts to allow for wildlife movement under linear transportation corridors.
    - If the construction of or retrofitting with wildlife bridges is infeasible, incorporate undercrossings and/or other crossing structures that use scientifically accepted openness ratios to allow for continued movement of wildlife where transportation facilities create barriers to wildlife movement and use of nursery sites. Evaluate size-class-specific crossing structures and movement enhancement features (e.g. habitat refugia within structure, soft bottom undercrossings) for each species to ensure that crossings are functional for movement. Additionally, within aquatic habitat impacting fish corridors for species such as southern steelhead, create passable aquatic barriers for migratory fish species in order to provide fish access to spawning and rearing habitats.
    - Maintain undercrossings and/or other crossing structures as needed to ensure wildlife movement. Prepare a fencing and wildlife crossing structure maintenance plan for projects with edge effects to maintain permeability for wildlife across corridors.
    - Install directional fencing, where appropriate, to reduce vehicle mortality and guide wildlife to proposed bridges, undercrossings, and/or other crossing structures. Where fencing stops, extend the fence and angle it away from the roadways to deter wildlife from being funneled to roadways. Because it is not possible to install a continuous fence, use one-way gates or jump-outs so animals that do get around fence end runs can safely exit roadways.

Furthermore, additional language was added to ban anticoagulant rodenticides as follows:

Pursuant to the California Ecosystems Protection Act (AB 1788), ban the use of anticoagulant rodenticides near open space, conserved lands and areas identified as core, linkages, wildlife corridors or other connectivity areas. The use of anticoagulant rodenticides causes secondary poisoning in predators and may contribute to reduced functional connectivity in an already constrained landscape.

The EIR prepared for the proposed Plan is a first-tier Program EIR. Second-tier projects that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. The lead agency may identify additional mitigation measures as applicable for implementation at that time.

**Subject: San Diego Forward: The 2021 Regional Plan (PLAN); Draft Environmental Report (DEIR); SCH #2010041060**

Dear Ms. Uchitel:

The California Department of Fish and Wildlife (CDFW) has reviewed the San Diego Association of Governments' (SANDAG) DEIR for the Plan pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.<sup>1</sup>

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

**CDFW ROLE**

9-1 CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the state. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a).) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting comments as a **Responsible Agency** under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW may also need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, projects tiering off the Plan may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 *et seq.*) Likewise, to the extent implementation of projects as proposed under the Plan may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 *et seq.*), the project proponent may seek related take authorization as provided by the Fish and Game Code.

<sup>1</sup> CEQA is codified in the California Public Resources Code in section 21000 *et seq.* The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

**RESPONSE TO COMMENT 9-1**

Thank you for CDFW's participation in the environmental review process and the identification of your organization's role and objectives. Further elaboration regarding your organization's comments is addressed in the responses below.

DocuSign Envelope ID: 8270F8CB-1015-466B-9CE3-220EAE1AB7C4

Kirsten Uchitel  
 SANDAG  
 October 11, 2021  
 Page 2 of 8

CDFW also administers the Natural Community Conservation Planning (NCCP) program. The area encompassed by the Plan is located within planning areas for several NCCP plans within San Diego County (County), including the adopted Multiple Species Conservation Program (MSCP) and Multiple Habitat Conservation Program (MHCP), as well as the draft North County (NC) MSCP and East County (EC) MSCP.

**PROJECT DESCRIPTION SUMMARY**

**Proponent:** San Diego Association of Governments (SANDAG)

**Objective:** The Plan is an update to San Diego Forward: The 2015 Regional Plan adopted in October 2015, and the 2019 Federal Regional Transportation Plan, adopted in October 2019. The DEIR analyzes the significant environmental impacts of the proposed 2021 Plan, which focuses on developing an integrated planning strategy for achieving sustainability in the areas of land use decisions, housing development, and planned transportation for the San Diego region through 2050. The planning strategies also focus on coordinating and managing the region's transportation networks, services and program, along with emphasizing the role of public transit in the process. Regional transportation challenges addressed in the Plan include economic and social inequities, climate change, public health, and safety. The Plan creates an integrated transportation system throughout the 11 Major Travel Corridors of the San Diego region, specifically: South Bay to Sorrento; Central Mobility Hub; State Route 125 (SR 125); Interstate 15 (I-15); Interstate 5 (I-5) North Coast Corridor; State Route 94 (SR 94); Interstate 8 (I-8), Coast, Canyons, and Trails; State Route 56 (SR 56); San Vicente; and North County.

The DEIR functions as a Programmatic EIR under CEQA Guidelines Section 15168 for streamlining future projects. The DEIR provides a foundation for second-tier CEQA documents for subsequent projects, but does not analyze the project-specific impacts of individual projects.

The planning horizon of the proposed Plan is 2050. The programmatic and long-term nature of the proposed Plan necessitates a general and at times qualitative approach to the evaluation of impacts. The DEIR analyzes impacts for the two main physical components of the proposed Plan, as well as the combined impacts of these components: regional growth and land use change, and transportation network improvements and programs. SANDAG is required to update the Plan every 4 years, in collaboration with the 18 cities and the County, along with regional, state, and federal partners.

**Location:** The Plan encompasses the entirety of San Diego County, which is more than 4,200 square miles in area. Most of the urban development lies in the western portion of San Diego County near the coast. Development inland in the eastern portion of the region is less dense and has a more rural character. The boundaries of the Plan include the cities of Carlsbad, Chula Vista, Coronado, Del Mar, El Cajon, Encinitas, Escondido, Imperial Beach, La Mesa, Lemon Grove, National City, Oceanside, Poway, San Diego, San Marcos, Santee, Solana Beach, Vista, and unincorporated areas within the County. Over half of the total land area in the region is not available for public development, including public lands, dedicated parks and open space, lands constrained for environmental reasons, and military use.

**Biological Setting:** The DEIR identifies 17 vegetation types in three categories in the San Diego Region: Wetlands and Riparian (Beach/Coastal Dunes/Saltpan/Mudflats, Marsh, Meadows and Seeps, Open Water and Streams, Riparian Forest/Woodland, Riparian Scrub, Vernal Pools), Uplands (Chaparral, Coastal Scrub, Desert Dunes, Desert Scrub, Oak Woodlands,

g-1  
 cont.

 Page 3 of 8

Forest/Woodland, Grasslands), and Other Cover Types (Agriculture, Disturbed Habitat, Urban/Developed). As indicated in the DEIR, 34 federally or state-listed or candidate plant species and approximately 244 additional special-status plant species have known distributions within the County. Twenty-nine (29) federally and/or state-listed or candidate animal species have potential to be found within the County, as year-round residents or as migrants. An additional 138 special-status wildlife species have known distributions within the County.

Wildlife movement occurs along landscape features (e.g., wildlife corridors, habitat linkages) within the boundaries of the Plan. The various County NCCP plans, both adopted and still in draft, identify landscape-level biological linkages that serve to connect large tracts of core habitat. These linkages allow species movement over time between habitat patches that would otherwise be disconnected. Wildlife corridors contribute to population viability by assuring genetic exchange between populations, providing access to adjacent habitat areas for foraging and mating, allowing for a greater carrying capacity, and providing routes for colonization of habitat lands following local population extinctions or habitat recovery from ecological catastrophes, such as wildfires. Corridors also allow species to adapt to climate change because many habitats could lose their original value as the climate changes and force species range shifts into more hospitable areas or climates. The DEIR focuses on the qualitative and quantitative analysis of landscape level regional wildlife movement and habitat linkages rather than specific local corridors (e.g., small canyons, ephemeral drainages); the latter would be evaluated individually during project-level CEQA review.

9-1  
 cont.

The Biological Resources section of the DEIR projects significant and unavoidable impacts in 2025, 2035, and 2050 to natural resources from projects tiering from the Plan.

BIO-1 projects significant and unavoidable impacts to sensitive natural communities identified in local or regional plans, policies, regulations, or by CDFW or USFWS and state or federally regulated waters and wetlands through direct removal, filling, hydrological interruption, or other means. BIO-1 mitigation measures include: design, minimization, and avoidance measures for Sensitive Natural Vegetation Communities and Regulated Aquatic Resources; provision of compensatory mitigation; preparation of a Habitat Restoration Plan; preparation of Habitat/Long-Term Management Plans; and implementation of Best Management Practices (BMPs) to avoid indirect impacts.

BIO-2 projects significant and unavoidable direct and indirect impacts to certain species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or listed by CDFW or USFWS, including their federally designated critical habitat, or species that are considered sensitive in CEQA Guidelines Section 15380. BIO-2 mitigation measures include: design, minimization, and avoidance measures for Special Status animal species; provision of compensatory mitigation for Special Status plant and animal species; preparation of a Habitat Restoration Plan; preparation of Habitat/Long-Term Management Plans; and implementation of Best Management Practices (BMPs) to avoid indirect impacts.

BIO-3 projects significant and unavoidable impacts to the movement of native resident or migratory fish and wildlife species, to established native resident or migratory wildlife corridors, and to the use of native wildlife nursery sites. Mitigation would involve facilitation of wildlife movement.

BIO-4 projects that no conflicts with any approved HCPs, NCCPs, other conservation plans, and local biological protection policies and ordinances would occur. The DEIR states that

DocuSign Envelope ID: 8270F8CB-1015-466B-9CE3-220EAE1AB7C4

Kirsten Uchitel  
 SANDAG  
 October 11, 2021  
 Page 4 of 8

- 9-1 cont. encroachment into hardline preserve areas would not conflict with HCPs because biologically equivalent or superior compensation of habitat or project redesign would be required when there is encroachment into hardline preserve areas. Thus, BIO-4 projects less than significant impacts. The draft NC and EC MSCPs were not included in this analysis.
- 9-2 CDFW's primary concerns with respect to climate change in San Diego County are the effects on biodiversity, special status plant and wildlife species, natural vegetation communities, and connections which maintain viable movement corridors between blocks of conserved habitat. Because climate change may impact species directly or indirectly by altering the distribution of vegetation types, promoting non-native species, duration and severity of drought, and increased frequency or magnitude of fires, CDFW considers the use of regional scale, multiple species conservation plans to be a valuable tool to guard against the effects of climate change.
- Timeline: The 2021 RP projects impacts forward to 2050. SANDAG is required to update the RP every 4 years.
- COMMENTS AND RECOMMENDATIONS**
- 9-3 It is the policy of the Department to promote and foster the development of planning strategies at the ecosystem level through active participation in local development of regional NCCPs, which often include innovative multiple species habitat conservation planning efforts (e.g., MSCP). The success of these plans is reliant on maintaining core biological resource areas and habitat linkages that are essential to the long-term biological viability of associated flora and fauna. Many of those projects defined within the Plan extend through diverse and biologically valuable habitats, consequently the need for comprehensive planning and creative designs solutions will be essential to ensure goals and objectives articulated in current and draft NCCP/HCP efforts are not undermined. CDFW believes the Plan provides a unique opportunity to develop and refine the SANDAG policies and strategies that could lead to more effective implementation of resource conservation and species protection. This includes compliance with State and Federal endangered species acts, approved NCCP/HCPs (e.g., County of San Diego's and City of San Diego's approved MSCP and several others) and the in-process NC and EC MSCPs. Our comments below are intended to complement existing work to date and provide guidance to reduce the potential for any subsequent conflict that could occur between existing and/or future plans, and other regulations for species protection (e.g., MSCP/MHCP, Lake and Streambed Alteration Agreements under Fish and Game Code §1600 et seq., Fish and Game Code §3500, et seq., etc.) that have received, or are anticipated to receive, State and Federal permits.
- CDFW offers the comments and recommendations below to assist SANDAG in adequately identifying and/or mitigating the Plan's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. Recommendations may also be included to improve the document.
- 9-4 I. Mitigation Measure or Alternative and Related Impact Shortcoming
- COMMENT #1:** The DEIR does not analyze potential conflicts with draft MSCPs.
- Issue:** The Biological Resources section of the DEIR states that conflicts with unapproved or unadopted plans do not require analysis under CEQA (CEQA Guidelines Section 15125(d)(e)). The NC and EC MSCP plans have not yet been implemented; however, in March 2021, the County of San Diego reinstated the Planning Agreements with the USFWS and CDFW for both draft plans. The County has completed the NC MSCP conservation design and identified

**RESPONSE TO COMMENT 9-2**

SANDAG appreciates CDFW's concerns with respect to climate change and its effects on the region's biodiversity. SANDAG has included a climate Adaptation and Resilience Program in the proposed Plan. In addition, please see Appendix C of the EIR, *Climate Change Projections, Impacts, and Adaptation*, which provides the framework for the exacerbation of climate change effects analyzed in the environmental impact analysis sections of the EIR's Chapter 4.

**RESPONSE TO COMMENT 9-3**

SANDAG appreciates CDFW's intentions to complement existing work and provide guidance to reduce the potential for conflict between existing and future plans and regulations for species protections.

**RESPONSE TO COMMENT 9-4**

This comment expresses concern that the Draft EIR does not analyze potential conflicts with draft MSCPs. Under CEQA and the CEQA Guidelines, only conflicts with adopted HCPs are considered potentially significant. See CEQA Guidelines Appendix G question IVe; see also CEQA Guidelines Section 15125(d)(e)) and *Chaparral Greens v. City of Chula Vista* (1996) 50 Cal.App.4th 1134.

Regarding concern about continuing and funding the development of NCCP/HCP planning efforts, the transportation network and the land use pattern proposed in the SCS does not impact the ability of the local jurisdictions to seek a regional funding source, and, therefore, there is no impact under CEQA and no required mitigation. However, the final Plan has included a commitment to fund habitat conservation, management, and monitoring of the HCPs and regional preserve system under a new funding allocation that when combined with the nature-based climate solutions program and habitat mitigation for transportation projects would total \$3 billion, as described in Appendix A of the proposed Plan. Furthermore, SANDAG has committed to monitor the implementation of the SCS on a two-year cycle pursuant to AB 1730 (Gonzalez 2019).

Please refer to Master Response 1 for additional discussion regarding including a regional habitat conservation fund.

DocuSign Envelope ID: 8270F8CB-1015-466B-9CE3-22DEAE1AB7C4

Kirsten Uchitel  
 SANDAG  
 October 11, 2021  
 Page 5 of 8

priority areas for conservation that are being considered in the CEQA analysis of development projects within the NC MSCP planning area. While a planning effort for the eastern portions of the San Diego region was considered by the County of San Diego in 2008, the EC MSCP planning efforts have slowed. However, preliminary conservation design was completed for this area and identified focused areas for conservation that are considered during CEQA analysis as described above for the North County.

**Specific impact:**

**Why impact would occur:** Lack of analysis of future conflicts with the draft NC and EC MSCP plans may inhibit forward planning for preservation, acquisition, management and monitoring of open space and biological resources and funding opportunities for support of these conservation actions.

9-4  
 cont.

**Evidence impact would be significant:** The *TransNet* Extension Ordinance and Expenditure Plan, approved countywide by voters in November 2004, includes an Environmental Mitigation Program (EMP) which is a funding allocation category for the costs to mitigate habitat impacts for regional transportation projects. The EMP is a unique component of the *TransNet* Extension in that it goes beyond traditional mitigation for transportation projects by including a funding allocation for habitat acquisition, management, and monitoring activities as needed to help implement the MSCP and MHCP, including subarea plans issued under these subregional planning efforts. This funding allocation is tied to mitigation requirements and the environmental clearance approval process for proposed transportation projects. Additionally, SANDAG has been discussing funding needs for planning and implementation of regional conservation efforts throughout San Diego County, including the monitoring and management of regional preserves. CDFW strongly supports completion of NCCP/HCP planning efforts, and believes that development of a regional funding source to support implementation of these plans, should be seen as a critical component of the San Diego Forward program.

**Recommended Potentially Feasible Mitigation Measure(s) (Regarding Mitigation Measure or Alternative and Related Impact Shortcoming)**

**Mitigation Measure #1:**

9-5

**To reduce impacts to less than significant:** The proposed Plan covers areas that are critical to the assembly of the County's Multiple Species Conservation Program (MSCP), including NC and EC plans and establishment of Preserve areas. We recommend the DEIR analyze the effects of the proposed Plan on the NC and EC MSCP plans, Preserve assembly, and full implementation of the plans. Any effect (direct or indirect) of the Plan on these draft NCCPs should be evaluated (and mitigated, if necessary). SANDAG staff should coordinate with County staff as well as the U.S. Fish and Wildlife Service and CDFW (jointly, the Wildlife Agencies) to best determine how to evaluate these draft NCCPs in the Plan and DEIR.

**Additional Recommendations**

**Recommendation #1: Regional Wildlife Movement Corridor Map**

9-6

The Regional Wildlife Movement Corridor Map (Figure 4.4-15, page 361 of the DEIR) as well as corresponding text on page 362 should be expanded to include certain omitted linkages prior to publication of the final EIR. Connectivity throughout the subregional MHCP should be included; for example, connections through Oceanside for coastal California gnatcatcher

**RESPONSE TO COMMENT 9-5**

This comment recommends that the Draft EIR analyze the impact of the proposed Plan on the unadopted, draft versions of the North County and East County MSCP plans. Please see response to comment CDFW 9-4 above and USFWS 38-4.

**RESPONSE TO COMMENT 9-6**

In response to this comment, the MHCP core and linkage areas (BCLA) have been added to Figure 4.4-15. The MHCP core and linkages mapping includes the gnatcatcher stepping stones, based on an analysis specifically conducted for the City of Oceanside to inform the preserve design for the MHCP (Bailey and Mock 1998). Under the discussion of the MHCP, the gnatcatcher stepping stones are discussed; text has been added to clarify that the stepping stone concept was included in the MHCP core and linkage map.

The comment asserts that the linkage along I-15 through North County is not referenced in the text. Mention of the I-15 linkage (Santa Ana – Palomar) is included in the text on pages 4.4-103 and 4.4-115. The I-15 linkage is also included on Figure 4.4-16 as part of the model prepared by Jennings (2020). No GIS data currently exist on the Jacumba-Sierra Juarez linkage to Mexico, but the Jennings (2020) model that is analyzed in the EIR includes the US-side of the linkage. With respect to the Santa Ana–Palomar and Jacumba-Sierra Juarez linkage, please see response to comment USFWS 38-12.

DocuSign Envelope ID: 8270F8CB-1015-466B-9CE3-22DEAE1AB7C4

Kirsten Uchitel  
 SANDAG  
 October 11, 2021  
 Page 6 of 8

9-6 cont. (Poliophtia californica californica) should be added to the map. The map is also missing the linkage along the I-15 through North County and there is no reference to it in the text. Additionally, it is not clear if MHPA areas on the map shown near the Border include the north/south connectivity with Mexico near Jacumba for Peninsular Bighorn Sheep (Ovis canadensis nelsoni) and whether this is included in the areas referenced in the text on page 362 under the Las Californias Binational Conservation Initiative section. Last, the DEIR should recognize that additional areas for wildlife movement may be subsequently identified through future studies and/or become necessary as a result of future urbanization/development in the County. Thus projects which tier off the final EIR may need to address wildlife corridor issues beyond just the corridors identified in the DEIR.

**Recommendation #2: Los Angeles–San Diego–San Luis Obispo (LOSSAN) Commuter Rail Corridor Alignment**

9-7 Past impacts to coastal resources by rail projects have been significant, and improvements proposed by the Plan are important elements which address removal of serious impediments to restoration of coastal wetlands, as well as removing rail elements from other sensitive habitats. The DEIR discusses major rail-related transportation network improvements, including continued double-tracking at certain locations on the LOSSAN rail corridor and construction of the Del Mar Tunnel. SANDAG has been considering alternatives that would direct the railroad inland and out of Los Peñasquitos Lagoon. However, Figures 2-32, 2-33, and 2-34 in the DEIR show the alignment of the LOSSAN corridor along the coast. We encourage SANDAG to include the proposed realignments in the DEIR maps and clarify which alignment is included in the quantification of impacts.

**Recommendation #3: 2. New commuter and light rail alignments proposed through the City of San Diego**

9-8 CDFW recommends SANDAG conduct early coordination with the Wildlife Agencies and the City of San Diego to design alignments that avoid sensitive resources and preserved lands.

**Recommendation #4: 3. Proposed upgrade of SPRINTER Rail segments to double tracks**

9-9 The North County Transit District's (NCTD) east-west SPRINTER hybrid rail spans 22 miles and connects Oceanside, Vista, San Marcos, and Escondido, serving 15 stations along the Highway 78 corridor. The addition of a second rail to existing SPRINTER tracks could potentially impact riparian corridors in the cities of Oceanside and Vista. CDFW recommends SANDAG conduct early coordination with the Wildlife Agencies and the cities of Oceanside and Vista to minimize impacts to sensitive resources as feasible.

**ENVIRONMENTAL DATA**

9-10 CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a data base which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). The CNDDDB field survey form can be found at the following link: [http://www.dfg.ca.gov/biogeodata/cnddb/pdfs/CNDDDB\\_FieldSurveyForm.pdf](http://www.dfg.ca.gov/biogeodata/cnddb/pdfs/CNDDDB_FieldSurveyForm.pdf). The completed form can be mailed electronically to CNDDDB at the following email address: [CNDDDB@wildlife.ca.gov](mailto:CNDDDB@wildlife.ca.gov). The types of information reported to CNDDDB can be found at the following link: [http://www.dfg.ca.gov/biogeodata/cnddb/plants\\_and\\_animals.asp](http://www.dfg.ca.gov/biogeodata/cnddb/plants_and_animals.asp).

**RESPONSE TO COMMENT 9-7**

The EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the plan include site-specific transportation network improvements and development projects. Specific projects under the proposed Plan, including the potential LOSSAN double-tracking alignments and the Del Mar Tunnel would be subject to project-specific environmental review, and the alignment, alternatives, and biological resources analysis will be included in the project-specific environmental review.

**RESPONSE TO COMMENT 9-8**

SANDAG appreciates your input and suggestion. Early coordination with the Wildlife Agencies and the City of San Diego to design alignments that avoid sensitive resources and preserved lands would occur on the project-specific level once a project has been further designed. In response to this comment, the following revision was made to mitigation measure BIO-1a, first bullet point:

- Conduct early coordination with the Wildlife Agencies and the respective local jurisdictions to design alignments that avoid sensitive resources and preserved lands.

**RESPONSE TO COMMENT 9-9**

This comment suggests that SANDAG coordinate with the Wildlife Agencies and cities of Oceanside and Vista to minimize impacts on riparian corridors from the addition of a second rail to the SPRINTER tracks. Language has been added to measure Bio-1a as included under Comment CDFW 9-8.

**RESPONSE TO COMMENT 9-10**

Reporting of special-status species to the CNDDDB would occur for each specific project on a project-specific analysis level. In response to this comment, the following revision was made to mitigation measure BIO-1a, last bullet point:

- Require biological monitoring and regular inspections for construction in the vicinity of and adjacent to sensitive habitats to avoid impacts on these habitats. Report any special-status species and natural communities detected during project surveys to the CNDDDB.

Thank you for your comment, SANDAG appreciates your input.

Page 7 of 8

**FILING FEES**

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

9-10

**CONCLUSION**

CDFW appreciates the opportunity to comment on the DEIR to assist SANDAG in identifying and mitigating Project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Meredith Osborne, Environmental Scientist, at [Meredith.Osborne@wildlife.ca.gov](mailto:Meredith.Osborne@wildlife.ca.gov).

Attachment A: CDFW Comments and Recommendations

	Recommendations/Mitigation Measures	Timing	Responsible Party
9-11	Mitigation Measure #1 The DEIR should analyze the effects of the proposed Regional Plan on the draft NC and EC MSCPs, Preserve assembly, and full implementation of the Plan on these draft NCCPs should be evaluated (and mitigated, if necessary). SANDAG staff should coordinate with County staff and the Wildlife Agencies to best determine how to evaluate the NC MSCP and the EC MSCP in the Plan and DEIR.	Prior to release of the final EIR	SANDAG
9-12	Recommendation #1 The Regional Wildlife Movement Corridor Map (Figure 4.4-15, page 361 of the DEIR) as well as corresponding text on page 362 should be expanded to include all omitted linkages, including MHCP connectivity, I-15 linkage through North County, and North/south connectivity with Mexico near Jacumba for Peninsular Bighorn Sheep.	Prior to release of the final EIR	SANDAG
9-13	Recommendation #2 CDFW recommends SANDAG to include proposed realignments of the LOSSAN corridor away from the coast and Los Peñasquitos Lagoon in the DEIR and maps and clarify which alignment is included in the quantification of impacts.	Prior to release of the final EIR	SANDAG
9-14	Recommendation #3 CDFW recommends SANDAG conduct early coordination with the Wildlife Agencies and the City of San Diego to design alignments within the City of San Diego that avoid sensitive resources and preserved lands.	Prior to construction	SANDAG
9-15	Recommendation #4 CDFW recommends SANDAG conduct early coordination with the Wildlife Agencies and the cities of Oceanside and Vista to minimize impacts from addition of a second rail to existing SPRINTER rails to sensitive resources as feasible.	Prior to construction	SANDAG

**RE: Draft Environmental Impact Report for San Diego Forward – the 2021 Regional Plan**

To Whom It May Concern:

10-1 Thank you for the opportunity to provide comments on the Draft Environmental Impact Report (DEIR) for San Diego Forward, the update of San Diego Association of Governments' (SANDAG) Regional Transportation Plan (RTP). The project is an update of SANDAG's existing RTP which aims to improve the balance between land use and transportation systems, including identifying future land use patterns for the region and policies, programs, actions, and a plan of projects intended to meet regional transportation needs and policy goals.

10-2 Given the California Coastal Commission's mandate to protect coastal resources through planning and regulation of the use of land and water within the Coastal Zone, we request that the Final EIR analyze consistency of the RTP with relevant certified Local Coastal Programs (LCPs), sea level rise (SLR), and possible impacts to coastal resources such as public access. Commission staff would note that these comments are in line with comments provided by staff on previous Notices of Preparation and EIRs for SANDAG RTP updates (e.g., Commission staff comments on the Draft 2021 Regional Plan, submitted August 6, 2021).

10-3 1) **Sea Level Rise.** Coastal Act Section 30253 requires that new development minimize risks to life and property from hazards and to assure stability and structural integrity without the use of a shoreline protective device. Thus, a principal concern of the Coastal Commission is ensuring that new coastal infrastructure, including transportation, housing and jobs investments, is designed to avoid or adapt to the effects of sea level rise for the expected life of the infrastructure, as described in the Commission's Sea Level Rise (SLR) policy guidance<sup>1</sup> as well as through recent Commission actions on key infrastructure projects throughout California. The Commission's Guidance references best available science, including SLR projection tables, from the Ocean Protection Council's (OPC) SLR Guidance (2018).<sup>2</sup> Understanding the potential impacts of climate change and sea level rise is critically important when conducting long-range planning efforts to ensure that housing, jobs,

<sup>1</sup> <https://www.coastal.ca.gov/climate/slrguidance.html>

<sup>2</sup> [https://opc.ca.gov/webmaster/ftp/pdf/agenda\\_items/20180314/Item3\\_Exhibit-A\\_OPC\\_SLR\\_Guidance-rt3.pdf](https://opc.ca.gov/webmaster/ftp/pdf/agenda_items/20180314/Item3_Exhibit-A_OPC_SLR_Guidance-rt3.pdf)

**RESPONSE TO COMMENT 10-1**

Thank you for your comments and consideration of the proposed Plan.

**RESPONSE TO COMMENT 10-2**

Consistency of the proposed Plan with relevant Local Coastal Programs was analyzed in Section 4.11, *Land Use*, of the Draft EIR. In addition, sea level rise, including exacerbation of climate change effects, and potential impacts on coastal resources are also addressed throughout the document, including in Section 4.1, *Aesthetics and Visual Resources*; Section 4.4, *Biological Resources*, Section 4.7, *Geology and Soils*, Section 4.10, *Hydrology and Water Quality*, as well as Section 4.11. For more information related to sea level rise, please see responses to comments CCC 10-3 and 10-4, below.

**RESPONSE TO COMMENT 10-3**

It is SANDAG's understanding that the H++ sea level rise scenario is generally used for projects with a lifespan beyond 2050 that have high consequences if damaged (for example, major airports or hazardous waste sites) and little to no adaptive capacity. The EIR did not include the H++ scenario in the climate change appendix due to its unknown probability and the fact that it is more relevant in the second half of the century. Because the EIR time horizon only goes out to 2050, SANDAG did not think the H++ scenario was appropriate to include.

The H++ scenario was not further analyzed due to the evolving nature of the science and the significant uncertainty associated with that scenario. In 2019, new science was published that reduces the likelihood of the H++ scenario (Edwards, T.L., M.A. Brandon, G. Durand, N.R. Edwards, N.R. Gолledge, P.B. Holden, I.J. Nias, A.J. Payne, C. Ritz, and A. Wernecke. 2019. Revisiting Antarctic Ice Loss Due to Marine Ice-Cliff Instability. *Nature* 566:58–64, doi:10.1038/s41586-019-0901-4).

10-3 cont. and transportation infrastructure are not located in areas that will be at risk from coastal hazards.

Given the proximity of essential regional infrastructure to the coast of San Diego County, particularly highways and railways, the RTP should carefully evaluate the vulnerability of existing and proposed transportation infrastructure and housing/jobs investments to the effects of sea level rise and associated hazards for the expected life of those investments. Potential impacts should include modeling of both tidal and fluvial flooding across the range of projected increases in global mean sea level (including under the medium-high and extreme risk aversion scenarios) as applied to the local area (e.g., San Diego County's open coast), combined with potential impacts from storm surge, wave run-up, and coastal erosion. While Commission staff appreciate the incorporation of SLR impacts on natural resources throughout the DEIR, the report references only the 'most-likely' scenario predicted in OPC's SLR Guidance (2018). OPC, however, recommends using the H++ scenario to plan for SLR, which references 2.7 ft. of SLR by 2050 and 10.2 ft. of SLR by 2100, as opposed to the 1.2 ft. and 4.6 ft. of SLR referenced in the DEIR. Therefore, Commission staff request that the impacts to infrastructure under an H++ scenario be analyzed alongside the most-likely scenario.

10-4 If the RTP recommends infrastructure improvements that are likely to be temporarily flooded or perpetually inundated in the next 75 to 100 years, then the RTP and the DEIR for the plan update should describe and analyze potential adaptation measures that would minimize adverse impacts to coastal resources and enhance public access to the coast. For example, if the proposed infrastructure investments are proposed to be protected from coastal hazards with shoreline armoring devices, such as seawalls and revetments, which adversely affect public access because they block access to the beach and result in the loss of public recreational areas, then the DEIR should analyze a) alternative infrastructure projects that would minimize the need for shoreline armoring, b) alternative adaptation strategies for protecting the proposed infrastructure from coastal hazards, and/or c) include options for relocation of existing or proposed infrastructure segments away from hazardous conditions.

10-5 2) **Selection of Project Alternative.** Commission staff would like to express their preference for Project Alternative 3, specifically because it is the only alternative that advances a free public transit policy by 2035. However, the Coastal Act was recently amended to add Environmental Justice as a policy to be analyzed in our regulatory work, and to add a designated Environmental Justice commissioner on the Coastal Commission. Accordingly, although we applaud the Regional Plan's focus on equity and recognize the need to generate revenue for implementation, Commission staff urge SANDAG conduct a thorough equity analysis to demonstrate that the free transit policy will be significant enough to offset the mobility impacts (specifically with respect to coastal access) to disadvantaged communities caused by proposed dynamic pricing on roadways and parking, consistent with Coastal Act Sections 30013, 30210, 30212, and 30252.

10-6 Please note that the comments provided herein are preliminary in nature and Coastal Commission staff may have additional comments as the project develops. Coastal Commission staff requests notification of any future activity associated with this project or

**RESPONSE TO COMMENT 10-4**

The effects of sea level rise on each individual environmental topic studied in the EIR is included in Sections 4.1 through 4.19 as well as in Appendix C of the EIR. In addition, Table C-2 in Appendix C of the EIR identifies all of the EIR resource topic sections that incorporate the effects of climate change-caused sea level rise. Appendix C also provides a description of scientific studies related to sea level rise in California and the San Diego region, including the California Coastal Commission's Sea Level Rise Policy Guidance and 2017 Draft Residential Adaptation Policy Guidance documents. As acknowledged in the EIR, particularly in Section 4.10, *Hydrology and Water Quality*, project footprints that lie in low elevations directly adjacent to the coast and within 100-year flood hazard areas would be susceptible to flooding and the effects of sea level rise. Tables 4.10-10 through 4.10-12 in the EIR show transportation network improvements in the 100-year floodplain. Design practices employed in accordance with the local HMP; Caltrans standards; and other related regulations and programs, including FHWA, FTA, and Caltrans policies on adapting to climate change, sea-level rise, and flooding, would be required. Compliance with applicable regulatory requirements and implementation of design measures, safety ordinances, and water quality requirements described above and in Section 4.10.2 would ensure that regional growth and land use changes as well as transportation network improvements would minimize impacts related to flooding. In addition, proposed improvements within coastal zones will undergo separate CEQA analysis, at which time, additional potential adaptation measures may be developed in conjunction with applicable resource agencies, including the California Coastal Commission.

Furthermore, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan, including infrastructure investments within the coastal zone, would be subject to project-specific environmental review. During project-specific environmental review, alternatives to specific infrastructure projects would be identified to minimize the significant impacts of the project, including any potential need for shoreline

armoring, alternative adaptation strategies to protect the project from coastal hazards, and/or alternate locations.

**RESPONSE TO COMMENT 10-5**

SANDAG acknowledges the Coastal Commission's support for Project Alternative 3 and the free public transit policy. The proposed Plan provides a framework for meeting its stated goals with coordinated land use and transportation planning strategies. Implementation actions related to projects, policies, and programs will confirm SANDAG's commitment to fully realizing the strategies in the proposed Plan. As described in Chapter 2.0, *Project Description*, of the EIR, as an implementation action SANDAG will evaluate the transition to free public transit and develop a Value Pricing and Fee Implementation Strategy. As part of the implementation process, SANDAG will be conducting ongoing analyses to assess mobility and transit improvements, including those related to improving access for disadvantaged communities. For example, SANDAG is currently working with the Social Equity Working Group to develop near-term solutions to address transit service improvements, amenities, and subsidized transit fares. Appendix U, *Cost Estimation Methodology*, Table U.2, in the proposed Plan, captures the transit fare subsidies to riders throughout FY2026–FY2050. For more information on the Value Pricing and User Fee Implementation and the Regional Fare Impact Study, please see Appendices B and U of the proposed Plan.

**RESPONSE TO COMMENT 10-6**

It is noted that the comments provided are preliminary and that they do not represent the opinion of the Coastal Commission itself but rather Coastal Commission staff. Thank you for your comments and consideration of the proposed Plan.

10-6  
cont.

related projects. Additionally, the comments contained herein are those of Coastal Commission staff only and should not be construed as representing the opinion of the Coastal Commission itself. Thank you for the opportunity to comment on the DEIR.

Sincerely,

Trevor Hill  
Transportation Program Analyst

**COMMENT LETTER 11: CITY OF CORONADO**

Comment Letter 11

1825 STRAND WAY · CORONADO, CA 92118 · TEL (619) 522-7335 · FAX (619) 522-7846

October 6, 2021

**Subject:** Comments on the Draft EIR for the San Diego Forward: 2021 Regional Plan

Dear SANDAG staff:

Thank you for the opportunity to review the Draft Environmental Impact Report (EIR) for the San Diego Forward: 2021 Regional Plan (Regional Plan). While the City of Coronado (City) is generally supportive of the 2021 Regional Plan, there are several areas of concern, including the inclusion of a mobility hub in the Orange Avenue Business District / Village area, and the potential consequences of such designation including further increases in housing, and the assumption of new mixed use areas in the City. These main concerns were summarized in the City's July 21, 2021 letter (Attachment) and remain unresolved.

The Regional Plan introduces the concept of a Mobility Hub, which would call for facilities for "Flexible Fleets" and "Transit Leaps," such as ride hailing zones, electric vehicle charging stations, micro-mobility parking areas, parcel delivery lockers, and sidewalk delivery bots and the use of drone technology. These facilities, as well as mixed use or residential uses which are also anticipated in the Regional Plan, are currently not allowed uses within the Commercial zone of Coronado. Implementation of these would require significant time and resources to update the City's General Plan, Zoning Ordinance, and Local Coastal Program.

Objective No. 1. of the Regional Plan, found on page ES.1 of the EIR, calls to "[f]ocus population and employment growth in mobility hubs and existing urban areas to protect sensitive habitat and natural resource areas." This is of great concern for the City of Coronado as it has approximately 24,000 residents and a compact, fully developed village area covering about two square miles surrounded by the San Diego Bay and the Pacific Ocean. The City is highly constrained and has limited additional development capacity due to the multiple other jurisdictions that control land within Coronado, as well as the Naval Air Station North Island Airport Land Use Compatibility Plan (NASNI ALUCP) overlay. Designating a mobility hub in Coronado will undoubtedly lead to expectations of future growth in Coronado, contrary to the statement on page 4.14-16 that SANDAG has no control over the amount or exact location of growth in implementing the Regional Plan. By designating an area as a mobility hub, SANDAG is dictating where future growth would occur.

11-1

11/9/21

**RESPONSE TO COMMENT 11-1**

Not all Mobility Hub areas are created equal. Coastal Mobility Hubs are envisioned to rely upon some transit services supported by an array of on-demand Flexible Fleets to help people complete short trips in and around the hub without needing to rely on a car. The suite of Flexible Fleets and supporting Mobility Hub amenities as included in the Final EIR can be tailored to meet the needs of people traveling to and within Coronado. SANDAG staff will continue to coordinate with Coronado on planning for appropriate Mobility Hub services, amenities, and supporting technology for this community.

Consistency of the proposed Plan with relevant general plans and LCPs is analyzed in Section 4.11, *Land Use*, of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions' general plans, LCPs, or other local planning documents. Consistency of individual second-tier projects with these policies would be considered during project-specific CEQA reviews.

Government Code Section 65080(b)(2)(B) provides that an SCS "use most recent planning assumptions considering local general plans and other factors." It also requires that the SCS "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board." The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the proposed Plan. As the comment notes, the SCS land use pattern focuses growth and development in the Mobility Hub areas.

Coronado is a major destination due to the presence of one of the region's top military bases. Additionally, people commuting to hospitality, retail, and dining jobs is a daily occurrence, and the community serves as one of the region's top tourism destinations for visitors from both outside and within San Diego County. These trip-

inducing factors contribute to the area's high propensity for regional Mobility Hub designation.

The 6<sup>th</sup> Cycle RHNA Plan, adopted by the Board of Directors and approved by the California Department of Housing and Community Development, includes a methodology that allocates housing throughout the region near jobs and transit. Consistent with State law, the RHNA process occurs about every 8 years. During the next RHNA process, the Board of Directors will again consider a methodology for allocating housing throughout the region, which may be different from the 6th Cycle methodology. The SCS land use pattern assumes mixed-use development to accommodate future growth and development in the Mobility Hub areas. While this is a strategy to increase housing affordability and reduce VMT, land use authority is reserved for local jurisdictions, and implementation of the land use pattern is to be refined through coordinated planning with the jurisdiction(s).

With respect to Figures 2-35 and 2-14, each shows generalized Mobility Hub boundaries for planning purposes and is not intended to be binding or precise. Mobility hub boundaries are subject to refinement in close coordination/planning with the affected jurisdiction(s). While Naval Air Station North Island is not located within the Mobility Hub area identified in Figures 2-35 and 2-14, it is a major regional employer. As described above, this is one of many trip-inducing factors contributing to the area's high propensity for regional Mobility Hub designation.

11-1  
cont.

The City of Coronado is concerned that a mobility hub within its jurisdiction would lead to a higher assigned Regional Housing Need Allocations (RHNA) from SANDAG in future Housing Element Update cycles. For the 6<sup>th</sup> Housing Element Update cycle, SANDAG based each jurisdiction's RHNA solely on the number of jobs and transit stops within the jurisdiction and included adjacent military jobs that had previously never been assigned to individual cities, resulting in a 1,800% increase in RHNA between the 5<sup>th</sup> and 6<sup>th</sup> Cycles. With the plan objective to focus on population and job growth within mobility hubs, the City believes the designation of a mobility hub in Coronado will lead to significant future impacts, including increases in the RHNA assigned to the City by SANDAG to which the City is vehemently opposed. Additionally, the City would oppose Alternative 3 outlined in the EIR, which would focus all growth within mobility hubs, for the same reasons.

When reviewing figures 2-35 and 2-14 that show proposed mobility hub locations as well as employment density for 2025 it does not appear that the significant employer/jobs are located within Coronado where the mobility hub is proposed, but rather on Naval Air Station North Island (NASNI). The Coronado village area is not a significant job center for the region, is constrained by existing development and the NASNI ALCUP, and has a general lack of vacant sites.

11-2

Additional intensified future growth could lead to many issues and create impacts within Coronado such as on the City's infrastructure, including sewer services, recreation facilities, and parks. Additionally, Coronado has just two access points into and out of the city: the San Diego-Coronado Bay Bridge and SR-75 Silver Strand, which is a Designated Scenic Highway as well as a STRAHNET Connector that is part of the National Strategic Highway Corridor Network for defense purposes. It is not prudent to place additional future growth on a constrained community that lacks adequate roadways that do not have feasible expansion opportunities and are designated as a strategic highway for defense purposes. Coronado requests that SANDAG conduct further analysis on potential impacts to the San Diego – Coronado Bay Bridge as well as the Silver Strand State Highway as a result of the Regional Plan.

The City also has the following comments:

11-3

- Page 4.18-2, related to water supply, includes a discussion on the various ways that water is provided to the region and states that "Coronado and Imperial Beach are not within SDCWA's service area" which is true. However, the EIR fails to analyze the water supply and demand for both Coronado and Imperial Beach, both of which are served by California American Water, and the potential impacts the Regional Plan would have on this water source.

11-4

- Table 4.8-5, found on page 4.8-18 of the Regional Plan, includes the status of each jurisdiction's efforts related to Climate Action Plans (CAP). The City of Coronado asks that a footnote be added to the table for Coronado, similar to footnote 2 for the City of Vista, noting that the City of Coronado published a public draft of a CAP update in 2021 that has not yet been adopted. On September 7, 2021, the City Council authorized the release of a public review draft CAP.

11-5

- Figure 2-27 on page 2-46 shows the 2025 regional bike network but omits a portion of the existing Bayshore Bikeway along Glorietta Boulevard. The Bayshore

**RESPONSE TO COMMENT 11-2**

he degree of specificity required in an EIR corresponds to the degree of specificity involved in the underlying activity (CEQA Guidelines Section 15146). As a programmatic document encompassing the entire region, the proposed Plan and its EIR do not analyze project-specific impacts on City sewer services, recreation facilities, and parks. These would be analyzed at the development project level. This comment also inaccurately suggests that future growth necessitates roadway expansion to increase capacity. SB 743 directed OPR to identify appropriate criteria for the evaluation of transportation impacts in CEQA Guidelines amendments, and provided that once these amendments are adopted, automobile delay, as measured by "level of service" and other similar metrics, no longer constitutes a significant environmental effect under CEQA. OPR selected VMT as the preferred transportation impact metric and applied its discretion to require its use statewide for land use projects and to recommend its use for transportation projects. Transportation impacts for future development projects would be evaluated at the project level consistent with SB 743 and the CEQA Guidelines.

In the proposed Plan, Transit Leap includes a new Rapid bus service from Coronado to Downtown San Diego (Rapid 910) via the San Diego-Coronado Bay Bridge and San Diego-Coronado-Military ferry service that will provide alternatives to driving alone.

**RESPONSE TO COMMENT 11-3**

Coronado and Imperial Beach are not within the SDCWA service area. They are served by California American Water. However, as is detailed in California American Water's Typical Water Quality Summary (<https://www.amwater.com/caaw/water-quality/water-quality-reports/coronado>), "The Coronado water system is served entirely by treated surface water purchased from the City of San Diego. The City of San Diego obtains its raw surface water supplies from local reservoirs and the San Diego County Water Authority. The San Diego County Water Authority obtains its supply from the Metropolitan Water District of Southern California (MWD) and transfers from other water agencies." The regional water supply discussed in the EIR includes all water obtained from MWD or other sources and imported into the County by the SDCWA. It also includes any surface water captured in reservoirs owned by the City of San Diego. The water supplies purchased by the cities of Coronado and Imperial Beach, therefore, are included in the

regional supplies discussed in the EIR. The conclusions regarding the adequacy of regional supplies would apply to the water supplies of these two cities. Wording in the EIR has been changed to clarify that, while the two cities are not within the SDCWA service area, their water supply, obtained via the City of San Diego, is part of the regional supply included in the analysis.

#### **RESPONSE TO COMMENT 11-4**

This comment notes that the City Council authorized the release of a public draft CAP on September 7, 2021, and requests that this information be included in Table 4-8.5 of the Draft EIR (page 4.8-18).

The Draft EIR was published for public review on August 27, 2021, before the City's public draft CAP was authorized for release. In response to this request, SANDAG has revised Table 4.8-5 in the Final EIR to include a footnote explaining that the City has published a public draft CAP and does not have an adopted CAP.

<sup>1</sup> CEQA Qualified Plan = a plan for the reduction of GHG emissions that includes the elements listed in CEQA Guidelines Section 15183.5(b)(1) (as determined by the agency adopting the plan).

<sup>2</sup> The City of Coronado authorized the release of a public draft Climate Action Plan (CAP) on September 7, 2021.

<sup>32</sup> The City of Vista published a public draft of a CAP update in 2021 that has not been adopted as of August 6, 2021.

**RESPONSE TO COMMENT 11-5**

For a more detailed response related to this comment, please refer to response L83 in Appendix P.2.

11-5 cont. Bikeway within Coronado is accurately depicted in the figure for the 2035 and 2050 regional bike networks. Coronado asks that Figure 2-27 be updated to reflect the current Bayshore Bikeway.

11-6

- Figure 4.11-1 on page 4.11-2 shows the 2016 Land Use Map for the region. When looking at residential designations in Coronado it appears as mostly single family residential, but lacks much of the existing multi-family residential zoned properties generally between Fourth and Tenth Streets and should be updated to reflect these conditions.

11-7

As stated earlier, Coronado appreciates SANDAG's ambitious plan to improve the San Diego region's mobility options, reduce greenhouse gas emissions, address traffic congestion, advance technology related to transportation services, and improve regional transportation infrastructure. Coronado, however, is concerned with the potential growth intensification the Regional Plan would have on this small, compact community with constrained and burdened transportation corridors and infrastructure. Coronado requests that the Regional Plan remove the mobility hub identified in Coronado and address the other comments in this letter.

Once again, thank you for the opportunity to comment on the 2021 Regional Plan. We look forward to seeing an amended plan in the future.

Respectfully submitted,

Tina Friend  
City Manager

Cc: City Councilmembers for the City of Coronado

**RESPONSE TO COMMENT 11-6**

The 2016 land use map was used by SANDAG as detailed in Appendix F of the proposed Plan, and considered local general plans. For consistency purposes with the rest of the County, no change has been made. However, it should be noted that ultimate land use authority is reserved for local jurisdictions, including the City of Coronado. The cities and the county are best positioned to effectively implement the objectives outlined in the proposed Plan as those jurisdictions understand the unique needs of their communities and geographies. As such, it is within the City of Coronado's authority to determine whether zoning in this area is single-family or multi-family.

**RESPONSE TO COMMENT 11-7**

This comment addresses the proposed Plan and does not relate to the adequacy of the Draft EIR.

Coronado is a major destination due to the presence of one of the region's top military bases. Additionally, people commuting to hospitality, retail, and dining jobs is a daily occurrence, and the community serves as one of the region's top tourism destinations for visitors from both outside and within San Diego County. These trip-inducing factors contribute to the area's high propensity for regional Mobility Hub designation.

Not all Mobility Hub areas are created equal. Coastal Mobility Hubs are envisioned to rely upon some transit services supported by an array of on-demand Flexible Fleets to help people complete short trips in and around the hub without needing to rely on a car. The suite of Flexible Fleets and supporting Mobility Hub amenities as included in the proposed Final EIR can be tailored to meet the needs of people traveling to and within Coronado. SANDAG staff will continue to coordinate with Coronado on planning for appropriate Mobility Hub services, amenities, and supporting technology for this community. Mobility hub boundaries are also subject to refinement in close coordination/planning with the affected jurisdiction(s).

**COMMENT LETTER 12: COUNTY OF SAN DIEGO**

October 11, 2021

Kirsten Uchitel  
 Associate Planner  
 SANDAG  
 401 B Street, Suite 800  
 San Diego, CA 92101

Sent via email to: [RegionalPlanEIR@sandag.org](mailto:RegionalPlanEIR@sandag.org)

**RE: REQUEST FOR COMMENTS ON THE DRAFT PROGRAMMATIC ENVIRONMENTAL IMPACT REPORT FOR SAN DIEGO FORWARD: THE 2021 REGIONAL PLAN FOR SANDAG**

Dear Ms. Uchitel,

12-1 The County of San Diego (County) staff reviewed SANDAG's Draft Programmatic Environmental Impact Report (Draft PEIR) for "San Diego Forward: The 2021 Regional Plan," dated August 2021. County staff provided detailed comments regarding the 2021 Regional Plan (Proposed Plan) in a letter previously submitted to SANDAG. The letter, dated August 6, 2021 (Attachment A), outlined opportunities within the Proposed Plan for which County staff requested further clarification, exploration, and consideration. County staff would like to continue discussions with SANDAG on how these opportunities align with the objectives of the proposed plan and the Draft PEIR.

To ensure that potential opportunities within the unincorporated area are not precluded in the future, County staff requests that SANDAG consider the comments below on the Draft PEIR and that any necessary refinements be reflected in Chapter 2, Project Description, and analyzed in the appropriate sections of the Final PEIR. County staff appreciates the opportunity to review the Draft PEIR for the Proposed Plan and offers the following comments for your consideration:

**GENERAL**

- 12-2
1. The Draft PEIR (Table 2-5) notes that 56% (1,855,597 out of 3,309,510 total people) of San Diego County residents are currently located outside of a Mobility Hub Network, including 512,597 people in the unincorporated area. With the significant investment described in the Proposed Plan, County staff would like to ensure that it is fairly and equitably distributed for the benefit of all County residents, including rural residents living in unincorporated communities.

**RESPONSE TO COMMENT 12-1**

SANDAG appreciates the County of San Diego's feedback on the proposed Plan and your participation in the environmental review process. Please refer to subsequent responses to your comments below for detailed responses. Refinements have been made to the Final EIR as applicable.

Responses to comments on the County's comments on the proposed Plan can be found under ID 968 in Appendix P.2. Please note that comments 12-1 through 12-7 apply to the proposed Plan, not to the adequacy of the Draft EIR.

**RESPONSE TO COMMENT 12-2**

While certain types of Flexible Fleets are envisioned to converge in more dense communities (e.g., micromobility, last-mile delivery), there are also planned Flexible Fleet services that operate outside of Mobility Hubs including in unincorporated communities. These services may include on-demand rideshare, ridehail, carshare, and microtransit services. As an implementation action of the proposed Plan, SANDAG is conducting a Flexible Fleets Implementation Strategic Plan to determine the appropriate use cases and geographic locations that are best appropriate for Flexible Fleet services, including in unincorporated communities of the County. In addition, the proposed Plan includes investments in broadband connectivity that will facilitate improved access to online services and on-demand mobility services.

Ms. Uchitel  
 October 11, 2021  
 Page 2

- 12-3 2. Staff recommends the inclusion of potential investments in roads identified in the County's Mobility Element and in the Regional Arterial System that would further connect the unincorporated area to proposed mobility hubs, with consideration of those roads that also serve as evacuation routes.
- 12-4 3. Staff would also request consideration of how transit can be aligned with recreation access points to increase access to these important regional amenities.
- 12-5 4. The Proposed Plan focuses on mobility and land use changes that would serve three primary user groups: pedestrians, bicyclists, and vehicles. Please consider updating the analysis to consider mobility needs for wildlife (wildlife corridors) and for equestrians where appropriate.
- 12-6 5. From a social equity standpoint, please consider if allowing single occupancy vehicles should be permitted in managed lanes. Allowing single occupants that can afford to travel in managed lanes will create some inequities in the community.

**AIRPORTS**

- 12-7 1. The San Diego County Regional Airport Authority adopted Airport Land Use Compatibility Plans for the eight airports, which included land use compatibility policies related to airspace, noise, safety, and overflight. Those policies have been adopted by the County of San Diego through its General Plan and Zoning Code. After evaluating the forecasted increases in housing and jobs around the Mobility Hubs, there are several land use assumptions made in the Proposed Plan related to safety and noise around Fallbrook Airpark, Jacumba Airport, Gillespie Field, and McClellan-Palomar Airport that County staff would like to better understand. For example, there are forecasted incompatible housing increases within the Runway Protection Zones at Gillespie Field. These inconsistencies could result in making the assumed intensities and density increases included in the Proposed Plan unachievable.

**AESTHETICS AND VISUAL RESOURCES**

- 12-8 1. Page 4.1-10 of the Draft PEIR mentions the County of San Diego Dark Sky Ordinance and associated regulation of outdoor light fixtures within 15 miles of local observatories. This ordinance also includes the minimization of light pollution to reduce impacts to wildlife. Please consider expanding the analysis to address direct and indirect impacts due to light and glare on open space lands and wildlife corridors/linkages.
- 12-9 2. It is not clear what type of trees and vegetation will be used to replace impacted vegetation in cases where vegetation disruption causes potential aesthetic impacts (Mitigation Measures AES-2a, 2b, AES-3a). Mitigation Measure BIO-1e specifies that certain invasive species shall not be used to replace impacted vegetation. Please consider adding that same requirement to the Aesthetic/Visual Resources mitigation measures in the Draft PEIR.

**RESPONSE TO COMMENT 12-3**

The proposed Plan includes improvements for arterial roadways so that they can benefit from management approaches and technology enhancements to increase efficiency and reduce delays (see proposed Plan Appendix A, A-41, Table A.13).

While these regional Mobility Hub coverage areas have been used to model the impact Transit Leap and Flexible Fleet trips to/from these hubs have on reducing VMT, they do not restrict Flexible Fleets from serving neighborhoods that may be between or beyond hubs. Some Flexible Fleet services operating within regional hubs will also need to reach outlying destinations, such as the set of beach and shopping communities cited in this comment. There will be many opportunities for Flexible Fleets to connect to Transit Leap stops located along routes in between hubs. The same applies to improvements on Complete Corridor arterials connecting to and from hubs.

Appendix Q of the proposed Plan describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.

SANDAG also encourages the County to work with staff on any proposals to include additional RAS routes during the next Regional Plan cycle. Eligibility criteria is outlined in Appendix T of the proposed Plan.

**RESPONSE TO COMMENT 12-4**

The proposed Plan aims to improve access to a quality public transportation system for all San Diego residents, especially for seniors, historically underserved communities, and other under-represented populations. SANDAG's social equity analysis projects significant improvements for senior access to high-quality transit service, parks, and recreational facilities. In every metric senior access to transit, retail, medical facilities, and parks improves through 2025 and 2050. More data and analysis is available in Appendix H of the proposed Plan.

In general, the Draft EIR found that the main drivers of demand for recreational facilities is population growth, not transportation network improvements (see, inter alia, EIR page 4.15-40). However, "[t]he transportation network improvements and programs, in particular rail improvements and active transportation facilities, could redistribute a portion of existing travel and attract transit users to recreation facilities

in the vicinity of transit stops and stations leading to minor increases in usage....In addition, active transportation improvements would expand recreation opportunities, such as bicycle facilities” (EIR page 4.15-43).

**RESPONSE TO COMMENT 12-5**

The proposed Plan suggests a Nature-Based Climate Solutions Program that will promote natural infrastructure that uses or mimics natural processes to benefit people and wildlife. SANDAG will prioritize resilience and innovative solutions in transportation infrastructure, Comprehensive Multimodal Corridor Plans (CMCPs), and consistent regional planning and implementation of the Sustainable Communities Strategy actions, emphasizing both nature-based and technological climate solutions. There are also further opportunities to expand upon ongoing efforts to assess the amount of carbon storage and sequestration potential of open space lands and the co-benefits from preserved open space, land management, and restoration activities.

The development CMCPs by SANDAG and Caltrans will consider all relevant and related plans and projects, in collaboration with city and County staff, to ensure there is cohesion and consistency between the CMCP and the communities within and adjacent to them, including active and multi-modal transportation considerations. These are focused efforts to identify projects and strategies that integrate transportation options, wildlife connectivity, and technology deployment to improve mobility and evacuations along the corridors.

This comment asks that the proposed Plan consider mobility needs for wildlife and equestrians in addition to pedestrians, bicyclists, and vehicles. This comment is therefore aimed at the proposed Plan, not the EIR. The EIR analyzes the proposed Plan’s impact on wildlife corridors in Section 4.4, *Biological Resources*. Mitigation measure BIO-3 includes specific measures to facilitate wildlife movements.

**RESPONSE TO COMMENT 12-6**

The intent of the Managed Lanes is to create a flexible system that can be managed in real time. This is similar to how the I-15 corridor is currently managed in North County. Solo drivers will have options to use the lanes but at a price, and transit services can travel congestion free. The result is better optimization of the system that encourages higher occupancy travel but with real alternatives that are competitive with driving.

SANDAG will launch a study in the next year to further examine the potential of usage-based fees and their capabilities in addressing various goals, including equity and GHG emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.

The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those driving fuel-powered vehicles, are paying more than their fair share.

**RESPONSE TO COMMENT 12-7**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. The land use pattern proposed in the proposed Plan focuses growth and development in the mobility hub areas. The allocation of housing units to subregional areas represents general areas projected for future growth and not precise locations for future housing development or housing unit type. The exercise of land use authority is reserved for local jurisdictions, and projected intensity and density of development under the proposed Plan would be achieved through a variety of strategies without placing housing areas in incompatible areas defined by an Airport Land Use Compatibility Plan (ALUCP).

**RESPONSE TO COMMENT 12-8**

In response to this comment, text has been added to the Dark Sky Ordinance summary on page 4.1-10 of the EIR to indicate that this ordinance also includes the minimization of light pollution to reduce impacts on wildlife. Mitigation measure BIO-2a in Section 4.4 provides measures to reduce impacts from increased temporary and permanent sources of lighting during construction and operation of future development occurring under the proposed Plan.

**RESPONSE TO COMMENT 12-9**

The types of trees and vegetation that would be used to replace impacted vegetation would vary, depending on a number of factors; however, in response to this comment mitigation measures AES-2a, AES-2b, and AES-3a have been modified to include language prohibiting planting of invasive plant species, as designated on the most recent version of the California Invasive Plant Council (Cal-IPC) California Invasive Plant Inventory.

Ms. Uchitel  
 October 11, 2021  
 Page 3

**BIOLOGICAL RESOURCES**

- 12-10 1. Please clarify the significant reduction in acreages impacted between the 2015 EIR and the 2021 Draft EIR, especially as they relate to Wetlands and Riparian Habitat, Upland Habitat, Agricultural Land, and Transportation. The differences do not appear to correlate with the changes or updates made between the 2015 and 2021 Regional Plan.
- 12-11 2. On January 13, 2017, County staff submitted comments to SANDAG on the Notice of Preparation (NOP) of the Regional Plan Draft PEIR (Attachment B). In that letter, the County requested that SANDAG coordinate with County staff and evaluate in the Draft PEIR potential direct and indirect impacts on the Multiple Species Conservation Plan (MSCP). The comments related to the MSCP still stand (Attachment B). As such, it is not clear how the Proposed Plan would impact the MSCP, or if there is specific mitigation proposed to reduce these impacts. Please consider updating the analysis to clarify these potential impacts and associated mitigation.
- 12-12 3. Please ensure that maps are using the latest GIS data available from SanGIS, which is regularly updated. For example, the maps showing Open Space Parks and Recreation land (Figures 4.15-1 and 4.15-2) seem to be missing some of the County's Department of Parks and Recreation properties. Please ensure all references to County Department of Parks and Recreation properties are updated throughout the 2021 Draft PEIR.
- 12-13 4. Please consider including County parks and preserves and associated proposed project impacts to each specific park and preserve within the Draft PEIR; data on County parks and preserves can be found on SanGIS. For example, on Page 4.4-107, it states that the largest area of encroachment and associated impacts would occur on the Otay Ranch Preserve. However, the level and extent of that potential impact is not clear. Please coordinate in advance with the County Department of Parks and Recreation prior to implementation of projects that may have impacts to County parks and preserves.
- 12-14 5. The figures within the Draft PEIR do not show property ownership overlaid with the proposed project. To better understand and analyze potential impacts of the project, please consider the inclusion of a figure that shows County parks and preserves.
- 12-15 6. Please consider revising "Hardline Preserve" to "MSCP Preserve" throughout the Draft PEIR, as MSCP Preserve is the term most commonly used.
- 12-16 7. In Table 4.2-2 and Table 4.4-6, Otay Ranch and the associated General Development Plan/Subregional Plan are categorized as falling under the jurisdiction of the City of Chula Vista. While the text clarifies that Otay Ranch is jointly owned and managed by the City of Chula Vista and the County, the categorization in the tables is unclear. Please consider revising the tables to show the joint ownership and management of this area.
- 12-17 8. Figure 4.4-16, San Diego Conservation Planning Areas and Conserved Lands, does not appear to be consistent with the Subarea Plans under Adopted MSCP/MHCP Subregional Plans listed in Table 4.4-5. Please consider revising these to show all Subarea Plan Areas.
- 12-18 9. On page 4.4-107, Section BIO-4 Analysis Methodology, please consider updating the methodology to take into consideration requirements of the Public Park Preservation Act of

**RESPONSE TO COMMENT 12-10**

The significant reduction in impact acreages is due to a significantly smaller development footprint in non-urban areas and, thus, a significantly smaller impact on biological resources in general.

**RESPONSE TO COMMENT 12-11**

Thank you for submitting the County of San Diego's comments on the NOP for this EIR. The EIR preparers received your comments and considered them in the preparation of the EIR. Direct and indirect impacts from the proposed Plan land use change and transportation network on the County's adopted MSCP are programmatically addressed under Impact BIO-4 of the EIR. Indirect impacts are assessed qualitatively. Tables 4.4-16 through 4.4-19 quantitatively assess impacts on the County's MSCP Preserve. Consistent with the County's adopted MSCP, the County would be consulted prior to any design of projects that could potentially have an effect on the County's MSCP Preserve. Furthermore, consistent with the EIR, any such projects would be required to be consistent with the County's MSCP, and no impacts on hardline preserve are expected. Should impacts on the MSCP be unavoidable, boundary line adjustments would be required as mitigation for such impacts, pursuant to the County's guidelines and in consultation with the County of San Diego. In addition, please see response to comment USFWS 38-4.

**RESPONSE TO COMMENT 12-12**

Figure 4.4-16 has been revised to include any County of San Diego conserved open space parks that were/are not included in the Conserved Lands database in the Final EIR.

**RESPONSE TO COMMENT 12-13**

The impacts on the Otay Ranch Preserve are a factor of the programmatic nature of the proposed Plan footprint. Specific impact avoidance, minimization, and mitigation measures will be developed during subsequent project-specific CEQA-level review and will require consistency with any adopted HCP. Project-level analysis will include consultation with the County Department of Parks and Recreation.

**RESPONSE TO COMMENT 12-14**

Please see response to comment County of SD 12-12.

**RESPONSE TO COMMENT 12-15**

The text has been revised throughout the document and “hardline preserves” has been replaced with “NCCP Preserves” to identify not just MSCP but also MHCP preserve designations.

**RESPONSE TO COMMENT 12-16**

Table 4.4-6 has been revised to reflect this comment in the Final EIR.

**RESPONSE TO COMMENT 12-17**

Figure 4.4-16 has been revised as suggested in the Final EIR.

**RESPONSE TO COMMENT 12-18**

The text on page 4.4-109 in Section 4.4 has been revised as suggested. The following language has been added:

The Public Park Preservation Act of 1971 (Public Resources Code Sections 5400-5409) requires that any “take” of public parkland may require compensation that is sufficient to acquire substantially equivalent substitute parkland or provide substitute parkland of comparable characteristics.

Ms. Uchitel  
 October 11, 2021  
 Page 4

- 12-18 | 1971 (Public Resources Code Sections 5400-5409). In the event the Proposed Plan results in "take" of any County MSCP Preserve Lands, this would be considered "take" of designated park land and may require land or other compensation for loss of park land.
- 12-19 | 10. In Figures 4.4-3 through 4.4-8, one of the data sources for these figures is stated as the County of San Diego's SanBios data from 2017. Please consider using the County of San Diego's SanBios data through 2020, as this contains updated data.
- 12-20 | 11. Table 4.4-5 states that the County is pursuing an amendment to the South County Subarea Plan to include the Quino checkerspot butterfly (QCB). Please remove reference to QCB as the County has expanded the project to the Regional Butterflies Habitat Conservation Plan (RBHCP) to include a comprehensive approach that would cover QCB, Harbison's dun skipper, Hermes copper, and the Laguna Mountains skipper.
  - a. Additionally, the RBHCP is currently being developed and has not yet been adopted. Therefore, reference to the RBHCP may not need to be included in Table 4.4-5 related to adopted regional conservation plans. Please consider removing the reference.
- 12-21 | 12. Given the significance and regional importance of wildlife corridors and wildlife linkages, please consider updating the analysis to consider areas where linkages and corridors could be impacted by the Proposed Plan and any mitigation measures that could be implemented to improve wildlife linkages.
- 12-22 | 13. Spread of invasive plants is a significant regional issue that many land managers face throughout the San Diego region. County staff supports Mitigation Measure BIO-1e, which would require a prohibition on planting or seeding of invasive species that appear on the most recent version of the California Invasive Plant Council California Invasive Plant Inventory. Please consider inclusion of an integrated invasive plant control plan with enforceable protocols for maintenance, construction, and emergency activities to follow when working within and moving between important habitat areas.
- 12-23 | 14. Section 4.4 has a description of the TransNet Environmental Mitigation Program (EMP) and states that the EMP provides funding for the acquisition, restoration, and management costs for the implementation of local Natural Community Conservation Plans (NCCPs). The EMP or other funding from TransNet may not provide a long-term regional funding source for conservation, including funding for the acquisition or ongoing management and monitoring. Please consider updating the PEIR to clarify that an adequate regional funding source has not yet been identified or put in place, which leaves local jurisdictions responsible for securing ongoing funding to implement local NCCPs.
- CULTURAL RESOURCES**
- 12-24 | 1. Please consider associated potential impacts on County parks and preserves related to cultural and historical resources. Staff understand that this is a PEIR, so please include the maximum possible area of impacts. Please coordinate in advance with the County Department of Parks and Recreation prior to implementation of projects that may have impacts to County parks and preserves and associated cultural and historical resources.

**RESPONSE TO COMMENT 12-19**

The 2017 reference was an error. The figures and text have been revised to show that the analysis used SanBios 2020 data in the Final EIR.

**RESPONSE TO COMMENT 12-20**

Revisions to Table 4.4-5 and the associated text have been made to remove reference to the Quino checkerspot amendment and the RBHCP in the Final EIR.

**RESPONSE TO COMMENT 12-21**

Thank you for your comment. Figure 4.4-15 has been revised to include the transportation network footprint in the Final EIR. Please also see response to comment CBD 8-7.

**RESPONSE TO COMMENT 12-22**

The text for mitigation measure BIO-1e has been revised to add the following:

Prohibit planting or seeding of invasive plant species that appear on the most recent version of the California Invasive Plant Council (Cal-IPC) California Invasive Plant Inventory, including the development of an integrated invasive plant control plan describing protocols and enforcement schedules for maintenance, construction, and emergency activities working within and moving between important habitat areas in the Final EIR.

**RESPONSE TO COMMENT 12-23**

SANDAG notes the County's concern that the EMP or other TransNet funding may not provide a long-term regional funding source for conservation and may leave local jurisdictions responsible for securing ongoing funding to implement local NCCPs. Please refer to Master Response 1 for discussions regarding including a regional habitat conservation fund.

**RESPONSE TO COMMENT 12-24**

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan, including those that would impact County parks and preserves would be subject to project-specific

environmental review. As a rough estimate the proposed Plan would impact approximately 59 acres of open space parks and 20 acres of recreational lands.

Also, note that County parks and preserves are in general not CEQA-defined cultural resources, i.e., archeological resources or built-environment resources.

Ms. Uchitel  
 October 11, 2021  
 Page 5

**GEOLOGY, SOILS AND PALEONTOLOGY**

- 12-25 1. The Grading and Erosion Regulations section does not identify and summarize applicable grading and erosion control ordinances. Applicable regulations are generally referenced to support a less-than-significant determination for thresholds (e.g. GEO-3, Result in Substantial Soil Erosion or the Loss of Topsoil). The County's Grading Ordinance appears to only be referenced within the context of paleontological resources. Please consider also referencing the County's Grading Ordinance in the Grading and Erosion Regulations section.
- 12-26 2. Please consider revising Table 4.7-3 to reference the County of San Diego General Plan Goals S-8 and S-9. Local Policies Concerning Geologic and Seismic Hazards references Goal S-7, but it should read "The San Diego County General Plan Goal S-8 and S-9 in the Safety Element requires minimized personal injury and property damage resulting from seismic hazards, and damage caused by mudslides, landslides, or rock falls."
- 12-27 3. Within Table 4.7-4, Local Policies Concerning Unique Geological and Paleontological Features, for the County of San Diego, please consider including the following: "COS-9.1 Preservation. Require the salvage and preservation of unique paleontological resources when exposed to the elements during excavation or grading activities or other development processes."
- 12-28 4. The Draft PEIR states "there would be development on soils incapable of supporting septic tanks or Onsite Wastewater Treatment Systems (OWTS)." However, the analysis also states that through future corrective measures/regulatory requirements, impacts to groundwater would be less than significant. Please consider adding a discussion of which regulations would be applicable and how those regulatory requirements would ensure that there would be no adverse groundwater impacts.

**GREENHOUSE GAS EMISSIONS**

- 12-29 1. On January 13, 2017, the County submitted comments to SANDAG on the Notice of Preparation (NOP) of the Regional Plan Draft PEIR (Attachment B). At the time of these comments, the County was in the process of preparing the 2018 Climate Action Plan (CAP). Since the release of the NOP and submittal of these comments, County staff is now preparing a CAP Update that will set new greenhouse gas (GHG) emissions targets and identify measures to reduce GHG emissions in the unincorporated area. County staff would like to work collaboratively with SANDAG on the Proposed Plan to identify an efficient and cleaner multi-modal transportation system that reduces vehicle miles traveled for unincorporated area residents by providing mobility options, which would reduce greenhouse gas emissions, and improve air quality for all residents in the region (Attachment A). County staff requests that SANDAG consider the comments provided previously and listed below in the Draft PEIR.
  - 12-30 a. Analyze alternatives that address multi-modal transportation options for the unincorporated county, particularly as it relates to transit service and alternative fuel infrastructure. County staff would encourage SANDAG to consider extending the benefits of mobility hubs and transit leap opportunities to unincorporated communities in which these services do not currently exist.

**RESPONSE TO COMMENT 12-25**

Under the County of San Diego's Grading Ordinance it is unlawful for any person to perform any grading or clearing within the County jurisdiction without proper approvals through County officials. While the Grading and Erosion Regulations discussion in Section 4.7, *Geology, Soils and Paleontology*, does not reference the specific grading and erosion control regulations of any of the local jurisdictions that fall within the region, the EIR discusses local jurisdictional requirements and the need to obtain appropriate permits in order to control erosion and sedimentation caused by construction activities. The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects under the Plan are subject to environmental review and will follow applicable laws and regulations, including coordination and permitting requirements of the local jurisdictions within which future development and transportation improvements fall.

**RESPONSE TO COMMENT 12-26**

Revisions were incorporated into Table 4.7-3 as suggested by the comment.

**RESPONSE TO COMMENT 12-27**

Revisions were incorporated into Table 4.7-4 as suggested by the comment.

**RESPONSE TO COMMENT 12-28**

Additional text was added to page 4.7-52 of the EIR regarding which regulations are applicable to an Onsite Wastewater Treatment System. However, as stated in Section 4.7, "all site designs would be reviewed and approved by the appropriate agencies." Approval from reviewing agencies will ensure that the proposed project is in compliance with all regulatory requirements, some of which may differ and vary depending on the jurisdiction within which the development will take place. As noted above, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects under the Plan are subject to environmental review and will follow applicable

laws and regulations, including coordination and permitting requirements of the local jurisdictions within which future development and transportation improvements fall.

**RESPONSE TO COMMENT 12-29**

SANDAG looks forward to collaborating with the County to identify an efficient and cleaner multi-modal transportation system that reduces VMT for unincorporated area residents by providing mobility options, which would reduce GHG emissions and improve air quality for all residents in the region.

**RESPONSE TO COMMENT 12-30**

Please see response to comment County of SD 12-2.

Ms. Uchitel  
October 11, 2021  
Page 6

12-31 b. *Analyze whether the developed/urban communities within the unincorporated county meet the Urban Area Transit Strategy.* The Urban Area Transit Strategy, considered in the previous 2050 Regional Transportation Plan, is not considered in this Proposed Plan and is replaced with broad concepts of Mobility Hubs. County staff is supportive of these efforts to centralize mobility investments for all users in urbanized areas. However, staff would encourage SANDAG to consider in the project description and analysis the potential for mobility hubs concepts that can be applied to unincorporated area communities that are not currently identified as being within and benefiting from mobility hubs and associated investments (Attachment A).

12-32 c. *Analyze an environmentally sustainable transportation system that can reduce vehicle miles traveled, gasoline consumption, and GHG emissions, while providing alternative modes of transportation for all economic sectors of our population.* County staff continues to encourage SANDAG to consider and identify sustainable transportation systems and strategies that can reduce vehicle miles traveled and GHG emissions from residents in unincorporated communities. For example, extending existing transit routes and reducing headways to increase transit service to unincorporated communities will encourage increased ridership, reduce vehicle trips, and will assist in decreasing GHG emissions.

12-33 d. *The County requests that SANDAG staff coordinate with County staff to ensure that the most recent planning assumptions are incorporated in the transportation models and growth forecasts.* It is not clear what projects or plans were considered and incorporated into the Proposed Plan modeling. However, there are some areas in which inconsistencies appear between approved development projects in the unincorporated area and projected growth identified in the Proposed Plan modeling. County staff relies on SANDAG population, housing, and job growth forecasts for planning efforts. As recently as July 2021, long-range planning efforts, such as the County's Housing Element Update, have relied on forecasts that project future housing growth in the unincorporated area of 50,184 new units between 2018 and 2050. These prior projections are significantly greater than the forecasted growth of 7,419 units during a similar time period in the Proposed Plan. Further, historic data shows that from 2010 to 2020, 7,330 new homes were built in the unincorporated area. If that trend continued, an additional 22,000 new homes would be built in the unincorporated area by 2050. County staff would appreciate continued coordination with SANDAG staff to ensure the most recent planning assumptions and projects are considered.

12-34 2. Based upon a review of the Draft PEIR, County staff encourages continued collaboration with SANDAG to ensure the most recent planning and land use assumptions (including approved development projects or those that are under construction) are reflected in regional modeling and growth forecasting. Through continued collaboration, the County can support the vision of the Proposed Plan by developing the CAP Update and related efforts based on similar assumptions and goals.

**HAZARDS AND HAZARDOUS MATERIALS**

12-35 1. Within Table 4.9-1 Major EnviroStor Hazardous Waste and Substances Sites in the San Diego Region, the list of sites does not appear to match the current Cortese list on the Department of Toxic Substances Control's (DTSC) website. Please consider adding a figure

**RESPONSE TO COMMENT 12-31**

The coverage area of each regional Mobility Hub is based on a data-informed propensity analysis carried out in parallel with Transit Leap routing assessment. The analysis leveraged Census Block Group geographies, including ones in unincorporated areas, to assess which areas were most conducive to hubs based on factors such as current and forecasted population and jobs, proximity to major destinations, community of concern coverage, and levels of short trip-making.

**RESPONSE TO COMMENT 12-32**

The proposed Plan includes an SCS, as required by SB 375 (Steinberg, 2008), for the San Diego region. When combined with the transportation network, the SCS exceeds the state's target for reducing per capita GHG emissions set by CARB. Further clarification on planned improvements to the bus network, including frequency and span-of-service improvements are reflected in Appendix A, Attachment 1 of the proposed Plan. Beyond fixed-route transit service, the proposed Plan envisions unincorporated communities to be served by Flexible Fleet services, offering mobility options that can reduce VMT and GHG emissions through increased carpools, vanpools, ridesharing, and microtransit.

**RESPONSE TO COMMENT 12-33**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Government Code Section 65080(b)(2)(B) provides that an SCS must "use most recent planning assumptions considering local general plans and other factors." It also requires that the SCS "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board." The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the Plan. The proposed Plan forecasts development through 2050 consistent with projections from the California Department of Finance but does not represent buildout capacity of jurisdictions' general plans. The latest projection for the San Diego region reflects a reduction in expected population growth

compared to prior forecasts. The SCS land use pattern aligns with the RHNA allocation for the County of San Diego, which is 6,700 units in unincorporated areas by 2029. Historic home building data was not a factor considered in development of the forecast. The proposed Plan and its SCS are iterative planning documents that are typically updated every 4 years to account for new data, analysis, policy, and experience.

**RESPONSE TO COMMENT 12-34**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. SANDAG looks forward to continued collaboration with the County.

**RESPONSE TO COMMENT 12-35**

Figure 4.9-3 has been added per the County's request in the Final EIR.

Ms. Uchitel  
 October 11, 2021  
 Page 7

12-35 cont. to show where these sites are in relation to proposed land use changes and transportation improvements.

12-36 2. Threshold HAZ-1 seems to apply specifically for potential release of hazardous materials during pre-construction, demolition, or construction activities. However, the analysis in this section also discusses the potential for releases during operational activities. Please consider updating the mitigation measure to reduce the risk of hazardous materials releases during project operation.

**HYDROLOGY AND WATER QUALITY**

12-37 1. Please consider augmenting the analysis to consider potential water quality impacts that could affect sensitive wildlife species and their associated habitats.

**LAND USE**

12-38 1. The County's *Community Trails Master Plan* identifies multiple regional trails that are regional resources, as they would benefit residents and visitors throughout the region. Please consider how the potential transportation and land use changes could impact the connectivity of these regional trails. The County also requests that SANDAG consider further coordination with the County Department of Parks and Recreation during implementation of the Proposed Plan when potential regional and community trail impacts are anticipated. Additionally, please consider working with County staff to look for further opportunities to provide trail connections during implementation of transportation infrastructure projects where feasible.

**PUBLIC SERVICES AND UTILITIES (RECREATIONAL FACILITIES)**

12-39 1. Within the Section "County and City General Plans," please consider adding the County's Parkland Dedication Ordinance, Community Trails Master Plan, and County of San Diego Parks Master Plan to the Draft PEIR, as these are all resource documents that discuss regional trail and recreation facilities.

12-40 2. Page 4.15-42 and Page 4.15-45, Section REC-1:  
 a. 2025  
 i. The Regional Growth and Land Use Change section states that "As noted under Threshold PS-1, approximately 78.8 percent of the 2025 population growth would occur within the City of San Diego, City of Chula Vista, and City of Escondido." Of the remaining 21.2 percent, it is unclear what portion is anticipated within the unincorporated County area. Please consider revising the PEIR to further clarify this.  
 ii. Transportation Network Improvements and Programs section: Please consider adding a table showing areas of impacts to recreational facilities belonging to or within the County's jurisdiction. The PEIR does not appear to specify which County of San Diego Recreational Facilities are impacted by the proposed project.

**RESPONSE TO COMMENT 12-36**

In addition to the potential release of hazardous materials during preconstruction, demolition, or construction activities, the analysis under Impact HAZ-1 notes that most land uses are likely to involve activities in which some form of hazardous materials would be routinely used, stored, handled, or transported. Additional operation impacts are discussed under Impacts HAZ-2 through HAZ-4. Furthermore, Impact HAZ-1 would result in a less-than-significant impact, and mitigation measures would not be required. As noted above, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects under the Plan are subject to environmental review, and any site-specific mitigation measures would be identified during that process.

**RESPONSE TO COMMENT 12-37**

The analysis under Impact BIO-2 in Section 4.4 discusses the potential water quality impacts that could affect sensitive wildlife species and their associated habitats. The section specifically discusses the impacts on water-dependent species if changes in hydrology occur from the proposed Plan.

**RESPONSE TO COMMENT 12-38**

Regional trails are discussed in the *Recreational Facilities* subsection of Section 4.15, *Public Services and Utilities*. Section 4.15 has been updated to address County-specific trails, including regional trails. The following text was added to page 4.15-43:

In addition, the future transportation network improvements could have impacts on the following County parks and recreation facilities through the year 2050: Eastview County Park and Sweetwater Regional Park (i.e., SR 125 Complete Corridor improvements from SR 905 to SR 54), Lakeside Sports Park (San Diego River Trail from Mast Park to Lakeside baseball park), Los Peñasquitos Canyon Preserve (Commuter Rail), Otay Valley Regional Park (Heritage Road Bridge), San Elijo Lagoon and Ecological Reserve (North Coast Bike Trail), San Luis Rey River Park (San Luis Rey River Trail), and Waterfront Park

(Commuter Rail). None of the County trails would be impacted by transportation network improvements.

No revisions to Section 4.11, *Land Use*, of the EIR have been made as a result of this comment. SANDAG looks forward to working with the County to identify opportunities for increased trail connections during implementation of the proposed Plan.

**RESPONSE TO COMMENT 12-39**

In response to this comment, SANDAG has added a reference to the Parkland Dedication Ordinance, Community Trails Master Plan, and Parks Master Plan on page 4.15-35 of the Final EIR due to their relevance to addressing population growth impacts on park and recreation resources.

**RESPONSE TO COMMENT 12-40**

Table 2-2 in Chapter 2 of the EIR outlines where population growth would occur throughout all jurisdictions in the County. The sentence under the REC-1 discussion simply summarizes the geographic population trends presented in the table and is not intended to be all-inclusive. As shown in Table 2-2, 1 percent of the forecasted population growth would occur in the unincorporated County lands between 2016 and 2050.

To provide further clarification, the following text has been added to page 4.15-43 of the Final EIR:

In addition, the future transportation network improvements could have impacts on the following County parks and recreation facilities through the year 2050: Eastview County Park and Sweetwater Regional Park (i.e., SR 125 Complete Corridor improvements from SR 905 to SR 54), Lakeside Sports Park (San Diego River Trail from Mast Park to Lakeside baseball park), Los Peñasquitos Canyon Preserve (Commuter Rail), Otay Valley Regional Park (Heritage Road Bridge), San Elijo Lagoon and Ecological Reserve (North Coast Bike Trail), San Luis Rey River Park (San Luis Rey River Trail), and Waterfront Park (Commuter Rail). None of the County trails would be impacted by transportation network improvements

Ms. Uchitel  
 October 11, 2021  
 Page 8

- b. 2035
  - i. As with the comment above under "2025," please consider revising the Regional Growth and Land Use Change section to show the percentage breakdown within the unincorporated area of the county.
  - ii. This section also states, "Between 2026 and 2035, the majority of the open space conversions would occur as a result of growth and land use change in the Warner Springs area shown in Figure 4.15-2, which would convert 275 acres of open space parks to spaced rural residential use." However, the analysis does not appear to explain the potential impact associated with this proposed loss of open space/park land. It should also be noted that this project is not yet approved and therefore may not result in open space conversion for additional growth and land use change(s). Please consider updating the analysis to take this into consideration and to further clarify and explain potential impacts.
- 12-41 3. Page 4.15-47, under REC-1 Implement Mitigation Measures Parks and other Recreational Facilities, please specify and/or provide information on the impacted facilities within the unincorporated areas of the county. Are there impacts to existing parks, campgrounds, trails, etc.? Please also consider including details of impacted County of San Diego facilities within the environmental document.
- 12-42 4. In the Pedestrian Facilities section of the Draft PEIR it states, "It should be noted that trail facilities are also considered part of the pedestrian network. The trail facilities within the San Diego region are further described and analyzed in Section 4.15, Public Services and Utilities, of this PEIR, along with other recreational facilities." Section 4.15 Public Services and Utilities further explains the trail facilities. However, the information is limited in that it only references the California Coastal Trail. Trails are an important aspect of the regional transportation network. Please consider updating the analysis to include existing trails and pathways and include this information as part of the pedestrian facilities assessment. The County's existing *Community Trails Master Plan* may be used as a reference document regarding regional trails.
- 12-43 **TRANSPORTATION**
- 12-44 1. If the boundaries of the proposed mobility hubs are not intended to be static, please include narratives and/or graphics to further clarify that the boundaries are not absolute.
- 12-45 2. County staff recommends that any 5 Big Moves pilot program or case study include and/or consider the unincorporated area (i.e. Flexible Fleet Strategic Plan).
- 12-46 3. Please coordinate with County staff in advance of transportation plans that go through or near County properties and facilities.
- 12-47 4. Regarding page 4.16-34, 4.16.3 SIGNIFICANCE CRITERIA, TRA-1 Conflict with a program, plan, ordinance, or policy addressing the circulation system, including -transit, roadway, bicycle, and pedestrian facilities:

**RESPONSE TO COMMENT 12-41**

The requested information regarding population growth in the unincorporated County is provided in Table 2-2, as noted in response to comment County of SD 12-40.

With regard to the loss of open space parks in the 2035 scenario, the impact analysis applies the recreation significance threshold and concludes that population and growth may result in a physical deterioration of park and recreation facilities. Deterioration caused by overuse can lead to a number of physical environmental impacts including degradation of the quality of biological habitats or increases in erosion near trailheads or along trails, as described in Sections 4.4 of the EIR. Minor edits have been made under the 2025, 2035, and 2050 scenarios to clarify the link between population growth and impacts on recreation facilities. Page 4.15-42 of the EIR acknowledges that local jurisdictions have the means to acquire, develop, and maintain parkland and recreation facilities in the future through funding mechanisms described in Section 4.15.2. However, there are no assurances that future park and recreation facilities would be capable of adequately serving forecasted populations contained in the proposed Plan. For this reason, the EIR concludes that impacts may be significant, should the Plan be approved.

**RESPONSE TO COMMENT 12-42**

The County of San Diego park and recreation facilities that could be impacted by proposed transportation network improvements are listed in response to comment County of SD 12-40. Potential impacts on those facilities have been addressed programmatically in the appropriate sections of the EIR and are illustrated in Figure 4.15-2.

**RESPONSE TO COMMENT 12-43**

SANDAG acknowledges there are many existing and future trails in the region that facilitate pedestrian movements. The trail information specificity requested in this comment is beyond the scope of the EIR; however, as noted in response to comment 12-40, none of the County trails would be impacted by the proposed Plan. A reference to the County's Community Trails Master Plan has been added to the EIR in response to comment 12-39.

**RESPONSE TO COMMENT 12-44**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. The following language has been added to Mobility Hub maps (Figures 2-35 and 2-36) in the Final EIR:

These maps show generalized regional Mobility Hub boundaries for planning purposes and are not intended to be binding or precise. Mobility Hub boundaries are subject to refinement in close coordination with the affected jurisdiction(s).

**RESPONSE TO COMMENT 12-45**

SANDAG looks forward to coordinating with the County on many areas of implementation for the proposed Plan, including the Flexible Fleet Implementation Strategic Plan, Active Transportation Plan, Comprehensive Multimodal Corridor Plans, and advanced transit planning. All of these efforts provide opportunities for refinement of the proposed Plan concepts at a local level.

**RESPONSE TO COMMENT 12-46**

SANDAG looks forward to coordinating with County staff prior to developing transportation plans that go through or near County properties and facilities.

**RESPONSE TO COMMENT 12-47**

The County is currently developing an Active Transportation Plan (ATP) for the unincorporated communities of the county. The ATP will integrate and update several existing plans and documents into a single plan. The ATP will serve as a master plan and policy document to guide the development and maintenance of active transportation infrastructure including sidewalks, pathways, multi-use trails, and bikeways; the ATP will include the Safe Routes to School programs for the unincorporated County. Additionally, the ATP is expected to be one of the implementation measures for the County's Climate Action Plan.

- a. 2025: Transportation Network Improvements and Programs, under Pedestrian (page 4.16-34). Table 4.16-8 shows a Pedestrian Analysis table showing average daily walking trips, walking mode share, and average length of walking trip. It is unclear as to whether these include an assessment of trail system(s) and trail facilities. Please consider including trails as a part of this analysis.
- b. 2035: Transportation Network Improvements and Programs, Same comment as 2025 above.
- c. 2050: Transportation Network Improvements and Programs, Same comment as 2025 above.

12-48

Thank you again for the opportunity to comment on the Draft PEIR. County staff looks forward to continued discussions with SANDAG on how we can work together to better ensure that consideration is given to future investments and incentives that would result in expanded options for transit, active transportation, and shorter and fewer automobile trips. If you have any questions regarding these comments, please contact Luis Duran, Land Use/Environmental Planner, at (619) 214-4698, or via e-mail at [luis.duran@sdcounty.ca.gov](mailto:luis.duran@sdcounty.ca.gov).

Sincerely,

*Lynnette Tessitore*

## RESPONSE TO COMMENT 12-48

Thank you for your comments. SANDAG looks forward to future coordination with the County of San Diego.

SARAH E. AGHASSI  
DEPUTY CHIEF ADMINISTRATIVE OFFICER

August 6, 2021

Hasan Ikhata  
Executive Director  
SANDAG  
401 B Street, Suite 800  
San Diego, CA 92101

Sent via email to: [SDForward@sandag.org](mailto:SDForward@sandag.org)

**REQUEST FOR COMMENTS ON THE DRAFT 2021 REGIONAL PLAN FOR THE SAN DIEGO ASSOCIATION OF GOVERNMENTS (SANDAG)**

Dear Mr. Ikhata,

Thank you to the San Diego Association of Governments (SANDAG) for your efforts to create a Regional Comprehensive Plan and Sustainable Communities Strategy (Regional Plan) to help design a regional transportation system that is fast, fair, clean and reduces greenhouse gas emissions. As County staff, we are committed to working with SANDAG staff on our shared goals of implementing programs and services to improve the quality of life of our residents as we determine where and how we grow, connect people and places, protect the environment, and provide opportunity for all of our region's residents.

12-49

This comment letter outlines areas within the Regional Plan for which County staff would like to request further clarification, exploration, and consideration. Attachment A provides additional comments from County staff for your consideration and incorporates additional information related to County-specific plans or policies that may further inform the Regional Plan.

**LAND USE, TRANSPORTATION PLANNING, AND SMART GROWTH**

Land use and transportation planning in the San Diego region is evolving to better address the most pressing issues of today, including climate change, quality of life, attainable housing, and social and economic inequities. The County has several planning efforts underway which prioritize addressing these issues, including the Regional Decarbonization Framework, the Climate Action Plan Update, the Electric Vehicle Roadmap, Office of Environmental and Climate Justice, and establishment of VMT thresholds. While independent of the Regional Plan, these efforts are aligned with the goals of the Regional Plan. County staff is interested in further understanding the regional growth modeling assumptions used within the Regional Plan and alignment with these County efforts.

**RESPONSE TO COMMENT 12-49**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Please see Plan responses L165 through L174 in Attachment P.2.

2021 Regional Plan – County of San Diego Staff Comments  
 August 6, 2021  
 Page 2

**PLANNING FOR THE UNINCORPORATED AREAS**

The County represents more than 500,000 residents who live within 34 unincorporated communities throughout the region. County staff would like to better understand how the Regional Plan will address transportation options outside of proposed mobility hubs for those communities. The unincorporated community of Ramona, for example, has a population of 36,000 residents, which is a larger population than the incorporated communities of Imperial Beach, Lemon Grove, Coronado, Solana Beach, and Del Mar.

Less than 1% of the unincorporated area is within the proposed mobility hubs, which is where transit and on-demand travel infrastructure investment will be focused. The unincorporated north and east county communities represent a significant population with higher-than-average VMT in the region. Investment in public transit and other transportation options will make it easier for people to drive less, which results in decreased GHG emissions. However, investment outside of mobility hubs appears to be limited, which would make it difficult for unincorporated residents to use new transit service.

To promote greater equity, County staff see opportunities to expand the proposed mobility hubs to include adjacent unincorporated communities. When we overlay the proposed mobility hubs with the County's VMT efficient areas (using both the unincorporated and regional averages), North County Metro, Lakeside, and Spring Valley (Attachment B) are adjacent to what appear to be proposed mobility hubs. These unincorporated communities would benefit from additional access and investment associated with inclusion in adjacent mobility hubs, as these communities have few existing alternative options to driving.

12-49  
 cont.

County staff is also interested in understanding how Regional Housing Needs Assessment (RHNA) allocations would be assigned. For the current 6<sup>th</sup> RHNA cycle, which covers 2021 – 2029, SANDAG allocated 6,700 units for the unincorporated area, with a total housing forecast in the Regional Plan of 7,419 units through 2050 for the unincorporated area. This forecast projects the County's RHNA allocation of 6,700 units being met by 2029, with an additional growth of 719 units by 2035, and projects no further growth in the unincorporated area through 2050. Based on this forecast, it appears that beyond 2035, all future housing needs in the region from RHNA cycles would be allocated to and met by growth in incorporated cities.

In order to fulfill the goals of the Regional Plan in providing access to affordable, reliable, and safe mobility options for everyone in the region, County staff would like to work with SANDAG to ensure consideration is given to future investments and incentives within the unincorporated area that would result in expanded options for transit and active transportation, and to encourage shorter and fewer automobile trips, including locations of mobility hubs, transit leap, flexible fleets, and complete corridors.

**COMMUTER PATTERNS AND MOBILITY IN THE UNINCORPORATED AREA**

The Regional Plan focuses on five key investment opportunities: Next Operating System (OS), Complete Corridors, Transit Leap, Mobility Hubs, and Flexible Fleets. Many of the Regional Plan investments would be contained within proposed mobility hubs and along identified complete corridors. The majority of infrastructure improvements appear to support a shift to new rail and trolley line infrastructure, largely along the coastal areas. However, Ramona, Lakeside, Spring Valley, and other unincorporated east and north county communities represent a significant population that would benefit from similar consideration for infrastructure improvements as that proposed for the coastal communities with less population. According to SANDAG's "Commuting Patterns in the San Diego Region" study, a majority of the unincorporated east and north county residents who are employed commute outside the boundaries of their County Supervisorial

2021 Regional Plan – County of San Diego Staff Comments  
 August 6, 2021  
 Page 3

district, with 84% of District 2 residents working outside the district and 82% of District 5 residents working outside the district. Vehicle miles traveled could be reduced through greater mobility options for the unincorporated area (i.e., expansion of mobility hubs, increased transit options such as bus rapid transit, and improvements to transit frequency and service areas).

The County worked closely with SANDAG as part of the 2015 Regional Plan to identify roads in the unincorporated areas to include in the Regional Arterial System (RAS). Many of these roads serve as evacuation routes during emergencies, provide access to unincorporated communities from Caltrans roads, and create a link to the larger San Diego region.

County staff would like to continue coordinating with SANDAG to further identify Regional Plan investments in infrastructure, technology, and communication improvements for roads identified in both the County's Mobility Element and unincorporated roads included in the RAS and how these investments will further connect the unincorporated area to proposed mobility hubs, flexible fleets, or transit leaps. In addition to providing efficient movement of people and goods, these investments would increase the efficiency of evacuation routes, relay important information on evacuation conditions to first responders, and assist in getting residents safely away from hazardous conditions, all important components of resiliency planning.

**FUNDING AND FINANCING**

County staff appreciates the difficulty in forecasting funding and revenue sources for a regional transportation network. The Regional Plan identifies use of TransNet funds as part of the implementation, but it is not clear whether projects that have previously been planned, programmed, or awarded as part of the previous plan using TransNet would retain that funding allocation, or if there would be a reallocation of these funds as part of the Regional Plan. It is also unclear if there would be any changes to the current allocation or use of funds that local agencies receive directly for local road system improvements. The unincorporated area relies on TransNet funding to build, improve, and maintain transportation facilities that enhance roadway safety and support smart growth development, including road infrastructure to support increased transit options. Loss or reallocation of this funding could affect these projects and limit the County's ability to provide transportation services in support of our goal of reducing greenhouse gas emissions.

The Regional Plan indicates that user fees would help build a transportation system that provides travelers with alternatives to driving. County staff would like to further discuss how the proposed road user charges would be developed, implemented, and applied to ensure that this funding strategy will not disproportionately burden unincorporated communities, which often have longer commutes and less access to alternative transportation options due to lack of regional planning for transit services to these communities. Revenues generated should also be allocated to support additional transportation and mobility options in unincorporated communities, while vehicle use by those with access to alternate modes of transportation should be disincentivized since their communities are receiving significant investments in public transit.

County staff looks forward to learning more about how future funding and investment would be applied to ensure that both the benefits and the costs of the Regional Plan are equitably distributed across the region.

**RESOURCE DISTRIBUTION**

The Regional Plan provides SANDAG with an opportunity to guide future investments in a way that meets smart growth objectives and reduces GHG emissions, but also guides future allocation of resources to achieve equitable outcomes. Several of the unincorporated communities, such as Lakeside, Spring Valley, and Ramona, have larger populations than some of the incorporated

12-49  
 cont.

2021 Regional Plan – County of San Diego Staff Comments  
August 6, 2021  
Page 4

12-49  
cont.

cities that are prioritized in the Regional Plan. In review of the proposed plan expenditures, a majority of the capital investments (55% of RTP funding) appear to go toward mobility hubs, complete corridors, and Next OS investments that are primarily outside of unincorporated communities. It is unclear what proportion of investment would go toward addressing mobility challenges within unincorporated communities and infrastructure investment that would provide linkages between the unincorporated areas and the proposed mobility hubs, transit leap, flexible fleets, and complete corridors. County staff is committed to working with SANDAG to further identify opportunities to equitably distribute the mobility benefits of the 5 Big Moves and further reduce GHG emissions regionwide.

The County appreciates the opportunity to comment on the Draft Regional Plan, and staff looks forward to future discussions regarding these comments. If you have questions regarding this letter, please contact Rami Talleh, Deputy Director with the Department of Planning and Development Services at 858-495-5475 or Rami.Talleh@sdcounty.ca.gov.

Sincerely,

SARAH E. AGHASSI

SARAH E. AGHASSI  
 DEPUTY CHIEF ADMINISTRATIVE OFFICER

**ATTACHMENT A  
 2021 REGIONAL PLAN COMMENTS FROM COUNTY OF SAN DIEGO  
 DEPARTMENTS AND DIVISIONS**

County of San Diego (County) staff in Planning & Development Services, the Department of Public Works, and the Department of Parks and Recreation reviewed the San Diego Association of Governments' (SANDAG) Draft 2021 Regional Plan (Regional Plan), for applicability to their respective work programs and County initiatives that are planned or currently underway. The County offers the following comments for your consideration.

**TRANSPORTATION**

1. County staff would be interested to better understand and discuss further with SANDAG the potential for Regional Plan strategies to be used as part of a potential regional mitigation strategy related to Vehicle Miles Traveled (VMT).
2. When would funding be expected to be implemented related to Transit Leap/Flexible Fleet Connections to Mobility Hub areas, as this is a potential opportunity to reduce VMT for residents living in the unincorporated area?
3. The County has developed an Electric Vehicle (EV) Roadmap and is committed to assisting with the deployment of regionwide EV infrastructure to reduce GHG emissions in the transportation sector. Could SANDAG provide additional details on the future development, application, and implementation of the proposed Road User Fees and other proposed road usage revenues? Will consideration be given to exemptions for use of clean mobility strategies?
4. County staff would like to discuss with SANDAG staff the Regional Plan strategies, including funding for Major Transit (for purposes of CEQA, defined as a rail transit station, ferry terminal served by bus or rail, and a bus stop with two or more lines that provide transit service at 15 minute intervals or better during peak commute periods) in areas of the unincorporated area that are identified as "VMT efficient" in the SANDAG VMT Map.
5. There is significant investment in development and infrastructure in the Otay Mesa area, and Otay Mesa is identified as a "Mobility Hub" area in the RTP. County staff would like to better understand what funding has been identified for this "Mobility Hub" area.
6. County staff would like to discuss with SANDAG the potential for "Major Transit" services along the I-15 corridor, such as the potential for buses on shoulders.

12-50

**RESPONSE TO COMMENT 12-50**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Please see Plan responses L418 through L437 in Attachment P.2.

**ROADS/TRAFFIC/FIELD ENGINEERING**

7. Complete Corridors, such as the SR-67 and I-15 Corridors, are envisioned to act as the backbone of the regional transportation system. In addition to providing for safe and comfortable spaces to get around for all modes of transportation, road improvements such as intersection widening are important for the safe and reliable movement of all road users. County staff would like to discuss further identification and investment within complete corridors that provide linkages to the unincorporated area. These improvements could assist in providing routes for the County's eastern and northern rural regions that could be essential in the event of accidents or fire evacuation. For example, County staff would like to discuss with SANDAG the option of including safety improvements along the SR-67 Corridor on Wildcat Canyon Road, as this road is a relief route to SR-67. Additionally, road improvements on Old Hwy 395 and Pala Temecula Road in the north county may merit further conversation, as both of these roads serve as alternate routes to I-15 during peak traffic hours.
8. County staff would like to further discuss improvements of low flow crossings that are necessary to limit area flooding as well as the safe passage of motorists.
9. County staff would like to work with SANDAG to identify evacuation routes at a regional level, and the possibility of creating a separate section within the Regional Plan that would identify improvements of these routes and potential funding that could be part of the 2021 Regional Plan.
10. County staff would like to discuss with SANDAG how Smart Infrastructure and Connected Vehicles will address the legal and financial challenges with sharing traffic signal data with private entities and the liability of the potential misuse of signal timing data.
11. County staff would like to better understand the impact of Electric Vehicle Infrastructure on County of San Diego public right of way.

12-50  
cont.

**WATERSHED**

12. Stormwater Management & Regional Needs Assessment; suggested edits in Appendix R, page R-2:
  - a. "The County of San Diego has initiated an update of the 2010 Needs Assessment's 40-year water quality cost estimate using more recent water quality planning documents and strategies for achieving regulatory compliance and water quality objectives throughout the region. Since 2010, the Copermittees have worked to formulate Water Quality Improvement Plans (WQIPs) for the region's watersheds, including strategies, planned projects, and schedules to address their respective water quality objectives and compliance needs. The update to the Needs Assessment is intended to assist the County in planning and decision making and will draw upon the most recent WQIPs, with a focus on unincorporated areas to develop updated cost information."

**BIOLOGY**

13. Figure AA.1 shows the conserved habitat lands in the San Diego region (light green) and displays the areas included in the four subregional habitat conservation plans (subfigure).
- The Pre-Approved Mitigation Area (PAMA) of the South County Multiple Species Conservation Program (MSCP) and draft PAMA of the draft North County MSCP are labeled as "Proposed Conserved Habitat Lands" (dark green). This label may be misinterpreted by readers. While the MSCP Preserves will be assembled within the PAMA, not all PAMA designated lands will be conserved or are being actively pursued for conservation at this time.
  - The draft Focused Conservation Area (FCA) of the draft East County MSCP was not included in the "Proposed Conserved Habitat Lands" (dark green). This area is equivalent to the draft North County MSCP's draft PAMA and should be included in this figure.
  - The Rancho Guejito property located north of San Pasqual Valley Road will not be included in future iterations of the draft North County MSCP Permit Area. The portions of this property identified within the draft North County MSCP should be changed from dark green to white to reflect this change.
  - In the subfigure, both the draft North County MSCP and Multiple Habitat Conservation Plan (MHCP) are identified by the number "4." The MHCP area should be identified by the number "1" to correspond with the provided key.
14. Although the draft 2021 Regional Plan mentions the importance of protecting habitat corridors and wildlife linkages through land acquisition, it does not appear to include the construction of safe passageways to connect wildlife to preserved lands bisected by existing and future regional transit corridors. It is recommended that SANDAG work with the San Diego Monitoring and Management Program (SDMMP) and community partners to identify the areas along regional transit corridors that would benefit from wildlife crossings and that these improvements be included in future regional projects.

**PARKS AND RECREATION**

15. For proposed projects that occur adjacent to Department of Parks and Recreation (DPR) County-managed lands, DPR staff would like to coordinate with SANDAG staff to ensure wildlife connectivity is maintained from adjacent lands to preserved County lands, including wildlife-only crossings.
16. For proposed projects that occur adjacent to or near existing or potential future trail connections, DPR staff would like to coordinate with SANDAG staff on trail connectivity throughout the County and incorporate safe multi-use crossings such as bridges or overpasses for recreational use.
17. DPR staff request SANDAG staff coordinate in developing SANDAG's 5 Comprehensive Multimodal Corridor Plans as mentioned in Appendix B: Implementation near DPR facilities:
- Central Mobility Hub and Connections, Coast, Canyons, and Trails – State Route 52, North County – SPRINTER/Palomar Airport Road/State Route 78/State Route 76, San Vicente – State Route 67, South Bay to Sorrento – Purple Line/Interstate 805/Blue Line/Interstate 5 South.

12-50  
cont.

- b. Study additional seven corridors to inform the next Regional Continuing Actions.
- c. Pursue funding opportunities for projects, programs, and services identified in completed CMCPs.

18. County Staff would like to discuss with SANDAG the possibility of including trails and trail systems within the unincorporated area as part of the 2021 Regional Plan and to consider California Coastal Trail connections to DPR facilities.

**AIRPORTS**

19. As the owner and operator for eight airports in the region, County Airports continues efforts to safely operate its facilities, ensure future land uses are compatible with aircraft operations, and protect the health and safety of people and property within the vicinity of an airport. The County's airports serve as transportation hubs, emergency service facilities and economic engines in their communities. McClellan-Palomar Airport is the only commercial airport in North County and has over 145,000 annual aircraft operations. It is also a Customs and Border Protection Port of Entry. In East County, Gillespie Field is the 44<sup>th</sup> busiest airport in the nation with 240,000 annual operations. Both of these airports support thousands of jobs and generate hundreds of millions of dollars in economic activity. The County looks forward to the integration of these airports into the regional transportation system.

20. The San Diego County Regional Airport Authority adopted Airport Land Use Compatibility Plans for the eight airports, which included land use compatibility policies related to airspace, noise, safety and overflight. Those policies have been adopted by the County of San Diego through its General Plan and Zoning Code. After evaluating the forecasted increases in housing and jobs around the Mobility Hubs, there are several land use assumptions related to safety and noise around Fallbrook Airpark, Jacumba Airport, Gillespie Field and McClellan-Palomar Airport that County staff would like to better understand. For example, there are forecasted incompatible housing increases within the Runway Protection Zones at Gillespie Field. These inconsistencies could result in the assumed intensities and densities increases being unachievable.

**ATTACHMENT B**  
**2021 REGIONAL PLAN PROPOSED MOBILITY HUB EXPANSION AREAS**

The Regional Plan will focus future investment, development, and growth in centralized areas referred to as "mobility hubs." There are locations in the unincorporated area that the County has forecasted for future growth, which included already designated Regional Housing Needs Assessment (RHNA) sites, and are located within close proximity to a proposed mobility hub. The County would like to work with SANDAG to consider the expansion of proposed mobility hubs to include additional unincorporated north and east county communities. As indicated in Figure 1, these proposed expansions include areas in North County Metro, Lakeside, and Spring Valley. Additional details for these three mobility hub expansions are provided below.

12-51

The North County Metro community is located between the proposed Vista and San Marcos mobility hubs. Expansion of the San Marcos mobility hub could include the Buena Creek Sprinter Station and additional housing units, including multiple RHNA sites.

Lakeside has multiple areas that are identified as efficient areas compared to the regional vehicle miles traveled (VMT) average. These areas are located immediately adjacent to the proposed El Cajon mobility hub. Expansion of the El Cajon mobility hub could include these VMT efficient areas as well as potentially including additional growth areas in Lakeside along the I-8 corridor.

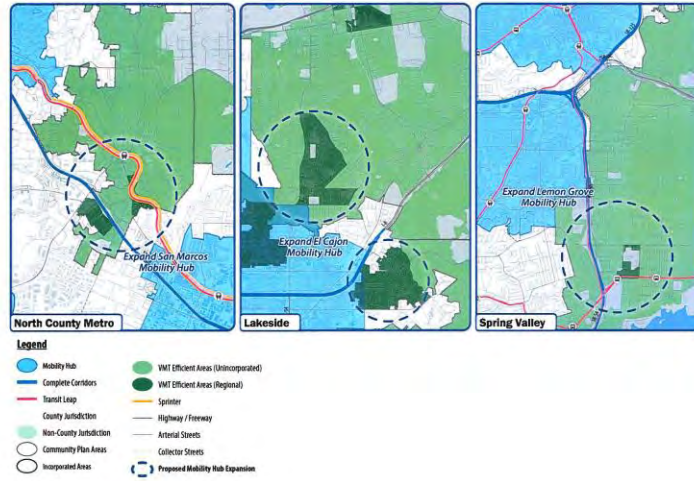

Spring Valley is located east of the proposed Lemon Grove mobility hub and south of the proposed La Mesa mobility hub. This community has existing transit access along Jamacha Boulevard and is in close proximity to the MTS Trolley stations in Lemon Grove. Expansion of this mobility hub could include the Spring Valley areas near SR-125 and along Jamacha Boulevard.

**RESPONSE TO COMMENT 12-51**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Please see Plan response L438 in Attachment P.2.

**COMMENTS ON THE NOTICE OF PREPARATION OF A PROGRAM ENVIRONMENTAL  
IMPACT REPORT FOR SAN DIEGO FORWARD: THE REGIONAL PLAN**

Dear Mr. Martin,

12-52 | The County of San Diego (County) has reviewed the Notice of Preparation for the San Diego Forward Regional Plan Program Environmental Impact Report (PEIR). We appreciate the opportunity to provide input for SANDAG's consideration. The County offers the following comments.

**TRAFFIC/TRANSPORTATION**

12-53 | The County is currently developing an Active Transportation Plan (ATP) for the unincorporated communities of the county. The ATP will integrate and update several existing plans and documents into a single plan. The ATP will serve as a master plan and policy document to guide the development and maintenance of active transportation infrastructure including sidewalks, pathways, multi-use trails, and bikeways; the ATP will include the Safe Routes to School programs for the unincorporated county. Additionally, the ATP is expected to be one of the implementation measures for the County's Climate Action Plan. Please consider identifying transit improvements and ATP and Transportation Demand Measures (TDM) in the SANDAG Regional Plan and PEIR which will assist the rural unincorporated areas in meeting the region's greenhouse gas (GHG) emission goals.

**RESPONSE TO COMMENT 12-52**

This comment was submitted during the NOP scoping period for the EIR and is not a comment on the adequacy of the EIR. No additional response is required.

**RESPONSE TO COMMENT 12-53**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

Mr. Martin  
 January 13, 2017  
 Page 2

**AIRPORTS**

12-54

Incorporating the Regional Aviation Strategic Plan (RASP) and Airport Multimodal Accessibility Plan (AMAP) assumptions into the development of the Regional Plan is an important part of planning for the region's future transportation needs. Aviation travel is expected to grow substantially according to projections from the San Diego Regional Airport Authority and SANDAG. Please consider prioritizing the ground transportation network surrounding McClellan-Palomar and Gillespie Field airports to accommodate increased demand as San Diego International Airport nears operational capacity.

**CLIMATE CHANGE AND GREENHOUSE GAS**

12-55

The County is currently developing a Climate Action Plan for the unincorporated county. The largest GHG emission source in the region is the Transportation Sector. The County looks towards the Regional Plan to lead the efforts in reducing GHG emissions in the Transportation Sector. The recommendations noted are important for the local jurisdictions in meeting their share of the region's GHG emission reductions. The County and SANDAG, working collaboratively on the Regional Plan, can move towards an efficient and cleaner multi-modal transportation system. As it relates to SANDAG's Regional Plan, the County requests the following be considered:

- a. Analyze alternatives that address multi-modal transportation options for the unincorporated county, particularly as it relates to transit service and alternative fuel infrastructure;
- b. Analyze whether the developed/urban communities within the unincorporated county meet the Urban Area Transit Strategy;
- c. Analyze an environmentally sustainable transportation system that can reduce vehicle miles traveled, gasoline consumption, and GHG emissions, while providing alternatives modes of transportation for all economic sectors of our population;
- d. Clarify whether the Regional Plan GHG emission reductions will be consistent with the Air Resources Board (ARB) 2030 Target Scoping Plan; and
- e. SANDAG's 2015 Regional Transportation Plan incorporated the County's 2011 General Plan Update Land Use and Mobility Elements. Since 2011, the County has adopted several general plan amendments (GPA) to the 2011 General Plan. The County requests that SANDAG staff coordinate with County staff to ensure that the adopted GPAs are incorporated in the transportation models and growth forecasts for the Regional Plan and PEIR Analysis.

**RESPONSE TO COMMENT 12-54**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. SANDAG has incorporated the Regional Aviation Plan (RASP) and Airport Multimodal Accessibility Plan (AMAP), and these can be found in Appendix BB of the proposed Plan. SANDAG will assess the ground transportation network throughout the region and prioritize transportation projects from the RASP and AMAP where appropriate and most needed.

**RESPONSE TO COMMENT 12-55**

This comment consists of County comments on the NOP, which appear to be similar to comments included in the County's letter on the Draft EIR, and which have been responded to in prior responses. Also note that the comment does not raise any issues about the adequacy of the Draft EIR and no response is required. However, the following clarifications are provided:

(a) The proposed Plan includes a transportation system that includes multi-modal options for the unincorporated county, such as investments in transit service, flexible fleets, active transportation, and electric vehicle programs.

(b) The Urban Area Transit Strategy was not updated for the proposed Plan. The proposed Plan identifies 31 Mobility Hub areas as focus areas for facilitating access to transit, deploying flexible fleet services, implementing complete streets, and focusing future growth and development. Chapter 2 of the proposed Plan also acknowledges the importance of transit priority areas as areas of focus for future planning efforts between SANDAG and local jurisdictions in support of sustainable communities. As shown in Figure 2.6 of the proposed Plan, there are unincorporated communities contained in Mobility Hub areas and/or transit priority areas.

(c) Performance results of the proposed Plan (see Appendix T of the Plan) demonstrate a reduction in per capita vehicle miles traveled and per capita GHG emissions. The Social Equity Analysis of the proposed Plan (see Appendix H of the Plan) demonstrates an increase in access to alternative modes of transportation to low income, minority, and senior populations.

(d) The comment asks SANDAG to clarify whether GHG emissions reductions under the proposed Plan would be consistent with the "Air Resources Board (ARB) 2030 Target Scoping Plan." SANDAG assumes

this is a reference to California's 2017 Climate Change Scoping Plan (2017 Scoping Plan), which identifies measures for how California can achieve the GHG reduction target of SB 32, which set forth in State law a requirement that statewide GHG emissions levels be reduced to 40 percent below 1990 levels by 2030.

The Draft EIR analyzes whether the proposed Plan would be inconsistent with the State's ability to achieve the 2030 reduction target of SB 32 in Impact GHG-5 (Draft EIR pages 4.8-31 to 4.8-33). The proposed Plan would assist in meeting the statewide 2030 GHG target by reducing GHG emissions in the passenger vehicle sector through the implementation of transportation network improvements and programs and efficient land use patterns to ultimately reduce VMT and the combustion of gasoline and diesel fuels pursuant to SB 375. Nevertheless, the Draft EIR concludes in Impact GHG-5 that the proposed Plan's 2030 GHG emissions would be inconsistent with the State's ability to achieve the goals of SB 32 because total emissions in the San Diego region of 20.4 MMTCO<sub>2e</sub> in 2030 would exceed the regional 2030 GHG reference point of 15.6 MMTCO<sub>2e</sub> (which is based on SB 32 targets for 2030). The 2017 Scoping Plan indicates that to achieve the statewide 2030 target, long-term investments in renewable energy generation, electrified transportation, energy efficient and decarbonized buildings, enhanced industry efficiency, restoration of California's natural and working lands, and sustainable solid waste management are among many actions the State must take. Many of the needed actions, including generation of renewable electric power, decarbonizing buildings, vehicle mandates, and sustainable solid waste management, are outside the jurisdictional authority of SANDAG and the scope of the proposed Plan. CARB notes that to reach the State's long-term GHG reduction goals, local, regional, and State agencies must engage with each other and local stakeholders to coordinate climate change solutions and programs to reduce local GHG emissions.

The Draft EIR identifies Impact GHG-5 as a significant impact in the year 2030. The Draft EIR identifies several mitigation measures to reduce this significant impact by achieving additional GHG emissions reductions above and beyond the reductions shown in the analysis for GHG-5 (mitigation measures AQ-3b, AQ-3c, AQ-4, TRA-2, WS-1a, WS-1b, GHG-5a, GHG-5b, GHG-5c, GHG-5d, GHG-5e, and GHG-5f). However, even with additional GHG emissions reductions from these mitigation measures, total regional GHG emissions would remain inconsistent with the State's ability to achieve the 2030 target. Achieving the necessary

level of reductions from all GHG emissions sectors will required a coordinated effort by, at minimum, State, regional, and local agencies, organizations, and stakeholders, and is well beyond the scope and jurisdiction of SANDAG alone. The Draft EIR concludes that Impact GHG-5 would be significant and unavoidable.

(e) In 2016–2018, local jurisdictions, including the County of San Diego, provided data to SANDAG on housing capacity based on their adopted plans to inform the Series 14 forecast development.

Mr. Martin  
January 13, 2017  
Page 3

#### MULTIPLE SPECIES CONSERVATION PLAN (MSCP)

12-56 The proposed Regional Plan covers areas that are critical to the County's Multiple Species Conservation Program (MSCP), both North and South County plans—including the assembly of a Preserve in each. The South County Subarea Plan was adopted in 1997; and the North County Plan is currently in development. As the Regional Plan encourages projects that are consistent with an SCS that achieves GHG reductions, we would anticipate that the PEIR would analyze the effects of the proposed Regional Plan on the MSCP South and North County plans, the assembly of the Preserve and full implementation of the plans. Any effect (direct or indirect) of the Regional Plan on the MSCP should be evaluated (and mitigated, if necessary). SANDAG staff should coordinate with County staff to best determine how to evaluate the MSCP South and NC Plan in the upcoming Regional Plan and PEIR.

#### PARKS AND RECREATION

12-57 The County's trails and pathway network provides safe, secure, healthy, affordable, and convenient travel choices between the places where people live, work, and play while reducing use of personal vehicles, thereby reducing GHG emissions. Please consider incorporating a discussion of the County's Community Trails Master Plan and encourage investment in trails and pathways that connect people with places where they live, work, and play.

#### VECTOR CONTROL PROGRAM

The County's Vector Control Program (VCP) is responsible for the protection of public health through the surveillance and control of mosquitoes that are vectors for human disease including West Nile virus (WNV). The VCP has completed their review and has the following comments regarding the Regional Plan.

- 12-58
1. The VCP requests that when implementing transportation projects or components of the environmental mitigation program, impacts from possible mosquito breeding sources are considered. Any area that is capable of accumulating and holding at least ½ inch of water for more than 96 hours can support mosquito breeding and development.
  2. For your information, the County's Guidelines for Determining Significance for Vectors can be accessed at [http://www.sandiegocounty.gov/content/dam/sdc/pds/docs/vector\\_guidelines.pdf](http://www.sandiegocounty.gov/content/dam/sdc/pds/docs/vector_guidelines.pdf).
  3. The California Department of Public Health Best Management Practices for Mosquito Control in California is available at <http://www.cdph.ca.gov/HealthInfo/discond/Documents/BMPforMosquitoControl07-12.pdf>.

#### RESPONSE TO COMMENT 12-56

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Please see response to comment County of SD 12-11.

#### RESPONSE TO COMMENT 12-57

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. At the regional and local level, SANDAG is supportive of planning efforts for locally sponsored trails and pathway networks as alternative transportation options and that foster improved neighborhoods and community connections. Please see discussions provided in Impact LU-1 in Section 4.11 and Section 4.15.

#### RESPONSE TO COMMENT 12-58

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. SANDAG understands the need for vector control and appreciates the information provided by the County and will take these measures into consideration when implementing transportation projects or components of the environmental mitigation programs.

Mr. Martin

### RESPONSE TO COMMENT 12-59

The County's comments on the NOP were considered during preparation of the Draft EIR.

**COMMENT LETTER 13: CITY OF DEL MAR**

Comment Letter 13

October 4, 2021

SANDAG Regional Plan EIR  
 c/o Kirsten Uchitel, Associate Planner  
 SANDAG  
 401 B Street, Suite 800  
 San Diego, CA 92101  
[RegionalPlanEIR@sandag.org](mailto:RegionalPlanEIR@sandag.org)

SENT VIA EMAIL

**RE: City of Del Mar Comments on the Draft Environmental Impact Report for the Draft 2021 Regional Plan**

Dear Ms. Uchitel:

On behalf of the City of Del Mar, thank you for the opportunity to provide formal comments on the San Diego Association of Government's (SANDAG) Draft Environmental Impact Report (DEIR) for the Draft 2021 Regional Plan. The City's comments are provided as follows:

- 13-1 | **1. COMMENT – PROJECT DESCRIPTION**  
**Pages 2-32, 2-34, 2-35, 2-36, 2-62 and Figures 2-20, 2-21, 2-22, 2-35**  
  
 The DEIR identifies Mobility Hubs as Coastal, Gateway, Major Employment Center, Suburban, and Urban, but does not provide an illustrative exhibit showing areas considered part of the Mobility Hubs. The City of Del Mar (City) recognizes that Table 2-11 on pages 2-59 and 2-60 provides a list by region for each Mobility Hub, but it is unclear what jurisdictions are associated with the Mobility Hubs. For example, it is unclear what portions of the City are included in the Solana Beach Mobility Hub. Further, the reference to Solana Beach is misleading as it also includes area in the City of Del Mar. From the figures, it appears that the Mobility Hub extends across the northern area of the City referred to as the North Bluff, a portion of North Beach, and a majority of the Del Mar Fairgrounds property.
- 13-2 | **Request 1:** The City requests an illustrative exhibit be provided in the Project Description that adds this clarity to the DEIR.
- 13-3 | **Request 2:** The figures provided in 2-20, 2-21, 2-22, and 2-35 are difficult to understand at a jurisdiction level due to the scale provided. The City requests these figures be separated and included at a smaller scale in greater detail. The City also

1050 Camino Del Mar, Del Mar, CA 92014 | 858.755.9313 | [www.delmar.ca.us](http://www.delmar.ca.us)

**RESPONSE TO COMMENT 13-1**

A map depicting the five different mobility hub types has been added to Chapter 2, *Project Description*, of the Final EIR as Figure 2-37. Figures 2-2.1 through 2-2.11 have also been added to the Project Description of the Final EIR to provide greater granularity on the Mobility Hub areas and projects in the proposed Plan at a corridor level. A portion of the City of Del Mar is included in the Solana Beach mobility hub, as reflected in Figures 2-2.5 and 2-2.8 in the Project Description of the Final EIR.

**RESPONSE TO COMMENT 13-2**

Please see response to comment Del Mar 13-1.

**RESPONSE TO COMMENT 13-3**

Figures 2-20, 2-21, 2-22, and 2-35 are intended to illustrate housing and employment density on a regional scale to demonstrate the process for identifying the areas targeted for development of Mobility Hub Networks. These maps are not intended to demonstrate exact locations of future Mobility Hubs. SANDAG did not include jurisdictional boundaries on these maps because the addition of this layer would have made the maps much harder to read given the amount of information already included. Major regional transportation corridors (i.e., interstates and state routes) are included to provide locational context.

13-3  
 cont. requests City jurisdiction lines be included as a matter of transparency. Otherwise, it is unclear where the City's boundary lines are located.

13-4 **Request 3:** Since the Del Mar Fairgrounds appears to be included in the Solana Beach Mobility Hub, the City requests an additional area southwest of the boundary be studied as part of the Mobility Hub. The City recognizes the DEIR is studying the areas included in the Draft 2021 Regional Plan, so this comment is requesting additional analysis be included so that the southeast boundary can be extended east to meet Jimmy Durante Boulevard (at minimum) or even further east to meet I-5. This is requested because these undesignated areas are immediately adjacent and outside the boundary of the Mobility Hub, as proposed, yet include key access points to major roads, the freeway, and major employment centers.

**2. COMMENT – PROJECT DESCRIPTION**  
**Pages 2-55, 2-56, 2-57 and Figures 2-32, 2-33, 2-34**

13-5 The DEIR illustrates the region's transit networks in 2025, 2035, and 2050 via a mix of Commuter Rail, Light Rail, Next Gen Rapid Bus, Local Bus, and Ferry. In 2025, Commuter Rail and Local Bus are designated in the City; however, in 2035, Next Gen Rapid Bus is introduced east-west on Del Mar Heights Road and north-south on Camino del Mar. Rail relocation inland from the Del Mar Bluffs is of critical importance to the City. The proposed 2025, 2035, and 2050 transit network maps do not reflect a realignment of the rail network in this fragile coastal region. The following requests are intended to ensure transparency and clarification to the public, and that sufficient analysis is provided within this Program-level DEIR.

13-6 **Request 1:** The City requests a callout be added to Figures 2-32, 2-33, and 2-34 indicating that the Commuter Network in said area is pending additional study for future inland realignment. The City further requests this be clarified on the figures via a dashed line through the Del Mar rail corridor and noted in the key legend.

13-7 **Request 2:** The City requests narrative be added to this section of the DEIR describing the planned realignment of the Commuter Rail network through the Del Mar rail corridor. The City further requests a clarification be made regarding the horizon years for: 1) the Del Mar Tunnel, which appears to be 2035; 2) the rail realignment inland from the Del Mar Bluffs, which is not specifically noted, however, Table E-6-3 in Appendix E-6 indicates this may be planned for 2050, not 2035, due to identified marsh and riparian scrub habitat impacts associated with "Commuter Rail 398" projects (although the identified amounts are relatively small at 0.2 acre of marsh and 0.4 acre of riparian scrub so it is unclear if this is intended to account for the inland rail

**RESPONSE TO COMMENT 13-4**

As SANDAG collaborates with cities on proposed Plan project and policy implementation in the years to come, conceptual Mobility Hub boundaries will be refined while taking into consideration city corridor and land use planning goals and policies, similar to what has already begun as part of the Comprehensive Multimodal Corridor Plans (CMCP) planning and design process. The City's request will be considered as part of this process. More detailed network-level analysis will be needed within each Mobility Hub to finalize detailed Transit Leap routing, Complete Corridor cross-sections, Flexible Fleet pilots, and supporting technologies.

**RESPONSE TO COMMENT 13-5**

Resilience of transportation infrastructure to climate impacts is a priority of the proposed Plan. As such, the relocation of the rails off of the Del Mar bluffs is a priority project recognized in the Appendix A of the proposed Plan as part of the 2035 Commuter Rail 398 project (Project ID TL06), with planning already underway.

**RESPONSE TO COMMENT 13-6**

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects subject to project-specific environmental review. The Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and the seasonal platform at the Del Mar Fairgrounds are considered second-tier projects. Callouts showing future second-tier projects on the referenced figure would not be feasible and are not within the scope of this Program EIR's project description.

**RESPONSE TO COMMENT 13-7**

The Del Mar tunnel is a top priority for SANDAG. Planning work is underway with preliminary engineering, and the environmental phase is expected to begin as soon as 2022 if funding is secured. The Del Mar Tunnel project is in the 2035 phase in the proposed Plan and the inland rail realignment is assumed as part of the tunnel project. Timing for bluffs restoration will be determined as the tunnel and inland rail realignment projects progress.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 3 of 27

13-7 relocation component); and 3) and restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures. It is unclear if the rail relocation and bluffs restoration is planned for 2035 or 2050.

13-8 **Request 3:** The City requests a notation on the figures and narrative be included to clarify that the COASTER route through Del Mar is referred to as "Commuter Route 398" in the DEIR.

13-9 **Request 4:** Due to the thick purple line delineation of the Commuter Rail alignment through Del Mar, it is difficult to view the light blue delineation noting the addition of Next Gen Rapid Bus in Figures 2-33 (2035) and 2-34 (2050). The City requests these figures be refined so that the planned Next Gen Rapid Bus along Del Mar Heights Rd (east-west) and Camino del Mar (north-south) are clearly shown and viewable to the public.

**3. COMMENT – PROJECT DESCRIPTION**  
**Page 2-58**

13-10 The DEIR notes that between 2026 to 2035, "major transportation improvements and programs would include continued double tracking at certain locations on the LOSSAN rail corridor, increases in COASTER frequencies, Del Mar Tunnel, new stations at Central Mobility Hub and at Camp Pendleton..." However, this section does not specifically include reference to a relocation of the rail corridor inland from the Del Mar Bluffs (though implied by the Del Mar Tunnel reference) or restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures. See above comment related to the 2035 or 2050 timeframe for the inland rail relocation. Further, this section does not list the proposed station (seasonal platform) at the Del Mar Fairgrounds. Note that the DEIR lists other planned rail stations in the region.

13-11 **Request:** The City requests that the inland rail relocation from the Del Mar Bluffs and seasonal platform at the Del Mar Fairgrounds be added to the project description and included in the DEIR analysis where appropriate, including inclusion into the 2035 or 2050 timeframe. Without the inclusion of these two key items, the extent of the DEIR project description is confusing to the public and inadequate.

**RESPONSE TO COMMENT 13-8**

These figures do not depict the transit leap network at the level of granularity required to complete the request. Route 398 is identified in Table A.5: Interstate North Coast Corridor, in Appendix A of the proposed Plan, as projects TL05, TL06, and TL07.

**RESPONSE TO COMMENT 13-9**

Specific corridor maps have been added to Appendix A of the proposed Plan so that the reader can see the difference between the proposed Plan projects within each corridor. These will be included as maps A.1 through A.12 in the proposed Plan.

**RESPONSE TO COMMENT 13-10**

While not specifically referenced in the 2025 Commuter Rail 398 (COASTER) project, the Bluff Stabilization Project (among others) is included in that phase, and those cost are represented in the \$1.2 billion cost assumptions. Also, the Del Mar Tunnel project is included in the 2035 phase. Specific alignments will be chosen once the project goes through the project-level environmental analysis phase. Relocation away from the bluffs is assumed as part of the tunnel project in the 2035 phase. The Del Mar platform is part of the San Dieguito Double Track Project, which is included in the 2025 Commuter Rail 398 project grouping.

**RESPONSE TO COMMENT 13-11**

The Del Mar platform is part of the San Dieguito Double Track Project, which is included in the 2025 Commuter Rail 398 project grouping. Relocation away from the Bluffs is assumed as part of the tunnel project in the 2035 phase.

13-12	<p><b>4. COMMENT – AESTHETICS</b>  <b>Page 4.1-11, Table 4.13</b></p> <p>Under “Visual Plan or Regulation,” the DEIR includes reference to the City’s Trees, Scenic Views, and Sunlight Protection Ordinance. Under “Local Scenic Resources,” the DEIR notes the City’s Local Coastal Program (LCP) with a date of 1993. These sections do not reflect additional provisions in the City’s codes related to scenic resources.</p>
13-13	<p><b>Request 1:</b> The City requests the correct code reference be made to the Trees, Scenic Views, and Sunlight Ordinance. This is City of Del Mar Municipal Code, Chapter 23.51 (not 30.52).</p>
13-14	<p><b>Request 2:</b> The City requests that “Visual Plan or Regulation” be updated to include reference to the City’s Bluffs, Slopes, and Canyon Overlay Zone (BSC-OZ) which is part of the City’s certified LCP (City of Del Mar Municipal Code, Chapter 30.52). As stated in the chapter, the “BSC Overlay Zone is designed to ... preserve the scenic sandstone bluffs and related canyons and steep slopes which characterize the area within the zone...The unique landforms within the zone provide visual relief and diversity within the City, and they define and separate neighborhoods, enhance the overall quality of Del Mar’s local coastal environment, and preserve the economic integrity of our visitor-oriented community.”</p>
13-15	<p><b>Request 3:</b> The City requests that “Local Scenic Resources” be updated to reflect the correct certification years for its LCP – should read “Local Coastal Program Land Use Plan (1993) and Implementing Ordinances (2001)” and the list should also include references to “canyons and steep slopes.”</p>
13-16	<p><b>5. COMMENT – AESTHETICS</b>  <b>Page 4.1-7</b></p> <p>The DEIR states that “some of the other local jurisdictions within the San Diego region have adopted scenic highway general plan elements or programs.” The City’s Community (General) Plan lists five principal roadways within the City as scenic corridors. These include: 1) Camino del Mar; 2) Crest Road; 3) Carmel Valley Road; 4) Coast Boulevard; and 5) Del Mar Heights Road (Community Plan, Transportation Element, pages 43-47). These roads have been determined by the City to allow for special views of scenic natural resources and to afford greater protection in order to maintain those views. Camino del Mar, Coast Boulevard, and Del Mar Heights Road offer scenic views of the Pacific Ocean. Crest Road offers views of the San Dieguito</p>

**RESPONSE TO COMMENT 13-12**

The text on page 4.1-11 of the EIR, in Table 4.1-3, has been updated as described in response to comments Del Mar 13-13 through Del Mar 13-15, in regards to additional provisions in the City’s codes related to scenic resources.

**RESPONSE TO COMMENT 13-13**

The City of Del Mar Municipal Code reference in Table 4.1-3 has been updated to reference the correct section of the Municipal Code (Chapter 23.51).

**RESPONSE TO COMMENT 13-14**

The “Visual Plan or Regulation” column on Table 4.1-3 has been updated to include a brief discussion of Municipal Code Chapter 30.52, *Bluff, Slope, and Canyon Overlay Zone*.

**RESPONSE TO COMMENT 13-15**

The “Local Scenic Resources” column on Table 4.1-3 has been updated to include the references to the Implementing Ordinances (2001) and to list “canyons and steep slopes” as resources identified in the listed documents.

**RESPONSE TO COMMENT 13-16**

The Draft EIR correctly states that “some of the other local jurisdictions within the San Diego region have adopted scenic highway general plan elements or programs.” Identifying all local scenic roadways or corridors within each jurisdiction is not necessary for programmatic impact analysis in the EIR. The project-specific evaluation of potential aesthetics impacts resulting from planned 2035 development in/adjacent to the City of Del Mar including the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, will occur during the project-specific environmental review process for these improvements.

13-16 River Valley as well as Crest Canyon and the North Bluffs adjacent to North Beach. Del Mar Heights Road and Carmel Valley Road serve as the City's southerly roadway connections to I-5. Views of Los Peñasquitos Lagoon are visible from Carmel Valley Road.

13-17 **Request:** The City requests its five principal roadways as noted above be included in the framework section of the Aesthetics chapter (similar to how other chapters in the DEIR describe relevant General Plan policies by local jurisdiction – see e.g., page 4.4-54, Table 4.4-6 in Biological Resources). This is important for the evaluation of potential aesthetics impacts resulting from planned 2035 development in/adjacent to the City of Del Mar including the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures.

**6. COMMENT - AESTHETICS**  
**Pages 4.1-18, 4.1-20**

13-18 The DEIR states for horizon year 2025 that, "Development in the Coastal Zone would need to adhere to the California Coastal Act and local coastal plans, while typical measures in local plans require development to be sited and designed to protect views to and along the ocean and other scenic coastal areas." A conclusion is noted that "these measures would reduce adverse effects on scenic vistas." A similar conclusion is noted for horizon year 2035 on page 4.1-20 regarding adherence to the Coastal Act. Further, page 4.1-20 states that implementation of the Big 5 Moves would include construction of "Complete Corridor improvements consisting of continued double-tracking at certain locations on the LOSSAN rail corridor, increase in COASTER frequencies, and grade separation at Leucadia Blvd." However, this impact analysis does not include the cited 2035 Del Mar Tunnel on page 2-58 (though it lists all other 2035 components), nor does it include reference to the inland rail relocation from the Del Mar Bluffs, the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, or the planned seasonal rail platform at the Del Mar Fairgrounds.

13-19 **Request:** The City requests the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, and planned seasonal rail platform at the Del Mar Fairgrounds be included in the Aesthetics section and analyzed accordingly. Without inclusion of these components, including the cited Del Mar Tunnel on page 2-58, and sufficient analysis of these components in this impact section, the City is

**RESPONSE TO COMMENT 13-17**

Page 4.1-17 of the EIR, provides a general characterization of the coastal scenic resources, including scenic vistas in the North County area that would be affected by new development, and includes the long-range views of the coastal mountain ranges and habitat preserves, unobstructed views of the Pacific Ocean from the Pendleton-De Luz area, and views of highly scenic lagoons and waterways such as Batiquitos, Agua Hedionda, Buena Vista, San Elijo, and Los Peñasquitos Lagoons, and the San Dieguito and San Luis Rey Rivers along the I-5 corridor. As stated in the EIR, the locations of some transportation network improvements and certain design features (e.g., above-grade facilities, retaining walls, sound attenuation walls, cut-and-fill activities) cannot avoid physical changes that have substantial adverse effects on scenic vistas, including blocking panoramic views or views of major landscape features or landforms. The EIR concludes that implementation of regional growth and land use change and transportation network improvements would result in new development and infrastructure affecting scenic resources, including trees, rocks, outcroppings, and historic structures within a state scenic highway and local scenic routes and protected public viewsheds. The impact in the year 2035 is significant. Also, see response to comment Del Mar 13-16 regarding program-level vs. project level CEQA analysis of aesthetics impacts.

**RESPONSE TO COMMENT 13-18**

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects would be subject to project-specific environmental review. With a programmatic level of analysis, the EIR provides a general assessment of potential impacts in the coastal regions, as discussed above. The evaluation of potential aesthetics impacts resulting from second-tier projects, including planned 2035 development in/adjacent to the City of Del Mar such as the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, will occur as part of the project-specific environmental review process for these improvements.

**RESPONSE TO COMMENT 13-19**

See response to comment Del Mar 13-18 above.

13-19 cont. | unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.

**7. COMMENT- AESTHETICS**  
**Pages 4.1-28, 4.1-29, Table 4.1-5**

13-20 | The DEIR impact analysis does not include the cited 2035 Del Mar Tunnel on page 2-58 (though it lists all other 2035 components), nor include reference to the inland rail relocation from the Del Mar Bluffs, the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, or the planned seasonal rail platform at the Del Mar Fairgrounds. This includes no reference to these items in Del Mar under Table 4.1-5 on page 4.1-29.

13-21 | **Request:** The City requests the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, and planned seasonal platform at the Del Mar Fairgrounds be included in the Aesthetics section and analyzed accordingly. Without inclusion of these components, including the cited Del Mar Tunnel on page 2-58, and sufficient analysis of these components in this section, the City is unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.

**8. COMMENT - AESTHETICS**  
**Page 4.1-23**

13-21 | The DEIR makes the reference, "The SPRINTER rail lines would be extended from Escondido to the North County Fair" as part of the 2050 Transportation Network Improvements and Programs. As a matter of clarification, this is presumed to be the "Westfield North County Shopping Center" and not the "Del Mar Fairgrounds" located in the City of Del Mar.

13-23 | **Request:** The City requests any reference to "North County Fair" be amended to "Westfield North County Shopping Center" in order to avoid confusion with the intended location of the SPRINTER extension.

**9. COMMENT - AESTHETICS**  
**Pages 4.1-42, 4.1-43**

13-24 | The DEIR describes components of the horizon year 2035 Transportation Network Improvements and Programs related to transit service as "increases in service for the COASTER..." but does not include reference to the Del Mar Tunnel, which would

**RESPONSE TO COMMENT 13-20**

See response to comment Del Mar 13-18 above.

**RESPONSE TO COMMENT 13-21**

See response to comment Del Mar 13-18 above.

**RESPONSE TO COMMENT 13-22**

Reference to the "North County Fair" has been amended to "Westfield North County Shopping Center" on pages 4.1-23, 4.1-30, and 4.1-39 of the EIR.

**RESPONSE TO COMMENT 13-23**

See response to comment Del Mar 13-22 above.

**RESPONSE TO COMMENT 13-24**

Page 4.1-43 of the EIR states that "due to the highly urbanized nature of the area surrounding these improvements (increases in service for the COASTER), substantial sources of additional lighting and glare would not occur." The text has been amended to include increases in Amtrack and Freight Service. The EIR does not dismiss aesthetic impacts but acknowledges that impacts would occur on a local level and would be evaluated at a local level on a project-by-project basis. Therefore, the detailed analysis relative to the proposed Del Mar Tunnel including security and/or maintenance lighting will be evaluated at the project-specific level, at which time the level of impacts will be determined and appropriate mitigation measures will be identified.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 7 of 27

13-24  
 cont. | include an inland rail relocation from the Del Mar Bluffs. Potential inland realignments will alter the location of rail service, including the referenced increase in COASTER service as well as AMTRAK and freight rail service through the City of Del Mar. During evening hours, it is anticipated that rail lighting including train headlights will result in new lighting and/or glare effects on public nighttime views not currently experienced under Existing Conditions. Further, it is not known if any other lighting would be associated with the Del Mar Tunnel including security and/or maintenance lighting.

13-25 | **Request:** The City requests this impact section be updated to include the Del Mar Tunnel and inland rail realignment from the Del Mar Bluffs, with associated analysis provided related to the new lighting and/or glare effects from train lights, increased train frequency, and any associated lighting for the Del Mar Tunnel including but not limited to security and/or maintenance lighting.

**10. COMMENT – AIR QUALITY**  
**Pages 4.3-35, 4.3-36**

13-26 | The DEIR describes components of the 2035 Transportation Network Improvements and Programs as including “expanded commuter rail services (Commuter Rail 582) improvements between Sorrento Mesa and National City,” Trolley line improvements, and a People Mover at the San Diego Airport. This section does not include references to increased service for the COASTER (e.g., as cited on pg. 4.1-42), or other rail network service improvements including AMTRAK or freight rail movement, all of which utilize diesel engines. Further, this section does not discuss the Del Mar Tunnel and potential concentrations (could be referred to as “hot spots”) of train emissions produced from tunnel exhaust systems in focused areas and their associated effects on residential areas with sensitive (65+) populations and/or two public elementary schools west of I-5 adjacent to the City’s east boundary (Del Mar Hills Academy and Del Mar Heights). Pursuant to the City’s recently adopted 6<sup>th</sup> Cycle Housing Element, in 2017 nearly 26% of City residents were 65 years or older, and 12% under 18 years based on the American Community Survey, 2017 ([www.delmar.ca.us/DocumentCenter/View/7542](http://www.delmar.ca.us/DocumentCenter/View/7542)). Page 4.3-7 of the DEIR states that “CARB has identified the following people as the most likely to be affected by air pollution: children younger than 14, the elderly older than 65...these groups are classified as sensitive receptors.”

13-27 | **Request:** The City requests this impact section be updated to include the proposed increase in rail service by horizon year 2035 for pedestrian and freight trains, and the Del Mar Tunnel. Further the City requests the associated air quality impacts resulting from increased diesel emissions, both by increased frequency of use and

**RESPONSE TO COMMENT 13-25**

As stated above, detailed analysis related to the new lighting and/or glare effects from train lights, increased train frequency, and any associated lighting for the Del Mar Tunnel and inland rail realignment from the Del Mar Bluffs, will be evaluated at the project-specific level, at which time the level of impact will be determined and appropriate mitigation measures will be identified.

**RESPONSE TO COMMENT 13-26**

These are general comments about the Draft EIR analysis and CARB definitions. The DEIR is in agreement with these comments and no changes have been made. The air quality analysis does not need to be updated to reflect increased service associated with COASTER, AMTRAK, and freight, as well as the Del Mar Tunnel, because the increase in service due to transportation improvements is already accounted for in emissions estimates and modeling. Moreover, the design of the Del Mar Tunnel is not yet known; therefore, it is not possible to analyze detailed construction and operation effects. Regardless, mitigation measures in the EIR would apply to future construction of future tunnels. For example, mitigation measure AQ-5b ensures railway tunnels or other underground features are designed to help reduce localized toxic air contaminant concentrations at sensitive receptors and are located as far away as feasibly possible from nearby sensitive receptors. No changes to the analysis are required.

**RESPONSE TO COMMENT 13-27**

See response to comment Del Mar 13-26. Additionally, mitigation measure AQ-2b ensures that all new train purchases shall be zero emission after 2035. No changes to the analysis are required.

13-27  
 cont. concentrated exhaust points emitted from the Del Mar Tunnel be analyzed in the impact section. Without inclusion of these components, including the cited Del Mar Tunnel on page 2-58 and increased rail service referenced on page 4.1-42), and sufficient analysis of these components being included in this impact section, the City is unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.

**11. COMMENT – AIR QUALITY**  
**Pages 4.3-40, 4.3-41, 4.3-42**

13-28 The DEIR addresses the increase in rail activity between 2016 and 2025, and refers to rail operators such as the COASTER and AMTRAK are replacing existing older locomotives with modern, Tier 4 engines by 2025. As a result, the DEIR concludes that contrary to the increase in rail activity, emissions are reduced due to the Tier 4 engines. Further, the DEIR addresses the increase in rail activity between 2016 and 2035 (page 4.3-42) and draws the same conclusion. However, the 2035 conclusion states, "Moreover, while passenger rail activity increases, all passenger rail lines (both current and new) are assumed to be operating completely with modern, Tier 4 engines by 2035." The conclusions made for horizon years 2025 and 2035 appear to be based on an assumption per the Regulatory framework and replacements made at-will by rail operators. It does not appear that Tier 4 replacements would be required as mitigation.

13-29 **Request 1:** As the impact section is based on an assumption that all train engines will be Tier 4, the City requests the impact section discuss the air quality impacts under an alternate scenario where passenger and freight rail would not be replaced with Tier 4 engines by horizon years 2025 and 2035, or only replaced in part. The City further requests clarification be included to understand at what point the increase in rail activity coupled with older engines (or a mix of older and Tier 4) could result in a significant impact to Air Quality. If it is found that a significant impact would occur if all train engines were not replaced with Tier 4 (or a percentage mix), the City requests a mitigation measure be added for horizon years 2025 and 2035 requiring the threshold percentages of all trains being Tier 4.

13-30 **Request 2:** The City requests this impact section be updated to include the Del Mar Tunnel and associated air quality impacts resulting from increased frequency of use and concentrated exhaust points emitted from the Del Mar Tunnel be analyzed in the impact section.

**RESPONSE TO COMMENT 13-28**

This is a general comment that references the fact that use of Tier 4 despite increases in rail service would decrease emissions. The commenter notes that new Tier 4 engines are not a mitigation measure. No specific comment requiring a response is provided.

**RESPONSE TO COMMENT 13-29**

The air quality analysis assumes that all passenger lines will be operating with Tier IV or better engines by 2025. However, both the Coaster and Amtrak Pacific Surfliner lines are operating their full fleet with Tier IV locomotives today, which is ahead of the schedule assumed in the Draft EIR. Both Coaster and Amtrak have retired the older diesel locomotives that were assumed under the EIR’s baseline conditions. Moreover, any new locomotive purchases will be Tier IV or better, in compliance with federal locomotive standards (40 CFR 1033). The suggested additional analysis and mitigation measure are not required.

**RESPONSE TO COMMENT 13-30**

Please see responses to comments Del Mar 13-27 and Del Mar 13-29 above.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 9 of 27

13-31	<p><b>12. COMMENT – AIR QUALITY</b>  <b>Pages 4.3-56, 4.3-57</b></p> <p><b>Request:</b> Same comment made above for Air Quality on Pgs. 4.3-35, 4.3-36</p>
13-32	<p><b>13. COMMENT – BIOLOGICAL RESOURCES</b>  <b>Page 4.4-12, Figure 4.4-2</b></p> <p>Several key lagoons are noted in the figure including Batiquitos and San Elijo to the north of the City. However, two key lagoons that flank the City's northern and southern boundaries are not noted on the figure. These are the San Dieguito (north) and Los Peñasquitos (south) Lagoons.</p> <p><b>Request:</b> The City requests that both the San Dieguito and Los Peñasquitos Lagoons are referenced on the figure as these lagoons are of critical importance to the community and region, and anticipated to be affected by the proposed 2035 Del Mar Tunnel and inland rail relocation from the Del Mar Bluffs.</p>
13-33	<p><b>14. COMMENT – BIOLOGICAL RESOURCES</b>  <b>Page 4.4-56, Table 4.4-6</b></p> <p>The table references the City's Lagoon Overlay Zone (Del Mar Municipal Code Chapter 30.53), Tree Protection Ordinance (Del Mar Municipal Code Chapter 23.50), and General Plan. However, the table does not include the following: 1) the City's Bluff, Slope, and Canyon Overlay Zone (Del Mar Municipal Code Chapter 30.52) and purpose, in part: Protects downstream resources from the adverse impacts of erosion and sedimentation; and 2) the City's Land Conservation Ordinance (Del Mar Municipal Code Chapter 23.33) and purpose: Regulates soil disturbances of existing or natural terrain and vegetation and does not create soil erosion, silting of lower slopes, slide damage, flooding problems, or severe cutting or scarring.</p> <p><b>Request:</b> The City requests the table also include the Bluff, Slope, and Canyon Overlay Zone and Land Conservation Ordinance.</p>
13-34	<p><b>15. COMMENT – BIOLOGICAL RESOURCES</b>  <b>Page 4.4-69</b></p> <p>The DEIR states that "estimated direct impacts on vegetation communities and regulated aquatic resources for the 2035 horizon year are provided in Table 4.4-8. Tables E-6-1 through E-6-3 in Appendix E-6 summarize the project-by-project impacts</p>
13-35	<p>The DEIR states that "estimated direct impacts on vegetation communities and regulated aquatic resources for the 2035 horizon year are provided in Table 4.4-8. Tables E-6-1 through E-6-3 in Appendix E-6 summarize the project-by-project impacts</p>
13-36	<p>The DEIR states that "estimated direct impacts on vegetation communities and regulated aquatic resources for the 2035 horizon year are provided in Table 4.4-8. Tables E-6-1 through E-6-3 in Appendix E-6 summarize the project-by-project impacts</p>

**RESPONSE TO COMMENT 13-31**

Please see responses to comments Del Mar 13-27 and Del Mar 13-29 above.

**RESPONSE TO COMMENT 13-32**

A call-out has been added to Figure 4.4-2 identifying the San Dieguito and Los Peñasquitos lagoons in the Final EIR.

**RESPONSE TO COMMENT 13-33**

A call-out has been added to Figure 4.4-2 identifying the San Dieguito and Los Peñasquitos lagoons in the Final EIR.

**RESPONSE TO COMMENT 13-34**

The cited ordinances in this comment were added to Table 4.4-6 in the Final EIR.

**RESPONSE TO COMMENT 13-35**

The cited ordinances in this comment were added to Table 4.4-6 in the Final EIR.

**RESPONSE TO COMMENT 13-36**

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects. Specific projects under the proposed plan, including the Del Mar Tunnel, Inland Rail alignment from the Del Mar Bluffs, Commuter Rail 398, and restoration of the Del Mar Bluffs, would be subject to project-specific environmental review, and the alignment, alternatives, and biological resources analysis will be included in the project-specific environmental review.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 10 of 27

13-36

on vegetation communities for each horizon year." The City provided an earlier comment under Chapter 2, Project Description where it requested a narrative be added describing the planned realignment of the Commuter Rail network through the Del Mar rail corridor. In this comment, the City requested clarification be made regarding the horizon years for: 1) the Del Mar Tunnel, which appears to be 2035 based on the DEIR Project Description; 2) the inland rail realignment from the Del Mar Bluffs, which is not specifically noted in the DEIR, but implied due to a Del Mar Tunnel being included; and 3) the associated restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures.

13-37

Related to planned Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs (Commuter Rail 398), and restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, the DEIR does not sufficiently describe the potential impacts to vegetation communities for each horizon year in Appendix E-6, Tables E-6-2 and E-6-3. As shown below, Table E-6-2 is for the 2035 horizon year and indicates Commuter Rail 398 would result in impacts to 0.6 acres of Coastal Scrub habitat. If the Del Mar Tunnel is proposed for horizon year 2035, regardless of the final alternative alignment selected, it is anticipated that a greater area of habitat impacts would result from both temporary/construction and permanent impacts associated with the construction of a Del Mar Tunnel. This is because the City is bordered by two lagoons, Los Peñasquitos to the south (which Commuter Rail 398 currently is located within) and San Dieguito to the north. Further, the City is bordered by the Torrey Pines State Natural Reserve Extension on the City's south slope and Crest Canyon on its north slope – areas that include a diversified mix of native plants and trees. It is reasonable that greater upland impacts would result from tunneling through or adjacent to a hillside.

**Appendix E-6, Table E-6-2 (2035)**

**RESPONSE TO COMMENT 13-37**

Please see response to comment Del Mar 13-36.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 11 of 27

13-38

Similarly, Table E-6-3 for the 2050 horizon year indicates Commuter Rail 398 would result in impacts to 0.2 acres of Marsh habitat and 0.4 acres of Riparian Scrub habitat. As noted in the City's Project Description comment, it is unclear if the inland rail realignment and/or restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures is planned for horizon year 2035 or 2050 as this information is not provided in the DEIR (DEIR only references the Del Mar Tunnel). Based on the identified impacts in Table E-6-3, wetland and riparian impacts are noted for Commuter Rail 398. It is unclear if these impacts are associated with the inland rail realignment. If the inland rail realignment is proposed for horizon year 2050, regardless of the final alternative alignment selected, it is anticipated that a greater area of habitat impacts would result from both temporary/construction and permanent impacts associated with the construction of a Del Mar Tunnel. This is because the City is bordered by two lagoons, Los Peñasquitos to the south (which Commuter Rail 398 currently is located within) and San Dieguito to the north. It is reasonable that greater impacts to wetland and/or riparian habitat would result from any of the inland rail realignment alternatives due to existing conditions in the Del Mar area. Further, the Table does not include reference to and analysis of the planned seasonal platform at the Del Mar Fairgrounds for either 2035 or 2050 which is also in vicinity to the San Dieguito Lagoon.

**Appendix E-6, Table E-6-3 (2050)**

Resource	Impacts and Mitigation		Mitigation	
	Impact	Mitigation	Impact	Mitigation
Wetlands	0.2	0.2	0.2	0.2
Riparian Scrub	0.4	0.4	0.4	0.4
Marsh	0.2	0.2	0.2	0.2
Other	0.0	0.0	0.0	0.0
Total	0.8	0.8	0.8	0.8

13-39

**Request:** In addition to clarifying the horizon years for inland rail relocation from the Del Mar Bluffs and planned seasonal platform at the Del Mar Fairgrounds, the City requests a sufficient level of analysis be provided in the impact section and Appendix E-6 related to planned improvements to Commuter Rail 398 through and adjacent to the City of Del Mar – and in particular the Los Peñasquitos and San Dieguito Lagoons, Torrey Pines State Natural Reserve Extension, and Crest Canyon.

Until this clarification is made and sufficient analysis is included in this impact section, the City is unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.

**RESPONSE TO COMMENT 13-38**

Please see response to comment Del Mar 13-36.

**RESPONSE TO COMMENT 13-39**

Please see response to comment Del Mar 13-36.

**16. COMMENT – CULTURAL RESOURCES**  
**Page 4.5-23**

13-40 The DEIR describes the Del Mar Tunnel and continued double-tracking at certain locations on the LOSSAN rail corridor by horizon year 2035, but does not list the inland rail relocation from the Del Mar Bluffs, the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, or the planned seasonal platform at the Del Mar Fairgrounds. Further, it is unclear which horizon years these components are planned for.

13-41 **Request:** The City requests inclusion of the inland rail relocation from the Del Mar Bluffs and planned seasonal platform at the Del Mar Fairgrounds in the impact section and analysis as applicable.

**17. COMMENT – GEOLOGY, SOILS, AND PALEONTOLOGICAL RESOURCES**  
**Page 4.7-27, Table 4.7-3 and Page 4.7-29, Table 4.7-4**

13-42 The table references the City's Community (General) Plan but does not reference the City's Local Coastal Program.

13-43 **Request 1:** The City requests inclusion of the following Local Coastal Program sections in Table 4.7-3: 1) Bluff, Slope, Canyon Overlay Zone (Del Mar Municipal Code Chapter 30.52) which is designed to protect the health, safety, and general welfare, and to protect downstream resources from the adverse impacts of erosion and sedimentation; 2) Coastal Bluff Overlay Zone (Del Mar Municipal Code Chapter 30.55) which is intended to protect Del Mar's fragile coastal bluffs as a visual resource and avoid the risks to life and property associated with bluff failure and shoreline erosion; 3) the Floodplain Overlay Zone (Del Mar Municipal Code Chapter 30.56), which is intended to avoid hazards to those who will occupy the development; to avoid damage or hazards to the surrounding area; and ensure that development will not obstruct flood flow; will be designed to reduce the need for construction of flood control facilities that would be required if unregulated development were to occur; and to minimize the cost of flood insurance to Del Mar residents; and 4) the City's Land Conservation Ordinance (Del Mar Municipal Code Chapter 23.33) which regulates soil disturbances of existing or natural terrain and vegetation and does not create soil erosion, silting of lower slopes, slide damage, flooding problems, or severe cutting or scarring.

13-44 **Request 2:** The City requests inclusion and reference to its adopted Sea Level Rise Adaptation Plan, which is part of its Community Plan Safety Element (adopted March

**RESPONSE TO COMMENT 13-40**

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. The Del Mar Tunnel project, which is a second-tier project, falls within the 2035 horizon year in the proposed Plan, and the inland rail realignment and bluffs restoration project are assumed as part of the tunnel project.

**RESPONSE TO COMMENT 13-41**

Please see response to comment Del Mar 13-40.

**RESPONSE TO COMMENT 13-42**

See responses to comments Del Mar 13-43 through Del Mar 13-45 for specific requests.

**RESPONSE TO COMMENT 13-43**

Suggested components of the City of Del Mar's LCP have been incorporated into Table 4.7-3 in Section 4.7, *Geology, Soils, and Paleontological Resources*.

**RESPONSE TO COMMENT 13-44**

Suggested reference to the City of Del Mar's Sea Level Rise Adaptation Plan has been incorporated into Table 4.7-3 in Section 4.7.

13-44  
 cont. | 2019). The Adaptation Plan is intended to guide policy decisions related to future development in areas that are identified as vulnerable to projected sea-level rise, flooding, and erosion. The Adaptation Plan identifies a range of adaptation options and prioritizes specific measures to address projected sea-level rise, flooding from the Pacific Ocean and San Dieguito River, and associated coastal bluff and beach erosion. The Adaptation Plan identifies beach nourishment and sand retention as high priority short-to-medium term adaptation measures that would reduce the risk of wave run-up and erosion of the bluff toe. Maintaining a wide public beach will help minimize flood risk to the adjacent public infrastructure, beach access, and private homes and businesses. The City's Sediment Management Plan (October 2018) is a technical document that supports the adopted approach for beach nourishment and maintenance dredging of the San Dieguito river inlet, as set forth in the Adaptation Plan. Currently, the City is seeking local, state, and federal approvals for a Sand Compatibility Opportunistic Use Program (SCOUP) to facilitate beach nourishment adaptation in accordance with the Adaptation Plan and Sediment Management Plan.

13-45 | **Request 3:** The City requests inclusion of the following in Table 4.7-4: 1) Bluff, Slope, Canyon Overlay Zone (Del Mar Municipal Code Chapter 30.52) which is designed to protect the health, safety, and general welfare, and to control the development of properties within the designated zone in order to preserve the scenic sandstone bluffs and related canyons and steep slopes which characterize the area within the zone.; and 2) Open Space Overlay Zone (Del Mar Municipal Code Chapter 30.60) which is intended, in part, to preserve scenic vistas and particularly unique natural features in specific neighborhoods.

**18. COMMENT – GEOLOGY, SOILS, AND PALEONTOLOGICAL RESOURCES**  
**Page 4.7-34**

13-46 | The DEIR describes continued double-tracking at certain locations on the LOSSAN rail corridor by horizon year 2035, but does not list the Del Mar Tunnel, the inland rail relocation from the Del Mar Bluffs, the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, or the planned seasonal platform at the Del Mar Fairgrounds. Further, it is unclear which horizon years the inland rail relocation and seasonal platform are planned for.

13-47 | **Request:** The City requests inclusion of the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and planned seasonal platform at the Del Mar Fairgrounds in the impact section and analysis as applicable. Provided that all three components would generally be sited within wetland areas with high liquefaction potential and/or hillside with potential seismic-related ground failure and/or landslides, until these components

**RESPONSE TO COMMENT 13-45**

Suggested references to the City of Del Mar’s Municipal Code have been incorporated into Table 4.7-4 in Section 4.7.

**RESPONSE TO COMMENT 13-46**

See response to comment Del Mar 13-47.

**RESPONSE TO COMMENT 13-47**

The EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. The Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and the seasonal platform at the Del Mar Fairgrounds are considered second-tier projects.

13-47  
 cont.

are included and sufficient analysis provided, the City is unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.

**19. COMMENT – GEOLOGY, SOILS, AND PALEONTOLOGICAL RESOURCES**  
**Page 4.7-41**

The DEIR generally makes reference to "...transportation network improvements [that] would occur in areas susceptible to slope failure, unstable soils, and expansive soils – particularly improvements in hilly or coastal areas such as the managed lanes along the freeways..." Further, the DEIR generally states that "specific transportation facilities located in areas prone to slope failure, or where the development of these facilities would be likely to cause slope failure, include services through coastal areas or canyons. These improvements may be at a greater risk for effects of slope failure or cause greater risks to people or structures in proximity to these improvements."

13-48

There are three specific rail improvement components that are either within or adjacent to the City and would be sited in "hilly or coastal areas" and/or "through coastal areas or canyons." However, the DEIR does not list these components but refers to them generally. These include the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, and the planned seasonal platform at the Del Mar Fairgrounds. As written, general references to "transportation network improvements" that are "susceptible to slope failure, unstable soils, expansive soils" and could cause "greater risk to people or structures in proximity" can be confusing to the public. Further, general references with the stated conclusions are not a sufficient level of programmatic analysis for the planned LOSSAN rail corridor improvements in/adjacent to the City.

13-49

**Request:** The City requests inclusion of the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, and planned seasonal platform at the Del Mar Fairgrounds in the impact section and analysis as applicable. This is because all three components are within the DEIR's general statements related to "hilly or coastal areas" and/or "through coastal areas or canyons" as well as general references to "transportation network improvements" that are "susceptible to slope failure, unstable soils, expansive soils" and could cause "greater risk to people or structures in proximity." Until these components are included and sufficient analysis is provided, the City is unable to provide further comment on the impacts, conclusion of less than significant, and/or mitigation measures at this time.

**RESPONSE TO COMMENT 13-48**

As noted above, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. The Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and the seasonal platform at the Del Mar Fairgrounds are considered second-tier projects, and because the specifications of second-tier projects such as the timing, location, and size, associated with implementation of the proposed Plan, are not known at this time, conclusions regarding the specific geologic risks related to the above-referenced second-tier projects would be speculative.

**RESPONSE TO COMMENT 13-49**

As noted above, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. The Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and the seasonal platform at the Del Mar Fairgrounds are considered second-tier projects, and because the specifications of second-tier projects such as the timing, location, and size, associated with implementation of the Plan, are not known at this time, conclusions regarding the specific geologic risks related to the above-referenced second-tier projects would be speculative.

**20. COMMENT – GREENHOUSE GAS EMISSIONS**  
**Page 4.8-24**

13-50

The DEIR describes the Del Mar Tunnel and continued double-tracking at certain locations on the LOSSAN rail corridor by horizon year 2035, but does not list the inland rail relocation from the Del Mar Bluffs, and restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, or the planned seasonal platform at the Del Mar Fairgrounds. Further, it is unclear which horizon years these components are planned for.

13-51

**Request:** The City requests inclusion of the inland rail relocation from the Del Mar Bluffs, the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, and planned seasonal platform at the Del Mar Fairgrounds in the impact section and analysis as applicable.

**21. COMMENT – LAND USE**  
**Page 4.11-30, 4.11-31**

13-52

The DEIR states that “the planned transportation network improvements for 2035 are described above” which is a reference to a general list of horizon year 2035 projects on page 4.11-30. However, there is no reference made in the impact section to the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, or restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures. As previously noted in earlier comments, the horizon year for the Del Mar Tunnel is 2035 but a reference to an inland rail relocation and its associated horizon year (2035 or 2050) or the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, is not described in the DEIR. It can be assumed that if the horizon year for the Del Mar Tunnel is 2035, then the inland rail realignment and bluffs restoration including removal of temporary measures would also be 2035. However, as previously noted in the City’s Biological Resources comments, the 2035 impacts for Commuter Rail 398 only affect a small portion of Coastal Scrub habitat, whereas the 2050 impacts for Commuter Rail 398 only affects a small portion of Marsh and Riparian Scrub habitat.

The DEIR provides three horizon years – 2025, 2035, and 2050. It is clear that a Del Mar Tunnel is planned for horizon year 2035, which is also described in Appendix A of the Draft 2021 Regional Plan, Table A.5 as Project ID TL06 (“Oceanside to downtown San Diego (Build Del Mar tunnel, add stations at Central Mobility Hub and Camp Pendleton, and Grade”). However, as previously commented, it is not clear if

**RESPONSE TO COMMENT 13-50**

The EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. Reference to future projects such as the inland rail realignment and bluff restoration projects in the impact analyses were provided as examples of the types of projects that could occur by those horizon years and were not intended to be an exhaustive list of all second-tier projects that would occur by that horizon year.

**RESPONSE TO COMMENT 13-51**

See response to comment Del Mar 13-50.

**RESPONSE TO COMMENT 13-52**

The EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. References to future projects such as the inland rail realignment and bluff restoration projects in the impact analyses were provided as examples of the types of projects that could occur by those horizon years and were not intended to be an exhaustive list of all second-tier projects that would occur by that horizon year. Given the programmatic nature of the EIR, project-specific analysis of the Del Mar Bluffs improvement project is not necessary at this time.

13-52  
 cont.

and when the associated inland rail realignment or bluff restoration including removal of the temporary stabilization measures are proposed.

Assuming it is 2035, the Land Use impact section does not sufficiently describe the indirect effects associated with deferring these critical components of the Transportation Network Improvements and Program to a horizon year post-2025. By not evaluating these critical components in the first horizon year of 2025, use of the LOSSAN rail corridor/Commuter Rail 398 by COASTER, AMTRAK, and freight rail will remain in its Existing Condition on the Del Mar Bluff. This includes associated bluff stabilization projects that have been completed prior to the baseline year of 2016 and post-2016 via a series of comprehensive bluff stabilization projects planned as part of Del Mar Bluffs Stabilization Projects 5 (DMB5), and subsequent Project 6 under consideration.

13-53

Completed projects pre-2016 include: 1) a soil cement buttress and new beach outfall constructed near Mile Post 244.45 (1996); 2) an emergency repair project constructed near the terminus of 8th Street after a failure of the bluff (late 2001); 3) construction of Del Mar Bluffs Stabilization Project 1, which included the addition of surface and subsurface drainage improvements and repair of upper bluff walls; 4) construction of Del Mar Bluffs Stabilization Project 2, which included the installation of Cast-In-Drilled-Holes (CIDH) soldier piles along 1,326 feet of the bluffs in the top priority areas (2007); and 5) construction of Del Mar Bluffs Stabilization Project 3, which included installation of soldier piles at seven additional priority areas along the bluffs that were not completed in previous phases (2012).

Completed/in-construction projects post-2016 include: 1) construction of Del Mar Bluffs Stabilization Project 4 which included urgent repairs to existing drainage systems and lower bluff wood retaining walls and additional upper bluff stabilization measures below 7th Street and lower bluff stabilization measures below Sea Orbit Lane due to bluff failures (2017-2020); 2) emergency bluff repairs below 13th Street and 15th Street (2019); and 3) emergency repairs for a bluff and seawall collapse that occurred in February 2021, under construction.

The next foreseeable project includes Del Mar Bluffs Stabilization Project 5 (DMB5) that is currently in design. As described in the DMB5 Analysis Report (July 2021) (available at [www.delmar.ca/rail](http://www.delmar.ca/rail)), the project is described as a "maintenance of way project, to maintain the existing track and protect it from erosion and seismic events" through various components such as "adding bluff toe protection measures and surface stabilization" (Report page 8). The Report lists consistency with key regional and corridor plans, including the "San Diego Forward: The Regional Plan (SANDAG

**RESPONSE TO COMMENT 13-53**

See response to comment Del Mar 13-52. The project components listed in the comment constitute second-tier projects, and this programmatic EIR does not analyze project-specific land use conflicts. The Draft EIR also does not provide a specific schedule for completion of the second-tier projects. SANDAG will continue coordinating with the City of Del Mar, as well as other local jurisdictions, to determine the prioritization and specific timelines of these second-tier projects, including the bluff stabilization project.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 17 of 27

13-53  
 cont.

2015), the 2016 San Diego regional Transportation Improvement Plan (SANDAG 2016), LOSSAN Corridor wide Strategic Implementation Plan (LOSSAN Corridor Rail Agency 2012), the LOSSAN Program Environmental Impact Report/Environmental Impact Statement (Caltrans and the Federal Railroad Administration 2009), the Infrastructure Development Plan for the LOSSAN Rail Corridor in San Diego County (SANDAG 2013), and the North Coast Corridor Public Works Plan/Transportation and Resources Enhancement Program (NCC PWP/TREP; Caltrans and SANDAG 2016)" (Report page 8). Further, the Report states that "the Proposed Action considers the anticipated bluff retreat for the next 30 to 50 years" (Report page 12).

13-54

As a result of deferring these components post horizon year 2025, the proposed 2021 Regional Plan results in indirect effects that conflict with the City's adopted and certified Local Coastal Program and in particular the Beach Overlay Zone (B-OZ, Del Mar Municipal Code Chapter 30.50) and the Coastal Bluff Overlay Zone (CB-OZ, Del Mar Municipal Code Chapter 30.55). Both overlays are Implementing Ordinances in the City's certified LCP (2001). The B-OZ chapter of the LCP includes a Shoreline Protection Area (SPA) line that begins at the approximate center-line of the railway tracks and covers the area west as specified in B-OZ Exhibit B. Components of the bluff stabilization projects in conflict with the LCP include exposed vertical retaining structures, soil nail reinforced areas with shotcrete facing, and grading within 40 feet of the top edge of a coastal bluff. Further, DMB5 proposes the excavation and removal of an existing coastal bluff berm located west of the track bed and generally below the area of 11<sup>th</sup> Street and 9<sup>th</sup> Street.

Under the certified Del Mar LCP (CB-OZ, Del Mar Municipal Code Section 30.55.080), development on coastal bluffs is regulated under the following provisions (in part):

A. Unless otherwise specified herein, all new or redeveloped principal or accessory structures, including new supporting foundations or supports for existing structures, shall be set back a minimum of 40 feet from the top edge of the coastal bluff as defined in this Chapter. [emphasis added]

C. No grading shall be allowed within 40 feet of the top edge of a coastal bluff. [emphasis added]

D. No grading or construction activities shall be allowed on the face of a coastal bluff unless approved as part of a Shoreline Protection Permit or Setback Seawall Permit issued in accordance with the provisions of this Title and when the

**RESPONSE TO COMMENT 13-54**

See responses to comments Del Mar 13-52 and Del Mar 13-53.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 18 of 27

Planning Commission or City Council, as the authorized review body for the project, makes a finding that the proposed grading has been minimized to the extent feasible to implement the authorized shoreline protection. [emphasis added]

Under the certified Del Mar LCP (B-OZ, DM Section 30.50.060), the construction of a protective structure may be authorized in the SPA area if it meets a list of findings, that include (in part):

C. Will assure stability and structural integrity and neither create nor contribute significantly to erosion, geologic instability, or destruction of the site or surrounding area, nor in any way substantially alter natural landforms along bluffs and cliffs. [emphasis added]

G. Will, if there is a vertical wall element in the proposed protective structure, have the seaward face of the vertical wall located within the Shoreline Protective Area only if there is no other feasible location for effectively protecting a principle structure; there is no feasible, less environmentally damaging alternative; and feasible mitigation measures have been provided to minimize adverse environmental effects; but in no event have the seaward face of the vertical wall more than five feet westward of the Shoreline Protection Area line. [emphasis added]

H. Will, if other than a vertical wall, meet all the conditions of Subsection G above. [emphasis added]

The constructed and planned stabilization components, including exposed vertical retaining structures, soil nail reinforced areas with shotcrete facing, and grading within 40 feet of the top edge of a coastal bluff (including terraced slopes and the excavation and removal of coastal bluff berms west of the track bed) are not consistent with City's LCP and in particular the bolded sections above.

Further, there is a conflict between the timing included in the DMB5 Alternatives Analysis Report of 30-50 years (i.e., 2051 to 2071 from the date of Report preparation) and the DEIR timeframe associated with the Del Mar Tunnel and assumed inland rail realignment from the Del Mar Bluffs (i.e., horizon year 2035) and assumed restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures. The DEIR does not include reference to the DMB5 Alternatives Analysis Report or any other completed or planned Del Mar Bluffs Stabilization Projects, including reports or plans.

13-54  
 cont.

13-55

**RESPONSE TO COMMENT 13-55**

See responses to comments Del Mar 13-52 and Del Mar 13-53. The proposed Plan identifies funding to kick start the environmental, design, and right-of-way phases of the Del Mar Tunnel project by 2025 with construction funding in the 2035 phase, and the inland rail realignment is assumed as part of the tunnel project. Timing for bluffs restoration will be determined as the tunnel and inland rail realignment projects progress. During project-specific analysis of second-tier projects, specific conflicts with reports such as the DMB5 Alternative Analysis Report will be considered.

City of Del Mar Comments  
 DEIR for Draft 2021 Regional Plan  
 October 4, 2021  
 Page 19 of 27

13-55  
 cont. This is important because even though SANDAG considers projects, such as DMB5, to be a maintenance of way project, pertinent DMB5 documents such as the July 2021 Alternatives Analysis Report describes the maintenance project's consistency with key regional and corridor plans, including the "San Diego Forward: The Regional Plan (SANDAG 2015), the 2016 San Diego regional Transportation Improvement Plan (SANDAG 2016), LOSSAN Corridor wide Strategic Implementation Plan (LOSSAN Corridor Rail Agency 2012), the LOSSAN Program Environmental Impact Report/Environmental Impact Statement (Caltrans and the Federal Railroad Administration 2009), the Infrastructure Development Plan for the LOSSAN Rail Corridor in San Diego County (SANDAG 2013), and the North Coast Corridor Public Works Plan/Transportation and Resources Enhancement Program (NCC PWP/TREP; Caltrans and SANDAG 2016)" (Report page 8).

13-56 The impact section for 2035 concludes that "...transportation network improvements would conflict with land use plans, policies, and regulations, including general plans, specific plans, and community plans, adopted for the purpose of avoiding or mitigating an environmental effect, impacts are already evaluated in other sections of this EIR, so these conflicts would not cause new significant impacts. Therefore, this impact (LU-2) in the year 2035 is less than significant."

For the reasons described above, the DEIR does not sufficiently describe the impacts associate with Commuter Rail 398 improvements in/adjacent to the City of Del Mar in other sections of the DEIR.

13-57 **Request:** Based on the concerns expressed above, the City requests that an analysis be provided in the impact section discussing the indirect and direct effects resulting from a deferred Del Mar Tunnel to 2035, inland rail relocation to horizon year 2035 (or 2050), and bluffs restoration including removal of the temporary stabilization measures to horizon year 2035 (or 2050). This includes an analysis of completed and planned bluffs stabilization projects, associated documents therewith, and their inconsistency with the City's certified LCP provisions in the CB-OZ and B-OZ. The City further requests the impact section's conclusion of less than significant be re-evaluated (page 4.11-31).

**22. COMMENT – LAND USE**  
**Page 4.11-31**

13-58 The DEIR states that "it cannot be guaranteed that all planned rail extensions would have alignments and design features that would avoid land use conflicts with adopted plans. Individual transportation network improvements would undergo separate environmental review under CEQA and NEPA, where applicable." The impact section

**RESPONSE TO COMMENT 13-56**

See responses to comments Del Mar 13-52 and Del Mar 13-53.

**RESPONSE TO COMMENT 13-57**

See responses to comments Del Mar 13-52 and Del Mar 13-53. The EIR's conclusion of less than significant for Impact LU-2 need not be re-evaluated because it is based on a programmatic vs. project-specific analysis of land use conflicts.

**RESPONSE TO COMMENT 13-58**

See response to comment Del Mar 13-52.

13-58 cont. does not provide specific reference to the Del Mar Tunnel, the inland rail relocation from the Del Mar Bluffs, or the planned seasonal platform at the Del Mar Fairgrounds.

13-59 **Request:** In reference to the statement that “individual transportation network improvements would undergo separate environmental review under CEQA and NEPA, where applicable,” the City requests that the sentence be amended to include specific references to the Del Mar Tunnel, the inland rail relocation from the Del Mar Bluffs, bluffs restoration including removal of the temporary stabilization measures, and the planned seasonal platform at the Del Mar Fairgrounds.

**23. COMMENT – NOISE**  
**Page 4.13-12, Table 4.13-4**

13-60 The table lists various construction equipment types including auger drill rig, blasting, dozer, dump truck, excavator, front end loader, impact pile driver, jackhammer, mounted impact hammer, rock drill, and vibratory pile driver. It is unclear if all types of equipment associated with the construction of a train tunnel are provided in the list.

13-61 **Request:** The City requests the table be amended, as applicable, to include any other equipment typical of rail tunnel construction (taking into account the size of trains used by COASTER, AMTRAK, and freight rail, including structural improvements, drainage, and emission exhaust) and update the associated analysis within the impact section accordingly.

**24. COMMENT – NOISE**  
**Pages 4.13-39, 4.13-40**

13-62 The DEIR describes continued double-tracking at certain locations on the LOSSAN rail corridor along with increases in COASTER frequencies and the Del Mar Tunnel, but does not reference the inland rail relocation from the Del Mar Bluffs, the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, or the planned seasonal platform at the Del Mar Fairgrounds.

13-63 **Request:** In addition to the City’s prior Noise comment on tunnel construction equipment, the City requests inclusion of the inland rail relocation from the Del Mar Bluffs and planned seasonal platform at the Del Mar Fairgrounds in the impact section and analysis as applicable. Provided that these components would occur near residential areas, until these components are included and sufficient analysis provided, the City is unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.

**RESPONSE TO COMMENT 13-59**

Requested text has been added to page 4.11-31 in the EIR. In addition, see response to comment Del Mar 13-52.

**RESPONSE TO COMMENT 13-60**

Table 4-13-4 includes the typical construction equipment mix that could be used in projects that would occur under the proposed Plan. The table is not meant for project-level analysis and does not include an exhaustive list of construction equipment, as the EIS is a program-level document. The exact mix of construction equipment for the commenter-referenced project would be included in project-level environmental documents.

**RESPONSE TO COMMENT 13-61**

See response to comment Del Mar 13-60. As discussed, the table is not meant to be exhaustive, and it is unknown at this time what type of tunneling equipment will be utilized for the project. Specific analysis will be conducted during project-level analysis.

**RESPONSE TO COMMENT 13-62**

As noted above, the EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. Noise increases associated with projects that would occur under the proposed Plan are discussed under Impact NOI-1 in Section 4.13, *Noise and Vibration*. The discussion is programmatic and outlines some of the projects that would occur during the time horizons referenced in the document. References to future projects in the impact analyses were provided as examples of the types of projects that could occur by those horizon years, and were not intended to be an exhaustive list of all second-tier projects that would occur by that horizon year.

**RESPONSE TO COMMENT 13-63**

See response to comment Del Mar 13-62.

- 13-64 **25. COMMENT – NOISE**  
**Page 4.13-47**
- The DEIR describes continued double-tracking at certain locations on the LOSSAN rail corridor along with increases in COASTER frequencies and the Del Mar Tunnel, but does not reference the inland rail relocation from the Del Mar Bluffs, the restoration of the Del Mar Bluffs, including the removal of installed temporary bluff stabilization measures, or the planned seasonal platform at the Del Mar Fairgrounds.
- 13-65 **Request:** In addition to the City’s prior Noise comment on tunnel construction equipment, the City requests inclusion of the inland rail relocation from the Del Mar Bluffs and planned seasonal platform at the Del Mar Fairgrounds in the impact section and analysis as applicable. Provided that these components would occur near residential areas, until these components are included and sufficient analysis provided, the City is unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.
- 13-66 **26. COMMENT – POPULATION AND HOUSING**  
**Page 4.14-8**
- The Regulatory Setting section describes four State laws, regulations, plans, and policies including State Housing Element Law (generally), California Relocation Assistance Act, Assembly Bill 1730 of 2019, and the Sustainable Communities and Climate Protection Act of 2008 (Senate Bill 375). The DEIR does not provide a summary of applicable State housing laws where additional density and streamlined processing is available for development projects within a Transit Priority Area and/or within a distance (e.g., one-half mile) of points such as a “Major Transit Stop” or a “High Quality Transit Corridor.”
- 13-67 **Request:** The City requests relevant statutes be provided with summaries that relate to development within areas such as a Transit Priority Area, Major Transit Stop, High Quality Transit Corridor, etc. and update the associated impact sections as applicable. This will help cities, such as the City of Del Mar, that currently only has Local Bus service understand the potential impacts associated with development and density once Next Gen Rapid bus service is introduced at the 2035 horizon year.

**RESPONSE TO COMMENT 13-64**

See response to comment Del Mar 13-62.

**RESPONSE TO COMMENT 13-65**

See response to comment Del Mar 13-62.

**RESPONSE TO COMMENT 13-66**

Additional recently adopted housing legislation related to streamlining approval for high density housing or housing within Transit Priority Areas has been incorporated into the Regulatory Setting in Section 4.14, *Population and Housing*.

**RESPONSE TO COMMENT 13-67**

See response to comment Del Mar 13-67. In addition, as noted above, the EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. The Next Gen Rapid bus service would be a second-tier project, and analysis of direct and indirect impacts associated with these second-tier projects would occur during project-specific environmental review.

**27. COMMENT – POPULATION AND HOUSING**  
**Page 4.14-14**

13-68 The DEIR in Chapter 2 Project Description (pages 2-55, 2-56, 2-57 – Figures 2-32, 2-33, 2-34) indicates that in 2025 (similar to the baseline year of 2016), Commuter Rail and Local Bus are designated in the City. However, in horizon year 2035, Next Gen Rapid Bus is introduced east-west on Del Mar Heights Road and north-south on Camino del Mar. The impact section for 2035 does not reference the addition of Next Gen Rapid Bus service in the City or the associated direct effects (e.g., Next Gen Rapid Bus results in new types of transit stops and corridors in the City, resulting in changes to development and density, and CEQA streamlining per State statute) or indirect effects (e.g., the extension of bus service types and commuter frequencies).

13-69 **Request:** The City requests the introduction of Next Gen Rapid Bus service in 2035 be discussed and potential impacts on population growth and housing per State statute related to development in areas such as Transit Priority Areas, Major Transit Stops, High Quality Transit Corridors, etc. As the 2021 Regional Plan had not been adopted prior to the State's 6<sup>th</sup> Housing Cycle deadline of April 5, 2021, the City's 6<sup>th</sup> Cycle Housing Element and associated 6<sup>th</sup> Cycle Housing Element EIR did not consider the addition of Next Gen Rapid bus service through the City, nor accounted for the potential land use and development/density changes, and CEQA streamlining that could result due to the addition of this type of service in the City. Until this is included and sufficiently analyzed, the City is unable to provide further comment on the impacts, conclusions, and/or mitigation measures at this time.

**28. COMMENT – WILDFIRE**  
**Page 4.19-10, Table 4.19-2**

13-70 The table does not include reference to the City's amended Community (General) Plan in 2019 to its Safety Element. In particular, wildfire is referenced in the current version of the Community (General) Plan (reference the online version at [https://library.municode.com/ca/del\\_mar/codes/community\\_plan?nodeId=THCOPLD-EMACA-PLAN-ENVIRONMENTAL-MANAGEMENT-SPECIFIC-RECOMMENDATIONSORPANO34-42](https://library.municode.com/ca/del_mar/codes/community_plan?nodeId=THCOPLD-EMACA-PLAN-ENVIRONMENTAL-MANAGEMENT-SPECIFIC-RECOMMENDATIONSORPANO34-42)). The amended Community (General) Plan now reads, in part, "The safety element is intended to protect the public health and safety, minimize the risk of hazards, and address local needs for climate change adaptation and resilience. Potential hazards in Del Mar include the threat of coastal storms, flooding, bluff erosion, beach erosion, sea level rise, dam failure, earthquake, landslide, tsunami, wildfire, structure fire, and drought."

**RESPONSE TO COMMENT 13-68**

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan would be subject to project-specific environmental review. The Next Gen Rapid Bus service is considered a second-tier project, and the specifications of these projects such as the timing, location, and size would be defined and specific impacts related to project characteristics would be identified during project-level analysis.

**RESPONSE TO COMMENT 13-69**

See response to comment Del Mar 13-68.

**RESPONSE TO COMMENT 13-70**

Language has been added to Table 4.19-2 to clarify that the City of Del Mar Safety Element was updated in 2019. Wildfire is now listed as a "potential hazard" in Table 4.19-2.

City of Del Mar Comments  
DEIR for Draft 2021 Regional Plan  
October 4, 2021  
Page 23 of 27

13-71 | **Request:** The City requests the table be updated to reflect the 2019 Safety Element amendment date and remove the statement that "Wildfire is not mentioned in the Safety Element."

13-72 | **29.COMMENT – ALTERNATIVES**  
**Page 6-2**

This is related to the City's prior comment made in Land Use (pages 4.11-30, 4.11-31).

13-73 | **Request 1:** The City requests that an Alternative be included in the DEIR that analyzes the indirect and direct impacts associated with a 2025 horizon year for the Del Mar Tunnel, inland rail relocation from the Del Mar Bluffs, and bluffs restoration including removal of the temporary stabilization.

13-74 | **Request 2:** The City requests that an Alternative be included in the DEIR (or joined with the Alternative request above) that analyzes the direct and indirect impacts associated with a even further inland realigned rail corridor for passenger and freight rail following the planned southerly alignments for High Speed Rail generally near SR-52 or SR-163 and I-15, and then connects with freight rail corridor near SR-78 (shown in red outlines below).

**RESPONSE TO COMMENT 13-71**

The statement that "Wildfire is not mentioned in the Safety Element" was removed from Table 4.19-2.

**RESPONSE TO COMMENT 13-72**

This is an introductory comment for the following comments. No response is required.

**RESPONSE TO COMMENT 13-73**

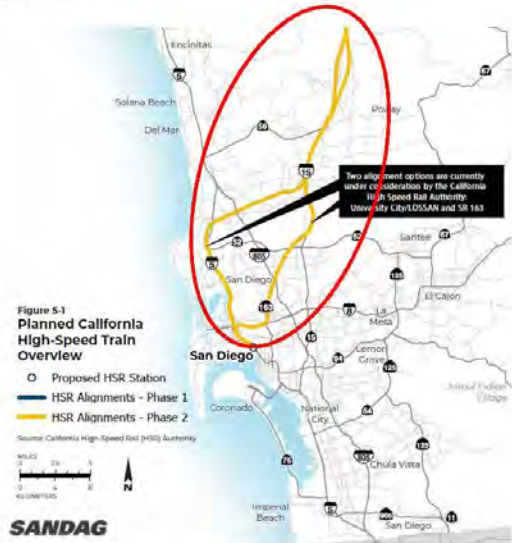

See Master Response 1 regarding the range of alternatives analyzed in the EIR. In addition, the comment requests analysis of an alternative to a specific project, not an alternative to the proposed Plan. Such a project would be a second-tier project and would have project-specific alternatives analysis as part of its environmental review. The proposed project-specific alternative is therefore not an appropriate alternative for this first-tier Program EIR.

**RESPONSE TO COMMENT 13-74**

See Master Response 1 regarding the range of alternatives analyzed in the EIR, and response to comment Del Mar 13-73.

City of Del Mar Comments  
DEIR for Draft 2021 Regional Plan

Page 24 of 27

13-74

City of Del Mar Comments  
DEIR for Draft 2021 Regional Plan  
October 4, 2021  
Page 25 of 27

13-74

**30. COMMENT – ALTERNATIVES**  
**Page 6-12**

13-75

In a 2019 Notice of Preparation (NOP) Scoping letter, the Coastal Commission requested an alternative be provided referred to as the “Coastal Protection Alternative” to consider the effects of sea level rise and minimize the need for shoreline armoring with the relocation of the rail corridor along the Del Mar bluffs. The letter also requests that the expected life of the rail corridor along the Del Mar bluffs and other existing infrastructure be analyzed given sea level rise and other environmental impacts. This alternative was rejected on the basis that is an individual project included in the proposed Plan rather than an alternative for the proposed Plan as a whole, and that the lead agency need not discuss alternatives to each particular component of a project.

13-76

**Request:** Based on the City’s prior comment made in Land Use (page 4.11-30, 4.11-31), the City requests SANDAG reconsider a “Coastal Protection Alternative” on page 6-12 and not reject it from further consideration. As part of the reconsideration, the City’s two requests noted above should be included as part of an updated Coastal Protection Alternative. While the City recognizes the reasons stated on page 6-12 as to why a Coastal Protection Alternative was rejected, the planned improvements to Commuter Rail 398 are programmatic components of the draft 2021 Regional Plan and discussed as part of the Transit Leap components in Chapter 2, Project Description (page 2-53) and Phased Transit Leap Network Improvements in Chapter 2, Project Description (page 2-58). The City recognizes that future implementation of the Commuter Rail 398 improvements at a project-level will require further environmental analysis per CEQA and NEPA at the project-level. However, the City disagrees with the reasons for rejecting the Coastal Protection Alternative on the basis that it is an individual project included in the proposed Plan rather than an alternative for the proposed Plan as a whole.

13-77

As noted throughout the City’s comments, sufficient analysis at a programmatic level of the planned Commuter Rail 398 improvements may find that impacts to the coastal region may be reduced via an alternative alignment outside of the coastal corridor. However, unless this analysis is completed at a programmatic level, the proposed Plan’s alignment in horizon years 2025, 2035, and 2050 for Commuter Rail 398 (including associated freight rail) will continue to be along the coastal corridor. The lead agency can include this alternative for further study in the DEIR and should include it given the extent of feedback and public interest on this critical programmatic component of SANDAG’s Draft 2021 Regional Plan.

**RESPONSE TO COMMENT 13-75**

See Master Response 1 regarding the range of alternatives analyzed in the EIR. As noted in the comment, the Coastal Protection Alternative was rejected from further consideration because it is a “second-tier” project-specific alternative. An EIR is not required to consider alternatives to a project component, and instead focuses on alternatives to the project (in this case the proposed Plan) as a whole. *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal. App. 4<sup>th</sup> 957,993.

**RESPONSE TO COMMENT 13-76**

See response to comment Del Mar 13-75.

**RESPONSE TO COMMENT 13-77**

See response to comment Del Mar 13-75.

City of Del Mar Comments  
DEIR for Draft 2021 Regional Plan  
October 4, 2021  
Page 27 of 27

13-78 | The City looks forward to ongoing coordination in SANDAG's development of its draft 2021 Regional Plan and requests Responses to Comments be provided via email to the City staff emails noted. Should you have any questions, please contact the City at (858) 755-9313.

Sincerely,

Terry Gaasterland  
Mayor

**To:** RegionalPlanEIR <[RegionalPlanEIR@sandag.org](mailto:RegionalPlanEIR@sandag.org)>  
**Subject:** Request for Comments on the DEIR Regional Plan

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

Kirsten Uchitel,  
I am sending you the Descanso Community Planning Group comments on the Draft EIR for SANDAG 2021 Regional Plan, attached.  
I am also sending you a copy USPS.  
As residents of the unincorporated community of Descanso, we feel we have not received any public outreach on this process, nor has any community in the East County Rural areas.  
The comment letter will outline our community's concerns of inequity, lack of representation, lack of services and being "taxed" without representation.  
I look forward to more inclusion of the unincorporated areas of the County in the next iteration of the DEIR and revision of the Regional Plan.  
Kerry Forrest,  
Chair Descanso Community Planning Group

14-1

**RESPONSE TO COMMENT 14-1**

SANDAG appreciates the Descanso Community Planning Group's (DCPG) feedback on the proposed Plan and your participation in the environmental review process. Please refer to subsequent responses to your comments below for detailed responses regarding your concerns.

DESCANSO COMMUNITY PLANNING GROUP  
 Post Office Box 38, Descanso CA 91916-0038

October 4, 2021

Attn: Kirsten Uchitel Associate Planner,  
 SANDAG, 401 B Street, Suite 800,  
 San Diego CA, 92101  
 Sent via email to: [RegionalPlanEIR@sandag.org](mailto:RegionalPlanEIR@sandag.org)

**REQUEST FOR COMMENTS ON THE DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE 2021 REGIONAL PLAN FOR THE SAN DIEGO ASSOCIATION OF GOVERNMENTS (SANDAG)**

Dear MS Uchitel,

14-2 I am writing this comment letter in representation of the Descanso Community Planning Group. Descanso is a rural country town located in the East County of San Diego County. The Regional Plan location includes all of San Diego County, not just the 18 cities. The unincorporated area of the county is not identified as significant in this regional plan.

The rural residents of the unincorporated areas of the county, those of us outside of Mobility Hub Network (table 2-5), represent more by population (1,813,718) than those within the Mobility Hub Network (1,657,130). The San Diego Forward- The 2021 Regional Plan does nothing to benefit those of us who reside outside of the Mobility Hub Network (Network) and yet we will be expected to financially contribute to it in a significant cost.

OUTREACH FOR PUBLIC COMMENT

14-3 "1.5.3 COMMENTS ON THE DRAFT EIR. *The Draft EIR has been distributed to the agencies, organizations, and individuals that provided written comments on the NOP, the SANDAG Board of Directors, SANDAG member agencies, public libraries throughout the region, and other interested parties and stakeholders.*" The local county libraries in Alpine, Descanso and Pine Valley do not have copies of the EIR. There may be more rural county libraries which do not have the EIR for review. The rural areas of

**RESPONSE TO COMMENT 14-2**

The comment raises concerns about the proposed Plan not benefiting those who reside outside of the Mobility Hub Network. The comment does not raise any concerns about the adequacy of the EIR. No further response is required.

**RESPONSE TO COMMENT 14-3**

SANDAG initiated the EIR scoping process on November 14, 2016, through the circulation of a NOP. Receipt of the NOP by the State Clearinghouse at the California Office of Planning and Research on November 14, 2016, initiated a 60-day comment period that ended January 13, 2017. The NOP provided formal notification to all federal, State, and local agencies involved with funding, and to other interested organizations and members of the public, that an EIR was to be prepared for the proposed Plan. The NOP was intended to encourage interagency communication concerning the proposed Plan and provide sufficient background information so that agencies, organizations, and individuals could respond to SANDAG with specific comments and questions on the scope and content of this EIR. Appendix A summarizes the issues raised in the NOP comments and identifies the EIR section(s) that address that issue or provides another response to the issue raised as appropriate. The NOP is provided in full in Appendix A-1. The written comments are provided in full in Appendix A-2.

Consistent with CEQA (PRC Section 21083.9), SANDAG noticed and held a public scoping meeting on December 8, 2016, at SANDAG's office at 401 B Street, San Diego, CA 92101. The purpose was to receive perspective and input from agencies, organizations, and individuals on the scope and content of the environmental information to be addressed in the EIR.

To support the development of the proposed Plan, SANDAG implemented a comprehensive public outreach and involvement program consistent with State and federal requirements. Early in the planning process, SANDAG developed a Public Involvement Plan (PIP) to guide the public outreach program, which was updated in mid-2019. The PIP identifies public engagement techniques to involve the public and collect input for the proposed Plan, including public workshops, social media, visualizations, and other means. It describes how to connect with hard to reach communities such as tribal nations and low-

income and minority populations. A detailed description of the PIP can be found in Appendix G of the proposed Plan.

The Draft EIR for the proposed Plan was released to the public on August 27, 2021, and was available for a 45-day public review period, as required by CEQA. SANDAG published a Notice of Availability (NOA) for the Draft EIR in local newspapers on August 27, 2021, and mailed the NOA to an extensive distribution list. SANDAG also filed a Notice of Completion (NOC) with the State Clearinghouse to indicate the availability of the Draft EIR for public review and comment on August 27, 2021. The Draft EIR was distributed to the agencies, organizations, and individuals that provided written comments on the NOP, the SANDAG Board of Directors, SANDAG member agencies, and other interested parties and stakeholders. Agencies, organizations, and individuals were invited to provide written comments on the Draft EIR during the public review period from August 27 to October 11, 2021.

The Draft EIR and all appendices were available for review online at [www.sdforward.com](http://www.sdforward.com); at SANDAG offices located at 401 B Street, Suite 800, San Diego, California 92101; and at the San Diego Central Library located at 330 Park Boulevard, San Diego, California 92101. The Central Library will facilitate inter-library transfers upon request by a member of the public in order to provide access at local libraries. On a case-by-case basis, the San Diego Central Library can also digitize documents and transfer them to other libraries. No such requests were made of the Central Library with respect to the Draft EIR, nor were any requests made of SANDAG with respect to providing access to the Draft EIR during the Public Comment period.

There will be a further opportunity for public participation on December 10, 2021, at the SANDAG Board of Directors meeting discussing adoption of the proposed Plan and certification of the EIR.

14-3 cont. the county are stakeholders but have not been contacted in the SANDAG outreach much less had the opportunity to review the draft EIR on the Regional Plan. Due to the lack of broad band internet and the lack of outreach by SANDAG to their communities many of those impacted by this action are being deprived of their right to participate in this process that may impact them significantly. **This review process should be delayed until the rest of the County residents have been included in the review and comment on the DEIR Regional Plan.**

PLANNING FOR THE UNINCORPORATED AREAS

14-4 "Public Services and Utilities San Diego Forward: The 2021 Regional Plan Page 4.15-19 Program Environmental Impact Report Broadband refers to a high-speed internet connection that can transport multiple signals and traffic types. According to the Federal Communications Commission (FCC) (2017), 100 percent of residents in the San Diego region currently have access to broadband via at least one provider." There is an opportunity here to develop investment strategies for working from home if broad band internet at a reasonable cost was made available to rural communities. Despite what has been reported Broad Band internet is NOT accessible to many of us in the county. Satellite and Cellular options can be very costly and unreliable, not efficient enough for home school study or work needs. This has not been identified as a strategy to reduce Vehicle Miles Traveled (VMT) for residents living outside the "Network" and should be considered and implemented within the Regional Plan.

14-5 How will the Regional Plan provide transportation options for those residents outside of the "Network"? The unincorporated East and North County communities represent a significant population with higher -than- average VMT within the County. Social Justice/Equity concerns regarding the Indian Reservations in the east County should be considered. Will the VMT fees be applied to tribal nations and the tribal members who may travel off tribal lands? Sequan, Viejas, Barona, Campo, La Posta, Jamul and Ewiiiaapaayp nations are in the rural areas of East County.

14-6 Many rural residents are of lower income and of Hispanic decent, how will this plan invest equitably in public transportation? Walking, riding a bike or using flexible fleets will not work in these areas. A possibility is frequent bus rapid transit using pickup points at the park- and -ride lots located on the Interstates such as I-8 and the State Highway 94 to the nearest mobility hub for further transport options. A rural transit line such as a train or bus service traveling from the ends of the county to the Mobility Hubs should be part of the plan.

ROADS/TRAFFIC

14-7 SANDAG should do more to identify and invest in routes for the County's eastern and northern rural regions that could be essential in the event of a natural disaster, earthquake, flood, or wildfire. Road improvements such as curve straightening and widening would benefit the drivers as well as recreational bike riders on roads like Highway 79 and Highway 94. Evacuation routes for disasters should be identified, developed, and marked in a manner like the Tsunami routes recently put into place

**RESPONSE TO COMMENT 14-4**

The Plan includes an investment in the backbone fiber infrastructure needed to support the transportation network; however, SANDAG is also developing a Regional Digital Equity Strategy & Action Plan to support the expansion of broadband county-wide. The Strategy & Action Plan will define strategies for expanding broadband and internet connectivity in the San Diego region to support quality of life, transportation, and equity.

**RESPONSE TO COMMENT 14-5**

The proposed Plan includes Mobility Hubs for East County which can facilitate creating additional economic opportunities within that hub. Mobility Hubs are communities with a high concentration of people, destinations, and travel choices. They offer on-demand travel options and supporting infrastructure to enhance connections to high-quality Transit Leap services while helping people make short trips around the community on Flexible Fleets. Mobility Hubs will be implemented in close coordination with local jurisdictions to align with the unique needs of each community.

SANDAG is also developing a Flexible Fleet Implementation Strategic Plan to identify near-term opportunities for Flexible Fleet pilots that support mobility, equity, and sustainability goals.

The Intra-regional Tribal Transportation Strategy was used to inform many of the improvements identified for the rural corridors. These examples have been added to the description of rural corridor improvements in Appendix A of the proposed Plan in the section titled *Rural Corridors* and Table A.12: Rural Corridors.

**RESPONSE TO COMMENT 14-6**

The Plan includes investments in Flexible Fleets, expansion of broadband, investment in zero emission vehicles, and improvements on rural corridors. These benefit rural communities with improved access to mobility options via technology, increased safety on hazardous roads particularly during emergency situations, and advanced deployment of zero emission vehicles.

**RESPONSE TO COMMENT 14-7**

The Comprehensive Multimodal Corridor Plans identify ways to improve roadway safety, enhance the urban-rural transportation interface (with special consideration given to limiting impacts on

surrounding environmental habitats and wildlife), engage with tribal nations, and create greater trip reliability and efficiency throughout the study area while supporting climate action initiatives. The suite of solutions will include active transportation, clean transportation, transit, resilience and environment, right-of-way and utilities, equity, and evacuation considerations.

14-7  
cont. within the county. The intersections of Highways to feeder roads should be evaluated for improvements and safety. There are more and more visitors to the rural areas of the county, and this has adversely impacted the safety of these intersections.

FUNDING AND FINANCING

14-8 The Regional Plan indicates that user fees would help build a transportation system that provides residents an alternative to driving in their vehicle. This plan must address how the proposed road use charges will be developed, implemented, and applied to ensure that this funding strategy will not disproportionately burden unincorporated communities, which have longer a commute, less access to alternative transportation options, don't use electric cars because SDGE cuts power off during potential high wind and wildfire events and have not yet had a voice in expressing their comments to this process (see outreach).

14-9 County VMT fees on top of State VMT fees on top of Federal VMT fees on top of existing gasoline taxes would unfairly penalize the driver of a gas-powered vehicle. Owners of gas-powered vehicles are frequently the low-income residents who live in the rural areas of the county where housing costs are less. This is not equitable for 50% or more residents living in the County (table 2-5). Those that have the least are being asked to sacrifice the most. You are creating a class of people who live in the rural areas of the county without alternative transportation options, a voice or opportunity but will be penalized by the VMT fees.

It is unclear what proportion of investment would go toward addressing mobility between unincorporated communities and infrastructure investment that would provide linkages between rural communities and the "Network".

14-10 SANDAG must address the equitable distribution of mobility benefits of the 2021 Regional Plan and the costs associated with it. The residents of the unincorporated areas of the county should not have to pay more than the benefits they may receive.

14-11 I look forward to the development of a more equitable draft Regional Plan which recognizes and includes the needs of residents in the unincorporated areas of San Diego County. The County does not end at El Cajon, as shown on your maps in the DEIR, there is much more of it you are not considering in your draft Regional Plan.

Kerry Forrest

Chair, Descanso Community Planning Group

cc: Supervisor Joel Anderson: Board of Supervisors, District 2

Senator Brian Jones, 38<sup>th</sup> Senate District, CA

**RESPONSE TO COMMENT 14-8**

SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and GHG emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.

The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as rural residents, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system. For example, drivers of fuel-powered vehicles in the state of Oregon receive a credit for fuel tax and remote emissions testing through their road usage charge program called OReGO.

**RESPONSE TO COMMENT 14-9**

The proposed Plan includes a variety of projects and programs to improve the transportation system for all modes of transportation in the San Diego region over 30 years. This includes investments to improve roads and freeways as well as public transit and active transportation. Gas tax revenues have been declining as vehicles become more fuel efficient and more electric vehicles are on the roads. A road usage charge would be a new funding mechanism to replace the gas tax. Road usage charges are being considered by transportation agencies across the country.

**RESPONSE TO COMMENT 14-10**

Investments in the proposed Plan for unincorporated communities include improvements to local bus service (increased frequencies and span of service) and Flexible Fleet services. Attachment 1 to Appendix A of the proposed Plan provides the frequencies and spans of service

proposed for Transit Leap, including local bus routes. In addition, the investments in the mobility hubs also serve residents of the unincorporated area as many residents live near a mobility hub and will be able to access the transit system within a reasonable amount of time on a Flexible Fleet service, then be able to make use of the Rapid bus, light rail, or commuter rail systems.

SANDAG looks forward to coordinating with the County on many areas of implementation for the proposed Plan including the Flexible Fleet Implementation Strategic Plan, Active Transportation Plan, Comprehensive Multimodal Corridor Plans, and advanced transit planning. All of these efforts provide opportunities for refinement of the proposed Plan concepts at a local level.

The proposed Plan puts in place a regional framework for a reimagined transportation system. The plans and studies identified as implementation actions in Appendix B of the proposed Plan will provide opportunities for SANDAG to work closely with the County to apply the 5 Big Moves concepts to the unincorporated areas and improve mobility options and safety.

#### **RESPONSE TO COMMENT 14-11**

The proposed Plan considers the current and future needs of the whole region, including unincorporated communities. The reimagined transportation system offers benefits that extend through the region as residents and visitors travel outside their communities for work, recreation, school, entertainment, and accessing basic needs. The investments in Next OS, Flexible Fleets, Mobility Hubs, and other programs are presented as regional investments, and SANDAG intends to work collaboratively with each jurisdiction to implement the proposed Plan and customize mobility solutions for the unique needs of each community.

**COMMENT LETTER 15: ENDANGERED HABITATS LEAGUE**

Comment Letter 15

**Cc:** Michael Beck  
**Subject:** Draft EIR for San Diego Forward: The 2021 Regional Plan (RTP/SCS)

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

October 11, 2021

Kirsten Uchitel, Associate Planner  
 San Diego Association of Governments  
 401 B Street  
 San Diego, CA 92101

**RE: Draft EIR for San Diego Forward: The 2021 Regional Plan (RTP/SCS)**

Dear Ms Uchitel:

15-1 Endangered Habitats League (EHL) is supportive of the 2021 RTP/SCS and its forward-looking transportation initiatives and housing allocations. We wish to comment on biological impacts. For your reference, EHL is a Southern California conservation group dedicated ecosystem protection and sustainable land use.

The EIR acknowledges significant and unavoidable impacts to biological resources, including to wetlands, sensitive species, and movement corridors/wildlife connectivity. There will also be significant impacts to greenhouse gas emissions and climate change, albeit less than a trend scenario.

15-2 For biological impacts, all feasible mitigation should be undertaken, and should take the form of *advanced, programmatic mitigation*. Such mitigation is comprehensive rather than project-by-project. A good model is the Orange County Transportation Authority's Measure M2 program for its Freeway Projects, in which a fraction of revenues were set aside to fund the mitigation. Because the San Diego region has existing and planned multiple species habitat plans (MSCP, MHCP, North County MSCP, etc.) establishment of a regional funding source for their acquisition and management – as called for in the MSCP – is a logical direction for the advanced, programmatic mitigation.

Please let me know of questions.

Yours truly,  
 Dan Silver

Dan Silver, Executive Director  
 Endangered Habitats League  
 8424 Santa Monica Blvd., Suite A 592 Los  
 Angeles, CA 90069-4267

213-804-2750  
[dsilver1a@me.com](mailto:dsilver1a@me.com)  
<https://ehleague.org>

**RESPONSE TO COMMENT 15-1**

Thank you for the Endangered Habitat League’s participation in the environmental review process. Further elaboration regarding your organization’s comments is addressed below.

**RESPONSE TO COMMENT 15-2**

This comment states that the Draft EIR should include “advanced, programmatic mitigation” of biological impacts, specifically, that funds should be set aside for the acquisition and management of habitat plans. As an initial matter, the EIR found that the proposed Plan has no significant impacts relating to conflicts with the provisions of adopted HCPs, NCCPs, or other conservation plans, or any local policies or ordinances protecting biological resources.

To meet the region’s habitat conservation goals, the proposed Plan identifies approximately \$3 billion for habitat-related efforts. This includes \$2,087 million for an enhanced habitat conservation, management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan), and \$300 to \$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan). As identified in Appendix B of the proposed Plan, SANDAG will continue to monitor the implementation of the Plan on a four-year cycle and make the data accessible to the public. Please refer to Master Response 1 for additional discussion regarding including a regional habitat conservation fund.

**COMMENT LETTER 16: FRIENDS OF ROSE CREEK**

**Friends of Rose Creek** \*  
 "Connecting Our Communities"  
 4629 Cass Street #188  
 San Diego CA 92109

Comment Letter 16

October 11, 2021

*2021 via email transmission to Kirsten.Uchitel@sandag.org*

Kirsten Uchitel, Associate Planner  
 SANDAG  
 401 B Street, Suite 800  
 San Diego, CA 92101  
 Subject: Draft EIR for San Diego Forward: The 2021 Regional Plan (RTP/SCS)

Dear Ms. Uchitel:

16-1 Thank you for the opportunity to comment on the Regional Plan. The Friends of Rose Creek cares for, enhances, and advocates for the protection of Rose Creek and the entire Rose Creek Watershed, which provides critical park services to a diverse community of workers, military personal and their families, as well as bird watchers and bicyclists from around the county. Our vision is for lower Rose Creek to be an open space park providing recreational and learning opportunities and a clean, healthy, aesthetically pleasing environment for residents, visitors, businesses, and native plants and animals.

16-2 We would like to request removal of the proposal to add travel lanes and carpool lane connectors to Highway 52 between I-5 and I-805. This critical stretch of Marian Bear Natural Park is part of the City of San Diego's MSCP program and is already negatively impacted by the existing highway and connectors. Furthermore, the Mid-Coast Trolley extension damaged the western portion of the critical habitat corridor between MCAS Miramar, Rose Canyon Open Space Park and the in-the-works planning for restored wetlands at the mouth of Rose Creek.

16-3 The EIR acknowledges potentially significant and unavoidable impacts to biological resources, including to wetlands, sensitive species, and movement corridors/wildlife connectivity. Pages 4.4-61 to 79 describe the substantial adverse effects on riparian habitat, wetlands and other sensitive natural habitats, their potential significance, and possible mitigation for unavoidable impacts. Pages 4.4-79 to 95 describe the proposed Plan's anticipated impacts to sensitive and rare, threatened and endangered species, their potential significance, and possible mitigation for unavoidable impacts. Pages 4.4-95 to 106 present comparable descriptions of the anticipated impacts to corridors and linkages that are essential to the continued survival of wildlife (and plants), their potential significance, and possible mitigation for unavoidable impacts.

**RESPONSE TO COMMENT 16-1**

Thank you for the Friends of Rose Creek's participation in the environmental review process; further elaboration regarding your organization's comments will be addressed in subsequent responses below.

**RESPONSE TO COMMENT 16-2**

This comment relates to the proposed Plan, and not the analysis in the Draft EIR. Many of the complete corridor projects in the proposed Plan utilize existing right-of-way and, in many cases, existing roadway shoulders without encroaching into any additional land. This will greatly reduce environmental impacts, speed project delivery, and reduce costs. Where this is not an option additional project-specific outreach and engagement will be conducted with affected residents and stakeholders. This process aims to develop projects with minimal impacts.

**RESPONSE TO COMMENT 16-3**

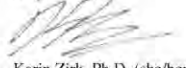

This comment accurately recites content of the Draft EIR. As identified in Section 4.4 of the EIR, implementation of mitigation measures would reduce impacts related to biological resources. However, there is no assurance that mitigation measures would be implemented for all projects or be equally effective due to the wide variety of circumstances, complexity of some sites, complexity of impacts on those sites, lack of available mitigation sites, shortage of acreage at mitigation banks, mitigation complexity and cost, lack of long-term management and monitoring, and lack of enforcement. Instances may occur in which impacts are not reduced to less-than-significant levels. Therefore, these impacts have been identified as significant and unavoidable.

16-4 The Friends of Rose Creek are strongly opposed to the loss of even one acre of biological resources, wetlands, or wildlife corridors. Plans like the Regional Plan take away habitat and nature from the communities where people are desperate to get out in nature and move them to the east and north east portions of the county. This then increases VMT as people with means drive to nature instead of being able to walk or bike to hiking trails. People without vehicles are then shut out from access to nature and this exasperates the social injustices in the county and leaves communities of concern without access to nature.

16-5 We reject the argument that staying within the Right-of-Way avoids impacts to biologic resources as these areas are often critically important habitats. Hiking five feet from a highway is not an enjoyable experience. We need more distance between natural areas and highways not less. We need more trees and shrubs not less. What we need is less concrete!

16-6 We need real solutions to address climate change and that includes insure we have nature in urban areas that serves as cooling places from heat islands, can absorb CO2, and contribute to our quality of life.

Respectfully,

Karin Zirk, Ph.D. (she/her)  
 Executive Director

**RESPONSE TO COMMENT 16-4**

This comment relates to the proposed Plan, and not the analysis in the Draft EIR.

See response to comment FORC 16-3.

In addition, many of the complete corridor projects in the proposed Plan utilize existing right-of-way and, in many cases, existing roadway shoulders without encroaching into any additional land. This will greatly reduce environmental impacts, speed project delivery, and reduce costs. Where this is not an option additional project-specific outreach and engagement will be conducted with affected residents and stakeholders. This process aims to develop projects with minimal impacts.

The conservation of native species and their habitat is a key component of SANDAG's SCS. The land use pattern of the proposed Plan envisions greater compact development in areas served by high frequency, efficient transit. The result is less urban sprawl and fewer impacts on native habitat and species. Appendix AA, *Regional Habitat Conservation Vision of the Regional Plan*, describes the region's efforts to develop and implement a system of open space for conservation of San Diego's unique biodiversity.

**RESPONSE TO COMMENT 16-5**

The Draft EIR does not find that transportation projects within existing rights-of-way categorically avoid impacts on biological or recreational resources. Both Sections 4.4 and 4.15 analyze impacts of the proposed Plan's transportation projects, projects within *and* outside existing rights-of-way.

As discussed in prior responses, where impacts on biological resources cannot be avoided, mitigation has been identified to avoid and reduce these impacts for the future construction of transportation and land use projects. Through the implementation of the proposed Plan, SANDAG will continue to support habitat conservation with the proposed establishment of the \$565 million Nature-Based Climate Solutions Program.

**RESPONSE TO COMMENT 16-6**

SANDAG acknowledges that more work needs to be done in this area and that various climate action plans developed for the region, along with federal and State agency initiatives, are being incorporated as

SANDAG's comprehensive strategies for addressing climate change in this and future regional plans.

**COMMENT LETTER 17: FRIENDS OF ROSE CANYON**

Comment Letter 17

October 11, 2021

Kirsten Uchitel, Associate Planner  
 SANDAG  
 401 B Street  
 San Diego, CA 92101

Submitted via email: [Kirsten.Uchitel@sandag.org](mailto:Kirsten.Uchitel@sandag.org)

Subject: Comments on the Draft EIR for San Diego Forward: The 2021 Regional Plan

Attachment: As an additional comment on the Draft EIR, we are resubmitting our Aug. 6, 2021 comments on the Draft Regional Plan about corrections needed to the San Diego Coastal Rail Trail project. These corrections were not incorporated in the Draft EIR, so we are submitting them again.

Dear Ms, Uchitel:

Friends of Rose Canyon (FRC) is a 501(c)(3) non-profit organization dedicated to the protection, preservation and restoration of Rose Canyon and the Rose Creek Watershed. The Rose Creek watershed begins east of I-15, crosses MCAS Miramar in two creeks (Rose Creek and San Clemente Creek, with Rose Creek flowing under I-805 and through Rose Canyon and San Clemente Creek flowing under the SR 52/I805 interchange and through San Clemente Canyon (also known as Marian Bear Park). San Clemente Creek joins Rose Creek at the SR-52/I-5 intersection. Rose Creek flows southward and is the main freshwater tributary of Mission Bay.

Much of the City-owned land in Rose Canyon is core MSCP habitat. Most of the City-owned land in San Clemente Canyon is part of Marian Bear Memorial Park and is core MSCP land.

FRC also works to protect habitat in areas near the Rose Creek watershed, including habitat adjacent to Carroll Canyon Creek, both east and west of the riparian corridor under I-805 that continues through Sorrento Valley to Penasquitos Lagoon.

**1. We concur with the following comments in the DEIR Comment Letter submitted by SWIA:**

- We strongly recommend the Plan be modified to reduce the number of managed lanes, initiate roadway pricing immediately, and increase transit options right away.

**RESPONSE TO COMMENT 17-1**

Thank you for your participation in the environmental review process and for the detailed comments for SANDAG’s consideration. For comments related to the San Diego Coastal Rail Trail Project, please refer to Appendix P.2 under Comment ID #1126. For other comments included in this letter, please refer to detailed responses below.

**RESPONSE TO COMMENT 17-2**

This comment is related the proposed Plan, not the analysis within the Draft EIR.

The proposed Plan is focused on creating more mobility options for all people in the San Diego region through a fast, reliable, and fair public transportation system and micromobility options including e-bikes and scooters, rideshare, and microtransit shuttles. The proposed Plan also proposes a network of Managed Lanes using existing infrastructure that provide priority access to people using transit, carpooling, or vanpooling. The Managed Lane network supports transit services, making transit a compelling alternative to driving.

The final draft of the proposed Plan has been updated to reflect 2030 as the start of implementation for the road usage charge to better align with the timing that the State and other regions are expecting for transitioning to a road usage charge.

The planned transit frequency improvements and spans of services for all routes, including existing local service and future regional services, will be added to Appendix A of the proposed Plan and can be currently viewed as part of the Social Equity Working Group agenda from August 5, 2021.

Regarding an alternative that prioritizes transit over the construction of new highway capacity, please see Master Response 1.

- 17-2 cont. - Adoption of an alternative that prioritizes transit over the construction of new highway capacity. That could include converting existing lanes to Managed Lanes.
- 2. For road and rail projects in urban areas, the Plan should mitigate all environmental impacts in the area the impacts occur.**
- 17-3 Our MSCP lands, wetlands, and wildlife corridors areas are the last remaining ones we have in our urbanized areas. They should be highly protected from further environmental impacts. Yet the DEIR indicates that multiple proposed road and (presumably) rail projects in the 2021 RTP would have highly negative direct and indirect impacts on these MSCP lands and wildlife movement corridors. We strongly disagree with the assumption in the DEIR that these impacts are acceptable. The approach is the usual mantra of impacting the urban habitat and mitigating far away. Historically in the Rose Creek watershed SANDAG has not mitigated impacts to urban habitat in the area those impacts occurred. SANDAG has instead mitigated the impacts at distant mitigation banks. Over time, this approach has led to a cumulative and ever-increasing degradation of our urban habitat areas, including urban MSCP lands, wetlands, riparian corridors and wildlife movement corridors. For example, SANDAG's \$30 million Rose Creek Bikeway project, completed last year, impacted the Rose Creek riparian corridor with construction of a major concrete structure for the bikeway. The creek in that location is a highly degraded urban waterbody, thick with invasive plant species and full of trash. It would have been a prime location for SANDAG to do wetland mitigation. Instead, SANDAG exported the mitigation to a distant mitigation bank, leaving Rose Creek as bad or worse than before.
- 17-4 Bicyclists using this \$30 million bikeway cycle along the edge of this still highly degraded creek. Similarly, SANDAG's recent MidCoast Trolley Project and Elvira to Morena Double Tracking Project impacted Rose Creek riparian areas with multiple new concrete structures. Yet SANDAG carried out mitigation for those impacts in distant mitigation banks
- 17-5 The DEIR proposes to continue this practice. It dismisses the impacts to our urban MSCP lands and watersheds by proposing to do mitigation elsewhere. The DEIR should instead acknowledge that in reality when impacts to urban area habitat are mitigated elsewhere, the environmental impacts in the urban area are permanent and cumulative.
- 17-6 The Plan promotes concentrating growth in high density urban areas in order to promote environmental benefits related to climate change and air quality. The Plan should therefore take a new approach to the environmental impacts of the projects it proposes to build in those urban areas: it should strongly consider not building road and other projects that impact urban MSCP lands, riparian areas, wildlife corridors and parks and mitigate impacts that do occur due to projects in urban areas in the area they occur,
- 17-7 **3. The Plan fails to identify the existence of Marian Bear Memorial Park.** It is one of the City of San Diego's oldest Open Space Parks, and it provides recreational and nature enjoyment opportunities in an area that is increasingly urbanized (thanks in part to SANDAG's projects). The area is also core MSCP and provides key wildlife corridor linkages to Rose Canyon in the west and MCAS Miramar in the east. Nevertheless, the Plan proposes a massive highway

2

**RESPONSE TO COMMENT 17-3**

Please see response to comment Del Mar 13-36 regarding the programmatic nature of the EIR. The EIR addresses mitigation on a programmatic level. On a project-specific level, and as often required by the regulatory agencies and local ordinances, onsite mitigation and mitigation within the same watershed is preferred, but if mitigation lands are not available, mitigation may need to occur elsewhere. The Draft EIR does not make a finding that impacts are "acceptable" or "unacceptable."

**RESPONSE TO COMMENT 17-4**

This comment provides a concern with the mitigation of a previous SANDAG project and does not provide a comment regarding the adequacy of this EIR. Therefore, no further response is required. However, the comment will be provided to the SANDAG Board of Directors for their consideration.

**RESPONSE TO COMMENT 17-5**

Please see response to comment FRC 17-3. The EIR provides programmatic mitigation measures to address impacts of the overall proposed Plan. The implementation of projects under the proposed Plan will require subsequent CEQA review, and the project-specific impacts and mitigation measures will be identified in that subsequent CEQA document. The Draft EIR discloses that offsite mitigation and mitigation banks are part of the programmatic mitigation measures (see BIO-1b, BIO-1c, BIO-2b, BIO-2c). The Draft EIR also discloses that despite implementation of these mitigation measures, impacts would remain significant and unavoidable.

**RESPONSE TO COMMENT 17-6**

This comment relates to the content of the proposed Plan, not the Draft EIR. Please see response to comments FRC 17-3 and FRC 17-5.

**RESPONSE TO COMMENT 17-7**

SANDAG's proposed Plan includes freeway improvements along I-5 and implementation of the Coastal Rail Trail in this area for the 2035 horizon, as well as the SR 52 bikeway from I-5 to Santo Road that would impact Marian Bear Memorial Park. Although SANDAG appreciates the concerns expressed in this comment, the improvements are required to

accommodate planned population growth and related transportation improvements identified in the proposed Plan.

The implementation of projects under the proposed Plan will require subsequent CEQA review, and the project-specific impacts and mitigation measures will be identified in that subsequent CEQA document, including the implementation of mitigation measures identified in Section 4.4, *Biological Resources*, of the EIR.

17-7 cont. project on SR-52 immediately adjacent to the park and MSCP, and likely cutting into it.

**The following projects should be removed from the Plan:**  
**For SR 52 between I-5 and I-805:**

- Remove the proposed three additional lanes (4 F to 4F + 3 ML)
- Remove the Managed Lane Connectors going in all directions between SR-52 and I-5
- Remove the Managed lane connectors between SR 52 EB and I-805 SB

17-8 Marian Bear I Park is immediately adjacent to this entire stretch of SR 52. Marian Bear Memorial Park, one of the City of San Diego's oldest open space parks. The Plan fails to identify its existence. The Park's trails provide beloved recreational opportunities for residents who live in the increasingly dense surrounding areas, a density increase that is promoted by the Plan as one of its core goals. The Plan is working at cross purposes if it simultaneously promotes major density increases in this area while simultaneously building a huge noisy intrusive highway project immediately adjacent to the very park that makes life move livable in those increasingly dense areas.

17-9 Marian Bear Park is core MSCP habitat. It provides wildlife corridor connectivity via the ever more constrained wildlife linkages to Rose Canyon in the west, to MCAS Miramar in the east, and to the south via the Rose Creek riparian corridor to Mission Bay. SANDAG's projects have increasingly constrained these corridors in recent years: with the Midcoast Trolley and the Elvira to Morena Doubletracking projects at the west end, and with the previous construction of the SR-52/I-805 intersection which left only a hugely constrained undercrossing for wildlife between Marian Bear Park and MCAS Miramar.

17-10 **4. Adding road capacity produces induced demand: the Plan should significantly reduce the number of lane miles of roadway it proposes to build.**  
 As the DEIR states, the Regional Plan adds a large amount of capacity to our roadways: It would add 799 lane miles of roadway by 2050 (Figure 4.16-74).

- 412 miles of additional freeway miles
- 32 miles of additional State Highway miles
- 392 miles of additional arterial miles
- 7 miles of Tollway (the plan removes 38 miles of Tollway)

17-11 a. The DEIR needs to explain its assumptions and conclusions around induced demand. It is now well accepted that adding road capacity induces demand. Induced demand occurs with HOV lanes as well as general purpose lanes. A potential way to address the issue of induced demand is with an aggressive pricing structure. But the issues around the pricing of Managed Lanes/HOV Lanes and whether and how much pricing impacts induced demand and VMT are debated. Moreover, while the construction of the 799 lane miles of new road capacity is built into the plan, no specific pricing structure is guaranteed. The DEIR should explain what its models show the pricing would need to be to counter the issue of induced demand and reduce VMT. Would it apply to general purpose lanes as well as managed lanes? What decisions would need to be made, and by whom, to implement the pricing

3

**RESPONSE TO COMMENT 17-8**

This comment relates to components of the proposed Plan, not the analysis within the Draft EIR. Many of the complete corridor projects in the Draft Plan utilize existing right-of-way, and, in many cases, existing roadway shoulders without encroaching into any additional land. This will greatly reduce environmental impacts, speed project delivery, and reduce costs. Where this is not an option additional project-specific outreach and engagement will be conducted with affected residents and stakeholders. This process aims to develop projects with minimal impacts.

**RESPONSE TO COMMENT 17-9**

Please see response to comment FRC 17-7. In addition, as discussed in Section 4.4, the transportation network improvements projected in the proposed Plan would impact wildlife movement. As noted under regional growth and land use change, adherence to the existing federal, State, and local laws, regulations, and programs discussed in Section 4.4.2 would reduce impacts on wildlife movement; however, it cannot be concluded that adherence would result in less-than-significant impacts for all projects. Considering both direct and indirect impacts, transportation network improvements under the proposed Plan would interfere substantially with fish and wildlife movement, wildlife corridors, and nursery sites. This would be a significant impact.

The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the Plan include site-specific transportation network improvements and development projects that would be subject to project-specific environmental review. Specific projects that would impact on Marian Bear Park would be considered second-tier projects and would be subject to project-specific environmental review.

**RESPONSE TO COMMENT 17-10**

This comment relates to components of the proposed Plan, not the analysis within the Draft EIR.

The proposed Plan places emphasis on maximizing the use of existing facilities to add corridor capacity to ease congestion while also trying to achieve meeting State and federal GHG and air quality targets. The proposed Managed Lanes network uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to transit, carpools, vanpools, and low-emission vehicles with

appropriate decals. The system of Managed Lanes and supporting connectors support Transit Leap and HOVs to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes.

Improvements to arterials are primarily part of SANDAG's Complete Corridor Regional Arterials. Complete Corridors are designed to provide priority access for transit and flexible fleet shared ride services on our regional arterials, and provide safe and comfortable transportation options to get people to their destinations safely and efficiently.

#### **RESPONSE TO COMMENT 17-11**

SANDAG is required to analyze induced demand impacts of the proposed Plan, which are documented in Appendix D of the proposed Plan. The activity-based model and other analyses used to inform the proposed Plan have been reviewed through SANDAG's peer review process and documented in the technical methodology submitted to CARB, also included in Appendix D. Where possible, the Plan proposes repurposing of general purpose lanes or shoulders to create Managed Lanes. The Managed Lane system is important for supporting the transit network and Flexible Fleets envisioned in the proposed Plan. The Regional Plan is updated every 4 years, providing opportunities to reflect changes in the network.

Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like GHG emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle: the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently fund different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources. This study will also give SANDAG a better idea of the interaction between included demand and usage-based fees.

17-11 cont. structure ? Would it be a road user charge? Given the unpopularity of the concept of a road usage charge, what is the likelihood of a pricing policy being implemented that is aggressive enough to counter the forces of induced demand?

17-12 Moreover, the DEIR proposes to move quickly to add road capacity: it would add 245 of those new lane miles by 2025, including 23 miles of General Purpose Lanes, 39 miles of HOV/Managed Lanes, 10 miles of Tollway, 27 miles of State Highway and 146 miles of Arterials.

17-13 The DEIR thus proposes to front load the proposed new road capacity projects before it is clear what the fee structure will be and what the impact of that fee structure is in terms of VMT, GHG emissions, and induced demand. And what will be the ridership of transit using the Managed Lanes? And what is a realistic time frame for when a comprehensive toll or road usage charge would be implemented? Will it be for use of both Managed Lanes and General Purpose Lanes? What vehicles will be allowed to use the MLs and under what conditions? (SANDAG staff have said that in their model, Single Occupancy Vehicles would be allowed to use the Managed Lanes.)

17-14 The Plan should be modified to reduce the construction of Managed Lanes built and implement the fee structure and some BRT routes to establish the viability of the Plan.

17-15 5. A major impact of the 799 new lane miles of roadway in the plan is severe and unmitigated environmental impacts to MSCP habitat and wildlife corridors and movement. (It is unclear how many of these would be due to commuter rail and LOSSAN projects, since their alignments are not specified).

- The Regional Plan (p. 4.4-112) Table 4.4-18 states that Transportation Network Improvements will encroach onto 78 acres of City of San Diego MHPA 100 Percent Conserved lands and 132 acres of MSCP South County Hardline Preserve, and 13 acres of Conserved Lands and Habitat Preserves.

A number of these impacted acres are in the urban areas of the City of San Diego, where MSCP habitat and wildlife corridors are already highly impacted and constrained. Removing from the Plan the projects on SR-52 between I-5 and I-805 (including the connectors) would reduce the impacts on the MSCP.

**6. Wildlife Corridors and Linkages**

17-16 In yet another acknowledgment of the severe environmental impact from the Plan's additional roadways, the DEIR states: "Almost the entire planned transportation network could potentially affect regional wildlife corridors and linkages."

The DEIR states on P. 4.4-35:  
 "A primary landscape features (sic) known to provide wildlife movement are ridgelines and drainages. Riparian corridors provide sufficient structural vegetative cover to allow the passage

4

**RESPONSE TO COMMENT 17-12**

Although this comment uses the term "DEIR," the substance of the comment relates to components of the proposed Plan, not the analysis within the Draft EIR.

The comment summarizes information provided in Table 4.16-6, *Roadway Network Analysis – Year 2025*, from Section 4.16, *Transportation*, of the Draft EIR regarding the number of lane miles of roadway that would be added under the proposed Plan. Generally, this summary provides introductory information for the following comments. However, the proposed Plan places emphasis on maximizing the use of existing facilities to add corridor capacity to ease congestion while also trying to achieve meeting State and federal GHG and air quality targets. The proposed Managed Lanes network uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to transit, carpools, vanpools, and low-emission vehicles with appropriate decals. The system of Managed Lanes and supporting connectors support Transit Leap and HOVs to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes.

**RESPONSE TO COMMENT 17-13**

Although this comment uses the term "DEIR," the substance of the comment relates to components of the proposed Plan, not the analysis within the Draft EIR.

As discussed in Appendix V of the proposed Plan, the Managed Lanes Feasibility Tool was used to forecast Managed Lane performance. The Managed Lanes Feasibility Tool is an interactive dashboard model developed by SANDAG's consultant, HNTB, that can be used to forecast Managed Lane performance and revenues. It has been used by agencies around the country to inform implementation of Managed Lane projects, phasing, and the development of associated operational policies. When outputs from the tool are compared to data from Managed Lanes once they are built, it has been found to be very accurate. The methodology uses revealed preference data from existing operating Managed Lanes across the country that were specifically selected to be representative based on conditions found to be similar to facilities in the San Diego region. The model analyzes existing traffic and

proposed lane configuration for the San Diego facilities that are included in the Managed Lane network to assign traffic volumes. It assumes a baseline volume must be reached before drivers will be willing to pay for the Managed Lanes. Usage of the Managed Lanes is predicted based on the overall level of demand above the baseline volume, available capacity in the Managed Lane, and remaining capacity in the general purpose lanes. It includes assumptions around HOV and clean air vehicle policies and discounts, traffic levels, growth rates, cost assumptions, lane capacity, toll rates, and inflation.

SANDAG will also launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and GHG emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources. The road usage charge provides an alternative to replace an old tax system that is no longer relevant.

The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. The mechanism to collect a future road usage charge has not yet been determined, but as the State of California transitions from the gas tax towards a road usage charge, SANDAG is anticipating leveraging the mechanism selected by the State. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those driving gas fueled vehicles, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.

#### **RESPONSE TO COMMENT 17-14**

The proposed Managed Lanes network uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to transit, carpools, vanpools, and low-emission vehicles with appropriate decals. The system of Managed Lanes and supporting

connectors support Transit Leap and HOVs to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes.

**RESPONSE TO COMMENT 17-15**

The project-specific impacts of commuter lane rail and LOSSAN projects will be addressed at the project-specific CEQA level and avoidance, minimization and mitigation measures will be identified pursuant to the Analysis Methodology Section in Chapter 4 of the EIR, and consistent with CEQA, local ordinance and guidelines, and the requirements by the Wildlife Agencies. As noted above, the Draft EIR discloses that the proposed Plan will have significant, unavoidable impacts on biological resources.

**RESPONSE TO COMMENT 17-16**

This comment correctly quotes from the Draft EIR.

17-16 cont. of many different types of wildlife. ...In many parts of Southern California, the linear habitat provided by riparian corridors is the only habitat left providing connectivity to core areas or unfragmented habitat patches. The Regional Plan, through land use and regional growth and climate adaptation and resiliency policies, intends to include wildlife movement corridors in the planned transportation network by conserving existing known corridors, identifying local corridors, and facilitating wildlife movement through project design."

17-17 The Plan should do exactly as it proposes to do by conserving the existing corridors in Marian Bear Park and deleting from the Plan the proposed three additional lanes and the huge connectors proposed to be on the SR 52 between I-5 and I-805. The corridor at SR 52 and I-805 is particularly constrained. If any of the proposed connectors at this location are built, it could be the final blow for that wildlife corridor.

17-18 Another reason to remove from the Plan the MLs on the 52 between I-5 and I-805 and the ML connectors to I-5 and I-805 is that both the I-5 and I-805 intersections already include a multi-level spaghetti pile of concrete roadways. Adding yet more would likely be extremely expensive and require rebuilding the existing portions of the spaghetti pile.

17-19 Figure 4.4-15: Regional Wildlife Movement Corridors. This shows the constrained wildlife movement corridors between Rose Canyon and MCAS Miramar and Marian Bear Park and MCAS Miramar, and in turn connectivity from MCAS Miramar to areas east of I-15, including Mission Trails and MCAS Miramar lands.

**Direct impacts to wildlife movement by 2050**  
 The Plan identifies Transportation Network Improvement impacts on the following acres of MSCP Core and linkages and SDSU Climate Resilient Wildlife Movement Corridors:  
 17-20 35 acres by 2025  
 554 acres between 2026 and 2035  
 440 acres between 2036 and 205

Again, reducing the number of additional lane miles of roadway would reduce this impact.

**7. I-805/Nobel**  
 17-21 The DEIR states (P. 4.4-71) that between 2026 and 2035, many of the Plan's projects are not expected to result in greater than a 5-acre loss of sensitive vegetation communities. However, two that are include:  
 I-805 from SR 52 to Carroll Canyon Road  
 I-5 widening along Rose Canyon

17-22 The DEIR should delete from the plan Project ID CC114 (Complete Corridor: Transit Operational Improvement at I-805/Nobel Drive). This may be the project that would cause a greater than 5 acre loss of sensitive vegetation communities (referred to on Page 4.4-71) Assuming it does, there is no need for a project at Nobel/805. Presumably, this project is to

**RESPONSE TO COMMENT 17-17**

This comment relates to components of the proposed Plan, not the analysis within the Draft EIR. The proposed Plan includes the Managed Lanes and connectors for SR 52; however, it also specifies that improvements to SR 52 will not expand beyond the current improved width. As projects move into advanced planning and design stages, more details will be defined to reduce impacts and develop mitigation strategies where necessary.

**RESPONSE TO COMMENT 17-18**

This comment relates to components of the proposed Plan, not the analysis within the Draft EIR.

The proposed Plan places emphasis on maximizing the use of existing facilities to add corridor capacity to ease congestion while also trying to achieve meeting State and federal GHG and air quality targets. The proposed Managed Lanes network uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to transit, carpools, vanpools, and low-emission vehicles with appropriate decals. The system of Managed Lanes and supporting connectors support Transit Leap and HOVs to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes.

In terms of the Managed Lanes proposed on SR 52 between I-5 and I-805 plus Managed Lane Connectors at I-5 and SR 52 and at I-805 and SR 52, the improvements for this segment are envisioned to be within the existing corridor footprint where the Managed Lanes would be designed through repurposing the existing shoulders and landscaped median.

Decisions on where to construct proposed Managed Lane connectors, including defining and designing site-specific elevation profiles and or structural/physical footprint construction components, will be examined through more detailed operational and technical studies. These efforts are generally undertaken during the project development and environmental clearance phase, which is generally carried out with public input and following the CEQA Guidelines to evaluate proposed project impacts and identify necessary mitigation measures.

**RESPONSE TO COMMENT 17-19**

Thank you for your comment. SANDAG appreciates the summary of Figure 4.4-15.

**RESPONSE TO COMMENT 17-20**

SANDAG appreciates the summary of impacts on the region's preserve system. The EIR addresses impacts on a programmatic level. Specific impact avoidance, minimization, and mitigation will be developed at the project-specific CEQA level. Please also see response to comment FRC 17-15.

**RESPONSE TO COMMENT 17-21**

SANDAG appreciates your comment regarding the potential impacts on sensitive vegetation communities from the I-805 from SR 52 to Carrol Canyon Road project, and I-5 widening along Rose Canyon. The comment does not identify any specific comments on the EIR adequacy. No further response is required.

**RESPONSE TO COMMENT 17-22**

The Direct Access Ramp at Nobel/I-805 has been removed from the proposed Plan. There are a number of constraints that limit the ability of the Rapid bus to access La Jolla Village Drive via the Managed Lanes. The current plan is to use existing ramps or operational improvements that would give the bus some level of priority to enter the existing ramps. More planning will need to occur as this project moves forward.

17-22  
cont. get BRT buses on and off at Nobel. However, this is concept is a holdover from an ill-conceived project many years ago and should be eliminated. There is no reason to get BRT buses on the 805 and off at Nobel Drive. It is far from the jobs/housing density that the BRT route is designed to serve. The DEIR should delete any proposed changes to the Nobel/805 location. The habitat at the Southwest corner is critical habitat for spreading Navarettia and has multiple special status species. It should not be impacted. Any BRT route on the I-805 should get on and off at La Jolla Village Drive or Mira Mesa Blvd or Sorrento Valley Road. There are existing high density jobs all along LJ Village Drive to Genesee Avenue and UTC, with lots more density planned for the coming years. There is also high density housing, with lots more likely to come. Coming SB on the I-805 from Sorrento Valley, the BRT buses can simply get on the I-805, stay in the auxiliary lane, and exit at LJ Village Drive, a distance of about a mile. For BRT buses entering I-805 NB at LJ Village Drive, they can stay in the on ramp and then almost immediately enter the off ramp for Sorrento Valley Road

17-23 **8. Intended Uses of the EIR (2.6, p. 2-72)**  
The DEIR should clarify that Project level EIRs will likely be required for a high percentage of the road and rail projects. It is worrisome that the DEIR states: "Subsequent activities implementing the proposed Plan will be examined in light of this EIR to determine whether additional environmental documentation, if any, such as a Negative Declaration, Supplemental or Subsequent EIR, or Addendum, must be prepared. We have seen CALTRANS prepare an MND for a huge, highly environmentally impactful highway project. Future avoidance of appropriate project level environmental review should not be suggested or implied.

Sincerely,

Deborah Knight  
Executive Director

**RESPONSE TO COMMENT 17-23**

The referenced statement is not intended to suggest or imply that this document will be used as a means to avoid following proper environmental review procedures for future projects. The statement is only stating that proper project-level environmental documentation will be conducted at the proper time, while following all applicable federal, State, and local environmental review requirements and procedures.

PO Box 221051, San Diego, CA 92192-1051

August 6, 2021

Submitted via email: SDForward@sandag.org  
Comments on the Draft 2021 Regional Plan

Active Transportation Projects:

**The City of San Diego's chosen alignment for the Coastal Rail chosen between Gilman/La Jolla Colony Drive and Sorrento Valley Coaster Station should be added to the RTP and the old alignment should be deleted (Rose Canyon, "UTC" (along Judicial Drive), Roselle Canyon and Roselle St to the Sorrento Valley Coaster station). This old alignment was thoroughly studied and rejected due to multiple major problems.**

17-24

The Draft RTP contains inconsistent and out-of-date labeling of a portion of the City of San Diego's Coastal Rail Trail. The City is the Lead Agency for the Coastal Rail Trail in the City, and it has selected the alignment and completed final design of the alignment along Gilman Drive to UCSD.

The City has deleted from its Bike Master Plan the old Rose Canyon, "UTC", and Roselle Canyon alignment. The City studied that route for years and rejected it for multiple reasons.

The RTP therefore needs to:

- cut three planned CRT segments and trim one CRT segment
- relabel the CRT route in the RTP to coincide with the approved Gilman Drive CRT segment, adding the UC San Diego CRT segment plus the I-5 Bicycle Corridor.
- Amend Appendix A and Appendix L in the SANDAG RTP to be consistent with this change.

The RTP should make the following changes summarized in the following tables:

## RESPONSE TO COMMENT 17-24

A full response to this letter is included beginning from ID L189 in Appendix P.2.

17-24  
cont.

CRT route as presented in the SANDAG RTP

SANDAG Project ID	Name/Description	SANDAG 2020 Cost	The RTP should make the following change	RTP Page reference
AT032	CRT - Carmel Valley to Sorrento to Roselle Canyon	\$20M	Change Carmel Valley to Roselle via Sorrento by removing Sorrento to Roselle. Carmel Valley to Sorrento remains.	Appendix A Table 1 p. A-6
AT036	CRT - Roselle Canyon	\$12M	Cut	Appendix A Table 1 p. A-6
AT037	CRT - UTC to Rose Canyon	\$11M	Cut	Appendix A Table 1 p. A-6
AT023	CRT - Rose Canyon	\$31M	Cut	Appendix A Table 1 p. A-8

The RTP needs to add the CRT route the City of San Diego has chosen for the segment from Sorrento Valley Coaster Station to the Gilman Drive/La Jolla Colony intersection

Segment	Start	End	Notes
CRT – I-5 Bicycle Corridor	Sorrento Valley	Voigt and Gilman	Already completed by Caltrans
CRT - UC San Diego	Voigt and Gilman Dr.	Gilman and La Jolla Village Dr.	UC San Diego is adding major bike infrastructure improvements through the campus on this route
CRT - Gilman	Gilman Dr. and La Jolla Village Dr.	Gilman Dr. and I-5 / Rose Creek Bike Path and La Jolla Colony Dr.	Protected bike lanes fully designed by City. Partial construction funding in SD City 2022 CIP budget.

17-24  
cont.

**Reallocation of funds and equity**

The savings for the three old, out-of-date segments to be cut is \$53 million (Rose Canyon, UTC (Judicial Drive) and Roselle Canyon, plus any savings from trimming the route AT032 by cutting Sorrento to Roselle, a segment made unnecessary by the I-5 bike path from the Sorrento Valley Coaster Station to UCSD. Two of the three segments in the City’s chosen CRT route are either complete or funded, so it can be anticipated that almost all of the \$53 million in the RTP can be freed up for active transportation projects that address equity, for example, in Chollas Creek, South Bay, or the Midway Corridor.

**Community and City of San Diego support and action for the CRT alignment up Gilman:**

The CRT route has City and Community support:

- The SANDAG RTP routes do not exist in the City of San Diego Bike Master Plan. They were explicitly deleted by the San Diego City Council in December 2013.
- The approved CRT Project route in San Diego has been selected, with the final Gilman Dr. link ready for construction and on the CIP list for 2020-2021.
- The approved CRT route was developed and selected by a City of San Diego Public Working Group in 2013-2014.
- The approved CRT route is supported by the Community Planning Groups: the UCPCG in 2013 and 2021, and the La Jolla Planning Association in 2021.
- The approved CRT route has been supported by the City of San Diego in 2013, 2016 and budgeted in 2021.

**The City’s approved CRT route enhances important existing connections:**

- With the Rose Creek bikeway open, it is a connecting link to UC San Diego from the south.
- With the existing I-5 Bicycle Corridor, it is a connecting link to UC San Diego from Sorrento and the Coaster.
- The completed UC San Diego Gilman Bridge over I-5 provides comfortable and safe bicycle links to the east UC San Diego Campus, industry along Eastgate Mail, and the commercial center at UTC.

**COMMENT LETTER 18: DAVID GRUBB (QUALITY OF LIFE COALITION)**

Comment Letter 18

October 11, 2021

*Via E-mail (RegionalPlanEIR@sandag.org)*

Kirsten Uchitel  
Associate Planner, SANDAG  
401 B Street, Suite 800  
San Diego CA, 92101

Dear Ms. Uchitel,

Please accept the following comments regarding the Draft 2021 SANDAG Regional Plan (“Regional Plan” or “Plan”) and Draft Environmental Impact Report (“DEIR”).

18-1 Please note that these comments have also been included in the combined comments document from the Quality of Life Coalition.

I am suggesting changes to Alternative 3 to avoid some of the significant impacts identified in the DEIR. While the DEIR states that impacts to GHG Emissions and Air Quality are “unavoidable”, that is not correct. Some of these impacts can be avoided or mitigated by changes to the Plan, as described below.

**I. Eliminate all addition of freeway lanes.**

18-2 The Regional Plan proposes to add lanes to a number of freeway segments in order to provide “managed” lanes. These additional lanes will increase capacity, inducing additional driving and increasing regional VMT and GHG Emissions, as well as PM-10 pollution from tire, brake, and road wear. Conversely, eliminating them will avoid some of these “Unavoidable” impacts and also reduce the GHG emissions attributable to the construction of new lanes.

**II. Replace “Managed” lanes with “Transit-only” lanes.**

18-3 Define “Transit” to include carpools of 3 or more, vanpools, shuttles, and other unconventional multi-passenger vehicles in addition to conventional transit vehicles. Restrict some freeway lanes to use only by transit, with no provision for paid access by non-transit vehicles. This will reduce the relative advantage of solo driving and make transit more attractive, further reducing the VMT, GHG, and PM-10 impacts. The Transit-only lanes should be taken from existing general-purpose or managed lanes, never from new construction.

**RESPONSE TO COMMENT 18-1**

Thank you again for the Quality of Life Coalition’s participation in the environmental review process and for the detailed comments for SANDAG’s consideration. Please see subsequent responses to specific comments for additional details regarding the Quality of Life Coalition’s concerns, including avoidance of certain significant impacts.

**RESPONSE TO COMMENT 18-2**

SANDAG is required to analyze induced demand impacts of the proposed Plan, which are documented in Appendix D of the proposed Plan. The activity-based model and other analyses used to inform the Plan have been reviewed through SANDAG’s peer review process and documented in the technical methodology submitted to CARB, also included in Appendix D. Where possible, the proposed Plan proposes repurposing of general purpose lanes or shoulders to create Managed Lanes. The Managed Lane system is important for supporting the transit network and Flexible Fleets envisioned in the proposed Plan. The Regional Plan is updated every 4 years, providing opportunities to reflect changes in the network

Please also refer to SANDAG’s response to a similar proposed alternative to eliminate all additional freeway lanes in letter 35 (response to comment SOFAR 35-3), and to Master Response 1 regarding alternatives.

**RESPONSE TO COMMENT 18-3**

Improvements to the freeway system are limited to Managed Lanes using existing infrastructure such as general purpose lane conversion and shoulders to facilitate additional transit and high occupancy vehicle travel. Please also refer to SANDAG’s response to a similar proposed alternative in letter 35 (response to comment SOFAR 35-3), specifically, making all managed lanes transit only.

18-4 **III. Add electrified rail transit where increased capacity is needed.**  
 Where additional transportation capacity is needed, as it is in most of the major corridors in the region, provide that capacity in the form of electrified rail transit. For a hundred years we have been adding capacity primarily in the form of roads. That has resulted in an unsustainable pattern of development. That must change starting today. Electric rail transit is the most efficient way to move people and goods, and it is very effective in shaping the pattern of development.

18-5 **IV. Start charging for road use sooner rather than later.**  
 We are in a climate emergency. We do not have the luxury of waiting until we build a great transit system before we try to reduce driving. We must reduce solo driving immediately and significantly. People who choose to drive should eventually be required to pay the full cost of driving and parking. This can be ramped up over time, but the process needs to start now.

18-6 **V. Conclusion - Give us an alternative that we can support.**  
 There is much that is good in the Draft Regional Plan, but it does not go far enough or fast enough. The changes described above could provide an alternative that we could all support.

Thank you for your consideration of this matter.

Sincerely,  
 David Grubb

**RESPONSE TO COMMENT 18-4**

SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Fast and frequent mass transit is the most efficient and sustainable way to move large amounts of people, particularly in our urban corridors that are carrying the largest number of trips the longest distances. These corridors experience the greatest congestion, which is why they have been slated for commuter rail that is much faster and more frequent than the rail service provided in the region today. The type of vehicles and propulsion will be determined during the advanced planning phase of each project.

Please see response to comment Chatten-Brown 34-2 for more information regarding changes to mitigation measure GHG-5b, “Establish New Funding Programs for Zero-Emissions Vehicles and Infrastructure,” that will further reduce GHG emissions with, in part, electrified public transit.

**RESPONSE TO COMMENT 18-5**

The proposed Plan has been updated to reflect 2030 as the start of implementation for the road usage charge to better align with the timing that the State and other regions are expecting to transition to a road usage charge.

**RESPONSE TO COMMENT 18-6**

SANDAG appreciates the Quality of Life Coalition’s feedback, and we hope the responses above provided some clarification. Please continue to follow along in the environmental process by visiting [www.SDForward.com](http://www.SDForward.com).

Title Page and Table of Contents

Executive Summary (Español)

P. ES-25 states that Alternative Three is considered the environmentally superior alternative.

18-7

Attachment 1 in supporting material for Item 6 on 10/8: "Achieving the state's mid-century goals will require major shifts in the energy sector, decarbonization of existing buildings and new construction, electrification of the entire transportation sector, sustainable solid waste and wastewater management practices, and direct carbon dioxide removal strategies that are well beyond the scope of and jurisdiction of SANDAG alone."

**Chapters:**

Chapter 1.0 – Introduction

Chapter 2.0 – Project Description

**Page 2-6**

If the goal is to "Incentivize sustainable growth and development" (which is a good one) the actions should be expanded to include

Collaborate with local jurisdictions on sustainable development land use planning and fund programs to accelerate housing production while also addressing equity, climate resilience, natural resource protection, and mobility.

18-8

This "update" below isn't reflected in the Project description. As mentioned above there is a lack of collaboration among local jurisdictions which sabotages efforts to have a top grade system.

**We're One Step Closer! – An Update from Kim Becker: 1/9/20**

I'm writing to you today with good news: The Airport Authority Board of Directors has certified the Final Environmental Impact Report for the Airport Development Plan, which envisions the replacement of the 53-year-old Terminal 1. This brings us one step closer to realizing our goal of providing a significantly upgraded customer experience, similar to what our passengers in Terminal 2 enjoy every day. *Of course, the plan also provides for new transportation and transit options that will make it easier for everyone to access San Diego International Airport.*

**RESPONSE TO COMMENT 18-7**

SANDAG looks forward to collaborating with local jurisdictions to implement the proposed Plan and support implementation of the local Climate Action Plans.

**RESPONSE TO COMMENT 18-8**

Land use authority is reserved to local jurisdictions: the cities and the County. The cities and the County are best positioned to effectively implement the objectives outlined in the proposed Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed Plan. SANDAG's Housing Incentive Program will include development of a regional anti-displacement strategy, considering climate change and resilience, consistency with the transportation improvements included in the proposed Plan, and alignment with SANDAG grant programs. No revisions to the Project Description are necessary.

**RESPONSE TO COMMENT 18-9**

This comment is noted. Figure 2-2, *Corridor Geographies*, has been updated.

**Figure 2-2 Corridor Geographies**

Parts of this map should be amended or clarified. In the 'corridor geography' of North County, most of the area between the I-15 and the San Vicente green area has 1,000s of acres with no (or very few) people living there. Although people do travel along the 78 to the east, the designation of this area is over-large. It should be refined to show just along the actual 78...not 1,000s of acres to the north. IN fact, if you look at later Figure 2-9 thru 2-12, no more houses or population is projected in this areas and more is projected south of the east 78.

Proposed revision to Figure 2-2

Reading later in the document(2-32, even more concern arises when the text suggests....

18-10 *GENERAL INTENSIFICATION OF LAND USES The SCS land use pattern represents a continuing trend in the San Diego region to provide more housing and job opportunities in the existing urbanized areas of the region. In 2012, SANDAG projected 17 percent of future housing growth would occur in the unincorporated area of the county under local general plans at the time. Today, SANDAG expects 12 percent of growth to occur in the unincorporated areas, much of that focused in the Lakeside, Spring Valley, and North County Metro. Tables 2-2 through 2-4 above show the forecasted growth in population, jobs, and housing units for each jurisdiction from the SCS land use pattern.*

Actually, other than the corridor geography 2-2, there is little to no intensification of housing, jobs shown in this area in the follow on figures. Again, figure 2-2 should be refined significantly in this area.

18-11 **Figures 2-17 to 2019**

What does a 'vacant' designation mean? No land is vacant. It is unclear where these lands are, but they should be called something else. Vacant implies not-developed. If there isn't any development, then there is probably some natural or artificial habitat present there.

Page 2-70

The text reads:

18-12 *CLIMATE ACTION PLANNING To help reach regional and State GHG emissions-reduction targets, the proposed Plan focuses heavily on the conversion to clean transportation and a shift from personal vehicle dependency through the 5 Big Moves. To help local jurisdictions make this transition and achieve broader reductions in GHG emissions, SANDAG will provide technical assistance, guidance resources, templates, and grant funding to incorporate the 5 Big Moves and SCS actions into their Climate Action Plans (CAPs) and plan for more well-connected, sustainable, healthy communities that are accessible to all.*

However, success in this area will require more aggressive actions on the part of SANDAG to assist in the reduction/elimination of sprawl development proposals that will undermine the success of the GHG reductions. Development speculators have now shifted to an 'annexation' approach and are expected to continue. The

**RESPONSE TO COMMENT 18-10**

This comment is noted. Figure 2-2 has been updated.

**RESPONSE TO COMMENT 18-11**

This comment is noted. "Vacant" denotes land without dwelling units or other structures or land usage type. The land use types and descriptions relevant to the GIS analyses in the proposed Plan and EIR can be found at:

[https://www.sandag.org/resources/maps\\_and\\_gis/gis\\_downloads/downloads/codes/Land\\_Use\\_Definitions.html](https://www.sandag.org/resources/maps_and_gis/gis_downloads/downloads/codes/Land_Use_Definitions.html).

**RESPONSE TO COMMENT 18-12**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. The land use pattern of the proposed Plan envisions greater compact development in areas served by high frequency, efficient transit. The result is less urban sprawl and greater reductions in GHG emissions. SANDAG has limited authority to "punish" local governments.

18-12  
cont. Plan should propose additional consequences to local governments who attempt to subvert these important transportation and climate actions in favor of sprawl.

Chapter 3.0 – Environmental Setting

Chapter 4.0 – Environmental Impact Analysis Approach

Chapter 4.1 – Aesthetics and Visual Resources

Chapter 4.2 – Agricultural and Forestry Resources

Chapter 4.3 – Air Quality

Chapter 4.4 – Biological Resources

**Page 4.4-76**

18-13 As we experience over and over, too often issues of science get politicized. This is true of wildlife and habitat management and mitigation. The Natural Resources Agencies often get undercut in their ability to oversee important habitat management issues. Therefore, we recommend the following addition in red

*... Consistent with the resource agencies' **approval** and applicable adopted plans, ordinances, and policies, provide compensatory mitigation for sensitive upland vegetation communities through the following:...*

**Page 4.4-77**

18-14 *BIO-1c Prepare a Habitat Restoration Plan. During planning, design, and project-level CEQA review of transportation network improvements or development projects, and as part of the regulatory permitting process, SANDAG shall, and other transportation project sponsors, the County of San Diego, cities, and other local jurisdictions can and should—as specified through consultation **and approval by** ~~with~~ resource agencies, and consistent with approved MSCP or MHCP guidelines and agreements, and applicable federal and State regulatory requirements—prepare and implement a habitat restoration plan for impacts on sensitive natural communities or a Habitat Mitigation and Monitoring Plan (HMMP) consistent with the requirements of and **approved by** USACE, RWQCB, and CDFW for all impacts on regulated waters, including wetlands. .*

**RESPONSE TO COMMENT 18-13**

The text has been revised as suggested in the Final EIR.

**RESPONSE TO COMMENT 18-14**

The text has been revised as suggested in the Final EIR.

Page 4.4-78	18-15	<p><i>BIO-1d Prepare Habitat/Long-Term Management Plans. During project-level CEQA review of transportation network improvements or development projects and as part of the regulatory permitting process, SANDAG shall, and other transportation project sponsors, the County of San Diego, cities, and other local jurisdictions should—as specified through consultation <b>and approved by</b> with resource agencies, and consistent with approved MSCP or MHCP guidelines and agreements, and applicable federal and State regulatory requirements—prepare and implement a Long-Term Management Plan (LTMP) consistent with the requirements of USACE, RWQCB, and CDFW for all impacts on regulated waters, including wetlands; or a Habitat Management Plan (HMP) or Resources Management Plan (RMP) for upland mitigation areas. <b>Further, the Management Plan must include, where relevant, the hiring of a certified recreation ecologist or comparable expertise to develop appropriate recreational measures, limitation, monitoring, and enforcement etc...</b></i></p>
4.4-78	18-16	<p><b>The DEIR needs a BIO-1(f)- Creation and funding of a Regional Funding Source for the implementation of mitigation and monitoring plans as outlined and committed to in the South County MSCP and as needed for this project. The Conservation Regional Funding Source should be a required mitigation in this document.</b></p>
4.4-82	18-17	<p>Related to the indirect impacts, Unauthorized recreational uses, illegal trail construction, trail related erosion, presence of dogs, etc.. all should be analyzed here as well and mitigations proposed.</p> <p><i>Permanent, indirect impacts would arise from increased human use of the area and unauthorized trespass, <b>illegal trail use, presence of dogs, trail related erosion, direct mortality of species,</b> increased nighttime lighting that may increase predation, increased noise associated with increased traffic volumes, and the increase in exotic species invasion.</i></p>
18-18		<p>Figure 4.4-16 seems incorrect, or at least confusingly presented. As it stands, the map appears to mix up several related regional HCP/NCCP items. The green is a mix of Chula Vista and unincorporated County Preserve land. The purple City of San Diego MHPA appears correct but the North County planning area appears to be a mix of the Multiple Habitats Conservation Program and North County MSCP. And the Cleveland National Forest and East County Bureau of Land Management lands should not be shown as entirely conserved because much of them are not conserved nor managed for HCP/NCCP resources. The MSCP planning areas and PAMA designated</p>

**RESPONSE TO COMMENT 18-15**

The text has been revised as suggested in the Final EIR; the following text revisions have been made on page 4.4-79:

The management plans can and should be consistent with the SDMMP MSP (SDMMP 2017), be prepared by qualified and experienced ecologists to develop appropriate management and monitoring measures. The management plans should outline describe management in perpetuity of the mitigation and conservation areas, identify illustrate adaptive management measures (Atkinson et al. 2004), outline management goals and objectives, and identify management tasks pursuant to these goals and objectives.

**RESPONSE TO COMMENT 18-16**

To meet the region’s habitat conservation goals, the proposed Plan identifies approximately \$3 billion for habitat-related efforts. This includes \$2,087 million for an enhanced habitat conservation, management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan and mitigation measure GHG-5c in Section 4.8 of the EIR), and \$300 to \$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan). As identified in Appendix B of the proposed Plan, SANDAG will continue to monitor the implementation of the Regional Plan on a four-year cycle and make the data accessible to the public. Monitoring would occur two years after adoption of the Regional Plan. Furthermore, SANDAG has committed to monitor the implementation for the Sustainable Communities Strategy on a two-year cycle pursuant to California Assembly Bill 1730 (Gonzalez 2019). Please refer to Master Response 1 for additional discussion regarding including a regional habitat conservation fund.

**RESPONSE TO COMMENT 18-17**

The text has been revised as suggested. The following text revisions have been made on page 4.4-84:

Permanent, indirect impacts would arise from increased human use of the area and unauthorized trespass, unauthorized trail use, presence

of dogs and feral cats, trail-related erosion, direct mortality of species, increased nighttime lighting that may increase predation, increased noise associated with increased traffic volumes, and the increase in exotic species invasion.

**RESPONSE TO COMMENT 18-18**

Figure 4.4-16 has been revised and the nomenclature in the legend has been corrected.

area is much larger than shown here. Further, the areas of the NC MSCP do not appear to be shown and the red seems like the MHCP of which only Carlsbad has completed its plan. This should be re-done to be clearer in what is actually conserved, PAMA, and in planning areas.

18-18  
cont.

In fact, here is the County map for South County MSCP From <https://www.sandiegocounty.gov/content/sdc/sustainability/cap/SouthMSCP.html> These boundaries should be reflected in the DEIR.

18-19 Page 4.4-58  
 Please add the following General Plan policy in the Escondido category  
 Escondido General Plan page 11-13, states that the focus of the Escondido General "Plan's smart growth principles represent a shift in focus from 'how to develop vacant land' to 'how to reinvest in existing neighborhoods.'"

Chapter 4.5 – Cultural Resources

Chapter 4.6 – Energy

Chapter 4.7 – Geology, Soils, and Paleontological Resources

Chapter 4.8 – Greenhouse Gas Emissions

**Failure to Reduce GHG Emissions**

The most significant concern is that the plan fails to reduce greenhouse gas emissions. It shows a reduction in per capita VMT, but that reduction is overwhelmed by the projected population increase, leading to an overall increase in VMT and the resulting emissions. That may satisfy the letter of the legal requirements, but it cannot be regarded as success. Climate disruption is the existential issue of our time. Failure to do our part to reduce the emissions that are disrupting the climate is clearly a failure of the plan.

The main reason for this failure of the plan is that it continues to promote and subsidize inefficient ways to move people and goods around the region.

18-20 The science tells us that we have a very short time to significantly reduce emissions. The realities of the market tell us that the only way to do that is to reduce driving starting immediately.

Increasing highway capacity does the opposite. It will induce additional driving, and make driving an even more attractive alternative to other modes. Instead of a positive mode shift away from driving, it will create a negative mode shift away from walking, biking, transit and telecommuting.

Adding managed lanes does not cure this problem. Increased capacity is increased capacity and it will induce more driving. Shifting some vehicles to managed lanes increases the capacity of the general purpose lanes.

Some specific questions for discussion.

**Added Freeway Lanes**

**RESPONSE TO COMMENT 18-19**

This has been added per the comment.

**RESPONSE TO COMMENT 18-20**

The proposed Plan is required to reduce GHG emissions from passenger vehicles and light-duty trucks by 19 percent per capita by 2035 compared to 2005 levels, as mandated by SB 375. Reducing GHG emissions and achieving State goals related to carbon neutrality requires actions at all levels of government. SANDAG looks to support and encourage local jurisdictions, State agencies, and other partners to reduce emissions beyond what is included in the proposed Plan.

SANDAG acknowledges that more work needs to be done in this area and that various climate action plans developed for the region, along with federal and State agency initiatives, are being incorporated as SANDAG's comprehensive strategies for addressing climate change in this and future regional plans. SANDAG continues to partner with local jurisdictions and other agencies to support the implementation of their specific climate action plans.

18-21 1. Table 4.16-14 shows an increase of 374 lane-miles of freeway by 2050, about a 15% increase over current conditions. That increased capacity will induce additional VMT. How is that handled in the modeling? How much VMT is projected to be added as a result of the added lane-miles? What mitigation is proposed to reduce that impact?

18-22 2. How do the added freeway lanes relate to the 450 acres of habitat impacts shown in Tables 4.4-7, 4.4-8, and 4.4-9?

18-23 3. Can SANDAG provide a map showing where lanes will be added, including any HOV-to-HOV transitions?

18-24 4. What would be the VMT and mode shift impacts of removing the added lanes from Alternative 3? In other words, what is the balance between VMT reductions due to BRT and the VMT increase due to induced driving?

18-25 5. Would it be possible to advance any transit projects to reduce the need to add lanes?

**Tolling and Road Use Charges**

18-26 Allowing single-occupancy vehicles with internal combustion engines to use HOV lanes for a fee defeats the purpose of having HOV lanes to reduce GHG emissions. It is also inherently inequitable. Making the fee somehow means-tested would further reduce the effectiveness as a GHG reduction measure. Tolling only some lanes and not others is not a good way to reduce VMT.

A road use charge is a much better option, but will be politically difficult. The discussion of Alternative 3 says there will be a road use charge of 3 cents a mile. That is not enough to motivate mode shift. Please provide more information on how a Road Use Charge will be implemented.

[Chapter 4.9 – Hazards and Hazardous Materials](#)

[Chapter 4.10 – Hydrology and Water Quality](#)

**RESPONSE TO COMMENT 18-21**

SANDAG is required to analyze induced demand impacts of the proposed Plan, which are documented in Appendix D of the Plan. The activity-based model and other analyses used to inform the Plan have been reviewed through SANDAG’s peer review process and documented in the technical methodology submitted to CARB, also included in Appendix D.

**RESPONSE TO COMMENT 18-22**

Roughly 75 percent of the transportation network improvements impacts listed in Tables 4.4-7 through 4.4-9 are associated with Complete Corridor projects. However, as discussed in prior responses, the EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan will be further evaluated and project design and alignments will be refined to minimize impacts on biological resources to the extent practicable. As such, impact values presented in this EIR are subject to change.

**RESPONSE TO COMMENT 18-23**

The Data Viewer accessible on SDForward.com includes maps of the improvements included in the proposed Plan.

**RESPONSE TO COMMENT 18-24**

SANDAG is required to analyze induced demand impacts of the proposed Plan, which are documented in Appendix D of the Plan. The activity-based model and other analyses used to inform the proposed Plan have been reviewed through SANDAG’s peer review process and documented in the technical methodology submitted to CARB, also included in Appendix D.

**RESPONSE TO COMMENT 18-25**

Additional lanes included in the proposed Plan directly support Transit Leap; the facilities and enhanced transit service function together as a system. These facilities improve transit operations, including transit priority functions that make transit a compelling alternative to driving.

**RESPONSE TO COMMENT 18-26**

Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like GHG emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle: the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers.

The study will determine how existing revenues currently fund different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources. The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.

Chapter 4.16 – Transportation

Chapter 4.17 – Tribal Cultural Resources

Chapter 4.18 – Water Supply

Chapter 4.19 – Wildfire

Chapter 5.0 – Cumulative Impact Analysis

Chapter 6.0 – Alternatives Analysis

**Alternative 3**

I am suggesting changes to Alternative 3 to avoid some of the significant impacts identified in the DEIR. While the DEIR states that impacts to GHG Emissions and Air Quality are “unavoidable”, that is not correct. Some of these impacts can be avoided or mitigated by changes to the Plan, as described below.

18-27

**I. Eliminate all addition of freeway lanes.**

The Regional Plan proposes to add lanes to a number of freeway segments in order to provide “managed” lanes. These additional lanes will increase capacity, inducing additional driving and increasing regional VMT and GHG Emissions, as well as PM-10 pollution from tire, brake, and road wear. Conversely, eliminating them will avoid some of these “Unavoidable” impacts and also reduce the GHG emissions attributable to the construction of new lanes.

**II. Replace “Managed” lanes with “Transit-only” lanes.**

18-28

Define “Transit” to include carpools of 3 or more, vanpools, shuttles, and other unconventional multi-passenger vehicles in addition to conventional transit vehicles. Restrict some freeway lanes to use only by transit, with no provision for paid access by non-transit vehicles. This will reduce the relative advantage of solo driving and make transit more attractive, further reducing the VMT, GHG, and PM-10 impacts. The Transit-only lanes should be taken from existing general-purpose or managed lanes, never from new construction.

**RESPONSE TO COMMENT 18-27**

Please refer to responses to comments Grubb 18-1 and 18-2.

**RESPONSE TO COMMENT 18-28**

Please refer to the response to comment Grubb 18-3.

18-29 **III. Add electrified rail transit where increased capacity is needed.**

Where additional transportation capacity is needed, as it is in most of the major corridors in the region, provide that capacity in the form of electrified rail transit. For a hundred years we have been adding capacity primarily in the form of roads. That has resulted in an unsustainable pattern of development. That must change starting today. Electric rail transit is the most efficient way to move people and goods, and it is very effective in shaping the pattern of development.

18-30 **IV. Start charging for road use sooner rather than later.**

We are in a climate emergency. We do not have the luxury of waiting until we build a great transit system before we try to reduce driving. We must reduce solo driving immediately and significantly. People who choose to drive should eventually be required to pay the full cost of driving and parking. This can be ramped up over time, but the process needs to start now.

18-31 **V. Conclusion - Give us an alternative that we can support.**

There is much that is good in the Draft Regional Plan, but it does not go far enough or fast enough. The changes described above could provide an alternative that we could all support.

**COMMENT LETTER 19: TOSHI ISHIHARA**

Comment Letter 19

**From:** Toshi Ishihara <toshiishihara58@gmail.com>  
**Sent:** Friday, September 17, 2021 11:27 AM  
**To:** Keith Greer <Keith.Greer@sandag.org>  
**Subject:** Your EIR presentation during the trans com meeting today

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

Hi Mr Greer

I watched your presentation on EIR today. The EIR document on GHG does not have any plots, it has only tables, but your presentation helped me understand the impacts of the RP on our region's GHG emissions.

I have one question about the GHG plot below.

Question: The 2021 RP will not reduce GHG emissions much after 2035 according to the plot. As you know, California has a 2035 100% EV mandate for passenger cars. How did the SANDAG's GHG emission model include that mandate?

Toshi Ishihara, PhD  
 Climate Change and Transportation Justice Advocate  
 Board Member, SanDiego350  
 Member, San Diego Transportation Equity Working Group

**RESPONSE TO COMMENT 19-1**

The comment asserts that “California has a 2035 100% EV mandate for passenger cars” and asks how this “mandate” was included in the GHG emissions projections for the San Diego region reported in the EIR.

In Impacts GHG-1 and GHG-5, the Draft EIR analysis is based on GHG emissions projections from 15 emissions categories, including the on-road transportation and off-road transportation sectors (Draft EIR pages 4.8-19 to 4.8-26; pages 4.8-31 to 4.8-35). The analysis in Impacts GHG-1 and GHG-5 is based on the *2016 GHG Inventory and Projections for the San Diego Region* report (Draft EIR Appendix H). This report provides an estimate of 2016 GHG emissions for the San Diego region and GHG projections for the years 2025, 2030, 2035, 2045, and 2050.

The 2016 inventory and projections report take into account existing laws, regulations, programs, and policies in effect as of May 2021 to project future GHG emissions out to 2050. The report does not attempt to predict the types of legal, regulatory, policy, economic, technological, and social changes that governments, the private sector, and individuals might make to reduce GHG emissions by 2050. This is because there is substantial uncertainty in projecting future emissions, especially for 2050; in general, the level of uncertainty regarding future emissions increases as the projections get closer to 2050. The 2016 inventory and projections report does not and cannot account for several factors that are unknown at this time but will affect future GHG emissions in the San Diego region, including: future changes in local, State, and federal laws, regulations, and public policy; local, State, national, and global economic conditions; multinational or global agreements; investments and decision-making by private sector actors, including local, national, and global businesses; and personal and group behavior. The Draft EIR analysis is therefore considered conservative and may overstate actual GHG emission trends in future years.

As described in Draft EIR Appendix H, the GHG emissions projections from the on-road transportation sector are based on the CARB Emissions FACTor model (EMFAC2017), which includes the effect of all

key federal and State laws, regulations, and legislative actions that were adopted as of December 2017.

Executive Order N-79-20, which was published on September 23, 2020, establishes, among other things, goals for the State to achieve: 100 percent of in-state sales of new passenger cars and trucks will be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the State will be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; 100 percent of off-road vehicles and equipment will be zero-emission by 2035 where feasible. It also directs that CARB, to the extent consistent with State and federal law, shall develop and propose regulations to achieve these goals for passenger cars and trucks and medium- and heavy-duty vehicles, including drayage trucks, and develop strategies to achieve these goals for off-road vehicles and equipment operations in coordination with other State agencies, the U.S. Environmental Protection Agency, and local air districts. When developing these regulations and strategies, CARB is directed to “act consistently with technological feasibility and cost-effectiveness.” It is important to recognize that EO N-79-20, while establishing a goal for 100 percent of in-state *sales* of new passenger cars and trucks to be zero emissions by 2035, does not mean 100 percent of all cars and trucks operating on the road will be zero emissions.

Regulations to implement this EO have not been adopted, nor have they been developed or proposed. At this time it is not known if such regulations will be adopted, or if they are adopted, how they will be designed and how they will affect the composition of the on-road transportation and off-road transportation vehicle and equipment fleets (i.e., the proportion of zero-emission versus non-zero-emission vehicles) in the San Diego region over time after they go into effect. As a result, their effect on future regional GHG emissions from the on-road transportation sector is not known at this time and is therefore not included in the GHG impact analysis of the Draft EIR.

The comment does not raise any issues with the adequacy of the Draft EIR, and no further response is required.

**COMMENT LETTER 20: JACUMBA COMMUNITY SPONSOR GROUP**

Comment Letter 20

**Jacumba Community Sponsor Group (JCSG)**

To: Kristen Uchitel, Associate Planner at SANDAG (via [RegionalPlanEIR@sandag.org](mailto:RegionalPlanEIR@sandag.org))

**COMMENTS ON THE DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR) FOR SAN DIEGO FORWARD: THE 2021 REGIONAL PLAN DEVELOPED BY THE SAN DIEGO ASSOCIATION OF GOVERNMENTS (SANDAG)**

October 11, 2021

Dear Ms. Uchitel,

20-1 Page 1-4 of the DEIR, states “on August 27, 2021, a Notice of Availability (NOA) was published in local newspapers and a Notice of Completion (NOC) was filed with the State Clearinghouse and that copies of the document were placed in public libraries throughout the region.” While a NOA may have been published in newspapers, it is highly doubtful that many San Diegans were reached through that medium. Also, library branches in the rural parts of the county were not provided copies of the document. In fact, it was not until September 7, 2021, that rural community planning/sponsor groups, charged with advising the County about the impacts of projects such as this regional transportation plan (RTP) on their respective communities, received written notification of the public comment period. By then, the 45-day public comment window had been reduced to just 36 days, an inadequate review period for this detailed 1300+ page document. Unlike many other project DEIRs which are often of interest to a specific community, the RTP will impact residents in all areas of the county. Contrary to what is stated on page 2-1, there was no extensive engagement with the public on the development of the DEIR and the general public had no real input into this document. **As a minimum, SANDAG should aggressively recirculate the DEIR and extend the public comment period for an additional 45 days, so that county residents have a genuine opportunity to submit their comments.**

20-2 The San Diego county region which encompasses 4,200 square miles, is geographically diverse, with rural landscapes comprising about two-thirds of the total land area. So, it was disappointing to learn that the draft 2021 RTP only proposes meaningful transportation improvements to the metropolitan areas of the county where Mobility Hubs, including expanded mass transit opportunities will provide a variety of affordable programs and services for urban residents. In fact, the RTP maps do not even identify individual communities east of El Cajon that will be disproportionately impacted by its urban focus. This freedom-restricting plan, in conjunction with other GHG regulatory programs currently under development like the Climate Action Plan and the Regional Decarbonization Framework, will make it costlier to live in the San Diego Region. Taken together, these plans will impact the personal choices of the county’s low-income residents who will no longer be able to afford to raise their families in rural communities or even drive and park a personal vehicle. Burdensome regulations may also cause residents to relocate to less regulated and expensive counties or states.

20-3 After its review of the DEIR, the JCSG provides the following specific comments and questions:  
 --Page 2-2, Figure 2-1, the regional setting map does not show the communities in the entire region: it is missing Spring Valley, Otay Mesa (which the plan describes elsewhere as an area of major growth), Ramona, and, of course, all the smaller communities located in the southeastern

**RESPONSE TO COMMENT 20-1**

SANDAG initiated the EIR scoping process on November 14, 2016, through the circulation of a NOP. Receipt of the NOP by the State Clearinghouse at the California Office of Planning and Research on November 14, 2016, initiated a 60-day comment period that ended January 13, 2017. The NOP provided formal notification to all federal, State, and local agencies involved with funding, and to other interested organizations and members of the public, that an EIR was to be prepared for the proposed Plan. The NOP was intended to encourage interagency communication concerning the proposed Plan and provide sufficient background information so that agencies, organizations, and individuals could respond to SANDAG with specific comments and questions on the scope and content of this EIR. Appendix A summarizes the issues raised in the NOP comments and identifies the EIR section(s) that address that issue or provides another response to the issue raised as appropriate. The NOP is provided in full in Appendix A-1. The written comments are provided in full in Appendix A-2.

Consistent with CEQA (PRC Section 21083.9), SANDAG noticed and held a public scoping meeting on December 8, 2016, at SANDAG’s office at 401 B Street, San Diego, CA 92101. The purpose was to receive perspective and input from agencies, organizations, and individuals on the scope and content of the environmental information to be addressed in the EIR.

To support the development of the proposed Plan, SANDAG implemented a comprehensive public outreach and involvement program consistent with State and federal requirements. Early in the planning process, SANDAG developed a PIP to guide the public outreach program, which was updated in mid-2019. The PIP identifies public engagement techniques to involve the public and collect input for the proposed Plan, including public workshops, social media, visualizations, and other means. It describes how to connect with hard to reach communities such as tribal nations and low-income and minority populations. A detailed description of the PIP can be found in Appendix G of the proposed Plan.

The Draft EIR for the proposed Plan was released to the public on August 27, 2021, and was available for a 45-day public review period, as required by CEQA. SANDAG published a Notice of Availability for the

Draft EIR in local newspapers on August 27, 2021, and mailed the Notice to an extensive distribution list. SANDAG also filed a Notice of Completion with the State Clearinghouse to indicate the availability of the Draft EIR for public review and comment on August 27, 2021. The Draft EIR was distributed to the agencies, organizations, and individuals that provided written comments on the Notice of Preparation, the SANDAG Board of Directors, SANDAG member agencies, and other interested parties and stakeholders. Agencies, organizations, and individuals were invited to provide written comments on the Draft EIR during the public review period from August 27 to October 11, 2021. SANDAG's mail distribution list is open to any subscriber and has been maintained and utilized for e-mail notifications throughout the planning process for the proposed Plan as well as the Draft EIR. SANDAG is unaware of the means through which JCSG received written notification of the public comment period on September 7, 2021. SANDAG's August 27, 2021 notification of the start of the public comment period was consistent with the requirements of CEQA and does not warrant recirculation.

The Draft EIR and all appendices were available for review online at [www.sdforward.com](http://www.sdforward.com); at SANDAG offices located at 401 B Street, Suite 800, San Diego, California 92101; and at the San Diego Central Library located at 330 Park Boulevard, San Diego, California 92101. The Central Library will facilitate inter-library transfers upon request by a member of the public in order to provide access at local libraries. On a case-by-case basis, the San Diego Central Library can also digitize documents and transfer them to other libraries. No such requests were made of the Central Library with respect to the Draft EIR, nor were any requests made of SANDAG with respect to providing access to the Draft EIR during the Public Comment Period.

There will be a further opportunity for public participation on December 10, 2021, at the SANDAG Board of Directors meeting discussing adoption of the proposed Plan and certification of the EIR.

#### **RESPONSE TO COMMENT 20-2**

The comment addresses the content of the proposed Plan, not EIR adequacy.

The proposed Plan was developed through a data driven planning process. The forecasted development pattern for the proposed Plan SCS is driven by regional goals for sustainability, mobility, housing affordability, and economic prosperity. The SCS land use pattern uses

areas in the region known as Mobility Hubs to concentrate future development. Mobility Hubs are communities with a high concentration of people, destinations, and travel choices. The SCS land use pattern represents a continuing trend in the San Diego region to provide more housing and job opportunities in the existing urbanized areas of the region.

Rural corridors, mostly located along state routes traversing the eastern two-thirds of the region, provide people access to rural towns and lands (including Jacumba), as well as connectivity to the interstate system. Rural corridors are economic lifelines for rural communities and the region's many tribal nations. Rural corridors provide access to jobs, education, and healthcare, as well as needed infrastructure for the movement of goods, deliveries, and emergency vehicles.

Along I-8 in East County, projects included in the proposed Plan benefit interchanges to this freeway with substantial safety improvements for SR 94, SR 76, and SR 79 and other state routes. Physical safety improvements are realized with a variety of projects including shoulder widening and curve straightening. Our rural and tribal communities also need new investments in broadband infrastructure. This infrastructure is an essential part of the transportation technology envisioned along rural corridors, by providing travelers with real-time travel information and enabling access to Flexible Fleet options such as shuttles and other on-demand transportation services. But it will not only improve mobility along rural corridors; it will enable residents to work remotely, learn online, and conduct other business over the internet.

Technology enhancements such as ATDM, as well as SIS are also aimed at improving safety. These improvements provide people with a variety of benefits, including expediting the movement of goods to rural communities during disaster recovery efforts. Projects related to ATDM will provide motorists with real time roadway conditions, including speeds, roadway visibility conditions, and other tactical information. Smart sensors, closed circuit television cameras, changeable message signs, and traffic detection equipment will all help provide people with a safer environment to walk and bike, while also adding the capability to prioritize the movement of freight or emergency vehicles along a rural corridor.

**RESPONSE TO COMMENT 20-3**

In response to this comment, Figure 2-1 has been revised to include tribal lands in the San Diego region.

- 20-3 cont. | portion of the county. It is also missing several Indian reservations/tribes such as the Campo, Manzanita, etc. Same comment about missing Indian reservations applies to the maps through Figure 2-16. **Provide inclusive maps throughout the EIR which identify rural communities as well as Indian reservations.**
- 20-4 | --Page 4-3 states, "Not all of the proposed plan impacts can meaningfully be analyzed quantitatively through the year 2050." **If SB 375 only sets GHG reductions for the years 2020 and 2035, then why does the RTP attempt to regulate transportation methodology which can be expected to drastically change well before the 2050-time horizon?**
- 20-5 | --Page 2-8 states, "...that by the 2030s, growth will slow to about 0.4 percent per year and decrease after 2040 to 0.3 percent per year, or less than 10,000 persons entering the region yearly." This statement appears to be in conflict with the population forecasts provided in Table 2-1 on page 2-11. **Review RTP for consistency.**
- 20-6 | --Page 2-32, Table 2-5 makes predictions/assumptions that the areas around Mobility Hubs will see the greatest increases in future population growth. Unfortunately, these are the areas where the cost of living is very high, which means that low income residents will be unable to afford to buy a home. It is the lack of affordability and personal safety that drives residents away from urban neighborhoods into the suburbs and rural communities. Based on modeling, this table shows an unsubstantiated decline in the population located outside to the mobility hubs from the baseline year of 2016 and 2050.
- 20-7 | --Page 2-37, Table 2-8 shows the RTP's GHG reductions for cars and light trucks at 17 percent in 2020. **Since we have 2020 in our rear-view mirrors, why doesn't this RTP use 2020 GHG figures instead of 2016 GHG figures as a baseline?**
- 20-8 | --Page 2-38 describes "Complete Corridors" that claim to provide everything to everyone. "Managed Lanes" (MLs) appear to be the RTP's preferred solution for reducing travel times on our freeways instead of building additional traffic lanes. **Where is data that shows existing MLs on I-15 significantly reduce gridlock during the morning or afternoon commutes?**
- 20-9 | --Page 2-42 has a map that shows Completed corridors by 2050. **Why doesn't I-8, which is a major east-west corridor and an evacuation route, show any road improvements east of El Cajon? Is this yet another instance where the RTP overlooks the impacts to rural residents who do not have other viable transportation options for getting to work?**
- 20-10 | --Page 2-49 states that over 2 million trucks pass through the Port of Entry (POE) at Tecate and Otay Mesa. These vehicles are not required to have the same strict emission standards as U.S. registered vehicles. **How will the RTP regulate/mitigate for the higher amounts of GHG emitted from Mexican trucks and passenger vehicles idling at POEs?** California could require that Mexican transport companies comply with the state's emission requirements and that Mexican truckers could be charged a per vehicle fee when crossing into the United States. (U.S. truckers should not be penalized over foreign truckers.)
- 20-11 | --Page 2-50, Figure 2-30 is a map which identifies rural corridors. Missing from that map is Highway 80 and SR-1. Both of these roads should be considered to be an integral part of the rural corridor system as they provide alternative routes for rural residents when I-8 or Highway 79 are

**RESPONSE TO COMMENT 20-4**

In addition to complying with SB 375, SANDAG's regional transportation planning efforts must also comply with CFR Section 450.324(a), which requires that "The metropolitan transportation planning process shall include the development of a transportation plan addressing no less than a 20-year planning horizon as of the effective date. In formulating the transportation plan, the MPO shall consider factors described in § 450.306 as the factors relate to a minimum 20-year forecast period. In nonattainment and maintenance areas, the effective date of the transportation plan shall be the date of a conformity determination issued by the FHWA and the FTA. In attainment areas, the effective date of the transportation plan shall be its date of adoption by the MPO." SANDAG has projected out to 2050 in its 2011, 2015, and 2021 regional transportation planning efforts. The Regional Plan and its SCS are iterative planning documents that are typically updated every 4 years to account for new data, analysis, policy, and experience.

**RESPONSE TO COMMENT 20-5**

The population numbers have been reviewed for consistency and have been confirmed to be accurate. Expected growth of 0.4 or 0.3 percent per year as stated on page 2-8 does not conflict with the population forecasts presented in Table 2-1.

**RESPONSE TO COMMENT 20-6**

SANDAG is currently developing a housing incentive program. This program will fund local plan updates and increasing affordable housing in transit-rich areas with infrastructure, services, and jobs. Please see Appendix B: Implementation Actions of the proposed Plan for more details.

**RESPONSE TO COMMENT 20-7**

Table 2-8 in Chapter 2, *Project Description*, of the Draft EIR, is not establishing baseline conditions, but rather GHG reduction targets established by SB 375. As stated on page. 2-38, "In accordance with SB 375, the proposed Plan must include an SCS that demonstrates that the San Diego region will reduce GHG emissions (GHG emissions for SB 375 compliance are calculated using carbon dioxide [CO<sub>2</sub>] emissions) from automobiles and light-duty trucks to achieve, if there is a feasible way to do so, the GHG emission reduction targets approved by CARB. Targets are expressed as percent change in per capita GHG emissions relative to

2005. Consistent with the targets established by CARB, the targets for the San Diego region are a 15 percent per capita reduction in passenger vehicle GHG emissions by 2020 and a 19 percent per capita reduction by 2035. The proposed Plan would exceed the GHG emission reduction targets for 2020 and 2035 established by CARB, as shown in Table 2-8.”

Regarding the use of 2016 as the baseline, the proposed Final Plan is unique, as it was developed over 6 years rather than 4 years. In October 2019, AB 1730 (Gonzalez) was signed into law, authorizing a 2-year extension for the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) for the San Diego region and deeming the 2015 Regional Plan, its SCS, and Final EIR valid for State compliance, funding eligibility, and other purposes through 2021. Due to this extended timeframe, the proposed Plan has a baseline of 2016, which is two years older than would be typical in past Regional Plan EIRs. In general, physical conditions as they existed in 2016 were used as the baseline for the impact analysis of the proposed Final EIR, corresponding with the release of the NOP on November 14, 2016 and the start of EIR preparation. This is the case for the GHG emissions baseline data used for analysis in the proposed Final EIR.

#### **RESPONSE TO COMMENT 20-8**

The proposed Plan maximizes our existing roads using technology to manage how lanes are used, which reduces traffic congestion and delay. The proposed network of Managed Lanes also encourages carpooling, vanpooling, and taking transit, which creates more roadway capacity without adding additional lanes. This model is very similar to how the I-15 Express Lanes operate today.

The Managed Lanes concept is envisioned in the proposed Plan, providing a system that gives the opportunity to dynamically manage the lanes based on real time conditions, time of day, and vehicle occupancy, to make all lanes more efficient and provide benefits to the system as a whole.

It is also important to recognize that State laws have changed from requiring congestion relief (usually solved in the short term by widening roadways) to reducing vehicle miles traveled and greenhouse gas emissions (usually solved by people living closer to destinations and using alternative modes of transportation such as walking, biking, carpooling and taking public transit). These bold changes are necessary to address unprecedented challenges facing our region, and state. SANDAG understands the near-term need for congestion relief and is

working to find near-term ways to implement flexible fleet pilot projects and expand service and frequency of public transportation.

**RESPONSE TO COMMENT 20-9**

The proposed Plan includes managed lanes on Interstate 8 between I-5 and Greenfield Drive east of El Cajon and, as indicated in Figure 2-25 and Figure 2-30, the proposed Plan includes rural corridor technology and operational improvements from Greenfield Drive to the Imperial County line. The rural corridor improvements would include curve realignments or straightenings, shoulder widenings, intersection improvements, and other safety improvements.

**RESPONSE TO COMMENT 20-10**

In terms of the air regulations in California, regardless of their registration and plate, any truck operating in the state is subject to California in-use regulations (e.g., truck and bus rule, smoke opacity requirements, and CARB's drayage truck rule). For example, each vehicle operating in California, including those in transit from Mexico, Canada, or any other state, must have a label, called an Emission Control Label, showing that the engine met the required federal emission standards applicable for the model year of the engine (see regulation at <https://ww2.arb.ca.gov/resources/documents/heavy-duty-diesel-emission-control-label-ecl-inspection-program-regulation>). Even if these trucks are exchanging cargo near California-Mexico border with another truck, they are still subject to CARB's regulations, including the Drayage Truck Rule.

Relevant federal and State regulations are discussed in Appendix Y of the proposed Plan.

Additionally, the Plan includes numerous projects to improve mobility at the border by reducing truck queuing, reducing congestion, and thereby reducing idling emissions.

No changes to the analysis are required.

**RESPONSE TO COMMENT 20-11**

Figure 2-30 is not intended to be a comprehensive map of all rural roadways, but rather Rural Corridors. Rural Corridors provide rural towns and lands access and connectivity to the interstate system. Highway 80 and SR 1, as "alternate routes," are not Rural Corridors.

- 20-11 cont. closed to major accidents or fires. **Add Highway 80 and SR-1 to the rural corridor maps with an appropriate level of improvements.**
- 20-12 --Table 2-10 on page 2-53 states, "Commuter rail lends itself to longer travel distances and operates with speeds up to 110 MPH." Figure 2-34 on page 2-57 shows an expansion of several commuter rail lines which seem to parallel the existing light rail (trolley) lines. **Where is the mass transit usage data for those routes that would justify the need (and the expense) of duplicative rail services?**
- 20-13 --Table 2-11 on pages 2-59 to 2-61 provides a list of the proposed mobility hubs in the RTP. **Why aren't the communities of Lakeside and Spring Valley included as future mobility hubs?**
- 20-14 --Table 2-12 on page 2-64 lists a variety of "Flexible Fleet Services." The RTP states that San Diego population is becoming older and that an estimated 60 percent will be seniors who are 75 years or older. **How will seniors safely use the flexible fleet services included in the RTP such as e-scooters, bikes, and ride-hailing? Does the RTP really intend for seniors to pick up their packages at "smart lockers" at mobility hubs instead of receiving package delivery at their doors?**
- 20-15 --Table 2-13 on page 2-68 to 2-69 is an expensive "wish list" of programs that are part of the RTP. Not only are the costs for these programs listed in 2020 millions of dollars, the table does not indicate funding sources. Even with all the RTP's proposed increases in road user fees, VMT, ridesharing costs, etc., in 2050, the RTP has a stated funding shortfall of \$73 billion in 2020 dollars. **Update Table 2-13 to include funding sources.**
- 20-16 --On page 2-72 is a list of prioritized RTP implementation actions where the number one priority is to "apply the Social Equity Planning Framework" and the number ten priority is to "Advance a data science program to better understand travel behavior and issues in the region..." **These implementation priorities must be reversed.** Included on the implementation actions list should be a requirement to identify funding sources before the RTP is approved. If funding cannot be identified, then reduce the scope of the plan.
- 20-17 --Table 4.3-4 on page 4.3-12 provides criteria pollutant emissions inventory for 2016 in the San Diego Air Basin. **Why does the RTP use "old" 2016 data for its modeling? Update the EIR to include a similar inventory for the year 2020, so that a trend in air quality can be determined.**
- 20-18 --Page 4-3-13 identifies wood burning and natural gas consumption as two emission sources. Both of these energy sources are commonly used by low-income rural residents to heat their homes. Future plans that would curtail or eliminate these energy sources must avoided in the interests of social equity. Especially when mismanagement of forest resources continues to result in enormous wildfires that burn large swaths of the State.
- 20-19 --Page 4.3-20 addresses Executive Order N-79-20 which requires that 100 percent of new car sales in California are to be zero emission by 2035. With the shift to electric vehicles, the draw on our electrical grid must surely increase. Just last week, Elon Musk who knows a little bit about electric cars, stated that the State's electrical generation capacity will have to at least double to support the planned shift to electric vehicles. Yet, the regional energy predictions found in Appendix F, and in Table 4.6.1 (page 4.6-17) show an overall decrease in the region's electrical

**RESPONSE TO COMMENT 20-12**

The comment only addresses the data used to prepare the proposed Plan, not the EIR.

SANDAG developed the proposed Plan and the proposed transportation network based on a data driven process— analyzing where people live and work, how they get around, what transportation infrastructure exists, what is needed to serve future growth, and more. This data included census data and cellphone based data. SANDAG did not rely on data alone; the proposed Plan reflects the views of real residents from around the region, the professional judgments of a number of planning professionals at the agency, and extensive knowledge of diverse communities across our region. Appendix T of the proposed Plan includes the detailed methodology for network development and performance of the Plan related to improved access to basic needs (retail, parks, and medical), employment centers, and higher education.

**RESPONSE TO COMMENT 20-13**

The coverage area of each regional Mobility Hub represents a general area defined through a propensity analysis (detailed in Appendix T of the proposed Plan). The Mobility Hubs depict a framework that will be used to guide future collaborative planning efforts between SANDAG and local jurisdictions. In reviewing the County of San Diego's suggestions received through the proposed Plan comment period, SANDAG agrees that the areas identified, including Lakeside and Spring Valley, are appropriate to consider in future Mobility Hub planning. The areas identified also align with Transit Priority Areas. In the proposed Plan, Mobility Hub maps also reflect Transit Priority Areas to be more inclusive of these areas.

**RESPONSE TO COMMENT 20-14**

The comment only addresses the content of the proposed Plan, not the EIR.

The proposed Plan aims to improve access to a quality public transportation system for all San Diego residents, especially for seniors and other disadvantaged populations. These improvements include transit fare subsidies and on-demand Flexible Fleet services that are accessible to seniors. The proposed Plan projects a growth in senior access to parks and recreational facilities via walking, biking, and transit (see Appendix H of the proposed Plan for more information). In

every metric, senior access to transit, retail, medical facilities, and parks improves through 2025 and 2050.

SANDAG has a long history of working closely with senior community members, social service providers, non-profits, and community-based organizations to develop and fund specialized transportation services geared specifically towards the needs of seniors. The proposed Plan network includes a variety of modes that work together seamlessly to provide all San Diego residents, regardless of age or ability, access to multiple travel choices. Flexible Fleets are an example of an option that is particularly well suited for the senior population. Flexible Fleets options like ridehail, rideshare, and microtransit offer a range of mobility options and vehicles that can accommodate many types of trips and meet the needs of various users. They can make it easy for seniors to access medical appointments and other basic needs without relying on a car. Flexible Fleet vehicles and services are adaptable in nature and can offer personalized accommodations, such as wheelchair lifts, door-to-door services, and other options for people with physical limitations. SANDAG has conducted outreach and will continue to engage with seniors to ensure their mobility needs are met. In addition, SANDAG is developing a Flexible Fleets Implementation Strategic Plan that will address potential barriers to accessing Flexible Fleets, ensuring options for people without smartphones or internet, providing education about how to access Flexible Fleets, and more.

#### **RESPONSE TO COMMENT 20-15**

Table 2-13 includes costs for proposed programs of the proposed Plan. Specific funding sources have not been identified for each program; however, proposed Plan Appendix V, *Funding and Revenues* includes Table V.1 that shows eligible uses (including programs) for the various funding sources.

The comment incorrectly identifies a funding shortfall of \$73 billion. The proposed Plan is revenue constrained, as required by 23 CFR 450.324 (f) and the California Transportation Commission Regional Transportation Plan Guidelines for Metropolitan Planning Organizations (2017). In the proposed Plan, revenues total \$172 billion and costs total \$163 billion in 2020 dollars.

**RESPONSE TO COMMENT 20-16**

The implementation actions identified on page 2-72 of the Draft EIR are not listed in order of priority. Funding sources for the proposed Plan are detailed in proposed Final Plan Appendix V.

**RESPONSE TO COMMENT 20-17**

As discussed in Chapter 4, physical conditions as they existed in 2016 are used as the baseline for the impact analysis of the EIR. The 2016 base year for the air quality analysis is the same as the 2016 year used in other technical sections, such as *Greenhouse Gas Emissions* (Section 4.6) and *Transportation* (Section 4.16). As shown in Table 4.3-3, ambient air quality in recent years is generally similar to 2016 data. Moreover, as discussed in Section 4.16.1, differences in traffic conditions between 2016 and current conditions (2021) are minor, and the change does not affect findings in the transportation analysis. Similarly, for air quality, changes between 2016 and current conditions are minor, and changing the baseline would not affect the overall findings of the air quality analysis.

No changes to the analysis are required..

**RESPONSE TO COMMENT 20-18**

There are no measures in the proposed Plan that would curtail or eliminate residential wood burning and natural gas combustion. SDAPCD regulates stationary and area source emissions as part of its air quality responsibility, and develops rules and regulations to ensure federal and State air quality standards are met. SDAPCD periodically revisits and amends its rulebook as part of the State Implementation Plan (SIP) process. Regardless, no mitigation like this is proposed in the EIR, and no changes to analysis are required.

**RESPONSE TO COMMENT 20-19**

The energy consumption shown in Table 4.6-1 is based on the energy consumption projections used in the GHG inventory (Appendix X of the proposed Plan), which are based on the CEC Energy Demand 2020–2030 Revised Forecast. The CEC forecasts discussed in Section 4.6, *Energy*, and Chapter 5, *Cumulative Impact Analysis*, indicate an increase in energy demand between 2020 and 2030. Appendix O of the EIR provides information to support the alternatives analysis, but does not include information related to electricity or energy demand.

No changes to the EIR analysis are required.

- 20-19 cont. | consumption from 2016 to 2050. The decrease in electrical consumption will also occur while the region's population is increasing. The CEC California Energy Demand 2018-2030 revised forecast shows the continued increase in the demand for energy supplies over the next ten years (page 5-30). **Verify electrical energy usage figures in Appendix O and cite sources for these figures.**
- 20-20 | --Page 4.3-33 states the entire MTS fleet of buses will be transitioned to zero-emission vehicles by 2040. **How will the longer time it takes to charge bus batteries be accommodated?** MTS should really consider a transition to smaller busses as the current passenger usage does not appear to require the seating capacity provided by full-sized, 60-foot long buses. **Will school buses be required to transition to electric buses?** This may be impractical and unworkable in rural parts of the county where Santa Ana winds cause frequent and extended power outages, and bus replacement may cause a financial hardship for small school districts.
- 20-21 | --Page 4.3-43 states VMT is expected to increase by 6.7 percent in 2050. One of the RTP's stated goals is to reduce VMT and the associated GHG emissions.
- 20-22 | --Page 4.3-51 states the use of propane and natural gas generators is authorized for construction purposes when the power is not available from the electrical grid. Residents in the rural part of the county frequently rely on propane generators when their normal source of electrical power has been shut off. Therefore, the future use of propane generators and/or heaters must be allowed.
- 20-23 | --Many RTP figures such as Figures 4.4-2 to 4.4-14 are missing page numbers which make them easier to reference. **Add page numbers to all RTP figures.**
- 20-24 | --Figure 4.4-7 should indicate that tricolored blackbirds and golden eagles are in the Jacumba area. **Update.**
- 20-25 | --Page 4.4-20 should show that Golden eagle habitat includes Jacumba. Page 4.4-21 should show the Tricolored blackbird and Pacific Pocket mouse habitat includes Jacumba. **Add Jacumba in habitat comments.**
- 20-26 | --Page 4.8-5, Table 4.8.4 should show emission breakdowns for the year 2020 and not 2016. **Update.**
- 20-27 | --Page 4.8-34, Table 4.8-12 shows 2050 GHG emission reference point is 80 percent below 2016 levels. Elsewhere in the RTP, the 2050 reference point is described as 80 percent below 1990 emission levels. **Review DEIR for GHG consistency.**
- 20-28 | --Page 4.8-50 describes the need for building "low stress bicycle networks." **What are low stress bicycle networks and how do they differ from bicycle corridors?** It also recommends implementing a school bus program in areas not currently served by school buses. **Identify the areas where additional school bus service is needed based on a geographical need and not a social equity "want."** In urban areas where schools are located close to residences, children should walk to school. San Diego County has recently allocated funds to pay for programs that would reduce childhood obesity and walking a short distance to school would provide a health benefit for children.
- 20-29 | --Figure 4.9-2 emergency evacuations routes do not include rural communities. **Add Alpine, Jamul, Campo, Jacumba, etc.**

**RESPONSE TO COMMENT 20-20**

The proposed Plan supports the electrification of the region's transit buses and the State's Innovative Clean Transit regulation. Appendices A and B of the Plan include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 and 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans>. As discussed in the Rollout Plans, appropriate charging infrastructure will be installed on site to accommodate and support bus capacity. MTS and NCTD will consider forecasted passenger usage, among other factors, when making decisions regarding bus sizes prior to purchase of vehicles.

The MTS transition to zero-emissions vehicles is detailed in its transition plan. The transition plan takes into account daily mileage requirements and charging needs. See the transition plan here: [https://www.sdmts.com/sites/default/files/attachments/mts\\_fleet\\_transition\\_study\\_final\\_092220\\_reduced.pdf](https://www.sdmts.com/sites/default/files/attachments/mts_fleet_transition_study_final_092220_reduced.pdf). School buses are not part of MTS transition plan, but CARB has budgeted for 1,000 zero-emission school buses in its 2021-2022 budget.

No changes to the Draft EIR analysis are required.

**RESPONSE TO COMMENT 20-21**

This comment does not pertain to EIR adequacy. As shown in Tables 4.6-17 through 4.6-19, while overall VMT is expected to increase relative to 2016 conditions, VMT on a per capita basis is reduced 14.1 percent by 2050, consistent with the objectives of the EIR.

**RESPONSE TO COMMENT 20-22**

Mitigation measure AQ-3b allows for the use of propane or natural gas generators when grid power is not available, which includes the rural areas. No changes to the EIR analysis are required.

**RESPONSE TO COMMENT 20-23**

For ease of reference, electronic documents have been updated to link all figure references to the appropriate figure upon selecting the associated reference.

**RESPONSE TO COMMENT 20-24**

Figure 4.4-7 has been updated as requested to include the tricolored blackbird and golden eagle in the Final EIR.

**RESPONSE TO COMMENT 20-25**

The EIR relies on available data sources. All sensitive species from the data sources referenced in the EIR are included in Figure 4.4-7, and tricolored blackbird and golden eagle points were added to the figure in the Final EIR.

**RESPONSE TO COMMENT 20-26**

As stated in Chapter 4 of the EIR, SANDAG is required to update the Regional Plan every 4 years, in collaboration with the 18 cities and County of San Diego, along with regional, State, and federal partners. The proposed Plan is unique, as it was developed over 6 years rather than 4 years. In October 2019, AB 1730 (Gonzalez) was signed into law, authorizing a 2-year extension for the RTP/SCS for the San Diego region and deeming the 2015 Regional Plan, its SCS, and Final EIR valid for State compliance, funding eligibility, and other purposes through 2021. Due to this extended timeframe, the proposed Plan has a baseline of 2016, which is 2 years older than would be typical in past Regional Plan EIRs. In general, physical conditions as they existed in 2016 are used as the baseline for the impact analysis of this EIR, corresponding with the release of the NOP on November 14, 2016, and the start of EIR preparation. As such, no changes have been made to Table 4.8-4.

**RESPONSE TO COMMENT 20-27**

The comment asserts that the reference in Draft EIR Table 4.8-12 referring to the 2050 reference point as 80 percent below 2016 levels is inconsistent with other, unspecified references to the 2050 reference point as 80 percent below 1990 emissions levels.

Under Impact GHG-5 the Draft EIR evaluates whether the proposed Plan is inconsistent with the State's ability to achieve the EO S-3-05 goal of reducing California's GHG emissions to 80 percent below 1990 levels by 2050. To perform this analysis, the Draft EIR estimated an emissions reduction reference point for the region for 2050, based on EO S-3-05. Because there is not an available 1990 emissions inventory for the San Diego region that is comparable to the regional inventory and projections prepared for the proposed Plan, a reference point was developed for this analysis to show the level of GHG reductions needed between 2016 (the baseline year of the inventory and proposed Plan)

and 2050 that would be equivalent to the level of reductions needed when measured against 1990.

In 2016, total statewide emissions equaled 429 MMTCO<sub>2e</sub>, which was 2 MMTCO<sub>2e</sub> (less than 1 percent) lower than the statewide 1990 emissions level of 431 MMTCO<sub>2e</sub> (CARB 2018d). Because total statewide emissions in 2016 were essentially equal to the statewide 1990 level, for purposes of this analysis, total regional emissions in 2016 are assumed to be representative of total regional emissions in 1990. Therefore, to identify the reference point for 2050, an 80 percent reduction was applied to the total regional emissions in 2016.

This comment does not relate to the adequacy of the Draft EIR and no further response is required.

#### **RESPONSE TO COMMENT 20-28**

This comment addresses two of the measures included in Draft EIR mitigation measure GHG-5f that the County of San Diego and cities can and should implement to reduce VMT from development projects. Specifically, the comment asks for clarification on the difference between low stress bicycle networks and bicycle corridors; regarding the measure to implement school bus programs in areas not served by school buses, the comment requests that SANDAG identify areas where school bus programs are “needed based on geographical need and not a social equity ‘want’.”

Low stress bicycle networks refer to bicycle facilities like trails, paths, or lanes in which the user experiences a low amount of stress due to factors such as low vehicle speed, low vehicle volumes, and physical separation from vehicle traffic. Implementing a school bus program in areas not served by school bus service is included in mitigation measure GHG-5f because school bus service can reduce VMT and associated GHG emissions when students travel to and from school in a bus instead of in passenger cars and trucks. The request for SANDAG to identify areas with a geographic need for school bus service is noted but not required by CEQA. However, this comment is noted for the record and will be forwarded to the SANDAG Board of Directors for its consideration prior to making a decision on adoption of the proposed Plan.

#### **RESPONSE TO COMMENT 20-29**

Edits have been made to Figure 4.9-2 to include rural communities.

20-30 --Table 4.14-2 on page 4.14-4 projects population growth by jurisdiction. From 2016 to 2050, the unincorporated area of the county is expected (or allowed) to increase by 0.9 percent. This increase seems incongruent when compared to Table 4-14-4 on page 4.14-6 which projects the 2016 to 2050 job growth in the unincorporated areas to be 23.2 percent. On page 4.11-28, the RTP states that in 2025, "growth in the unincorporated areas would be focused within existing rural communities." However, the plan would actually restrict growth (development) in the rural areas through the implementation of Vehicle Miles Travelled (VMT) restrictions and fees.

20-31 --Table 4.15-2 on page 4.15-3 lists Fire Service providers in the unincorporated areas of the county. It currently omits a number of fire service providers such as Boulevard, Campo, Descanso, Jacumba, and others. **Update the Fire Service providers listing.**

20-32 --Page 4.15-58 describes certain mitigation measures for reducing construction waste. It currently reads: "prepare and apply a waste management plan that promotes solid waste reduction." Another measure reads: "Reuse and or recycle construction and demolition waste." Measures such as these should have an identified percentage specified. **Assign percentages to mitigation measures.**

20-33 --Page 4-16-2, Table 4.16-1 provides a summary of roadway miles for the years 2016 and 2020. It is unbelievable that during a 5-year period, just two freeway lane miles were added and lane miles added to state highways and local roadways were also minuscule. **The revenue generated by the 2004 TransNet Tax was directed for improving the efficiency of our roadway systems. It should be used for highway improvements including additional road lanes, etc., and not be consumed by mass transit improvements envisioned by SANDAG.**

20-34 --Page 4.16-7 states that the RTP uses 2019 transit data instead of the 2021 data because it better reflects current and typical ridership conditions when the county is not under a stay-at home order. That may be so, but even the 2019 transit figures showed a decline over 2016 figures, and the 2019 figures are pre-pandemic. During the pandemic, people not only shunned mass transit, many found that they could work from home. Because they are likely to continue to do so well into the future, the lingering effects of the pandemic on transit ridership need to be evaluated before billions of dollars in mass transit subsidies are used to increase the frequency of bus and tram service or to expand trolley, bus and commuter rail routes or to provide free or reduced transit fares. Mass transit cannot be considered to be a stand-alone transportation plan as there will likely be future pandemics. **Before the expansive mass transit expenditures proposed in the 2021 RTP can be approved, at least two years of current ridership data must be thoroughly scrutinized. Real data collected from the public should be used to predict future transit usage figures not models.**

20-35 --Page 4.16-9, Footnote 1 for Table 4.16-3: Year 2019 Transit Services in the Region appears to contain an error. The average daily passenger figures should be taken from the FY2019 National Transit Database and not from FY2016. **Correct footnote 1. To provide some meaningful data, this table should also show the annual and daily carrying capacity for each type of transit. That data would reflect actual transit usage. Then based on real usage data, the cost analysis for different types of transit passenger miles can be determined. This is information that must be provided in the RTP.** Cost analysis when combined when usage data must be applied to future transit decisions. BMPs for transit should identify cost efficiencies such as using a one-car trolley

**RESPONSE TO COMMENT 20-30**

For the San Diego region, population is expected to grow by nearly 437,000 people from 2016 to 2050. Prior forecasts projected more people in the San Diego region. The Series 14 Regional Growth Forecast includes assumptions of housing unit production that results in a subregional forecast that includes population decline or lower population growth in certain areas in the region. These housing assumptions, described in proposed Plan Appendix F, include an increase in the region's vacancy rate to 4% by 2040, an accounting of vacation rentals and second homes as "unoccupiable," and a decrease in household size from 2.75 persons per household in 2016 to 2.62 persons per household by 2036.

Forecasted job growth in the region is a result of the size and age/race/ethnicity/sex composition of the projected population as well as higher projected labor force participation rates in the future. The region is expected to grow by 440,000 jobs by 2050. Future jobs are allocated to existing employment centers and scheduled commercial development. To clarify, the quoted statement is intended to indicate that for the growth that would occur within the unincorporated areas (0.9 percent), that growth would be focused within existing rural communities, rather than in unincorporated areas that are not part of rural communities. It is acknowledged that VMT restrictions and fees encourage growth in urban areas and discourages growth in unincorporated areas.

**RESPONSE TO COMMENT 20-31**

Table 4.15-2 in the Final EIR has been updated in response to this comment to include additional County fire service providers, specifically, Campo Reservation Fire Protection District and Boulevard. The other two fire stations referenced are CAL FIRE stations and were already accounted for.

**RESPONSE TO COMMENT 20-32**

The percentage of waste reduction associated with the measures outlined in mitigation measure U-2b would be based on State legislation and local regulations. A specific percentage cannot be applied to each measure due to waste reduction policy variations across the various jurisdictions in the county and potential future regulatory updates at

the State level; however, a reference to State and local requirements has been added to the measure to ensure the goals established are achieved.

**RESPONSE TO COMMENT 20-33**

Experience and research have demonstrated that expanding roadways ultimately leads to more traffic and GHG emissions. For example, in the Houston area, a 26-lane, \$2.8 billion mega-freeway project was built to alleviate traffic congestion. Within a few years after construction was completed, congestion worsened and travel times increased 30 percent during the morning commute and 55 percent during the evening commute. The proposed Plan maximizes our existing roads using technology to manage how lanes are used, which reduces traffic congestion and delay. The proposed network of Managed Lanes also encourages carpooling, vanpooling, and taking transit, which creates more roadway capacity without adding additional lanes.

The TransNet measure approved by San Diego County voters in 2004 focused on congestion relief and included a set of transportation improvements, many of which have been completed. The remaining projects in the TransNet measure may not be constructed due to changes in regional needs, changes in State law, and technology advancements that would suggest a different transportation solution. The SANDAG Board of Directors may review the TransNet ordinance and discuss possible updates. This process is outside of the development of the proposed Plan.

**RESPONSE TO COMMENT 20-34**

Due to data/survey availability, ABM2+ largely relies on pre-pandemic survey (2016/17 household behavior, 2019 SB1 TNC, and 2015 transit onboard surveys); therefore, the pandemic impacts on behaviors such as transit/carpool usage and auto ownership are not reflected in ABM2+. Based on information from the National Household Travel Survey, California Household Travel Survey, 2016/17 Household Behavior Survey, and the ACS, SANDAG developed a telework trend to project future telework rates. Researchers from the Institute of Transportation Studies at UC Irvine reviewed and confirmed the telework assumptions used in proposed Plan.

SANDAG has a plan to update ABM2+ to ABM3 to reflect the “new normal” travel behaviors, once surveys conducted in a new normal year become available. The new normal condition is important for

creating a long-range planning model. It is unclear at this moment, when and if the new normal has arrived.

**RESPONSE TO COMMENT 20-35**

Please see response to comment JCSG 20-26 for rationale regarding the use of a 2016 baseline.

The performance of the proposed Plan is based on the best available data at this time. It will be important to continue to monitor trends and impacts on travel behavior as the Regional Plan is implemented and updated in the future. Priority Implementation Action 10 is to advance a data science program to better understand travel behavior in the region, update travel demand modeling tools, and improve transparency and reporting on program effectiveness and project delivery.

20-35 cont. Instead of a three-car trolley when passenger loads are low. This could save on routine trolley car maintenance which is likely based on actual trolley miles. Bus sizing and frequency of service should also be analyzed based on costs. **Smart transit operations save the taxpayers money!**

20-36 --Table 4.16-4 on page 4.16-11 shows that unlike roadway miles, bicycle paths/lanes/route mileage were significantly increased between 2016 and 2020. The expansion of safe bicycle lanes within urban areas has been met with mixed reactions. The few cyclists who are using them are happy but the merchants losing customer parking spaces are not. The bicycle coalition is a strong voice but in reality, bike lanes on both sides of a street are routinely underutilized by cyclists. The construction of additional urban bike facilities should not come at the expense of a reduction in handicapped parking, etc. Bike facilities could easily be expanded along the road shoulders of freeways. They would be especially useful along I-8 which could function as an important link in the cross-country southern bicycle route.

20-37 --Table 4.14-6 on page 4.14-18 identifies the potential displacement of the residential and commercial land uses if the RTP was implemented, including the loss of 1234-acres of land under military use in 2050. **It is unclear in the RTP where this proposed loss of military land would occur and how it would affect military readiness. Provide amplifying information.**

20-38 --Page 4.15-49 discusses the requirement for the appropriate level of telecommunications infrastructure be included with any forecasted new development. However, the RTP fails to address the outstanding need for broadband infrastructure in many of the county's rural communities. **In the interests of social equity, the RTP must address strategies for real connectivity within our rural areas that would allow low-income residents access to remote education programs and to work from home.** Both of these could reduce VMT for residents living well outside of mobility hubs.

20-39 --Page 4.16-13 states that SANDAG does not regulate public or private parking within the region. However, in an effort to promote mass transit usage, SANDAG has developed a Parking Strategies for Smart Growth guide which, if implemented by in cities, would make affordable parking in urban areas a thing of the past.

20-40 --Page 4.16-23 describes some of the requirements of SB 375 as it pertains to regional GHG targets. The California Air Resources Board (CARB) has established per capita regional GHG reduction target for passenger vehicles for 2020 and 2035. Updated CARB targets of 15 percent reduction GHG below 2005 levels in 2020, and 19 percent below 2005 levels in 2035. These do not appear to align with the RTP's GHG reduction goals on page 4.16-45 which are 80 percent below 1990 levels. **Verify GHG reduction goals to ensure consistency.**

20-41 --Table 4.16-14 on page 4.16-40 shows a **374-lane mile reduction** in General Purpose Freeway Lanes from the baseline year 2016 to 2050 while HOV/Managed Lanes in 2050 reflect a 705-mile increase over the baseline year. **The addition of new freeway HOV lane miles should not come at the cost of reducing general purpose lanes as they will contribute to overall traffic congestion on our freeways.**

20-42 --Table 4.16-13 on page 4.16-39 shows a comparison of baseline year 2016 transit miles of service with transit service of 2050. **Where is usage data that shows that transit service in 2050 will require 2.8 times the number of 2016 transit miles? Where does the RTP address a**

6

### RESPONSE TO COMMENT 20-36

Build out of the Regional Bike Network along with investments in Complete Streets and Vision Zero programs are components of the proposed Plan that advance goals related to reducing GHG emissions, improving safety for all users, and advancing public health. SANDAG is unaware of any study indicating that it is either safe or effective to add bicycle lanes to freeway shoulders.

### RESPONSE TO COMMENT 20-37

Figure 4.11-3 in the Land Use section of the EIR identifies the military installations in the San Diego region. Table 4.14-6 identifies the potential loss of land uses with implementation of the proposed Plan (including a 500-foot buffer to provide a conservative estimate of impact). The potential impact on military lands that may occur with permanent ROW acquisitions from the proposed transportation projects would be addressed at the project-specific level of environmental analysis. As discussed in Appendix B of the proposed Plan, SANDAG is collaborating directly with Military Community Planning Liaison Officers to identify challenges, opportunities, and priority projects that support mission readiness and the region's transportation priorities.

### RESPONSE TO COMMENT 20-38

As discussed in detail in mitigation measure GHG-5d in Section 4.8, SANDAG will adopt a Regional Digital Equity Strategy and Action Plan that identifies and addresses gaps in accessing affordable, high-quality broadband service (Near-Term Action 6(c) in Appendix K). SANDAG will also participate in federal and State processes to support projects that increase access to broadband infrastructure, as well as pursue federal, State, and private partnerships to leverage additional dollars for these programs.

### RESPONSE TO COMMENT 20-39

Please note that the Parking Strategies for Smart Growth guide is referenced on page 4.16-13 of the Draft EIR.

SANDAG developed a *Parking Strategies for Smart Growth* guide as part of their *Planning Tools for the San Diego Region* (SANDAG 2010a). This guide provides a benchmark and compares the various parking regulations within the region, as well as how those regulations compare to national standards. Additionally, the guide provides example policies

on how jurisdictions can implement smart growth parking policies and programs. SANDAG also developed a regional parking management toolbox that provides jurisdictions within the San Diego region with a framework for evaluating, implementing, and managing parking management strategies that support their economic development, sustainability, and mobility goals.

**RESPONSE TO COMMENT 20-40**

This comment asserts that the per capita regional GHG reduction targets for passenger vehicles for 2020 and 2035 established for SANDAG by CARB “do not appear to align with the RTP’s GHG reduction goals,” which the commenter refers to as “80 percent below 1990 levels” by referencing Draft EIR page 4.16-45.

To clarify, Draft EIR page 4.16-45 is referring to the statewide goal established in EO S-3-05 for reducing GHG emissions from all emissions sectors in California to 80 percent below 1990 levels by 2050. The proposed Plan does not establish a reduction goal of reducing total regional emissions in the San Diego region to 80 percent below 1990 levels by 2050. The Draft EIR does provide an analysis of whether the proposed Plan would be inconsistent with the State’s ability to achieve the EO S-3-05 target of reducing emissions to 80 percent below 1990 levels by 2050 (Impact GHG-5, pages 4.8-31 to 4.8-35).

The proposed Plan is required by State law to include an SCS that will achieve the 2035 per capita regional GHG reduction targets for passenger vehicles, if it is feasible to do so. GHG reductions under SB 375 apply only to certain classes of passenger vehicles, are measured against a 2005 baseline, and are measured on a per capita basis. For these reasons GHG reductions required under SB 375 are not directly comparable to the statewide GHG reductions goals set forth in EO S-3-05.

**RESPONSE TO COMMENT 20-41**

Managed Lane investments are focused on making carpooling, vanpooling, and transit more time competitive with driving by ensuring these driving alternatives can use Managed Lanes to bypass congestion in general purpose lanes. Solo drivers who pay a fee will also have the opportunity to bypass traffic congestion. Conversion of general purpose lanes to create additional Managed/HOV lanes would be governed by federal and State laws and regulations. Increasing non-drive alone

travel choices such as carpooling/vanpooling and bicycle facilities is also important to the overall goal of reducing GHG emissions and VMT.

**RESPONSE TO COMMENT 20-42**

The performance of the proposed Plan is based on the best available data at this time. It will be important to continue to monitor trends and impacts on travel behavior as the Regional Plan is implemented and updated in the future. The proposed Plan's Priority Implementation Action 10 is to advance a data science program to better understand travel behavior in the region, update travel demand modeling tools, and improve transparency and reporting on program effectiveness and project delivery.

20-42 cont. | corresponding transportation benefit for rural residents who don't reside near mobility hubs who must use roadways as their primary method of travel?

20-43 | --Page 4.16-45 describes total VMT, household-generated VMT and light-duty VMT. (Hey fellas, can we make this more complicated?) The RTP uses "modeled" forecasts to develop transportation metrics and predict transportation requirements using 2016 as the baseline year. Complicated VMT models make assumptions that are unlikely to approach reality especially when models are used to make per capita VMT predictions that are 34-years out (2050). **2019 should be used as a baseline year and any VMT analysis predictions past 2035 are educated guesses at best.**

20-44 | --On page 5-65 in its description of the California-Baja California Border Master Plan, the RTP states that more than 30 million privately owned vehicles crossed the border from Mexico in 2015. This figure seems to be at odds with the figure of 2 million trucks crossing the border in 2019 that is found on page 2-49. **Clarify.**

20-45 | The JCSG and the residents of Jacumba reject the RTP for the following reasons:  
 --It is essentially an urban transportation benefits plan which residents in the rural area will be required to fund via VMT programs and road user fees which come on top of the gasoline taxes already paid at the pump. Road user fees should be only be applied to electric vehicles because they do not pay gasoline taxes. The vehicle registration program could include a flat fee for electric vehicle road usage and that would eliminate the need to require black boxes in vehicles to record VMT. Unfortunately, future increases to road user fees can be expected, as state and federal governments look for an easy source of revenue that can be thrown at a variety of programs. After all, history has proved there are no governmental "lock boxes." Even with the addition of many new transportation-related fees, the 2021 RTP acknowledges a funding shortfall of \$70 billion (2020 dollars) and this is real money.

20-46 | --The RTP uses outdated 2016 data to model many of its transportation predictions 34-years into the future (2050). It should at least be using 2019 data. SANDAG must do a better job of identifying the lasting impacts of the COVID-19 pandemic before shoveling billions of taxpayer dollars into an overly expensive plan that has been developed with faulty assumptions.

20-47 | --The RTP also seeks to institutionalize ever-increasing transportation fees and land use policies that would essentially raise the cost of renting, buying, or building a home in San Diego county. Additionally, the RTP would infringe upon the rights of residents to raise their families in the rural parts of the county.

20-48 | --Finally, the 2021 RTP admits that even if all the restrictive transportation programs described in the plan were approved it does not guarantee that local temperature and the sea levels won't rise. In fact, on page 4-8-35, the RTP states:  
 "Despite the transportation-related reductions under the proposed Plan implementation, total regional GHG emissions would exceed the reference points for 2050. Additional reductions would be needed in the transportation sector and in all other GHG sectors: energy; solid waste; water supply and wastewater; industrial processes; management of natural lands; etc. Achieving GHG

**RESPONSE TO COMMENT 20-43**

The data presented in this table are modeled results from SANDAG's Activity Based Model (ABM). This model can take into account several factors such as travel distance, speed, and network availability. The ABM is updated regularly with the latest available data and best practices to represent regional travel; please see Appendix S, *Travel Demand Modeling Tools*, of the proposed Plan for more information.

Regarding the assertion that VMT predictions past 2035 are educated guesses, the ABM is a state-of-the-art tool for analyzing the transportation network, land use pattern, and other policies of the proposed Plan; however, it is based on the information we know today. There are many emerging technologies and future behavior changes that could impact mode shift in the future. SANDAG will continue to use best available data and research on mobility to inform future updates of the ABM and estimated performance of the proposed Plan.

Please see response to comment JCSG 20-7 regarding the use of 2016 for the baseline year.

**RESPONSE TO COMMENT 20-44**

Page 5-65 of the Draft EIR references the total number of privately owned vehicles, including trucks, crossing the border, while page 2-49 references just trucks. These numbers are not conflicting, and no change has been made.

**RESPONSE TO COMMENT 20-45**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

Rural corridors, mostly located along state routes traversing the eastern two-thirds of the region, provide people access to rural towns and lands (including Jacumba), as well as connectivity to the interstate system. Rural corridors are economic lifelines for rural communities and the region's many tribal nations. Rural corridors provide access to jobs, education, and healthcare, as well as needed infrastructure for the movement of goods, deliveries, and emergency vehicles.

Along I-8 in East County, projects included in the proposed Plan benefit interchanges to this freeway with substantial safety improvements for SR 94, SR 76, and SR 79 and other state routes. Physical safety improvements are realized with a variety of projects including shoulder widening and curve straightening. Rural and tribal communities also

need new investments in broadband infrastructure. This infrastructure is an essential part of the transportation technology envisioned along rural corridors, by providing travelers with real-time travel information and enabling access to Flexible Fleet options such as shuttles and other on-demand transportation services. But it will not only improve mobility along rural corridors; it will enable residents to work remotely, learn online, and conduct other business over the internet.

Technology enhancements such as ATDM, as well as SIS, are also aimed at improving safety. These improvements provide people with a variety of benefits, including expediting the movement of goods to rural communities during disaster recovery efforts. Projects related to ATDM will provide motorists with real time roadway conditions, including speeds, roadway visibility conditions, and other tactical information. Smart sensors, closed circuit television cameras, changeable message signs, and traffic detection equipment will all help provide people with a safer environment to walk and bike, while also adding the capability to prioritize the movement of freight or emergency vehicles along a rural corridor.

Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like GHG emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle: the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently fund different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.

The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed

program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.

The road usage charge, which is being studied by both the federal and State governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, and fair to all.

The proposed Plan is revenue constrained, as required by 23 CFR 450.324 (f) and the California Transportation Commission Regional Transportation Plan Guidelines for Metropolitan Planning Organizations (2017). Funding sources for the proposed Plan are detailed in Appendix V of the Plan.

#### **RESPONSE TO COMMENT 20-46**

This comment addresses the proposed Plan and is not related to EIR adequacy.

The proposed Plan is unique, as it was developed over 6 years rather than 4 years. In October 2019, AB 1730 (Gonzalez) was signed into law, authorizing a 2-year extension for the RTP/SCS for the San Diego region and deeming the 2015 Regional Plan, its SCS, and Final EIR valid for State compliance, funding eligibility, and other purposes through 2021. Due to this extended timeframe, the proposed Plan has a baseline of 2016, which is 2 years older than would be typical in past Regional Plan EIRs. The COVID-19 pandemic is a very recent phenomenon that fell in the middle of the planning efforts related to the proposed Plan. The long-term effects of the pandemic on the region, specifically related to transportation, have yet to fully emerge. SANDAG is mandated by State law (AB 1730) to adopt the current iteration of its RTP/SCS by December 31, 2021. However, as noted under response to comment JCSG 20-43, the Regional Plan and its SCS are iterative planning documents that are typically updated every four years to account for new data, analysis, policy, and experience. The longer-term effects of the pandemic will be taken into account during the subsequent iterations of the Regional Plan.

**RESPONSE TO COMMENT 20-47**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

**RESPONSE TO COMMENT 20-48**

This comment accurately cites language in the Draft EIR stating that achieving GHG reductions “at the scale required would require major changes to government regulation, private sector activity, consumer behavior, and other facets of life. . .” However, it incorrectly implies that the proposed Plan outcome should guarantee that local temperatures and sea levels would not rise. The basic purposes of CEQA are to inform government decision makers and the public about potential significant environmental impacts of projects, identify ways the impacts can be reduced or avoided, prevent significant avoidable environmental damage through alternatives and mitigation, and disclose to the public the reason that decision makers approved a project that may result in unavoidable significant impacts. The lead agency is required to consider the information in the EIR, along with any other relevant information, in making its decisions on the project approval. The Draft EIR accomplishes the basic purposes of CEQA, and the SANDAG Board of Directors will consider the information in making its decision on the Plan.

20-48 cont. | reductions for these sectors at the scale required would require major changes to government regulation, private sector activity, consumer behavior, and other facets of life..."

20-49 | **It is for the reasons stated above and others, that the JCSG recommends the "No Project" RTP alternative outlined in the DEIR. We reject the Draft 2021 Regional Transportation Plan as it is written.** Attachment A provides some of our previous comments on the draft 2021 RTP.

Sincerely,

San Diego County Department of Planning and Development Services (PDS)

Subject: Comments on the San Diego Association of Governments (SANDAG's) Draft 2021 Regional Plan

August 6, 2021

Dear Mr. Talleh,

20-50 On July 16, 2021, community planning/sponsor groups were asked to provide their comments on the draft May 2021 San Diego Forward-The 2021 Regional Plan and its thirty-one lengthy and detailed appendices. Although this was an exceptionally short review period, the Jacumba Sponsor Group has the following comments.

This draft plan identifies interdependent transformative strategies designed to address the greatest transportation and mobility challenges that the region faces: safety and traffic congestion; social inequities; and state and federal requirements to reduce greenhouse gas (GHG) emissions and air pollution—and they are noble goals. However, it makes many unsubstantiated assumptions based on inadequate data from which it then draws conclusions.

On page 10, the plan states that in 2019, greater than 90 percent of CA-MEX trade was moved by truck across the international border. A great fact to know, but where does your regional plan address and mitigate for the smoggy trucks registered in Mexico that are hauling those goods? Will the plan only regulate the emissions of vehicles registered in San Diego County (or California) while out-state and out-of-country (Mexican) vehicles get a “free pass?”

On page 12, the plan states: “from 2016 to 2050, nearly 60 percent of population growth will be among those who are 75 years and older.” Will this aging population (60 percent who are projected to be people of color), feel physically safe while using public transit (buses, trams, trolleys) during evening/night time? Will they all have smart phones and be able to navigate a smart phone application that gives them a choice of transportation modality based on a variety factors including CO<sub>2</sub> emissions?

On page 15, the plan states that if the 2021 plan was implemented, “By 2050, this could result in 13 percent of commuters using transit (up from 3 percent today) and that there would be a substantial decline in commuters driving alone to work (from 80 percent today to 62 percent in 2050). Those figures do not reflect any significant behavioral changes regarding transportation choices given that this plan would greatly expand mass transit frequency and routes. In 2021, many city busses are carrying just two to three passengers while trolleys carry more passengers depending on their routes. How realistic are the 2021 plan’s predicted increases? Were urban residents asked about factors that would actually make them leave their cars and use mass transit instead? Was the current trend of working remotely from home factored into these calculations? What if the public perceives that it is not in their best interests to share a bus or a trolley with a group of strangers who may or may not be healthy? What happens when the next pandemic

**RESPONSE TO COMMENT 20-50**

Thank you for including a copy of JCSG’s comments on the proposed Plan. For detailed responses to these comments, please refer to responses beginning on L217 in Appendix P.2.

impacts our region and mass transit shuts down for public safety reasons? Clearly more studies on the current trends in mass transit usage must be analyzed before the predictions contained in this plan can be validated. Also, additional studies on post-COVID mass transit usage figures are critical. Analysts should avoid using the data from any month when all mass transit ridership fares have been waived, as they will skew the data. (This will happen in September 2021.)

On page 25, the 2021 plan calls for providing a variety of transit riders with reduced fares (seniors, low-income, students, youth and the disabled). This is fiscally untenable. What is the actual cost per passenger mile on a bus, trolley, or light rail? **Appendix A predicts that in 2020 dollars, transit fare subsidies in 2035 will be \$982 million dollars and in 2050, subsidies will be \$4 BILLION dollars which means that the answer to the previous question about the cost per passenger mile must be too high to print!!!** This plan cannot seriously contemplate spending \$4 billion dollars to possibly achieve a 13 percent increase in mass transit ridership.

The 2021 plan which seeks to “reimagine” regional transportation strategies appears to be a huge and costly wish list of programs and government regulations directed primarily at changing residents’ driving behavior at a tremendous loss of personal freedoms. It envisions spending millions of dollars to create an expanded bike network with corridors by 2050. Again, where is the data that shows that kind of expenditure will get more people out of their cars and onto bicycles? A recent case in point: the removal of 400 parking spaces along the business district on 30<sup>th</sup> Street in the North Park area so that bike lanes, that are rarely used to commuting to and from work, could be installed. Not only are the merchants upset about the loss of customer parking and business, but delivery trucks are now blocking bike lanes to make their deliveries and handicapped parking has become confusing for those who need it. The 2021 plan will greatly expand on that unpopular and costly transportation strategy.

Under this plan, transportation in and around mobility hubs or areas of concentrated development (cities) would be highly regulated with curb management regulations/fees based on the time of day parking rates, and ride-hailing opportunities. Ride-hailing at mobility hubs is described as offering people on-demand vehicles for short and long-distance trips, possibly subscription-based services which would “allow people to reserve a vehicle that best serves the needs of their trip.” So, it is okay to rent/drive a vehicle but just not to personally own a vehicle?

On page 32, the plan states: “In the San Diego region, almost half of all trips are three miles or less, and most everyday trips are made within neighborhoods using local streets.” Where is the data to back up this statement? This page also states: “On average, one person is killed or seriously injured in traffic violence everyday in the region.” Everyone understands the safety risks that they take when they drive a car and they believe those risks to be acceptable. Again, no driving statistics are referenced, and of course, the plan does not provide data on the numbers of people who are mugged walking down the region’s streets or at trolley stations, etc.

Everyone agrees that climate change is real. On page 34, several climate strategies are listed. The blue pie chart at the top of the page lists “collecting rainwater” as one viable climate mitigation strategy. Why doesn’t this 2021 plan identify more impactful strategies such as building new reservoirs/expanding existing ones or building additional desalinization plants? It should be noted, that even if the 2021 plan is implemented, it will not stop the sea levels from rising.

This plan would require employers and developers to provide transportation benefits and on-site amenities to encourage people to use sustainable transportation choices. Does the County want even more businesses to flee California for a friendlier business climate? Employers can figure out how to use flexible work schedules and tele-work options to attract and sustain their workforce without unnecessary government intervention/regulation.

Of course, of the 2021 plan's proposed transportation management "strategies" come at a huge cost (\$163 billion dollars). The plan identifies \$90 billion dollars that will come from local funding sources: sales taxes, impact fees, fuel taxes, roads tolls, increased passenger fares, general funds, housing revenue, ride-hailing fees, value pricing, and road user charges also called vehicle miles travelled (VMT). Road usage fees or VMT, which have yet to be implemented through legislation, are needed to offset the reduction in gasoline taxes as more electric vehicles (EV) use our roadways. Under this plan, VMT fees would come on top of the existing federal, state, and local gasoline taxes, and they would unfairly penalize the drivers of gas-powered vehicles, who frequently are low-income and minority residents who live in the rural areas of the County. (VMT would not be collected on out-of-state vehicles.) Under the 2021 plan, fees of all kinds would be raised, including variable road tolls based on the time of day (congestion), fees for solo drivers using carpool lanes, and fees for ride-sharing services like Uber. The fees and regulations imposed by this plan will disproportionately impact low-income residents, while the plan claims to promote social equity. They are the ones who will not be able to afford to park/drive their own private vehicles while private transportation choices of more affluent residents will not be affected.

Figure 3.3 on page 50 shows the 2021 Regional Plan Expenditures with an estimated total of \$163 billion in 2020 dollars. There needs to be a similar pie chart within the 2021 plan that shows how much money will be spent on each transportation category: Transit Leap (mass transit), mobility hubs, complete corridors, bicycle network, highway improvements etc. Although there may be appendices that list all the funding for a specific category, it is unlikely that most people will wade through all of them to find that important information.

On page 53 of the 2021 Regional plan is a list of a priority implementation actions. Number 1 on the list is "Apply the Social Equity Planning Framework". Number 10 on this list is: "Advance a data science program to better understand travel behavior in the region." These priorities should be reversed. **You can't apply a framework or develop a meaningful plan until there is solid and recent (post COVID) transportation data!**

This very expensive "Lamborghini" transportation plan with its "woke" statements about social equity and its claims to "strengthen a sense of place," is a direct assault on the personal transportation choices of San Diego County residents. County leaders must choose a less expensive "Toyota" plan that will not transform "America's Finest City" into a third-rate economy where only the wealthy residents can still afford to own and drive a car.

**Subject:** Questions re: dEIR for the regional plan

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

Mr. Greer, these are the questions I raised during the Sept. 17 SANDAG joint committees hearing; I was disappointed that there was no response during the hearing; please provide responses in reply to this email:

- 21-1 • The dEIR analysis of GHG production: Is this analysis of production of GHGs from ALL sectors and operations in the San Diego region - not just from the transportation sector, but from all including land use, energy, agriculture, etc? If so, from the proposed project what is the analysis of GHG production from JUST the transportation sector?
- 21-2 • Given that the dEIR project alternative 3 is the environmentally superior alternative, and I assume including reduction in production of GHGs, why would this alternative not be the recommended alternative to adopt as the 2021 regional plan?

Craig Jones  
 858-354-1785  
[bananashke@sbccglobal.net](mailto:bananashke@sbccglobal.net)

**RESPONSE TO COMMENT 21-1**

The comment asks whether the Draft EIR analysis of “GHG production” includes only the transportation sector or also includes other sectors and operations in the San Diego, and also asks for “the analysis of GHG production from JUST the transportation sector.”

In Impacts GHG-1 and GHG-5, the Draft EIR analysis is based on GHG emissions projections from 15 emissions categories, including the on-road transportation and off-road transportation sectors (Draft EIR pages 4.8-19- to 4.8-26; pages 4.8-31 to 4.8-35). The analysis in Impacts GHG-1 and GHG-5 is based on the *2016 GHG Inventory and Projections for the San Diego Region* report (Draft EIR Appendix H). This report provides an estimate of 2016 GHG emissions for the San Diego region and GHG projections for the years 2025, 2030, 2035, 2045, and 2050.

In Impact GHG-3, the Draft EIR analysis is based on GHG emissions projections from the entire on-road transportation sector (Draft EIR pages 4.8-28 to 4.8-29). The on-road transportation sector is defined in Impact GHG-3 as passenger cars and light-duty trucks and heavy-duty trucks and vehicles (Draft EIR page 4.8-28).

The comment does not raise any issues with the adequacy of the Draft EIR and no further response is required.

**RESPONSE TO COMMENT 21-2**

CEQA does not require that lead agencies adopt the environmentally superior alternative. At the conclusion of the EIR process, the decision-makers (in this case the SANDAG Board of Directors) makes final determinations as to the feasibility of alternatives, considering information in the Draft EIR, additional information in the Final EIR and elsewhere in the administrative record, and policy factors. (See CEQA Guidelines Section 15091(a)(3).) Therefore, this comment will be provided to the Board of Directors and will be considered before it makes a decision on adopting a final Regional Plan.

**COMMENT LETTER 22: SAN DIEGO COUNTY LOCAL AGENCY FORMATION COMMISSION**

Comment Letter 22

**San Diego County**

 San Diego County Local Agency Formation Commission

**SUBJECT:** SD LAFCO Comment Letter |  
 Draft Environmental Impact Report (EIR) for SANDAG's 2021 Regional Plan

22-1

The San Diego County Local Agency Formation Commission (LAFCO) appreciates the opportunity to review the program-level Draft Environmental Impact Report (EIR) prepared as part of SANDAG's 2021 Regional Plan. LAFCO's review is premised as potential responsible agency, and specifically exercising its separate planning and regulatory activities in response and/or in alignment to the Regional Plan. This includes addressing LAFCO's own task under Government Code Section 56668(g) to consider the merits of all jurisdictional changes relative to regional transportation plans.

With the preceding framing in mind, LAFCO has reviewed the DEIR and have no material comments to provide at this time. We will – nonetheless – continue to monitor the EIR process and are available to SANDAG staff to coordinate as appropriate.

Respectfully,  
  
 Priscilla Allen  
 Analyst I

Re: Comments on the Draft Program EIR for San Diego Forward: The 2021 Regional Plan

Dear Ms. Uchitel:

23-1 The focus of the comments herein on the subject DEIR is one of the proposed Regional Plan's Major Travel Corridors - Coast, Canyons, and Trails, specifically trail-related impacts on wildlife. Here, "trail-related impacts on wildlife" refers to negative indirect impacts / effects on wildlife from the construction and/or use of trails and bikeways for recreation, commuting, or local trips. The wildlife species of concern are those living in, passing through, or somehow relying on lands conserved for the perpetuation of viable populations of sensitive species pursuant to the approved and draft NCCPs/HCPs in San Diego County, and otherwise conserved lands such as CDFW's ecological reserves and USFWS's national wildlife refuges.

The construction and human use of such trails / bikeways is an admittedly minor component of the proposed Plan; and, this focus is in no way intended to minimize the importance of any other aspects of the proposed Plan, but rather only to highlight DEIR's inadequacies on this matter.

23-2 The DEIR identifies several trail / trail segments and bikeways among the projects of the proposed Plan.<sup>1</sup> The following two CEQA significance criteria in the DEIR are the most pertinent to the construction and use of trails and bikeways.

BIO-2 Have a substantial adverse effect, either directly or indirectly, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or listed by CDFW or USFWS, including their federally designated critical habitat, or species that are considered sensitive in CEQA Guidelines section 15380.

BIO-3 Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

Please note the following four points.

<sup>1</sup> The following are the trail / trail segments among the projects of the proposed Plan: California Coastal Trail, Coastal Rail Trail, San Diego River Trail - Carlton Oaks Segment, San Diego River Trail - Mast Park to Lakeside baseball park, San Luis Rey River Trail, and Inland Rail Trail: Oceanside (tables on pages E-63 to E-77 in the DEIR's Appendix E - Biological Resources - <https://www.sandag.org/files/2021/09/2021-regional-plan-eir-appendix-e-biological-resources.pdf>).

**RESPONSE TO COMMENT 23-1**

Thank you for your participation in the environmental review process. Further responses to your comments are provided below. SANDAG appreciates and shares your concerns on the importance of wildlife protection from the effects of trails and bikeways.

**RESPONSE TO COMMENT 23-2**

SANDAG appreciates the summary of the EIR's biological mitigation measures that pertain to the construction and use of trails and bikeways.

- 23-3 1. The discussion in the DEIR of indirect impacts under Bio-3 mentions human disturbance from increased human presence, and the importance of riparian corridors to regional connectivity, describing corridors as often being the only connections left to large core habitat patches (page 4.4-98). However, the proposed mitigation measures for significant impacts to which the two above significance criteria apply are inadequate to address the need to provide perpetual adaptive management associated with the indirect impacts on wildlife from human disturbance.<sup>2</sup>
- 23-4 2. Not found (though possibly missed in review) in the EIR is evidence of consideration of a potential project-related increase in the human use of trails (on NCCP/HCP and other conserved lands) that lead to any of the trails and bikeways identified on the DEIR.
- 23-5 3. The analyses in the DEIR for direct impacts for years 2025, 2035, and 2050, state, “Bikeways would have relatively little impact on corridors as most are within or directly adjacent to developed areas.... The increased presence of humans in some riparian areas (e.g., Coastal Rail Trail, San Diego River Trail) may alter wildlife behavior, but these areas are already heavily disturbed by human presence.” The fact that the identified riparian areas are already heavily disturbed by human presence does not obviate the need to mitigate for added project-related levels of human disturbance.
- 23-6 4. The preceding three points are concerning with respect to wildlife species requiring sound management of the NCCP/HCP and other conserved lands in San Diego County. Consequently, please add the following to the final EIR.
- A. A discussion of the potential for project-related increase in the human use of trails (on NCCP/HCP and other conserved lands) that lead to any of the trails and bikeways identified on the DEIR, an analysis of the impacts on wildlife from increased levels of human use, and mitigation measures to address the increased levels.
- B. Mitigation measures to provide the following at project-specific levels.
- i. Site trails / bikeways outside of NCCP/HCP and other conserved lands wherever feasible.
- ii. Studies (e.g., BACI) should be designed and implemented by biologists well-grounded in recreation ecology<sup>3</sup> to assess the trail-related indirect impacts on wildlife for both (a) existing trails / bikeways that experience an increase in project-related use, and (b) new

<sup>2</sup> Indirect effects / impacts may have an effect later in time or are farther removed in distance, but are still reasonably foreseeable and attributable to project-related activities (DEIR page 4.4-61). Examples of such impacts from human disturbance of wildlife are (a) disruptions of animals' behavior, physiological processes, natural movement patterns used for foraging/hunting, and/or (b) rendering foraging/hunting/resting/feeding areas functionally inaccessible. Such impacts are most serious when long lasting and/or the affected wildlife don't have elsewhere to go to meet their needs (i.e., no other suitable habitat is available to them within a distance or linkage they could safely travel) – refer to sources in footnote 3.

<sup>3</sup> As reflected in studies conducted on NCCP/HCP-conserved lands in San Diego and Orange County, such studies should have been occurring regularly as part of the implementation of the NCCPs/HCPs in the region to inform adaptive management for public use of the conserved lands; two reasons they have not been done as needed are lack of sufficient funding and the fact that this issue is as yet inadequately recognized and addressed despite the documented evidence for it. Regarding the insufficient funding, refer, for example, to Appendix AA of the DEIR <https://www.sandag.org/sites/default/files/2021-08/Appendix%20AA%20-%20Sierra%20Club%20-%202021%20-%20Letter%20to%20SANDAG%20on%20the%20Regional%20Plan.pdf> and the Sierra Club's August 2, 2021, letter to SANDAG on the Regional Plan. The SDMMP provides related information at <https://www.sandag.org/sites/default/files/2021-08/SDMMP%20-%202021%20-%20Letter%20to%20SANDAG%20on%20the%20Regional%20Plan.pdf>. Also refer to <https://www.sandag.org/sites/default/files/2021-08/SDMMP%20-%202021%20-%20Letter%20to%20SANDAG%20on%20the%20Regional%20Plan.pdf> specifically the articles at <https://www.sandag.org/sites/default/files/2021-08/SDMMP%20-%202021%20-%20Letter%20to%20SANDAG%20on%20the%20Regional%20Plan.pdf> and <https://www.sandag.org/sites/default/files/2021-08/SDMMP%20-%202021%20-%20Letter%20to%20SANDAG%20on%20the%20Regional%20Plan.pdf>.

### RESPONSE TO COMMENT 23-3

Mitigation measure BIO-3, *Facilitate Wildlife Movement* (page 4.4-106), identifies measures for indirect impacts on wildlife movement corridors, including designing to avoid impacts on wildlife corridors and the preparation of wildlife movement studies where no data exist. In order to capture adaptive management and monitoring as suggested by the comment, the following text has been added to the first paragraph:

Conduct wildlife movement studies and Before-After-Control-Impact-Studies (BACI) where data are lacking, identify corridor widths and wildlife crossing structures, and consider balancing conservation and recreation (Mitrovich et al. 2020) in project design. Include adaptive management and monitoring measures in the CEQA review, mitigation measures, and project design.

### RESPONSE TO COMMENT 23-4

Page 4.4-83 (BIO-2) addresses potential impacts from human use on sensitive species resulting from land use changes and regional growth. Consistency with the HCPs is addressed in BIO-4, which assumes that the proposed Plan is consistent with all HCPs. Allowable uses, including recreational trails, are identified in the respective adopted NCCP Subarea Plans, and land use adjacency analyses conducted on the project-specific CEQA level would identify any conflicts with Subarea Plans and require mitigation.

### RESPONSE TO COMMENT 23-5

DAG appreciates your comment. In order to mitigate for added project-related levels of human disturbance, the following revisions have been made to mitigation measure BIO-3:

- Allow corridor buffer zones and wide movement corridors to remain or incorporate periodic larger habitat patches along a corridor's length.
- Where feasible, site linear projects, including pedestrian trails, away from wildlife corridors and conserved lands or NCCP lands.
- Where feasible, prohibit night-time trail use and enforce seasonal trail closure, and plan access points and infrastructure carefully to minimize the effects on biological resources and wildlife corridors.

- As feasible, within 200 feet of a wildlife corridor, use non-reflective glass or glass treated with non-reflective coating for all exterior windows and building surfaces.
- Use only native species for landscaping within at least 200 feet of identified wildlife corridors.
- Incorporate dimmed, shielded, and directed lighting in areas near corridors that only illuminate the project site; consider high pressure sodium or cut-off fixtures as feasible, and provide vegetative screening to reduce light pollution on corridors.
- Include permanent noise barriers and sound-attenuating features as part of the project design, and incorporate temporary noise barriers and noise-reduction devices on equipment during construction; require the use of hydraulically or electrically powered tools, as feasible. Barriers could be in the form of outdoor barriers, sound walls, buildings, or earth berms to attenuate noise at adjacent sensitive uses.
- Install physical barriers (e.g., wildlife fencing) that prevent human and/or domestic predator entry into the corridor and, if appropriate, limit the amount of noise and lighting that enters the corridor. Use techniques such as grade separation, buffer zones, landscaped berms, dense plantings, sound walls, reduced-noise paving materials (i.e. rubberized asphalt), and traffic calming measures.

#### **RESPONSE TO COMMENT 23-6**

Thank you for identifying potential indirect impacts on wildlife species and corridors. As addressed in the response to the preceding comments, and as correctly stated, increase of human use would be addressed on the project-specific level; see also response to comments Lucas 23-3 and 23-4. Informed by studies on the recreational impacts on wildlife (i.e. M. Mitrovich, C. L. Larson, K. Barrows, M. Beck, and R. Unger. 2020. *Balancing Conservation and Recreation*. California Fish and Wildlife, Recreation Special Issue; 11–28), the following bullets were added to the BIO-3 mitigation paragraph:

- Where feasible, site linear projects, including pedestrian trails, away from wildlife corridors and conserved lands or NCCP lands.
- Where feasible, prohibit night-time trail use and enforce seasonal trail closure, and plan access points and infrastructure carefully to minimize the effects on biological resources and wildlife corridors.

With regards to funding and Appendix AA (see Footnote 3), please refer to Master Response 1 for discussions regarding including a regional habitat conservation fund.

23-8 cont. trails and bikeways. For "a," the studies will inform adaptive management. For "b" the studies must be conducted and the data analyzed during initial planning of contemplated trails, prior to CEQA or any environmental review. Until data are gathered and analyzed, it is infeasible to defensibly determine whether such impacts are significant and, if they are, whether an existing level of use continue or a new project should proceed, and, if so, what management / mitigation should be provided.

23-7 C. A requirement to set aside transportation dollars for the studies in B(ii) and associated resulting mitigation / perpetual adaptive management with realistic alternatives to select from to adaptively manage effectively. This funding should be at least at a level commensurate with the reliance on commuting by bike (including e-bikes) and foot to meet the VMT and GHG emission reductions. This required set-aside should be possible with (a) \$40 million by 2025 to be allocated to projects that reduce GHG emissions and for updates to CAPs or GHG reduction plans and (b) an additional \$40 million by 2025 to be allocated to the implementation of nature-based climate solutions to remove CO<sub>2</sub> from the atmosphere.<sup>4</sup>

23-8 In closing, climate change has and will continue to negatively affect most wildlife species. The degree to which the use of trails / bikeways in San Diego County diminishes the rate of climate change will factor into weighing the relative importance of protecting wildlife from trail-related impacts. However, in efforts to address climate change by increasing use of trails and bikeways, please do not jeopardize the decades of effort, time, energy, and funding dedicated to conservation in the region by burdening the conserved lands with new trails and bikeways or higher level of human use of existing trails and bikeways. There is a perpetual need to uphold the conservation achieved and meet the associated regulatory obligations. And, it is well documented that trail-related disturbance of wildlife on lands conserved expressly for them must be taken seriously.

Thank you for the opportunity to comment on the DEIR.

Libby Lucas

<sup>4</sup> This assumes that the funding is realized and that, for example, carbon sequestration projects may occur within lands conserved for wildlife species and there will be existing or new trails in some of these areas.

**RESPONSE TO COMMENT 23-7**

To meet the region’s habitat conservation goals, the proposed Plan identifies approximately \$3 billion for habitat-related efforts. This includes \$2,087 million for an enhanced habitat conservation, management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan), and \$300 to \$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan).

**RESPONSE TO COMMENT 23-8**

SANDAG appreciates the commenter’s concerns. The proposed Plan includes a Climate Adaptation and Resilience Program that takes into consideration the potential effects of and solutions to climate change. Climate change has been a key topic throughout the Draft EIR and is discussed in detail in Appendix C, *Climate Change Projections, Impacts, and Adaptation*.

24-2 Many thanks for your thoughtful reminder. Becoming ancient has brought on constant overload as my colleagues decline in number and/or acuity. Our favorite Editor is on leave so please bear with my stumbling verbiage, not meant to offend.

Citizens for Responsible Watershed Management  
comment to 2021 SANDAG Regional Plan

24-3 The focus of this plan on improving effectiveness of previous plans reveals limitations of information and/or education on the part of authors who did not factor in the publicly beneficial effects of compliance with the 1945 CA Water Code.

What does this have to do with transit planning?

24-4 That Landmark State Law specifically and repeatedly

**RESPONSE TO COMMENT 24-2**

This comment is an explanation of the previously submitted blank email SANDAG received. SANDAG appreciates your feedback on the Draft EIR. Please see responses below for the comments provided in this letter.

**RESPONSE TO COMMENT 24-3**

Section 4.10.2 of the *Hydrology and Water Quality* section in the EIR, includes all of the applicable federal, State, and regional and local laws, regulations, plans, and policies applicable to the proposed Plan. Applicable sections of the California Water Code were included and analyzed to determine if implementation of the proposed Plan would result in a significant hydrology and water quality impact. The analysis in Section 4.10.4 of the EIR concluded that with compliance with regulatory requirements the proposed Plan’s impacts on hydrology and water quality are less than significant.

**RESPONSE TO COMMENT 24-4**

Please see response to comment Marple 24-3.

24.4  
cont. instructed all Southern CA agencies to;  
“guide all or any stormwaters into soils of the District”

24.5 We need no civil engineering expertise to recognize beneficial alternatives to ‘traditional’ transit planning that would become open to present planners if this simple instruction was complied with.  
- If all San Diego landscapes are managed like the USEPA mode of Phoenix to retain rainfall so that it soaks into the soil, no runoff of water would occur.  
- If there is no runoff then storm drains would not dump rainfall into canyons so these could become ‘secondary transit’ routes, as in Phoenix.

24.6 If planners find these concepts confusing then we may reasonably assume they’ve not ‘done their homework’ well enough to recognize public benefit from providing a convenient, safe, economical alternative to riding a bike in traffic or owning an automobile.

24.7 Public servants who manage transit systems should be aware of all costs/benefits of non-auto travel routes and produce a comprehensive study of these from National and Worldwide models. Only then will San Diego citizens be able to vote wisely for candidates who will demand multi-layered transit planning.

If residents have convenient paths-trails-travelways simple economics would reduce car ownership and thereby bring an overall improvement in traffic flow.

24.8 Has the scope of benefits from this reduction been identified? Have results of reduced auto traffic been

**RESPONSE TO COMMENT 24-5**

Please see response to comment Marple 24-3. As discussed in additional detail in Section 4.10, through the various regulatory requirements to incorporate hydromodification and low impact development (LID) measures, projects implementing the proposed Plan would maintain pre-development hydrology, and would reduce, infiltrate, and properly manage stormwater runoff such that on- or offsite flooding would not occur.

**RESPONSE TO COMMENT 24-6**

For further information, refer to the proposed Plan, which discusses in additional detail the Plan’s strategy for creating an integrated transportation system, including one with Complete Corridors that prioritize access to roadways for public transit, active transportation, and shared mobility services. The Active Transportation Network is a critical part of the proposed Plan that represents critical connections needed to get people around and is more than just bike facilities. As is the case with current SANDAG Active Transportation projects, each of these facilities also includes safety and connectivity enhancements for people walking, riding micromobility or transit, and driving. That said, this comment is not a comment about the content or analysis of the Draft EIR, and, as such, no further response is required.

**RESPONSE TO COMMENT 24-7**

SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms.

**RESPONSE TO COMMENT 24-8**

The proposed Plan includes a number of investments in active transportation including the regional bike network, local bike projects through local streets and road funding as well as complete street investments in mobility hubs, mobility hub amenities (including secure bike parking and e-bike charging), an e-bike incentive program, and Vision Zero programs. In addition, Appendix B describes implementation actions for the proposed Plan, which includes a Regional Active Transportation Plan (including updated Regional Bike

Plan), Comprehensive Multimodal Corridor Plans, Regional Vision Zero Action Plan (including Regional Safety Policy), updating SANDAG grant programs, a quick build program for complete streets, and transportation demand management grants and incentives.

Also, as discussed in comment Marple 24-7, SANDAG will conduct a study that will focus on calculating the true cost of driving. Equity will be a very important component of that study. That said, this comment does not appear to provide a specific comment about the content or analysis of the Draft EIR and no further response is required.

24-8  
cont. evaluated and illustrated to the public?  
It is obvious that the less wealthy population would benefit most from a dense network of non-auto trails, but so too would drivers, due to reduced traffic.

A fully developed web of travelways for those who would benefit most from not owning a car would be a proper goal for officials seeking equitable plans.

24-9 SANDAG planning has been focused on expanding vehicular travel systems and creating bike lanes.  
Forming a network of non-auto travel routes would give all residents the free or inexpensive option of walking, biking, ‘scooters’ or using minibus units to reach local destinations.

24-10 For these reasons, addressing the issue of failure to comply with CA Law intended to prevent flooding of canyons would be a major step toward restoring the public’s right to convenient, safe, free pedestrian passage throughout all communities.

24-11 Has SANDAG performed a fully comprehensive study of ‘secondary transit’ that uses canyons, highway ROWs and ‘back streets’ to form a web of safe paths-trails-travelways along these routes?

24-12 To summarize:  
San Diego residents have shown minimal interest in working with SANDAG because it presents choices between its preferred plans, does not fully illustrate all transit planning options for public consideration.

**RESPONSE TO COMMENT 24-9**

Please see response to comment Marple 24-6.

**RESPONSE TO COMMENT 24-10**

Please see response to comment Marple 24-3.

**RESPONSE TO COMMENT 24-11**

Many of the Complete Corridor projects in the proposed Plan utilize existing right-of-way and, in many cases, existing roadway shoulders without encroaching into any additional land. This will greatly reduce environmental impacts, speed project delivery, and reduce costs. Where this is not an option additional project-specific outreach and engagement will be conducted with affected residents and stakeholders. This process aims to develop projects with minimal impacts.

In addition, as referenced in comment Marple 24-8, SANDAG will prepare a Regional Active Transportation Plan that will revisit future active transportation investments, including the feasibility of investments along travel ways such as those listed in the comment.

Thank you for your comment and consideration of the proposed Plan. Please see response to comment Marple 24-3

**RESPONSE TO COMMENT 24-12**

This comment appears to assert that the Draft EIR does not analyze a reasonable range of alternatives.

As the Draft EIR explains (page 6-1), SANDAG considered public input provided during the EIR scoping process, and used this input develop the reasonable range of alternatives. Public input requested alternatives that reduce GHG emissions, air quality impacts, and VMT. The alternatives selected for detailed consideration incorporate many of the major transportation investments and policy options that commenters suggested.

Notably, alternatives do not need to be environmentally superior in all respects to the proposed Project. Courts have noted that for complex projects with a wide scope, “it is practically impossible to imagine an alternative that would provide substantial environmental advantages in all respects” (*Sierra Club v. City of Orange* (2008) 163 Cal. App. 4th 523).

Please see Master Response 1 for additional discussion of alternatives evaluated in the EIR. Please see response to comment Marple 24-5 regarding stormwater management planning.

24-12  
cont.

Integrating its planning with that of every community to maximize rainwater management in keeping with the spirit and intent of the CA Water Code would be a major step toward upgrading the planning process.

Comment Letter 25

**CITY OF OCEANSIDE**  
OFFICE OF CITY MANAGER

October 11, 2021

Mr. Hasan Ikhtrata  
Executive Director  
San Diego Association of Governments (SANDAG)  
401 B Street, Suite 800  
San Diego, CA 92101

RE: Draft Environmental Impact Report for the 2021 Regional Plan

Dear Mr. Ikhtrata:

25-1 The City of Oceanside ("City") appreciates the opportunity to comment on the Draft Environmental Impact Report (EIR) for the 2021 Regional Plan ("the proposed Plan"), which combines the Regional Transportation Plan, Sustainable Communities Strategy, and Regional Comprehensive Plan. The proposed Plan looks ahead to 2050, with the purpose of addressing many systematic transportation challenges faced by the entire San Diego region. The City acknowledges SANDAG's bold vision for a transformed mobility network that promotes convenient and cost-effective transportation options, smart growth, environmental justice, social equity, and Greenhouse Gas emissions reduction. However, the City would like to take this opportunity to identify significant concerns regarding 1.) the proposed Plan and Draft EIR's growth projections and land use assumptions for Oceanside, and 2.) SANDAG's continued lack of funding allocation, support, or implementation of two important regional transportation projects identified and relied on in the proposed Plan. These inadequacies effectively result in miscalculated environmental impacts and insufficient analysis pursuant to the California Environmental Quality Act (CEQA). The City's comments on these two issues are detailed below:

The proposed Plan and associated environmental analysis inadequately address Oceanside's growth and land use assumptions, forecasts, and planning efforts.

25-2 In a letter to SANDAG on the proposed Plan from the City's Development Services Department, dated August 6, 2021, City staff raised concerns about the proposed Plan's significant underestimation and inconsistent acknowledgement of Oceanside's growth assumptions and land use projections, which should form the basis of the Draft EIR analysis. As such, the Draft EIR's land use analysis is incomplete. Further details are provided below:

- 25-3 • The proposed Plan projects roughly 300,000 fewer new residents in the San Diego region compared to the prior (2016) forecast; however, SANDAG projects the region's population will grow by nearly one million people by 2050. The growth in population will drive job growth and housing demand within the region – adding 500,000 jobs and more than 330,000 housing units by 2050 (Series 13: 2050 Regional Growth Forecast).

300 NORTH COAST HIGHWAY • OCEANSIDE, CA 92054-2885 • TELEPHONE (760) 435-3065 • FAX (760) 435-3078

**RESPONSE TO COMMENT 25-1**

SANDAG would like to thank the City of Oceanside for participating in the environmental review process and for acknowledging support for SANDAG's vision of the proposed Plan. Please see below for detailed responses to the concerns listed by the City.

**RESPONSE TO COMMENT 25-2**

The proposed Plan and associated land use analysis use the most recent planning assumptions considering local general plans and other factors consistent with Government Code Section 65080(b)(2)(B). The SCS must also "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the GHG emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the GHG emission reduction targets approved by the state board." The SCS included in the proposed Plan projects development that would achieve the state-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the proposed Plan. The proposed Plan forecasts development through 2050 consistent with projections from the California Department of Finance but does not represent buildout capacity of jurisdictions' general plans. The analysis in the EIR is complete and based on planning assumptions provided to SANDAG by local jurisdictions as of 2018. SANDAG acknowledges that Oceanside is working on a General Plan Update and has completed other planning efforts since 2018 that will inform development of the next forecast.

The Regional Plan and its SCS are iterative planning documents that are typically updated every 4 years to account for new data, analysis, policy, and experience.

**RESPONSE TO COMMENT 25-3**

The Series 14 Regional Growth Forecast uses the January 2020 vintage of the Department of Finance populations projections, which shows less growth over the next 30 years than previously anticipated in the population projections used for the Series 13 Regional Growth Forecast.

- 25-4 • The proposed Plan and associated land use analysis insufficiently assumes Oceanside will accommodate less than three percent (3%) of this total regional growth through 2050. Oceanside is the San Diego region's Interstate (I)-5 gateway. With Oceanside remaining one of the region's more affordable communities, and with the City looking to incentivize higher and better use of underutilized properties in its major corridors, the proposed Plan disregards Oceanside's land use potential to accommodate a greater share of the regional growth. Housing demand in Oceanside remains strong, and the City is still one of the most affordable markets in the San Diego region, particularly along the coastline. Moreover, the local employment base continues to grow, especially in the manufacturing, health care, and hospitality sectors. Oceanside has the potential to accommodate significant growth through infill and redevelopment, and the revitalization of the City's urban corridors will draw new residents and employers. In order to sufficiently allocate transportation funding where it is most needed in the region and ensure that Oceanside receives its fair share, it is imperative that Oceanside's growth is correctly reflected in both the proposed Plan and Draft EIR. Otherwise, this persistent underestimation of the City's population will only exponentially adversely affect the San Diego region's transportation network and directly impact Oceanside, beyond year 2050.
- 25-5 • The Draft EIR provides an inaccurate analysis of existing land use/zoning and local land use plans, policies, and regulations. Most specifically, Appendix F: Regional Growth Forecast and Sustainable Communities Strategy Land Use Pattern is inconsistent with the City's General Plan Update and current planning efforts, including the City's endeavors to accommodate the Regional Housing Needs Assessment. The Draft EIR relies on data provided in an outdated June 2002 General Plan rather than establishing assumptions based on the City's General Plan Update and associated Smart and Sustainable Corridors Plan (SSCP), currently in process. In fact, SANDAG's continued use of the City's outdated General Plan has likely contributed to low growth projections over the past three forecast periods (2008, 2012, and 2016). Moreover, the proposed Plan and Draft EIR fails to recognize the Coast Highway Vision and Strategic Plan, adopted by Oceanside City Council in 2009. The adopted plan is expected to generate significant jobs and housing growth along the Coast Highway corridor.
- 25-6 Since early 2020, the City has made significant progress on updating its General Plan and associated technical studies. Slated for City Council adoption in spring 2023, the General Plan Update establishes a long-range vision for the community and plans for important community issues, such as new growth, housing needs, public services, and environmental protection. The City's General Plan Update includes policies to incentivize infill and redevelopment through new zoning standards, a streamlined review process, CEQA clearance, and targeted infrastructure improvements. The SSCP establishes a framework for developing future housing and employment growth into the City's commercial corridors, while maintaining the integrity of adjacent residential neighborhoods. The SSCP will identify ways to facilitate infill and redevelopment along Mission Avenue, Oceanside Boulevard, and Vista Way. Another relevant planning document is the approved Coast Highway Vision and Strategic Plan, which re-envisioned the historic highway and its surroundings based on Livable Communities and Smart Growth principles and transforms it into a pedestrian-friendly and transit-oriented place that attracts and serves both visitors and residents. It is imperative that the proposed Plan and Draft EIR accurately consider these important planning efforts going forward. Rather than relying on outdated information, the City is confident that these policies and projections provide more reliable data demonstrating Oceanside's true growth and land use potential.

**RESPONSE TO COMMENT 25-4**

Please see response to comment Oceanside 25-2.

**RESPONSE TO COMMENT 25-5**

The proposed Plan and associated land use analysis use the most recent planning assumptions considering local general plans and other factors consistent with Government Code Section 65080(b)(2)(B). Consistency of the proposed Plan with relevant general plans and LCPs is analyzed in Section 4.11, *Land Use*, of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions' general plans, LCPs, or other local planning documents. Consistency of individual second-tier projects with these policies would be considered during project-specific CEQA reviews.

As noted in the comment, the City's General Plan Update has not been adopted and is currently in process and will inform development of the next forecast. The proposed Plan is an iterative planning document that is typically updated every 4 years to account for new data, analysis, policy, and experience. In 2016–2018, local jurisdictions, including the City of Oceanside, provided data to SANDAG on housing capacity based on their adopted plans to inform the Series 14 forecast development. The proposed Plan forecasts development through 2050 consistent with projections from the California Department of Finance but does not represent buildout capacity of jurisdictions' plans.

**RESPONSE TO COMMENT 25-6**

The comment describes the City's progress on updating its general plan and associated technical studies. As noted in the comment, the City's General Plan Update is currently in process and anticipated for consideration by the City Council in Spring 2023. The proposed Plan is an iterative planning document that is typically updated every 4 years to account for new data, analysis, policy, and experience. SANDAG looks forward to coordinating with the City on future Regional Plan updates. Consistency of the proposed Plan with relevant general plans and LCPs is analyzed in Section 4.11 of the Draft EIR. Due to the programmatic nature of the EIR analysis, the Draft EIR does not call out specific policies from local jurisdictions' general plans, LCPs, or other local planning documents. Consistency of individual second-tier projects with

these policies would be considered during project-specific CEQA reviews.

In 2016–2018, local jurisdictions, including the City of Oceanside, provided data to SANDAG on housing capacity based on their adopted plans to inform the Series 14 forecast development. The proposed Plan forecasts development through 2050 consistent with projections from the California Department of Finance but does not represent buildout capacity of jurisdictions' plans.

- 25-7 • The Draft EIR fails to account for the City's long-standing allowances for mixed-use residential development in commercial districts, which have the strong potential to dramatically affect residential growth projections. Many of the City's largest mixed-use residential projects have been developed on, or are planned for, commercially-designated sites.
  - 25-8 • SANDAG has the responsibility to analyze the proposed Plan for inconsistencies with each jurisdiction's land use assumptions, which in this case is specific to Oceanside. Consequently, these inconsistencies could result in the underestimation of proposed environmental impacts and associated mitigation measures.
  - 25-9 • Overall, the Draft EIR insufficiently addresses these important land use factors and trends for determining potential environmental impacts. Ultimately, the City is concerned that the most recent iteration of the regional population forecast may significantly underestimate Oceanside's capacity for additional population, housing, and employment. As such, the Draft EIR lacks sufficient environmental analysis pursuant to CEQA.
- The proposed Plan and associated environmental analysis identify and rely on two important regional transportation projects, yet fail to demonstrate how SANDAG will fund, support, or implement such projects consistent with the Draft EIR analysis.
- As previously expressed, the City is concerned with the detrimental and persistent ramifications associated with the proposed Plan and Draft EIR's significant underestimation of growth in Oceanside. This inaccurate depiction of future growth in the northern San Diego region could eventually result in lost funding for traffic alleviation projects with potential to provide relief to all local San Diego residents and its visitors. The City is already enduring serious adverse traffic safety and mobility impacts along the State Route (SR)-76 corridor due to lack of SANDAG and CALTRANS funding and jurisdictional coordination. This is particularly experienced at the College/SR-76 interchange, which per recent reports is one of the most congested areas in the State. The City is extremely concerned, however, with the proposed Plan and Draft EIR's identification and reliance on two such regional transportation projects: 1.) I-5 HOV Lanes, from SR-78 to Vandergrift ("I-5 HOV Lanes"), and 2.) I-5 and SR-78 Interchange ("I-5/SR-78 Interchange"). Further details are provided below:
- 25-11 • The Draft EIR states that the proposed I-5 HOV Lanes project will be implemented by year 2025; however, to date SANDAG has yet to allocate funding or support on this major freeway improvement's project design. It is imperative that the proposed project not only remain on the proposed Plan's list of projects, but also receive adequate funding and commitment from SANDAG to bring the project to fruition, especially if the Draft EIR analysis relies on it. With the year 2025 nearly three years away, it is unrealistic and disingenuous for SANDAG to continue stating that the project will be delivered on-time.
  - 25-12 • The proposed I-5/SR-78 Interchange project would establish a much-needed connection between the west and east side of I-5 at the SR-78 interchange. Under existing conditions, there is no safe access for bicyclists and pedestrians across I-5 in this area. Similar to the I-5 HOV Lanes project, the Draft EIR identifies and relies on the proposed I-5/SR-78 Interchange project; however, SANDAG has not formally appropriated the funding needed to implement it.
  - 25-13 • While the City is encouraged by SANDAG's inclusion of these projects in the proposed Plan and associated environmental analysis, there are considerable concerns about the lack of project funding allocation and commitment provided by SANDAG at this time. These are integral traffic-

**RESPONSE TO COMMENT 25-7**

In 2016–2018, local jurisdictions, including the City of Oceanside, provided data to SANDAG on housing capacity based on their adopted plans to inform the Series 14 forecast development. The SCS land use pattern proposed in the proposed Plan focuses growth and development in the Mobility Hub areas to facilitate access to transit and improved jobs-housing balance. The allocation of housing units to subregional areas represents general areas projected for future growth in Mobility Hub areas, not specific parcels, for future housing development or housing unit type. A number of land uses at the parcel level, aggregated up, comprise these general areas. The exercise of land use authority is reserved for local jurisdiction.

**RESPONSE TO COMMENT 25-8**

Chapter 4.11 of the Draft EIR evaluates the land use impacts of the proposed Plan, including a consistency analysis with jurisdictions' land use plans. Please also see Draft EIR Appendix L, *Subregional Plan Consistency Analysis*. Environmental impacts of any such inconsistencies are considered throughout the Draft EIR as part of the proposed Plan impact analysis.

**RESPONSE TO COMMENT 25-9**

In 2016–2018, local jurisdictions, including the City of Oceanside, provided data to SANDAG on housing capacity based on their adopted plans to inform the Series 14 forecast development. The forecasted development pattern in the SCS does not represent buildout capacity of jurisdictions' general plans. Rather, the SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs and policies in the Plan consistent with SB 375. The Draft EIR's population forecasts are based on substantial evidence using the best-available data, specifically, the Series 14 Regional Growth Forecast and the regional forecast from the California Department of Finance.

**RESPONSE TO COMMENT 25-10**

SANDAG looks forward to continuing to coordinate with the City of Oceanside to incorporate its latest planning assumptions into future updates of the Regional Plan so that they are included. To the extent this comment refers to the comments above alleging the proposed Plan's population modeling undercounts growth in Oceanside, see response to

comment Oceanside 25-09. See below responses regarding the two specific transportation projects mentioned in the comment.

**RESPONSE TO COMMENT 25-11**

The Build NCC I-5 HOV lane project is being constructed from south to north and includes the northern segment as part of its project-level environmental analysis (to Harbor/Vandegrift [https://www.keepsandiegomoving.com/Documents/NCC\\_doc/I-5\\_Final\\_EIR-EIS.pdf](https://www.keepsandiegomoving.com/Documents/NCC_doc/I-5_Final_EIR-EIS.pdf)). Although funding has not yet been identified or programmed, SANDAG continues to pursue funding for implementation of this project consistent with the proposed Plan.

**RESPONSE TO COMMENT 25-12**

The I-5/SR 78 project (Interchange and Arterial Operational Improvements) is included in the proposed Plan by 2035. The regional transportation network does not include details regarding the types of bicycle and pedestrian facilities to be included with specific corridor projects, and the analysis of those projects will require future planning and coordination with local jurisdictions, community members, and other stakeholders to determine those details; all to be conducted at the project level.

**RESPONSE TO COMMENT 25-13**

SANDAG will continue to pursue State and federal funding for these (and other) future projects identified in the proposed Plan.

Page 4 of 4

25-13  
cont. | alleviating projects that affect the San Diego region, and every effort must be made to  
implement them in accordance with statements made in the proposed Plan and Draft EIR.

Summary

25-14 | The City of Oceanside again thanks SANDAG for the opportunity to comment on the Draft EIR for the  
proposed Plan. Staff look forward to collaborating with SANDAG as the draft environmental analysis is  
revised to more accurately reflect Oceanside's more realistic growth and land use projections. The City  
will continue reaching out to SANDAG staff to express the importance of allocating funding for  
implementation of the I-5 HOV Lanes and I-5/SR-78 Interchange projects with the goal of realizing their  
timely construction.

Sincerely,

Deanna Lorson  
CITY MANAGER

**Cc:** Andy Loperena <ALoperena@poway.org>; Scott Post <SPost@poway.org>; Melody Rocco <MRocco@poway.org>; Bob Manis <BManis@poway.org>; SDFORWARD <sdforward@sandag.org>  
**Subject:** Draft EIR for the 2021 Regional Plan Comments - City of Poway

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

Thank you for allowing us to submit comments on the Draft EIR for the 2021 Regional Plan.

26-1 Regarding Scripps Poway Parkway, the City of Poway would like to see vehicle, bike, pedestrian and transit infrastructure improvements and connections to be added from the Highway 67 through Scripps Poway Parkway to the I-15 Freeway. Please note that the majority of the City of Poway and areas east of the City of Poway are in the Very High Fire Severity Zone. Evacuation routes for the region should consider alternative routes and not only highway routes. Figure 4.9-2 of the EIR shows that there are no evacuation routes through the City of Poway. Providing vehicle, bike, pedestrian and transit infrastructure improvements along Scripps Poway Parkway and establishing it as an Evacuation Route will provide better access for emergency vehicles and sufficient routes for persons evacuating through the City of Poway. I have spoken to several property and business owners within the South Poway Business Park (SPBP) including Geico and parking is a constant issue. There is currently no public transit route into the SPBP. Having public transit, bike, pedestrian and highway/road improvements/connections providing more efficient access to the SPBP is essential for future employment growth and public safety in the area. Many workers in the Poway area live in Ramona and East County and this is a vital connection for the City and the Region. SANDAG has also identified the SPBP as a Tier 3 employment center in their draft Employment Center analysis. Construction is also underway to add thousands of more employees in the SPBP. To be clear, we are recommending that Scripps Poway Parkway be shown as a critical connection, a multimodal corridor, and an evacuation route in the San Diego region ([https://www.sandag.org/uploads/publicationid/publicationid\\_4730\\_28341.pdf](https://www.sandag.org/uploads/publicationid/publicationid_4730_28341.pdf)).

26-2 Regarding the Hwy 67, please note that the City of Poway's General Plan Transportation Element includes a multi-use path on the west side of SR-67 (reference p. 3 <http://docs.poway.org/weblink/0/doc/50446/Electronic.aspx>). This multi-use path would include a separated two-way bike path and a fenced DG equestrian trail. The multi-use path provides a critical and safe pathway for hikers, bikers, runners, walkers, children, and equestrians. A multi-use path also creates a necessary loop between the City's Iron Mountain trailhead and other destinations (e.g., Mt. Woodson, Lake Poway) which is also a goal within the Transportation Element. We recommend the San Vicente corridor plan be consistent with the City's plans. Also, for public safety, please recall that there are considerable traffic collisions along the Hwy 67 and we recommend that traffic safety improvements be considered along the Hwy 67 corridor.

State Route 67 is also designated as a scenic roadway by the Poway General Plan. As a part of the General Plan requirements, a 50-foot wide landscape open space easement is required from adjacent property owners from the ultimate right-of-way line along State Route 67 when development is proposed. This easement shall be landscaped and modified as needed to enhance the scenic quality of the area as discussed in the General Plan Transportation Element Policy B – Scenic Roadways. Providing scenic roadway elements to the design will also help the corridor be more compatible with surrounding open space. To contribute to the General Plan goals, we would suggest that the right-of-way incorporate design elements consistent with a scenic roadway (e.g., naturalized decorative solid walls, native landscaped medians and shoulders, additional landscape areas and trees where feasible, earthen berms). Also, the EIR

**RESPONSE TO COMMENT 26-1**

This comment is related to the proposed Plan and does not address the adequacy of the Draft EIR.

The San Vicente Comprehensive Multimodal Corridor Plan (CMCP) effort is currently underway, and Scripps Poway Parkway is included in the study area for that CMCP. The CMCP will include a suite of solutions for consideration in future planning, implementation, and improvement activities along the corridor, including SR 67 connections with Poway Road and Scripps Poway Parkway. The CMCP will include active transportation, clean transportation, transit, resilience and environment, ROW and utilities, equity, and evacuation considerations. The CMCP stakeholder working group includes representation from the City of Poway, which is intended to integrate jurisdictional priorities into the suite of solutions within the boundaries of the CMCP planning area.

**RESPONSE TO COMMENT 26-2**

The San Vicente CMCP will consider all relevant and related plans and projects, in collaboration with City of Poway staff, to ensure there is cohesion and consistency between the CMCP and the communities within and adjacent to it, including active and multi-modal transportation considerations.

The CMCP study identifies ways to improve roadway safety, enhance the urban-rural transportation interface (with special consideration given to limiting impacts on surrounding environmental habitats and wildlife), engage with tribal nations, and create greater trip reliability and efficiency throughout the study area while supporting climate action initiatives. The suite of solutions will include active transportation, clean transportation, transit, resilience and environment, ROW and utilities, equity, and evacuation considerations. The City of Poway is an integral member of the stakeholder working group and in the development of the CMCP.

This comment also applies only to the content of the proposed Plan and not the adequacy of the Draft EIR's contents.

for the 2021 Regional Plan Table 4.1-1 and Figure 4.1-1 shows Highway 67 as not an Officially Designated or an Eligible State Scenic Highway, however, the Caltrans Scenic Highway System Lists (<https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-l-scenic-highways>) notes Highway 67 as an Eligible State Scenic Highway and the EIR needs to be revised to show Highway 67 as an Eligible State Scenic Highway.

As a part of the San Diego Forward Plan and the 5 Big Moves Plan, SANDAG established the SR-67 corridor as a Comprehensive Multimodal Corridor Plan (CMCP) calling for a multimodal road along the SR-67 ([https://www.sdforward.com/docs/default-source/default-document-library/appendix-june-5-2020.pdf?sfvrsn=891afe65\\_4](https://www.sdforward.com/docs/default-source/default-document-library/appendix-june-5-2020.pdf?sfvrsn=891afe65_4)). As stated on p. 6-2 of the 2050 RTP, “Our region has consistently supported a multimodal approach to transportation that looks at the overall system and improvements that benefit all modes, rather than prioritizing one over the other. This approach gives all of the transportation system users choices traveling within and through the region.” Further, “A well designed and thoughtfully integrated multimodal transportation system will give people choices, allowing them to select the transportation mode that is best suited for a particular trip. In an area as large and diverse as the San Diego region, this approach is necessary to make the best use of our limited transportation resources.” As discussed, a multi-modal transportation system provides users transportation options and choices and thereby reduces traffic congestion and ghg emissions. Regional multi-use paths have been a great asset to communities across the country. Here in San Diego, the SR-56 Bike Path is separated from the highway and is often used by runners, walkers, and equestrians. In contrast, it is uncommon to see bikers, walkers, and equestrians in a bike route adjacent to a highway (for instance, SR-76). A multi-use path is also kid friendly because of the separation from the highway and kids are often seen on the SR-56 Bike Path and not commonly seen within bike routes adjacent to a Highway. The multi-use path also accommodates a more rural aesthetic and is safer for users. Multi-use paths have become a critical component to the transportation system and are treasured by the communities they are a part of. The addition of the multi-use path along Hwy 67 is more consistent with the goals and policies of the 2050 RTP. We recommend the San Vicente corridor plan provides a separated mixed-use path throughout the full length of the corridor.

Regarding unique geological features or landforms, page 4.7-30 of the EIR for the 2021 Regional Plan notes that the City of Poway General Plan “does not contain policies or regulations specific to unique geological features or landforms.” This is incorrect, the General Plan and Habitat Conservation Plan notes unique geological features and landforms and related policies that include the preservation of rock outcroppings, open space, hillsides, ridgelines, and cultural, historical, and paleontological resources. Please update this in the EIR to be accurate.

Regarding Poway’s General Plan, page 4.11-16 of the EIR for the 2021 Regional Plan notes that the City of Poway Comprehensive Plan was adopted November 1991 and that the Housing Element update is in the process of being updated. Please update the EIR as follows: “Poway General Plan November 1991 (Transportation Element updated March 2010; Housing Element updated August 2021; Public Safety Element being updated as of October 2021).”

Lastly, during the workshop portion for the Draft 2021 Regional Plan, workshops were provide by area (North, East, Central, etc.). Based on the mapped areas shown, Poway residents and community stakeholders were not represented as a part of any region and that outreach with appropriate comment period should be provided prior to moving forward with Draft. I'd be happy to assist you with what an appropriate outreach should be.

Thank you for considering our comments. Please feel free to reach out to me with any questions.

Thank you,

**RESPONSE TO COMMENT 26-3**

Table 4.7-4 in the Final EIR has been updated to reflect correct notes in the General Plan and Habitat Conservation Plan as provided in the comment.

**RESPONSE TO COMMENT 26-4**

Table 4.11-5 in the Final EIR has been updated to reflect the General Plan element updates as provided in the comment.

**RESPONSE TO COMMENT 26-5**

This comment addresses the proposed Plan public outreach process, and is not related to the adequacy of the Draft EIR.

To support the development of the proposed Plan, SANDAG implemented a comprehensive public outreach and involvement program consistent with State and federal requirements. Early in the planning process, SANDAG developed a Public Involvement Plan (PIP) to guide the public outreach program, which was updated in mid-2019. The PIP identifies public engagement techniques to involve the public and collect input for the proposed Plan, including public workshops, social media, visualizations, and other means. It describes how to connect with hard to reach communities such as tribal nations and low-income and minority populations. A detailed description of the PIP can be found in Appendix G of the proposed Plan. As part of outreach on the Draft Plan, a virtual open house was held on June 16, 2021, entitled “County Unincorporated,” which included connections to adjacent cities, including Poway.

There will be a further opportunity for public participation on December 10, 2021, at the SANDAG Board of Directors meeting discussing adoption of the proposed Plan and certification of the EIR

**Subject:** 2021 Regional Plan Comments - City of Poway

Thank you for allowing us to submit comments on the Draft 2021 Regional Plan.

Regarding Scripps Poway Parkway, the City of Poway would like to see vehicle, bike, pedestrian and transit infrastructure improvements and connections to be added from the Highway 67 through Scripps Poway Parkway to the I-15 Freeway. I have spoken to several property and business owners within the South Poway Business Park (SPBP) including Geico and parking is a constant issue. There is currently no public transit route into the SPBP. Having public transit, bike, pedestrian and highway/road improvements/connections providing better more efficient access to the SPBP is essential for future employment growth in the area. Many workers in the Poway area live in Ramona and East County and this is a vital connection for the City and the Region. SANDAG has also identified Scripps Poway as a Tier 3 employment center in their draft Employment Center analysis. Construction is also underway to add thousands of more employees in the SPBP. To be clear, we are recommending that Scripps Poway Parkway become a critical connection and a multimodal corridor ([https://www.sandag.org/uploads/publicationid/publicationid\\_4720\\_28341.pdf](https://www.sandag.org/uploads/publicationid/publicationid_4720_28341.pdf)).

Regarding the Hwy 67, please note that the City of Poway's General Plan Transportation Element includes a multi-use path on the west side of SR-67 (reference p. 3 <http://docs.poway.org/web/Link/0/doc/50446/Electronic.aspx>). This multi-use path would include a separated two-way bike path and a fenced DG equestrian trail. The multi-use path provides a critical and safe pathway for hikers, bikers, runners, walkers, children, and equestrians. A multi-use path also creates a necessary loop between the City's Iron Mountain trailhead and other destinations (e.g., Mt. Woodson, Lake Poway) which is also a goal within the Transportation Element. We recommend the San Vicente corridor plan is consistent with the City's plans.

State Route 67 is also designated as a scenic roadway by the Poway General Plan. As a part of the General Plan requirements, a 50-foot wide landscape open space easement is required from adjacent property owners from the ultimate right-of-way line along State Route 67 when development is proposed. This easement shall be landscaped and modified as needed to enhance the scenic quality of the area as discussed in the General Plan Transportation Element Policy B – Scenic Roadways. Providing scenic roadway elements to the design will also help the corridor be more compatible with surrounding open space. To contribute to the General Plan goals, we would suggest that the right-of-way incorporate design elements consistent with a scenic roadway (e.g., naturalized decorative solid walls, native landscaped medians and shoulders, additional landscape areas and trees where feasible, earthen berms).

As a part of the San Diego Forward Plan and the 5 Big Moves Plan, SANDAG established the SR-67 corridor as a Comprehensive Multimodal Corridor Plan (CMCP) calling for a multimodal road along the SR-67 ([https://www.sdforward.com/docs/default-source/default-document-library/agenda-june-5-2020.pdf?sfvrsn=891afe65\\_4](https://www.sdforward.com/docs/default-source/default-document-library/agenda-june-5-2020.pdf?sfvrsn=891afe65_4)). As stated on p. 6-2 of the 2050 RTP, "Our region has consistently supported a multimodal approach to transportation that looks at the overall system and improvements that benefit all modes, rather than prioritizing one over the other. This approach gives all of the transportation system users choices traveling within and through the region." Further, "A well designed and thoughtfully integrated multimodal transportation system will give people choices, allowing them to select the transportation mode that is best suited for a particular trip. In an area as large and diverse as the San Diego region, this approach is necessary to make the best use of our limited transportation resources." As discussed, a multi-modal transportation system provides users transportation options and choices and thereby reduces traffic congestion and ghg emissions. Regional multi-use paths have been a great asset to communities across the country. Here in San Diego, the SR-56 Bike Path is separated from the highway and is often used by runners, walkers, and equestrians. In contrast, it is uncommon to see bikers, walkers, and equestrians in a bike route adjacent to a highway (for instance, SR-76). A multi-use path is also kid friendly because of the separation from the highway and kids are often seen on the SR-56 Bike Path and not commonly seen within bike routes adjacent to a

**RESPONSE TO COMMENT 26-6**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. See Appendix P.2 for the responses to comments on the proposed Plan. The San Vicente CMCP effort is currently underway. The CMCP will include a suite of solutions for consideration in future planning, implementation, and improvement activities along the corridor, including Highway 67 connections with Poway Road and Scripps Poway Road. The CMCP will include active transportation, clean transportation, transit, resilience and environment, ROW and utilities, equity, and evacuation considerations. The CMCP stakeholder working group includes representation from the City of Poway, which is intended to integrate jurisdictional priorities into the suite of solutions within the boundaries of the CMCP planning area.

Your comment has been forwarded to San Diego Metropolitan Transit System (MTS).

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

Please see responses L124 through L128 in Appendix P.2.

**COMMENT LETTER 27: CITY OF SAN DIEGO**

Comment Letter 27

October 11, 2021

SANDAG Regional Plan EIR  
C/O Kirsten Uchitel  
401 B Street, Suite 800  
San Diego, CA 92101

**Subject: City of San Diego Comments on the Draft Environmental Impact Report for San Diego Forward: The 2021 Regional Plan**

Dear Ms. Uchitel:

The City of San Diego (City) Planning Department has received the Draft Environmental Impact Report (EIR) for San Diego Forward: The 2021 Regional Plan (2021 Regional Plan) prepared by the San Diego Association of Governments (SANDAG) and distributed it to applicable City departments for review. The City has reviewed the Draft EIR and appreciates this opportunity to provide comments to SANDAG.

27-1

The 2021 Regional Plan represents a major step forward in reducing vehicle miles traveled by single occupant vehicles and greenhouse gas (GHG) emissions in the region by incorporating five transformational strategies which will be critical to enabling the City to implement its Climate Action Plan. The City applauds SANDAG's commitment to making infrastructure and technological investments in the mobility system with a greater emphasis on transit, bicycling, and walking as well as innovative and bold strategies to manage demand on regional roadways prioritizing safety and aligning with the City's commitments to Vision Zero. The City's General Plan is consistent with the 2021 Regional Plan as both focus development within vibrant mixed-use centers served by high frequency transit, and the City supports the 2021 Regional Plan's intent to preserve open space from non-sustainable development. The City Planning Department looks forward to closely working with SANDAG to implement the strategies described in the 2021 Regional Plan.

In response to the request for public comment, the City has the following comments on the Draft EIR for your consideration.

• • •

27-2

**RESPONSE TO COMMENT 27-1**

Thank you for your comments and consideration of the proposed Plan.

**RESPONSE TO COMMENT 27-2**

Table 4.16-4 has been revised to reflect this comment and now shows 20.9 Class IV lane miles under year 2020 conditions.

Table note #2 for Tables 4.16-5 through 4.16-16 has been updated to read "Mode Share" instead of "More Share."

Page 2  
Ms. Kirsten Uchitel  
October 11, 2021

- 27-2 cont. • **Table 4.16-4:** shows a decrease in class IV mileage from 20 to 13 between 2016 and 2020. Per coordination with SANDAG staff it is understood that this was due to a misclassification of some facilities and will be corrected.
  - Mode Share typo in footnote 1 “more share”.
- 27-3 • **Table 4.16-1 Existing Roadway Facilities:** it appears State Highways may be mislabeled in this table and should be tollways. This causes inconsistencies in subsequent tables Roadway Network Analysis for years 2025, 2035 and 2050.
- 27-4 • **Table 4.16-4 Existing Bicycle Facilities in the Region:** It is understood that the mileage was extracted from the transportation network used in ABM 2+, recommend additional clarification on how the mileage is reported from the ABM (i.e. is it centerline mileage, lane mileage, etc.)
  - Recommend disaggregating Class IV Cycle Track into one-way cycle track and two-way cycle track mileages.
- 27-5 • **Pg. 4.16-13 Pedestrian Facilities:** The Draft EIR states, “It should be noted that trail facilities are also considered part of the pedestrian network.” The document should state if these facilities would or would not be ADA compliant either partially or wholly.
- 27-6 • **Table 4.16-9 Transit System Analysis – Year 2035:** Please include a footnote on how Miles of Transit Service is generally calculated.
- 27-7 • **Table 4.16-14 Roadway Network Analysis – Year 2050:** Please clarify the cause of the significant decrease in Tollway mileage in 2050 when previous analysis years showed increases.
- 27-8 • **Page 4.16-47:** Typo in bottom paragraph states, “the proposed Plan would reduce the regional VMT per capita by 7.8%...” this should be “7.2%” per Table 4.16-7.
- 27-9 • **Alternative Analysis:** SANDAG has identified Alternative 3 as the environmentally superior alternative. Specifically, for Transportation, VMT is reduced more than the proposed plan. SANDAG should evaluate and analyze the features that reduce VMT in Alternative 3 for feasibility in inclusion on the proposed plan as a project feature or further mitigation for the project, such as subsidized transit fares and microtransit.

PLANNING DEPARTMENT – MYRA HERRMANN, SENIOR PLANNER –  
[MHERRMANN@SANDIEGO.GOV](mailto:MHERRMANN@SANDIEGO.GOV), (619) 446-5372

In chapter 4.5 Cultural Resources, please consider the following edits and comments:

- 27-10 • **Pg 4.5-24:** This paragraph requires a minor edit which should be corrected in the Final EIR as shown in underline below:
  - **2035 Conclusion:** Implementation of the proposed Plan would result in regional growth and land use change and transportation network improvements and programs that would cause a substantial adverse change in the significance of a historical resource or unique archaeological resource. Therefore, this impact (CULT-1) in between 2026 and 2035 is significant.
- 27-11 • **Pg 4.5-28:** Recommend that the following language be added at the end of the second bullet point in Mitigation Measure CULT-1.b to include the provision for consultation with local government agency qualified staff. This is especially important for local

### RESPONSE TO COMMENT 27-3

Table 4.16-1 has been updated to reflect this comment.

### RESPONSE TO COMMENT 27-4

Tables 4.16-4, 4.16-7, 4.16-11, and 4.16-15 have been updated to clarify that the total miles of bicycle facilities reported in the table are the total centerline miles.

The Class IV Cycle Track improvements contained within the proposed Plan are still at the higher level planning stages. Therefore, the form of cycle track (one-way or two-way) has not yet been determined for any of the identified improvements. This level of analysis will need to be conducted at the individual project level, during the design process. As such, this level of information cannot be provided at this time.

Please note that this information can be provided for the existing facilities outlined in Table 4.16-1; however, to maintain consistency with Tables 4.16-7, 4.16-11, and 4.16-15 of the Draft EIR, the same level of facility summary is maintained throughout all tables.

### RESPONSE TO COMMENT 27-5

All trail facilities included within the proposed Plan will be designed and constructed based on the trail design standards of the Member Jurisdiction in which they are located. The trail design standards for each Member Jurisdiction should incorporate all relevant ADA standards, thereby resulting in ADA compliant trails. Please note that the United States Access Board has identified four Conditional Exceptions for when ADA standards do not need to be applied to trail facilities, as identified in the *Accessibility Standards for Federal Outdoor Developed Areas* (May 2014). The four exceptions are as follows:

- Compliance is not practicable due to terrain.
- Compliance cannot be accomplished with the prevailing construction practices.
- Compliance would fundamentally alter the function or purpose of the facility or the setting.
- Compliance is limited or precluded by any of the following laws, or by decisions or opinions issued or agreements executed pursuant to any of the following laws:
  - Endangered Species Act (16 USC 1531 et seq.)
  - National Environmental Policy Act (42 USC 4321 et seq.)
  - National Historic Preservation Act (16 USC 470 et seq.)

- Wilderness Act (16 USC 1131 et seq.)
- Other federal, State, or local law, the purpose of which is to preserve threatened or endangered species; the environment; or archaeological, cultural, historical, or other significant natural features

Further detail is provided through the following link:

<https://www.access-board.gov/files/aba/guides/outdoor-guide.pdf>

Because the trail facilities included within the proposed Plan are only conceptual at this time, and have not yet been designed, it is not known if the proposed trail facilities, or a portion of the trail facilities, will need to utilize the ADA exceptions outlined above. Individual trail facilities will be required to go through the CEQA review process, at a project level, and will be subject to design review through the Member Jurisdiction prior to their construction. The level of ADA compliance each trail facility will be able to achieve will be identified, reviewed, and disclosed during this process. This information has been summarized as a footnote on page 4.16-13 of the EIR.

**RESPONSE TO COMMENT 27-6**

A table note has been added to Table 4.16-9 to describe the methodology used to calculate Miles of Transit.

**RESPONSE TO COMMENT 27-7**

The decrease in tollway mileage under the Year 2050 conditions is due to the expiration of the SR 125 tollway franchise agreement, which ends in 2042. After Year 2042 SR 125, south of SR 54, will be reverted to Caltrans control and the tolls will no longer be issued to the public.

**RESPONSE TO COMMENT 27-8**

The bottom paragraph of page 4.16-50 has been revised to correct 7.8% to 6.8%..

**RESPONSE TO COMMENT 27-9**

As the Draft EIR explains (page 6-1), SANDAG considered public input provided during the EIR scoping process, and used this input develop the reasonable range of alternatives. Public input requested alternatives that reduce GHG emissions, air quality impacts, and VMT. The alternatives selected for detailed consideration incorporate many of the

major transportation investments and policy options that commenters suggested.

Regarding reduction of fares, mitigation measure GHG-5f provides that during project-level planning, design, and CEQA review of development projects, responsible agencies can and should implement measures including “[s]ubsidizing transit service expansion by increasing service hours, decreasing fares, and adding additional transit fleets” (Draft EIR pages 4.8-49 and 4.8-50). In addition, one of the Implementation Actions listed in Appendix B of the proposed Plan is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a 1-year pilot that may provide free fares for youth under age 19. See Master Response 1 for further information on the role of subsidized fares and microtransit as an alternative.

**RESPONSE TO COMMENT 27-10**

The date has been corrected on page 4.5-24 of the EIR as requested.

**RESPONSE TO COMMENT 27-11**

Mitigation measure CULT-1b on page 4.5-28 of the EIR has been updated to include the requested language that acknowledges consultation/collaboration with local agencies that have qualified cultural resources staff:

...and/or when applicable, qualified local agency staff with technical expertise in archaeological and cultural resources management.

Page 3  
Ms. Kirsten Uchitel  
October 11, 2021

- agencies that have established Historical Resources Regulations and Guidelines and qualified staff that assist other planning staff with such issues during the ministerial or discretionary review process, as well as during grading and construction implementation:
- Should an archaeological deposit and/or feature be encountered during construction activities that is determined to be a historical resource or unique archaeological resource by a qualified archaeologist, stop ground-disturbing activities and prepare and/or implement an Archaeological Data Recovery Program (ADRP) in consultation with SHPO and/or when applicable, qualified local agency staff with technical expertise in archaeological and cultural resources management.
- In chapter 4.17 Tribal Cultural Resources, please consider the following edits and comments:
- **Pg 4.17-8:** Please make the following revisions in the 2<sup>nd</sup> paragraph, lines 2 & 3 as follows: University ~~Center~~.
  - **Pg 4.17-10:** In the 2<sup>nd</sup> to last paragraph on the page, please insert a “hyphen” between Midway\_Pacific Highway.
  - **Pg 4.17-12:** In the last paragraph on the page, please insert “San Diego” after “Downtown”, insert a “hyphen” between Midway\_Pacific Highway, add “Mesa” after the word “Otay” and delete “City” from the 3<sup>rd</sup> line. These should be corrected throughout the chapter.
  - **Pg 4.17-13:** In the 2<sup>nd</sup> paragraph, 3<sup>rd</sup> line, insert “San Diego” after “Downtown” and add “Mesa” after the word “Otay” in the 4<sup>th</sup> line. These should be corrected throughout the chapter to clarify the correct Downtown and the correct “Otay” community in the region. Please also insert a “hyphen” between Midway\_Pacific Highway.
  - **Pg 4.17-15:** In TCR-1a, line 8, remove the “period” after the word “should” and replace with a “comma” to reconnect the two sentences. The last line in the last paragraph should be revised as shown: “...mitigation measures as set forth...”
  - **Pg 4.17-16:** Under standard mitigation measures for TCRs number “3”, the word “Record” should be inserted before “Permanent”. Recommend that Mitigation Measure 4. Protecting the resource., should be expanded to describe how the resource would/could be protected and/or include the following statement “as agreed upon during the tribal consultation process”
  - **Pg 4.17-16:** TCR-1b, 2<sup>nd</sup> bullet, line 2 should be revised to read the qualified archaeologist and or tribal monitor of an archaeologist is not present, shall direct the contractor to temporarily divert all stop ground-disturbing activities in the area of the discovery and prepare and implement a mitigation plan consistent with standard mitigation measures set forth in PRC Section 21084.3(b), in cooperation with a qualified archaeologist (if applicable) and in consultation with Native American tribes.
  - **Pg 4.17-16:** TCR-1b, 3<sup>rd</sup> bullet should be revised as follows: The qualified archaeologist shall be responsible for ensuring that all artifacts integrate curation of archaeological artifacts and associated records associated with the survey, testing,

**RESPONSE TO COMMENT 27-12**

The community name “University Center” is correct; therefore, no change has been made.

**RESPONSE TO COMMENT 27-13**

Midway Pacific” has been changed to “Midway-Pacific” on page 4.17-10 of the EIR as requested.

**RESPONSE TO COMMENT 27-14**

The community name “Downtown” is correct and adding “San Diego” after “downtown” is not necessary; therefore, no change has been made. The terms “Otay,” “Otay Mesa,” and “East Otay Mesa” have been reviewed and corrected where applicable. “Midway Pacific” has been changed to “Midway-Pacific” as requested on page 4.17-12 and throughout the section.

**RESPONSE TO COMMENT 27-15**

The community name “Downtown” is correct and adding “San Diego” after “downtown” is not necessary; therefore, no change has been made. The terms “Otay,” “Otay Mesa,” and “East Otay Mesa” have been reviewed and corrected where applicable. “Midway Pacific” has been changed to “Midway-Pacific” as requested throughout the section.

**RESPONSE TO COMMENT 27-16**

The minor corrections on page 4.17-15 of the EIR have been made as requested.

**RESPONSE TO COMMENT 27-17**

The comment aligns with the intent of the mitigation measure. The minor corrections have been made as requested. Mitigation measure TCR-1a has been revised on page 4.17-16 of the EIR to state:

3. Permanent Record permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
4. Protecting the resource as agreed upon during the tribal consultation process.

**RESPONSE TO COMMENT 27-18**

The comment aligns with the intent of the mitigation measure. Mitigation measure TCR-1b has been revised on page 4.17-16 to

incorporate the comments in order to clarify the process and intent of the measure. The revisions are as follows:

- Should a previously undiscovered cultural resource be encountered during construction activities that is determined to be a TCR by the CEQA lead agency in consultation with Native American tribes, the qualified archaeologist, or tribal monitor if an archaeologist is not present, shall direct the contractor to temporarily divert all stop ground-disturbing activities in the area of the discovery and prepare and implement a mitigation plan consistent with standard mitigation measures set forth in PRC Section 21084.3(b), ~~in cooperation with a qualified archaeologist (if applicable) and~~ in consultation with Native American tribes.

#### **RESPONSE TO COMMENT 27-19**

The comment aligns with the intent of the mitigation measure.

Mitigation measure TCR-1b has been revised on page 4.17-16 to

incorporate the comments in order to clarify the process and intent of the measure. The revisions are as follows:

- ~~Integrate curation of archaeological~~ The qualified archaeologist shall be responsible for ensuring that all artifacts and ~~associated~~ records associated with the survey, testing, data recovery and/or monitoring of future projects are permanently curated with an appropriate ~~in a~~ regional center focused on the care, management, and use of archaeological collections ~~if the artifacts must be excavated~~. This shall be completed in consultation with the Native American representative and does not include Native American human remains and associated burial items, the disposition of which should be determined in consultation with the designated Most Likely Descendants (MLDs).

Page 4  
Ms. Kirsten Uchitel  
October 11, 2021

27-19 cont. data recovery and/or monitoring of future projects are permanently curated with an appropriate in-a regional center focused on the care, management, and use of archaeological collections if the artifacts must be excavated. This shall be completed in consultation with the Native American representative. This and does not include Native American human remains and associated burial items, the disposition of which should be determined in consultation with the designated Most Likely Descendants (MLDs).

27-20 • **Pg 4.17-16:** A fourth bullet should be added that requires preparation and submittal of a draft and final monitoring report which describes the results, analysis, and conclusions of all phases of the Monitoring Program, including the provisions for curation and/or repatriation, if applicable, and copies of any signed curation agreements to verify completion of the required monitoring program.

27-21 **STORMWATER DEPARTMENT – MARK G. STEPHENS, ASSOCIATE PLANNER – MGSTEPHENS@SANDIEGO.GOV, (858) 541-4361**

The City Stormwater Department is responsible for operation and maintenance of stormwater facilities located within the public right-of-way and drainage easements dedicated to the City; reducing flood risks; and leading the City's efforts to protect and improve stormwater quality by identifying and abating sources of pollution through public education, employee training, water quality monitoring, pollution source identification, code enforcement, watershed management, and development and implementation of best management practices (BMPs).

27-22 Please consider the following comments:

- **BIO-3, on pages 4.4-95 through 4.4-106, Tables 4.4-13 through 4.4-15:** show forecasted encroachment into wildlife movement corridors and linkages in the Multiple Species Conservation Program (MSCP). Development of transportation projects adjacent to or near MSCP lands has the potential to impact habitat integrity if a project casts a shadow or introduces artificial light or noise. These impacts may limit areas where the City of San Diego is able to successfully establish mitigation sites. Where possible, transportation network improvements should be located and designed in such a way that they minimize any potential impact on habitat integrity in MSCP lands.
- **Page 4.10-15 Under Areas of Special Biological Significance:** correct the last sentence identifying the Scripps Institution of Oceanography.
- **Under San Diego Regional Municipal Stormwater Permit on page 4.10-34,** change the reference to "County of San Diego Regional Airport Authority" to "San Diego County Regional Airport Authority," since the organization isn't part of the County of San Diego government.
- **Page 4.10-22:** please confirm the following statement is correct, or make any revisions needed to ensure its accuracy: "No areas in the San Diego region are in a levee flood protection zone." Corridor, light rail, and bikeway improvements are mentioned

**RESPONSE TO COMMENT 27-20**

The comment aligns with the intent of the mitigation measure. A fourth bullet has been added to mitigation measure TCR-1b on page 4.17-16 that requires the preparation and submittal of a draft and final monitoring report, per the comment. This addition will ensure and signify the completion of the monitoring program described in mitigation measure TCR-1b. The added language is as follows:

- Upon completion of all ground-disturbing activity, the qualified archaeologist shall prepare and submit a draft and final monitoring report to the CEQA lead agency that describes the results, analysis, and conclusions of all phases of the monitoring program, including the provisions for curation and/or repatriation, if applicable, and copies of any signed curation agreements to verify completion of the required monitoring program.

**RESPONSE TO COMMENT 27-21**

Thank you for your comment. The responsibilities of the City's Stormwater Department are understood.

**RESPONSE TO COMMENT 27-22**

nk you for your comment. Figure 4.4-15 has been revised to include the transportation network footprint in the Final EIR.

In regards to development of transportation projects adjacent to or near MSCP lands, direct and indirect impacts from the proposed Plan's land use change and transportation network on the County's adopted MSCP are programmatically addressed under Impact BIO-4 of the EIR. Indirect impacts are assessed qualitatively. Tables 4.4-16 through 4.4-19 quantitatively assess impacts on the County's MSCP Preserve. Consistent with the County's adopted MSCP, the County would be consulted prior to any design of projects that could potentially have an effect on the County's MSCP Preserve. Furthermore, consistent with the EIR, any such projects would be required to be consistent with the County's MSCP, and no impacts on hardline preserve are expected. Should impacts on the MSCP be unavoidable, boundary line adjustments would be required as mitigation for such impacts, pursuant to the County's guidelines and in consultation with the County of San Diego. In addition, please see response to comment USFWS 38-4.

**RESPONSE TO COMMENT 27-23**

"Scripps Institute of Oceanography" has been revised to "Scripps Institution of Oceanography" on page 4.10-15 of the EIR.

**RESPONSE TO COMMENT 27-24**

Text has been revised according to the comment to "~~County of San Diego~~ County Regional Airport Authority" on page 4.10-34 of the EIR.

**RESPONSE TO COMMENT 27-25**

Based on the Department of Water Resource's most recent available data, this statement is correct. No part of the County falls within a levee flood protection zone.

Page 5  
Ms. Kirsten Uchitel  
October 11, 2021

27-25  
cont. throughout the Draft Program EIR at locations that either neighbor or cross a levee along the San Diego River.

• **General Comments:**

- 27-26 ○ As a general comment applicable to 4.10 Hydrology and Water Quality, federally constructed levees along the San Diego River and Tijuana River are regulated by the U.S. Army Corps of Engineers. Improvements that encroach on the levee prism must obtain a Section 408 Permit from the Army Corps. The floodplain is regulated by the Federal Emergency Management Agency (FEMA), and improvements that encroach on the floodplain must obtain approval from the City of San Diego for areas within its jurisdiction to ensure floodplain regulations are met.
- 27-27 ○ Because this Draft Program EIR is a programmatic level document, with many project specifics still under development, please include the City Stormwater Department in future subsequent or tiered project level reviews that could have potential impacts on areas within our purview.
- 27-28 ○ Please note that effective July 1, 2021, the former City of San Diego Transportation and Stormwater Department was reorganized into individual departments, the City Stormwater Department (using the “stormwater” as a single word spelling convention) and the City Transportation Department.

• • •

27-29 Thank you for the opportunity to provide comments on the Draft EIR. Please feel free to contact me directly via email at [RMalone@sandiego.gov](mailto:RMalone@sandiego.gov) or by phone at (619) 446-5371 if there are any questions regarding the contents of this letter.

Sincerely,

Rebecca Malone, AICP, Environmental Policy Program Manager  
Planning Department

RM/ta

cc: Reviewing Departments (via email)  
Review and Comment online file

**RESPONSE TO COMMENT 27-26**

Thank you for your comment. The proposed Plan provides a framework for meeting its stated goals with coordinated land use and transportation planning strategies. Implementation actions related to projects, policies, and programs will confirm SANDAG’s commitment to fully realizing the strategies in the proposed Plan. Individual projects under the proposed Plan are subject to environmental review and will follow applicable laws and regulations, including coordination and permitting requirements of the local jurisdictions within which future development and transportation improvements fall.

**RESPONSE TO COMMENT 27-27**

The EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the proposed Plan include site-specific transportation network improvements and development projects. Many individual transportation projects in the RTP would be implemented by Caltrans and local governments. It is the responsibility of these implementing agencies to include the City Stormwater Department in their reviews. SANDAG will contact the City Stormwater Department for second-tier projects it approves or carries out.

**RESPONSE TO COMMENT 27-28**

Thank you for your comment. It is acknowledged that the former City of San Diego Transportation and Stormwater Department was reorganized into individual departments.

**RESPONSE TO COMMENT 27-29**

Thank you for your comments and consideration of the proposed Plan.

**COMMENT LETTER 28: CITY OF SAN MARCOS**

**RESPONSE TO COMMENT 28-1**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Appendix F of the proposed Plan includes the assumptions used to develop the Series 14 Regional Growth Forecast and the SCS land use pattern. Among other requirements set forth by SB 375, the SCS must "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board." The SCS included in the proposed Plan projects development that would achieve the State GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the Plan.

See below responses to specific comments mentioned in this general comment.

28-1  
cont.

Please find the City's specific comments on these topics below. City staff would be happy to meet with the SANDAG Regional Plan team to discuss these comments in greater detail and to learn more about SANDAG's modeling and funding projections.

**SERIES 14 REGIONAL GROWTH FORECAST MODEL ASSUMPTIONS**

**Land Use Assumptions**

The Regional Plan DEIR states that "Adopted general plan land use assumptions are used as input to develop SANDAG's regional growth forecast. The forecast is based on the most recent planning assumptions, considering local general plans and other factors, as required by SB 375 (Government Code Section 65080(b)(2)(B))" (p. 4.11-16). The City would like to better understand the "other factors" and model inputs that interact with the local general plan land use data.

City staff reviewed SANDAG's Series 14 Regional Growth Forecast GIS data. The forecast for San Marcos reflects a 28% population increase between 2016 (baseline) and 2050 (horizon year) (Table 2-2). The total projected population in 2050 is 120,247 persons. The San Marcos General Plan has capacity for 41,843 units (including existing units), which would support a population of more than 128,000 based on the 2019 average persons per household for San Marcos of 3.06. In theory, the City's general plan can support the projected future population through 2050.

28-2

We recognize that some redistribution of the development capacity may need to occur in the future in order to comply with State mandates related to housing, reduction of greenhouse gas (GHG) emissions and vehicle miles traveled, as well as to meet economic and other goals. For these reasons, the City is currently updating our General Plan. However, the current General Plan should serve as the baseline for land use assumptions in San Marcos for the purposes of the Regional Plan. The Regional Plan appears to redistribute future population within the City in a way that differs from what is in the General Plan. The City would like clarity regarding the land use and population growth assumptions underlying the Regional Plan.

The City recognizes that certain high-level criteria must be input to produce a regional forecast model, and that because of the dynamics between the various inputs, these models do not always produce linear results. We appreciate that apparent inconsistencies and anomalies may appear at a granular (parcel/ MGRA/ TAZ) level that don't necessarily represent the overall patterns generated by the model. However, we felt it was important to review the data at a parcel level throughout the City to understand where the forecast may be inconsistent with existing land use plans and reasonably foreseeable local growth patterns. Numerous or significant inconsistencies could lead to inaccuracy in the overall forecasts.

28-3

Below are several examples of land use or population projections that appear to conflict with the City's General Plan for specific areas, or otherwise seem counterintuitive based on staff's knowledge of local conditions (i.e., "local assumptions"). Overall, the SANDAG Series 14 Growth Forecast reflects future growth

**RESPONSE TO COMMENT 28-2**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Appendix F of the proposed Plan includes the assumptions used to develop the Series 14 Regional Growth Forecast and the SCS land use pattern, which considered local general plans and other factors. Among other requirements set forth by SB 375, the SCS must "set forth a forecasted development pattern for the region, which, when integrated with the transportation network and other transportation measures and policies, will reduce the greenhouse gas emissions from automobiles and light trucks to achieve, if there is a feasible way to do so, the greenhouse gas emission reduction targets approved by the state board." The SCS included in the proposed Plan projects development that would achieve the State-mandated GHG emissions reduction target when integrated with the transportation investments, programs, and policies in the Plan by focusing growth and development in Mobility Hub areas. The allocation of housing units to Mobility Hub areas represents general areas projected for future growth, not precise parcel locations, for future housing development or housing unit type. A number of land uses at the parcel level, aggregated up, comprise these general areas. The precise zoning at the parcel level is within local jurisdictions' land use authority.

Priority areas for future housing growth were identified through a scoring process applied to all Master Geographic Reference Areas (MGRAs) in the San Diego region. Each MGRA received a score based on Mobility Hub propensity analysis results and a land use mixing criterion. MGRAs associated with conserved lands or military installations were identified as "constraints" and excluded from the scoring. The Mobility Hub propensity analysis is described in proposed Plan Appendix T: Network Development and Performance, and considered the number of local street intersections per square mile, vehicle miles traveled in 2016, employment counts, population density, and proximity to "activity centers" such as hospitals, schools, airports, hotels, military installations, shopping centers, and universities and colleges. The land use mix score was calculated based on the percentage of MGRA acreage associated with land use types that are complementary to residential uses. In general, higher scored areas are more favorable to future housing development, and parcels without existing capacity that had both eligible land uses and high scores were assigned additional capacity for the purpose of developing the SCS land

use pattern. Within high-scoring MGRAs, SANDAG selected land use codes that could be considered for future residential uses (e.g., low-density office, vacant/undeveloped, arterial commercial, surface parking, hotel/resort, and other public services). Details on this methodology are described in the Series 14 Regional Growth Forecast and SCS Land Use Pattern Subregional Allocation Documentation: <https://sdforwarddata-sandag.hub.arcgis.com/documents/SANDAG::series-14-regional-growth-forecast-and-scs-land-use-pattern-subregional-allocation-oct-2021-draft/about>.

The Regional Plan and its SCS are iterative planning documents that are typically updated every four years to account for new data, analysis, policy, and experience.

### **RESPONSE TO COMMENT 28-3**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Appendix F of the proposed Plan includes the assumptions used to develop the Series 14 Regional Growth Forecast and the SCS land use pattern.

Regarding “areas where Series 14 Growth Forecast Households is higher than local assumption,” SANDAG relied upon local general plans and other factors to allocate housing units to subregional areas. Priority areas for future housing growth were identified through a scoring process applied to all MGRAs in the San Diego region. Each MGRA received a score based on Mobility Hub propensity analysis results and a land use mixing criterion. MGRAs associated with conserved lands or military installations were identified as “constraints” and excluded from the scoring. The Mobility Hub propensity analysis is described in proposed Plan Appendix T: Network Development and Performance, and considered the number of local street intersections per square mile, vehicle miles traveled in 2016, employment counts, population density, and proximity to “activity centers” such as hospitals, schools, airports, hotels, military installations, shopping centers, and universities and colleges. The land use mix score was calculated based on the percentage of MGRA acreage associated with land use types that are complementary to residential uses. In general, higher scored areas are more favorable to future housing development, and parcels without existing capacity that had both eligible land uses and high scores were assigned additional capacity for the purpose of developing the SCS land use pattern. Within high-scoring MGRAs, SANDAG selected land use

codes that could be considered for future residential uses (e.g., low-density office, vacant/undeveloped, arterial commercial, surface parking, hotel/resort, and other public services). Details on this methodology are described in the Series 14 Regional Growth Forecast and SCS Land Use Pattern Subregional Allocation Documentation: <https://sdforwarddata-sandag.hub.arcgis.com/documents/SANDAG::series-14-regional-growth-forecast-and-scs-land-use-pattern-subregional-allocation-oct-2021-draft/about>.

Regarding “areas where Series 14 Growth Forecast Population is lower than local assumptions,” the Series 14 Regional Growth Forecast includes assumptions of housing unit production that results in a subregional forecast that includes population declines or lower population growth in certain areas in the region. These housing assumptions, described in proposed Plan Appendix F, include an increase in the region’s vacancy rate to 4 percent by 2040, an accounting of vacation rentals and second homes as “unoccupiable,” and a decrease in household size from 2.75 persons per household in 2016 to 2.62 persons per household by 2036.

The SCS land use pattern advanced in the proposed Plan focuses growth and development in the Mobility Hub areas, which represent general areas projected for future growth and not precise parcel locations. A number of land uses at the parcel level, aggregated up, comprise these general areas. The precise zoning at the parcel level is within local jurisdictions land use authority.

The Regional Plan and its SCS are iterative planning documents that are typically updated every four years to account for new data, analysis, policy, and experience.

28-3  
cont.

areas roughly consistently with the City's General Plan in key locations (i.e., University District and Creek District Specific Plan Areas). However, the projected changes are tied to parcels in the vicinity but not the same as what is in the City's land use plan. There are some forecasted household or population increases or decreases within individual MGRAs that are directly inconsistent with the City's plan. The City has questions regarding the assumptions and model dynamics that create these apparently random projections.

*Areas where Series 14 Growth Forecast Households is higher than local assumptions (Attachment A)*

- A1. Single-family developments Coronado Hills and Rancho Tesoro (off of Twin Oaks Valley Road south) are accurately forecast to have an increase in households, but why a reduction in population?
- A2. San Marcos Boulevard mixed use shows significant population increases that would not be supported by the levels of development allowed in this land use designation.
- A3. Residential units are assigned to some individual MGRAs with industrial and commercial land uses. These areas are not currently planned for residential units (i.e., off of Las Posas and Armordite). Does the model assume that these areas will redevelop as mixed use?
- A4. Residential units are also assigned to areas designated for passive and recreational open space.

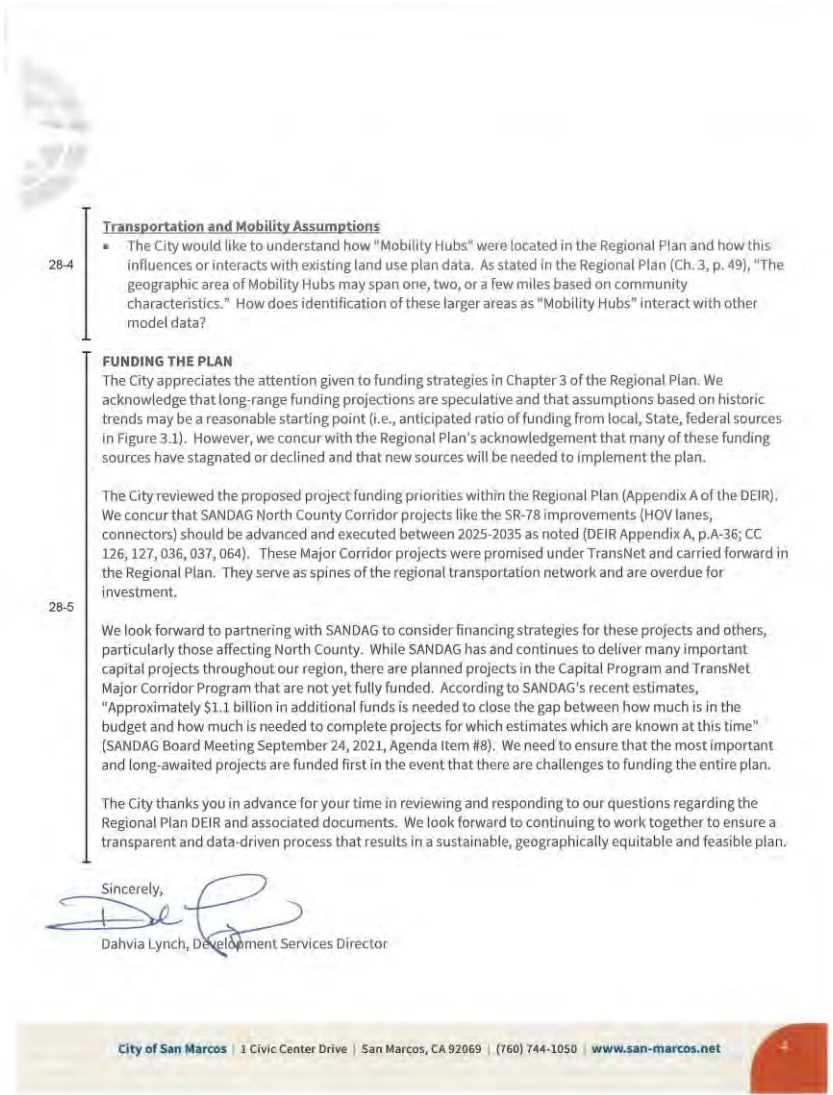

*Areas where Series 14 Growth Forecast Population is lower than local assumptions (see Attachment B)*

- B1. Population estimates for areas of San Marcos currently under development (i.e., Highlands off of northern Las Posas, Rancho Tesoro area off of Twin Oaks Valley Road) and Santa Fe Hills, as well as large developments like San Elijo Hills (over 3,000 units), seems to assume that populations in these and similar suburban areas will decrease. New units are being constructed in some of these areas and families continue to move into existing suburban homes. While future urbanizing centers will draw population from many places, we do not necessarily expect a major shift from suburban areas.

We understand the concept that suburban household size may decrease as children leave the home and parents stay in place through middle age. However, regional trends show that household size has increased in San Marcos over the past twenty years, from 3.03 to 3.06 persons per household (U.S. Census American Community Surveys 2010-2019). Anecdotally, given housing prices and demand for larger homes in quality school districts, it seems that turnover of suburban housing to younger families will occur within the Regional Plan horizon. We also anticipate more multi-generational households as children stay in the home through young adulthood or aging parents move in with their children. Additionally, it seems that new State laws streamlining construction of Accessory Dwelling Units and redevelopment of single-family lots will lead to higher, if not at least sustained, populations in suburban neighborhoods. What is the basis for these assumed population decreases?

Staff speculate that some of these inconsistencies could be due to reliance on an amalgamation of land use data combined with TAZ level data, or traffic and development assumptions generated for private project analyses (whether or not these came to fruition). We look forward to discussing further with SANDAG staff and/or receiving written feedback regarding these questions.

**RESPONSE TO COMMENT 28-4**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. Please see proposed Plan Appendix F, Regional Growth Forecast and SCS Land Use Pattern, for the assumptions used to develop the SCS land use pattern and Appendix T, Network Development and Performance, for information about Mobility Hub network development.

**RESPONSE TO COMMENT 28-5**

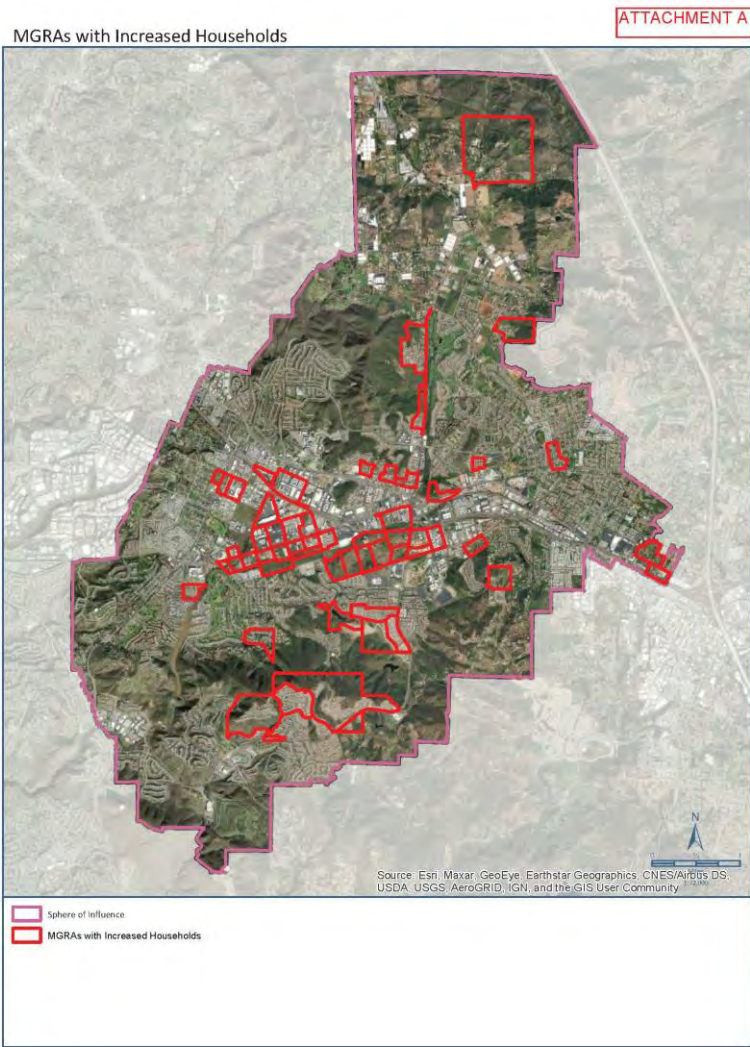

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

29-1 This new plan seems to be incredibly beneficial for the county as a whole. It not only seems appropriate but long overdue, particularly because it will reduce noise pollution, greenhouse emissions and traffic collisions.

**COMMENT LETTER 30: SAN DIEGO COUNTY AIR POLLUTION CONTROL DISTRICT**

Comment Letter 30

October 11, 2021

Hasan Ikhrata  
San Diego Association of Governments  
401 B Street, Suite 800  
San Diego, CA 92101

Re: San Diego Forward 2021 Regional Plan Draft Environmental Impact Report Comments

Dear Mr. Ikhrata:

The San Diego County Air Pollution Control District (APCD) would like to commend the time and effort invested in the creation of the Draft 2021 San Diego Forward Regional Plan and accompanying environmental document. Together, APCD and SANDAG share common goals, which include improving air quality throughout San Diego County in an equitable manner, supporting the transition to a zero-emission transportation system, and supporting alternatives to single occupancy vehicles. APCD believes that the Draft 2021 Regional Plan will move San Diego County in that direction and result in San Diego County being a leader in innovative transportation planning.

30-1

APCD also appreciates our collaborative relationship with SANDAG in other regional planning efforts that support the Draft 2021 Regional Plan and further improve air quality. Such efforts include participation in the Community Air Protection Program (AB 617) Portside Community Steering Committee, the San Diego County Incentive Project to install electric vehicle charging stations (CALeVIP), and the recently launched "Accelerate to Zero Emissions" collaborative to encourage zero-emission vehicles. Our strong collaboration in transportation conformity will also ensure that on-road motor vehicle ozone precursor emissions (VOC and NOx) will be reduced in San Diego County by 30% by 2026, and 40% by 2032, compared to 2020 levels. APCD looks forward to continuing these efforts and others with SANDAG well into the future.

Thank you for the opportunity to provide feedback on the Draft 2021 Regional Plan Draft EIR. APCD staff has reviewed the document and enclosed you will find our comments for your consideration.

Once again, we appreciate your partnership in ensuring that we all work collectively to improve the air quality in the region.

Respectfully,

Nora Vargas, Chair of the Governing Board  
San Diego County Air Pollution Control District

**Paula Forbis**  
Paula Forbis, Interim Air Pollution Control Officer  
San Diego County Air Pollution Control District

www.scdapcd.org

**RESPONSE TO COMMENT 30-1**

SANDAG appreciates the San Diego County Air Pollution Control District's (APCD) expressed support for the proposed Plan and feedback. SANDAG also appreciates the collaborative relationships between our two agencies and looks forward to continued collaboration towards further improving air quality. Please refer to subsequent responses for detailed responses to APCD's comments.

Cc: Michael Watt, SDAPCD Deputy Director  
 Kathy Keenan, SDAPCD Supervising Air Resource Specialist

**Technical Notes**

30.2 **Attainment Status**  
 As of July 2, 2021, San Diego has been designated a Severe Nonattainment Area for the 2008 and 2015 ozone National Ambient Air Quality Standards (NAAQS). This should be reflected in Table 4.3-1 and first sentence of Attainment Status on page 4.3-11.  
**AQ-5 Mitigation Strategies**  
 Since some of the toxic air contaminant (TAC) exposure discussed in section AQ-5 is from rail lines, SANDAG should consider including AQ-2b Zero Emission Trains in Section AQ-5 mitigation strategies (page 4.3-80).

**Comments Regarding Chapter 4.3, Air Quality**

30.3 **Support for Planned Zero-Emission and Electric Vehicle Programs and Policies**  
 Mitigation measures including GHG-5b, AQ2-b (Establish New Funding Programs for Zero-Emissions Vehicles and Infrastructure) that encourage the adoption of zero-emission vehicles are crucial for the region to meet our air quality and GHG reduction goals. As a partner APCD is fully supportive of SANDAG's substantial near-term and long-term investment commitments and looks forward to continuing to work with SANDAG and other regional agencies on future programs that further encourage zero-emission technologies.

30.4 **More active transportation and zero-emission transit-lead projects completed, and more frequent service by 2025 in disadvantaged and low-income communities**  
 The Regional Plan provides a blueprint for a cleaner transportation system for our region. To the maximum extent feasible, SANDAG should consider bringing forward and scheduling additional active transportation and zero-emission transit-lead projects for completion by 2025 that transit through or benefit low-income (as defined in AB 1550) or disadvantaged communities (as defined in SB 535) in San Diego County. For example, the Draft 2021 Regional Plan includes only two transit-lead projects scheduled for completion by 2025: (1) Project ID #TL21 in the South Bay to Sorrento corridor, and (2) Project ID #TL19 in the I-8 corridor. Additional Rapid or bus improvement projects should be scheduled for completion and prioritized for these communities prior to 2025, and (to the maximum extent feasible) only with zero-emission equipment. SANDAG should also prioritize any projects in these same communities that would result in increased frequency of service on bus or trolley lines. These suggested improvements would urgently improve existing transit access in neighborhoods that rely most on transit service, and encourage residents to seek alternatives to older, high-polluting vehicles as their primary mode of transportation.

30.5 **Phase trolley and commuter rail projects to be open for service as early as possible and find creative ways to improve transit service in the near term.**  
 For example, the existing Blue Line trolley route connects the Border to Downtown San Diego via the San Ysidro Transit Station. The Draft 2021 Regional Plan does include future high speed commuter rail service along the same corridor, planned for operation by 2050 (Project ID #TL04). As an interim step to further  
 10124 Old Grove Rd, San Diego California 92131-1649  
 (858) 586-2600 Fax (858) 586-2601  
 www.sdapcd.org

**RESPONSE TO COMMENT 30-2**

The attainment designation for the 2008 ozone standard has been changed to Serious Nonattainment in Table 4.3-1 and within the in-text references on page 4.3-11 of the EIR.

**RESPONSE TO COMMENT 30-3**

This comment agrees with an EIR mitigation measure, and no further response is required.

**RESPONSE TO COMMENT 30-4**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. The proposed Final Plan includes additional Rapid bus projects in the 2025 plan phase compared to the Draft Plan that were selected considering equity, system operations, and performance criteria (TL32 in the Coast, Canyons, and Trails corridor, and TL37 in the North County corridor). Frequency and span of service improvements for the transit system have also been added to the proposed Final Plan in Attachment 1 to Appendix A. The proposed Final Plan also supports the electrification of the region's transit buses and the State's Innovative Clean Transit regulation. Appendices A and B of the proposed Plan include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 and 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans>.

**RESPONSE TO COMMENT 30-5**

This comment is related to the proposed Plan and is not related to the adequacy of the Draft EIR. A near-term implementation action (Appendix B) of the proposed Plan includes a Blue Line Trolley study to assess the ability to operate express and 24-hour service along the corridor. The results of this study will help inform decisions regarding express Blue Line trolley service and non-rail operational improvement options. High-Speed Commuter Rail from the vicinity of National City to Kearny Mesa is included in the proposed Plan in the 2035 phase. Subsequent plans will revisit the timeline for extending this rail service to the border.

30-5  
cont. reduce emissions in the near-term, APCD recommends adding an express Blue Line trolley (or RAPID) service along the existing Blue Line route between the San Ysidro Transit Station to a major downtown transit station (e.g., 12<sup>th</sup> and Imperial) as soon as possible, but no later than 2035. Such service could potentially be discontinued once high-speed commuter rail service is fully operational by 2050. Another possible consideration would be to prioritize the High-Speed Commuter Rail projects between the Border and Kearny Mesa for completion by 2035.

30-6 **Consideration of additional measures to reduce vehicle miles traveled (VMT) and Particulate Matter emissions between 2035 and 2050**  
Table 4.3-7 in the 2021 Regional Plan Draft EIR projects that emissions from ozone precursor pollutants (VOCs and NOx) as a result of the Plan will be substantially reduced by 2050. However, the Draft EIR also notes total VMT will increase by 6.7% by 2050 compared to 2016 baseline conditions. The increased VMT is presumed to result in more road dust overall, as well as brake and tire wear from on-road sources; both in turn are projected to result in an increase of 0.19 tons per day of particulate matter of 10 microns or less ("PM10") after mitigation. The mitigation SANDAG has proposed for anticipated PM10 increases includes working with APCD to procure more regional incentive funding, as well as a commitment to purchase zero-emission commuter trains from 2035 onward. These proposed mitigation measures are significant and stand to reduce at least some PM10 throughout the region. That being said, in order to avoid any potential future localized impacts along transportation corridors or regional air quality impacts, and to address the root cause of anticipated PM10 emission increases, which is increased regional VMT from motor vehicle use by 2050, APCD strongly encourages SANDAG to explore additional measures in the final 2021 Regional Plan that would reduce regional VMT enough to result in no projected PM10 increases by 2050. Such measures that could be further explored to reduce VMT and PM10 projection emissions include but are not limited to enhanced implementation of already implemented Transportation Control Measures (TCM's) identified in the Clean Air Act (§108(f)), or adoption and implementation of identified TCM measures that have not been implemented to date.

30-7 **Reconsider funding for Desert Line Reliab (Project ID #GM41)**  
Approximately \$253 million is noted as an unconstrained goods movement project in the Draft 2021 Regional Plan for "basic service" and "rehabilitation" of the MTS-owned Desert Line railroad track. Low-emission locomotives can play a critical role in reducing the number of heavy-duty trucks on the road. However, this project would require substantial funding in order for locomotives to even begin using the track decades from now. Furthermore, freight locomotives remain one of the highest emitters of ozone precursor emissions in San Diego County after on-road transportation. As on-road transportation moves toward zero-emission technologies, freight locomotive emissions will comparatively grow larger. Locomotives today also do not have any state or federal obligation to operate the lowest polluting equipment available. If ever completed and operational, the Desert Line could also add additional railroad traffic between the Border and Downtown San Diego from the Desert Line. To ensure such a scenario does not further burden impacted communities along this corridor, APCD recommends this funding be allocated to the project only if there is an enforceable commitment to only operate zero-emission locomotives along this corridor.

30-8 **Collaborate with APCD and other regional agencies on improving transit experience and expanding no-cost transit pass pilot project to residents 24 years and younger**  
10124 Old Grove Rd, San Diego California 92131-1649  
(858) 586-2600 Fax (858) 586-2601  
www.sdapcd.org

**RESPONSE TO COMMENT 30-6**

This comment is related to the proposed Plan and is not related to the adequacy of the Draft EIR. Total VMT is expected to increase by 2050 as a result of increased regional population, resulting in additional transportation-related particulate matter. This increase occurs despite the decrease in VMT per capita achieved under the proposed Plan. SANDAG looks forward to additional coordination with APCD and CARB as increases in PM10 emissions are not isolated to the San Diego region. The additional TCMs included in the Clean Air Act are substantially advanced with the proposed Plan including public transportation, bicycling and walking encouragement, traffic signalization, reduced congestion through transportation infrastructure, incident management, and ITS. The proposed Plan also identifies funding for partnering with local jurisdictions and other stakeholders on measures that could enhance VMT reduction, including Vision Zero programs, Complete Streets in Mobility Hubs, and Flexible Fleet pilots.

**RESPONSE TO COMMENT 30-7**

This comment is related to the proposed Plan and is not related to the adequacy of the Draft EIR. The Rehabilitation of the Desert Line is an unconstrained project in the proposed Plan with MTS as the implementing agency. Improvements would be funded by MTS, potentially in partnership with a leaseholder that would operate the freight rail line. SANDAG encourages its regional partners to develop and implement sustainable and innovative freight solutions that reduce emissions while still facilitating trade. In addition, CARB is developing measures aimed at reducing locomotive and railyard emissions in California

**RESPONSE TO COMMENT 30-8**

One of the Implementation Actions listed in Appendix B of the proposed Plan is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.

30-9  
1091  
Regional transit agencies today offer discounted daily and monthly fares for youth riders. However, the cost of discounted fares remains a significant barrier for increased ridership, especially those living in low-income households. Alongside infrequent transit service, youth riders today may not be incentivized to use public transit even at a discounted rate. As such, many youths may be forced or inclined to purchase low-cost, older, and higher-polluting vehicles to serve as their primary means of transportation. In recognition of this, APCD was pleased to see SANDAG's Transportation Committee pursuing an \$8 million pilot project to provide fare subsidies to residents 18 years and younger and supports full approval of this pilot program by the SANDAG Board of Directors. To further encourage youth transit ridership, APCD recommends expansion of the pilot project to all residents 24 years and younger as envisioned in Alternative 3 of the Draft EIR should additional funding become available.

**Continue to ensure the Regional Plan is consistent and aligns with the EPA Border 2025 Environmental Program.**

30-9  
The Draft EIR notes that the Regional Plan considered and relied on analyses from many plans, including the US EPA Border 2025 Program. Goal #1 of that program is to reduce air pollution in the Border region through efforts to prioritize environmental justice, address disproportionate air quality impacts, and focus on activities in or near vulnerable communities such as the San Diego/Tijuana binational airshed. When implemented, SANDAG should ensure the final 2021 Regional Plan and its respective projects are consistent with and align with strategies in the latest version of that plan, "EPA Border 2025 United States – Mexico Environmental Program", found here: [https://www.epa.gov/sites/production/files/2021-05/documents/final\\_us\\_mex\\_border\\_2025\\_final\\_may\\_6.pdf](https://www.epa.gov/sites/production/files/2021-05/documents/final_us_mex_border_2025_final_may_6.pdf)

**Include California Air Resources Board (CARB) and Environmental Protection Agency (EPA), in addition to APCD, as potential data sources for air quality performance**

30-10  
Table 3.1 on page 54 of the Draft 2021 Regional Plan states that APCD will be the primary data source for the "air quality" performance indicator of the 2021 Regional Plan. APCD stands ready to work with SANDAG in the fulfillment of this metric. However, should additional data be needed that goes beyond the capability or resources that APCD currently offers, APCD would recommend that CARB and EPA also be listed as potential agencies that could assist in data collection.

10129 Old Grove Rd. San Diego California 92131-1649  
(858) 586-2600 Fax (858) 586-2601  
[www.sdapcd.org](http://www.sdapcd.org)

**RESPONSE TO COMMENT 30-9**

he cumulative impacts of the proposed Plan are discussed in in the Draft EIR in consideration of proposed plans such as the U.S. Border Environmental Program: Border 2025, in Chapter 5, *Cumulative Impact Analysis*, of the EIR. Because cumulative air quality impacts throughout Southern California and northern Baja would be significant, it was determined that the proposed Plan's incremental air quality impacts are also cumulatively considerable.

The proposed Plan emphasizes continued collaboration between SANDAG and partners on both sides of the U.S.-Mexico border to plan for improved mobility in the border region. This collaboration builds on years of partnerships and active participation in binational programs that advance these goals, including the EPA and SEMARNAT-led Border 2025 program. SANDAG staff regularly participate in groups such as the San Diego-Tijuana Air Quality Task Force and the AB 617 Steering Committee, and have advocated for air quality measures in border communities. In California, regulation of vehicle emissions is managed by CARB. CARB conducts inspections of heavy-duty trucks traveling in California, including those registered out of state and from foreign countries. At border ports of entry CARB inspects heavy-duty trucks for excessive smoke and engine certification label compliance. SANDAG partners with CARB and the San Diego Air Pollution Control District on air quality conformity (see Appendix C) and emission reduction strategies across the region.

In addition, SANDAG has worked with CARB on updates to the CalEnviroScreen tool to provide data and improve how this tool captures various environmental impacts felt on either side of the border. SANDAG will continue participating in such border and environmental focused programs to support coordination of activities to reduce impacts on the binational community

SANDAG is committed to pursuing programs and projects to further policies focused on electrification of fleets, and EO N-79-20 related to sales of zero-emission personal and medium/heavy-duty vehicles; planning for goods movement strategies that reduce border congestion that exacerbates emissions resulting from vehicle delay; and continuing coordination on strategies identified in the 2021 California-Baja California Border Master Plan.

**RESPONSE TO COMMENT 30-10**

This comment addresses the proposed Plan and does not relate to the adequacy of the EIR. SANDAG intends to use similar data as prior Performance Monitoring Reports, which included Air Quality Index data from APCD. However, as noted in Chapter 3, *Environmental Setting*, of the proposed Plan, the data sources listed in Table 3.1 are the best sources identified as of the completion of the proposed Plan and are subject to change if new data sources are identified prior to the completion of the Performance Monitoring Report.

**COMMENT LETTER 31: SAN DIEGO COUNTY REGIONAL AIRPORT AUTHORITY**

Comment Letter 31

October 11, 2021

San Diego Association of Governments  
 401 B Street, Suite 800  
 San Diego, CA 92101.  
 Attn: Coleen Clementson

**RE: Airport Authority Comments on Draft EIR for Proposed 2021 Regional Plan**

Ms. Clementson:

The San Diego County Regional Airport Authority (Airport Authority) is pleased to submit this comment letter on the Draft Environmental Impact Report (Draft EIR) for the proposed 2021 Regional Plan (Proposed Plan) released by the San Diego Association of Governments (SANDAG) for public review on August 27, 2021. This letter supplements comments on the Proposed Plan that the Airport Authority sent to SANDAG on August 4, 2021, which are also attached for inclusion and consideration in the 2021 Regional Plan's Final EIR.

31-1

Created in 2003, the Airport Authority is responsible for operating San Diego International Airport (SAN) and planning for the region's long-term air transportation needs. SAN is the only major commercial airport in the region, connecting San Diego to over 70 domestic and international markets and generating over \$12 billion annually in local economic benefit. In addition, the Airport Authority acts as the Airport Land Use Commission in the County of San Diego, pursuant to the California State Aeronautics Act, to help ensure compatibility between all 16 public-use and military airports in the region and future land use development in the surrounding areas.

As SANDAG finalizes the EIR for the 2021 Regional Plan, the Airport Authority requests that the following items be included in the analyses and documentation:

31-2

- 1. Central Mobility Hub (CMH) Assumptions in Navy OTC Revitalization Draft EIS**  
 On page 2-63, the Draft EIR states that a "CMH at OTC is included in two of the development scenarios evaluated in the Navy's Draft EIS" for its proposed OTC Revitalization Project. The Navy's Draft EIS, however, specifically lists the Central Mobility Hub as an action that exceeds the scope of the analysis in the EIS. As such, the Airport Authority requests that SANDAG clarify and, if needed, correct in the Final EIR the relationship between the Central Mobility Hub in the proposed 2021 Regional Plan and the Navy OTC Revitalization Project's Draft EIS.

**RESPONSE TO COMMENT 31-1**

Thank you for your comments on behalf of the San Diego County Regional Airport Authority (SDCRAA). SANDAG appreciates SDCRAA's input on the EIR and the proposed Plan as well as the background information about the SDCRAA.

**RESPONSE TO COMMENT 31-2**

Proposed clarifications regarding assumptions related to the Central Mobility Hub in the Navy OTC Revitalization Draft EIS have been made to Chapter 2, *Project Description*, on page 2-64 of the EIR.

PO Box 82776 • San Diego, CA 92158-2776  
[www.san.org](http://www.san.org)

Page 2 of 4  
31-3

**2. Airport Taxicab Replacement Program**

On page 4.3-25, the Draft EIR lists the San Diego Air Pollution Control District's (SDAPCD) "Airport Taxicab Replacement Program" as a regional incentive program to reduce emissions of ozone precursors. This program was concluded on June 30, 2015 based on information available on the SDAPCD's website. As such, the Airport Authority requests that the Final EIR notes that this incentive program is no longer available.

31-4

**3. Updated Alquist-Priolo Earthquake Fault Zone Maps**

On page 4.7-3, the footnote in the Draft EIR states that the California Geologic Survey is in the process of updating fault zone maps for the region. It should be noted that the new fault zone maps were officially finalized by the State on September 23, 2021. As such, the Airport Authority requests that the Final EIR be updated accordingly.

31-5

**4. Adopted Airport Land Use Compatibility Plans**

The Draft EIR on page 4.9-7 lists all of the Airport Land Use Compatibility Plans (ALUCPs) and their adoption year. However, the Draft EIR includes an incorrect statement that "ALUCPs have been adopted for 14 of the 16 public-use and military airports in the region." As such, the Airport Authority requests that the Final EIR recognizes that ALUCPs for all 16 public-use and military airports in the San Diego region have been formally adopted by the Airport Authority, acting in its role as the County's Airport Land Use Commission.

31-8

**5. Table of San Diego Region Airports**

The title for Table 4.11-4 (on page 4.11-10) should be revised to "San Diego Region's Public and Military Airports."

31-7

**6. Airport Development Plan Summary**

The Airport Authority requests that the following revisions be made on page 5-5 in the Final EIR's Cumulative Impacts section to more accurately describe the scope of the SDIA Airport Development Plan:

"San Diego ~~County~~ International Airport Development Plan

Each year, more than ~~1.917~~ 25 million air passengers use the San Diego International Airport (SDIA). ~~The air cargo capacity at SDIA is currently constrained by limited infrastructure.~~ To maximize the airport's operational efficiency and make the most of the airport's 661-acre footprint, SDIA is moving forward with its next master planning phase, the Airport Development Plan (ADP). The ADP provides a development framework to

**RESPONSE TO COMMENT 31-3**

Reference to Airport Taxicab Replacement Program on page 4.3-25 of the EIR now includes the caveat that the Airport Taxicab Replacement Program ended in 2015.

**RESPONSE TO COMMENT 31-4**

The footnote on page 4.7-3 of the EIR has been updated to reflect the September 23, 2021, finalization of the fault zone maps by the State.

**RESPONSE TO COMMENT 31-5**

Suggested edits have been implemented on page 4.9-7 of the EIR to indicate that ALUCPs have been adopted for all 16 public-use and military airports in the region.

**RESPONSE TO COMMENT 31-6**

Table 4.11-4 of the EIR has been updated to include "Military" in the title.

**RESPONSE TO COMMENT 31-7**

Suggested edits related to the San Diego International Airport Development Plan have been implemented on page 5-5 of the EIR.

Page 3 of 4

31-7  
cont.

implement improvements that will enable the San Diego County Regional Airport Authority (SDCRAA) to accommodate future demand for air travel that is anticipated to occur at SDIA with more modern, efficient, and comfortable facilities. The ADP is considered a probable future project for the cumulative impact analysis. The primary components of the project are the replacement of the existing Terminal 1, ~~modifications to Terminal 2~~, a new administration building, and a new airport access roadway with new bicycle and pedestrian infrastructure. As part of the Terminal 1 replacement, a new ~~access road and~~ parking structure would ~~also~~ be constructed. ~~Other improvements include infrastructure upgrades and the removal/relocation of other airport support facilities to accommodate the terminal improvements.~~ Ultimately, the number of gates at SDIA would increase from 51 to 62~~1~~ (SDCRAA 2019a)."

31-8

**7. 2019 Airport Development Plan vs. 2008 Airport Master Plan**  
In section 5.2.13, the Draft EIR cites SDIA's 2008 Airport Master Plan as the source document to inform its cumulative noise impact assessment. The 2008 Airport Master Plan is outdated and has been superseded in terms of the number of current and forecasted aircraft operations. A new aviation activity forecast was formally approved by the FAA and is included in the 2019 Airport Development Plan. As such, the Airport Authority requests that the 2019 Airport Development Plan be used in all cumulative impact analyses and discussions in the Final EIR.

The Airport Authority appreciates the opportunity to provide formal comments on the Draft EIR for the proposed 2021 Regional Plan. Please feel free to contact me at [breed@san.org](mailto:breed@san.org), if you have any questions or need additional information.

Sincerely,

**Brendan Reed**  
Director of Airport Planning & Environmental Affairs

Attachment: August 4, 2021 Airport Authority Letter to SANDAG on Draft 2021 Regional Plan

cc: Dennis Probst, Airport Authority, Vice President - Development  
Ted Anasis, Airport Authority, Airport Planning Manager

**RESPONSE TO COMMENT 31-8**

Text has been revised in Section 5.2.13 on page 5-52 of the EIR to reflect the updated 2019 Airport Development Plan.

**RE: Airport Authority Comments on Draft 2021 Regional Plan**

Ms. Clementson:

On behalf of the San Diego County Regional Airport Authority (Airport Authority), I am submitting this comment letter in response to the Draft 2021 Regional Plan (Draft Plan) released by the San Diego Association of Governments (SANDAG) for public review on May 28, 2021. The Airport Authority acknowledges SANDAG's hard work over the last 3 years in developing a new vision for the region's surface transportation system and appreciates the opportunity to provide productive feedback on it.

Created in 2003, the Airport Authority is responsible for operating San Diego International Airport (SAN) and planning for the region's long-term air transportation needs. SAN is the only major commercial airport in the region, connecting San Diego to over 70 domestic and international markets and generating over \$12 billion annually in local economic benefit. In addition, the Airport Authority acts as the Airport Land Use Commission in the County of San Diego, pursuant to the California State Aeronautics Act, to help ensure compatibility between all 16 airports in the region and future land use development in the surrounding areas.

As SANDAG further refines the 2021 Regional Plan, and completes its environmental review under the California Environmental Quality Act, the Airport Authority requests that the following items be considered:

- 1. Aligning Air & Surface Transportation Planning**  
In 2011, the Airport Authority and SANDAG led the development of a Regional Aviation Strategic Plan (RASP) and Airport Multimodal Accessibility Plan (AMAP), respectively, to ensure a seamless and efficient connection between the region's air and surface transportation infrastructure. The Draft 2021 Regional Plan's Appendix BB (page BB-1) states that "routes included in the 2011 AMAP continue to be identified in the 2021 Regional Plan." However, the following

31-9

PO Box 52776 • San Diego, CA 92138-2776  
[www.san.org](http://www.san.org)

**RESPONSE TO COMMENT 31-9**

Thank you for providing SDCRAA's letter providing comments on the Proposed Plan. Responses to these comments can be found beginning from ID L343 in Appendix P.2.

Page 2 of 6

31-9  
cont.

ground access improvements, which were prioritized in the 2011 AMAP, do not appear to be programmed into the Draft Plan:

*San Diego International Airport*

- Heavy Rail Grade Separation (Whitherby St. to Laurel St.)
- I-5 Direct Access Ramps

*McClellan-Palomar Airport*

- Palomar Airport Road Widening (I-5 to Hidden Valley Rd.)
- Additional Airport Access at Owens Ave.
- Modification of Future Route 445

*Gillespie Field*

- Gillespie Field Trolley Station Relocation
- New Bus Rapid Transit (BRT) Station
- Marshall Avenue Intersection Improvements
- BRT Routes (90, 870, & 890) Modifications

*Cross Border Xpress*

- SR 905/Britannia Interchange Capacity Increase
- Britannia Road Widening
- Siempre Viva Road Widening
- Local Bus Route (661) Modifications

As such, the Airport Authority requests that the 2021 Regional Plan clarify whether these AMAP-identified priorities will be implemented or have been substituted with alternative implementation options.

**2. Connecting Regional Transit Network to SAN**

The Airport Authority has been working closely with SANDAG and other public agency partners to identify opportunities to better connect SAN to the regional transit network. As noted in the Draft 2021 Regional Plan, one of the concepts is a fixed-rail transit connection, such as an Automated People Mover (APM), between a Central Mobility Hub at the Old Town Campus and the SAN terminal area. This airport transit connection is anticipated in the Draft Plan to be built in 2035. The Airport Authority looks forward to continuing its collaboration with SANDAG to further refine the APM's alignment and station location concepts.

The 2016 Airport Transit Plan, which was developed in partnership between the Airport Authority, Metropolitan Transit System (MTS), and SANDAG, identified more near-term opportunities for increasing ridership on public transit to and

Page 3 of 6

from SAN. As recommended in the Airport Transit Plan, the Airport Authority will be launching a new all-electric shuttle service to Old Town Transit Center this fall, in conjunction with the start of the Mid-Coast Trolley Extension operations and increased Coaster service frequency.

Another recommendation in the Airport Transit Plan is the transition of MTS Bus Route 992, which is currently the main transit connection to the Airport, to a Rapid Bus service. It also suggested that combining the new Rapid 992 with other Rapid bus routes, such as the 215 along the El Cajon Boulevard corridor and 235 along the Interstate 15 corridor, could improve airport transit ridership by better linking to major regional destinations and by increasing single-seat access to the San Diego International Airport.

As such, the Airport Authority requests that the 2021 Regional Plan assess the potential ridership benefits from upgrading MTS Bus Route 992 to a Rapid service and extending other existing and planned Rapid routes to serve the SAN terminal areas.

**3. Considering Airport Compatibility in New Development Siting**

All 16 public-use and military airports in the San Diego region now have an adopted Airport Land Use Compatibility Plan (ALUCP), which provides guidance on appropriate land uses surrounding them to protect the health and safety of people and property within their vicinity. The Draft 2021 Regional Plan states in Chapter 1 (Page 12) that 3.7 million people will be living in the San Diego region by 2050 (13% greater than 2016 levels), creating a need for 440,000 more jobs and 274,000 more homes. Figure 2.4 (Page 27) in the Draft Plan identifies regional mobility hub areas that could accommodate this increased demand for jobs, housing, shopping, and recreation, while being served by expanded transit networks. In the Airport Authority's initial review, it appears that many of these hub areas are in close proximity to airports.

As such, the Airport Authority requests that the 2021 Regional Plan ensure that new incompatible land uses are not introduced near airports, as outlined in each ALUCP. The Draft Plan's Environmental Impact Report should also formally assess any land use conflicts with the applicable ALUCPs. Important factors include:

- Limiting new noise-sensitive development within an airport's noise contours and ensuring that any new noise-sensitive development includes sound insulation

31.9  
cont.

Page 4 of 6

31-9  
cont.

- Prohibiting certain sensitive land uses within an airport's safety zones and limiting the number of people in areas subject to the highest risk of aircraft accidents
- Assuring aircraft safety and preserving airport operations by limiting the height of new structures and objects

**4. Clarifying SAN Air Cargo Information**

The Draft 2021 Regional Plan acknowledges the importance of air cargo in moving goods into and out of the region. Specifically, Appendix Y of the Draft Plan discusses freight movement between the region's highways and arterials, rail corridors, land ports of entry, maritime port, and the San Diego International Airport. The Airport Authority has identified the following inaccuracies in the presented narrative and data:

- Page 21 in Appendix Y states that "when combined with the rate at which trucks produce emissions per day, neighborhoods in close proximity to the airport are put at a higher [air quality] risk" without citing any environmental impact study to substantiate this conclusion.

The Airport Authority has ensured that current and future emissions from the San Diego International Airport's activities are included in the most recent 2020 State Implementation Plan (2020 SIP) for attaining air quality standards in the San Diego region under the federal Clean Air Act. The 2020 SIP determined that SAN's emissions can be accommodated without causing the region to experience additional exceedances of criteria pollutant standards.

- Figure 2.10 in Appendix Y is an outdated map of SAN, which doesn't properly reflect the airport property boundaries and onsite aeronautical uses.
- Page 78 in Appendix Y incorrectly states that Capital International Cargo operates at SAN.
- Page 78 in Appendix Y includes statements that air cargo operations are constrained due to limited airport space for expansion.

As identified in its 2013 Northside Improvements Environmental Assessment, the Airport Authority is proposing a new *SAN Northside Cargo Development* project. The project would include a consolidated

Page 5 of 6

31-9  
cont.

warehouse to fully accommodate onsite cargo sorting and staging, as well as expanded apron to accommodate additional cargo aircraft parking.

Additionally, the Airport Authority opened a new 93,000-square-foot Airline Support Building on North Harbor Drive this year, which will allow for more efficient processing of bulky cargo items shipped in the bellies of passenger jets. Approximately 15% of SAN's freight volumes are transported as "belly cargo."

- Page 78 in Appendix Y relies on the outdated 2009 Destination Lindbergh Study to estimate SAN's air cargo capacity and identify cargo operational deficiencies.

The FAA approved the most recent SAN aviation activity forecast in June 2019, which is publicly available at [www.san.org/plan](http://www.san.org/plan). The forecast anticipates that the number of cargo aircraft operations (i.e. takeoffs or landings) will increase by nearly 71% by 2050, even with the Airport's single-runway configuration.

As such, the Airport Authority requests that the 2021 Regional Plan be updated to incorporate the more accurate information presented above.

**5. Updating Airport Ground Access Modeling Assumptions**

Similar to other regional transportation plans, the Draft 2021 Regional Plan relies on an integrated forecasting model to determine future population, housing, and employment growth. This information is then applied to an activity-based model to simulate detailed transportation behaviors, such as where, when, and how people travel on a daily basis.

On page 20 in Appendix C, the Draft Plan states that its model relies on airport passenger survey data from 2008 to estimate airport-related travel patterns and demands on local and regional transportation facilities. The Airport Authority notes that ground access characteristics have changed dramatically over the last decade, especially with the introduction of rideshare companies. The Airport Authority also noticed that the modeling appears to be based on SAN aviation activity forecasts that were developed in 2013 (Figure S.18 in Appendix S). As previously stated, the FAA approved the most recent aviation activity forecast in June 2019, which is publicly available at [www.san.org/plan](http://www.san.org/plan). The new "constrained demand scenario" forecast estimates that SAN will serve approximately 20.3 million enplaned passengers in 2050.

Page 6 of 6

As such, the Airport Authority requests that the 2021 Regional Plan's modeling be updated to be based on more accurate modal assumptions for airport users and the more recent SAN aviation activity forecast.

Again, the Airport Authority appreciates the opportunity to provide feedback on the Draft 2021 Regional Plan. Please feel free to contact me at [breed@san.org](mailto:breed@san.org), if you have any questions or need additional information.

31-9

San Diego, CA 92101

Via E-mail, RegionalPlanEIR@sandag.org

Re: San Diego Transportation Equity Working Group Comments to the Draft Environmental Impact Report for the 2021 Regional Plan

Respected Ms. Uchitel:

The San Diego Transportation Equity Working Group (SDTEWG) expresses overall support and commends the SANDAG team for all the efforts to advance a transformational Regional Plan (RP) that improves the quality of life of the San Diego Region while addressing climate pollution and greenhouse gas (GHG) emission. **Although visionary, the Draft Environmental Impact Report (DEIR) for the 2021 RP includes significant air quality impacts, housing displacement, and insufficient GHG emission reductions.** The following letter expresses the concerns of the SDTEWG core organizations and provides mitigation measures to best decrease the RP environmental impacts particularly to communities at the frontlines of the climate disaster.

The SDTEWG was established in 2018 by community-based organizations (CBOs) in an effort to elevate transportation and environmental justice opportunities in Mid-City and South Bay for years to come. The core organizations are the Center on Policy Initiatives (CPI), City Heights Community Development (CH CDC), Environmental Health Coalition (EHC), Mid-City CAN (MCC), and SanDiego350 (SD350). Supporting organizations include Casa Familiar (CF) and the Urban Collaborative Project (UCP).

**1. Air Quality Impacts**

The DEIR states that Particulate Matter 10 (PM10), 2.5 (PM2.5) will increase and have significant impacts. PM10 and PM2.5 refer to PM emission that are smaller than or equal to 10 or 2.5 microns respectively. Although new vehicle technology will release less fuel emission, road dust from brakes and tire wear will continue to grow and as result emit more PM10 & PM2.5. The SDTEWG recommends that:

- a. **Mitigation GHG-5b**, which establishes new funding programs for zero-emission vehicles and infrastructure, should be amended to include the acceleration of the region's bus fleet

**RESPONSE TO COMMENT 32-1**

Thank you for the San Diego Transportation Equity Working Group's (SDTEWG) expressed support for the proposed Plan. SANDAG appreciates SDTEWG's participation in the environmental review process, and SDTEWG's concerns are addressed in detail in the responses to comments that follow.

**RESPONSE TO COMMENT 32-2**

MTS's Zero Emissions Bus (ZEB) Pilot Program has set a 2040 goal for full bus electrification. The ZEB Program prioritizes bus assignments on routes serving SB 535 Disadvantaged Communities (DACs) during fleet transition years.

Changes have been made to mitigation measure GHG-5b as described in response to comment Chatten-Brown 34-2, which accelerate adoption of these measures.

Changes to mitigation measure GHG-5a are not required in response to this specific comment. Reduction measures local jurisdiction's climate action plan (CAP) result in local emission reductions. These local emission reductions can result in air quality co-benefits by reducing natural gas combustion for space and water heating or by reducing VMT from vehicle travel. While many CAPs discuss the potential air quality and public health co-benefits of measures, quantification of these co-benefits is not standard CAP practice nor is it required for CAPs to be adopted by jurisdiction's elected decision-making body.

Lastly, the comment incorrectly states that the proposed Plan will result in significant PM2.5 impacts. No significant PM2.5 impacts are identified in the Draft EIR.

32-2 cont.	<p>transition to 100% electric by 2030 with priority implementation in disadvantaged communities as identified by CalEnviroScreen (CES).</p> <p><b>b. Mitigation GHG-5a</b> be enhanced by prioritizing grant funding for jurisdictions that integrate regulatory mechanisms to actively decrease toxic air pollution in the Climate Action Plan Updates or GHG reduction plans.</p>
32-3	<p><b>2. Housing Displacement</b> The DEIR states the Plan will displace substantial numbers of people or housing units. Therefore, the Regional Plan must commit to near-term actions to prevent displacement particularly in disadvantaged communities as identified by CES. The SDTEWG recommends:</p> <p><b>a. The Regionwide Displacement Study</b> be completed no later than June 2022.</p> <p><b>b. Near-term Action 8(c)</b>, directs SANDAG to implement a regional housing incentive grant program to support housing development in transit-rich areas. The mitigation should be amended to incorporate the protection of low-income communities of color living near transit corridors from gentrification with proactive strategies that include building affordable housing while preserving naturally occurring affordable housing, community ownership, and tenant protections.</p>
32-4	<p><b>3. Insufficient Greenhouse Gas Emission Reductions</b> The SDTEWG strongly recommends the prioritization of mitigation measures focused on the electrification of <b>mass public transit</b>. The proposed regional plan shows a dramatic decrease of GHG emissions compared to previous regional plans due to transit improvements and compact development. However, the DEIR recognizes that the Plan would be inconsistent with the State's ability to achieve the SB 32 target of reducing statewide GHG emissions to 40 percent below the 1990 levels by 2030, ability to achieve the EO B-55-18 goal of statewide carbon neutrality by 2045 across all sectors, and achieve the EO S-3-05 goal of reducing California's GHG emissions to 80 percent below 1990 levels by 2050.</p> <p>Mitigation measures provided include establishing new funding for zero emission vehicles and infrastructure. The over-reliance on electric single occupancy vehicles and infrastructure sidetracks efforts to rapidly decrease GHG emissions, congestion, and vehicle miles traveled (VMT). The SDTEWG recommends a stronger focus on the electrification of <b>mass public transit</b> to accelerate emission reductions.</p>
32-5	<p><b>c. Mitigation GHG-5b</b>, which establishes new funding programs for zero-emission vehicles and infrastructure, should be amended to include the acceleration of the region's bus fleet transition to 100% electric by 2030 with priority implementation in disadvantaged communities as identified by CalEnviroScreen (CES).</p> <p><b>a. Include no-cost transit analysis:</b> Although CEQA does not require EIRs to analyze the impact of non-infrastructure projects, we recommend conducting an analysis on the environmental impact of no-cost transit. The analysis should consider its impact on emission reductions and air quality.</p>
32-6	<p>Additionally, measures to mitigate GHG from the development of projects should involve partnering with Community Based Organizations (CBO) to prioritize community engagement that identifies best ways to increase transit use through service frequency and affordability.</p>

**RESPONSE TO COMMENT 32-3**

SANDAG is in the process of preparing the Regional Displacement Study, as identified in Appendix B of the proposed Plan. The commenter is requesting a specific completion date of the study as well as implementation of a regional housing incentive grant program, which are beyond the scope of the EIR; these requests will be considered by the SANDAG Board of Directors when it considers adoption of the proposed Plan.

**RESPONSE TO COMMENT 32-4**

In addition to making observations about GHG emissions under the proposed Plan and summarizing the conclusions of the Draft EIR, this comment also “strongly recommends” mitigation measures related to electrification of public transit. Specifically, it asserts that mitigation measure GHG-5b “should be amended to include acceleration of the region’s bus fleet to 100 percent electric by 2030 with priority implementation in disadvantaged communities as identified by CalEnviroScreen (CES).”

Mitigation measure GHG-5b (page 4.8-47) requires that SANDAG shall, prior to December 2025, establish one or more funding programs for zero-emissions vehicles and infrastructure, including, among other things, allocation of “funding for zero-emissions buses and infrastructure (e.g., EV charging equipment and/or hydrogen fueling stations).” Entities eligible for funding under this measure include “public transit operators for zero-emission bus and infrastructure funding.” Electric buses and charging infrastructure would qualify to receive funding under this measure.

This mitigation measure was developed in part to help public transit agencies in the San Diego region comply with CARB’s Innovative Clean Transit Regulation, which requires all public transit agencies in California to gradually transition to a 100 percent zero-emission bus fleet. The comment does not provide any reason or evidence that narrowing the focus of this measure from zero-emission technology to electric technology or prioritizing implementation within CES-defined

disadvantaged communities would increase the measure's GHG reduction effectiveness.

Mitigation Measure GHG-5b has been accelerated and strengthened in revisions made in response to Draft EIR comments. See response to comment Chatten-Brown 34-2.

Moreover, SANDAG does not have the authority to amend this mitigation measure to require that "the region's bus fleet transition to 100% electric by 2030" or to require that public transit agencies "priorit(ize) implementation in disadvantaged communities as identified by CalEnviroScreen (CES)."

While incorporating this comment into mitigation measure GHG-5b is not required under CEQA, it is acknowledged for the record and will be forwarded to the decision-making bodies for their consideration prior to making a decision on adopting the proposed Plan. SANDAG has prioritized equity in the proposed Plan more than ever before, promising a system that is a faster, fairer, and cleaner transportation system that is intended to uplift people who have been historically faced with social injustice

#### **RESPONSE TO COMMENT 32-5**

The proposed Plan has been developed with equity at the forefront. An equity-specific project list has been included in Appendix H of the proposed Plan. In addition, one of the Implementation Actions listed in Appendix B of the proposed Plan is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a 1-year pilot that may provide free fares for youth under age 19. The proposed Plan supports the electrification of the region's transit buses and the State's Innovative Clean Transit regulation. Appendices A and B of the proposed Plan include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 and 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website at: <https://ww2.arb.ca.gov/our->

work/programs/innovative-clean-transit/ict-rollout-plans. Land use authority is reserved to local jurisdictions: the cities and the County.

#### **RESPONSE TO COMMENT 32-6**

This comment asserts that “measures to mitigate GHG from the development of projects” should include partnering with Community Based Organizations (CBOs) and community engagement to identify the best ways to increase transit use through service frequency and affordability. For purposes of responding to this comment SANDAG assumes the commenter is referring to Draft EIR mitigation measure GHG-5f. SANDAG agrees with this comment and has revised mitigation measure GHG-5f as follows (page 4.8-51):

- Measures that reduce VMT by increasing transit use, carpooling, bike-share and car-share programs, and active transportation, including the following:
  - Building or funding a major transit stop within or near development, in coordination with transit agencies.
  - Developing car-sharing and bike-sharing programs.
  - Providing pedestrian network improvements and a comprehensive bicycle network.
  - Providing traffic calming measures.
  - Providing transit incentives, including transit passes for Metropolitan/North County Transit District buses and trolleys.
  - Consistent with the Regional Bike Plan, incorporating bicycle and pedestrian facilities into project designs, maintaining these facilities, and providing amenities incentivizing their use; and planning for and building local bicycle projects that connect with the regional network.
  - Implementing Complete Streets consistent with the SANDAG Regional Complete Streets Policy, including adopting local Complete Streets policies.
  - Implementing Mobility Hubs consistent with the Regional Mobility Hub Strategy.
  - Improving transit access to bus and trolley routes through incentives for constructing transit facilities within developments, and/or providing dedicated shuttle service to trolley and transit stations.
  - Implementing measures to increase transit use through service frequency and affordability as identified through community

engagement activities, including but not limited to input from local residents, stakeholders, and Community-Based Organizations.

32-7 SANDAG's Social Equity Early Action Transit Pilot program serves as a model to build upon. The SDTEWG recommends the following:

- a. **Mitigation GHG – 5f**, which includes measures to reduce VMT should be amended to prioritize an increase of frequency and affordability of bus and trolley services particularly in areas under construction informed by the local CBOs and respective stakeholders.

32-8 **4. Coastal Access**  
 Unfortunately, the draft Regional Plan and associated DEIR do not adequately analyze how the Plan impacts coastal and beach access for disadvantaged communities in San Diego. We ask staff to conduct this analysis and make changes to improve access.

We thank the SANDAG team for all the efforts to integrate equity in the Regional Plan and look forward to continue collaborating.

Sincerely,

**The San Diego Transportation Equity Working Group**

**Center on Policy Initiatives**, Keara Piña  
**City Heights Community Development Corporation**, Randy Torres-Van Vleck  
**Environmental Health Coalition**, Laura Benavidez & Carolina Martinez  
**Mid-City CAN**, Diana Ross  
**SanDiego350**, Toshihiko Ishihara & Steven Gelb

**RESPONSE TO COMMENT 32-7**

The comment recommends that Draft EIR mitigation measure GHG-5f should be amended to “prioritize an increase of frequency and affordability of bus and trolley services particularly in areas under construction informed by the local CBOs and respective stakeholders.”

Draft EIR mitigation measure GHG-5f states that the County of San Diego and cities can and should implement measures to reduce GHG emissions and achieve zero-net energy during the planning, design, project-level CEQA review, construction, and operation of development projects. It includes several measures that would reduce VMT, including the following related to improving public transit service:

- Improving transit access to bus and trolley routes through incentives for constructing transit facilities within developments, and/or providing dedicated shuttle service to trolley and transit stations.
- Subsidizing transit service expansion by increasing service hours, decreasing fares, and adding additional transit fleets.
- Implementing a school bus program in areas currently not served by school buses.

As shown above, mitigation measure GHG-5f already includes measures addressing increased frequency and affordability of bus and trolley services as requested by the commenter. Also refer to response to comment Del Mar 13-6, which shows how the text of mitigation measure GHG-5f has been revised to reference measures that increase frequency and affordability of transit services through input by CBOs, other stakeholders, and residents.

**RESPONSE TO COMMENT 32-8**

It should be noted that as SANDAG developed the proposed network for the proposed Plan, data on trip-making was used to understand the critical connections of the region. Connections to coastal areas are represented in these critical connections. Implementation of the regional bike network as well as complete streets in Mobility Hubs will support enhancement for active transportation in coastal communities, benefiting all residents in the region including disadvantaged communities.

“Second-tier projects” that would implement the Plan include site-specific transportation network improvements and development projects that would be subject to project-specific environmental review under CEQA and NEPA, where applicable. The corresponding project-

specific environmental documentation would identify significant impacts with regard to conflicts with land use policies of adopted plans, including specific impacts related to coastal access, and identify mitigation measures to avoid or lessen significant physical impacts on the environment resulting from any conflicts.

**COMMENT LETTER 33: SIERRA CLUB SAN DIEGO**

Comment Letter 33

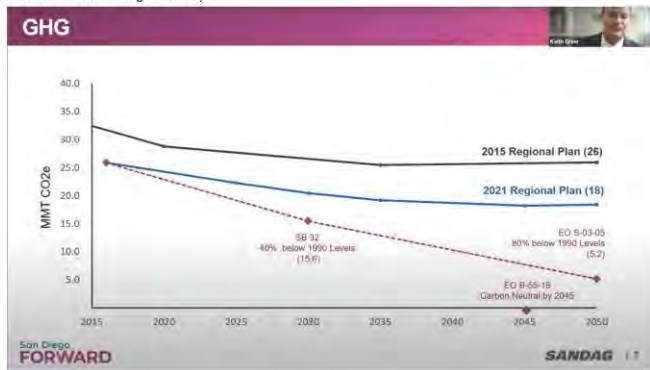

October 11, 2021

Via E-mail (RegionalPlanEIR@sandag.org)  
 Kirsten Uchitel  
 Associate Planner, SANDAG  
 401 B Street, Suite 800  
 San Diego CA, 92101  
 Dear Ms. Uchitel,

These comments are in response to the 2021 SANDAG Draft Regional Plan as detailed in the Draft Environmental Impact Review of that plan

SANDAG's Regional Plan has strong reinforcement of important improvements for the San Diego region; however, although we support many of the transit and infill improvements and emissions reductions, the Draft Environmental Impact Report exposes that the plan falls short of the ambition needed to reduce emissions quickly, dramatically force a mode shift, and reduce overall Vehicle Miles Travelled. Specifically, the plan does not meet state goals for GHG reductions, including SB 32, Executive Order B-55-18, and Executive Order S-03-05. (source SANDAG Board Mtg 10/8/21)

33-1

**RESPONSE TO COMMENT 33-1**

The proposed Plan significantly reduces per capita VMT; however, total VMT increases through the life of the Plan. VMT growth is predominantly due to the population and employment growth within the region, notwithstanding that the SCS land use pattern and the proposed transportation network improvements and programs in the proposed Plan would help to reduce VMT growth. That said, the increase in VMT, from baseline Year 2016 conditions, was identified as a significant impact under Impact TRA-2 in the EIR.

The proposed Plan exceeds the SB 375 target of 19 percent reductions of GHG by 2035 and the Board Resolution for a 30 percent reduction of GHG emissions from all on-road transportation by 2035. However, the proposed Plan's GHG emissions would be inconsistent with the State's ability to achieve the goals of EO B-55-18 and S-3-05. As discussed in additional detail in Section 4.8.4 in the EIR, mitigation measures would help reduce regional GHG emissions by reducing VMT, increasing use of zero-emission fuels, sequestering carbon from the atmosphere, and other measures; they would reduce inconsistency of the proposed Plan's GHG emissions with the State's ability to achieve the SB 32, EO B-55-18, and EO S-3-05 GHG reduction goals. However, full implementation of the changes required to achieve these goals is beyond SANDAG's and local agencies' current jurisdiction and authority. As such, impacts were identified as significant.

SANDAG recognizes that substantial reductions in global, state, and regional GHG emissions are an urgent priority, and strives in its regional plans and programs to do its part in reducing GHG emissions from all sources. However, there is no current legal or planning requirement that the SANDAG region's emissions be reduced by the same percentage ("equal share") as the statewide percentage in order for the State to achieve the Executive Orders' goals. More specifically, there is no legal or planning requirement that the proposed Plan achieve these reductions or be on a trajectory to achieve these reductions.

While the proposed Plan results in significant impacts related to VMT and GHG, anticipated reductions in per capita VMT and GHG, along with proposed mitigation measures, would reduce inconsistency of the proposed Plan with the State's ability to achieve VMT and GHG goals

and puts SANDAG on a trajectory that more closely aligns with regulatory targets.

Furthermore, as discussed in Chapter 2, *Project Description*, SANDAG updates the Regional Plan every 4 years, and, as the State continues to identify new plans and technologies to meet the mid-century GHG emission targets, SANDAG will be able to implement these features into future plans to further the region's progress toward the State's goal of carbon neutrality by 2045.

33-2 Transportation represents more than 50% of our regional emissions when fuel procurement is included, and the report explains repeatedly that the region will likely be subjected to average temperature increases of up to 4.8 °F by 2050 and sea level rise up to 4.6' by 2100. Rather than treat those dire predictions as a mandate to create a plan that addresses Climate Crisis with accelerated pace, the plan uses state mandates as the upper limit of ambition, while still managing to miss three of those mandated goals. Plans originally slated to connect the county via proper investment in lasting and extremely low emissions electric rail have been scrapped and replaced with Bus Rapid Transit, allegedly for flexibility to adapt routes to anticipated accepted usage. Urban planners and the science agree that electric rail is the right investment, because increasing the use of electric trains to satisfy our needs is the most efficient, and least emitting method of transporting people long distances. Movement over shorter distances in a deepening Climate Crisis should be centered around active transportation and micromobility, again focusing on extremely low emissions movement.

33-3 The planning initially indicated a network of electric trains through the center of the county, along the I-15 corridor, and also connecting in many East-West configurations. But with an assumption that North County residents will never have a willingness to use trains, instead it resulted in a degraded regional rail plan with pessimistic propensity scores dictating which communities would be served in 2050 by rail and who would have to fall back on Bus Rapid Transit and continue using cars seemingly forever. (images from SANDAG Transportation, Regional Planning, and Borders Committees Joint Meeting 8/7/2020)

**RESPONSE TO COMMENT 33-2**

As an initial matter, this comment relates to the contents of the proposed Plan and not to the adequacy of the Draft EIR’s analysis.

As discussed throughout the Draft EIR and particularly in Appendix C, *Climate Change Projections, Impacts, and Adaptation*, of the EIR, SANDAG is aware of and deeply concerned about the implications of climate change on the San Diego region.

As described in Section 4.8, the 2017 Scoping Plan establishes the statewide framework for achieving the goal of a 40 percent reduction from 1990 GHG levels in 2030 and putting post-2030 statewide emissions on a downward trajectory toward the long-term statewide GHG reduction goals for 2045 and 2050. The 2017 Scoping Plan indicates that to achieve these targets and goals, long-term investments in renewable energy generation, electrified transportation, energy efficient and decarbonized buildings, enhanced industry efficiency, restoration of California’s natural and working lands, and sustainable solid waste management are among many actions the State must take. In addition, the State has not adopted a plan analogous to the 2017 Scoping Plan that addresses achieving the EO S-3-05 goal of reducing statewide GHG emissions by 80 percent below 1990 levels by 2050 or the B-55-18 goal of achieving statewide carbon neutrality no later than 2045.

As discussed in the Final EIR (page 4.8-40), available research and reports indicate that achieving statewide GHG reduction goals will require major shifts or even fundamental transformations in the economic, social, technological, and political fabric of life in California and beyond, including the development of new technologies and large-scale deployment of new and existing technologies; and in the roles of local, State, and the federal government in regulating economic activities and personal behaviors that affect GHG emissions. The precise pathway to meeting the State’s mid-century goals (e.g., achieving carbon neutrality no later than 2045; reducing emissions to 80 percent below 1990 levels by 2050) is still unclear, but would require the decarbonization of the State’s electrical sector; decarbonization of existing buildings and new construction; electrification of the entire transportation sector; investments in healthy soils; sustainable solid waste and wastewater management; and carbon dioxide removal

strategies, such as land-based carbon sequestration and direct air capture of CO<sub>2</sub>.

The required GHG reductions from the aforementioned sectors will be achieved through a coordinated effort by, at minimum, State, regional, and local agencies, organizations, and stakeholders, and is well beyond the scope and jurisdiction of SANDAG alone.

SANDAG investments will also support the transition of transit and freight vehicles to zero emission including funding for hydrogen fuel cell electric buses and battery electric buses. The proposed Plan supports investments in the electrification of cars, trucks, and buses and their supporting infrastructure (e.g., EV charging stations and hydrogen fueling stations) and supports the transition of transit and freight vehicles to zero emission including funding for hydrogen fuel cell electric buses and battery electric buses. These electric vehicle investments are one of the ways SANDAG is working to reduce regional GHG emissions and improve local air quality. Appendices A (Table A.17) and B of the proposed Plan show SANDAG's proposed EV commitments such as regional electric vehicle and charging infrastructure incentive programs. Innovation and advanced technologies will be critical to meeting regional GHG reduction goals in 2035.

Furthermore, as discussed in Chapter 2, SANDAG updates the Regional Plan every 4 years, and, as the State continues to identify new plans and technologies to meet the mid-century GHG emission targets, SANDAG will be able to implement these features into future plans to further the region's progress toward the State's goal of carbon neutrality by 2045.

### **RESPONSE TO COMMENT 33-3**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

Following the 5 Big Moves data-driven approach to develop a comprehensive and integrated transportation system, the project-evaluation criteria methodology relied on regional data and information analyzed with geospatial tools (ArcGIS) and spreadsheets (Excel). SANDAG used GIS analytics and data, including land use density, access to transit, car ownership, and income to refine the networks. Origin-destination pairs were analyzed and refined to assess which routes warranted commuter rail solutions and which warranted alternate transit solutions that would reduce automobile use.

33-3 cont.

This was a massive change in strategy after the 5 Big Moves had been described for more than a year as having a Transit Leap. California's High Speed Rail (HSRA) is only expected to serve Escondido and downtown San Diego, so it does not take the place of a regional rail line on the I-15 corridor.

33-4

The bike infrastructure plans are too slow, incremental, and don't fundamentally pattern streets for the radical mode shift we need. The RP has chosen to wait for a separate plan update for the regional bicycle network. Unfortunately the bike network is treated like a separate ancillary addition, forming a patchwork of insufficiently wide rail trails (actually Multi Use Paths) and painted class 1 bike lanes. It fundamentally fails to restructure the more dense areas as walkable and bikeable cities. This will result in continuing to miss projected targets of increasing Active Transportation that is necessary for lower emissions in our cities' Climate Action Plans. This Regional Plan is for 28 of the most critical years that San Diego will ever face, yet the plans don't meet the depth of mode shift needed. Single occupancy cars are still given deference in 2050, creating no fundamental change.

33-5

This plan's inclusion of new rail in the South Bay is admirable and reinforces the need to move people who are expected to embrace transit. But the plan is placing too little emphasis on mass transit in the rest of the county, attempting to reduce congestion with Managed (HOT) Lanes and underwhelming carpooling strategies, assuming that most San Diegans will never give up their cars. This is not the right response from planners who are tasked with helping us radically reduce VMT. Although the Report does acknowledge the reduction of per capita VMT, it actually predicts an increase in VMT by 6.7% because of new population growth. That is completely unacceptable with our world in the balance.

**RESPONSE TO COMMENT 33-4**

As an initial matter, this comment relates to the contents of the proposed Plan, and not to the adequacy of the Draft EIR's analysis.

The projects from the active transportation network were laid out and prioritized based on the analysis performed in Riding to 2050, SANDAG's Adopted Regional Bike Plan. While the deadline year for build out is 2050, this just means it would be proposed to be completed by that time. Many projects will likely be completed earlier. This is especially true as new funding sources become available. Additionally, as an early action out of the proposed Plan, SANDAG will be developing a new Regional Active Transportation Network in which projects will be reassessed and reprioritized based on data and community engagement. Finally, the intention of the network proposed in this Plan is a regional framework which facilitates trips associated with regional purposes (trips to school and work, trips within Mobility Hubs, trips to major destinations, and others). The regional network complements the much more extensive networks that local jurisdictions plan and construct on their own streets.

**RESPONSE TO COMMENT 33-5**

Commuter Rail Line 582 is included in the proposed Plan to serve north-south travel needs in Sorrento Mesa, National City, Kearny Mesa, and University Heights. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is completing a more detailed ridership analysis of this route.

The proposed Plan is focused on creating more mobility options for all people in the San Diego region through a fast, reliable, and fair public transportation system and micromobility options such as e-bikes and scooters, rideshare, and microtransit shuttles. The Plan also proposes a network of Managed Lanes using existing infrastructure that provides priority access for people using transit, carpooling, or vanpooling. The Managed Lane Network supports transit services making transit a compelling alternative to driving.

The proposed Plan maximizes the region's existing roads using technology to manage how lanes are used, which reduces traffic congestion and delay. The proposed network of Managed Lanes also encourages carpooling, vanpooling, and taking transit, which creates more roadway capacity without adding additional lanes.

As discussed in Draft EIR Section 4.16, achieving further reductions in the total and per capita VMT generated within the region depends upon additional State policy actions and funding, as well as local jurisdictions' review and entitlement of individual land use development projects and Regional Arterial System (RAS) transportation projects. In addition, transportation sponsors other than SANDAG, such as Caltrans, must evaluate and potentially mitigate any induced VMT that may be associated with the implementation of enhancements to the freeway and State Highway System.

The Draft EIR proposes mitigation measure TRA-2, which focuses on project-specific mitigation measures that can and should be implemented to further reduce the region's total VMT and VMT per capita. SANDAG cannot require local agencies implementing development projects, or other transportation project sponsors not receiving TransNet grants, to adopt the mitigation measures, and it is ultimately the responsibility of the CEQA lead agency to determine and adopt mitigation. In addition, the State has indicated that additional State policy actions and funding would be required to close the VMT gap between what the MPOs could achieve through implementation of their SCSs and reductions needed to meet State goals.

33-6 The DEIR states, "RTP transportation network improvements must be "revenue constrained" (23 CFR 450.324(f)(11), meaning that the MPO has specified the public and private funds that are reasonably expected to be available and that are needed to implement the proposed transportation plan."  
 Though the mandate may state that the RTP must be revenue constrained, this ultimately forces it to be compromised to the extent that it does not satisfy the other constraints, such as legally mandated climate emissions reductions goals.

It is plain to see that the plan was altered to be more affordable and politically more acceptable by current SANDAG board representatives. That is a disservice to the future generations that this plan underserves. With VMT still going up in the wrong direction, and not enough influence of increasing Passenger Miles Travelled via high density rail movement, the plan fails to account for any worse case scenarios demanded by future emissions reductions goals.

Because the plan is revised every 4 years, if the 2050 vision is valuable for anything, it is critical as a way of driving the big swings in mass transit, and laying the foundation for the difficult task of building electrified permanent infrastructure for transit and walkable and bikeable streets in all our communities to connect them to transit, thus reimagining extremely low impact travel.

33-7 This plan relies on Bus Rapid Transit using Managed Lanes to ensure those buses move in a timely manner, which we cannot guarantee without a fully dedicated bus lane. Furthermore, buses leaving the main route to meet riders at off-road transit stations as the 235 route currently does, makes the BRT solution significantly slower, than traveling the same distance by car. The choice to use BRT instead of rail, fails to invest in what would be the faster, cheaper to operate, higher capacity system, not subject to conflict with road traffic. The use of "HOT" paid access to prioritize the wealthy while leaving behind those without the means to pay ever-changing Managed Lanes tolls, is an inequitable policy that should be abandoned. If Managed Lanes are a lever to encourage reduction of VMT through the enhancement of per vehicle Passenger Miles Traveled, then the policy cannot have loopholes for the wealthy driving solo, even if HOT lane policy might be expected to fund other programs. While today, there are HOV privileges for EVs, hybrids, and motorcycles, the plan doesn't describe a specific trigger for when those privileges will be rescinded. As internal combustion cars are phased out and EVs are the norm, it will no longer make sense, or be possible, to allow them to use those Managed Lanes in single occupancy mode. Despite the state's insistence the HOV lanes reduce emissions, there is little evidence to show that Managed Lanes induce carpooling. The plan shows only an eventual 6.4% reduction in percentage of car mode share in 2050 compared to 2016 (85.9% -> 79.5%), meaning it is failing miserably to diminish car driving behaviors. If the intention of Managed Lanes is to reduce congestion in the hope that cars move more freely, the reduced congestion will discourage the necessary mode shift to adoption of GHG-reducing, higher PMT mass transit. Marginally reducing congestion is an outdated goal, no longer relevant in a community that is now tasked with eliminating GHG emissions rather than just slightly cutting them. Managed lanes were described during the community engagement phase of the RTP as a dynamic sign-based system in the 5 Big Moves preview, one that could be operated without the creation of any new lanes. Here it is shown as a feature of the Next OS, which is described as

**RESPONSE TO COMMENT 33-6**

As an initial matter, this comment relates to the contents of the proposed Plan, and not to the adequacy of the Draft EIR's analysis.

Planning a better transportation system that reduces congestion, addresses social equity considerations, and meets State and federal mandates for reducing GHG emissions and air pollution is key to SANDAG's vision for the region. Revenues to fund the projects do not come in all at once, but dollars that are available are applied to ensure that the best projects are initiated first and, as the comment suggests, lays the foundation for future changes to come.

Also as the commenter notes, SANDAG updates the Regional Plan every 4 years, and, as the State continues to identify new plans and technologies to meet the mid-century GHG emission targets, SANDAG will be able to implement these features into future plans to further the region's progress toward the State's goal of carbon neutrality by 2045.

**RESPONSE TO COMMENT 33-7**

As an initial matter, this comment relates to the contents of the proposed Plan, and not to the adequacy of the Draft EIR's analysis.

The proposed Plan places emphasis on maximizing the use of existing facilities to add corridor capacity to ease congestion while also trying to meet State and federal greenhouse gas and air quality targets. The proposed Managed Lanes Network uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to transit (including Bus Rapid Transit), carpools, vanpools, and low-emission vehicles with appropriate decals. The system of Managed Lanes and supporting connectors support Transit Leap and HOVs to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes. Solo drivers will have options to use the lanes, but at a price, and transit services can travel congestion free. The result is better optimization of the system that encourages higher occupancy travel but with real alternatives that are competitive with driving.

SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are

impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources. SANDAG also will collaborate with State and federal agencies that are partnering to evaluate road charge programs in California.

The Plan proposes an expanded public transit network including commuter rail, light rail, Rapid bus, and local bus services. The network was developed to be a comfortable, convenient option to the automobile. The commuter rail service connects the highest demand trip areas between residents and employment centers. The purple line alignment through City Heights is being studied in the South Bay to Sorrento Comprehensive Multimodal Corridor Plan currently underway. Funding for the relocation of rail on the Del Mar Bluffs to a tunnel is prioritized in the proposed Plan.

But the plan calls for the creation of hundreds of miles of additional lanes. Any new lane miles will add capacity and induce new demand, thus increasing VMT and emissions.

33-8 Regarding the Plan Alternatives, Sierra Club prefers Alternative 3 to the actual Plan. The increased focus on infill and associated benefits of access to transit and mobility options are responsible policy that will limit habitat disruption, protect native species, and drive down emissions more quickly, although we feel this is not enough, nor is it fast enough.

33-9 Our community members cannot build their own train system nor can they build their own separated bike lanes. They rely on SANDAG planners to witness the proven low emissions strategies that other cities are using to radically prepare for a low GHG emissions future. The car, truck and SUV have brought us high emissions and pollution, and extremely high congestion, and we cannot afford the time and risk of phasing out internal combustion cars to replace them with an equal number of substantially heavier, battery electric EVs which have no advantage in reducing congestion. The next generation will look at this plan, at how it morphed from one of great promise to one of great fiscal compromise, in a time that we could not afford to favor business-as-usual over dramatic mode shift. The Climate Crisis is expected to get substantially worse, and this plan contains far too much incrementalism. The Climate Emergency demands bold plans with dramatic reductions in overall VMT and with contingencies within the plan, to accelerate more rapid emissions reductions as we continually reevaluate and find that accelerated emissions reductions are absolutely necessary.

Sincerely,  
Karl Aldinger  
Organizer - Sierra Club San Diego

**RESPONSE TO COMMENT 33-8**

The Sierra Club’s support for Alternative 3 is acknowledged. At the conclusion of the EIR process, the decision-makers (in this case the SANDAG Board of Directors) make final determinations as to the feasibility of alternatives, considering information in the Draft EIR, additional information in the Final EIR and elsewhere in the administrative record, and policy factors (see CEQA Guidelines Section 15091(a)(3)). Therefore, this comment will be provided to the Board of Directors and will be considered before it makes a decision on adopting a final Regional Plan.

**RESPONSE TO COMMENT 33-9**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

That said, SANDAG understands the commenter’s concerns, which align with the proposed Plan’s goal of healthier air and reduced GHG emissions regionwide, while facilitating the efficient movement of people and goods and providing access to affordable, reliable, and safe mobility options for everyone. The proposed Plan is a long-range planning document and is required by federal law to provide a reasonably feasible funding strategy for the projects, policies, and programs of the Plan. Significant additional work, including public involvement, pilot testing, legislation, and much more will be necessary to inform implementation of elements of the proposed Plan. At a minimum this Plan is updated every four years with the latest in planning ideas and concepts.

We appreciate your support and feedback. Please continue to follow along in this process by visiting [SDForward.com](http://SDForward.com).

Via E-mail (RegionalPlanEIR@sandag.org)  
Kirsten Uchitel  
Associate Planner, SANDAG  
401 B Street, Suite 800  
San Diego CA, 92101

Dear Ms. Uchitel,

On behalf of the San Diego Chapter of the Sierra Club, we are providing the following comments regarding the Draft 2021 SANDAG Regional Plan (“Regional Plan” or “Plan”) and Draft Environmental Impact Report (“DEIR”). Please also see additional letters submitted separately by members of Sierra Club San Diego for further comments on the Regional Plan and DEIR, explaining deficiencies of the Regional Plan and requesting improvements.

Because the Regional Plan fails to sufficiently reduce greenhouse gases and vehicle miles travelled, and protect biological resources, we urge SANDAG to revise the Plan and recirculate a new DEIR. The DEIR contains deficiencies, which we have described below.

34-1

**I. The Regional Plan Fails to Sufficiently Reduce GHG Emissions.**

The Regional Plan fails to sufficiently reduce greenhouse gas (“GHG”) emissions. Courts have emphasized the importance of regional transportation and land use planning in meeting statewide GHG reductions. (*Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 17 Cal.App.5th 413, 429 (“*CNFF II*”), *Golden Door Properties, LLC v. County of San Diego* (2020) 50 Cal.App.5th 467, 533-34 (“*Golden Door II*”).) Yet the Regional Plan will have significant and unavoidable impacts to greenhouse gas emissions, as it is inconsistent with the state’s ability to achieve statewide GHG reductions under SB 32, EO S-3-05, and EO B-55-18. (Impact GHG-5, DEIR, p. 4.8-35 to -52.)

**A. The DEIR’s GHG Mitigation Measures Violate CEQA.**

“Formulation of mitigation measures shall not be deferred until some future time.” (CEQA Guidelines § 15126.4, subd. (a)(1)(B).) Deferral of the development of mitigation is only allowable where “specific performance criteria” are required at the

34-2

**RESPONSE TO COMMENT 34-1**

This comment asserts that the proposed Plan fails to sufficiently reduce GHG emissions and refers to more detailed comments provided later in the letter. It is true that the Draft EIR found that the proposed Plan would have significant and unavoidable impacts to greenhouse gas emissions. This comment does not assert any reasons why those findings are inadequate.

**RESPONSE TO COMMENT 34-2**

The comment restates the program-level mitigation measures. The description of these measures as “impermissible deferred mitigation” is not explained in detail in this comment. In general, however, mitigation measures in a first-tier EIR for a program-level project such as the proposed Plan may contain generalized mitigation criteria and policy-level alternatives (*Koster v. County of San Joaquin* (1996) 47 Cal.App.4th 29). See *California Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603 (the details of exactly how the required mitigation and its performance standards will be achieved can be deferred pending completion of a future study). The proposed Plan “integrates land use, transportation systems, infrastructure needs, and public investment strategies within a regional framework,” and its EIR is a first-tier Program EIR for which mitigation measures may be more generalized than in a project-level EIR. (see Draft EIR page 1-1.)

This comments assert that Draft EIR mitigation measures GHG-5a, GHG-5b, GHG-5c, and GHG-5d lack specific performance criteria. However, these mitigation measures do include specific performance standards as described below.

**GHG-5a Allocate Competitive Grant Funding to Projects that Reduce GHG Emissions and for Updates to CAPs or GHG Reduction Plans** (pages 4.8-46 to 4.8-47).

By adopting this measure, SANDAG would commit to two actions: (1) implementing a grant program(s) that allocate(s) funding on a competitive basis to underfunded GHG-reducing projects that implement strategies or measures included in an adopted climate action plan (CAP) or GHG reduction plan, and (2) as part of next cycle of the *TransNet* Smart Growth Incentive and Active Transportation Grant Programs Smart Growth Incentive Program, continue to require locally

adopted CAPs or GHG reduction as prerequisites to be eligible for grant funding, and make funding available for local jurisdictions to prepare and update CAPs and GHG reduction plans that keep pace with future longer-term State targets and goals for GHG emissions reductions.

Mitigation measure GHG-5a does include specific performance standards that the grant program(s) will be required to achieve, as described below.

First, the measure commits SANDAG to achieving additional *annual* GHG emissions reductions during the proposed Plan horizon by implementing projects that would otherwise not occur due to insufficient funding and additional *cumulative* GHG emissions reductions during the proposed Plan horizon by implementing projects ahead of schedule and realizing GHG reductions earlier than they would otherwise occur due to timing of funding availability. To ensure that this measure achieves additional annual and/or cumulative GHG emissions reductions, funding applicants are required to demonstrate, to SANDAG's satisfaction, that their projects would not be financially feasible, either due to insufficient funding or the timing of funding availability, in the absence of SANDAG funding.

Second, to receive the competitively awarded grant funding, projects must be included in an adopted CAP or GHG reduction plan. That adopted CAP or GHG reduction plan is required, in part, to establish a locally appropriate 2030 GHG reduction target for community-wide emissions derived from the State's legislative 2030 target, and to quantify how local GHG reduction strategies, programs, and measures would meet or exceed the 2030 target. Applicants are also required to estimate the GHG emissions reductions from their project, subject to review and approval by SANDAG.

Third, the measure includes a commitment by SANDAG to structure the grant program(s) by using evaluation criteria, evaluation criteria weighting, or similar means that prioritize the allocation of funds to projects that include measurable programs for achieving the GHG emissions reduction targets identified in that jurisdiction's adopted CAP or GHG reduction plan. This measure also includes a commitment by SANDAG to report annually to the Board of Directors on the estimated GHG reductions achieved by the projects funded through this grant program.

It is not possible at this time for SANDAG to establish additional performance criteria for this mitigation measure in the form of a

specific numeric amount of GHG emissions reductions that would be achieved by implementation of the grant program(s). While examples of the types of projects that would be eligible for funding are listed in the measure (e.g., existing building retrofits to reduce electricity or natural gas use or install onsite renewable energy systems), there is not sufficient information available at this time about the nature, scope, size, location, and other details of specific projects that would apply for funding (e.g., number, type, age, and condition of buildings that would be retrofitted; number, system size, and type of onsite renewable energy systems installed).

Lastly, SANDAG has made the following minor revisions to the text of mitigation measure GHG-5a to clarify the points raised in this response. The following revisions also reflect edits made in response to comment Chatten-Brown 34-3.

**GHG-5a Allocate Competitive Grant Funding to Projects that Reduce GHG Emissions and for Updates to CAPs or GHG Reduction Plans.** ~~Prior to December 2025 (adoption of the next Regional Plan), and beginning as soon as~~ No later than December 2023, SANDAG shall implement a grant program(s) that allocate(s) funding on a competitive basis to underfunded GHG-reducing projects that implement the stated strategies or measures in local jurisdiction CAPs or GHG reduction plans. To be eligible, CAPs or GHG reduction plans shall meet the minimum criteria specified below. Examples of such projects to reduce GHG emissions include existing building retrofits to reduce electricity or natural gas use or install onsite renewable energy systems, activities at the local level that reduce VMT, Smart Cities<sup>3</sup> measures that result in the reduction of GHG, programs and infrastructure to divert organic waste from landfills, and tree planting. ~~The purpose of such new and/or revised grant program(s) shall is to:~~ (1) achieve additional annual GHG emissions reductions during the proposed Plan horizon by implementing projects that would not otherwise occur due to insufficient funding, and (2) achieve additional cumulative GHG emissions reductions under the proposed Plan planning horizon by implementing projects ahead of schedule and realizing GHG reductions earlier than they would otherwise occur due to timing of funding availability. Reducing total annual and cumulative GHG emissions under the proposed Plan planning horizon would reduce the proposed Plan's contribution to climate change.

To be eligible for grant funding, local jurisdictions would be required to have a CAP or GHG reduction plan adopted by the agency's elected decision-making body. Applicants shall provide sufficient evidence in their funding proposals demonstrating, to SANDAG's satisfaction, that their projects would not be financially feasible, either due to insufficient funding or the timing of funding availability, in the absence of SANDAG funding. Applications shall include estimated GHG emissions reductions from the project, which shall be prepared using established methods or protocols and shall be reviewed and approved by SANDAG. The grant program(s) shall be structured (e.g., using evaluation criteria and/or weighting of evaluation criteria) to prioritize the allocation of ~~allocate~~ funds to projects based on the amount of ~~that make~~ measurable progress they achieve towards achieving the GHG emissions reductions targets identified in that jurisdiction's adopted CAP or GHG reduction plan.

As part of next cycle of the *TransNet* Smart Growth, Incentive and Active Transportation Grant Programs Smart Growth Incentive Program to be released prior to December 2023, SANDAG shall: (1) continue to require locally adopted CAPs or GHG reduction as prerequisites to be eligible for grant funding, and (2) make funding available for local jurisdictions to prepare and update CAPs and GHG reduction plans that keep pace with future longer term State targets and goals for GHG emissions reductions. Any new or updated CAP or GHG reduction plan receiving funding through this program shall also meet the following minimum criteria:

- The CAP or GHG reduction plan shall be adopted by the jurisdiction's elected decision-making body.
- The CAP or GHG reduction plan shall establish a locally appropriate 2030 GHG reduction target for communitywide GHG emissions derived from the State's legislative target for 2030 (as established by SB 32 or as amended by future legislation), and should establish long-term targets.
- The CAP or GHG reduction plan shall quantify, using substantial evidence, how local GHG reduction strategies, programs, and measures would meet or exceed the local GHG reduction target.

---

<sup>3</sup> Smart Cities use Information and Communications Technology to enhance the quality and performance of public services in order to reduce resource consumption and operate efficiently. Investment in reliable technology and high-speed connectivity are critical to the success of Smart Cities.

- The CAP or GHG reduction plan shall establish a mechanism to monitor the plan's progress toward achieving the target, including reporting data to SANDAG consistent with, and inclusion in, the Climate Action Data Portal or similar database, and a requirement to amend the plan if it is not achieving adopted goals.

Sources of funding that SANDAG shall use include the grants to fund CAP implementation and the Resilient Capital Grants and Innovative Climate Solutions Program (approximately \$40 million dollars) identified in the proposed Plan (Table 2-13 in Chapter 2 and Near-Term Actions 9(b) and 9(d) in Appendix K, respectively). SANDAG shall also pursue federal and State partnerships to leverage additional dollars for these programs. SANDAG shall document and report to the SANDAG Board of Directors the activities funded by this grant program and the estimated GHG emissions reductions on an annual basis.

**GHG-5b. Establish New Funding Programs for Zero-Emissions Vehicles and Infrastructure.** (pages 4.8-47 to 4.8-48)

By adopting this measure, SANDAG commits to two actions: (1) establishing one or more new programs to allocate funding for zero-emission buses and infrastructure (e.g., EV charging equipment and/or hydrogen fueling stations), zero-emissions goods movement vehicles (e.g., medium- and/or heavy-duty trucks) and infrastructure, and electric micromobility (e.g., personal electric bikes, cargo delivery electric bikes, neighborhood electric vehicles) and associated infrastructure; and (2) establishing one or more programs to allocate funding for public and private light duty vehicle fleets in the San Diego region to install zero-emission vehicle infrastructure and/or purchase zero-emission vehicles (e.g., battery electric vehicles, fuel cell electric vehicles).

Mitigation measure GHG-5b does include a specific performance standard that the program will be required to achieve, as described below.

As described in the Draft EIR, the mitigation measure requires that new funding awarded through these programs shall be above and beyond that for which reductions in GHG emissions have already been considered as part of the off-model calculations to achieve the SB 375 target. In addition, SANDAG has revised mitigation measure GHG-5b to specify the number of electric bikes, zero-emission buses, and zero-

emission light-duty vehicles and/or chargers that will result from implementation of this measure. SANDAG has also revised this mitigation measure to clarify the timing and other details of implementation. The revisions to the text of mitigation measure GHG-5b are provided below.

**GHG-5b. Establish New Funding Programs for Zero-Emissions Vehicles and Infrastructure.** ~~Prior to December 2025,~~ SANDAG shall establish one or more new programs to allocate funding for zero-emission buses and infrastructure (e.g., EV charging equipment and/or hydrogen fueling stations), zero-emissions goods movement vehicles (e.g., medium- and/or heavy-duty trucks) and infrastructure, and electric micromobility (e.g., personal electric bikes, cargo delivery electric bikes, neighborhood electric vehicles) and associated infrastructure.

Eligible entities could include but are not limited to public transit operators for zero-emission bus and infrastructure funding; port tenants, distributors, wholesalers, warehouse developers and/or owners, truck owners and/or operators, truck manufacturers, infrastructure providers, and any company that has a fleet of medium- and/or heavy-duty trucks for zero-emission goods movement funding; and local residents, last mile delivery services, and ride-share and/or ride-hail services for electric micromobility funding and associated infrastructure.

SANDAG shall include approximately \$100 million by 2025 of the Electric Vehicle Program (Table 2-13 in Chapter 2 and Near-Term Action 9[b] in Appendix K), and approximately \$5 million of Transportation Demand Management funding for an electric bike incentive program (Table 2-13 in Chapter 2).

The funding for electric bikes will become available beginning in FY 2022 with the launch of a \$500,000 incentive program and will be expanded through FY 2025. This program will reduce GHG emissions by providing funding for, at minimum, 200 electric bikes and associated services.

The funding for zero-emission buses and infrastructure will become available in FY 2023 to enable investments in zero emission transit buses, zero emission school buses, and supporting infrastructure through partnerships with the transit agencies (the Metropolitan Transit System [MTS] and North County Transit District [NCTD]) and San Diego County Air Pollution Control District (APCD). This program

will reduce GHG emissions by providing funding for, at minimum, 100 zero-emission buses, as well as associated fueling/charging infrastructure and services.

Beginning in FY 2022 SANDAG will begin two planning strategies to inform transition to zero-emission goods movement: the California Energy Commission-funded Medium Duty/Heavy Duty EV Blueprint grant for San Diego Region in partnership with Port of San Diego, and the Caltrans-funded San Diego and Imperial Counties Sustainable Freight Implementation Strategy. SANDAG will also rely on the Portside Community Emissions Reduction Plan (CERP) and Maritime Clean Air Strategy (MCAS) to inform investment decisions. Investments in goods movement vehicle and infrastructure will begin in FY 2024.

~~Prior to December 2025~~, SANDAG shall also establish one or more programs to allocate approximately \$30 million in funding for public and private light duty vehicle fleets in the San Diego region to install zero-emission vehicle infrastructure and/or purchase zero-emission vehicles (e.g., battery electric vehicles, fuel cell electric vehicles). Eligible entities could include, but are not limited to, school districts, water districts, local jurisdictions, TNCs, private businesses, and non-profit organizations. New funding will be above and beyond that for which reductions in GHG emissions have already been considered as part of the off-model calculations to achieve the SB 375 target.

Beginning in FY 2023, SANDAG will formalize a partnership with CALeVIP San Diego County Incentive Project administrator to make available incentives for fleet charging infrastructure. Beginning in FY 2024, SANDAG will establish a vehicle incentive program that allocates funding incentives for public and private fleet vehicles. This program will reduce GHG emissions by providing funding for a minimum of 5,000 light-duty vehicles and/or chargers.

To further support this mitigation measure, SANDAG shall also participate in federal and State processes to support transportation electrification as well as pursue federal, State, and local partnerships to leverage additional dollars for these programs.

**GHG-5c Implement Nature-Based Climate Solutions to Remove Carbon Dioxide from the Atmosphere** (pages 4.8-48 to 4.8-49).

By adopting this measure, SANDAG commits to establishing a Nature-Based Climate Solutions Program that will remove CO<sub>2</sub> from the

atmosphere by restoring or enhancing natural infrastructure that uses or mimics natural processes to benefit people and wildlife.

Mitigation measure GHG-5c does include specific performance standards that the program will be required to achieve, as described below.

First, the measure commits SANDAG to implementing, or providing funding to implement, projects that restore or enhance native habitats to increase rates of carbon sequestration over baseline conditions. Toward this end, prior to implementation of any projects proposed for funding under this program, SANDAG shall prepare, or require the preparation of, studies demonstrating that such proposed projects would increase rates of carbon sequestration over baseline conditions. SANDAG shall document the proposed carbon sequestration for each project receiving funding under this program and provide a report to the SANDAG Board on an annual basis.

It is not possible at this time for SANDAG to specify a specific numeric amount of CO<sub>2</sub> that would be removed from the atmosphere. While examples of the types of projects that would be eligible for funding are listed in the measure (e.g., restoring buried or concreted watercourses to riparian habitat to return them to more natural conditions, restoration of fallow agricultural native coastal sage scrub and chaparral), there is not sufficient information available at this time about the nature, scope, size, location, and other details of specific projects that would apply for funding to be able to estimate the level of GHG reductions that would be achieved. (e.g., acreage, type of vegetative cover, soil type).

SANDAG has revised this mitigation measure to clarify that implementation will begin immediately upon adoption of the proposed Plan. The revisions to the text of mitigation measure GHG-5c are provided below.

**GHG-5c. Implement Nature-Based Climate Solutions to Remove Carbon Dioxide from the Atmosphere.** Beginning immediately upon adoption of the proposed Plan and pPrior to December 2025 (adoption of the next Regional Plan), SANDAG shall establish a Nature-Based Climate Solutions Program that will restore or enhance natural infrastructure that uses or mimics natural processes to benefit people and wildlife. Through this program SANDAG shall implement, or provide funding to implement, projects that restore or enhance native habitats to increase rates of carbon sequestration over baseline

conditions. Examples include, but are not limited to, restoring buried or concreted watercourses to riparian habitat to return them to more natural conditions, restoration of fallow agricultural native coastal sage scrub and chaparral, and removal of fill within salt and freshwater and restoration with wetland habitat.

Prior to implementation of any projects proposed for funding under this program, SANDAG shall prepare, or require the preparation of, studies demonstrating that such proposed projects would increase rates of carbon sequestration over baseline conditions. SANDAG shall document the proposed carbon sequestration for each project receiving funding under this program and provide a report to the SANDAG Board on an annual basis.

SANDAG shall use the Nature-Based Climate Solutions Program (approximately \$40 million) identified in the proposed Plan (Table 2-13 in Chapter 2 and Near-Term Action 9(e) in Appendix K) to fund projects under this program. Additional funding could come from the *TransNet* Environmental Mitigation Program Fund for mitigation projects that require restoration and/or land management grants for the restoration of land to native habitat. SANDAG shall also pursue federal and State partnerships to leverage additional dollars for this program.

**GHG-5d. Develop and Implement Regional Digital Equity Strategy and Action Plan to Advance Smart Cities and Close the Digital Divide.** (pages 4.8-49 to 4.8-50)

By adopting this measure, SANDAG commits to adopting a Regional Digital Equity Strategy and Action Plan that reduces GHG emissions by identifying and addressing gaps in accessing affordable, high-quality broadband service (Near-Term Action 6(c) in Appendix K). Access to broadband service allows for remote education, telemedicine, work from home, and the potential for other remote access opportunities that reduce car travel and associated GHG emissions.

Mitigation measure GHG-5d does include a specific performance standard that the program will be required to achieve, as described below.

As described in the Draft EIR, the measure commits SANDAG to reducing car travel and associated GHG emissions by increasing access to affordable, high-quality broadband service that in turn allows for remote education, telemedicine, and working from home. The increased access to broadband service results from the measure's allocation of

\$32 million to undertake projects in the Action Plan that have quantified GHG reductions. The measure also commits SANDAG to identifying and quantifying, where possible, the GHG reductions that will result from the Action Plan, and reporting annually to the SANDAG Board on the measure's funding expenditures and quantified GHG reductions.

It is not possible at this time for SANDAG to establish additional performance criteria for this mitigation measure in the form of a specific numeric amount of GHG emissions reductions that would be achieved by implementation of projects to increase access to broadband service that are identified in the Action Plan. This is because the data needed to quantify GHG reductions that would result from increasing access to broadband service are not currently available. While examples of the types of virtual activities that would be supported by increasing access to broadband service are included in the measure and would reduce car travel and associated GHG emissions (e.g., remote education, telemedicine, teleworking), there is not sufficient information available at this time about the specific attributes of communities that currently lack access to broadband service. Examples of these attributes include: communities' access to telehealth services; the types of jobs held by people in such communities and the ability of those jobs to be performed virtually; the extent of online delivery adoption for packages, medical devices and supplies, and food and household items; and the potential for utilizing remote services for governmental and social services.

SANDAG has revised this mitigation measure to clarify that implementation will begin immediately upon adoption of the proposed Plan. The revisions to the text of mitigation measure GHG-5d are provided below.

**GHG-5d. Develop and Implement Regional Digital Equity Strategy and Action Plan to Advance Smart Cities and Close the Digital Divide.** Subsequent to adoption of the proposed Plan and Prior to January 2023, SANDAG shall adopt a Regional Digital Equity Strategy and Action Plan that identifies and addresses gaps in accessing affordable, high-quality broadband service (Near-Term Action 6(c) in Appendix K). Access to broadband service allows for remote education, telemedicine, work from home, and the potential for other remote access opportunities that reduce car travel and the associated GHG emissions. Investment in reliable technology and high-speed

connectivity are critical to close the digital divide and the foundation of a Smart Cities efforts to become more efficient, use less resources and reduce GHG. The Action Plan will identify specific actions, responsible parties, and a timeline for implementing the strategies identified in the Action Plan. Prior to December 2024, SANDAG commits to researching and evaluating methodologies for and quantifying, where possible, the corresponding GHG reductions associated with improved access to remote services enabled by broadband (e.g., telehealth, remote work, distance learning, and other remote services). SANDAG shall implement the Next OS (approximately \$32 million) identified in the proposed Plan (Table B-1, Page B-5 in Appendix K) to fund projects that advance Smart Cities efforts and close the digital divide. SANDAG shall also participate in federal and State processes to support projects that increase access to broadband infrastructure, as well as pursue federal, State, and private partnerships to leverage additional dollars for these programs. SANDAG shall document SANDAG's funding expenditures and progress on implementing the Action Plan and provide a report to the SANDAG Board on an annual basis. Prior to December 2025 (adoption of the next Regional Plan), SANDAG will identify and commit approximately \$32 million to undertake projects in the Action Plan that have quantified GHG reductions. SANDAG shall document the funding expenditures and quantified GHG reductions and provide a report to the SANDAG Board on an annual basis.

SANDAG  
 2021 Regional Plan DEIR Comments  
 October 11, 2021  
 Page 2

34-2 cont. “time of project approval.” (*Sacramento Old City Association v. City Council of Sacramento* (1991) 229 Cal.App.3d 1011, 1029.) “Simply stating a generalized goal for mitigating an impact does not allow the measure to qualify for the exception to the general rule against the deferred formulation of mitigation measures.” (*King & Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 856.) The DEIR relies on the following program-level mitigation measures which constitute impermissible deferred mitigation due to the lack of specific performance criteria:

- GHG-5a: Allocate Competitive Grant Funding to Projects that Reduce GHG Emissions and for Updates to CAPs or GHG Reduction Plans.
- GHG-5b: Establish New Funding Programs for Zero-Emissions Vehicles and Infrastructure.
- GHG-5c: Implement Nature-Based Climate Solutions to Remove Carbon Dioxide from the Atmosphere.
- GHG-5d: Develop and Implement Regional Digital Equity Strategy and Action Plan to Advance Smart Cities and Close the Digital Divide.

(DEIR, pp. 4.8-45 to -47.)

34-3 GHG-5a requires SANDAG to implement a competitive grant funding program, but does not allow such program to commence until 2023. Further, the mitigation measure does not ensure specific sources of funding for the program (requiring SANDAG to “pursue” funding), nor does it evaluate the performance of funded plans, instead delegating such authority to grant applicants. (DEIR, pp. 4.8-45 to -46.)

34-4 Further, GHG-5b, GHG-5c, and GHG-5d have no stated performance criteria.

34-5 The mitigation measures also lack enforcement mechanisms as required by CEQA. (Pub. Resources Code, § 21081.6, subd. (b); *Lincoln Place Tenants Assn. v. City of Los Angeles* (2007) 155 Cal.App.4th 425, 445.)

34-6 Further, Project-Level Mitigation Measure GHG-5e states that “transportation project sponsors *can and should* implement measures to reduce GHG emissions.” (DEIR, p. 4.8-48, emphasis added.) SANDAG states it does not have the authority to require other agencies to implement this measure (DEIR, p. 4.8-51), but to the extent SANDAG controls or provides funding for any such transportation projects, SANDAG must require that these mitigation measures are mandatory as a condition for receiving funding. Additionally, any projects relying on the Regional Plan DEIR must incorporate the Regional Plan DEIR’s mitigation measures. (CEQA Guidelines § 15168, subd. (c)(3).)

**RESPONSE TO COMMENT 34-3**

This comment asserts that mitigation measure GHG-5a “does not allow (the competitively funded grant program) to commence until 2023, does not ensure specific funding sources, or evaluate the performance of funded projects. These three points are responded to individually below.

Regarding commencement of the program, SANDAG has revised the mitigation measure to clarify that SANDAG will start to develop the program immediately upon approval of the Plan with award of grants no later than December 2023. Refer to response to comment Chatten-Brown 34-2 for the revised text of mitigation measure GHG-5a. This implementation date is based on the time to develop the program, secure funding, and include in the budget that would be adopted in July of 2022, and time to set out a call for projects, review applications, and get approvals of the Policy Advisory Committees (PACs) and the Board of Directors.

Regarding funding sources, the measure does identify specific funding sources for mitigation measure GHG-5a. It does not only commit SANDAG to pursue funding as asserted by the commenter. The EIR identifies the following specific funding sources for mitigation measure GHG-5a (page 4.8-47):

Sources of funding that SANDAG shall use include the grants to fund CAP implementation and the Resilient Capital Grants and Innovative Climate Solutions Program (approximately \$40 million dollars) identified in the proposed Plan (Table 2-13 in Chapter 2 and Near-Term Actions 9(b) and 9(d) in Appendix K, respectively).

Refer to response to comment Chatten-Brown 34-2 for the revised text of mitigation measure GHG-5a that clarifies the amount of funding that has been allocated to this measure.

Regarding performance evaluation, the measure does not delegate this authority to grant applicants as asserted by the commenter. As explained in the Draft EIR, grant applications are required to include estimated GHG emissions reductions from the project, and SANDAG is required to document and report to the Board of Directors annually on the estimated GHG reductions achieved from the grant program (pages 4.8-46 to 4.8-47). In addition, refer to response to comment Chatten-Brown 34-2 showing how the text of mitigation measure GHG-5a has

been revised to state that SANDAG shall review and approve the GHG emissions reductions estimates included in grant applications.

**RESPONSE TO COMMENT 34-4**

This comment asserts that mitigation measures GHG-5b, GHG-5c, and GHG-5d lack stated performance criteria.

Regarding GHG-5b, this measure provides new funding for zero-emissions busses and infrastructure, including at least \$100 million by 2025. That \$100 million figure is a performance criterion, as well as the requirement that that funding be used for zero-emissions busses and infrastructure. This mitigation measure's performance can easily be tracked by simply calculating the amount of additional funding procured for these zero-emissions buses and infrastructure, and comparing it to the \$100 million required by GHG-5b.

Mitigation Measure GHG-5c requires the preparation of studies showing that any proposed nature-based climate solutions would "increase rates of carbon sequestration over baseline conditions." This requirements acts as the performance standard for this measure. Additionally, this measure identified \$40 million of funding for this specific program. (Draft EIR 4.8-47.)

Mitigation measure GHG-5d similarly requires SANDAG to commit a specific amount of funds (\$32 million) to "to fund projects that advance Smart Cities efforts and close the digital divide" (page 4.8-49).

Additionally this measure provides: "SANDAG shall document SANDAG's funding expenditures and progress on implementing the Action Plan and provide a report to the SANDAG Board on an annual basis." The funding commitment and requirement to document expanded access are performance criteria.

Refer to response to comment Chatten-Brown 34-2 for additional information.

**RESPONSE TO COMMENT 34-5**

This comments asserts "lack of enforcement mechanisms" for mitigation measures GHG-5a, GHG-5b, GHG-5c, and GHG-5d. However, each of these measures does include an enforcement mechanism, as described below.

Mitigation measures GHG-5a through 5d each include a commitment that SANDAG "shall" implement the mitigation measure and each identifies the specific funding source(s) and amounts that SANDAG is committing to use to implement the mitigation measure (pages 4.8-46

to 4.8-49). To ensure these measures are implemented, SANDAG would adopt them as part of the Mitigation Monitoring and Reporting Program following certification of the EIR and adoption of the proposed Plan (CEQA Guidelines Section 15097). Moreover, as described in the Draft EIR under the heading, *Background: Summary and Status of Previously Adopted GHG Mitigation Measures* (pages 4.8-43 to 4.8-44), SANDAG successfully implemented the GHG emissions mitigation measures that it committed itself to and adopted as part of the EIR prepared for the 2015 Regional Plan.

#### **RESPONSE TO COMMENT 34-6**

This comment acknowledges that SANDAG does not have authority to require other agencies to implement certain mitigation measures, such as GHG-5e, but requests that SANDAG should, to the extent it “controls or provides funding for any such transportation projects . . . require that these mitigation measures are mandatory as a condition for receiving funding.” SANDAG’s ability to require other agencies to implement specific mitigation measures, and the Draft EIR’s use of the phrase “can and should” in its mitigation measures, is discussed in Master Response 2.

This response also argues that CEQA Guidelines Section 15168 subdivision (c)(3) requires that all mitigation measures in the proposed Plan be incorporated into any projects relying on this Draft EIR. Section 15168 subdivision (c)(3) states “[a]n agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program.” Notably, only “feasible” mitigation measures must be incorporated into a project that tiers off of a programmatic EIR. Because the determination of “feasibility” of any given mitigation measure is made at the project level, this Draft EIR cannot definitively say whether the mitigation measures discussed in the Draft EIR will or will not be incorporated into any specific project that tiers from this analysis. It is therefore not correct that *any* projects tiering off this Draft EIR *must*, in all cases, incorporate *every* mitigation measure discussed in the Draft EIR.

Further, if a second-tier project does not incorporate every EIR mitigation measure, this does not make the Program EIR mitigation measures invalid. Rather, the consequence is that the second -tier CEQA review may not rely on the Program EIR for CEQA streamlining for those significant impacts where Program EIR mitigation measures are not incorporated.

SANDAG  
 2021 Regional Plan DEIR Comments  
 October 11, 2021  
 Page 3

34-7 Further, the DEIR asserts that Impact GHG-5 will be significant and unavoidable, as GHG emissions in the San Diego region will exceed SB 32 targets. (DEIR, p. 4.8-33.) This impact, however, is not unmitigable. Agencies are required to adopt all mitigation measures and discuss and analyze all feasible mitigation measures and alternatives before approving a project with significant impacts. (Pub. Resources Code § 21081; *King & Gardiner Farms, LLC*, *supra*, 45 Cal.App.5th 814, 865-66, 869.)

34-8 Finally, to maximize accountability and enforceability of mitigation, Sierra Club urges that all greenhouse gas emissions be mitigated locally in San Diego County.

**B. Calculations of GHG Emissions from Projects Contemplated by the Regional Plan Must Include the Actual Lifespan of the Projects.**

34-9 CEQA Guidelines section 15064.4, subd. (a) requires an agency to make a “good-faith effort, based to the extent possible on scientific and factual data,” to calculate the full GHG emissions expected from a project. Calculations of GHG emissions of transportation and other projects contemplated under the Regional Plan must include the period of construction and the actual lifespan of the projects rather than an unsupported, arbitrarily limited lifespan such as the periods of 30 years sometimes utilized in CEQA review documents for development projects. These assumptions were not identified in the DEIR’s GHG analysis (DEIR, pp. 4.8-1 to -52) or the Regional Plan’s Appendix X GHG Emissions Inventory.

**C. The Significance Threshold for Impact GHG-1 Is Inadequate.**

34-10 The significance threshold for Impact GHG-1 is whether the Regional Plan “[d]irectly or indirectly result[s] in an increase in GHG emissions compared to existing conditions.” (DEIR, p. 4.8-19.) Yet the severity of the climate crisis necessitates reductions in GHG emissions from baseline. (see, e.g., Intergovernmental Panel on Climate Change Report, *Climate Change 2021*, available at [https://www.ipcc.ch/report/ar6/wg1/downloads/report/IPCC\\_AR6\\_WGI\\_Full\\_Report\\_summary.pdf](https://www.ipcc.ch/report/ar6/wg1/downloads/report/IPCC_AR6_WGI_Full_Report_summary.pdf).) Given the severity of the climate crisis, supported by compelling evidence, a threshold that measures increases to GHG emissions is insufficient to evaluate the Regional Plan’s impacts on GHG emissions and the ongoing climate disaster. Instead, SANDAG should adopt a significance threshold focused on reductions of GHG emissions from baseline.

**RESPONSE TO COMMENT 34-7**

This comment asserts that Impact GHG-5 “is not unmitigable” and that agencies are required to adopt all mitigation measures and discuss and analyze all feasible mitigation measures and alternatives before approving a project with significant impacts.

The Draft EIR identifies Impact GHG-5 as a significant impact in the year 2030, 2045, and 2050. The Draft EIR identifies several mitigation measures to reduce this significant impact by achieving additional GHG emissions reductions above and beyond the reductions shown in the analysis for Impact GHG-5 (mitigation measures AQ-3b, AQ-3c, AQ-4, TRA-2, WS-1a, WS-1b, GHG-5a, GHG-5b, GHG-5c, GHG-5d, GHG-5e, and GHG-5f). However, even with the additional GHG emissions reductions from these mitigation measures, total regional GHG emissions would remain inconsistent with the State’s ability to achieve the 2030 reduction target of SB 32 and the 2045 and 2050 reduction goals of EO B-55-18 and EO S-3-05. Achieving the necessary level of reductions from all GHG emissions sectors will require a coordinated effort by, at minimum, State, regional, and local agencies, organizations, and stakeholders, and is well beyond the scope and jurisdiction of SANDAG alone. Therefore, the Draft EIR appropriately concludes that Impact GHG-5 would be significant and unavoidable.

The comment does not identify any additional feasible mitigation measures that would further reduce this significant GHG emissions impact, or provide any evidence to support its assertion that Impact GHG-5 “is not unmitigable.” The Draft EIR provides a detailed discussion of the types of actions required to achieve the statewide GHG emissions targets and goals analyzed in Impact GHG-5 and explains why SANDAG alone cannot bring about all of the needed reductions. No further response is required.

**RESPONSE TO COMMENT 34-8**

This comment “urges that all GHG emissions be mitigated locally in San Diego County.” This is not required by CEQA. Further, the Draft EIR mitigation measures (GHG-5a through GHG-5f) are focused on reducing GHG emissions within the San Diego region and on projects within the region that would remove carbon emissions from the atmosphere. EIR

mitigation measures do not include out-of-County offsets. No further response is required.

**RESPONSE TO COMMENT 34-9**

The comment asserts that GHG emissions calculations of transportation and other projects included in the proposed Plan “must include the period of construction and the actual lifespan of the projects” instead of using “an unsupported, arbitrarily limited lifespan such as the periods of 30 years sometimes utilized in CEQA review documents for development projects.” The Draft EIR properly estimates GHG emissions under implementation of the proposed Plan including from construction activities resulting from regional growth and land use change and transportation network improvements and programs as described below.

The GHG emissions projections included in the Draft EIR reflect GHG emissions that would be generated by activities associated with implementing the two main physical components of the proposed Plan: regional growth and land use change, and transportation network improvements and programs. It analyzes the combined emissions of these components.

The projections are reported out to 2050, because this the horizon year of the proposed Plan. Further, Executive Order S-3-05, which is included in the significance threshold for Impact GHG-5, also has a 2050 horizon year for GHG emissions reductions, and the 2017 Scoping Plan sets a path for achieving these GHG emissions reductions in 2050. Projecting Regional Plan GHG emissions beyond 2050 would be speculative due to likely but unknown changes in both economic activity and GHG reduction policies and technology.

Specifically, as explained in Draft EIR Section 4.8.4, *Environmental Impacts and Mitigation Measures*, the GHG emissions calculations included in the Draft EIR include “15 emissions categories,” one of which is the off-road equipment sector (Draft EIR page 4.8-19). As explained in Draft EIR Appendix H, the off-road equipment sector includes construction equipment emissions from implementation of regional growth and land use change and transportation network improvements and programs under the proposed Plan (Draft EIR Appendix H page X-37). Thus, GHG emissions from construction of projects included in the proposed Plan are accounted for in the GHG emissions calculations included in the Draft EIR.

The Draft EIR does not use “an unsupported, arbitrarily limited lifespan such as the periods of 30 years.” Further, the GHG emissions projections are not based on the “period of construction and the actual lifespan” of every individual transportation network improvement and land use development project included in the proposed Plan because the project-specific details needed to perform such analysis are not available at this time (e.g., project design, site conditions, type and number of equipment needed, site conditions, construction start date and duration). As explained in Draft EIR Chapter 4, *Environmental Impact Analysis Approach* (Draft EIR pages 4-1 to 4-2), this EIR analyzes impacts of the proposed Plan at the same level of detail as the proposed Plan and does not analyze the project-specific impacts of individual projects. Project-specific and site-specific details of subsequent transportation and land use projects will vary widely. When a first-tier Program EIR is prepared, “leaving project-specific details to subsequent EIRs when specific projects are considered” is a proper approach to CEQA tiering (In re Bay Delta [2008] 43 Cal. 4th 1143, 1174).

#### **RESPONSE TO COMMENT 34-10**

This comment asserts that the Draft EIR significance criterion for Impact GHG-1, which addresses whether the proposed Plan would directly or indirectly result in an increase in GHG emissions compared to existing conditions (2016), is inadequate because the severity of the climate crisis requires reductions in GHG emissions from baseline, and that instead SANDAG should use a significance threshold focused on reductions of GHG emissions from baseline.

It is misleading to imply that the significance threshold for Impact GHG-1 is the only Draft EIR GHG significance threshold. The Draft EIR in fact uses five significance criteria to evaluate whether implementation of the proposed Plan would have a significant GHG emissions impact (page 4.8-20). As described in the Draft EIR, these significance criteria were developed based on the Initial Study checklist questions provided in Appendix G of the CEQA Guidelines and CEQA Guidelines Section 15064.4 (page 4.8-20). Impact GHG-1, which is addressed by the commenter, is based on CEQA Guidelines Section 15064.4(b)(1), which states that lead agencies should consider, “the extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting.”

Three of the significance criteria address reductions of GHG emissions below baseline as requested by the commenter:

- GHG-2, which evaluates whether the proposed Plan would conflict with the SANDAG region's achievement of SB 375 GHG emissions reduction targets for 2035 (a 19 percent reduction from 2005 levels).
- GHG-3, which evaluates whether the proposed Plan would conflict with or impede achievement of an at least 30 percent reduction in per capita GHG emissions from the entire on-road transportation sector by 2035 compared to existing conditions (2016).

GHG-5, which evaluates whether the proposed Plan would be inconsistent with the State's ability to achieve the 2030 reduction target of SB 32 (40 percent below 1990 levels by 2030) and long-term reduction goals of EO S-3-05 (80 percent below 1990 levels by 2050) and EO B-55-18 (carbon neutrality no later than 2045).

SANDAG  
2021 Regional Plan DEIR Comments  
October 11, 2021  
Page 4

**II. The Regional Plan Has Significant Transportation Impacts Requiring Mitigation.**

**A. The Regional Plan Overly Emphasizes Roadway Construction and Fails to be Consistent with Statewide Climate Goals and Federal RTP Policy Objectives.**

**1. The Regional Plan is Inconsistent with Statewide Climate Goals.**

“CEQA requires public agencies like SANDAG to ensure that [] analysis stay in step with evolving scientific knowledge and state regulatory schemes.” (*Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497, 504 (“*CNEFF I*”).) Executive Order No. S-03-05, enacted in 2005, established GHG reduction targets to 80 percent below 1990 levels by 2050. (*Golden Door Properties, LLC v. County of San Diego* (2018) 27 Cal.App.5th 892, 895 (“*Golden Door I*”).) SB 32, enacted in 2016, “adopts a goal of reducing [GHG] emissions by 40 percent below 1990 levels by the year 2030”—a “necessary interim target to ensure that California meets its longer-range goal of reducing [GHG] emissions to 80 percent below 1990 levels by the year 2050.” (*Golden Door II, supra*, 50 Cal.App.5th 467, 488.) In 2008, SB 375 was enacted to “reduce GHG emissions through improved land use and transportation planning.” (*Id.* at 533, emphasis added.)

The Regional Plan’s emphasis on freeway construction is misguided and counterproductive to the goals of Executive Order No. S-03-05, SB 32, and SB 375. As the DEIR notes, on-road transportation of light-duty vehicles and passenger cars contributes the largest share of GHG emissions in the San Diego Region. (Table 4.8-7, DEIR, p. 4.8-23.) According to Table 4.16-6, the Regional Plan *increases* the total number of roadway lane miles within the region under Year 2025 conditions, as compared with baseline. (DEIR, p. 4.16-32.) This includes increases in miles from freeways, tollways, state highways, and arterials. (*Ibid.*) The Regional Plan will also result in an increase of average daily vehicular trips of 122,278. (*Ibid.*) The total number of roadway miles continues to increase under the 2035 scenario (DEIR, p. 4.16-36 [an increase of 622 miles]) and 2050 scenario (DEIR, p. 4.16-40 [an increase of 799 miles]). The DEIR mischaracterizes the increase of 799 roadway miles over baseline in 2050 as a “slight” increase, but that is an increase of 11.5 percent. (DEIR, p. 4.16-40.)

The Regional Plan, however, touts a decrease in roadway mode share under Year 2025 conditions of 3.3% under baseline, and a decrease of 0.18 miles—950 feet—of average length of vehicular trip under baseline. (DEIR, p. 4.16-32.) These paltry figures demonstrate the Regional Plan’s lack of ambition in meeting GHG reduction goals. While the roadway mode share decreases further under the 2035 and 2050 scenarios, the

**RESPONSE TO COMMENT 34-11**

The comment notes that implementation of the proposed Plan will increase the total number of roadway lane miles within the San Diego Region, under each Horizon Year:

- Year 2025 – Increases 233 lane miles
- Year 2035 – Increases 617 lane miles
- Year 2050 – Increases 788 lane miles

Please note that the transportation analysis information presented in the Draft EIR has been updated in the Final EIR. These updates are primarily due to minor modifications in the transportation network improvements included within the proposed Plan, as noted in Appendix B. Additionally, minor corrections to ABM 2+ were also made, which are detailed in Appendix S of the proposed Plan (page S-104).

The comment also notes that the proposed increase in roadway lane miles is counterproductive to the region’s ability to meet the State’s GHG emission goals, as prescribed in SB 32 and SB 375.

As an initial matter, it should be noted that much of the increase in lane miles under the proposed Plan would be managed lanes, not general purpose lanes, with the vast majority of new lanes in 2035 and 2050 being managed lanes. Although this comment’s notes that the average length of a vehicle trip “does not meaningfully change,” trip length alone is not a complete datapoint where managed lanes promotes carpooling, high-occupancy vehicles, and public transportation, all of which tend to lower per-capita VMT.

This comment is addressed in the Draft EIR, under TRA-2, as follows:

**2025 Conditions**

*Page 4.16-51:*

Additionally, as displayed previously in Table 4.16-6, implementation of the proposed Plan, in Year 2025, would increase the number of roadway lane miles within the region by ~~245~~ 233 miles. Some of the additional lane miles added to the network would be managed lanes (~~39~~ 34 miles); however, these improvements would still increase the overall vehicular capacity of the region’s roadway network, resulting in the potential for induced travel.

*Page 4.16-51:*

Implementation of the proposed Plan would also result in an increase of ~~477,196~~ 923,702 daily VMT generated within the San Diego region

compared to Baseline Year 2016 conditions, which is considered a substantial increase. Therefore, this impact (TRA-2) is considered significant in the year 2025 because the proposed Plan would not achieve the substantial VMT reductions needed to help achieve statewide GHG reduction goals.

### **2035 Conditions**

*Page 4.16-53:*

Additionally, as displayed previously in Table 4.16-10, implementation of the proposed Plan, under Year 2035 conditions, would increase the number of roadway lane miles within the region by ~~622~~ 617 net miles. The majority of the additional lane miles added to the network would be managed lanes (~~436~~ 449 miles); however, these improvements would still increase the overall vehicular capacity of the region's roadway network, resulting in the potential for induced travel.

*Page 4.16-53:*

Implementation of the proposed Plan would result in an increase of ~~2,520,860~~ 1,798,264 daily VMT generated within the San Diego region compared to Baseline Year 2016 conditions, which is considered a substantial increase. Therefore, this impact (TRA-2) is considered significant in the year 2035 because the proposed Plan would not achieve the substantial VMT reductions needed to help achieve statewide GHG reduction goals.

### **2050 Conditions**

*Page 4.16-55:*

Additionally, as shown in Table 4.16-14, implementation of the proposed Plan under Year 2050 conditions would increase the number of roadway lane miles within the region by ~~798~~ 788 net miles. The majority of the additional lane miles added to the network would be managed lanes (705 miles); however, these improvements would still increase the overall vehicular capacity of the region's roadway network, resulting in the potential for induced travel.

*Page 4.16-55:*

Implementation of the proposed Plan would result in an increase of ~~5,611,752~~ 4,519,230 daily VMT generated within the San Diego region compared to 2016 conditions, which is considered a substantial increase. Therefore, this impact (TRA-2) is considered significant in the year 2050 because the proposed Plan would not achieve the

substantial VMT reductions needed to help achieve statewide GHG reduction goals.

Therefore, the impacts associated with the additional roadway lane miles, as they relate to Section 15064.3 of the CEQA Guidelines as well as the proposed Plan's ability to achieve the substantial VMT reductions needed to help achieve the statewide GHG reduction goals, are identified and disclosed in the Draft EIR.

Additionally, please note that page 4.16-43 of the Draft EIR has been revised to remove the word "slightly" in describing the increase in roadway lane miles.

Finally, please note that Impact GHG-5 does evaluate the consistency of the proposed Plan with the state's ability to achieve statewide climate goals.

SANDAG  
 2021 Regional Plan DEIR Comments  
 October 11, 2021  
 Page 5

34-11  
 cont. average length of vehicle trip does not meaningfully change over these time horizons.  
 (DEIR, pp. 4.16-36, 4.16-40.)

The Regional Plan emphasizes that its construction of hundreds of new roadway miles over the course of the Plan are primarily “managed” freeway lanes for the supposed benefit of bus rapid transit rather than comparably extensive commuter rail or dedicated bus lanes. (DEIR, p. 4.16-32.) But managed lanes will not be effective for bus rapid transit because these lanes will also be available for use by high occupancy and fee-payer vehicles that in turn will result in congestion and greatly reduced bus efficiency during critical daily “rush hour” transportation periods as evidenced by conditions on existing rapid bus/HOV lanes on Interstate 15, Interstate 805, Interstate 5, and elsewhere. In order to fully analyze transportation impacts, we request that SANDAG provide information on the performance of current bus rapid transit routes to compare operations during periods of congestion/non-congestion and determine whether these routes are effective when using the same lanes as HOVs and paying users.

34-12

And as shown in the list of projects in DEIR Appendix B, the Regional Plan includes massive new infrastructure to connect managed lanes between freeways and provide separate ramp infrastructure where buses must enter and exit freeways to access transit stations (DEIR, Appendix B) rather than the far more efficient method of bringing people directly to dedicated commuter rail or bus lanes.

**2. The Regional Plan is Inconsistent with the 2019 Federal RTP.**

The DEIR inaccurately concludes that the Regional Plan is consistent with the goals and “general intent” of the 2019 Federal RTP for 2025, 2035, and 2050. (DEIR, pp. 4.16-30, 4.16-35, 4.16-39, 4.16-43.) Under CEQA, “any” inconsistency between a project and an applicable land use plan must be disclosed in an EIR. (CEQA Guidelines § 15125, subd. (d), emphasis added.) Further, a “general” consistency with a plan cannot overcome a specific, fundamental, and mandatory inconsistency. (See *Spring Valley Lake Assn. v. City of Victorville* (2016) 248 Cal.App.4th 91, 101.) The Regional Plan’s increases to roadway miles in 2025, 2035, and 2050, increases to vehicle miles travelled (see Section II.B below), and continued dominance in mode share of roadway travel are completely inconsistent with the goal of the Federal RTP to “[m]ake transportation investments that result in cleaner air, environmental protection, conservation, efficiency, and sustainable living.” (DEIR, pp. 4.16-31 to -33, 4.16-37, 4.16-41.) Due to this inconsistency, the DEIR must find that Impact TRA-1 is significant, and propose mitigation measures for this impact.

34-13

**RESPONSE TO COMMENT 34-12**

he performance of the existing Rapid Bus service is not indicative of the projected future operations of the same services, or their effect on future VMT production within the region. This is because the majority of the region’s existing Rapid Bus services do not operate within exclusive or managed rights-of-way. Thus, the majority of these routes operate within mixed-flow traffic, which would not be the case with the implementation of the proposed Plan.

As noted in Table 4.16-14 of the Draft EIR, the proposed Plan would implement over 705 lane miles of HOV/Managed Lanes along freeways within the region. This is more than six times the number of HOV/Managed Lane miles that are available within the existing transportation network. Therefore, future Rapid Bus services will have substantially more opportunity to operate within exclusive or managed rights-of-way than what is provided today. It should also be noted that the proposed Plan includes additional operational improvements to the service, transit services, including dynamic transit routing, scheduling, and communications, as well as implementation of smart intersections (see Table A.15 in Appendix A of the proposed Plan for additional details). The benefits associated with these improvements are not reflected through the existing performance of the Rapid Bus services. As such, the existing Rapid Bus operations do not correctly reflect future conditions, and are not relevant to the analysis conducted for Impact TRA-2.

The performance of all future transit services within the San Diego region, including the Rapid Bus services that utilize the Managed Lanes included within the proposed Plan, were evaluated using SANDAG’s updated second generation Activity Based Model (ABM2+). The ABM2+ forecasts future travel patterns within the region based on several factors including, but not limited to, population, employment, available transportation facilities (including Managed Lanes) and services (including Rapid Bus), travel speeds, roadway congestion, and pricing. The ABM2+ is the most up-to-date transportation forecast within the San Diego region and is the best tool in which the metrics used to evaluate effects of land use growth and transportation network improvements can be measured at a regional level, including activity and tour (trip) generation, mode split, average trip length, and VMT. As such, the ABM2+ is the most accurate way to project future transit ridership and its effect on VMT within the region. Thus, the regional

VMT analysis conducted under Impact TRA-2 was done as accurately as possible, using the best tools available for projecting future transportation patterns and conditions, including Rapid Bus and other transit services.

Finally, please note that the transit improvements included in Draft EIR Appendix B were coded into and accounted for within the ABM2+ model. The ABM2+ model does account for additional travel times and delays that could occur with buses entering and existing the freeway managed lanes to access transit stations. Therefore, the projected efficiency of the proposed transit system, with the implementation of the proposed Plan, was correctly analyzed under TRA-2..

#### **RESPONSE TO COMMENT 34-13**

This comment asserts that the Draft EIR improperly finds that the proposed Plan is “generally consistent” with the 2019 Federal RTP at the 2025, 2035, and 2050 horizons, but that because the proposed Plan results in increases in roadway miles and total-VMT, as well as “continued dominance in mode share of roadway travel,” it is actually inconsistent with the goal of the Federal RTP to “[m]ake transportation investment that result in cleaner air, environmental protection, conservation, efficiency, and sustained living.”

This comment fails to explain how the proposed Plan is inconsistent with the broad policy goals quotes from the 2019 Federal RTP. The quoted Federal RTP policy goals do not make any increase in roadway capacity inconsistent; to the contrary, as discussed in response to comment Chatten Brown 34-11, much of the roadway capacity increase is for Managed Lanes, which have the effect of lowering per-capita VMT and resulting in cleaner air and greater efficiency.

The Draft EIR’s findings are based on substantial evidence. For example, the Draft EIR finds that the proposed Plan is consistent with the Federal RTP goal cited in this comment because “[t]he proposed expansion of the region’s transit network would also provide more viable multi-modal options for travelers, resulting in reductions in both VMT per capita and VMT per employee within the region, thus reducing GHG emissions, creating a cleaner and more sustainable environment” (Draft EIR page 4.16-31; see also Table 4.16-15). These calculations were performed using the ABM2+ modeling, the most up-to-date transportation forecast within the San Diego region.

In addition, this comment is addressed directly within the Draft EIR as follows:

*Year 2025 – Page 4.16-33*

- *Make transportation investments that result in cleaner air, environmental protection, conservation, efficiency, and sustainable living. The proposed expansion of the region's transit network would also provide more viable multi-modal options for travelers, resulting in reductions in both VMT per capita and VMT per employee within the region, thus reducing GHG emissions, creating a cleaner and more sustainable environment.*

Please note that the increase in VMT under Year 2025 conditions is associated with the anticipated growth in population and employment within the region, and is not directly associated with the increase in roadway lanes miles. As such, implementation of the proposed Plan will result in a decrease in total VMT of 3,729,924 miles as well as a decrease in VMT per Capita of 1.07 miles, when compared to Year 2025 no-build conditions (See table below). Therefore, the proposed Plan is consistent with the 2019 Federal Plan goal of “*Make transportation investments that result in cleaner air, environmental protection, conservation, efficiency, and sustainable living.*” It is assumed that growth in regional population and employment is the predominant factor in the projected increase in total VMT from Base Year (2016) conditions.

*Year 2035 – Page 4.16-38*

- *Make transportation investments that result in cleaner air, environmental protection, conservation, efficiency, and sustainable living. The associated decreases in average vehicular trip length and travel times noted above would result in a lower average VMT per capita and VMT per employee within the region (see Table 4.16-18). These decreases in vehicular traffic would result in lower GHG emissions, creating a cleaner and more sustainable environment.*

Please note that the increase in VMT under Year 2035 conditions is associated with the anticipated growth in population and employment within the region, and is not directly associated with the increase in roadway lane miles. As such, implementation of the proposed Plan will result in a decrease in total VMT of 8,961,822 miles as well as a decrease in VMT per Capita of 2.22 miles, when compared to Year 2035 no-build conditions (See table below). Therefore, the proposed Plan is consistent with the 2019 Federal Plan goal of “*Make transportation*

*investments that result in cleaner air, environmental protection, conservation, efficiency, and sustainable living*” and that it is assumed that growth in regional population and employment is the predominate factor in the projected increase in total VMT from Base Year (2016) conditions.

*Year 2050 – Page 4.16-43*

- *Make transportation investments that result in cleaner air, environmental protection, conservation, efficiency, and sustainable living. The associated decreases in average vehicular trip length and travel times noted above would result in a lower average VMT per capita and VMT per employee within the region (see Table 4.16-19). These decreases in vehicular traffic would result in lower GHG emissions, creating a cleaner and more sustainable environment.*

Please note that the increase in VMT under Year 2050 conditions is more associated with the anticipated growth in population and employment within the region, and is not directly associated with the increase in roadway lanes miles. As such, implementation of the proposed Plan will result in a decrease in total VMT of 11,937,229 miles as well as a decrease in VMT per Capita of 2.87 miles, when compared to Year 2050 no-build conditions (See table below). Therefore, the proposed Plan is consistent with the 2019 Federal Plan goal of “*Make transportation investments that result in cleaner air, environmental protection, conservation, efficiency, and sustainable living.*” and that it is the assumed growth in regional population and employment is the predominate factor in the projected increase in total VMT from Base Year (2016) conditions.

To clarify information presented in the Draft EIR, the following tables show that the additional roadway miles included in the proposed Plan will not increase VMT within the region as compared to the No-Build conditions. Therefore, including the additional roadway miles in the proposed Plan is not inconsistent with the Federal RTP.

**VMT Analysis - Year 2025**

<b>Metric</b>	<b>Base Year (2016)</b>	<b>Year 2025 No Build</b>	<b>Year 2025 Proposed Plan</b>	<b>Δ Proposed Plan to 2016</b>	<b>% Change from Proposed Plan to 2016</b>	<b>Δ Proposed Plan to No Build</b>	<b>% Change from Proposed Plan to No Build</b>

VTM per Employee (miles)	18.91	18.21	14.32	-4.59	-24.3%	-3.89	-21.4%
VTM per Service Population (miles)	17.02	17.27	15.23	-1.79	-10.5%	-2.04	-11.8%
Population within TPAs	764,847	1,201,517	2,125,868	1,361,021	177.9%	924,351	76.9%
Employment within TPAs	609,253	864,936	1,470,233	860,980	141.3%	605,297	70.0%
Service Population within TPAs	1,374,100	2,066,453	3,596,101	2,222,001	161.7%	1,529,648	74.0%

Please note that the transportation analysis information presented in the Draft EIR has been updated in the Final EIR. These updates are primarily due to minor modifications in the transportation network improvements included within the proposed Plan, as noted in Appendix B of the Plan. Additionally, minor corrections to ABM 2+ were also made, which are detailed in Appendix S of the Plan (page S-104).

**B. The Regional Plan Subverts Statewide Goals by Increasing Vehicle Miles Travelled.**

34-14 The Regional Plan results in an increase of 477,196 daily VMT above baseline under 2025 conditions, 2,520,860 daily VMT above baseline under 2035 conditions, and a staggering 5,611,752 daily VMT under 2050 conditions. (DEIR, pp. 4.16-47, 4.16-49, 4.16-51.) The Regional Plan thus fails to meet the qualitative significance threshold adopted by SANDAG—not only does the Regional Plan fail to “achieve the substantial VMT reductions needed to help achieve statewide GHG reduction goals,” it actively *increases* VMT in the region throughout the life of the Plan. Increase in VMT is completely antithetical to the state’s GHG reduction goals. (California Air Resources Board, 2017 Scoping Plan-Identified VMT Reductions And Relationship To State Climate Goals, January 2019; *Golden Door II*, 50 Cal.App.5th 467, 544 [“VMT reduction is an integral part of California’s strategy to reach 2030 and 2050 GHG emission reduction targets.”].) Further, the Regional Plan fails to meet the VMT per capita reduction goal of 14.3% by 2050 as required by CARB. (DEIR, p. 4.16-51.)

The DEIR interpolates interim VMT reduction goals for 2025 and 2035 by using a “straight-line interpretation line of the full 14.3 percent reduction in VMT per capita and the 34 years (Base Year 2016 to Horizon Year 2050) the region has to achieve that target,” thus assuming a VMT reduction requirement of 0.4% per year. (DEIR, p. 4.16-46.) The DEIR states that even though the interim reductions of 7.2% in 2025 and 11.6% in 2035 do not meet the 14.3% required reduction, they “remain on target” because they meet the interim target goals that SANDAG has interpolated. (DEIR, p. 4.16-47 to -49.) The DEIR offers no analysis that such an interpolation is supported by substantial evidence. (CEQA Guidelines § 15064, subd. (f)(5) [“Argument, speculation, unsubstantiated opinion or narrative, or evidence that is clearly inaccurate or erroneous, or evidence that is not credible, shall not constitute substantial evidence. Substantial evidence shall include facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts.”].)

**C. Mitigation Measures for Transportation Impacts Must be Enforceable.**

34-15 Mitigation measures must be enforceable. (Pub. Resources Code, § 21081.6, subd. (b); *Lincoln Place Tenants Assn. v. City of Los Angeles* (2007) 155 Cal.App.4th 425, 445.) The DEIR’s stated mitigation measures for TRA-2, Achieve Further VMT Reductions for Transportation and Development Projects, permits local jurisdictions to implement such VMT reductions at their discretion. For example, the measure states that “SANDAG shall, and other transportation project sponsors, the County of San Diego, cities, and other local jurisdictions *can and should* implement project-level VMT

**RESPONSE TO COMMENT 34-14**

As the comment points out, the proposed Plan would result in an increase in the total VMT generated within the region as follows:

- Year 2025 Conditions: 477,196 daily VMT
- Year 2035 Conditions: 2,520,860 daily VMT
- Year 2050 Conditions: 5,611,752 daily VMT

Please note that the transportation analysis information presented in the Draft EIR has been updated in the Final EIR. These updates are primarily due to minor modifications in the transportation network improvements included within the proposed Plan, as noted in Appendix B. Additionally, minor corrections to ABM 2+ were also made, which are detailed in Appendix S of the proposed Plan (page S-104). Therefore, the increases in total regional VMT are now:

- Year 2025 Conditions: 923,702 daily VMT
- Year 2035 Conditions: 1,798,328 daily VMT
- Year 2050 Conditions: 4,519,230 daily VMT

As noted on page 4.16-48:

Because there are no State-recommended total VMT significance thresholds for regional plans such as an RTP/SCS, a qualitative threshold is used: would the proposed Plan achieve the substantial VMT reductions needed to help achieve statewide GHG reduction goals? If the Regional Plan would cause substantial increases in total VMT, then it would not achieve the substantial VMT reductions needed to help achieve statewide GHG reduction goals.

Therefore, because no guidance has been provided by the State on this issue the Draft EIR used a threshold of no change from baseline conditions as the threshold. To the extent this comment implies the Draft EIR does not disclose the significant impact of increased total VMT, the increase in daily VMT, from baseline Year 2016 conditions, was identified as a significant impact under Impact TRA-2, as noted in the following sections of the Draft EIR:

- 2025 Conditions - Page 4.16-48, Paragraph 5
- 2035 Conditions - Page 4.16-50, Paragraph 4
- 2050 Conditions - Page 4.16-52, Paragraph 2

Lastly, as noted on page 4.16-48 of the Draft EIR (last paragraph), interim VMT per capita targets were derived to identify if the proposed Plan would be on track to meet the State’s target of 14.3 percent

reduction in VMT per capita by Year 2050, as compared to baseline conditions. It is clearly stated in the last sentence of the paragraph “*The interim VMT per capita targets were not used to determine impact significance.*” This is further reflected in the TRA-2 conclusion sections, for each horizon year, where the State’s target of 14.3 percent is used as the significance threshold for each horizon year and not the identified interim VMT per capita target. Thus the methods used for interpolating interim VMT reduction goals are not relevant to the EIR’s analysis and disclosure of significant VMT impacts.

**RESPONSE TO COMMENT 34-15**

This comment refers to the use of the phrase “can and should” in mitigation measures where another agency, and not SANDAG, would have the responsibility to implement and carry out. Please refer to Master Response 2 for a response to this comment, where it is described why the use of this language is specifically allowed by CEQA in these circumstances.

SANDAG  
 2021 Regional Plan DEIR Comments  
 October 11, 2021  
 Page 7

34-15  
 cont. reduction measures.” (DEIR, p. 4.16-53, emphasis added.) This discretionary language makes the mitigation measure non-enforceable, and thus in violation of CEQA.

**III. The DEIR Fails to Adequately Analyze and Mitigate Impacts to Biological Resources.**

34-16 The Regional Plan fails to sufficiently protect biological resources by erroneously concluding that significant impacts are unavoidable and by failing to identify significant conflicts with several existing and planned regional habitat conservation plans (DEIR, pp. 4.4-61 to 113). The Regional Plan also fails to implement adequate mitigation measures.

**A. The Regional Plan is Inconsistent with Federal, State, and Local Goals to Protect Biological Resources.**

The DEIR’s assertion that Impact BIO-4 is less than significant lacks substantial evidence. The Regional Plan is in clear conflict with state and federal goals to protect 30% of land and water natural resources by 2030 (see Governor’s Exec. Order No. N-82-20 (Oct. 7, 2020); Exec. Order No. 14008, 86 Fed. Reg. 7619 (Feb. 1, 2021)). The Regional Plan is also in conflict with regional habitat conservation plans, which must be discussed in the DEIR. (CEQA Guidelines § 15125, subd. (d).)

34-17 If SANDAG maintains its current conclusions of significant and unavoidable impacts to BIO-1, BIO-2, and BIO-3 biological resources, SANDAG must also necessarily conclude that there will be similar significant and unavoidable conflicts with state and federal goals to protect 30% of land and water natural resources by 2030 and local regional habitat conservation plans (i.e., Impact BIO-4) given those plans’ reliance on the same minimization and mitigation measures SANDAG asserts cannot be guaranteed under BIO-1, BIO-2, and BIO-3. (See Section III.B below.)

34-18 The Regional Plan is also in conflict with regional habitat conservation plans because it does not provide a clear path to establishment of an essential regional funding source necessary to implement existing and planned regional habitat conservation plans. Existing regional habitat conservation plans like the San Diego Multiple Species Conservation Plan and Multiple Habitat Conservation Program anticipate and require establishment of a regional funding source to support implementation of the plans. The Regional Plan is the most appropriate planning tool available to provide a regional funding source for the regional habitat conservation plans yet does not include any planning for establishment of the regional funding source.

**RESPONSE TO COMMENT 34-16**

Section 4.4 of the EIR analyzes the impact on biological resources at a programmatic level based on best available information, including impacts on sensitive species, vegetation communities, wetlands, wildlife movement, and consistency with policies and approved HCPs. Impacts were analyzed based on the programmatic footprint developed for the proposed Plan, and mitigation measures were identified accordingly. Additional analysis will be conducted on a project-specific level under CEQA, including project-specific impact analysis of biological resources and identification of mitigation measures. The comment does not explain why the EIR “erroneously” concludes that significant impacts are unavoidable.

**RESPONSE TO COMMENT 34-17**

The comment asserts that impacts addressed in BIO-4 are not less than significant based on the fact that the proposed Plan is in conflict with State and federal goals to protect 30 percent of land and water resources by 2030, and that this goal would not be achieved if the impacts on BIO-1, BIO-2, and BIO-3 are unavoidable. The MSCP targets to protect 172,000 acres of natural lands (excluding agricultural lands); the MHCP targets to protect 19,000 acres. Approximately 100,000 acres of land in the North County MSCP will be unavailable for development. The majority of lands in the East County (approximately 90 percent) are public lands that are already conserved. The total amount of public lands (undeveloped or in open space) in San Diego County amounts to 1.7 million acres. With San Diego County having almost 3 million acres of landmass, of which approximately 2 million is undeveloped or planned for conservation, the conservation percentage of San Diego County far exceeds 30 percent target. Therefore, the EIR is consistent with the goals identified in EO N-82-20 (October 7, 2020) and EO 14008, 86 *Federal Register* 7619. The comment also asserts that the proposed Plan is in conflict with regional HCPs. All approved HCPs have been included and addressed in this EIR, and impacts on approved HCPs have been analyzed; see discussion under Impact BIO-4 in Section 4.4 and Table 4.4-5. The HCPs have been designed to allow for impacts on biological resources so long as the appropriate mitigation measures are adhered to, including mitigation measures outlined in each participating jurisdiction’s ordinances and guidelines that reflect consistency with the regional HCPs and Subarea Plan. These guidelines and ordinances are listed (together with other representative ordinance and guidelines)

in Table 4.4-6. Each Subarea Plan has different conservation classifications, which were included in the data analysis and models in this EIR (see the *Analysis Methodology* under Impact BIO-4). The EIR assumes that all regional and local guidelines and ordinances would be adhered to, and that impacts on hardline preserves would be avoided at the project-specific design level. However, should impacts on hardline preserves be unavoidable, local ordinances governing the implementation of the Subarea Plans have provisions, such as Boundary Line Adjustments, that would be implemented to avoid the loss of highly valuable biological resources and conserved lands consistent with all legal and regulatory provisions of the HCPs. Therefore, the conclusion in Impact BIO-4 correctly identifies that the EIR is not in conflict with any approved HCPs.

**RESPONSE TO COMMENT 34-18**

Please refer to Master Response 1 for discussions regarding including a regional habitat conservation fund in the alternatives. The comment asserts that the proposed Plan does not provide a clear path to the establishment of an essential regional funding source to implement existing and planned regional HCPs. As described in Appendix A of the proposed Plan the final Plan has included a commitment to fund regional habitat conservation, management, and monitoring under a new funding allocation that when combined with the nature-based climate solutions program and habitat mitigation for transportation projects would total \$3 billion. Furthermore, each local jurisdiction that is signatory to the conservation plan and the Implementing Agreement with the Wildlife Agencies that provides the legal “take” authorizations identified in the conservation plan is obligated to fund local costs for land conservation, acquisition, management, and monitoring.

**B. The DEIR’s Biological Resources Mitigation Measures Violate CEQA.**

SANDAG significantly undermines the potential effectiveness of measures to minimize and mitigate impacts to biological resources by concluding that impacts will remain significant because other agencies implementing the plan may not fully implement mitigation measures described in the Regional Plan.

34-19 According to the Regional Plan DEIR, “Implementation of mitigation measures BIO-1a through BIO-1e would reduce or minimize this impact (BIO-1). However, while projects under SANDAG’s control would adhere to these measures, there is no assurance that these mitigation measures would be implemented by non-SANDAG project sponsors or would be equally effective for all projects ... Instances may occur in which impacts are not reduced to less-than-significant levels. Therefore, this impact (BIO-1) would remain significant and unavoidable.” (DEIR, p. 4.4-78.)

SANDAG’s rationale here renders the mitigation measures non-enforceable, and is an abdication of SANDAG’s own responsibility as a lead agency to reach sound conclusions of impacts to the environment and adopt effective mitigation. Rather than minimizing its own responsibility, SANDAG should include language in the DEIR mandating implementation of DEIR mitigation measures for its own projects and for any other agencies implementing projects under the Regional Plan to the extent that they are likely to invoke SANDAG’s Regional Plan DEIR for their own CEQA review and compliance. Subsequent projects relying on the Regional Plan DEIR must incorporate the Regional Plan DEIR’s mitigation measures. (CEQA Guidelines § 15168, subd. (c)(3).)

34-20 Finally, an EIR is required to discuss and adopt all feasible mitigation measures. (*King & Gardiner Farms, LLC, supra*, 45 Cal.App.5th 814, 865-66, 869.) An additional mitigation measure should be added to BIO-4 requiring preparation of a detailed strategic plan to establish the regional funding source for the regional habitat conservation plans.

**IV. The DEIR Failed to Consider a Reasonable Range of Alternatives.**

34-21 The EIR failed to adequately analyze alternatives to the Project, because it did not include a reasonable range of alternatives that would “avoid or substantially lessen” the Project’s significant impacts, as required by CEQA at Public Resources Code section 21002 and CEQA Guidelines section 15126.6 subdivisions (a), (b). While Alternative 3 is the only alternative to reduce VMT further than the Regional Plan, none of the alternatives avoid or *substantially* lessen the Project’s impacts on VMT. (*Golden Door II, supra*, 50 Cal.App.5th 467, 547, citing *Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 17 Cal.App.5th 413, 437 [“it is reasonable to expect

**RESPONSE TO COMMENT 34-19**

Please see Master Response 2 and response to comment Chatten-Brown 34-6, which explain why the EIR’s approach to mitigation measures to be implemented in second-tier projects is consistent with CEQA requirements. As Master Response 2 explains, second-tier transportation project EIR mitigation measures, such as biological resource mitigation measures, would be implemented for transportation projects that SANDAG directly approves or carries out, and implementation of applicable and feasible mitigation measures would be a grant condition for capital projects funded by SANDAG’s TransNet grant programs.

**RESPONSE TO COMMENT 34-20**

To meet the region’s habitat conservation goals, the proposed Plan identifies approximately \$3 billion for habitat-related efforts. This includes \$2,087 million for an enhanced habitat conservation, management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan), and \$300 to \$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan). As such, an additional mitigation measure is not required.

**RESPONSE TO COMMENT 34-21**

Please refer to Master Response 1 for a response to this comment, which explains why the EIR’s alternatives analysis complies with CEQA requirements and addresses potential alternatives to substantially lessen VMT and biological resource impacts.

34-21  
cont. | at least one project alternative to have been focused primarily on significantly reducing vehicle trips.”].) SANDAG also fails to provide an alternative avoiding or substantially lessening the Project’s significant impacts on biological resources.

**V. Conclusion**

34-22 | Based on the foregoing comments, we respectfully request that SANDAG revise the Regional Plan and recirculate the DEIR to achieve further GHG and VMT reductions, improve protections for biological resources, and resolve the issues addressed in this letter.

Thank you for your consideration of this matter.

Sincerely,

Re: **Draft San Diego Forward: The 2021 Regional Plan and its Draft Environmental Impact Report**

Dear Ms. Uchitel:

35-1 Save Our Forest and Ranchlands (SOFAR) and the Cleveland National Forest Foundation (CNFF), two organizations dedicated to progressive land use planning and the protection of vital natural resources, submit the following comments on San Diego Forward: the 2021 Regional Plan (the proposed Plan) and the draft environmental impact report (DEIR) for the proposed Plan. As detailed below, the proposed Plan inappropriately continues to emphasize auto-based transportation at the expense of much-needed public transportation. This approach will not allow the region to achieve its environmental or land use goals. In addition, the proposed Plan relies on speculative sources of funding and it is therefore unclear whether those public transportation projects that are included in the Plan will actually be funded and implemented.

35-2 The DEIR for the proposed Plan also fails to comply with the California Environmental Quality Act (CEQA). For example, the DEIR does not contain a legally defensible alternatives analysis and lacks a sufficient basis for rejecting SOFAR's and CNFF's Climate, Housing, Transit Alternative. In May 2020, we submitted a letter to the SANDAG Board of Directors urging the agency to include an alternative in the RTP DEIR capable of meeting housing and greenhouse gas (GHG) reduction goals that have been set collectively by the state of California, the City of San Diego, and SANDAG. That letter is attached and is incorporated by reference into this letter. The Climate, Housing, Transit Alternative is centered on building a 21st Century regional mobility system, beginning with a foundational first-phase area-complete transit, bike, and walk system in the "urban core" that is competitive with the automobile

**RESPONSE TO COMMENT 35-1**

This comment inaccurately describes the proposed Plan as emphasizing auto-based transportation at the expense of public transportation. The proposed Plan emphasizes connections to mobility options in neighborhood hubs—whether it be transit, ride share, shuttles, scooter or bike share, walking, or biking. By building out from these centers of activity to an even broader system of smart roadways and transit services, the proposed Plan provides alternatives to driving for both short and long trips around the region.

Transit Leap improvements make public transit a compelling option to driving—fast, convenient, and safe. Improvements include commuter rail, light rail, Rapid, local bus, and ferry service. Next Generation Rapid Service is a Rapid bus service operating in priority travel lanes and/or separated guideways and is given traffic signal priority. Commuter rail includes new and significantly upgraded rail service with high-speed trains that are fast and convenient and provide a compelling alternative to driving. Light Rail Transit (LRT) includes improvements to existing light rail services and new tram services.

Managed Lanes offer priority access to people using transit, carpooling, riding motorcycles, or vanpooling along with emergency vehicles and some low-emission vehicles with appropriate decals. Managed Lanes would be expanded by repurposing shoulders or existing travel lanes, as feasible. Managed Lane improvements are planned for both interregional and urban corridors. Interregional corridors connect us to neighboring counties and beyond and account for about 70 percent of vehicle miles driven on the region's freeways. Urban corridors connect local cities and account for 27 percent of vehicle miles driven on the region's freeways. Interregional corridor trips are typically longer than 20 miles while trips made on urban corridors are often between 5 and 20 miles. See Appendix A, Transportation Projects, Programs, and Phasing, of the proposed Plan at A-2.

This comment also inaccurately describes the financial plan included in the proposed Plan as speculative. Federal and State laws require SANDAG to develop a regional plan built on reasonable assumptions of the revenues that will be available during the period covered by that plan (Government Code Section 65080(b)(4); 23 CFR

450.322(f)(10)(ii)). See Appendix V, Funding and Revenue, of the proposed Plan for additional information about revenue sources.

Also, these introductory comments summarize more detailed comments, for which additional responses are provided below.

**RESPONSE TO COMMENT 35-2**

As explained in Master Response 1, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives, that are potentially feasible, and that reduce environmental impacts. The discussion also explains why the Draft EIR was not required to consider SOFAR's proposed Climate, Housing and Transit Alternative in detail. See Section 6.5.5 of the Draft EIR for additional discussion of the reasons for rejecting SOFAR's proposed Climate, Housing and Transit Alternative from detailed consideration.

35-2 cont. (i.e., that achieves at least a 50% transit, bike, and walk mode share in the urban core area).<sup>1</sup> As discussed below, SANDAG inappropriately declined to include this Alternative in the DEIR. Therefore, we respectfully reiterate our request for SANDAG to include the Climate, Housing, Transit Alternative in the EIR for the proposed Plan.

**SANDAG is Abdicating its Responsibility to Prepare a “Transit First” Plan.**

35-3 Even a cursory review of the DEIR reveals the proposed Plan does not represent the sea change in regional transportation and land use planning that is necessary to avert a climate catastrophe and to rectify the serious housing challenges facing the region’s residents. This past April, SANDAG committed to reimagining how people and goods move in the 21st century by implementing infrastructure that ensures, among other things, that public transit is competitive with automobile travel. See SANDAG Resolution No. 2021-17. The proposed Plan, however, eschews these admirable goals in favor of a much more “business-as-usual” approach. It is certainly not a “transit first” plan. Critical projects necessary to advance a comprehensive public transportation network, including for example the Miramar Tunnel and complete double-tracking of the COASTER, would not be constructed until 2050, if ever.

At the same time, the proposed Plan calls for \$50 billion in roadway expenditures. As SANDAG is well aware, projects that increase roadway capacity will continue to exacerbate far-flung sprawl development, which in turn will increase vehicle miles traveled (VMT). Pursuing expensive (and expensive) roadway projects is no longer supportable in the face of the housing and climate crises confronting the region. As SANDAG is aware, in order to achieve the region’s environmental and housing goals, the proposed Plan must encourage intensified, compact land use. Unfortunately, antiquated roadway projects—many of which would serve remote destinations—remain front and center in SANDAG’s proposed Plan.

35-4 The RDEIR claims that this highway-centric Plan would result in a 150 percent increase in “walk to transit” and “drive to transit” mode share. Yet this statistic and the information cited in support are misleading. The fact that people may be within walking distance to transit does not mean those people actually use transit. The DEIR indicates that “current” (2016) transit mode share in the SANDAG Plan area is 1.6% percent and is estimated to increase to 5% under the Build Scenario 2050. (DEIR Appendix T (Table T6: Supporting Measure)). At first glance, this increase in transit mode share would appear to suggest that the region is making substantial progress. Yet, the DEIR’s very low estimate of “current” transit mode share appears to be inaccurate, which renders the claimed increase to 5% misleading. The 2010-2012 California Household Travel Survey (CHTS) identifies existing transit mode share for San Diego County as 4.2% (i.e., 2 ½ times greater than that reported in the SANDAG regional travel demand model).<sup>2</sup> If transit mode share is in fact currently just over 4%, the fact that the Plan would increase

<sup>1</sup> Generally speaking, the urban core includes the trolley ring, downtown, the airport, the newly planned intermodal transit center. This area is approximately 60 square miles but has all the facilities, density, zoning, and jobs to launch a successful transit model for the region.

<sup>2</sup><https://www.nrel.gov/transportation/secure-transportation-data/tsdc-california-travel-survey.html> (calculations performed by Norm Marshall).

**RESPONSE TO COMMENT 35-3**

This comment inaccurately characterizes the nature of the roadway projects in the proposed Plan. The proposed Plan emphasizes connections to mobility options in neighborhood hubs—whether it be transit, ride share, shuttles, scooter or bike share, walking, or biking. By building out from these centers of activity to an even broader system of smart roadways and transit services, the proposed Plan provides alternatives to driving for both short and long trips around the region.

Transit Leap improvements do make public transit a compelling option to driving—fast, convenient, and safe. Improvements include commuter rail, light rail, Rapid, local bus, and ferry service. Next Generation Rapid Service is a Rapid bus service operating in priority travel lanes and/or separated guideways and is given traffic signal priority. Commuter rail includes new and significantly upgraded rail service with high-speed trains that are fast and convenient and provide a compelling alternative to driving. LLRT includes improvements to existing light rail services and new tram services.

Where possible, rather than adding new roads, the proposed Plan repurposes general purpose lanes or shoulders to create Managed Lanes. The Managed Lane system is important for supporting the transit network and Flexible Fleets envisioned in the proposed Plan. The Regional Plan is updated every four years, providing opportunities to reflect changes in the network. The proposed Plan’s improvements to the freeway system are limited to Managed Lanes using existing infrastructure such as general purpose lane conversion and shoulders to facilitate additional transit and HOV travel.

Rural corridors serve many remote destinations, mostly located along state routes traversing the eastern two-thirds of the region, and provide people access to rural towns and lands, as well as connectivity to the interstate system. Rural corridors are economic lifelines for rural communities and the region’s many tribal nations. Rural corridors provide access to jobs, education, and healthcare, as well as needed infrastructure for the movement of goods, deliveries, and emergency vehicles.

Along I-8 in East County, projects included in the proposed Plan benefit interchanges to this freeway with substantial safety improvements for SR 94, SR 76, and SR 79 and other state routes. Physical safety improvements are realized with a variety of projects, including shoulder

widening and curve straightening. The region's rural and tribal communities also need new investments in broadband infrastructure. This infrastructure is an essential part of the transportation technology envisioned along rural corridors, by providing travelers with real-time travel information and enabling access to Flexible Fleet options such as shuttles and other on-demand transportation services. But it will not only improve mobility along rural corridors, it will enable residents to, for example, work remotely and learn online.

For the roadway component of the proposed Plan, SANDAG is required to analyze induced demand impacts, which are documented in proposed Plan Appendix D. The activity-based model and other analyses used to inform the Plan have been reviewed through SANDAG's peer review process and documented in the technical methodology submitted to CARB, also included in Appendix D.

With respect to project phasing under the proposed Plan, the proposal for a "Transit First" plan fails to recognize that there are regulatory constraints on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced. There are also regulatory constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network. For instance, federal formula funds such as Federal Transit Administration (FTA) Section 5307 or Regional Surface Transportation Program (RSTP) funds are apportioned annually; SANDAG can make assumptions about how much can be anticipated in the future based on historical data but has no ability to advance any project(s) that need the funding in years prior to apportionment. Other funds that SANDAG cannot advance and redirect to transit include funds going to other agencies, such as the State Highway and Protection Program (SHOPP) funds, which are managed by the California Transportation Commission and are used for safety, operations, and rehabilitation projects on the state highway system by Caltrans.

Specific to the comment that critical projects would not be constructed until 2050, the phasing of projects in the proposed Plan depends upon several factors including project readiness, connectivity, social equity, and anticipated revenues by implementation period. As the proposed Plan is implemented, phasing of projects may change if opportunities arise to advance projects into earlier phases of the Plan. All LOSSAN

double tracking projects are phased for completion in 2025 and 2035. Batiquitos Lagoon Double Track, San Onofre to Pulgas Double Track Phase 2, Eastbrook to Shell Double Track, and San Dieguito Double Track projects are phased for completion by 2025. Carlsbad Village Double Track, La Costa to Moonlight Double Track, Moonlight to Swami Double Track, San Onofre Creek Double Track (CP Songs Double Track), and San Mateo Creek Double Track projects are phased for completion by 2035. The Miramar Tunnel is phased for completion by 2050.

Regarding land use and housing, under the SCS for the proposed Plan, 31 Mobility Hub areas were identified as optimal locations for siting transit investments that maximize regional connectivity, and for focusing future transit-oriented growth. By 2050, 53 percent of the population, 71 percent of the jobs, and 54 percent of the housing for the region are projected to be in Mobility Hub areas. See Tables F.4 through F.6 in Appendix F of the proposed Plan for more details on the regional population, jobs, and housing within Mobility Hub areas. Development under the SCS for the proposed Plan is substantially more compact than previous plans, conserving far more land and open space due to densification in the Mobility Hub areas. The proposed Plan does “encourage intensified, compact land use,” and includes transportation network improvements, including roadway improvements, that support this land use goal. See Chapter 2 and Sections 4.2, 4.4, 4.11, and 4.14 of the EIR for more discussion of the land use impacts under the proposed Plan.

SANDAG is developing a Regional Housing Incentive Program to meet the goals of the proposed Plan and assist local jurisdictions in achieving housing goals. SANDAG’s housing incentive program will include development of a regional anti-displacement strategy, and consider climate change and resiliency, availability of transit and active transportation, and consistency with the transportation improvements included in the proposed Plan. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The Plan proposes a land use scenario that accommodates the Regional Housing Needs Assessment and, when combined with the transportation system, allows the region to meet its SB 375 greenhouse gas reduction target.

**RESPONSE TO COMMENT 35-4**

This comment inaccurately characterizes the mode share shifts achieved under the proposed Plan. This comment relies upon mode share numbers generated by the California Household Travel Survey (CHTS), which presents a less accurate picture of regional behavior and mode share than SANDAG's ABM2+ forecast, for several reasons. The CHTS was conducted by Caltrans between 2010 and 2013. This was during the time of the Great Recession, which created unique influences on travel behaviors and characteristics. The SANDAG ABM2+ was updated based on the San Diego Regional Transportation Study (SDRTS) conducted between 2016 and 2017. The SDRTS used smartphone-based travel diaries as the primary means of travel data collection and included nearly 6,200 participating households. From a data quality perspective, the SDRTS is considered superior to the CHTS based on the more recent time period for survey collection, travel survey data collection methodology, and San Diego region sample size. Additionally, the CHTS and the SDRTS are limited to travel surveys of residents. However, the ABM2+ forecasts travel for all types of trips—resident, visitor, cross border, airport, non-resident trips starting/ending external to San Diego, commercial, and truck. SANDAG collects supplemental travel survey and data on these other travel markets for inclusion in ABM2+ forecasts. Again, from a data perspective, the ABM2+ forecast, including mode share numbers, is superior to the CHTS numbers referenced in SOFAR's comment.

As shown in Appendix O-2 of the EIR, the transit mode share for all trips in 2050 is 5.2 percent under the proposed Plan, and the transit mode share for work trips in 2050 for peak period and all day is 13.2 percent. This comment inaccurately characterizes GHG reductions achieved under the proposed Plan. The proposed Plan achieves 20.4 percent per capita GHG reductions from passenger vehicles and light duty trucks by 2035 and exceeds the regional GHG reduction target of 19 percent.

San Diego Forward: The 2021 Regional Plan and its DEIR  
SOFAR and CNFF Comments  
October 7, 2021  
Page 3 of 6

35-4 cont. transit mode share to 5% reflects almost no change at all. In any event, until SANDAG accurately characterizes existing transit mode share, any future mode share projections are not credible. Moreover, even if the Plan's 2050 transit mode share of 5.0% is accurate—which appears highly unlikely—this nominal increase in transit ridership does not come close to achieving the region's GHG reduction goals.<sup>3</sup>

35-5 The proposed Plan's focus on regional mode share also deprives both SANDAG and the public of information necessary to take the first foundational steps toward building a transit bike and walk system that is truly competitive with the auto—i.e., a system that achieves a 50% walk, bike and transit mode share—in areas surrounding mobility hubs. This is the level of investment and innovation that might actually start to meet GHG targets and VMT reduction goals. However, information on current and projected mode shares for specific area-complete transit systems such as the Central Mobility Hub are not to be found in the DEIR. Obviously, this a critical omission because it forecloses discussion on locating the first stepping stones and taking the first steps to meet the looming social, ecological, and health challenges facing the globe and our local region. San Diego is the seventh most ozone-polluted metro area in the country.<sup>4</sup> The proposed Plan fails to take meaningful steps toward mitigating the impacts of continued reliance on automobiles.

35-6 A definition of insanity often attributed to Albert Einstein is “doing the same thing over and over again and expecting different results”. If true, then San Diego is insane because we've been doing the same thing over and over with a growing inability to meet the existential challenges that face the region.

35-7 Paradoxically, the DEIR asserts that the purpose of the Plan's roadway-building component is to increase public transportation. (See DEIR at 6-13, stating that the Plan does not include general purpose lanes, but instead focuses on adding Managed Lanes which “increase the efficiency of roadway travel for vehicles and transit.”) The DEIR repeats this assertion in rejecting alternatives identified by members of the public. (See DEIR at 6-11, 6-13.) However, the DEIR fails to provide any factual support for the claim that Managed Lanes promote transit use. In order to justify road building as a measure of increasing transit ridership, the FEIR must actually model the effect that Managed Lanes have on transit ridership (i.e., how many transit trips would occur with Managed Lanes versus without Managed Lanes). It must also disclose the cost effectiveness of Managed Lanes per additional transit trip. Finally, it must disclose whether other types of transit investments would be more cost-effective and result in increased transit ridership compared to Managed Lanes. Without this information, the DEIR's conclusions regarding Managed Lanes' support for transit and its rejection of alternatives lack evidentiary support. The DEIR also fails as an informational document.

<sup>3</sup> The City of San Diego's Climate Action Plan identifies a 50% transit, walk and bike mode share for commuters within ½ mile of a major transit stop within City of San Diego by 2035; see Climate Action Plan p.37; available at [https://www.sandiego.gov/sites/default/files/final\\_july\\_2016\\_cap.pdf](https://www.sandiego.gov/sites/default/files/final_july_2016_cap.pdf); accessed September 28, 2021.

<sup>4</sup> American Lung Association, State of the Air Report Card, San Diego-Chula Vista-Carlsbad, at <https://www.lung.org/research/sota/city-rankings/msas/san-diego-chula-vista-carlsbad-ca/ozone>.

## RESPONSE TO COMMENT 35-5

DAG recognizes that substantial reductions in global, state, and regional GHG emissions are an urgent priority, and strives in its Regional Plans and programs to do its part in reducing GHG emissions from all sources. Section 4.8.1 of the EIR properly describes existing conditions related to GHG emissions, including background information on various greenhouse gases, their sources, and their potential to trap heat in the Earth's atmosphere and contribute to global warming. The EIR describes the main sources of GHG emissions in the state and in the San Diego region. The effects of climate change (“climate destabilization”) are summarized, with detailed description based on scientific studies of how climate change is anticipated to impact California and the San Diego region provided in EIR Appendix C. Section 4.8 also describes the regulatory setting for GHG emissions, providing descriptions of State legislation and EOs B-30-15 and S-3-05 goals for statewide GHG reductions. The statewide GHG reduction goals adopted by the Legislature and expressed by the Governor's EOs are based on limiting global warming to levels necessary to avoid potentially catastrophic climate change impacts.

CEQA does not require analyzing projected mode share for specific areas within the region in a programmatic impact analysis prepared for a comprehensive regional plan under CEQA. The degree of specificity required in an EIR corresponds to the degree of specificity involved in the underlying activity, which is described in the EIR. (CEQA Guidelines Section 15146.)

The Draft EIR properly evaluates the significant environmental impacts of the proposed Plan consistent with CEQA requirements, and concludes that the Plan would have significant and unavoidable GHG emissions impacts. The Draft EIR then identifies mitigation measures and alternatives to the proposed Plan that would reduce this significant impact. For more detail see EIR Section 4.8 and Chapter 6.0.

## RESPONSE TO COMMENT 35-6

This comment expresses an opinion about challenges facing the region. It does not address EIR adequacy, and no further response is required.

## RESPONSE TO COMMENT 35-7

is comment inaccurately asserts that Managed Lane investments do not support transit use. The Managed Lane system would support a robust network of Next Generation Rapid Service operating in priority travel

lanes and/or separated guideways and would be given traffic signal priority. Next Generation Rapid routes would provide competitive alternatives to single-occupancy vehicle travel and be connected via the Regional Mobility Hub Network. In addition, the proposed Managed Lanes network uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to modes of transportation that would reduce VMT over single-occupancy vehicles, i.e., transit, carpools, vanpools, and low-emission vehicles with appropriate decals.

Data from model runs comparing the proposed Plan network with Managed Lane investments to a network consistent with SOFAR’s proposed Climate, Housing and Transit Alternative, which omits new Managed Lanes, demonstrates that the proposed Climate, Housing and Transit Alternative’s impacts on VMT are similar to the proposed Plan’s impacts, and that it does not substantially reduce the proposed Plan’s significant impacts.

Database	Proposed Final Plan		SOFAR’s Climate, Housing and Transit Alternative	
	2035	2050	2035	2050
SB 375 VMT	79,725,710	81,804,496	79,877,932	82,247,926
SB 375 VMT/Person	22.0	21.8	22.1	22.0
Final Per Capita GHG Reductions for 2050	-20.4%	-21.0%	-20.4%	-20.7%

See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR’s proposed Climate, Housing and Transit Alternative from detailed consideration.

**The Proposed Plan Relies on Highly Speculative Funding Sources.**

The proposed Plan relies on revenue sources that are highly speculative and thus provides no assurance that the Plan's transit projects would be funded. The Plan identifies 163.3 billion in total revenues (2020 dollars). (Draft RTP Appendix V Table V.4, pp. 26-27.) This includes \$62.1 billion in "New" revenue sources:

- \$10.0 billion from 1/2 cent TransNet sales tax starting in 2025
- \$7.2 billion from 1/2 cent MTS sales tax starting in 2025
- \$2.2 billion in ride hailing service fees starting in 2026
- \$17.2 billion in state road user charges starting in 2026
- another \$17.2 billion in regional road user charges starting in 2026
- \$4.7 billion from assumed increase in Federal gas tax

All of these revenue sources are highly speculative. More than half of the "New" revenue is from road user charges that do not yet exist. The Draft RTP's sole justification for including this revenue is that a committee authorized by the Legislature is investigating the possibility of such charges. (See Draft RTP Appendix V, p. V-17 - V-18). According to transportation expert Norm Marshall, there is no authorization for or mechanism in place to collect such charges. The next largest components of the "New Revenue" are from two 1/2 cent sales taxes that the proposed Plan simply assumes will be approved by the voters. SANDAG similarly assumed additional sales tax revenue in connection with the 2015 RTP, but the voters rejected Measure A in 2016. Passage of these two additional tax increases is highly uncertain.

Moreover, the proposed Plan shows that 45% of the total Plan expenditures are for non-capital items including operations, local streets and roads, programs and debt service. These comprise about \$73.5 billion. (Draft RTP, Figure 3.3, Section 3, at 7). Without the "New" revenue sources, total revenue is only \$103.2 billion, leaving only about \$30 billion for capital projects or only one-third of the \$90 billion in capital projects in the Plan (\$55 of \$163.6 billion). If complete funding is not assured, there will be a large revenue shortfall. In this event, the FEIR should disclose which capital projects would be prioritized.

**The DEIR Lacks a Legally Defensible Alternatives Analysis.**

The alternatives analysis in the DEIR does not remedy the deficiencies identified by the California Court of Appeal in *Cleveland National Forest Foundation v. San Diego Association of Governments*. (17 Cal.App.5th 413, 435-437 (2017)). In that case, the Court determined that the EIR did not identify an alternative that results in a substantial reduction in VMT. The Court found this omission was inexplicable given SANDAG's acknowledgement in its Climate Action Strategy that the state's efforts to reduce GHG emissions from on-road transportation will not succeed if the amount of driving,

**RESPONSE TO COMMENT 35-8**

This comment inaccurately describes the revenue sources included in the proposed Plan as highly speculative. Federal and State laws require SANDAG to develop a regional plan built on reasonable assumptions of the revenues that will be available during the period covered by that plan (Government Code Section 65080(b)(4); 23 CFR 450.322(f)(10)(ii)). New funding sources are revenues that do not currently exist or that may require additional steps before the MPO or transit agency can commit such funding to transportation projects (2017 RTP Guidelines for MPOs). Strategies for ensuring their availability must be identified and future revenues may be projected based on historical trends, including consideration of past legislative or executive actions (2017 RTP Guidelines for MPOs). The level on uncertainty in projects based on historical trends is generally greatest for revenues in the "outer years" (10 years or more) of an RTP.

Specific to the revenue sources cited, this comment fails to recognize that SANDAG has succeeded in passing two past sales tax measures to fund transportation in the region, indicating it is reasonable to assume additional transportation sales tax measures would be passed. With respect to ridehailing service fees, SANDAG has an existing partnership with researchers at UC Berkeley to analyze data collected by SANDAG to better understand the time and price tradeoffs of ridehailing service users, exploring opportunities, challenges, and social equity considerations for policies to promote pooled ridehailing trips. This analysis will be completed by FY 2023 and will inform the development of a ridehailing fee program by 2026.

The State is currently studying implementation of a road user charge, and it would be unreasonable for SANDAG to disregard the actions at the State-level that would directly impact anticipated revenue during the period covered by the proposed Plan. The proposed Final Plan now assumes collection of both the State and regional road usage charges would begin by 2030. As a near-term action, SANDAG will launch a study in FY 2022 to evaluate different transportation funding sources, and a working group would oversee the development of a comprehensive value pricing and user fee implementation strategy that supports the goals of the proposed Plan.

35-8

35-9

35-10

SANDAG is partnering with the Sacramento Area Council of Governments and Southern California Association of Governments on a Caltrans Planning Grant to develop a research design framework for pilot projects to test the effectiveness of road pricing strategies combined with demand management approaches (incentives) to advance equity, reduce vehicle miles traveled and GHG emissions, manage roadway congestion, and provide sustainable revenues for system maintenance and operation. This study will put California MPOs in a position to complement the efforts of Caltrans through its Road Charge Pilots Program. Caltrans was recently awarded \$2.15 million from the Federal Highway Administration to continue pilot testing user acceptance and the technological feasibility of implementing road user charges.

Both studies will include a robust public-engagement process and lay the foundation for prioritizing different goals and understanding the potential of these tools in advancing these goals. SANDAG will leverage existing coordination efforts with the other major MPOs in California to ensure an integrated approach when possible. Once these initial studies are complete, SANDAG will begin deploying pilot testing by FY 2026 to inform the detailed design of new pricing. Through coordination with State and MPO partners, SANDAG would pursue legislative action for authority to administer a road usage charge program by 2030.

Specific to the federal gas tax, an increase is assumed based on public discussion by members of Congress and the president to introduce legislation to increase the gas tax, a carbon tax, or a tax on other fuels based on the life cycle for carbon emissions in order to fund a modern and strong transportation system.

#### **RESPONSE TO COMMENT 35-9**

This comment asserts that the Final EIR should disclose which capital projects would be prioritized in the event of a funding shortfall, which is a speculative scenario. Federal and State laws require SANDAG to develop a regional plan built on reasonable assumptions of the revenues that will be available during the period covered by that plan (Government Code Section 65080(b)(4); 23 CFR 450.322(f)(10)(ii)). See Appendix V, *Funding and Revenue*, of the proposed Plan for additional information about revenue sources.

Further, under CEQA case law, an EIR is entitled to assume that assumptions that are an integral part of the proposed project will become reality (*Village Laguna of Laguna Beach, Inc. v. Board of*

*Supervisors* (1982) 134 Cal. App. 3d 1022,1030). An EIR can make reasonable assumptions based on substantial evidence about future conditions without guaranteeing that those assumptions will remain true (*Environmental Council of Sacramento v. City of Sacramento* (2006) 142Cal. App. 4<sup>th</sup> 1018,1036).

**RESPONSE TO COMMENT 35-10**

As explained in Master Response 1, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives and that are potentially feasible. The discussion also explains why the Draft EIR was not required to consider SOFAR's proposed Climate, Housing and Transit Alternative in detail. See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR's proposed Climate, Housing and Transit Alternative from detailed consideration.

35-10 cont. or VMT, is not significantly reduced. The Climate Action Strategy explained, “Lowering vehicle miles traveled means providing high-quality opportunities to make trips by alternative means to driving alone such as walking, bicycling, ridesharing, and public transit, and by shortening vehicle trips that are made.” (*Id.*)

The current DEIR suffers from this same deficiency because it does not include an alternative that would result in a meaningful reduction in VMT. Nor, as discussed above, does it include an alternative that would result in a meaningful increase in high-quality opportunities to make trips by alternative means to driving.

In addition to the No Project Alternative, the DEIR identifies just two alternatives. Alternative 2: 2019 Transportation Network with New Value Pricing and User Fee Policies and Alternative 3: All Growth Focused in Mobility Hubs and More Progressive Value Pricing and User Fee Policies.

35-11 Alternative 2 would result in higher per capita and overall VMT compared to the proposed Plan and compared to existing (2016) conditions. (DEIR at 6-56; DEIR Appendix O, Table O-3: SB 375 Reductions for Alternatives Considered in Detail in this EIR (pdf page 932).) The DEIR identifies the increase in VMT under this alternative as a significant impact; Alternative 2 would actually *increase* VMT compared to the proposed Plan. (DEIR at 6-56 — 6-59.)

35-12 Although Alternative 3 would reduce per capita VMT compared to existing (2016) conditions, there is very little difference in per capita VMT between the proposed Plan and Alternative 3 in 2025, 2035 and 2050. Like Alternative 2, Alternative 3 would *not* reduce VMT impacts to a less than significant level. (DEIR at 6-56—6-59.) Moreover, Alternative 3 would result in an overall increase in VMT in 2035 and 2050 compared to existing conditions. (DEIR at 6-22; Appendix O, Table O-3: SB 375 Reductions for Alternatives Considered in Detail in this EIR (pdf page 932).)

35-13 The end result is that the DEIR fails to provide a *transportation-network* alternative that would result in substantive decreases in VMT and substantive benefits in transit/bike/walk mode share. This is because *Alternative 3 calls for the same transportation network as the proposed Plan.* (DEIR at 6-4.) The fact that Alternative 3 would result in (nominal)VMT reductions compared to the proposed Plan is largely due to its compact land use patterns. (DEIR at 6-6.) While CNFF concurs that development must be concentrated in urban areas to achieve the region’s GHG reduction and housing goals, modifications to land use alone are not sufficient to achieve GHG reduction goals. Moreover, it is imperative to note that an RTP alternative that emphasizes land use rather than transportation projects is misguided because, as the DEIR itself acknowledges, SANDAG has little control over land use. (DEIR at 6-14.)

**The DEIR Incorrectly Rejects the Climate, Housing and Transit Alternative.**

35-14 The DEIR rejects SOFAR’s and CNFF’s Climate, Housing and Transit Alternative as both duplicative and infeasible. The DEIR’s rejection is unsupported on both grounds. First, the DEIR asserts that the proposed Plan includes the transit components identified in the SOFAR’s and CNFF’s Alternative. While the proposed Plan does include some of the transit projects identified in the Climate, Housing and Transit Alternative, the proposed Plan also calls for a massive increase in road and freeway building. As we have explained, building a comprehensive regional public transportation network will

**RESPONSE TO COMMENT 35-11**

As explained in Master Response 1, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives and that are potentially feasible. Alternative 2 was included for detailed consideration because it reduces other significant impacts, including air quality and population and housing, as compared to the proposed Plan. See Chapter 6 and Table 6-3 for additional discussion of the comparative impacts of the proposed Plan and Alternative 2. The discussion also explains why the Draft EIR was not required to consider SOFAR’s proposed Climate, Housing and Transit Alternative in detail. See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR’s proposed Climate, Housing and Transit Alternative from detailed consideration.

**RESPONSE TO COMMENT 35-12**

As explained in Master Response 1, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives and that are potentially feasible. The discussion also explains why the Draft EIR was not required to consider SOFAR’s proposed Climate, Housing and Transit Alternative in detail. See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR’s proposed Climate, Housing and Transit Alternative from detailed consideration.

SOFAR suggests that the Draft EIR should have evaluated a project alternative that substantially reduced VMT below existing levels. Alternative 3 consists of the proposed Plan transportation network, a land use pattern that restricts all regional growth to the Mobility Hubs, and more progressive value pricing and user fees policies than what is included in the proposed Plan; it achieves lower VMT than the proposed Plan, though still above existing levels. An alternative including *further* VMT-reduction measures to reduce VMT below existing levels is not currently feasible for several reasons, including:

- *Further* substantial changes needed in State and federal policy and legislation. These would include still *further* changes in state road pricing policy, land use policies, and parking policies—beyond those included in the proposed Plan and Alternatives 2 and 3—that are not reasonably foreseeable.
- Lack of funding for *further and accelerated* major transit service improvements (recognizing that, as discussed in additional detail in

subsequent discussion, increased transit investments alone cannot achieve substantial VMT reductions). The request to switch funding from roadways to transit fails to recognize that there are regulatory constraints on directing roadway funds to transit, and on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced. There are also constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network.

- Severe economic and social impacts caused by substantial increases in driving costs. Alternative 3 already increases fees compared to the proposed Plan. From a consumer standpoint, increases in fuel or vehicle user costs can be a trade-off with discretionary expendable income for purchasing food, clothing, and other personal items, especially for lower income households. A significant increase in fuel cost or vehicle user fees would also result in lower spending in other areas of the economy, and economic disruption would occur in adjusting to higher fuel or vehicle registration prices.
- Lack of authority for SANDAG and local governments to implement such *further* measures. For example, SANDAG has no authority to increase state road pricing, or require local governments to implement land use or parking policies.

SANDAG cannot control the total regional population growth that is the main cause of total VMT increases. As SANDAG modeling indicates, population growth is the main driver of future VMT growth. Alternative 3 would result in VMT per capita of 15.6 (home-based) compared to the proposed Plan VMT per capita of 16.03 in 2050. Alternative 3 would result in a total VMT increase of 2,756,715 miles per day in year 2050, which is approximately 39 percent lower than the proposed Plan (total VMT increase of 4,519,230 miles per day in year 2050). Population growth under the proposed Plan, however, increases by 13 percent. Even with decreases in driving per capita, under Alternative 3 total VMT still increases by 3.2 percent compared to 2016 because population growth outpaces driving reductions. As courts have noted, “CEQA is not intended as a population control measure” (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 220).

**RESPONSE TO COMMENT 35-13**

As explained in Master Response 1, the Draft EIR does evaluate a reasonable range of alternatives that achieve most of the basic project objectives and that are potentially feasible. The discussion also explains why the Draft EIR was not required to consider SOFAR's proposed Climate, Housing and Transit Alternative in detail. See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR's proposed Climate, Housing and Transit Alternative from detailed consideration.

To be legally adequate under federal transportation law and SB 375, the proposed Plan is required to address transit projects, highway projects, and sustainable land use patterns; all three components are integrated into the basic project objectives described in EIR Section 2.4 (page 2-6). An EIR must discuss alternatives to a project in its entirety but is not required to discuss alternatives to each particular component of a project. SOFAR proposes a "transportation-network" alternative but does not address the regulatory constraints on redirecting roadway funds to transit, and on when money becomes available during the lifespan of the proposed Plan. For instance, federal formula funds such as FTA Section 5307 or RSTP are apportioned annually; SANDAG can make assumptions about how much can be anticipated in the future based on historical data but cannot advance any project(s) that need the funding in years prior to apportionment. Other funds that SANDAG cannot advance and redirect to transit include funds going to other agencies, such as SHOPP funds, which are managed by the California Transportation Commission and are used for safety, operations, and rehabilitation projects on the state highway system by Caltrans.

Given these constraints, Alternative 3 did not assume an alternate transportation network different than that of the proposed Plan. Instead, Alternative 3 included more progressive pricing and user fees, as well as an intensified land use pattern in order to reduce significant impacts on the environment. Inclusion of this more compact land use pattern is appropriate as the SCS land use pattern is an integral component of a regional plan, as mandated by SB 375. As compared to the proposed Plan, Alternative 3 reduces significant impacts on aesthetics and visual resources, agriculture and forestry, air quality, biological resources, cultural resources, geology, GHG, mineral resources, noise, public services and utilities, transportation, and

wildfire. See Chapter 6 and Table 6-3 for additional discussion of the comparative impacts of the proposed Plan and Alternative 3.

**RESPONSE TO COMMENT 35-14**

his comment inaccurately characterizes the nature of the roadway projects in the proposed Plan.

Where possible, rather than adding new roads, the proposed Plan repurposes general purpose lanes or shoulders to create Managed Lanes. The Managed Lane system is important for supporting the transit network and Flexible Fleets envisioned in the proposed Plan. The Regional Plan is updated every four years, providing opportunities to reflect changes in the network. The proposed Plan's improvements to the freeway system are limited to Managed Lanes using existing infrastructure such as general purpose lane conversion and shoulders to facilitate additional transit and high occupancy vehicle travel.

This comment also inaccurately characterizes the nature and comparative impacts of the proposed Plan as compared to SOFAR's proposed Climate, Housing and Transit Alternative on freeway expansion and roadway capacity. In 2050, under the proposed Plan, the region has 2,122 miles of general purpose freeway lanes (including auxiliary lanes) due to existing lane conversions. In 2050, under SOFAR's proposed Climate, Housing and Transit Alternative, which includes no roadway improvements, the region has 2,352 miles of general purpose freeway lanes (including auxiliary lanes). The proposed Plan includes 821 miles of HOV/Managed Lanes, which SOFAR inaccurately suggests will continue to contribute to substantial increases in VMT and GHG emissions. Data from model runs comparing the proposed Plan network to SOFAR's proposed Climate, Housing and Transit Alternative demonstrates that the proposed Climate, Housing and Transit Alternative has similar impacts as the proposed Plan in achieving the State's GHG reduction goals and does not substantially reduce the proposed Plan's significant impacts.

Database	Proposed Final Plan		SOFAR's Climate, Housing and Transit Alternative	
	2035	2050	2035	2050
SB 375 VMT	79,725,710	81,804,496	79,877,932	82,247,926
SB 375 VMT/Person	22.0	21.8	22.1	22.0
Final Per Capita GHG Reductions for 2005	-20.0%	-21.0%	-20.4%	-20.7%

See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR's proposed Climate, Housing and Transit Alternative from detailed consideration, including a discussion of selected elements of SOFAR's alternative that are similar to the proposed Plan's elements.

With respect to project phasing under the proposed Plan, this comment fails to recognize that there are regulatory constraints on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced. There are also regulatory constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network. For instance, federal formula funds such as FTA Section 5307 or RSTP funds are apportioned annually; SANDAG can make assumptions about how much can be anticipated in the future based on historical data but has no ability to any project(s) that need the funding in years prior to apportionment. Other funds that SANDAG cannot advance and re-direct to transit include funds going to other agencies, such as SHOPP funds, which are managed by the California Transportation Commission and are used for safety, operations, and rehabilitation projects on the state highway system by Caltrans.

San Diego Forward: The 2021 Regional Plan and its DEIR  
 SOFAR and CNFF Comments  
 October 7, 2021  
 Page 6 of 6

35-14 cont. require all of the region’s transportation investment dollars for the foreseeable future. For this reason, the Climate, Housing and Transit Alternative *does not include any freeway expansion*. The billions of dollars spent on freeway expansion the past 20 years have a) failed to reduce congestion, b) caused a substantial increase in VMT and GHG emissions, and c) resulted in a severe housing shortage. The Climate, Housing and Transit Alternative is not duplicative of the proposed Plan or any alternative considered in the DEIR.

35-15 The DEIR further opines that it will not be possible to achieve the goals identified in the Climate, Housing and Transit Alternative. The DEIR attempts to justify this conclusion by claiming that even Alternative 3, which includes what the DEIR characterizes as the most progressive transportation measures to reduce VMT and GHG, is unable to meet the VMT goals of the CHT Alternative.(DEIR at 6-14.) This statement is incorrect. Alternative 3 does not include the most progressive transportation measures; rather, it calls for an identical transportation network to the proposed Plan. As we explained in our May 6, 2020 letter, the Climate, Housing and Transit Alternative would eliminate the sizable number of road/freeway projects and use that funding to construct and implement a comprehensive transit system.

35-16 We again request that SANDAG model and fully analyze the Climate, Housing and Transit Alternative in the EIR for the proposed Plan. This modeling should advance all of the Alternative’s transit projects to the first ten years of the Plan in order to truly understand the effect that a comprehensive transit network would have in achieving the region’s environmental and housing goals. We remain optimistic that such modeling will demonstrate that this Alternative will be far more effective than the proposed Plan in achieving the state’s GHG reduction goals and substantially reducing the Plan’s significant environmental impacts.

**Conclusion.**

35-17 In the face of a severe, entrenched housing crisis endangering the public welfare and the severe climate crisis endangering the planet, SANDAG owes the public nothing less than a transit alternative that immediately meets these life threatening challenges rather than artificially prolonging them. The DEIR should also be revised and recirculated to correct the deficiencies identified in this letter.

Sincerely,

  
 Duncan McFetridge  
 Director, CNFF  
 President, SOFAR

Attachment: Letter from Duncan McFetridge to SANDAG Board of Directors, May 6, 2020

**RESPONSE TO COMMENT 35-15**

Alternative 3 in the Draft EIR evaluated what additional reductions of VMT and GHG could potentially be achieved by further restricting development to Mobility Hubs, increasing fees associated with automobile use, and decreasing costs associated with transit use. This comment inaccurately characterizes the comparative potential of the proposed Plan network and SOFAR’s proposed Climate, Housing and Transit Alternative to reduce VMT and GHG. Data from model runs comparing the proposed Plan network to SOFAR’s proposed Climate, Housing and Transit Alternative demonstrates that the proposed Climate, Housing and Transit Alternative has similar impacts as the proposed Plan in achieving the State’s GHG reduction goals and does not substantially reduce the proposed Plan’s significant impacts.

Database	Proposed Final Plan		SOFAR’s Climate, Housing and Transit Alternative	
	2035	2050	2035	2050
SB 375 VMT	79,725,710	81,804,496	79,877,932	82,247,926
SB 375 VMT/Person	22.0	21.8	22.1	22.0
Final Per Capita GHG Reductions for 2005	-20.0%	-21.0%	-20.4%	-20.7%

See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR’s proposed Climate, Housing and Transit Alternative from detailed consideration.

This comment also fails to recognize that there are constraints on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced. There are also regulatory constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network. For instance, federal formula funds such as FTA Section 5307 or RSTP are apportioned annually; SANDAG can make assumptions about how much can be anticipated in the future based on historical data but has no ability to advance any project(s) that need the funding in years prior to apportionment. Other funds that SANDAG cannot advance and re-direct

to transit include funds going to other agencies, such as SHOPP funds, which are managed by the California Transportation Commission and are used for safety, operations, and rehabilitation projects on the state highway system by Caltrans.

**RESPONSE TO COMMENT 35-16**

The proposal to advance all of the Alternative's transit projects to the first 10 years of the proposed Plan fails to recognize that there are constraints on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced. There are also constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network. For instance, federal formula funds such as FTA Section 5307 or RSTP are apportioned annually; SANDAG can make assumptions about how much can be anticipated in the future based on historical data but has no ability to advance any project(s) that need the funding in years prior to apportionment. Other funds that SANDAG cannot advance and re-direct to transit include funds going to other agencies, such as SHOPP funds, which are managed by the California Transportation Commission and are used for safety, operations, and rehabilitation projects on the state highway system by Caltrans.

This comment inaccurately characterizes the GHG reductions that can be achieved under the proposed Plan network as compared to SOFAR's proposed Climate, Housing and Transit Alternative. SANDAG modeling data demonstrates that the proposed Climate, Housing and Transit Alternative has similar impacts as the proposed Plan in achieving the State's GHG reduction goals and does not substantially reduce the proposed Plan's significant impacts.

Database	Proposed Final Plan		SOFAR's Climate, Housing and Transit Alternative	
	2035	2050	2035	2050
SB 375 VMT	79,725,710	81,804,496	79,877,932	82,247,926
SB 375 VMT/Person	22.0	21.8	22.1	22.0
Final Per Capita GHG Reductions for 2005	-20.0%	-21.0%	-20.4%	-20.7%

See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR's proposed Climate, Housing and Transit Alternative from detailed consideration.

**RESPONSE TO COMMENT 35-17**

This comment makes statements about challenges facing the region, to which no further response is required. This comment also asserts the need to recirculate the Draft EIR based on the inaccurate assertions made in comments 35-1 through 35-16, for which responses have already been provided above. No information has been added to the Draft EIR that would trigger recirculation under CEQA Guidelines Section 15088.5.

[clerk@sandag.org](mailto:clerk@sandag.org)

**RE: Transportation Network Scenarios for the 2021 RTP**

Save Our Forest and Ranchlands ("SOFAR") and the Cleveland National Forest Foundation ("CNFF"), two organizations dedicated to progressive land use planning and the protection of vital natural resources, are submitting comments for the draft transportation network scenarios for the 2021 Regional Transportation Plan Update. We recognize that SANDAG, under its new leadership and with new board members, has undergone a tectonic shift towards building a regional transit system to serve the urbanized western section of San Diego County. The focus of this letter is centered on the required first step towards building a 21<sup>st</sup> Century regional mobility system, i.e., a first phase area- complete transit, bike, walk system in the urban core that is competitive with the auto.

35-18 Therefore, SOFAR and CNFF urge the SANDAG Board of Directors to include a Climate, Housing, Transit Alternative in the 2021 RTP update—an alternative focused on meeting both the housing needs and greenhouse gas ("GHG") reduction goals for a qualified land use area that have been set collectively by the State of California, the City of San Diego, and SANDAG:

- 40% reduction in GHG below 1990 levels by 2030 (California AB 32 and SB 32)
- 80% reduction in GHG below 1990 levels by 2050 (Governors Schwarzenegger and Brown)
- 25% reduction in per capita GHG from passenger cars and trucks relative to 2005 by 2035 (California SB 375; California Air Resources Control Board<sup>1</sup>)
- 14.3% reduction in total daily VMT per capita, and 16.8% reduction in total light-duty VMT per capita, relative to 2015-2018 average by 2050 (California Air Resources Board)<sup>2</sup>
- 50% transit, walk and bike mode share for commuters within ½ mile of a major transit stop in City of San Diego by 2035 (Climate Action Plan, City of San Diego)<sup>3</sup>
- 150% increase in transit mode share (SANDAG's *Urban Area Transit Study*)<sup>4</sup>

1

**RESPONSE TO COMMENT 35-18**

The proposed Plan aligns with many of the elements of the Climate, Housing and Transit Alternative while meeting all legal requirements. As the Plan is implemented, SANDAG looks forward to continuing to advance efforts related to climate, housing, and transit.

SANDAG is developing a Regional Housing Incentive Program to meet the goals of the proposed Plan and assist local jurisdictions in achieving housing goals. SANDAG's housing incentive program will include development of a regional anti-displacement strategy, and consider climate change and resiliency, availability of transit and active transportation, and consistency with the transportation improvements included in the Regional Plan. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed Plan proposes a land use scenario that accommodates the Regional Housing Needs Assessment and, when combined with the transportation system, allows the region to meet its SB 375 greenhouse gas reduction target.

This comment inaccurately assumes the proposed Climate, Housing and Transit Alternative would significantly reduce VMT and GHG emissions, and substantially increase transit use. The Climate, Housing and Transit Alternative would have similar impacts as the proposed Plan on VMT and GHG emissions, and there is no evidence transit use would be greater.

See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR's proposed Climate, Housing and Transit Alternative from detailed consideration, including a discussion of selected elements of SOFAR's alternative that are similar to the proposed Plan's elements.

35-18 cont.

- Adequately plan to meet the housing needs of everyone in the community (California)<sup>4</sup>
- SB 743 VMT reduction goals

Meeting these goals is not only reasonable, but also urgently required if we are going to solve some of the unrelenting challenges faced by residents of San Diego. Indeed, SANDAG's prior RTP was found to be deficient for failing to discuss an alternative which could significantly reduce total vehicle miles traveled ("VMT") (*Cleveland National Forest Foundation v. San Diego Association of Governments*. 17 Cal.App. 5th 413, 435-437 (2017)). Heretofore, the San Diego region has met these challenges with clever words, not deeds. These goals are achievable only if land use and transportation are addressed together.

These synergies are recognized in SANDAG's *Urban Area Transit Strategy* and the City of San Diego's *General Plan Housing Element* which includes this goal:

*Ensure the provision of sufficient housing for all income groups to accommodate San Diego's anticipated share of regional growth ...in a manner consistent with the development pattern of the Sustainable Communities Strategy (SCS), that will help meet regional GHG targets by improving transportation and land use coordination and jobs/housing balance, creating more transit-oriented, compact and walkable communities, providing more housing capacity for all income levels, and protecting resource areas.<sup>5</sup>*

The Climate, Housing, Transit Alternative would pick up where SANDAG's *Urban Area Transit Strategy* left off in 2011.

35-19

**Housing + Transportation Affordability (H+T)**

There is a huge amount of attention on housing affordability but too little focus on housing and transportation ("H+T") affordability. Outlying housing may be cheaper in the short run than housing in the region's core because of supply and demand – but any savings often are eaten up by increased transportation costs. Dispersed housing requires more cars per household and more VMT and GHG emissions per household.

The Center for Neighborhood Technologies has modeled H+T costs relative to income for the entire U.S. with support of the U.S. Department of Housing and Urban Development. Figure 1 shows the H+T affordability results for the San Diego region for households with the regional typical household income of \$64,309.

## RESPONSE TO COMMENT 35-19

Under the SCS for the proposed Plan, 31 Mobility Hub areas were identified as optimal locations for siting transit investments that maximize regional connectivity, and for focusing future growth. Nine factors were used to assess the propensity for transit-based trip making to identify the Mobility Hub areas integrated into the proposed Plan, including employment, population density, age, proximity to activity centers, trips within census block groups, communities of concern, and VMT per capita.

The areas indicated in the figure provided by SOFAR are well-aligned with the Mobility Hub areas identified in the proposed Plan. The Mobility Hub areas contain 70 percent of the Center for Neighborhood Technology's H+T index values that are considered affordable, i.e., less than the regional median. The remaining 30 percent of the H+T index values that are considered affordable are located primarily in East County, where development would contribute to urban sprawl in the backcountry and impede achieving regional reductions of VMT and GHG emissions.

While land use authority is reserved to local jurisdictions—the 18 cities and the County—SANDAG will work closely with jurisdictions to incentivize building of housing in the Mobility Hub areas. In coordination with the development of the proposed Plan, SANDAG will embark on developing a housing incentive program that will support jurisdictions in the development and adoption of policies and process improvements to accelerate housing production. The program will also look for ways to leverage funding from the State to provide more housing in the region and meet the goals of the proposed Plan.

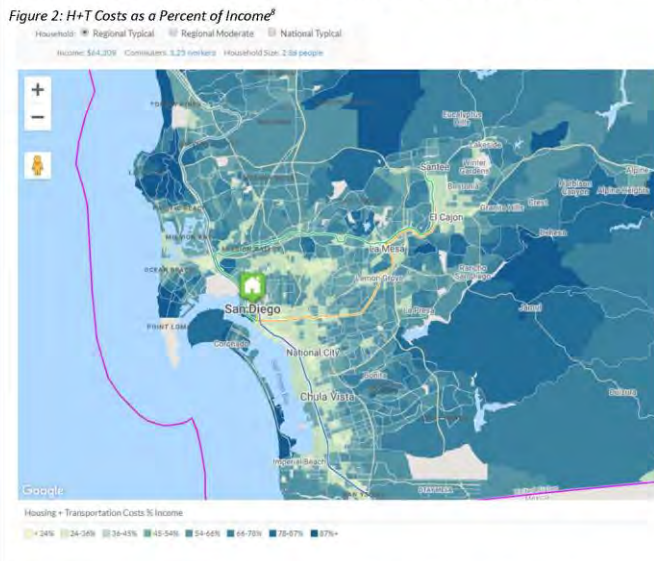

Figure 1 shows that, on average, transportation costs are about two-thirds as large as housing costs. However, transportation costs vary greatly across the region. Figure 2 maps H+T affordability.

35-19 cont.

<sup>7</sup> Center for Neighborhood Technologies. <https://htaindex.cnt.org/fact-sheets/?focus=cbsa&gid=42>

<sup>8</sup> Center for Neighborhood Technologies. <https://htaindex.cnt.org/>

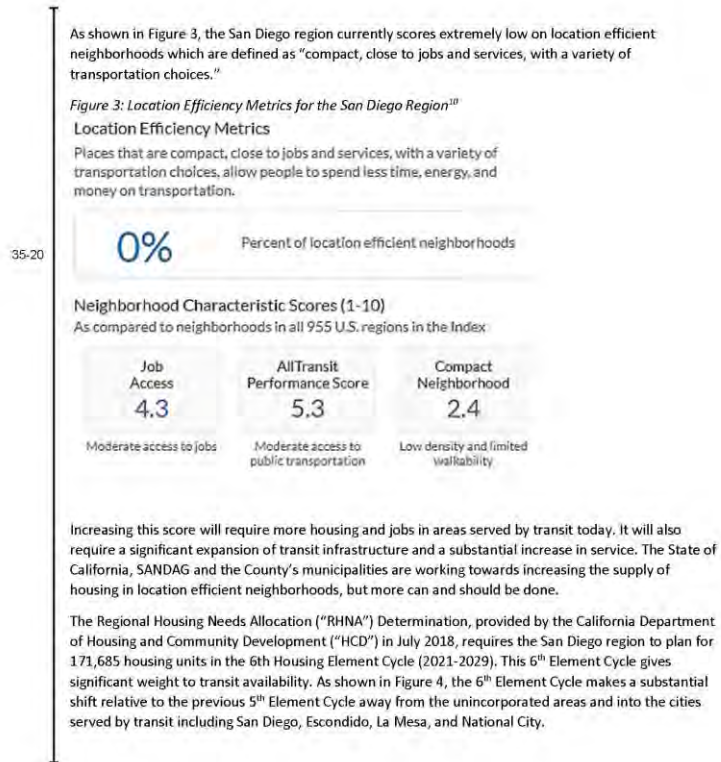

35-19  
cont.

As shown in Figure 2, when both housing and transportation costs are considered, the most affordable areas are in the light-colored areas primarily in the region's core and along major transit corridors. The housing affordability problem cannot be solved by building new housing in the darker-colored areas because high transportation costs make those areas inherently unaffordable. The areas in the more remote locations in San Diego County (i.e., even further from the City center) are not shown in order to make the map more readable, but these areas also tend to be more unaffordable when taking into account H+T.<sup>9</sup>

Real estate developers and their allies are currently pressuring San Diego County to retain its unlawful and inaccurate thresholds for assessing VMT impacts under SB 743, claiming that mitigation for VMT impacts will make housing in more remote parts of the County unaffordable. But housing in these areas is already unaffordable when transportation costs—that is, costs of driving long distances from locations not served by transit—are taken into account. SANDAG can help facilitate a better approach through the RTP, one that encourages the County to plan for housing in areas where transportation costs are low rather than allowing developers to build in remote areas and then trying to “mitigate” for the resulting VMT.

**The answer to housing affordability is H+T affordability. It is building more housing in the H+T affordable light-colored areas and in expanding the supply of H+T affordable areas through increased transit service.**

<sup>9</sup>Transportation costs—both in absolute terms and as a percentage of income—are even higher in many North County and East County communities (for example, transportation costs alone range from 25% of income in Alpine and Fallbrook to 27% of income in Borrego Springs and 28% of income in Julian and Pala). See <https://htaindex.cnt.org/fact-sheets/>.

<sup>10</sup>Center for Neighborhood Technologies. <https://hta.index.cnt.org/fact-sheets/?focus=cbsa&id=42>

**RESPONSE TO COMMENT 35-20**

This comment largely describes positive changes at the State and local level to increase housing supply, which requires no further response. It also inaccurately asserts that all transportation spending can be shifted towards transit and non-motorized infrastructure. There are regulatory constraints on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced. There are also regulatory constraints on which dollars stay with SANDAG and which dollars are distributed directly to other agencies to maintain, operate, and rehabilitate the transportation network. For instance, federal formula funds such as FTA Section 5307 or RSTP funds are apportioned annually; SANDAG can make assumptions about how much can be anticipated in the future based on historical data but has no ability to advance any project(s) that need the funding in years prior to apportionment. Other funds that SANDAG cannot advance and re-direct to transit include funds going to other agencies, such as SHOPP funds, which are managed by the California Transportation Commission and are used for safety, operations, and rehabilitation projects on the state highway system by Caltrans.

35-20  
cont.

Figure 4: RHNA Allocations 2020-2029 and 2010-2019<sup>11</sup>

The City of San Diego's share of the total has risen from 54% of the total in the previous cycle to 63% in the new cycle. The City has ample capacity for this housing. It has identified capacity to construct 164,142 housing units or 56,241 more than required.<sup>12</sup> A large percentage of this capacity is in transit corridors.

These are positive changes. However, in the past, the housing allocations have been aspirational but not enforced. The State has signaled that it plans to be more aggressive about enforcement during this cycle. SANDAG can help the municipalities achieve their housing goals by shifting all transportation spending towards transit and non-motorized (walk and bike) infrastructure. These investments, which will facilitate getting people out of the cars, will also help the region increase density without large impacts on neighborhoods.

35-21

In addition to personal savings on car ownership (e.g., acquisition, registration, and insurance) and costs associated with driving (e.g., gasoline, replacement parts, and repairs), municipalities are beginning to recognize that neighborhoods served by transit require fewer parking spaces. Last year, the City of San Diego passed a parking reform package that eliminated parking requirements for sites located within

<sup>11</sup> Center for Neighborhood Technologies. <https://htaindex.cnt.org/>

<sup>12</sup> City of San Diego General Plan Housing Element 2021-2029 (March 2020 Draft), p. HE-38.

**RESPONSE TO COMMENT 35-21**

This comment describes past changes to parking space requirements, and no further response is required.

35-21  
cont.

1/2-mile of a transit stop. This is a tremendously important reform for housing affordability because construction of parking can cost as much as \$90,000 per space in structures.<sup>13</sup>

Building a Real Regional Transit System – the Climate, Housing, Transit Alternative  
SANDAG’s Executive Director Hasan Ikhata said:

*I don't buy the debate that transit doesn't work. Transit doesn't work now because it's not designed to work. You know, if you come from the border to downtown and it takes you, you know... it's about 20 some miles... it takes you an hour in transit, that's not real transit, as far as I'm concerned.<sup>14</sup>*

The San Diego region’s transit system performs much more poorly than its west coast peers. As shown in Figure 5, a much smaller share of the region’s workers commute by transit than other west coast regions.

Figure 5: Transit Work Mode Share in Four West Coast Regions

35-22

Source: U.S. Census American Community Survey

<sup>13</sup><https://timesofsandiego.com/politics/2019/03/04/san-diego-city-council-votes-to-repeal-minimum-parking-requirements-for-new-housing/>

<sup>14</sup>San Diego Tribune, February 27, 2019. <https://www.sandiegouniontribune.com/opinion/commentary/sd-utbg-sandag-ikhata-transit-interview-20190227-story.html>

7

**RESPONSE TO COMMENT 35-22**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

SANDAG cannot confirm the metrics used for the comparison depicted in Figures 5 and 6 in the comment, nor can SANDAG confirm the accuracy of the transit work mode share and commute time data for other metropolitan regions based on the information provided in the comment. For the San Diego region, 3.4 percent of the work trips were made by public transit in 2016 (Final Plan, Table T6.2). With implementation of the proposed Plan, the transit mode share for all work trips increases to 11.7 percent in 2035 and 13.2 percent in 2050. As for the ratio of average transit commute time to average auto commute time, that ratio is not calculated in the proposed Plan. However, Table T6.3 of the Final Plan includes travel times for transit, auto, and carpool by corridor.

This comment relies upon commute times generated by the CHTS, which presents a less accurate picture of regional behavior and mode share than SANDAG’s ABM2+ forecast, for several reasons. The CHTS was conducted by Caltrans between 2010 and 2013 during the Great Recession, which created unique influences on travel behaviors and characteristics. The SANDAG ABM2+ was updated based on the San SDRTS conducted between 2016 and 2017, which used smartphone-based travel diaries as the primary means of travel data collection and included nearly 6,200 participating households. From a data quality perspective, the SDRTS is considered superior to the CHTS based on the more recent time period for survey collection, travel survey data collection methodology, and San Diego region sample size.

Additionally, the CHTS and the SDTRS are limited to travel surveys of residents. However, the ABM2+ forecasts travel for all types of trips—resident, visitor, cross border, airport, non-resident trips starting/ending external to San Diego, commercial, and truck. SANDAG collects supplemental travel survey and data on these other travel markets for inclusion in ABM2+ forecasts. Again, from a data perspective, the ABM2+ forecast is superior to the CHTS numbers referenced in SOFAR’s comment.

The proposed Plan includes the Miramar tunnel to support improvements to the Coaster, new commuter rail service, and upgrades to existing light rail service, including grade separations and eliminating

stops for express service. The proposed Plan also includes a Central Mobility Hub to connect the urban core, the airport, the LOSSAN corridor, the trolley system, and many bus routes.

Specific to express bus service, the proposed Plan includes an expanded network of Rapid buses and improvements to the local bus system to facilitate more frequent and longer spans of service. The Rapid bus network is envisioned to connect to Mobility Hubs, communities, job centers, and other destinations. The infrastructure to support these connections includes better connectivity on city streets, direct access ramps from freeway facilities, plus an assortment of transit operational improvements to facilitate access. By 2035, about 30.4 percent of the region's population is projected to be living within a half-mile of a Rapid transit stop. For those living further from Rapid transit stops, the proposed Plan investments in Flexible Fleets will allow for more options to facilitate first mile/last mile connections with solutions that can be customized for different communities (microtransit, ridesharing, bikeshare, etc.).

The proposed Plan also includes a land use pattern that focuses growth in Mobility Hub areas to align with transportation investments and facilitate more bikeable and walkable communities. SANDAG is working closely with the City of San Diego to ensure that the proposed Plan complements the City's efforts to achieve the mode share goals of its Climate Action Plan.

35-22  
cont

Those who do commute by transit in the San Diego region suffer an enormous travel time penalty relative to the other large regions in California (Figure 6).

Figure 6: Ratio of Average Transit Commute Time to Average Auto Commute Time

Source: California Household Travel Survey

Improving the regional transit system is not a new idea in the San Diego region; there just has not been enough follow through. Almost a decade ago, SANDAG prepared the *Urban Area Transit Strategy* (“UATS”) as part of its 2011 RTP to connect regional housing needs with transit infrastructure:

*The overarching goal of the UATS was to create a world-class transit system for the San Diego region in 2050, with the aim of significantly increasing the attractiveness of transit, walking, and biking in the most urbanized areas of the region.*

*The vision called for a network of fast, flexible, reliable, safe, and convenient transit services that connect our homes to the region’s major employment centers and destinations. Achievement of this vision would make transit a more appealing option for many trips, reducing the impact of vehicular travel on the environment and on public health. Other key goals included:*

- *Making transit more time-competitive with automobile travel;*
  - *Maximizing the role of transit within the broader transportation system; and*
  - *Reducing vehicle miles traveled and greenhouse gas emissions in the region.*
- (p. TA 7-5)<sup>15</sup>

<sup>15</sup> SANDAG, Urban Area Transit Study.

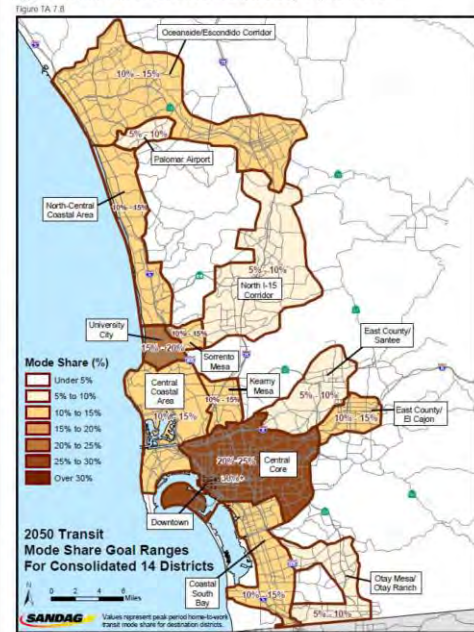

<http://www.sandag.org/index.asp?projectId=368&fuseaction=projects.detail>

35-22  
cont.

The UATS showed a high potential for transit ridership in the region's urban core (Figure 7).

Figure 7: SANDAG Urban Area Transit Study Figure TA 7.8

For transit to become time-competitive with the automobile, the Climate, Housing, Transit Alternative will require much more than a few isolated projects. It will require comprehensive investments at each of the four levels shown in Figure 8.

Figure 8: Complete Transit System

35-22  
cont.

At the top level, improving rail service in the Los Angeles to San Diego (“LOSSAN”) corridor is a top priority. To this end, an important study by Caltrans and CNFF has just been completed regarding the potential transit ridership on the LOSSAN rail corridor between San Diego and Los Angeles. This study arose as a result of litigation filed by CNFF challenging the planned expansion of the I-5 freeway between La Jolla and Oceanside as inconsistent with California’s GHG emission targets. CNFF and Caltrans reached a settlement that focused on the potential to improve rail service on the LOSSAN corridor. In particular, the parties agreed to study the feasibility of constructing a double-track rail tunnel through Miramar Hill to facilitate transit on the corridor. The parties believed that the Miramar tunnel could reduce travel times and provide improved connections to local transit services in the University Town Center (UTC) area.

The recently-completed study concludes that the Miramar tunnel and rail line straightening would add a critical link to the LOSSAN rail corridor. See Exhibit #1 (Miramar Tunnel Feasibility Study). Critically, it finds that the feasibility criteria for the Miramar tunnel have been satisfied. Its specific findings include the following:

1. The project would increase discretionary passengers by 1,300 to 1,700 per day, thereby reducing annual VMT 200 million to 240 million miles and GHG by 70,000 to 84,000 tons.
2. The project would provide competitive travel times, including a transit system average clock time that is approximately 3% faster than the automobile.
3. The project would be cost competitive, with transit riders cost at \$180/month versus automobile costs of \$507/month.
4. The project has no fatal engineering flaws.

**RESPONSE TO COMMENT 35-23**

Appendix D of the proposed Plan includes an induced demand analysis (as required by CARB) to be factored into estimated 2035 greenhouse gas emissions. This analysis utilized the Induced Demand Calculator referenced in the comment.

35-22  
cont.

The study further acknowledges a prior federal study that found construction of the Miramar tunnel along with other corridor improvements would reduce travel time between San Diego and Los Angeles to two hours. In short, construction of the new tunnel, which would provide enhanced access to downtown and the airport, would be a key transportation improvement for the region and the state. As the study notes, the LOSSAN rail corridor—together with the I-5 freeway—is the second-most traveled route in North America. The Miramar tunnel must be considered a key component of the Climate, Housing, Transit Alternative.

At the next level is a network of higher-speed, high frequency transit lines with separate rights of way and fewer stops. In many regions, a light rail service fills this niche, but in the San Diego region the Trolley has not filled this niche well. It operates too slowly and service is not frequent enough. Improvements are needed in both these dimensions. Achieving the required level of service in this higher-speed tier will require a rethinking of the system. As part of the Climate, Housing, Transit Alternative, SANDAG should evaluate speeding up the existing lines through grade separations and eliminating stops, as well as creating new higher-speed lines.

Express buses on managed lanes currently do not serve this higher-speed niche well because they connect freeway interchanges instead of land uses. A typical trip using these express buses will be unattractive because it also will involve connecting bus service on one or more circuitous routes. Express buses and managed lanes can work well for some park-and-ride travelers traveling to major destinations but cannot serve a significant portion of the region's population well.

Both the regional rail and higher-speed high-frequency tiers need to be well connected. The Climate, Housing, Transit Alternative must include an inter-modal terminal (Grand Central) connecting San Diego's urban core, the Airport, the LOSSAN corridor, the Sprinter corridor, and the Trolley system.

The Climate, Housing, Transit Alternative must also include efficient connections with frequent local buses (which could possibly be automated in the future). To this end, SANDAG must grapple with the first mile/last mile issue as this reflects a failure in land use and the existing transit system. While higher income travelers may have a choice of Uber-type services to solve this problem, this should not be viewed as a remedy for the average traveler.

Finally, the goal of a functional transit system is to serve an area-complete bike and walkable land use because no trip begins or ends on a transit vehicle. Most transit trips begin and end with a walk trip. In regions with high transit use, there are generally about twice as many walk trips as transit trips. Investments in walk and bike infrastructure should be a top priority. Consistent with the City's Climate Action Plan, the Climate, Housing, Transit Alternative must model a 50% transit, walk and bike mode share for residents in the central core.

35-23

**Stop Expanding Freeways**

Building a real regional transit network will require all the region's transportation investment dollars for the foreseeable future. **The Climate, Housing, Transit Alternative must not include any freeway expansion.**

The billions of dollars spent on freeway expansion the past 20 years have A) failed to reduce congestion, B) caused a substantial increase in VMT and GHG emissions, and C) resulted in a severe housing shortage. The transportation models used to justify these freeway expansion projects have been wrong

35-23  
cont.

on all counts. These models - both in the San Diego region and in regions throughout the U.S. - forecast dire increases in travel time if freeways are not widened, and substantial increases in travel time even if they are widened. In fact, as shown in Figure 9, travel time has stayed remarkably constant in the U.S. for decades.

Figure 9: Average Time Driving (minutes per day) 1990-2017 by MSA Population (NHTS)

Source: National Household Travel Survey.

Figure 9 shows the “average time spent driving a private vehicle in a typical day.” There was an increase during the 1990s, a time when many women were joining the labor force, but since 2000 there has been little change. Time spent driving also is very similar across differently sized regions. There is evidence that people have a “travel time budget”. If travel speeds drop, they (on average) will adapt to travel a shorter distance.

In contrast, if travel speeds increase, people (on average) will travel longer distances. This phenomenon is known as “induced travel”. In work for the California Air Resources Board (“CARB”), researchers at the University of California and the University of Southern California reviewed the literature on induced travel and concluded:

*Thus, the best estimate for the long-run effect of highway capacity on VMT is an elasticity close to 1.0, implying that in congested metropolitan areas, adding new*

35-23  
cont.

*capacity to the existing system of limited-access highways is unlikely to reduce congestion or associated GHG in the long-run.*<sup>16</sup>

The SANDAG regional transportation model fails to account properly for induced travel although there now are newer algorithms that could address this deficiency.<sup>17</sup>

Senate Bill 743 establishes VMT as the appropriate metric for determining the impacts of transportation projects. This has made properly accounting for induced VMT critical in the regulatory process. The Office of Planning and Research's ("OPR") *Technical Advisory on Evaluating Transportation Impacts in CEQA* recommends:

*Whenever employing a travel demand model to assess induced vehicle travel, any limitation or known lack of sensitivity in the analysis that might cause substantial errors in the VMT estimate (for example, model insensitivity to one of the components of induced VMT described above) should be disclosed and characterized, and a description should be provided on how it could influence the analysis results. A discussion of the potential error or bias should be carried into analyses that rely on the VMT analysis, such as greenhouse gas emissions, air quality, energy, and noise.*<sup>18</sup>

The National Center for Sustainable Transportation at the University of California at Davis has produced an *Induced Travel Calculator*<sup>19</sup> to help address the deficiencies in the models. Recently, Caltrans also has issued new draft guidance on accounting for induced travel. It recommends following the OPR recommendations:

*Caltrans recommends using the VMT analysis approaches recommended in OPR's advisory when evaluating the transportation impacts of projects on the State Highway System (SHS).*<sup>20</sup>

Neither expanding freeways nor not expanding freeways will have any effect on regional congestion or average travel times. However, expanding freeways will cause significant increases in VMT and GHG emissions, and will continue to starve the transit system of needed investments.

A Completely New Direction is Needed

Given that transit in the San Diego region has been and continues to be severely under-funded and under-built compared to roadway projects, as discussed above, the Climate, Housing, Transit Alternative must exclude roadway/freeway funding and expansion. Heretofore, SANDAG's planning has arbitrarily segmented freeway and transit projects. This artificial segmentation is not only irrational, it is fatal in achieving sustainable housing goals because **transit, bike, and walk mobility and auto-based mobility serve contradictory land use purposes**. SANDAG's failure to historically recognize this fundamental truth is the Achilles heel of its planning and lies at the doorstep of the agency's on-going inability to deliver a plan that truly unites our community on an ecologically sustainable foundation.

It is abundantly clear that SANDAG's past planning efforts have not only been deficient but have repeatedly failed to heed the ominous warnings from the courts, the public, and the planet itself. With California literally on fire due largely to climate change induced drought and high temperatures, SANDAG has failed the public by not aggressively pursuing a transportation scenario that would meet the State's GHG and VMT reduction goals.<sup>21</sup> The Climate, Housing, Transportation Alternative would help achieve targets set in legislation, the California Air Resources Board's Climate Change Scoping Plan, and relevant Executive Orders.

35-24

Similarly, with regard to the local housing crisis, it is inconceivable that SANDAG's prior RTPs have not called for a 50% transit, bike, and walk mode share alternative necessary to activate infill housing, especially since the urban core is already zoned for such housing. Here too, the Climate, Housing, Transit Alternative would facilitate this infill housing and help the City of San Diego achieve the targets set forth in its Climate Action Plan.

Additionally, the County's continued business-as-usual approach to planning makes the need for SANDAG to strengthen guidance regarding future development in the region all the more pressing. In spite of all the talk of a new direction, the County recently unveiled a plan update for the forest community of Alpine which can only be described as a VMT and ecosystem catastrophe. This planning contradiction was noted in Shute Mihaly's comment letter on the Alpine plan<sup>22</sup>. The tectonic shift in regional transit mobility mentioned in the opening paragraph of this letter must become a reality soon to avoid irreversible damage to our wild lands and a missed opportunity for the region.

Faced with these pressing social and environmental challenges, SANDAG's new regional direction can be strengthened by following established judicial, executive, and local legislative guidelines designed to meet the housing and climate crises. The public urgently deserves to see what it would take for the region to build a world-class transit system and to develop reasonably priced infill housing. Common sense dictates that the Climate, Housing, Transit Alternative would necessarily begin with a complete, first phase transit, bike, and walk system with an inter-modal terminal connecting the Airport, the Central Core, the LOSSAN Corridor, the Sprinter corridor, and the Trolley system. It is important to note that the Climate, Housing, Transit Alternative would not only be the "environmentally superior alternative", it would also be the socio-economic superior alternative because a true transit, bike and walk system reduces both the cost and shortage of housing and the cost of driving.

<sup>21</sup> <https://abcnews.go.com/Politics/climate-change-make-wildfires-spread-factor/story?id=56937704>

**RESPONSE TO COMMENT 35-24**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR.

This comment inaccurately characterizes the GHG reductions that can be achieved under the proposed Plan network as compared to SOFAR's proposed Climate, Housing and Transit Alternative. SANDAG modeling data demonstrates that the proposed Climate, Housing and Transit Alternative has similar impacts as the proposed Plan in achieving the State's GHG reduction goals and does not substantially reduce the proposed Plan's significant impacts.

Database	Proposed Final Plan		SOFAR's Climate, Housing and Transit Alternative	
	2035	2050	2035	2050
SB 375 VMT	79,725,710	81,804,496	79,877,932	82,247,926
SB 375 VMT/Person	22.0	21.8	22.1	22.0
Final Per Capita GHG Reductions for 2005	-20.0%	-21.0%	-20.4%	-20.7%

See Section 6.5.5 of the Draft EIR for additional discussion of reasons for rejecting SOFAR's proposed Climate, Housing and Transit Alternative from detailed consideration.

35-25 In conclusion, in the face of a severe, entrenched housing crisis endangering the public welfare and the severe climate crisis endangering the planet, SANDAG owes the public nothing less than a transit alternative that immediately meets these life threatening challenges rather than artificially prolonging them.

Duncan McFetridge

Director, CNFF

President, SOFAR

Exhibit #1: Miramar Tunnel Feasibility Study

**RESPONSE TO COMMENT 35-25**

This conclusory comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. See prior responses to this comment letter for explanations of why the Climate, Housing, Transit Alternative would not achieve the benefits asserted by the commenter, as well as why it was rejected from detailed consideration in the Draft EIR.

SANDAG recognizes that substantial reductions in global, State, and regional GHG emissions are an urgent priority, and strives in its regional plans and programs to do its part in reducing GHG emissions from all sources. EIR Section 4.8.1 properly describes existing conditions related to GHG emissions, including background information on various greenhouse gases, their sources, and their potential to trap heat in the Earth’s atmosphere and contribute to global warming. It describes the main sources of GHG emissions in the state and in the San Diego region. The effects of climate change (“climate destabilization”) are summarized, and a detailed description based on scientific studies of how climate change is anticipated to impact California and the San Diego region is provided in EIR Appendix C. Section 4.8 also describes the regulatory setting for GHG emissions, including descriptions of goals adopted by the Legislature and EOs B-30-15 and S-3-05 goals for statewide GHG reductions. The statewide GHG reduction goals adopted by the Legislature and expressed by the Governor’s EOs are based on limiting global warming to levels necessary to avoid potentially catastrophic climate change impacts.

SANDAG Regional Plan EIR Sent Via Email: RegionalPlanEIR@sandag.org  
 C/O Kirsten Uchitel, Associate Planner  
 401 B Street, Suite 800  
 San Diego, CA 92101

**SUBJECT: DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE 2021 REGIONAL PLAN**

The City of Solana Beach (City) appreciates the opportunity to review and comment on the San Diego Association of Governments (SANDAG) Draft Environmental Impacts Report (DEIR) for the Proposed 2021 Regional Plan (Proposed Plan). In addition to these comments on the DEIR, the City also attaches for inclusion and reference its comments on the Plan itself dated August 5, 2021.

36-1

As summarized in Table 7-2 and as discussed throughout the DEIR, significant and unavoidable impacts after mitigation were identified for seventeen (17) of the nineteen (19) resource areas analyzed. These include significant and unavoidable impacts after mitigation in "Regional Growth and Land Use Change" and also from "Transportation Network Improvements and Programs" in the areas of Aesthetics and Visual Resources, Agricultural and Forestry Resources, Air Quality, Biological Resources, Cultural Resources, Geology, Soils, and Paleontological Resources, Greenhouse Gas Emissions, Land Use, Mineral Resources, Noise and Vibration, Population and Housing, Public Services and Utilities, Transportation, Tribal Cultural Resources, Water Supply and Wildfire. While we recognize that the DEIR is a program level environmental review document, the level and extent of significant and unavoidable impacts even after mitigation for which a Statement of Overriding Considerations would have to be adopted by the SANDAG Board is concerning and, naturally, raises serious questions about the long-term viability of the Proposed Plan and its potential adverse impacts to the communities throughout the county. Generally speaking, the DEIR should more carefully consider these significant and unavoidable impacts and evaluate whether all potential mitigation measures have adequately been considered in order to reduce at least some of these impacts to a level of insignificance.

That said, please accept the following comments on specific sections of the DEIR:

36-2

**1. EXECUTIVE SUMMARY (ES)**

The first listed project objective for the DEIR is to "focus population and employment growth in mobility hubs and existing urban areas to protect sensitive

**RESPONSE TO COMMENT 36-1**

As noted in the comment, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. Because the specifications of second-tier projects such as the timing, location, and size, associated with implementation of the Plan, are not known at this time, it cannot be concluded with certainty that the mitigation measures identified in the Draft EIR would sufficiently reduce impacts to less-than-significant levels. In addition, many Draft EIR mitigation measures for second-tier projects recognize that agencies other than SANDAG (e.g., local governments, transit districts, and Caltrans) are responsible for implementation, stating that such agencies "can and should" implement them. SANDAG can commit to feasible mitigation measures that are within its responsibility and jurisdiction. However, SANDAG will not be the agency for many of the second-tier projects that implement the proposed Plan. In those instances, SANDAG in its CEQA findings may find that those measures are within the responsibility and jurisdiction of another agency, and that such measures can and should be adopted by such other agency (Guidelines Section 15091(a)(2)).

The Draft EIR also recognizes that due to project or site-specific circumstances it may not be feasible for individual lead agencies to implement all of the "can and should" mitigation measures listed for a particular significant impact. Implementing agencies are required by CEQA to exercise discretion in selecting and imposing mitigation measures based on all relevant feasibility concerns, including costs and available funding, enforcement mechanisms, effectiveness as applied to the specific project in question, and collateral environmental or other effects that may result from implementation of the mitigation measure. How these factors may affect individual mitigation decisions for the many individual projects anticipated in the proposed Plan cannot be realistically assessed in a Program EIR for the entire proposed Plan.

As such, the EIR takes a conservative approach when making significant and unavoidable impact determinations. It does propose all potentially feasible programmatic mitigation measures for significant impact, and

some EIR mitigation measures have been strengthened in response to public comments on the Draft EIR.

**RESPONSE TO COMMENT 36-2**

Mobility Hubs are meant to be a general geographic area for concentration of future development and travel choices, but that does not mean that the entire area within the Mobility Hub will be developed. During the design of the elements of the Solana Beach Mobility Hub, project-specific biological field surveys and analysis will be conducted that will consider impact avoidance and minimization measures on sensitive biological resources, including southern coastal salt marsh and southern maritime chaparral.

36-2  
 cont.

habitat and natural resource areas." This objective seemingly ignores the fact that some areas where mobility hubs are proposed – particularly the Coastal Mobility Hub proposed for Solana Beach – are themselves replete with environmentally sensitive habitat areas (ESHA) and natural resources that must be protected. The City's 2018 updated ESHA Mapping for our Certified Local Coastal Program's Land Use Plan (LCP/LUP) identified 2,192.11 total acres of sensitive habitat and/or vegetation communities in Solana Beach, many of which the Proposed Plan and the DEIR are intended to protect. These include Southern Maritime Chapparal, Diegan Coastal Sage Scrub (described on page 4.4-64 of the DEIR as "one of the most sensitive vegetation communities in the County") and Southern Coastal Salt Marsh. This sensitive habitat is distributed throughout much of the Coastal Mobility Hub proposed for Solana Beach. While mitigation is identified to protect such habitat, like most impacts analyzed in the DEIR, even with mitigation this impact is significant and unavoidable. Absent additional mitigation for sensitive habitat within our Coastal Mobility Hub, the objective to focus population and housing in a mobility hub with significant sensitive habitat in order to protect that habitat is counterintuitive and effectively increases the impact within our City.

**Request:** The DEIR should be revised to address this discrepancy within the Solana Beach Mobility Hub and should place equal value on preserving the sensitive habitat and coastal resources – both physical and visual – within Solana Beach.

**2. PROJECT DESCRIPTION – MOBILITY HUBS (Section 2.5.1)**

36-3

The DEIR (and the Proposed Plan) describe Mobility Hubs as having "coverage areas" of 1, 2, or 4 miles from each node around which they are centered and are further described as "unique to each community based on community characteristics and travel needs." This uniqueness and stated objective to respect the character, scale and visual qualities of each Mobility Hub, although acknowledged and addressed throughout the DEIR including in Sections 4.1 (Aesthetics and Visual Resources), 4.11 (Land Use) and 4.14 (Population and Housing), is seemingly overlooked inasmuch as the DEIR identifies significant and unavoidable impacts for each of these analyzed resource areas due to the Sustainable Community Strategy's (SCS's) focusing of densification in these Mobility Hubs.

Additionally, Figures 2-35 and 2-36 (as well as Figures 2-20 and 2-21) illustrate the Mobility Hub Network. However, each Mobility Hub is very generally depicted and does not follow any specific geographic, visual or roadway boundaries. It is unclear how these amorphous mobility hub boundaries should be interpreted.

**Request:** The City requests that SANDAG staff work with City officials and their respective staffs to more clearly define these boundaries and provide more clear exhibits.

**RESPONSE TO COMMENT 36-3**

As stated in Chapter 2, *Project Description*, of the Draft EIR, potential locations for Mobility Hubs were identified for communities with a high concentration of people, destinations, and travel choices where densification is envisioned in the SCS, subject to the approval of local jurisdictions. As such, as part of the implementation of the proposed Plan, SANDAG will be working with the staff of the local jurisdictions to define the exact specifications of Mobility Hubs, including location and any other criteria to meet the unique characteristics and reflect the respective community transportation needs of each community. As noted above under Solana Beach 36-1, the significant and unavoidable determinations were based on a conservative approach based on a variety of factors related to determining the feasibility of mitigation measures in this first-tier Program EIR.

**3. AESTHETICS AND VISUAL RESOURCES (Section 4.1)**

36-4

Pages 4.1-9 of the DEIR accurately note that, under the California Coastal Act of 1976, scenic and visual qualities of the coast must be considered and protected as a visual resource. Additionally, page 4.1-10 notes that Section 30251 of the Coastal Act requires that permitted development shall be sited and designed to protect views to and along the ocean and scenic coastal areas, to minimize the alteration of natural landforms, to be visually compatible with the character of surrounding areas and, where feasible, to restore and enhance the visual quality in visually degraded areas. Solana Beach is located entirely within the Coastal Zone while the entire western half of the City is also identified as a Coastal Mobility Hub in the Proposed Plan and DEIR. Therefore, the objective to focus jobs, housing and densification within this area as contemplated in the DEIR while also complying with the Coastal Act mandate to preserve scenic and visual qualities, protect views of the ocean and require new development to be compatible with the surrounding areas conflict with one another. More pointedly, the Proposed Plan is inconsistent with the Coastal Act in this regard. Not surprisingly, the DEIR determined that the Proposed Plan would, even after mitigation, have a significant and unavoidable impact effect in each of the following areas:

- AES-1** Have a substantial adverse effect on a scenic vista.
- AES-2** Substantially damage scenic resources, including but not limited to, trees, rocks, outcroppings, and historic structures within a state scenic highway.
- AES-3** Substantially degrade the existing visual character or quality of public views of the site and its surroundings, including adding a visual element of urban character to an existing rural or open space area, conflicting with regulations governing scenic quality.
- AES-4** Substantially degrade the existing visual character or quality of public views of the site and its surroundings by creating a new source of substantial light or glare that would adversely affect day or nighttime views.

This determination points to the significant challenges coastal cities like Solana Beach already face and will continue to face in light of the Coastal Mobility Hub designation in attempting to balance our local needs with both state and regional mandates and policies.

Additionally, Table 4.1-3 of the DEIR lists the Visual Resource Protection Plans and Regulations Governing Scenic Quality in the San Diego Region by Local Jurisdiction. In so doing, however, it fails to include the City's LCP/LUP Policies (2014) that mandate the protection of visual and scenic resources in compliance with the Coastal Act as well as our local Dark Sky Zones adjacent to the San Elijo Lagoon along the City's northern boundary and adjacent to the San Dieguito Lagoon at the southeastern boundary of the City.

**RESPONSE TO COMMENT 36-4**

Requested edits have been made to Table 4.1-3 to reference policies from Solana Beach's LCP/LUP regarding scenic quality as well as the Dark Sky Zones ordinance. In addition, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects, including Mobility Hubs. Development of Mobility Hubs that would occur as part of the implementation of the proposed Plan would undergo separate, project-specific environmental review, and any impacts on aesthetic and visual resources, including consistency with CCA policies related to preservation of such resources, would be evaluated and mitigated when the timing, location, and other specifications of a specific project have been defined. Draft EIR Section 4.1.2 describes the CCA policies that apply to coastal development to protect views to and along the ocean and other scenic coastal areas, and edits have been made to mitigation measures AES-2a and AES-2b to address coastal areas more specifically.

36-4  
 cont.

**Request:** The City requests that Table 4.1-3 be revised to include reference to our LCP/LUP Policies (2014) and our Dark Sky Zones as additional plans governing scenic qualities in our City. Further, the DEIR should provide a more detailed analysis of the inherent conflict between the Proposed Plan (specifically the Coastal Mobility Hub in Solana Beach) and the requirements of the Coastal Act to preserve scenic and visual qualities, protect views of the ocean and require new development to be compatible with the surrounding areas.

**4. AIR QUALITY (Section 4.3)**

36-5

Page 4.3-42 of the DEIR states that VMT, freight rail, and passenger rail activity is projected to increase between 2016 and 2035 and that reductions in emissions across the board are due primarily to federal and state regulations that reduce emissions from vehicles and locomotives over time. It goes on to state that, while passenger rail activity increases, "all passenger rail lines (both current and new) are assumed to be operating completely with modern, Tier 4 engines by 2035" concluding that, "while activity and fuel consumption increase, emissions are reduced, because Tier 4 engines emit fewer emissions per gallon of fuel consumed that the current locomotive fleet." Based on this, the Air Quality impact is determined to be less than significant in 2035. However, the DEIR does not explain the basis for the assumption that all passenger lines (both current and new) would be operating completely with modern, Tier 4 engines by 2035. If they are not, it stands to reason their emissions might not "trend down" by 2035 and, conversely, that significant, adverse impacts to Air Quality might instead result.

**Request:** Since reductions in emissions are based on an assumption that all rail lines will be operating with completely modern, Tier 4 engines by 2035, additional analyses should be conducted to assess Air Quality impacts if that assumption is not met and that a certain percentage of passenger rail lines are not operating with modern, Tier 4 engines.

**5. BIOLOGICAL RESOURCES (Section 4.4)**

36-6

In addition to the comments noted under the Executive Summary above, page 4.4-1 of the DEIR lists several agencies that identify sensitive vegetation communities in their ordinances and guidelines. Although this list does not include Solana Beach, as noted above, the City update its LCP/LUP ESHA Mapping in 2018 and the City's General Plan Conservation and Open Space Element also identifies policies to preserve sensitive habitat. Table 4.4-6 includes Relevant General Plan Policies and Biological Resource Protection Ordinances in the San Diego Region. Solana Beach is included in this list, however, the updated ESHA Mapping for the City's LCP LUP is not included.

Given the Significant and Unavoidable Impacts After Mitigation that are identified in the DEIR for Biological Resources, the City is concerned that focusing additional

**RESPONSE TO COMMENT 36-5**

See response to comment Del Mar 13-29. The air quality analysis assumes that all passenger lines will be operating with Tier IV or better engines by 2025. However, both the Coaster and Amtrak Pacific Surfliner lines are operating their full fleet with Tier IV locomotives today, which is ahead of the schedule assumed in the Draft EIR. Both Coaster and Amtrak have retired the older diesel locomotives that were assumed under the EIR's baseline conditions. Moreover, any new locomotive purchases will be Tier IV or better, in compliance with federal locomotive standards (40 CFR 1033). Also, mitigation measure AQ-2b ensures that all new train purchases shall be zero emission after 2035. The suggested additional analysis and mitigation measure are therefore not required.

**RESPONSE TO COMMENT 36-6**

The reference to the City's ESHA Mapping has been added to Table 4.4-6 in the Final EIR. Please also see response to comment Solana Beach 36-2. At the time of implementation of the elements of the Solana Beach Mobility Hub, project-specific biological field surveys and analysis will be conducted as applicable to address impact avoidance and protection of sensitive biological resources, including sensitive habitat.

jobs, housing and densification in the City's proposed Coastal Mobility Hub would further impact the 2,192.11 total acres of sensitive habitat and vegetation communities in Solana Beach, that the Proposed Plan and the DEIR are intended to protect.

36-6  
 cont.

**Request:** The City requests that Table 4.4-6 be revised to include reference to Solana Beach's updated ESHA Mapping associated with its Certified LCP/LUP. Additionally, the Proposed Plan and DEIR should analyze and make room for the preservation and protection of sensitive habitat and coastal resources (i.e., wetlands and bluffs) that are located within the proposed Solana Beach Coastal Mobility Hub.

**6. GEOLOGY, SOILS, AND PALEONTOLOGICAL RESOURCES (Section 4.7)**

Table 4.7-3 lists Local Policies Concerning Geologic and Seismic Hazards of local jurisdictions. On page 4.7-28 of the DEIR, Solana Beach's policies are listed, however, there is no mention of the City's Certified LCP/LUP which has an extensive list of Land Use Policies regarding the City's coastal and inland bluffs, coastal erosion, shoreline protection and protection of public's health, safety and welfare against coastal hazards and erosion.

36-7

**Request:** The City requests that Table 4.7-3 be revised to include specific policies of the City's Certified LCP/LUP (Update in 2014). Land Use Policies of the LCP/LUP that should be noted are those within Chapter 4 – Hazards & Shoreline/Bluff Development including those regarding General Development (Chapter 4, Section 1), Shoreline Development (Chapter 4, Section 2), Shoreline Erosion and Protective Structures (Chapter 4, Section 3), and Beach Sand Replenishment and Retention (Chapter 4, Section 4). The Proposed Plan should be analyzed against these policies for consistency.

**7. LAND USE (Section 4.11)**

Page 4.11-12 of the DEIR provides an overview of the California Coastal Act and page 4.11-17 contains a very brief discussion of Local Coastal Plans (Programs). While this discussion briefly describes and summarizes the intent of the Coastal Act and general location of the Coastal Zone, it does not provide any meaningful discussion about land use priorities and policies of the Coastal Act and its relationship to the Proposed Plan, which this section of the DEIR specifically analyzes. The entire City of Solana Beach is located within the Coastal Zone and is therefore subject to the provisions of the Coastal Act. As required under the Coastal Act, the City's Certified LCP/LUP (Amended 2014) LUP emphasizes visitor-serving and coastal dependent uses on and near the coast and throughout the City. The Proposed Plan's designation of much of our City within the Solana Beach Coastal Mobility Hub, including the entire western portion of the City closest to the coast, is expressly intended to focus more jobs, housing and densification in the City conflicts with several provisions of the Coastal Act that emphasize visitor

36-8

**RESPONSE TO COMMENT 36-7**

Table 4.7-3 has been updated with a discussion of policies related to geologic hazards from the Solana Beach LCP/LUP. While the Draft EIR did not individually analyze consistency with all of the local policies of all of the jurisdictions listed in Table 4.7-3, the Draft EIR states that existing federal, State, and local laws, regulations, and programs included in Section 4.7.2 would require each improvement or project to be reviewed by appropriate regulatory agencies prior to construction and would require each improvement or project to adhere to design standards described in the CBC and all standard design, grading, and construction practices to avoid or reduce impacts from geologic hazards. As such, any site-specific transportation network improvements and development projects occurring within Solana Beach would be subject to the policies identified in the City's LCP/LUP.

**RESPONSE TO COMMENT 36-8**

The identified sections of the Coastal Act have been added to the Regional and Local Laws, Regulations, Plans, and Policies discussion related to LCPs on Final EIR pages 4.11-12 and 4.11-13. Conflicts with land use plans, policies, or regulations are evaluated in the EIR on a program-level basis. As discussed for Impact LU-2, the forecasted development of the proposed Plan is based on the Series 14 Regional Growth Forecast SCS land use pattern, which is, in turn, based on the adopted general plans of the cities and County of San Diego and on the most recent planning assumptions, considering local general plans and other factors, as required by SB 375 (Government Code Section 65080(b)(2)(B)), including local coastal programs, which are components of local general plans. In a few cases, the SCS land use pattern may conflict with specific land use designations in general plans, but impacts of SCS implementation are already evaluated in other sections of the EIR, so these conflicts would not cause new significant impacts.

36-8  
 cont.

servicing, coastal dependent and recreational land uses over residential use. Therefore, a more detailed analysis of the Coastal Act's requirements and, more specifically, the areas in which land use conflicts may arise, should be provided. Coastal Act provisions that should be analyzed and/or considered include but are not limited to the following:

**Section 30212.5.** Wherever appropriate and feasible, public facilities, including parking areas or facilities, shall be distributed throughout an area so as to mitigate against the impacts, social and otherwise, of overcrowding or overuse by the public of any single area.

**Section 30213.** Lower cost visitor and recreational facilities shall be protected, encouraged, and, where feasible, provided. Developments providing public recreational opportunities are preferred.

**Section 30221.** Oceanfront land suitable for recreational use shall be protected for recreational use and development unless present and foreseeable future demand for public or commercial recreational activities that could be accommodated on the property is already adequately provided for in the area.

**Section 30222.** The use of private lands suitable for visitor serving commercial recreational facilities designed to enhance public opportunities for coastal recreation shall have priority over private residential, general industrial, or general commercial development, but not over agriculture or coastal-dependent industry.

**Section 30222.5.** Oceanfront land that is suitable for coastal dependent aquaculture shall be protected for that use, and proposals for aquaculture facilities located on those sites shall be given priority, except over other coastal dependent developments or uses.

**Section 30223.** Upland areas necessary to support coastal recreational uses shall be reserved for such uses, where feasible.

**Section 30255.** Coastal-dependent developments shall have priority over other developments on or near the shoreline. Except as provided elsewhere in this division, coastal-dependent developments shall not be sited in a wetland. When appropriate, coastal-related developments should be accommodated within reasonable proximity to the coastal-dependent uses they support.

36-9

Additionally, the City's Certified LCP/LUP contains Policies intended to implement the Coastal Act that should be considered that include but are not limited to the following:

**RESPONSE TO COMMENT 36-9**

Due to the programmatic nature of the EIR analysis, the EIR does not call out specific policies from local jurisdiction's LCPs/LUPs; thus, the specific Solana Beach LCP/LUP is not specifically called out in the analysis. Consistency of individual second-tier projects with these policies would be considered during project-specific CEQA reviews.

36-9 cont. **Policy 2.31:** Priority shall be given to the development of visitor serving and commercial recreational facilities designed to enhance public opportunities for coastal recreation. On land planned for visitor serving commercial and/or recreational facilities, priority shall be given to such uses over private residential or general commercial development. New visitor serving uses may not displace existing low-cost visitor serving uses unless an equivalent replacement is provided.

**Policy 2.33:** Coastal recreational and visitor serving uses and opportunities, especially Lower and moderate cost opportunities, shall be protected, encouraged, and where feasible, provided by both public and private means. Removal or conversion of existing lower cost opportunities, including overnight accommodations, shall be discouraged unless the use will be replaced with another use offering comparable visitor serving or recreational opportunities.

**Policy 2.34:** Priority shall be given to the development of visitor serving commercial and/or recreational uses that complement public recreation areas or supply recreational opportunities not currently available in public parks or beaches. Visitor serving commercial and/or recreational uses may be located near public park and recreation areas only if the scale and intensity of the visitor serving commercial recreational uses is compatible with the character of the nearby parkland and all applicable provisions of the LCP.

36-10 As noted above, both the Coastal Act and the City's LCP/CUP Policies prioritize visitor serving commercial and/or recreational land uses over residential use. The Proposed Plan's explicit focus on and prioritization of housing densification within the Solana Beach Coastal Mobility Hub clearly conflicts with these provisions of the Coastal Act and our Certified LCP/LUP. In a City like Solana Beach, a built-out city of only 3.4 square miles that is entirely located within the Coastal Zone, the ability to comply both with the Coastal Act and the Proposed Plan's objective to focus housing and jobs in the proposed Solana Beach Coastal Mobility Hub is and will continue to be a challenge. The DEIR should consider and/or analyze these conflicting objectives.

36-11 Table 4.11-5 of the DEIR lists the adoption and updates to the General Plans and Housing Elements of jurisdictions in the County. For Solana Beach, however, this table indicates that our Housing Element is "being updated as of December 2020." Our City Council approved our 6<sup>th</sup> Cycle Housing Element on April 14, 2021, and submitted it to the Department of Housing and Community Development (HCD) immediately thereafter. In response to comments from HCD, the City is preparing revisions to our Housing Element for approval by our City Council before the end of 2021.

**RESPONSE TO COMMENT 36-10**

Solana Beach is a major destination due to its commercial and recreational resources for visitors from both outside and within San Diego County. These trip-inducing factors contribute to the area's high propensity for Regional Mobility Hub designation.

Not all Mobility Hub areas are created equal, and they do not all require construction of a major transit center. Coastal Mobility Hubs in the North County area are envisioned to rely upon some transit services supported by an array of on-demand Flexible Fleets to help people complete short trips in and around the hub without needing to rely on a car. The suite of Flexible Fleets and supporting Mobility Hub amenities as included in the Final EIR can be tailored to meet the needs of people traveling to and within Solana Beach. SANDAG staff will continue to coordinate with Solana Beach on planning for appropriate Mobility Hub services, amenities, and supporting technology for this community.

**RESPONSE TO COMMENT 36-11**

The text in Table 4.11-5 has been updated to reference the current Housing Element status, as provided in this letter.

36-12 **Request:** Section 4.11 of the DEIR should include a more detailed description and analysis of provisions of the Coastal Act and local LCP Policies that conflict with the Proposed Plan's stated objective that jobs, housing and densification should be focused in designated Coastal Mobility Hubs. Where conflicts exist, the Proposed Plan should state that provisions of the Coastal Act should prevail.

Please update Table 4.11-5 of the DEIR regarding the status of the City's Housing Element.

**8. 4.13 NOISE AND VIBRATION**

The DEIR discusses noise and vibration associated with Phased Transit Leap improvements, which includes double-tracking at certain locations on the LOSSAN rail corridor along with increases in COASTER frequencies. The DEIR states that land uses considered to be sensitive to human annoyance caused by vibration are generally the same as those that would be sensitive to noise.

The City appreciates the analysis of noise and vibration resulting from improvements associated with regional growth and land use changes and transportation network improvements as well as the mitigation measures proposed to address these impacts. Despite this analysis and proposed mitigation, Significant and Unavoidable Impacts After Mitigation are identified in 2025, 2035 and 2050 for noise and vibration impacts (NOI-1 and NOI-2).

36-13 The DEIR discusses and analyzes the Generation of Excessive Groundborne Vibration or Groundbourne Noise Levels and similarly determines that improvements associated with regional growth and land use changes and transportation network improvements could generate an increase in groundbourne noise and vibrations. These impacts are also determined to be Significant and Unavoidable After Mitigation in 2025, 2035 and 2050 and could result both from construction activity and from ongoing operation of the transportation network under the Proposed Plan.

Absent from the analysis, however, is any discussion regarding the potential vibrational impacts to coastal bluffs, inland bluffs and other sensitive landforms through which the newly double-tracked LOSSAN rail corridor and the anticipated increased COASTER services do and will run. Similarly, when combined with the transportation network impacts, new construction activity anticipated within the City's Coastal Mobility Hub could create more severe groundborne vibration impacts to natural landforms and/or to existing development. The City of Solana Beach is characterized by extensive coastal and inland bluffs that are within close proximity to the LOSSAN corridor. The City routinely experiences coastal erosion and bluff failures that create a public safety hazard. Additionally, most of the City is designated within the proposed Solana Beach Mobility Hub which is intended to be the focus of additional jobs, housing and densification under the Proposed Plan. While mitigation measures are proposed to address these impacts, Section 4.13

**RESPONSE TO COMMENT 36-12**

Requested revisions have been made to Table 4.11-5 in Section 4.11, *Land Use*, of the Final EIR. In addition, due to the programmatic nature of the EIR analysis, the EIR does not call out specific policies from local jurisdiction's LCP/LUPs; thus, these specific Solana Beach LCP/LUP items are not specifically called out in the analysis. The EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. As part of the implementation of the proposed Plan, individual projects that are part of the Plan, including Mobility Hubs, would be subject to project-specific environmental review and would include project-specific consistency analyses with applicable CCA and LCP policies. Project-design adjustments and mitigation measures would be identified to reduce impacts related to potential conflicts with applicable policies at that time.

**RESPONSE TO COMMENT 36-13**

Impacts from vibration associated with projects that would occur under the proposed Plan are described under Impact NOI-2 in Section 4.13, *Noise and Vibration*. The discussion is generic and outlines some of the projects that would occur during the time horizons referenced in the document. This analysis is not meant to clear projects that would require project-level analysis and does not include an exhaustive list of projects as the document is a program-level EIR. The analysis requested by the commenter for the referenced project would be included in the project-level environmental document. Language has been added to Section 4.13 to discuss generally the impacts of vibration-related impacts to coastal and inland bluffs.

and Section 7.2.8 of the DEIR should include discussion and analysis of specific impacts to coastal bluffs, inland bluffs and to the existing development within these areas.

36-13  
 cont. **Request:** The DEIR should include discussion and analysis of the potential impact of groundborne vibrations to coastal bluffs, inland bluffs and existing development from the construction and operation of the proposed transportation network and regional growth and new development contemplated and/or proposed under the Proposed Plan.

**9. POPULATION AND HOUSING (Section 4.14)**

36-14 Section 4.14.2 of the DEIR, Regulatory Setting, discusses federal, state, regional and local laws, regulations, plans and policies associated with the Proposed Plan and the DEIR. However, this section of the DEIR appears only to discuss a narrow set of regulations that directly relate to the Proposed Plan and DEIR. The list of regulations does not appear to be exhaustive. On an annual basis, the State Legislature passes, and the Governor signs a number of bills that apply directly to local jurisdictions. Increasingly, these bills are focusing on increasing housing throughout every city in the state and, in many cases, incentivize high density housing, streamlined permit processing, no parking and additional CEQA exemptions for such housing, particularly when located within close proximity to major transit stops or high quality transit corridors. Despite this, the DEIR does not include a meaningful discussion state housing legislation and, more specifically, how it may further impact development along the proposed transportation network and/or within the Mobility Hub Network.

36-15 Section 4.11 of the DEIR discussed local General Plans and Community Plans and states that infill development of new housing and employment land uses within established communities would typically occur in accordance with adopted general plans, community plans and or zoning ordinances. Additionally, on page 4.1-18 of Section 4.1, the DEIR states that "...all development or redevelopment projects would undergo further environmental and design review on a project-by-project basis to ensure that substantial adverse effects on scenic vistas are identified and avoided or reduced to the extent feasible." However, housing legislation proposed over the past several years has continuously sought to provide for ministerial or "by-right" housing which effectively eliminates the ability for local jurisdictions to review or condition such housing development. This year, Senate Bill (SB) 9 was signed by Governor Newsom which provides for the ministerial approval of housing development on single-family zoned property and also allows for the ministerial approval of a lot split of such parcels to provide additional housing. Not only does this eliminate the discretion of a city to review such projects to protect against adverse visual and aesthetic impacts, but it also sets the stage for future legislation to do the same. Additionally, by definition, a ministerial permit process does not require CEQA review. Therefore, the comment for the DEIR is not accurate as projects may be approved without project-by-project review. As noted above, other

**RESPONSE TO COMMENT 36-14**

The Regulatory Setting in Section 4.14, *Population and Housing*, discusses federal, State, regional, and local laws, regulations, plans, and policies pertaining to and relevant to the proposed Plan. While it is correct to say that housing legislation in recent years has sought to provide for ministerial housing, which may mean that future CEQA analysis would not occur on each and every specific development project, each jurisdiction has a local entitlement process to follow and specific ordinances, including design measures, that projects would be required to adhere to. Therefore, even for projects that are exempt from CEQA, review at a local level for compliance with the local jurisdiction's entitlement process and specific local ordinances, including design measures, would still occur. As such, future development occurring as part of the implementation of the proposed Plan would be evaluated at a local level on a project-by-project basis, whether the evaluation occurs as part of the CEQA process or as part of the local entitlement process.

**RESPONSE TO COMMENT 36-15**

While it is correct to say that housing legislation in recent years has sought to provide for ministerial housing, which may mean that future CEQA analysis would not occur on each and every specific development project, each jurisdiction has a local entitlement process to follow and specific ordinances, including design measures, that projects would be required to adhere to. Therefore, even for projects that are exempt from CEQA, review at a local level for compliance with local jurisdiction's entitlement process and specific local ordinances, including design measures, would still occur. As such, aesthetic impacts would be evaluated at a local level on a project-by-project basis, whether the evaluation occurs as part of the CEQA process or as part of the local entitlement process. The EIR does not dismiss aesthetic impacts but acknowledges that impacts would occur on a local level and would be evaluated at a local level on a project-by-project basis.

36-15  
 cont. recently adopted state housing legislation provides for streamlined review of projects located near major transit stops or high quality transit corridors. The DEIR should consider and evaluate additional state housing legislation for its potential impact on land use, population and housing and visual quality.

36-16 **Request 1:** The DEIR should expand its discussion of state legislation to include recently adopted housing legislation including those that incentivize housing development, housing density, streamlined permit review and/or CEQA exemptions.

**Request 2:** The City requests that the underlying source documents be provided for the population and job growth projections used in the DEIR. The numbers used in the DEIR appear to be inconsistent with numbers and projections used by SANDAG previously including during the RHNA process.

**10. TRANSPORTATION (Section 4.16)**

36-17 On page 14.16-13 of the DEIR, Pedestrian Facilities are discussed. The DEIR states that walking is a part of an active transportation network and identifies pedestrian facilities to primarily include sidewalks and crosswalks associated with arterials and roadways, as well as bridges and other connections across highways and rail facilities. The Active Transportation is an important element of the Regional Plan and is discussed in many sections throughout the DEIR. Compared to other modes of transportation as identified and discussed in the DEIR, Pedestrian Facilities, arguably, is the most impactful and important mode of transportation and yet, less than one page of the Transportation section is dedicated to Pedestrian Facilities. In that short section, the DEIR places the Safe Routes to School Program as the main strategy to address the Pedestrian mode of the Proposed Plan. While the Safe Routes to School Program needs to be discussed, the Pedestrian Facilities Section should be expanded with additional discussion and analysis.

**Request 1:** The DEIR should add stand-alone pedestrian bridges and pedestrian under-crossings into the Pedestrian Facilities category and include the required discussion for potential impacts and required mitigation measures for such facilities. The DEIR should identify the need for and incorporate Pedestrian Facilities into major corridor and transportation improvements where other modes of transportation have created barriers or made the pedestrian mode of travel less desirable or safe as compared to other modes of transportation.

36-18 **Request 2:** Additionally, the Lomas Santa Fe corridor is identified as a major transportation element which is divided into two segments by the I-5 freeway. The Pedestrian Facility in the east/west direction at the I-5 Interchange is inadequate to a point that the City, in collaboration with the Solana Beach School District, has placed crossing guards to assist pedestrians, often young school children, in crossing the interchange. This is particularly important at the northbound on-ramp

**RESPONSE TO COMMENT 36-16**

Regarding Request 1, please see responses to comments Solana Beach 36-14 and 36-15. Regarding Request 2, the proposed Plan’s Appendix F, Series 14 Regional Growth Forecast and SCS Land Use Pattern, details the development of the population and job growth projections that are reflected in the Draft EIR. The Series 14 Regional Growth Forecast aligns with the regional population projection from the California Department of Finance (DOF) released in January 2020. The California Department of Housing and Community Development issued the San Diego region’s Regional Housing Needs Assessment Determination on July 5, 2018, and used an earlier version of the DOF population projection.

**RESPONSE TO COMMENT 36-17**

In general, pedestrian facilities are more focused in localized areas and are not planned at the regional level. Due to its regional focus, the proposed Plan need not provide substantial detail on the pedestrian facilities that currently exist within the region or locally planned improvements to pedestrian networks under future year conditions. Additionally, the proposed Plan does not include any specific pedestrian-related infrastructure; instead, the proposed Plan includes grant funding opportunities for local jurisdictions to plan, design, and construct pedestrian improvements at the local level (see Table A.14 and A.17 of the proposed Plan). Therefore, because the pedestrian infrastructure funded by the proposed Plan will generally be planned, designed, and implemented by local jurisdictions, it has not been identified at this time and could not be summarized or included within the Draft EIR. Finally, it should be noted that subsequent, project-level, CEQA review will be required for the pedestrian infrastructure funded by the proposed Plan prior to such infrastructure’s implementation.

Please also note that an analysis of how the implementation of the proposed Plan will affect pedestrian travel within the region was conducted under Impact TRA-1. A summary of the pedestrian analysis result, including trip generation, average trip length, and mode split is provided for each Horizon Year in Tables 4.16-8 (Year 2025), 4.16-12 (Year 2035), and 4.16-16 (Year 2050).

**RESPONSE TO COMMENT 36-18**

As an initial matter, Request 1 relates to the contents of the proposed Plan, not the adequacy of the analysis within the DEIR. The proposed

Plan aims to create safe and well-connected routes for pedestrians and bicyclists. The intention of the network in the Plan is a framework that facilitates trips associated with regional purposes designed to enhance neighborhood connections to schools, employment centers, and other everyday destinations. At the regional scale, the regional transportation network does not include details regarding the types of bicycle and pedestrian facilities to be included within specific corridor projects, and the analysis of those projects will require future planning and coordination with local jurisdictions, community members, and other stakeholders to determine such details, all of which would be conducted at the project level.

In addition to specific projects and corridors, the Plan includes funding for “Complete Streets in Mobility Hubs,” which will include active transportation improvements on local streets within the hubs that will facilitate these kinds of connections. The intention is to make trips less than 3 miles more attractive for walking and biking. Local jurisdictions also have access to Safe Routes to Schools programs and funding, which can assist with infrastructure, outreach, and other elements. Appendix A of the proposed Plan includes *Mobility Hubs* and *Policies and Programs* sections that describe investments that would benefit school sites and school access. Within the *Mobility Hub* investments, programs aim to make streets safer for people who walk and bike by investing in traffic calming and pedestrian improvements. Under *Policies and Programs* the proposed Plan includes Vision Zero programming that prioritizes safety through roadway design while working with cities to develop community engagement programs that identify local street safety issues and provide technical guidance to resolve those issues through investment, policies, and programs.

Request 2 states that the Draft EIR should incorporate a mitigation measure to improve pedestrian access along Lomas Santa Fe at the I-5 interchange. The issues described at the east/west direction at the I-5 Interchange, however, describe an existing condition, not an impact of the proposed Plan. This comment is therefore directed towards the content of the proposed Plan, not the adequacy of the EIR’s mitigation measure for the significant impacts *caused* by the proposed Plan. The comment will be considered by the SANDAG Board of Directors when it considers adoption of the proposed Plan

36-18  
 cont.

location where pedestrian crossing is uncontrolled. The City requests that the DEIR incorporate a mitigation measure that improves pedestrian access along Lomas Santa Fe at the I-5 interchange.

**11. WATER SUPPLY (Section 4.18)**

36-19

The DEIR concentrates its discussion and analysis on the San Diego County Water Authority (SDCWA). While it generally discusses SDCWA member agencies, there is little discussion about adequate water supply at the local level within each jurisdictions' respective water district(s). Given the ongoing and worsening drought and severely low water levels in the state's reservoirs as well as at Lake Mead and Lake Powell, additional analysis should be conducted on local water districts and water supply, particularly those that serve the Proposed Plan's Mobility Hub Network.

**Request:** The DEIR should include more detailed analysis of SDCWA Member Agencies' local water supplies, particularly those serving areas located within the Proposed Plans' Mobility Hub Network.

**12. WILDFIRE (Section 4.19)**

36-20

On page 4.19-18, the DEIR states that the western portion of the [San Diego] region is also at high risk for fire hazards as it contains hundreds of miles of WUI (Wildland Urban Interface) due to the multitude of canyons throughout the area. Solana Beach is no exception as our entire northern boundary fronts the San Elijo Lagoon, with the southeastern boundary adjacent to several finger canyons emanating from the San Dieguito Lagoon across Via de la Valle. Consequently, an extensive are of the northern portion of Solana Beach is within a Very High Fire Hazard Severity Zone (VHFSZ Map). Thought not easily discernible in Figures 4.19-3 and 4.19-4 of the DEIR, much of this area overlaps with the Proposed Plan's Solana Beach Mobility Hub.

Again, the DEIR determined that there will be Significant and Unavoidable Impacts After Mitigation for all three significance criterion (WF-1, WF-2 and WF-3) in 2025, 2035 and 2050. These impacts are associated both to the risks of wildfire itself and to the exposure of pollutant concentrations of wildfire smoke. Page 4.19-18 of the DEIR also notes that insufficient water supply, which is discussed in Section 4.18 and which also experiences Significant and Unavoidable Impacts After Mitigation, "may also contribute to an increased risk of wildland fire hazard."

**Request:** Given that the City's existing VHFSZ areas overlap with the Solana Beach Mobility Hub, the DEIR should assess and/or analyze whether including such areas within a designated Mobility Hub increases the risks to the public.

**RESPONSE TO COMMENT 36-19**

The Draft EIR analyzes at a program level the effects of the planned transportation network, and the resulting patterns of land use and development, on a regional basis. The analysis incorporates the population growth projected for the County's cities and unincorporated areas projected by SANDAG Series 14 statistics. The water supply analysis examines the adequacy of the region's future water supply assuming future projected population levels. The availability of future water supplies to meet this future demand is assessed using the legally mandated UWMPs prepared by the agencies supplying water to the region, the SDCWA and the MWD. For the SDCWA service area, the EIR does not analyze the water supply of particular geographic areas or jurisdictions; instead, it analyzes the adequacy of supply on a regional basis. It should be noted, however, that the water planning of the SDCWA's 24 member agencies is incorporated into the SDCWA UWMP. This planning includes both supply and demand.

The proposed Plan designates areas that, due to planned investment in transportation infrastructure and a potential for increased employment and residences, are potential Mobility Hubs. As described in the Chapter 2 of the EIR, Mobility Hubs are proposed for communities with a high concentration of people, destinations, and travel choices where densification is envisioned in the SCS, *subject to approval of local jurisdictions*. In order for a Mobility Hub to become a reality a very large number of plans and projects would need to be proposed over many years. These plans and projects would be subject to local discretionary review, including review pursuant to CEQA. As part of this plan and project-level review, the adequacy of local water supplies, storage capacity, and conveyance infrastructure would be evaluated. The results of these analyses would determine what water infrastructure investments would be necessary in order for a Mobility Hub to meet its ultimate growth potential in terms of jobs and residences, or if less intensive future development is warranted as a result of limited water supplies or inadequate infrastructure.

**RESPONSE TO COMMENT 36-20**

The EIR concludes that transportation network improvements and programs associated with the proposed Plan would expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildland. Revisions have

been made to Section 4.19, *Wildfire*, regarding the 2025 (Final EIR page 4.19-21), 2035 (Final EIR page 4.19-24), and 2050 (Final EIR page 4.19-25) as follows:

Risks would be exacerbated in areas where designated Mobility Hubs, characterized by a higher density of jobs and residences, would develop within and adjacent to VHFSZs.

Also, please see response to comment Solano Beach 36-19 regarding project-specific review of projects implementing Mobility Hubs; such reviews would consider and mitigate wildfire impacts.

Draft EIR - 2021 Regional Plan  
Solana Beach Comments  
October 11, 2021  
Page 12 of 12

36-21

Once again, the City of Solana Beach greatly appreciates the opportunity to review and comment on the DEIR. We look forward to coordinating with you further on this and appreciate SANDAG's consideration of the City's comments as noted above.

If you have any questions or comments, please feel free to contact Community Development Director Joseph Lim at [jliri@cosb.org](mailto:jliri@cosb.org) or 858-720-2434 or me at [gwade@cosb.org](mailto:gwade@cosb.org) or 858-720-2444.

Sincerely,

Gregory Wade  
City Manager

**SUBJECT: DRAFT 2021 REGIONAL PLAN**

The City of Solana Beach appreciates the opportunity to review and comment on the San Diego Association of Governments (SANDAG) Draft 2021 Regional Plan (Draft Plan). It is clear that much time and effort went into this important document. Submitted for your consideration are the following comments:

- **Mobility Hubs** – Page 19 of Chapter 2 of the Draft Plan, the Sustainable Communities Strategy (SCS), describes planned "Mobility Hubs" as areas or communities in the region with "a high concentration of people, destinations, and travel choices" that "offer on-demand travel options and supporting infrastructure that enhance connections to high-quality Transit Leap services." While the SCS seems to acknowledge that these Mobility Hubs can vary both in size and transit availability and can "span one, two or a few miles based on community characteristics," the SCS and the Draft Plan do not separately categorize or discuss these Mobility Hubs based on these unique characteristics despite having done so previously as well as in Appendix T (Network Development and Performance). Pages 15 through 18 of Appendix T of the Draft Plan – Network Development and Performance – contains a Propensity Analysis for both Transit Leap Services and Mobility Hubs. These analyses identified which transit routes were most likely to meet the needs of transit riders now and in the future and which communities were most suitable for Mobility Hubs. While it should be noted that Solana Beach ranked at the lower end of both (see Figures 12 and 14), these analyses resulted in the apparent establishment of five (5) distinctive types of Mobility Hubs – Coastal, Gateway, Major Employment Center, Suburban and Urban Core – with Solana Beach identified in Figure 15 as a Coastal Mobility Hub. However, the SCS contains no meaningful discussion of these distinctive and unique Mobility Hub areas referring to them only in Figure 2.5 of the SCS where projected future growth is illustrated. The dramatic difference in projected future growth for each of these distinct Mobility Hub Areas, with Coastal Mobility Hubs well below the other four Mobility Hub Areas in both the percentage of future housing and future jobs (5% and 2%, respectively), clearly demonstrates their

36-22

**RESPONSE TO COMMENT 36-22**

Thank you for providing the City of Solana Beach’s letter providing comments on the proposed Plan. Responses to these comments can be found beginning from ID L142 in Appendix P.2.

Draft 2021 Regional Plan  
Solana Beach Comments  
Page 2 of 4

uniqueness with respect to jobs, housing and access to high-quality transit and the extent to which each area should be relied upon (or not) to satisfy the region's future growth.

The adopted 2021 Regional Transportation Plan (Adopted Plan) and the SCS should contain a detailed discussion of the five (5) Mobility Hub Areas and a description of the unique characteristics and transit needs for each – both now and in the future.

Additionally, by virtue of the fact that the Solana Beach Train Station is within 2 ½ miles of the cities of Del Mar, Encinitas and San Diego and the County of San Diego, this regional Coastal Mobility Hub Area in the Adopted Plan should, for purposes of planning for future housing and job growth, extend into and cover the City of Del Mar and the Del Mar Fairgrounds and areas of the cities of Encinitas and San Diego and the County of San Diego immediately adjacent to Solana Beach.

- **Transit Leap Services** – As noted above, the Propensity Analysis discussed in Appendix T for both Transit Leap Services and Mobility Hubs determined that Solana Beach and its Train Station were at the lower end in the region both in meeting the needs of transit riders now and in the future and for suitability as a Mobility Hub. While the City acknowledges that the presence of the Train Station in Solana Beach might make it reasonable to include as a potential future Mobility Hub in the Adopted Plan, during the recent Regional Housing Needs Assessment (RHNA) allocation process, the City also made it clear that, both now and in the near term, the Train Station does not currently provide adequate Coaster or Amtrak headways, nor does it provide meaningful connections to other transit services to be considered a Mobility Hub now. Indeed, despite the North County Transit District (NCTD) Board recently voting to increase Coaster service beginning in October 2021, such a designation is still largely aspirational. While, again, the City acknowledges that the Draft Plan and the Adopted Plan are just that – a plan for the future – Appendix A of the Draft Plan – Transportation Projects, Programs, and Phasing – appears to support this position. Table A.5 (Interstate 5 North Coastal Corridor) identifies one Transit Leap project (TL40) – *Rapid 473* – for implementation in the year 2035. Similarly, Table A.9 (State Route 56) identifies one Transit Leap project (TL026) – *Rapid 103* – for implementation in the year 2050. These 15 to 30-year forward-looking Transit Leap projects, while helpful for the future, do not appear to satisfy the near-term objectives of a Coastal Mobility Hub.

In order to justify the designation of the Solana Beach Train Station as a Coastal Mobility Hub, both now and in the future, more immediate Transit Leap service connections should be considered for inclusion in the Adopted Plan.

36-22  
cont.

36-22  
 cont.

**Appendix B: Implementation Actions** – Appendix B provides detail on commitments and key actions to implement elements and strategies of the Draft Plan. Key to this objective is the involvement of and coordination with each member agency as they are most knowledgeable of the needs of their respective communities. Indeed, Near-term Implementation Action No. 2 in Table B.1 identifies the need to partner with local governments to develop five initial Comprehensive Multimodal Corridor Plans (CMCPs). Therefore, the City requests that the following minor edits to Appendix B (page 16) under “Land Use and Regional Growth” be included:

“The 2021 Regional Plan vision for land use focuses on development and growth in ~~Mobility-Hub areas urbanized areas near jobs~~ to preserve San Diego’s open space and support transportation investments by reducing vehicle miles traveled (VMT). Mobility Hubs are ~~the an~~ opportunity to provide housing to address the Regional Housing Needs Assessment. ~~Land use authority is reserved to local jurisdictions because they are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan through understanding of the unique needs of their communities and geographies.~~ Because land use authority is reserved to local jurisdictions, SANDAG will leverage partnerships with cities and the county through the Smart Growth Incentive Program and other grants to provide funds for transportation-related improvements and planning efforts that support smart growth in Mobility Hubs to realize ~~this their~~ vision for ~~their~~ communities. SANDAG will continue its existing grant programs, partner with member agencies on state funding opportunities, and provide data and technical support to assist local jurisdictions with land use planning efforts in line with the 2021 Regional Plan.”

- **Regional Housing Needs Assessment** – Following adoption of the Draft RHNA allocation by the SANDAG Board in September 2020, appeals of the allocation were filed by the cities of Coronado, Imperial Beach, Lemon Grove and Solana Beach. In order that these appeals are correctly noted for the record, there are two locations in the Draft Plan to which a clarifying footnote and additional language should be added to the Adopted Plan. Specifically, the City requests the following for the Adopted Plan:
  - On page 33 of the Draft Plan, after the sentence: “The SANDAG Board of Directors adopted the RHNA Plan on July 10, 2020, with the final housing unit allocation” the following footnote should be added:
 

*\* In September 2020, the cities of Coronado, Imperial Beach, Lemon Grove and Solana Beach filed a Petition for Writ of Mandate in San Diego Superior Court challenging, among other things, the Board’s adoption of the RHNA Plan. SANDAG demurred to the cities’ Petition and the demurrer was sustained by the court in February 2021. The petitioning cities have*

Draft 2021 Regional Plan  
Solana Beach Comments  
Page 4 of 4

*appealed the ruling on the demurrer to their Writ Petition, and that appeal remains pending in the Fourth District Court of Appeal.*

- On page 14 of Appendix K (Regional Housing Needs Assessment Plan), the following paragraph should be added to the end of this page/section:

*On September 24, 2020, the cities of Coronado, Imperial Beach, Lemon Grove and Solana Beach filed a Petition for Writ of Mandate in San Diego Superior Court, Case No. 37-2020-00033974-CU-MC-CTL, against SANDAG and SANDAG's Board of Directors seeking an order requiring that SANDAG give those cities a fair hearing on their RHNA appeals and decide the cities' appeals in a legal manner without bias and without the use of the weighted voting mechanism. Specifically, the petitioning cities asked the court to order: (1) that the final RHNA allocation approval by SANDAG be rescinded; (2) that SANDAG's denial of the cities' RHNA appeals be rescinded; (3) that the appeals be remanded to SANDAG for fair consideration; and (4) that SANDAG be prohibited from utilizing a weighted vote on the cities' RHNA appeals. On February 5, 2021, SANDAG's demurrer to the Petition for Writ of Mandate was sustained by the Superior Court. The petitioning cities have appealed the ruling on the demurrer to their Writ Petition. That appeal remains pending in the Fourth District Court of Appeal. So long as the litigation is pending, the Board's adoption of the RHNA Plan cannot be considered final.*

Once again, the City of Solana Beach greatly appreciates the opportunity to review and comment on the Draft Plan. We also appreciate SANDAG's consideration of our comments and requested changes for inclusion in the Adopted Plan as noted above.

If you have any questions or comments, please feel free to contact Community Development Director Joseph Lim at [jjlim@cosb.org](mailto:jjlim@cosb.org) or 858-720-2434 or me at [gwade@cosb.org](mailto:gwade@cosb.org) or 858-720-2444.

**COMMENT LETTER 37: SOUTHWEST WETLANDS INTERPRETIVE ASSOCIATION**

Comment Letter 37

**From:** Bill Tipperts <[billtipperts@gmail.com](mailto:billtipperts@gmail.com)>  
**Sent:** Monday, October 11, 2021 1:13 PM  
**To:** Kirsten Uchitel; Mike McCoy  
**Cc:** Robert Miller; Yvonne Oden; Gary Brown; Mayda Winter  
**Subject:** Comments on the RTP/SCS (San Diego Forward: The Regional Plan) Draft EIR

**CAUTION: This email originated from outside of SANDAG. Do not click links or open attachments unless you are expecting the content.**

Ms. Uchitel:

37-1

I am submitting these comments on behalf of the Board of the Southwest Wetlands Interpretive Association (SWIA), which has advocated for and worked to conserve native habitats in San Diego and southern California for over four decades. We appreciate the efforts by SANDAG to present a new approach and set of concrete elements to make our region less autocratic, reduce associated GHG emissions, improve social/environmental justice and reduce impacts to natural lands. The significance of potential impacts from the proposed Plan, and reasonable ways to improve it to reduce impacts, suggests that a new alternative plan is desirable and feasible. Our letter proposes the framework for that alternative.

Regards,

Bill Tipperts (Board Member, SWIA)

**RESPONSE TO COMMENT 37-1**

Thank you for your comment on behalf of the Southwest Wetlands Interpretive Association (SWIA). SANDAG appreciates SWIA's proposal regarding a framework for a new alternative. Please refer to response to comment SWIA 37-11 for further elaboration regarding this comment.

Southwest Wetlands Interpretive Association

(submitted 11 October 2021 via email to Kirsten.Uchitel@sandag.org)

Subject: Draft EIR for San Diego Forward: The 2021 Regional Plan (RTP/SCS)

Dear Ms. Kristen Uchitel,

37-2 The Southwest Wetlands Interpretive Association (SWIA) is a non-profit organization dedicated to helping preserve and enhance wetlands throughout southern California – and also to supporting land uses and planning to conserve upland habitats and species. SWIA provides the following comments on the Draft EIR for SANDAG's RTP/SCS. After decades of incremental changes to our transportation system and associated land use/development, the RTP/SCS Plan presents important elements for a blueprint to transform how our region accommodates projected growth in our region's population, housing, and jobs.

Given the length (2330 pages) and complexity of the EIR/Appendices, we are limiting our comments and recommendations for changes to reduce impacts to several components: (1) changes to the proposed transportation infrastructure; (2) need for additional funding (regional habitat conservation fund) to address impacts to habitats and species; (3) a new alternative is necessary to address/reduce significant deficiencies in the Plan and impacts from its implementation.

General Comments

37-3 SANDAG's proposed Plan (the RTP/SCS) attempts to strike a balance between what is optimal and what is achievable, having to contend with the historical failures of previous plans to address the region's transportation needs and allied concerns. As stated in the EIR (Page ES-1): "The proposed Plan includes a blueprint for a regional transportation system, serving

### RESPONSE TO COMMENT 37-2

SANDAG appreciates SWIA's overall support for the Plan. Please refer to the responses to comments below for further discussion.

### RESPONSE TO COMMENT 37-3

Regarding significant and unavoidable impacts, the EIR prepared for the proposed Plan is a first-tier Program EIR. "Second-tier projects" that would implement the proposed Plan include site-specific transportation network improvements and development projects. Many Draft EIR mitigation measures for second-tier projects, recognizing that agencies other than SANDAG (e.g., local governments, transit districts, and Caltrans) are responsible for implementation, state that such agencies "can and should" implement the measures. See Master Response 2 for further discussion of these mitigation measures.

SANDAG can commit to feasible mitigation measures that are within its responsibility and jurisdiction. However, SANDAG will not be the lead agency for many of the second-tier projects that implement the proposed Plan. In those instances, SANDAG in its CEQA findings may find that those measures are within the responsibility and jurisdiction of another agency, and that such measures can and should be adopted by such other agency (Guidelines Section 15091(a)(2)).

The Draft EIR also recognizes that due to project- or site-specific circumstances, it may not be feasible for individual lead agencies to implement all of the "can and should" mitigation measures listed for a particular significant impact. Implementing agencies are required by CEQA to exercise discretion in selecting and imposing mitigation measures based on all relevant feasibility concerns, including costs and available funding, enforcement mechanisms, effectiveness as applied to the specific project in question, and collateral environmental or other effects that may result from implementation of the mitigation measure. How these factors may affect individual mitigation decisions for the many individual projects anticipated in the proposed Plan cannot be realistically assessed in a program EIR for the entire Plan.

As such, the EIR takes a conservative approach when making significant and unavoidable impact determinations. Further elaboration regarding specific comments is provided below.

Kirsten Uchitel, Associate Planner  
 11 October 2021  
 Page 2

37-3 cont. existing and projected residents and workers within the San Diego region (Figure 2-1) that further enhances quality of life and offers more mobility options for people and goods. The proposed Plan looks ahead to 2050, and accommodates more than 430,000 new residents, approximately 440,000 new jobs, and over 280,000 new housing units. The underlying purpose of the proposed Plan, in summary, is to develop a Regional Plan that addresses the many regional transportation challenges that are deeply connected to larger societal issues that impact everyone's quality of life, including economic and social inequities, climate change, public health, and safety."

We concur with the purpose and many components of the proposed Plan but it also contains deficiencies and would result in many Significant and Unavoidable Impacts (summarized on Pages 7-12 to 23). In light of those findings and our identified concerns, we provide the following specific comments.

Specific Comments

37-4 As the EIR describes, the proposed Plan would not put the region on the trajectory to reduce total VMT -and associated GHGs - to meet the state's long-term GHG reduction targets. While the Plan is a welcome break from former "freeway/roadway-centric" RTPs, it does not ensure the necessary land use changes nor the shift to a functional transit/active transportation system that is needed to rapidly reduce our reliance on vehicular use and put the region on a GHG emissions reduction trajectory that aligns more closely with State targets.

37-5 Transportation: The EIR frames a fundamental purpose of the RTP/SCS (Page ES-2) as: "Under Senate Bill (SB) 375, the regional transportation plan must include an SCS consisting of land use, housing, and transportation strategies that, if implemented, would allow the region to meet its regional targets for greenhouse gas (GHG) emissions reductions from passenger vehicle use established by the California Air Resources Board (CARB)." GHG emission reductions. Rather than framing that statement as "...if implemented...", we believe the GHG emissions reductions are a strict requirement and that the final Plan and its EIR certification must acknowledge that requirement. The sentence should be rewritten as: "Under Senate Bill (SB) 375, the regional transportation plan must include an SCS consisting of land use, housing, and transportation strategies that, ~~if~~ will be implemented, ~~would allow to ensure the region~~ meets its regional targets for greenhouse gas (GHG) emissions reductions from passenger vehicle use established by the California Air Resources Board (CARB)."

The 5 Big Moves (Pages 2-38, et seq.) describe the proposed transportation system and sequencing for its major components. Notably, the Plan relies on the addition of managed

**RESPONSE TO COMMENT 37-4**

As an initial matter, this comment relates to the content of the proposed Plan, not the DRAFT EIR. The proposed Plan significantly reduces per capita VMT; however, total VMT increases through the life of the proposed Plan. VMT growth is predominantly due to the population and employment growth within the region, notwithstanding that the SCS land use pattern and the proposed transportation network improvements and programs in the proposed Plan would help to reduce VMT growth. That said, the increase in VMT, from baseline Year 2016 conditions, was identified as a significant impact under Threshold TRA-2 in the EIR.

The proposed Plan exceeds the SB 375 target of 19 percent reductions of GHG by 2035 and the Board Resolution for a 30 percent reduction of GHG emissions from all on-road transportation by 2035. However, the proposed Plan's GHG emissions would be inconsistent with the State's ability to achieve the goals of EO B-55-18 and EO S-3-05. As discussed in additional detail in Section 4.8.4 in the EIR, mitigation measures would help reduce regional GHG emissions by reducing VMT, increasing use of zero-emission fuels, sequestering carbon from the atmosphere, and other measures; they would reduce inconsistency of the proposed Plan's GHG emissions with the State's ability to achieve the SB 32, EO B-55-18, and EO S-3-05 GHG reduction goals. However, full implementation of the changes required to achieve these goals is beyond SANDAG's and local agencies' current jurisdiction and authority. As such, they were identified as significant and unavoidable.

While the proposed Plan results in significant impacts related to VMT and GHG, anticipated reductions in per capita VMT and GHG, along with proposed mitigation measures, would reduce inconsistency of the proposed Plan with the State's ability to achieve VMT and GHG goals, and puts SANDAG on a trajectory that more closely aligns with regulatory targets.

**RESPONSE TO COMMENT 37-5**

SB 375 language is quoted accurately, and SB 375 does not require regional planning agencies like SANDAG to guarantee emissions reduction targets will be met, so no change to the DRAFT EIR is warranted. That being said, GHG reductions necessary to meet State targets are expected to be achieved through a coordinated effort by, at minimum, State, regional, and local agencies, organizations, and

stakeholders, and is well beyond the scope and jurisdiction of SANDAG alone. Therefore, while it is SANDAG's intention to follow through with this plan in an attempt to ensure that regional GHG emissions reductions targets are met, due to the scope of the efforts, it would not require to commit in certainty.

A better transportation system that is less reliant on the automobile is a fundamental component of the proposed Plan. The investments in Managed Lanes will support high speed transit service to ensure time competitive trips as compared to automobile use. The proposed Plan places emphasis on maximizing the use of existing facilities to add corridor capacity to ease congestion while also trying to meet State and federal GHG and air quality targets. The proposed Managed Lanes network uses existing infrastructure by repurposing shoulders and general purpose lanes to offer priority access to transit, carpools, vanpools, and low-emission vehicles with appropriate decals. The system of Managed Lanes and supporting connectors support Transit Leap, Flexible Fleets, and HOVs to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes. The Regional Plan is updated every 4 years, providing opportunities to reflect changes in the network in the future.

Kirsten Uchitel, Associate Planner  
 11 October 2021  
 Page 3

lanes, whether from converted general purpose lanes or created from freeway shoulder/ROW, particularly in the short-to-midterm years. New lanes rarely meet their objectives because they often initiate "induced (travel) demand" that quickly produces the congestion (and GHG emissions) that the added lanes were intended to reduce.

The proposed transportation system approach, including infrastructure projects, pricing, and related policies places too much reliance on managed lanes to transition away from the region's dependence on vehicular use. Induced demand (i.e., Downs-Thomson Paradox) is not adequately addressed in the EIR. Studies of induced demand and possible measures to reduce its effects and how it may be addressed, such as the following studies, suggest that induced demand may be controllable but the entire transportation infrastructure system, and especially social policies and pricing - and viable transit options - must be integrated and established concurrently. Advancing transit options and reducing the addition of new lanes is a better approach.

Concurrent with those changes, we support immediate pilot testing of flexible fleet options to complement this emphasis on advanced transit. That should not incentivize or facilitate standard rideshare, which are shown to increase VMT, rather it should focus on services and technologies that promote zero emission, multi-passenger ridership.

We strongly recommend the Plan be modified to reduce the number of managed lanes, initiate roadway pricing immediately (and to the extent possible, applying revenues to transit projects and reduced ridership fares), and increase electric bus and BRT services and associated transit options as a transition while fixed guideway and other major transit infrastructure are constructed. The Plan should advance the timelines of all major transit infrastructure.

**RESPONSE TO COMMENT 37-6**

SANDAG is required to analyze induced demand impacts of the proposed Plan, which are documented in Appendix D of the proposed Plan. The activity-based model and other analyses used to inform the proposed Plan have been through SANDAG's peer review process and are documented in the technical methodology submitted to CARB, which is also included in Appendix D. Where possible, the proposed Plan proposes repurposing shoulders and general purpose lanes to offer priority access to transit, carpools, vanpools and low-emission vehicles with appropriate decals. The system of managed lanes and supporting connectors support Transit Leap and high occupancy vehicles to create a seamless systemwide network that will provide people with transportation options, reducing the need to add new highways or general purpose lanes. As such, investment in managed lanes would be beneficial to transit usage. It would not shift investment from additional transit projects and advancing transit options is not feasible because, as discussed in Master Response 1, the request to switch funding from roadways to transit fails to recognize that there are regulatory constraints on directing roadway funds to transit, and on when money becomes available during the lifespan of the proposed Plan, meaning funding programs typically are approved or collected on an annual basis and much funding cannot be advanced.

SANDAG also is currently working with the Social Equity Working Group to develop near-term solutions to address transit service improvements, amenities, and subsidized transit fares. Appendix U, *Cost Estimation Methodology*, Table U.2, in the proposed Plan, captures the transit fare subsidies to riders throughout FY2026–FY2050. For more information on the Value Pricing and User Fee Implementation and the Regional Fare Impact Study, please see Appendices B and U of the proposed Plan.

The Regional Plan and its SCS are iterative planning documents that are typically updated every 4 years to account for new data, analysis, policy, and experience.

**RESPONSE TO COMMENT 37-7**

The deployment of Flexible Fleets such as e-bikes, shuttles, or ridesharing is envisioned as part of the proposed Plan to provide convenient and affordable options in different communities. SANDAG is developing a Flexible Fleet Implementation Strategic Plan to identify

near-term opportunities for Flexible Fleet pilots that support mobility, equity, and sustainability goals.

**RESPONSE TO COMMENT 37-8**

Please see Master Response 1 explaining why this type of alternative was not considered in detail in the EIR.

SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the proposed Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, in addition to providing fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, has been added to Appendix A in the Final Plan.

The proposed Plan includes increased service spans for the trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.

Kirsten Uchitel, Associate Planner  
 11 October 2021  
 Page 4

37-9 As a related concern, the EIR does not adequately address an issue that was raised many times during the Plan's preparation: More clear and definitive mechanisms are needed in the Plan to ensure that its actions - particularly those that rely upon the local jurisdictions for land use zoning, development, and other supportive actions - are implemented (and monitored and corrected/adjusted, as necessary) in accordance with the Plan's expectations. The metrics for monitoring Plan implementation must be more specific; for example, are the locations and numbers of future population, jobs and housing developments (units) in accord with the Plan (i.e., meeting the expected allocations in the mobility hubs/smart growth areas) by the time periods (e.g., are annual increases consistent with the RHNA), are the primary transportation route improvements being constructed on the anticipated timelines and matching with the new development/growth, etc. Those and other monitoring parameters must be collected, analyzed and reported on a timely (annual or at least biannual) basis and corrective measures undertaken when/where necessary.

The potential impacts from implementing the Plan while population, housing, and job growth are not aligning with the transportation infrastructure would be a potentially fatal flaw unless the Plan incorporates new mechanisms - that are agreed-to by the jurisdictions per formal agreements - to ensure conformance.

37-10 **Biology:** The EIR acknowledges potentially significant and unavoidable impacts to biological resources, including to wetlands, sensitive species, and movement corridors/wildlife connectivity. Pages 4.4-61 to 79 describe the substantial adverse effects on riparian habitat, wetlands and other sensitive natural habitats, their potential significance, and possible mitigation for unavoidable impacts. Pages 4.4-79 to 95 describe the proposed Plan's anticipated impacts to sensitive and rare, threatened and endangered species, their potential significance, and possible mitigation for unavoidable impacts. Pages 4.4-95 to 106 present comparable descriptions of the anticipated impacts to corridors and linkages that are essential to the continued survival of wildlife (and plants), their potential significance, and possible mitigation for unavoidable impacts. We concur with the analyses and findings that, even with mitigation, those potential impacts to all of these biological resources would be significant (and unavoidable). It is particularly important to highlight that SANDAG has no land use authority, so it cannot ensure that the impacts from land use/development - and climate change effects - will not be greater than what was assumed and analyzed. For those reasons, we strongly recommend adding a funding mitigation measure that would provide the region's extant - and future - preserved conservation lands (i.e., not just the project-specific mitigation lands) sufficient regional habitat conservation funding to address unanticipated impacts to rare, threatened and endangered species from growth/development and associated climate change effects.

**RESPONSE TO COMMENT 37-9**

Please refer to Master Response 1 for explanation regarding why this element was not considered in detail in the alternatives.

**RESPONSE TO COMMENT 37-10**

Please refer to Master Response 1 for discussions regarding including a regional habitat conservation fund in the alternatives.

Kirsten Uchitel, Associate Planner  
11 October 2021  
Page 5

37-11

**Alternatives:** As stated in our introductory comments, the proposed Plan contains many reasonable components. And we concur that Alternative 3 is the Environmentally Superior Alternative of the three analyzed alternatives. However, the EIR fails to describe and analyze a range of reasonable alternatives (CEQA Guidelines, Section 15126.6), including one that would prioritize transit/active transit over managed lanes, specify and institute a much more rigorous monitoring system of the transportation system's buildout and performance; add a regional habitat conservation fund; and ensure enforcement of the jurisdictions' compliance with the Plan. **Based on the deficiencies we identify in the proposed Plan, and the significant impact findings for that Plan in this EIR, we strongly recommend that a new alternative be prepared and adopted, consistent with our recommendations, as the preferred Plan.**

Our contact for this comment letter is Bill Tippetts ([billtippetts@gmail.com](mailto:billtippetts@gmail.com) or 619-822-4323), who is available to discuss it with SANDAG.

Sincerely,

Mike McCoy  
President

Bill Tippetts  
Board Member

Cc: SWIA Board

**RESPONSE TO COMMENT 37-11**

The comment asserts that the range of alternatives evaluated in the EIR does not meet CEQA's requirement to evaluate a reasonable range of potentially feasible alternatives because the EIR does not include an alternative that :

- Prioritizes transit/active transit over Managed Lanes
- Institutes a much more rigorous monitoring system of the transportation system's buildout and performance
- Adds a regional habitat conservation fund; and
- Ensures enforcement of the jurisdictions' compliance with the Plan.

Please see Master Response 1 explaining why this type of alternative was not considered in detail in the EIR.

Subject: Comments on the Draft Environmental Impact Report for the San Diego Forward: 2021 Regional Plan, San Diego County, California

Dear Kirsten Uchitel:

38-1

The U.S. Fish and Wildlife Service (Service) has reviewed the Draft Environmental Impact Report (EIR) for the San Diego Association of Government's (SANDAG) San Diego Forward: 2021 Regional Plan (Plan) in San Diego County, California. The comments provided in this letter are based on information provided in the Draft EIR, our knowledge of sensitive and declining species and habitats, and our participation in regional conservation planning efforts.

The primary concern and mandate of the Service is the protection of public fish and wildlife resources and their habitats. The Service has legal responsibility for the welfare of migratory birds, anadromous fish, and endangered animals and plants occurring in the United States. The Service is also responsible for administering the Federal Endangered Species Act of 1973 (Act), as amended (16 U.S.C. 1531 *et seq.*), including habitat conservation plans (HCP) developed under section 10(a)(1) of the Act.

**PROJECT DESCRIPTION**

38-2

San Diego Association of Government has prepared the Draft EIR in accordance with the California Environmental Quality Act (CEQA) to analyze the significant environmental impacts of the Plan, which is an update to the San Diego Forward: 2015 Regional Plan, adopted in October 2015, and the 2019 Federal Regional Transportation Plan, adopted in October 2019. The Plan updates the Regional Comprehensive Plan (RCP) for the San Diego region and the Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS). The Plan includes a blueprint for a regional transportation system to serve existing and projected workers and residents within the San Diego region up to the year 2050. The Plan includes the following objectives:

1. Focus population and employment growth in mobility hubs and existing urban areas to protect sensitive habitat and natural resource areas.

**RESPONSE TO COMMENT 38-1**

Thank you for the U.S. Fish and Wildlife Service's (USFWS) review of the Draft EIR and participation in the environmental review process. Detailed responses to USFWS' comments are provided in subsequent discussions below.

**RESPONSE TO COMMENT 38-2**

The summary of the proposed project description is acknowledged.

Kirsten Uebittel (FWS-SDG-22B0003-22CPA0003)

2

38-2

2. Provide transportation investments that support compact land development patterns and reduce sprawl.
3. Meet greenhouse gas emissions targets established for the San Diego region by the California Air Resources Board (CARB) and the SANDAG Board of Directors.
4. Provide transportation investments and land use patterns that promote social equity.
5. Provide transportation investments and land use patterns that reduce vehicle miles traveled and improve air quality.
6. Provide multi-modal access to employment centers and key destinations for all communities.
7. Enhance the efficiency of the transportation network for moving people and goods through the deployment of new technologies.

As required by Senate Bill (SB) 375, the regional transportation plan includes an SCS intended to align regional transportation, housing, and land use planning to attain regional greenhouse gas (GHG) emission reductions from passenger vehicle use established by the CARB. The Plan would implement the "5 Big Moves," which consists of Complete Corridors, Transit Leap, Mobility Hubs, Flexible Fleets, and Next Operating System throughout the 11 Major Travel Corridors in the San Diego region: South Bay to Sorrento; Central Mobility Hub; State Route 125 (SR 125); Interstate 15 (I-15); Interstate 5 (I-5) North Coast Corridor; State Route 94 (SR 94); Interstate 8 (I-8); Coast, Canyons, and Trails; State Route 56 (SR 56); San Vicente; and North County.

**Service Comments**

We offer the following comments on the Draft EIR to assist SANDAG in avoiding and minimizing the Plan's potential impacts on sensitive resources:

**General Comments**

38-3

1. San Diego Association of Government has been a leader in the development and implementation of regional HCPs in San Diego County. The Plan is an opportunity for SANDAG to continue in that leadership role by supporting the completion of the remaining habitat conservation plans and the establishment of regional funding to support implementation of those plans. Appendix AA of the Plan outlines the Regional Habitat Conservation Vision for the County, including the need for regional funding. As stated in this appendix, the need was estimated to be approximately \$3.0 billion in 2011. The current plan (Appendix A, Table 17) includes \$565 million for nature-based climate solutions which may provide some funding for implementation tasks associated with the regional HCPs. However, there are few details included in Appendix B that describe how and what this funding will be used; therefore, it is difficult to evaluate how this measure might contribute to the regional need. Furthermore, the Plan only addresses a portion of the estimated \$3.0 billion needed. The nature-based climate

**RESPONSE TO COMMENT 38-3**

As an initial matter, this comment relates to the content of the proposed Plan, not the Draft EIR.

Appendix AA of the proposed Plan describes the history and status of the HCPs within the region. Each local jurisdiction that signed an Implementing Agreement for their HCP was granted "take" authorization for impacts on endangered and threatened species. The local jurisdiction's commitment was to fund the local costs for acquisitions, management, and monitoring. Funds to cover these local costs will be raised on a regional or plan area basis as outlined in the Implementing Agreements.

The transportation network and the land use pattern proposed in the SCS do not impact the ability of the local jurisdictions to seek a regional funding source, and therefore there is no impact under CEQA and no required mitigation. SANDAG will continue its existing grant programs, partner with member agencies on State funding opportunities, and provide data and technical support to assist local jurisdictions with land use planning efforts in line with the proposed Plan. To meet the region's habitat conservation goals, the proposed Plan identifies approximately \$3 billion for habitat-related efforts. This includes \$2,087 million for an enhanced habitat conservation, management, and monitoring program (see Land Use and Habitat programs in Appendix B of the proposed Plan), a \$565 million Nature-Based Climate Solutions Program that will promote both habitat conservation and restoration and carbon sequestration (see Climate Adaptation and Resilience programs in Appendix B of the proposed Plan and mitigation measure GHG-5c in Section 4.8 of the EIR), and \$300 to \$500 million of land acquisition and restoration for habitat mitigation of transportation projects (incorporated in project costs presented in Appendix A of the proposed Plan)..

Kirsten Uchitel (FWS-SDG-22B0003-22CPA0003)

3

- 38-3 cont. solutions mentioned in Appendix B should be linked to the Regional Habitat Conservation Vision described in Appendix AA. We recommend that the Plan be updated to include a sixth “big move” that addresses completion and funding of San Diego’s regional HCPs, including incentives for jurisdictions to complete their HCPs and a commitment to address the full need for regional funding. These actions would help offset cumulative impacts associated with urban development including the associated transportation projects outlined in the Plan.
- 38-4 2. We recommend that the Draft EIR include an analysis of the potential effects to all the regional HCPs, not just the permitted plans. The conservation design (i.e., preserves and habitat linkages) has been completed for all of the Natural Community Conservation Planning Program (NCCP)/HCPs throughout San Diego County.
- 38-5 3. We recommend that the Draft EIR address how the proposed lane management changes, including any tolled express lane options, will affect Vehicle Miles of Travel (VMT) and include a discussion of how the proposed move to managed lanes is consistent with updated CEQA guidelines pursuant to SB 743.
- 38-6 4. Please note that the proposed Otay Ranch amendment to the South County Multiple Species Conservation Program (MSCP) has been withdrawn and should be removed from the text and impacts analysis in the Draft EIR.
- 38-7 5. The Plan includes a network of off-street bikeways and trail alignments, many of which are located along riparian areas and wildlife movement corridors. Recreational activity has been associated with shifts in the composition of natural communities from native to nonnative species, declines in the distribution and density of native wildlife species (Reed and Merelender 2008), reduction in the diversity and abundance of wildlife species (Banks and Bryant 2007), reduction in the density and diversity of bird communities (Szaro 1980; Blakesley and Reese 1988), alterations in the spatial and temporal use of habitat by wildlife (George and Crooks 2006; Cardoni *et al.* 2008), increases in the vigilance and flight of wildlife (Taylor and Knight 2003), and increases in the measured physiological stress response of wildlife (Arlettaz *et al.* 2007). We request that the plan conduct a thorough analysis of impacts to wildlife connectivity and address how the plan will provide for the movement of wildlife in response to global climate change and prevent habitat fragmentation resulting from these trail alignments.
- Specific Comments*
- 38-8 1. We have the following comments regarding Figures 2-33 and 2-34 (2035 and 2050 Transit Network):
- a. Figure 2-34 (2050 Transit Network) includes a depiction of a single California High Speed Rail alignment. We recommend that alternative alignments be identified for the California High Speed Rail project that further avoid and minimize impacts to sensitive biological resources and to regional HCP planning efforts. In North San Diego County, the alignment along I-15 has the potential to significantly impact

**RESPONSE TO COMMENT 38-4**

The EIR addresses draft NCCP Subarea Plans and any updates to these plans when the respective jurisdiction implements the Draft Subarea Plan through ordinances, planning guidelines, or local directives, or when there are signed agreements between the jurisdiction and the Wildlife Agencies (i.e., for the North County and East County MSCPs). However, the CEQA analysis only considers adopted HCPs pursuant to CEQA guidance (see CEQA Guidelines question IV.e and Section 15125(d)(e)) and the criteria identified in the EIR. The word “approved” has been changed to “adopted” throughout the document when referencing NCCPs and HCPs. (See *Chaparral Greens v. City of Chula Vista* (1996) 50 Cal.App.4th 1134.).

**RESPONSE TO COMMENT 38-5**

The tolling lanes and Managed Lanes included in the proposed Plan were coded into SANDAG’s ABM2+, which was the main tool used to conduct the VMT analysis and identify VMT-related impacts under Threshold TRA-2. As such, the effects of the proposed tolling lanes and Managed Lanes were accounted for in the VMT impact analysis of the proposed Plan, as shown in Tables 4.16-6, 4.16-10, and 4.16-14. Please note that the Draft EIR provides a programmatic analysis of the proposed Plan and is only intended to evaluate the impacts of the proposed Plan as a whole. The Draft EIR does not analyze the effect of individual improvements or specific changes to the region’s transportation network and/or land uses patterns. Subsequent project-level CEQA analysis will be required to isolate and identify the impacts associated with the individual components of the proposed Plan prior to their implementation.

It should be noted that measure RTP-1 of the California Air Pollution Control Officers Association (CAPCOA) *Quantifying Green House Gas Mitigation Measures, August 2010* identifies that the implementation of cordon pricing and/or tolling to get in and out of central business districts can reduce VMT by a magnitude of 7.9–22.0 percent. The determination of the specific percentage can vary from location to location based on factors such as pricing levels and the associated levels of congestion. As noted previously, this level of analysis was included within the ABM2+ results and was therefore accounted for within the

VMT analysis conducted for the proposed Plan; however, the VMT reductions were not calculated for individual facilities.

Finally, as identified under Threshold TRA-2, implementation of the proposed Plan will result in a conflict and/or is inconsistent with CEQA Guidelines Section 15064.3 by not achieving the substantial VMT reductions needed to help achieve statewide GHG reduction goals. As such, the Draft EIR discloses that implementation of the proposed tolling lanes and Managed Lanes, in conjunction with the implementation of rest of the proposed Plan, would result in a significant impact.

**RESPONSE TO COMMENT 38-6**

The references to the Otay Ranch and Quino checkerspot amendments have been removed from the Final EIR.

**RESPONSE TO COMMENT 38-7**

The EIR is a programmatic document that assesses projects on a large scale. Threshold BIO-3 in Section 4.4, *Biological Resources*, addresses impacts on wildlife movement corridors on a programmatic level based on best available data. The implementation of projects under the proposed Plan will require subsequent CEQA review, and the effects of an individual project on wildlife movement corridors, including the potential for habitat fragmentation, will be analyzed in the project-specific CEQA document.

**RESPONSE TO COMMENT 38-8**

The California High Speed Rail project has been added to Appendix A of the proposed Plan, and SANDAG will track its progress as it is developed by the State; however, it is not a project that would be designed or constructed by SANDAG or other entities within the region. Regarding specific project-level impacts (e.g., Commuter Rail), the proposed Plan is a high-level, programmatic document. Specific details regarding impacts and mitigation are not known at this time but will be covered when future projects go through project-level environmental review.

	Kirsten Uchitel (FWS-SDG-22B0003-22CPA0003)	4
38-8 cont.	<p>the Pre-approved Mitigation Area (PAMA) of the draft North County MSCP, as well as designated critical habitat for the coastal California gnatcatcher. The PAMA in this area forms "stepping stones" of habitat for the gnatcatcher along I-15 to connect populations of gnatcatchers in San Diego County to populations in Riverside County. Farther south, the alignment appears to pass through the Carroll Canyon and Rose Canyon areas. We recommend avoiding impacts to wildlife connectivity in these areas, as well as federally endangered willowy monardella [<i>Monardella viminea</i> (<i>M. linoides</i> subsp. v)], federally threatened coastal California gnatcatcher [<i>Polioptila californica californica</i>; gnatcatcher], vernal pool habitat and associated species, and the Multi-Habitat Planning Area (MHPA) of the MSCP.</p>	
38-9	<p>b. Figures 2-33 and 2-34 include new additions to the existing Commuter Rail alignments, including a new line that travels between Sorrento Valley, La Jolla, Kearny Mesa, Mission Valley, City Heights, and National City. We recommend that SANDAG design the proposed new alignment to avoid natural resources and the MHPA to the maximum extent practicable, and preferably remain within existing highway corridors.</p>	
38-10	<p>c. Figure 2-34 appears to show the proposed "Miramar Tunnel," but also removes the existing railroad alignment known as the "Miramar Curve" between Sorrento Valley, Miramar, and Rose Canyon. It is our understanding that the Miramar Tunnel alternative would not necessarily allow for the removal of the Miramar Curve alignment.</p>	
38-11	<p>d. Figure 2-34 appears to show the railroad shifting slightly inland of the existing alignment for the Del Mar Tunnel north of where it passes through Los Peñasquitos Lagoon. Under this alternative, the railroad would be double-tracked through the lagoon, which would result in significant impacts to lagoon hydrology, listed species, and sensitive habitats. It is our understanding that SANDAG is evaluating several tunnel alignment alternatives, and we strongly recommend that the other alignment alternatives be included in the figures and impacts analysis. Selection of the more inland tunnel alignments (Crest Canyon or I-5 tunnel alternatives) would result in a significant environmental benefit by allowing for the removal of the existing railroad berm from the lagoon. This alignment alternative would prevent the impacts associated with adding a second track to the existing alignment and allow for a significant improvement to lagoon hydrology and restoration of saltmarsh that supports the federally endangered light-footed Ridgway's (=clapper) rail [<i>Rallus obsoletus</i> (=longirostris) <i>levipes</i>] and other sensitive species.</p>	
38-12	<p>2. We recommend that Figure 4.4-15 (Regional Wildlife Movement Corridors) be expanded to include Multiple Habitat Conservation Program (MHCP) connectivity, specifically the gnatcatcher stepping stones through Oceanside. The description of the MHCP should be expanded to include at least the same level of detail as the MSCP. The North County linkage up I-15 should be included in Figure 4.4-15 and described in the text. There is</p>	

**RESPONSE TO COMMENT 38-9**

Regarding specific project-level impacts (e.g., Commuter Rail), the proposed Plan is a high-level, programmatic document. Specific details regarding impacts and mitigation are not known at this time but will be covered when future projects go through project-level environmental review.

**RESPONSE TO COMMENT 38-10**

The inclusion of the Miramar Tunnel is intended as a replacement of the Miramar Curve to meet future transit needs. Future use of the Miramar Curve corridor is unknown but not assumed as part of the alignment of future proposed Plan transit projects.

**RESPONSE TO COMMENT 38-11**

Specific details regarding the review of project alternatives, impacts, and mitigation of those impacts are not known at this time but will be covered when the tunnel alignment alternatives go through project-level environmental review.

**RESPONSE TO COMMENT 38-12**

The MHCP cores and linkages map has been added to Figure 4.4-16 of the Final EIR.

The Santa Ana-Palomar linkage across I-15 is also included in Figure 4.4-15 (species-specific linkage) as part of the model prepared by Jennings et al. (2020).

No GIS data exist yet for the potential Jacumba-Sierra Juarez linkage. This linkage was identified in concept by South Coast Wildlands (SCW) and The Nature Conservancy (TNC), but was never modeled. TNC is planning to model this linkage in the future as part of their Las Californias Binational Conservation effort. The model developed by Jennings et al. (2020) includes the U.S. side of the Jacumba-Sierra Juarez linkage, which is included in Figure 4.4-15 of the EIR.

	Kirsten Uchitel (FWS-SDG-22B0003-22CPA0003)	5
38-12 cont.	also a north/south linkage with Mexico near Jacumba that should be included in the figure and text.	
	3. Under the heading "Multiple Species Conservation Program" (starting on page 4.4-48), we have the following suggested edits:	
	a. On page 4.4-48, please note that the MSCP was approved in 1997 and the updated document was printed in August 1998.	
	b. We recommend revising the first sentence on page 4.4-49 as follows: "The USFWS and CDFW have issued permits (50-year permit term) to five of the nine jurisdictions within the MSCP plan boundary."	
38-13	c. On page 4.4-49, we recommend revising the second half of the paragraph as follows: "While the County is not yet implementing the North County MSCP, it has completed the conservation design and identified priority areas for conservation that are being considered in the CEQA analysis of development projects within the North County MSCP planning area. While a planning effort for the eastern portions of the San Diego region was considered by the County of San Diego in 2008, the East County MSCP planning efforts have slowed because of staffing constraints. Preliminary conservation design was been completed for this area and identified focused areas for conservation that are considered during CEQA analysis as described above for the North County."	
	d. On page 4.4-49, paragraph starting with "In March 2021:" Please note that wetland habitats are covered by all the plans, but take of certain covered species within those habitat types is not covered. Therefore, we recommend removing the third sentence in this paragraph.	
	4. We recommend the following edits to Table 4.4-5 (page 4.4-50):	
38-14	a. Please note that the Vernal Pool HCP was only permitted by the Service, not the California Department of Fish and Wildlife (CDFW). We also recommend removing the first sentence in the description of the Vernal Pool HCP, as the planning agreement is not relevant, and we recommend adding that the Vernal Pool HCP has the same plan boundaries as the City's subarea plan.	
	b. Reference to the Otay Ranch and Quino checkerspot butterfly amendments should be deleted as these proposals have been withdrawn.	
38-15	5. We recommend revising Figure 4.4-16 to show all the different planned preserve areas in one color with symbology (i.e., hatching) indicating what has already been conserved.	
38-16	6. The section entitled "San Diego Gas & Electric Subregional NCCP" (page 4.4-53) should be updated to note that the Service and CDFW are coordinating with San Diego Gas and Electric (SDG&E) on an amendment to their HCP/NCCP.	

**RESPONSE TO COMMENT 38-13**

The text has been revised as suggested; the third sentence in the paragraph starting with "In March 2021" has been removed from the Final EIR.

**RESPONSE TO COMMENT 38-14**

Table 4.4-5 has been revised as suggested in the Final EIR.

**RESPONSE TO COMMENT 38-15**

Figure 4.4-16 has been revised as suggested in the Final EIR.

**RESPONSE TO COMMENT 38-16**

The text has been revised as suggested in the Final EIR.

Kirsten Uchitel (FWS-SDG-22B0003-22CPA0003)

6

- 38-17 7. On page 4.4-62, we recommend defining “conserved” to clarify the difference between areas where impacts will be avoided vs. areas that are truly conserved with site protection instruments, management, and monitoring.
- 38-18 8. Tables 4.4-7, 4.4-8, and 4.4-9 (Estimated Direct Impacts on Vegetation Communities and Regulated Aquatic Resources within the San Diego Region) include estimated impacts to sensitive vegetation communities. Please provide a description of the types of projects that would result in such significant impacts to marsh (54.5 acres) due to regional growth and land use change by 2025.
- 38-19 9. Tables 4.4-7, 4.4-8, and 4.4-9 identify almost all the natural vegetation communities that would be impacted by the Plan, with the exception of desert dunes, desert scrub, and forest/woodland, as “sensitive vegetation communities... that may require mitigation.” It is unclear why these specific vegetation communities would be considered not sensitive or why impacts to these communities would not be offset in a manner similar to the other vegetation communities.
- 38-20 10. Figure 4.4-17 (Undeveloped to Developed Land Use Conversions) shows a large amount of development in Otay Mesa, Chula Vista, and Warner Springs. We are familiar with the proposed development projects reflected on the map for Otay Mesa and Chula Vista, which, with the exception of potential impacts to the federally endangered Quino checkerspot butterfly (*Euphydryas editha quino*), were addressed by the MSCP. But development in the Warner Springs area has not yet been addressed through a regional planning effort or other consultation or permitting processes with the Service. Because the Warner Springs area is not adjacent to urban centers and regional transportation corridors, we recommend that the Plan include a description of proposed development in this area and its consistency with the Plan’s objectives.
- 38-21 11. Under the heading “Transportation Network Improvements and Programs: Direct Impacts” for 2025 (page 4.4-68), the text references significant vegetation impacts due to the new four-lane toll road SR 11/Otay Mesa East Port of Entry (POE) from SR 125 to Mexico. This project is already under construction, and it is unclear if the resulting impacts, which were already addressed under CEQA, are included in this analysis.
- 38-22 12. BIO-1d (page 4.4-78): We recommend including consistency with the San Diego Management and Monitoring Program’s (SDMMP) Management Strategic Plan.
- 38-23 13. The analysis for BIO-2 (page 4.4-79) appears to rely on known species occurrences. Given the lack of comprehensive surveys, we recommend also conducting an analysis using modeled habitat (e.g., County of San Diego Species Models) to evaluate potential impacts to sensitive species.
- 38-24 14. The proposed mitigation measures BIO-2b and BIO-2c (page 4.4-91) are limited to species covered under approved NCCPs/HCPs. We recommend including species that would be covered under draft plans as well. We also recommend including species addressed under the County’s Resource Protection Ordinance.

**RESPONSE TO COMMENT 38-17**

The text has been revised. The following footnote has been added on Page 4.4-62:

The term “conserved” reflects the projected conservation of habitats and biological resources as identified in the HCPs. Hard-line preserves cannot be developed and impacts will be avoided. When allowed development occurs in other preserve dedications such as the PAMA, FPA, or MHPA, the conservation component required by the respective HCP will be implemented through the dedication of conservation easements or other site protection instruments that require the conservation, management, and monitoring of the conserved resources in perpetuity.

**RESPONSE TO COMMENT 38-18**

The impacts on marshes (including coastal salt marsh) occur due to land use changes as a result of regional land use changes rather than specific projects. Specifically in the City of National City, the programmatic proposed Plan footprint shows commercial development that may affect the Sweetwater and E-Street marshes. However, this is due to the programmatic nature of the footprint, which shows an approximate impact area rather than a project-specific footprint, because the project designs have not yet been developed. Project design, impact avoidance and minimization measures, and subsequent CEQA analysis will consider avoidance or mitigation of any impacts on conserved lands, sensitive coastal salt marsh habitat, and special-status species.

**RESPONSE TO COMMENT 38-19**

The County of San Diego requires mitigation for the vegetation communities included in the collapsed categories of desert dunes, desert scrub, and forest/woodland. Because all vegetation communities in Tables 4.4-7 through 4.4-9 are sensitive, in the Final EIR, the word “sensitive” has been added to vegetation communities in the table titles, and asterisks and footnotes have been removed. Any impacts on these vegetation communities would be offset based on the County’s *Report Format and Content Requirements for Biological Resources* (2010) mitigation ratios.

**RESPONSE TO COMMENT 38-20**

This comment addresses the proposed Plan and is not related to the adequacy of the Draft EIR. The SCS Land Use Pattern does not contemplate new residential development in the Warner Springs area. The area identified by the comment in and around Warner Springs contains one parcel with 15 sub-parcels. The assignment of the land use type is based on the logic of the forecast model to roll unique sub-parcel based land uses to the predominant land use at the parcel level. In this case, commercial and office use (Resort) was assigned to one of the sub-parcels, and Spaced Rural Residential was assigned to 14 sub-parcels based on the County's General Plan where these sub-parcels were designated under "Rural Lands RL-80." While the land use designation changed, no new housing units are projected for this area in the SCS Land Use Pattern.

**RESPONSE TO COMMENT 38-21**

As discussed in Chapter 4, the proposed Plan has a baseline of 2016, which is 2 years older than would be typical in past Regional Plan EIRs. In general, physical conditions as they existed in 2016 are used as the baseline for the impact analysis of this EIR, corresponding with the release of the NOP on November 14, 2016, and the start of EIR preparation. Therefore, SR 11 is included in analysis of this EIR because it was part of the 2016 baseline. The EIR provides a programmatic analysis; the CEQA document prepared for SR 11 provides more in-depth, project-specific analysis of the project's impacts and mitigation measures.

**RESPONSE TO COMMENT 38-22**

The following text has been added to the Final EIR on page 4.4-79:

The management plans can and should be consistent with the SDMMMP MSP (SDMMMP 2017), and describe management in perpetuity....

**RESPONSE TO COMMENT 38-23**

Modeled habitat for sensitive species has been added to and included in the analysis in the Final EIR, and has also been added to EIR Appendix E-7, Table E-7-6.

**RESPONSE TO COMMENT 38-24**

Please see response to comment USFWS 38-4.

Reference to the County's Resource Protection Ordinance has been added to mitigation measures BIO-2b and BIO-2c in the Final EIR.

Kirsten Uebitel (FWS-SDG-22B0003-22CPA0003)

7

- 38-25 | 15. Under the heading “Impact Analysis; 2025; Regional Growth and Land Use Change; Direct Impacts” (page 4.4-97), the text indicates that the corridors identified by the Las Californias Binational Conservation Initiative between the United States and Mexico would not be significantly impacted by regional growth and land use change. We recommend clarifying whether solar and wind power development projects, which may be needed to support urban development, are included in the scope of this plan.
- 38-26 | 16. The MCSP linkages are included in Table 4.4-13, 4.4-14, and 4.4-15 (Forecasted Encroachments Into Wildlife Movement Corridors and Linkages within the San Diego Region), but the other subarea plans are not included. We recommend including the linkages for the other subarea plans as well.
- 38-27 | 17. Table 4.4-16 (page 4.4-108); We recommend including the other permitted jurisdictions under the MSCP, as well as the draft preserves for North and East County.
- 38-28 | 18. Appendix E-4 (page E-58) includes the Vernal Pool HCP as a draft plan. However, it has been approved and permitted as noted in the text. In addition, the boundaries of the North County and East County plans have been updated. Please contact the County of San Diego for additional information.

We appreciate the opportunity to comment on the Draft EIR. If you have any questions regarding this letter, please contact Lauren Kershek<sup>1</sup> or Sally Brown<sup>2</sup>.

Sincerely,

**JONATHAN  
SNYDER**  
Jonathan D. Snyder  
Assistant Field Supervisor  
U.S. Fish and Wildlife Service

<sup>1</sup> Lauren\_Kershek@fws.gov

<sup>2</sup> Sally\_Brown@fws.gov

**RESPONSE TO COMMENT 38-25**

Solar and wind power developments are future land uses to be approved by the local jurisdictions and would be addressed on a project-specific CEQA level; project-specific analysis would evaluate impacts on wildlife movement corridors and consistency with Habitat Conservation Programs and Plans.

**RESPONSE TO COMMENT 38-26**

Wildlife Movement Corridors and Linkages were identified in the umbrella MSCP and MHCP documents and were adopted by the subarea plans; ergo, the subarea plan cores and linkages are the same as those identified in the umbrella documents. Table 4.4-15 has been revised to add the MHCP core and linkage areas (BCLA) in the Final EIR.

**RESPONSE TO COMMENT 38-27**

The permitted jurisdictions with preserves that were not included in the South County MSCP and City of San Diego MHPA, the MHCP (FPA/BCLA) and Chula Vista MSCP Preserves, have been added to Tables 4.4-16, 4.4-17, and 4.4-18. The other approved jurisdiction’s preserve designs were captured by the MSCP preserves. Because the EIR only addresses approved NCCPs (see response to comment USFWS 38-4), the Draft North and East County MSCPs are not evaluated in this document.

**RESPONSE TO COMMENT 38-28**

Appendix E-4 of the EIR has been revised to remove the Vernal Pool HCP since it has been approved. Please also see response to comment USFWS 38-4.

Kirsten Uchitel (FWS-SDG-22B0003-22CPA0003)

**COMMENT LETTER 39: KARIN ZIRK**

Comment Letter 39

From: "Karin Zirk, Ph.D." <[me@karinzirk.com](mailto:me@karinzirk.com)>  
 Date: October 10, 2021 at 10:27:19 AM PDT  
 To: Denise Friedman <[denisewfriedman@icloud.com](mailto:denisewfriedman@icloud.com)>, [derekstattin@hotmail.com](mailto:derekstattin@hotmail.com)  
 Subject: RE: Sponsor Save Marian Bear Park  
 Reply-To: [me@karinzirk.com](mailto:me@karinzirk.com)

39-1 [ SANDAG is proposing increasing the number of lands on Hwy 52 which will gobble up some of Marian Bear Park. Plus they want to have designated carpool connector lanes from I-5 and I-805 to Hwy 52 which will further encroach on the park and end up destroying more oaks, sycamores and upland habitat.

39-2 [ You can find the petition at <https://www.change.org/p/save-marian-bear-park>

Warmly,

Karin Zirk, Ph.D. (she/her/hers)  
 Executive Director  
 Friends of Rose Creek  
 \*\*\* Connecting Our Communities \*\*\*  
<http://www.saverosecreek.org>

**RESPONSE TO COMMENT 39-1**

This is a comment on the content of the proposed Plan, and does not raise issues on the adequacy of the Draft EIR. The impacts of the proposed Plan on recreational facilities are discussed in Section 4.15 of the EIR.

The proposed Plan includes freeway improvements along I-5 and implementation of the Coastal Rail Trail in this area for the 2035 horizon. In addition, the SR 52 bikeway from I-5 to Santo Road would impact Marian Bear Memorial Park. Although SANDAG appreciates the concerns expressed in this comment, the improvements are required to accommodate planned population growth and related transportation improvements identified in the proposed Plan.

The implementation of projects under the proposed Plan will require subsequent CEQA review, and the project-specific impacts and mitigation measures will be identified in that subsequent CEQA document, including the implementation of mitigation measures identified in Section 4.4, *Biological Resources*, of the EIR.

**RESPONSE TO COMMENT 39-2**

Please see response to comment Zirk 39-1 above. The implementation of projects under the proposed Plan will require subsequent CEQA review, and the project-specific impacts and mitigation measures will be identified in that subsequent CEQA document.

**COMMENT LETTER 40: UNIDENTIFIED WEB COMMENT**

Comment Letter 40

**Commenter:** Not Provided  
**Agency:** Not Provided  
**Contact Information:** Not Provided  
**Date Received:** 9/17/2021  
**Comment:**

- 40-1 | The EIR should consider a net-zero GHG emission alternative within the confines of current feasibility. Another alternative could be to maximize GHG emission reductions using expected levels of funding.
- 40-2 | The EIR should also consider the regional plan's consistency with agency's mode share targets using modeled mode share for the regional plan as compared to the mode share targets. For example, the City of San Diego sets specific mode share targets for transit by 2035 within transit priority areas. The regional plan should be consistent with these mode share targets or at least expressly discuss the inconsistency within the EIR.

**RESPONSE TO COMMENT 40-1**

As the Draft EIR explains (page 6-1), SANDAG considered public input provided during the EIR scoping process, and used this input to develop the reasonable range of alternatives. Public input requested alternatives that reduce GHG emissions, air quality impacts, and VMT. The alternatives selected for detailed consideration incorporate many of the major transportation investments and policy options that commenters suggested.

As of July 2021, the State has yet to develop or adopt an overarching plan that provides the framework for how California will achieve carbon neutrality by 2045. It is anticipated that achieving this goal would require a combination of GHG emissions reduction and GHG emissions removal strategies; however, it is unknown at this time what combination of reduction and removal strategies will be pursued in California to achieve this goal.

Many features currently included in the proposed Plan (e.g., the SCS, increased transit, and active transportation investments) have the effect of reducing GHG emissions that might otherwise occur. Mitigation measures presented in this EIR are additional feasible GHG reduction measures not included in the proposed Plan that SANDAG would or other agencies could implement.

SANDAG has direct responsibility for planning for achieving passenger vehicle GHG reduction targets through the development and implementation of an SCS pursuant to SB 375. The proposed Plan includes an SCS and demonstrates that, if the proposed Plan is implemented, the San Diego region would achieve its SB 375 target for 2035. Analysis performed by SANDAG and included in the SCS documentation for the proposed Plan demonstrates that the San Diego region has achieved its SB 375 target for 2020 (Appendix H of this EIR).

In addition, the proposed Plan incorporates several demand management strategies such as teleworking, private pooling programs, vanpool programs, carshare programs, and transit fare subsidies. The land use strategy in the proposed Plan consists of the SCS land use pattern, which considers jobs-housing balance, mixing of uses, and

transit-oriented development. Please see Section 4.8 for more information about these strategies.

Please see Master Response 1 for further explanations why the EIR did not consider a “net zero emissions alternative” in detail. Similar reasons explain why an alternative that maximizes GHG emission reductions using expected levels of funding was not considered in detail.

**RESPONSE TO COMMENT 40-2**

SANDAG’s ABM2+ estimates the mode shift performance of the proposed plan. The mode share estimates from ABM2+ are reported for the entire region.

Data on mode share is provide in Appendix T, Table T6.2 of the proposed Plan. Other agencies’ mode share targets are specific to their plans. For the City of San Diego, the City’s climate action plan acknowledges that additional strategies must be implemented in addition to the proposed Plan to achieve the City’s mode share targets.

Section 4.16, *Transportation*, discussed mode share. Because the proposed Plan identifies and proposes transportation network improvements at a regional level,

plan consistency was reviewed against other regional plans and policies. (Draft EIR page 4.16-30.) Consistency with specific local plans regarding mode share targets would be done on a project level.

## COMMENT LETTER 41: UNIDENTIFIED WEB COMMENT

Comment Letter 42

**Commenter:** Bruce Higgins  
**Agency:** Retired  
**Contact Information:** brucehiggins1253@gmail.com  
**Date Received:** 8/28/2021  
**Comment:**

42-1 This is the wrong plan for the San Diego region. It focuses on spending \$ Billions on rail that is not currently used by the population. The existing rail system is slow, is inconvenient, and runs at the wrong times. There are major problems with the routing. This so called plan envisions new routing but does not address how that would happen. It also calls for instituting a plan of per mile charges for force people on the the rail system. That appears to be illegal on its face. It will also call for managing were people are allowed to live so that they can access the inconvenient transportation system. Such a plan is completely backwards of how transportation should work.

42-2 The sponsoring agency SANDAG has zero credibility with the voters as they have admitted fraud with the last series of bond issues. As a result the chances of the bond plan passing to fund their grand plan is very small. Most of this work will therefore be wasted.

It is evident that SANDAG and it's manager intend to push this White Elephant through to a vote. When it is defeated, fire Mr. Ikhtrata, and start over. Construct a new plan that is responsive to the region and the actual needs of the population.

**RESPONSE TO COMMENT 42-1**

Thank you for your comments and consideration of the proposed Plan. This Plan has been carefully researched and tailored to be specific to the unique challenges, land uses, resources and communities of the San Diego region.

As an initial matter, this comment relates to the contents of the proposed Plan, not the analysis within the Draft EIR.

Regarding “new routing,” the EIR prepared for the proposed Plan is a first-tier Program EIR. “Second-tier projects” that would implement the proposed Plan include site-specific transportation network improvements and development projects. For subsequent project activities, a site-specific environmental review would be the responsibility of the implementing agency prior to project implementation.

The Vision of the proposed Plan is “A fast, fair, and clean transportation system and a resilient region.” The proposed Plan sets three primary goals to achieve this Vision:

- The efficient movement of people and goods.
- Access to affordable, reliable, and safe mobility options.
- Healthier air and reduced GHG.

The general concept for the proposed Plan was informed significantly by early work on the 2019 Regional Plan, which led to the 2019 Federal RTP. This work included a four-phased approach: concept development, network development, network refinement, and transportation system validation. Additional information about the four phases can be found in Appendix T of the proposed Plan.

Based on regional travel data, SANDAG identified critical regional nodes for travel connections for trips taken to and from the top 15 employment centers in San Diego County. See Section 2.2.1, *Development of the Proposed Plan: A Data Driven Process*, of this EIR for more information about these areas and elements.

In addition, the proposed Plan incorporates several demand management strategies such as teleworking, private pooling programs, vanpool programs, carshare programs, and transit fare subsidies. The land use strategy in the proposed Plan consists of the SCS land use

pattern, which considers jobs-housing balance, mixing of uses, and transit-oriented development. Please see Section 4.8 for more information about these strategies.

SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and GHG emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.

The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those driving fuel-powered vehicles, are paying more than their fair share.

**RESPONSE TO COMMENT 42-2**

This comment is not related to the adequacy of the Draft EIR, or the contents of the proposed Plan, and no further response is given.

**COMMENT LETTER 43: BRENT TANNER**

Comment Letter 43

**Commenter:** Brent Tanner  
**Agency:** Aggregate Technologies  
**Contact Information:** btannerr@gmail.com  
**Date Received:** 9/30/2021  
**Comment:**

43-1

URGENT REQUEST: Environmental Review  
 Dear SANDAG and respected SANDAG counsel commissioners,  
 My name is Brent Tanner. As the owner of a large development (a 620 unit project currently under construction) in your area, I'm very grateful for San Diego County's past and current efforts at environmental stewardship. However, I do have some concerns going forward, specifically regarding the environmental impact of concrete, and I believe a review of the most recent developments in materials science and environmentally friendly concrete offers great potential for enhancing San Diego County's efforts at minimizing its carbon footprint.

The natural process for producing Portland cement, the main reactive component in concrete, is among the most carbon-unfriendly of all essential materials, with approximately one ton of CO2 released for every one ton of cement made. That becomes very significant when you consider the vast infrastructure applications of concrete in modern life. The environmental cost of traditional concrete becomes difficult to avoid because of the basic chemistry of one of its primary components: limestone plus heat equals calcium oxide plus carbon dioxide. But what if there was an alternative?

Recent innovations in particle-size optimized cement means we can produce concrete that uses 25% less Portland cement<sup>1</sup> which means a 25% lower carbon footprint per cubic yard of concrete poured. Not only that, this concrete product resists salt, chloride, and other elements far better than traditional concrete because it incorporates limestone powder and other mineral fillers<sup>1</sup> to create cement paste which has a higher solids density and reduced porosity, which creates superior salt resistance and durability. That means it's longer-lasting, and that means you save cost and reduce carbon over the long haul.

Why should San Diego lead the way on environmentally-green (or "reduced carbon") cement? Because it's an opportunity to create an impact across the country and across government and business. More than half of all cement is purchased by government entities. Think road projects, bridges, airports, hydroelectric dams. So, where the government leads, everyone else follows. When reduced carbon concrete becomes the standard in your county, for at-or-near the cost of traditional solutions, you'll become recognized as the leaders in green concrete use, and you will inspire others to follow suit.

Bill Gates has indicated that he believes green concrete would cost 243% more than traditional concrete, but it can in fact be produced for around the same price because the cost of mineral fillers should be the same or less than the cost of Portland cement they partially replace. But even if that were not so, it would still be worth paying a small premium for the meaningful environmental benefits.

<sup>1</sup> Covered by ACI 211.7R-15 "Guide for Proportioning Concrete Mixtures with Ground Limestone and Other Mineral Fillers" also covered by ASTM C1797-17 "Standard Specification for Ground Calcium Carbonate and Aggregate Mineral Fillers for use in Hydraulic Cement Concrete".

1

**RESPONSE TO COMMENT 43-1**

As an initial matter, this comment relates to the proposed Plan and does not address the adequacy of the Draft EIR. The potential use of low carbon concrete is discussed in Section 4.8 of the Draft EIR and is incorporated into mitigation measure GHG-5e: "Implement sustainable construction measures through construction bid specifications, including. . . [u]se lighter-colored pavement, binding agents that are less GHG-intensive than Portland cement, and less-GHG intensive asphalt pavements" (page 4.8-50).

43-1  
cont.

San Diego needs more efficient concrete. With the availability of green concrete that uses 25% less Portland cement, therefore producing concrete with 25% lower carbon footprint and reduced environmental impact, it becomes clear that your imperative is to explore securing a procurement that meets this new, attainable goal. Such a procurement would align well with SANDAG's Sustainable Communities Strategy (SCS).  
This innovation is the direction the concrete industry is headed...wouldn't San Diego rather be leading than following? Please contact me immediately to discuss how using green concrete can begin making a significant difference for San Diego and for the whole country.

Best Regards,  
Brent R. Tanner

**COMMENT LETTER 44: CRAIG FORMAN**

Comment Letter 44

**Commenter:** Craig Forman  
**Agency:** Not Provided  
**Contact Information:** craigforman@live.com  
**Date Received:** 8/28/2021  
**Comment:**

44-1 [ Unsure where to leave this comment. An increase in the sales tax to pay for improvements is regressive and (a) will force lower income individuals into less populated areas of the county with less expensive rents but less public transportation and (b) affect retired and unemployed individuals. Maybe suggest a greater sharing % of the exploding property tax assessments which will not increase taxes, just allocate more of it to public transportation?

**RESPONSE TO COMMENT 44-1**

As an initial matter, this comment relates to the proposed Plan, and not the Draft EIR.

The funding strategy for the proposed Plan includes over 30 different funding sources, including local sales tax revenue and property taxes from an Enhanced Infrastructure Financing District (EIFD) surrounding the Central Mobility Hub project. An EIFD works by diverting future increases in property tax revenues that will result from the project due to the increasing property values.

## COMMENT LETTER 45: JOHN WOTZKA

Comment Letter 45

**Date Received:** 8/31/2021

**Comment:**

45-1

Hope you are keeping up with the developments in Floating Offshore Wind coming into the area and the jobs that will be created with this technology for ports and renewable energy manufactures. Examples are being shown on the East Coast too including the Great Lakes. There are endless examples of both of these technologies in Europe, Asia and most parts the rest of the World. The U.S. is behind but will adjust to what it will need. High Speed Rail is another area where there will be jobs the long term future and it will improve the health of the people of California with cleaner air and many jobs for the manufacture of the HSR systems.

### RESPONSE TO COMMENT 45-1

Thank you for your comments and consideration of the proposed Plan. This comment does not appear to be a comment about the content or analysis of the Draft EIR or the proposed Plan, and as such no response is required.

**Contact Information:** jpf.morpheus@gmail.com  
**Date Received:** 8/28/2021  
**Comment:**

46-1 | I have reviewed the executive summary and concur with its priorities. We must reduce vehicle miles traveled, and attendant emissions. Public transportation infrastructure and housing development patterns that eliminate sprawl, enhance compact business/residential access, and reduce GHG emissions are essential for our future, sooner rather than later. It is very difficult to 'retrofit' after a long history of laissez faire development policy. But, we must begin.

**RESPONSE TO COMMENT 46-1**

Thank you for your comments and consideration of the proposed Plan.  
Thank you for your support.

**COMMENT LETTER 47: CRAIG NELSON**

Comment Letter 47

**Comment:**

47-1 Every bus I see is EMPTY , you will never get people of SD to ride the inefficient , nasty slow bus. Period. I dare you to publish the actual %23 of riders per mile driven. It would be cheaper and better on the environment if you bought every single side a Prius vs. driving empty buses around in circles. DUMP IKY

**RESPONSE TO COMMENT 47-1**

Thank you for your comments and consideration of the proposed Plan.

As shown in Section 4.16, *Transportation*, of the EIR, there is currently an average of 257,891 daily transit trips (page 4.16-32). The number of trips is projected to increase to 416,061 in 2025, to 805,642 in 2035, and to 944,876 in 2050. Transit Mode Share would increase from 1.7 percent in 2016 to 5.6 percent in 2050 (Draft EIR page 4.16-41).

**Comment:**

48-1 | Charging people to drive per mile is completely ridiculous and we will vote against it and vote you out of office

**RESPONSE TO COMMENT 48-1**

As an initial matter, this comment relates to the proposed Plan, and not the Draft EIR.

The proposed Plan incorporates a variety of value pricing and user strategies as tools to improve mobility by encouraging changes in travel behaviors while generating revenue to address the region's aging infrastructure and expand travel options. Specifically, the proposed Plan explores a network of Managed Lanes, a mileage-based road usage charge, a fee on the fares charged for rides provided by Transportation Network Companies, and further subsidization of transit fares.

Strategies such as these are in different phases of planning, design, pilot, and deployment in different areas of the region and are also being explored at the State and federal level. SANDAG will rely on coordination with the other MPOs in California along with Caltrans to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers. Meanwhile, the design of these strategies, such as the fee structure and distribution of revenue, should be specifically developed for the San Diego region's unique environment and priorities.

SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.

The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed

program that will ensure that no particular group, such as those driving fuel-powered vehicles, are paying more than their fair share.

49-1 I would like to receive info about expanding NCTD Transit options to Miracosta

**RESPONSE TO COMMENT 49-1**

Thank you for your comments and consideration of the proposed Plan. The proposed Plan includes Rapid 477, which would run from Carlsbad Village to SR 76 via College Boulevard and would serve Mira Costa College. In addition, the Plan proposes Flexible Fleets as a variety of on-demand services that could offer mobility options for Mira Costa College.

**Comment:**

51-1

Route 52 should not be expanded to more lanes. Use the money for public transit and making it easier and cheaper for people to use Public Transportation. We are in a climate crisis which means that we need to sequester carbon, not to add more to the planet

### RESPONSE TO COMMENT 51-1

As an initial matter, this comment relates to the proposed Plan, and not the Draft EIR. It will be considered by the SANDAG Board of Directors when it considers approval of the proposed Plan.

Also note that, as included under mitigation measure GHG-5c in Section 4.8, SANDAG shall implement, or provide funding to implement, projects that restore or enhance native habitats to increase rates of carbon sequestration over baseline conditions.

## San Diego Forward: Draft 2021 Regional Plan Public Comments and Responses

San Diego Forward: The Draft 2021 Regional Plan (2021 Regional Plan) was released for public review and comment on May 28, 2021. The public comment period concluded on August 6, 2021. Comments were submitted via the [SDForward.com](https://www.sdfwd.com) website, email, voicemail, public meetings hosted by SANDAG, and letters (via email and mail).

SANDAG promoted the public comment period via community presentations, websites, social media, radio, email updates, and newspaper notices. Public notices were published in English and Spanish, and in additional languages by request. During the public comment period, SANDAG held a series of public meetings as opportunities for community members to learn more and voice their comments on the draft 2021 Regional Plan. In June, SANDAG coordinated six virtual open houses which each focused on one of the region's subregions. Two virtual public hearings were held in July. After several months of public outreach, SANDAG garnered more than 17 million impressions and received 1,431 public comments on the draft 2021 Regional Plan. The following attachments include all public comments received during the public comment period<sup>1</sup> and the corresponding responses from SANDAG. Comments are separated into tables by source.

1. Attachment 7A: Website-Sourced Public Comments and Responses
2. Attachment 7B: Email-Sourced Public Comments and Responses
3. Attachment 7C: Voicemail-Sourced Public Comments and Responses
4. Attachment 7D: Public-Meeting-Sourced Public Comments and Responses
5. Attachment 7E: Letter-Sourced Public Comments and Responses

---

<sup>1</sup> Comments received after the close of the public comment period on August 6, 2021, were still recorded and will be responded to. These responses will be included as an item attachment in the SANDAG Board of Directors December 10, 2021, meeting agenda.

# Appendix G Attachment 7A: Website-Sourced Public Comments and Responses

The table below contains all comments received through the online form that was available on [SDForward.com](http://SDForward.com) during the public comment period for the draft 2021 Regional Plan. Comments and corresponding responses are sorted by commentor name, if provided, in alphabetical order.

Draft 2021 Regional Plan Responses to Comments – Website Sourced				
ID	Commentor Name	Agency	Comment	Response
W1	Abdulla Gagy	El Cajon Collaborative/ Barrio Logan College Institute Parent Arabic	We want to be sure that this will not compete with Uber, Lyft and taxis. Many of our refugees are drivers to support their families and use it as extra income since they don't make very much money. This is a wonderful way for people to get where they need to go with someone who speaks their language that they are comfortable with. Thank you for keeping the ride sharing programs and increasing them.	SANDAG intends to design and launch Flexible Fleet services that provide greater mobility choices and improve quality of life in the San Diego region.
W2	Abraham Navarrete	National Latino Research Center	I participated in the NLRC Youth Empowerment info session. I think we can include our public transportation system by including Roundabouts-Improves traffic flow, supports community. I like the idea of the big 5 moves, however, I am concerned on how this will be accomplish. Sounds to go to be true.	The 2021 Regional Plan includes funding for complete streets improvements in Mobility Hub areas, which could support the design and implementation of roundabouts. Appendix B describes the near-term and continuing actions to implement the Regional Plan.
W3	Abraham Navarrete	National Latino Research Center	I participated in a community youth talk with the NLRC to learn about the regional plan. One of my concerns is safety, in this plan it should include more safety figures. For example, there should be like a guard walking around to make buses safe, two people. I think that we should have implemented this plan earlier (why are we so late to do so?) because we youth rely on public transportation and it needs improvements.	SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements.
W4	Abraham Navarrete	National Latino Research Center	I learned about this plan in our summer program with the YEP team at the NLRC. I use public transportation such as the bus. The bus is down the street from my house, and it takes me 5-10 minutes to get to school-middle school. I really like this plan, however, I have a concern on navigating this new system and the technology-I feel that I might get lost.	SANDAG understands your concern. Our primary goal is for technology to make transportation easier and better for people. When new technologies are planned and designed, we will seek extensive input from the public to ensure that these solutions are user friendly and make it easier for all people to access and use transportation information and services.
W5	Abraham Navarrete	National Latino Research Center	I was able to learn about the plan in our YEP class with NLRC. My biggest concern with this plan is safety. I feel like young girls sometimes feel unsafe, especially if they're alone. How is safety being implemented? We need safety for youth as we rely on transportation to get to school or other places.	SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements. SANDAG will be working hard with the help of all of our passengers and representatives to ensure that this plan gets implemented.
W6	Abraham Navarrete	National Latino Research Center	I was able to learn about the plan in our Thursday youth class with the NLRC. I think the plan is a good starting point. Many options for us to travel to places. I think the plan is good for the environment (it will reduce pollution). Also, I think we can improve system and make sure we are accountable to keep them clean/ cleaner.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W7	Abraham Navarrete	National Latino Research Center	I was able to learn about the regional plan in our Friday summer class with YEP. I like the 2021 Regional Plan, it is very interesting but it feels unrealistic, it will need so much time to get there.	Thank you for your comment and support for the 2021 Regional Plan. Implementation of the plan will take place over 30 years. Appendix B describes the near-term and continuing actions to implement the plan.
W8	Abraham Navarrete	National Latino Research Center	I like the Mobility Hub interesting idea.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W9	Abraham Navarrete	National Latino Research Center	I used to take public transportation when I went to CSUSM. I have a car now which at the moment is more reliable then our public transportation. I believes there is a need for a drastic change in our current system. At the moment we have a big issue with public transportation is travel time. From experience I know that if the bus is 1- or 5-minutes late people lose that other form of transportation, the other connecting bus because they would leave, and this causes people to wait for the next one making them late (for work/ school/ etc.). Not reliable.	The Regional Plan includes new services which will operate at higher speeds then traditional transit. Commuter rail routes have been designed to be grade separated which will allow them to circumvent street crossings and reduce conflict with cars. Additionally, existing transit would be upgrade with grade separations at major crossings and more service throughout the day.

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
W10	Abraham Navarrete	National Latino Research Center	From the plan I support that we include a bike lane, and safer, and more space for pedestrians. I still think we need more improvement for our youth, who use skateboards.	Hello Abraham, thank you for your comments. The bike network shown in the plan is the Adopted Regional Bike Network, which was adopted in 2010. As an early action out of the Regional Plan, SANDAG will develop a new Active Transportation Plan. Although the original plan considered topography, we will take a fresh look in the new one. With the ever increasing popularity of e-bikes, scooters, skateboards, and other micromobility modes we do feel it is important to build bike network that works for all users and provide as many network connections as possible.
W11	Abraham Navarrete	National Latino Research Center	At times our youth are criminalize, and put in situations that are not safe for them. How is this plan going to make sure this won't be an issues any longer?	SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements. SANDAG will be working hard with the help of all of our passengers and representatives to ensure that this plan gets implemented.
W12	Abraham Navarrete	National Latino Research Center	I personally feel that this is a great plan, however, I have a concerned about gentrification how is this plan and SANDAG going to be accountable for housing to be affordable to our communities? For our communities to not have to move out to different county because they can't afford? Notes, we have seen this happening in San Marcos and other cities in San Diego County, it is not fair!	In this round of the Regional Plan, social equity was at the forefront of the Regional Plan. One of the plan's near-term priority implementation actions includes a Regionwide Displacement Study (Appendix B) in order to ensure our housing efforts do not lead to the displacement of current low-income residents in communities where housing growth occurs. Additionally, SANDAG is in the development of a regional housing incentive grant program which could be include the ability to fund local plan updates in Mobility Hubs, two of which are the Oceanside and Vista Transit Centers.
W13	Abraham Navarrete	National Latino Research Center	Furthermore, I have a concern about the technology part of the plan. This plan assumes that we all are in the same knowledge and understanding for technology-which is not.	SANDAG understands your concern. Our primary goal is for technology to make transportation easier and better for people. When new technologies are planned and designed, we will seek extensive input from the public to ensure that these solutions are user friendly and make it easier for all people to access and use transportation information and services.
W14	Abraham Navarrete	National Latino Research Center	Lastly, I do not recall hearing anything in regards safety-ICE agents coming to our community public centers. How is this issues addressed in the plan? We have seen this multiple times in our transportation centers, on the Sprinter and this is a huge concern for our community.	<p>Transit station security and operations are a function of MTS and NCTD. MTS's website states that they have been making changes to its security policies and practices, to ensure their operations are in line with best in practice policies. Recent measures include increased training for internal and contract security staff, updated use of force policy, conducting an outside audit, using more visible and customer friendly uniforms, and more. Details can be found at <a href="https://www.sdmts.com/inside-mts/news-release/mts-makes-significant-changes-use-force-policy">https://www.sdmts.com/inside-mts/news-release/mts-makes-significant-changes-use-force-policy</a> and <a href="https://www.sdmts.com/inside-mts/news-release/new-uniforms-mts-security-teams-aim-increase-trust-and-public-safety">https://www.sdmts.com/inside-mts/news-release/new-uniforms-mts-security-teams-aim-increase-trust-and-public-safety</a>.</p> <p>NCTD's website states that they contract with the San Diego Sheriff's Office and local law enforcement agencies to patrol and provide law enforcement and security services at our transit centers. Your comment was shared with Dennis Desmond (denis.desmond@sdmts.com) and Robert Calix (rcalix@nctd.org) from MTS and NCTD respectively.</p> <p>SANDAG's Public Safety Committee provides a forum for which regional public safety issues and concerns can be addressed. NCTD and MTS serve on the Public Safety Committee as advisory members. Information regarding the Public Safety Committee can be found at: <a href="https://www.sandag.org/index.asp?committeeid=66&amp;fuseaction=committees.detail">https://www.sandag.org/index.asp?committeeid=66&amp;fuseaction=committees.detail</a></p>
W15	Adam Deutsch		I appreciate that Complete Corridors is a priority, with an emphasis on DEDICATED space, which means protected bike lanes. The entire plan, beyond that, is resting on major investments in Transit and mobility technology, but encouraging people to use bikes is much more cost effective and is generally easier to do. I think that should be a higher priority than tech we don't have.	Successful implementation of the 2021 Regional Plan relies on a combination of safe travel infrastructure, frequent and convenient mobility services, and technology to enhance transportation services and operations. Dedicating space for those travel options that help reduce automobile dependence combined with supportive policies and incentives for multimodal use are a key focus of plan implementation – everything from active transportation to ADA-accessible ridesharing options.
W16	Adam Deutsch		Ridehailing is dubious. Though it might seem like an ecofriendly option on the surface, it's really just more cars on the road. The goal should be to have a transit system that makes using ANY car	Fast and frequent transit is a key component of the 2021 Regional Plan. Commuter rail services along our urban corridors provide a sustainable alternative for longer regional trips; Light Rail will operate on higher frequencies and expanded service times; and

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			seem unnecessary or even inconvenient. One should be able to get where they're going by walking, bus, trolley, or bike in a time that's less than double going by car.	NextGen Rapid will provide a more reliable Rapid bus service. Flexible Fleets, which include on-demand mobility options like ridehailing, complete the transit network by providing connections to transit or serving areas where traditional transit services may not be suitable. Flexible Fleet services provide greater mobility choices in the San Diego region that ultimately helps to reduce the reliance on private vehicles.
W17	Adam Titone	Bicycle shop manager	Bicycles have become more popular recently. Our electric bicycle shop has grown significantly, we have local customers asking us where and how to park bicycles safely, where the safest place to ride is and how to deal with conflicting vehicle traffic. We have noticed the lack of quality bicycle parking and infrastructure. Our customers use a number of modes of personal transportation via bike lanes and those lanes are in need of improvements. We hope the city can connect with local businesses that gets local folks moving for insight. I have requested a bike rack on our block for general use and have not received any response on if that will take place.	<p>We have noticed the uptick in bicycle activity as well, as you can see in our InfoBit on biking during the Pandemic:  <a href="https://www.sandag.org/uploads/publicationid/publicationid_4704_27994.pdf">https://www.sandag.org/uploads/publicationid/publicationid_4704_27994.pdf</a>                      We also appreciate your concerns regarding the quality of bicycle parking and infrastructure. SANDAG's 2021 Regional Plan includes an Active Transportation vision focused on creating a regional network of bicycle facilities that are safe and comfortable for users of all ages and abilities. You can explore the network in our web-based data viewer :  <a href="https://sandag.maps.arcgis.com/apps/Cascade/index.html?appid=897af882e8c14b1e996c33e48bc15347">https://sandag.maps.arcgis.com/apps/Cascade/index.html?appid=897af882e8c14b1e996c33e48bc15347</a>                      As noted in Appendix L, while SANDAG has been working since 2011 to implement this network, including the \$200 million Bike Early Action Program. The 2021 Regional Plan takes these efforts further by redefining the project types as On-Street Facilities or Off-Street Facilities, which encompass a variety of flexible and context sensitive designs like protected bikeways, traffic-calmed bike boulevards, and off-street paths.</p> <p>Regarding bike parking, we work to include visible and convenient bike parking in every one of our active transportation projects. That said, our plan is a plan for the whole region, and our efforts are regional. For local discussions with individual cities, we recommend working with city staff. We are happy to help connect you to the right people if we can, although we do not have control over the process of local jurisdictions.</p>
W18	Alex Ortega Jr	San Diego Miramar College	<p>First off, I would like to say that I am for the Big 5 project and would plead that it is recommended as soon as possible. North County desperately needs improved public transportation to help ease the traffic congestion that occurs at the 5 and 15 junctions with the 78 freeway.</p> <p>As a North County San Diego Native, my question for SANDAG is why has there not been a proposal for the use of an above ground rail system? I understand that due to the frequency of earthquakes it is difficult to plan anything underground for a subway system, but looking at what has been done in the Bay Area with the BART system, would it not make sense for San Diego to implement something similar? Of course finances are always an issue but looking at the Bay Area, San Diego will undoubtedly grow to the same population size. Instead of looking at a temporary solution, incorporating a rail system that would run all over San Diego County would be getting ahead of the curve.</p>	The 2021 Regional Plan is the first of its kind in San Diego County to include such a vast, interconnected rail system that is separated from vehicle traffic. Future studies will need to be conducted to determine if these services will be above or below ground but the high speed connection these services will provide is included in the Plan.
W19	Alex Vit		<p>20 year old here. Will be a user of these new transportation projects.</p> <p>As can be seen from Figure 2.4 on page 24 of the plan, there are very few bus services (and no high-quality Rapid bus services) in the Del Mar - Solana Beach - Encinitas area. As these are suburbs and transit connections suck, it's useless to try to get from my house in Encinitas to somewhere like UTC via public transportation. Hell, you can't even get from my house to the Encinitas Coaster Station on a bus because it would take 6 times as long as it would driving (1 hour versus 10 minutes), despite the journey being 4 miles. Would be cool to have some high-capacity/good East-West connections in the Encinitas area (or other townships) to get people from their homes to the Coaster Station and/or Solana Beach Amtrak Station. Bonus points if the busses are electric.</p> <p>I highly support the effort to grade separate the commuter rail network. Better for pedestrians, bikers, and congestion. It would really be worthwhile to COMPLETELY grade separate and electrify the entire proposed high-speed commuter rail network. In fact, electrifying, double tracking, and grade separating the existing LOSSAN corridor should be prioritized as a project. Currently, my friends and I like to travel to Los Angeles, but we feel limited in our ability to do so.</p>	A major focus of the North Coast Corridor investments are the upgrades and services along the Coaster corridor with some connecting Rapid services. Please see the online data viewer at <a href="http://SDForward.com/envision">SDForward.com/envision</a> to view the projects. The details on the frequency and service spans also will be added to the Final Plan for this corridor and others. The California High Speed Rail project has been added to Appendix A and SANDAG will track its project as it is developed by the state. Also, the transit agencies continue to electrify their fleet per state mandates and SANDAG continues to make progress on the Central Mobility Hub to provide greater access to the airport. Those projects are listed in Appendix A under the "Central Mobility Hub" table.

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
			<p>We hate sitting in traffic but we and we would like to take the Amtrak more often, but given the prices of the tickets, we always figure it's just not worth it to take the train; the price of gas split between two people is equal to the price of a ticket, and the time it takes to get to our location is usually lower with an automobile. I am willing to pay quite a bit more in taxes/government debt for services to be upgraded (even more than they already are) on this railway line.</p> <p>Also (again referring to Figure 2.4 here), why are there no commuter rail lines on the California High-Speed Rail route from downtown SD to Escondido? Or even Temecula? Seems like a wasted opportunity, it's not like those intercity trains are going to be running 24/7. A lot of people would stand to benefit from that, I would think that SANDAG would just have to construct stations along the line and use quickly-accelerating high-speed trains as well. With a Sprinter extension to the CA High-Speed Rail line, couldn't the city create a market for tourists to take public transport to the Wild Animal Park as well?</p> <p>The sooner MTS stops buying diesel busses and Coaster/Amtrak stop buying fully diesel trains the better. There are so many alternatives out there nowadays; so many companies produce electric busses and many companies also produce (high-speed!) dual-mode locomotives that are future-proof. Plus they're so much more comfortable - I go to school in a city where they have electric busses, they're a much more dignified experience than noisy diesel busses that throw everyone back in forth in their seat when they change gears.</p> <p>I'm also willing to pay a lot in taxes for a direct tram from the airport to the proposed multimodal hub. It would be cool to not have to drive all the way to the airport from Encinitas and all the way back just to drop someone off (or be dropped off myself). Lots of unnecessary GHG emissions and time wasted.</p>	
W20	Alexa Kaplan	N/A	<p>There are plans for way too many new homes in Mira Mesa. I am concerned about lack of infrastructure and mass transit prior to the building of new homes. Please make sure there will be enough transit for the 50,000 new people expected to move into Mira Mesa. The planning groups plan for walkability and transit options other than cars, so I would like to ensure that these transit options exist by the time these huge numbers of new people arrive.</p>	<p>The 2021 Regional Plan includes new RAPID transit lines proposed on Mira Mesa Blvd and Carroll Canyon Rd in addition to existing Rapid on I-15. The two new RAPID lines would connect with the commuter rail service in Sorrento Valley. Bike and Flexible Fleet services are also accommodated within the Mira Mesa area and within the proposed Mira Mesa Mobility Hub.</p>
W21	Alexander Han	Sunrise Movement SD	<p>For the final plan, I urge this Board to (1) maximize emissions reductions, (2) prioritize investments in the communities on the frontlines of environmental injustice and the climate crisis, and</p> <ul style="list-style-type: none"> <li>-Improve the Bus System</li> <li>-Create a Blue Line Express</li> <li>-Provide 24 Hour Service by 2025</li> <li>-Have a Purple Line Serve Central City Heights</li> <li>-Create Youth Opportunity Passes (YOP): Provide No-cost transit passes for all youth 24 years old and under in order to ensure generations of lifelong transit riders and encourage significant mode shift. -Connect youth to school, work, internships, and other early-career opportunities.</li> <li>-Electrify Bus Fleet by 2030</li> <li>-Identify Anti-Displacement strategies</li> <li>-Improve the transit Bathroom network</li> <li>-Create an Emergency Ready Transit System</li> </ul>	<p>SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.</p> <p>The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line.</p> <p>The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.</p> <p>The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
				<p>Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego.</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.</p> <p>The proposed final 2021 Regional Plan supports the electrification of the region’s transit buses and the state’s Innovative Clean Transit regulation. Appendices A and B include SANDAG’s proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS’ and NCTD’s Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the final 2021 Regional Plan. SANDAG’s housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues.</p> <p>The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations.</p> <p>MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG’s specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p>
W22	Alexander Wenzel		<p>As a data scientist, software developer, and resident of San Diego who commutes 100% by public transit, I strongly encourage SANDAG to consider an open source model for the proposed Next OS system. As motivation for this proposal, consider the One Bus Away (OBA) app which MTS and NCTD use in order to provide scheduling and real-time arrival information to passengers. OBA is an open source project that originated in academia and which in turn relies on the open source Google Transit File System (GTFS) format for describing a transit system and computing vehicle arrival times and delays. Due to the existence of this robust open source project and data schema, MTS and NCTD need not worry about developing (and maintaining) their own app from scratch in-house. While infrastructure as critical as the Next OS ecosystem will need some form of institutional control by local governing bodies such as SANDAG, an open source model would</p>	<p>Thank you for the comment. We concur and envision the Next OS to be an open source solution.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			<p>allow members of the community, including local academic institutions and volunteers with the necessary skillset and motivation to make their community a better place, to contribute to the process of feature development and bug fixing that is needed for a robust system such as that proposed for Next OS. For example, although my career is in bioinformatics and genomics, I am passionate about improving public transit in our region and would happily spend my Saturdays fixing Next OS bugs for free, if given the chance. Additionally, as Next OS aims to control a vast segment of the regional transportation ecosystem, its security is of paramount importance. History has shown that open source projects tend to be more secure, so creating an open source environment for Next OS would go a long way towards protecting our region from threats as we seek to build a greater digital integration of our transportation system. Finally, making Next OS open source would lower the barrier to entry for other regions in the country to mold similar systems for their own needs based on Next OS. The causes of our climate problems are not contained within county lines, so our success is inextricably tied to the efforts at mitigation and adoption throughout the rest of the country. Making Next OS an open source standard around which other cities, counties, and regions can build their own smart transit systems is itself a major investment in reaching our own climate goals. In closing, I urge SANDAG to build Next OS as an open source project to leverage the ample talent in our region, engage with the community transparently throughout the development process, and ensure the robustness and overall success of the future system.</p>	
W23	Alison Aragon	Pro Kids, First Tee - San Diego	<p>I urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth (ages 24 and under) receive priority when transit fare subsidies are allocated. Let's help the leaders of tomorrow, today!</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.</p>
W24	Aliya Cunningham	The San Diego LGBT Community Center	<p>I am a supporter of The San Diego LGBT Community Center and I am writing to urge the Board to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated. I believe that every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under, who have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes are a key investment that will provide a foundation for our region's equitable economic recovery.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W25	Alla Valdespino		<p>I agree with SANDAG's approach to try and make a fast, fair and clean transportation system for San Diegans. However, I believe that SANDAG and NCTD need to really look at the reasons why people don't use public transportation today. People need to rely on cars because public transit doesn't reach where people that need it are, and there aren't accessible bus connections to important destinations such as the DMV, healthcare, or to work places like in factories and major retail. I live in North County San Diego, it is an issue here. Over the years, ridership has decreased, because bus lines get taken away, modified, or times aren't convenient for people. The 335 bus route was removed, leaving only the one way 334 route. The 306 and 318 routes don't run as frequently as people need, and the timing with the 318 bus is inconvenient for a lot of people. There aren't any convenient bus connections to many major retailers where people work, as well as in industry parks or resort hotels (like in Carlsbad). In addition, SANDAG and NCTD should have a voice when advocating for affordable housing near public transit, because the fact of the matter is that people that live in luxury apartment housing will never use public transport for everyday trips and errands because they can afford a car. Therefore, low-income individuals and underrepresented minorities should be given the priority when it comes to planning housing near major transit hubs. I also believe that SANDAG and particularly NCTD need to work on their outreach efforts to try and increase ridership, because their current efforts are honestly pathetic. They need to market their routes by promoting popular destinations that transit connects to, and make it accessible for people to be able to reach said destinations. SANDAG also needs to be particularly attentive to the needs of pedestrians and bikers' safety. Major transportation hubs should be safe for pedestrians and bikers, where cars are forced to slow down, and watch where people are going. Take a look at the Vista Transit center. The intersections that surround the</p>	<p>The 2021 Regional Plan used comprehensive data analytics to establish where people live, where they work, and what activity centers they were traveling to. Based on this analysis, new routes and modes of transportation were developed. Trunk line transit is connected to Mobility Hubs and Flexible Fleets that provide the first and last mile access that has previously been missing.</p> <p>Your comment was forwarded to North County Transit District (NCTD).</p>

			transit are very busy and people are almost always getting run over by cars that that making right turns. Thank you.	
W26	Ana Ardon		I'm in full support of the new vision but I have several concerns about its implementation of social equity framework. The report does not directly address the unique experiences of Latinos and immigrant communities. For example, immigration enforcement has had detrimental effects in our quality of life and the use of transportation options. Local elected representatives in North County have vocalized their lack of support for the plan which may lead to fragmented efforts (some cities benefiting more than others from these advances), leaving communities of color at a disadvantage. Gentrification is another concern. In the city of Vista there has been a boom in housing development that has increased housing cost exponentially. Apartment units near the transit center cost around \$3,000 a month. I hope these issues are considered as the plan becomes a reality.	One of the Plan's Near-Term Priority implementation actions includes a Regionwide Displacement Study (Appendix B, pg B-3). One objective is to understand the dynamics of housing growth without causing displacement. Additionally, SANDAG is currently developing a housing incentive program. This program will fund local plan updates and increasing affordable housing in transit-rich areas with infrastructure, services, and jobs. Please see Appendix B: Implementation Actions for more details.
W27	Andi MacLeod		I urge you strongly to prioritize no-cost travel passes for 24-and-under riders on public transit. With school and jobs to get to, and the economic hardships experienced by many in the pandemic, young people need the extra boost they will get from no-cost travel passes. Approve them on the 6th and make San Diego a place where young people can Live Well too!	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W28	Andrea Dee		I write in support of the completion of the inland rail trail.	We are committed to complete this project and invite you to check out the project webpage at Keep San Diego Moving, sign up for updates if you have not already, <a href="https://www.keepsandiegomoving.com/RegionalBikeProjects/inland_rail_trail_intro.aspx">https://www.keepsandiegomoving.com/RegionalBikeProjects/inland_rail_trail_intro.aspx</a>
W29	Andrea Mendoza Vasconez		I'm writing to urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated. Youth is a time for habit formation. It is essential to instill the habit of using public transportation among our youth because of all the associated environmental, economic and health benefits. I urge you to follow the lead of many other counties that have successfully prioritized youth for transit subsidies. Thank you!	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W30	Andrew Frank		<p>I understand why the growth of electric vehicles has an impact on revenues from gasoline taxes, and I understand that to some extent electric vehicles get a "free ride". However, your use tax under consideration is not the way to resolve it -- have you checked with SDGE for a way to add a fee on electricity for eVehicle charging?</p> <p>Why should I pay San Diego ANYTHING if I choose to go on a cross-country trip in my car? Would only local miles count? How would you do that?</p> <p>Why should commuters from OC and Temecula get a free ride ... do you have a way to charge them? How about tourists, truckers, moving companies, etc., and all of the other vehicles that are not registered here?</p> <p>I do not like the idea of yet another tax -- it is a tax, no matter what you call it -- but I abhor one that is inherently inequitable and not well thought out.</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. While the design of the program has not yet been determined, initial assumptions included in the Regional Plan is that the regional road usage charge would be a user-fee for use of roads in San Diego County. So a San Diego County resident would not be charged a San Diego user fee for miles drive in other counties, and residents of other counties would be charged for miles driven in San Diego county. SANDAG will rely on coordination with other agencies in California along with the State Department of Transportation to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers.</p>
W31	Andrew Simmerman	KIPP SoCal Public Schools	<p>I would like to start with sharing gratitude to SANDAG staff and the Board of Directors for the considerable efforts, research, and intentionality in engaging with so many community members and partners - particularly in the most transit impacted communities - throughout the entire Regional Plan process.</p> <p>I represent a school organization (KIPP SoCal Public Schools and KIPP Adelante Preparatory</p>	SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights,

			<p>Academy at 426 Euclid Ave.) that serves students in Barrio Logan and Southeast San Diego, with 90% of our students qualifying for free or reduced price lunch. Access to equitable, quality and affordable public transportation is critical for the students and families that we serve and there are numerous aspects of the Regional Plan that make us excited for the future opportunities it will present for our families and our communities that have been systemically under resourced.</p> <p>As you obtain feedback regarding the Regional Plan, KIPP SoCal Public Schools is advocating for:</p> <ul style="list-style-type: none"> <li>- Funding for free youth passes given to youth to age 24.</li> <li>- A Mobility Hub in southeast San Diego, preferably at the Euclid Trolley Station that will offer our students and residents more reliable transportation choices</li> <li>- Grade separations for the Orange Line, especially at Euclid to increase trolley speeds and headways (it's a big area of support from the community)</li> <li>- Fiber optics underground to ensure we are ready for the state of the art Transportation System that is in the design stage, (IOS systems) and to more appropriately address the digital divide in our "Redlined communities".</li> <li>- Covering on our MTS bus stops (structures).</li> <li>- Considering 24 hr. service on the lines that are taking our families to work.</li> <li>- Focusing on transitioning to an all electric buses in the first 2-3 years of implementation</li> <li>- Improving the frequency and reliability of our bus routes</li> <li>- Ensure all of our streets are designed with the "Complete Streets" designs</li> </ul> <p>Thank you in advance for your consideration of the above implementations.</p>	<p>and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p> <p>Southeast San Diego is part of the South Bay to Sorrento Mobility Hub. For more information regarding Mobility Hubs please see: <a href="https://www.sandag.org/index.asp?subclassid=83&amp;fuseaction=home.subclasshome">https://www.sandag.org/index.asp?subclassid=83&amp;fuseaction=home.subclasshome</a></p> <p>The City of San Diego coordinated with SANDAG to adopt a Euclid Avenue Master Plan. The Master Plan includes an existing conditions report, and mobility report. The Master Plan describes the implementation of complete streets, mixed use development, and more. The Euclid Avenue Master Plan details the City's intent to improve pedestrian and cyclist safety; as well as improve connectivity to the Trolley and Euclid Transit Center. For more information regarding the Euclid Avenue Transit Center, please visit: <a href="https://www.sandiego.gov/planning/community/cpu/encanto/egmp">https://www.sandiego.gov/planning/community/cpu/encanto/egmp</a></p> <p>The Regional Plan includes a variety of new commuter rail services that will provide higher speed transit with reduced travel times. Additionally, existing transit is envisioned to be upgraded with grade separations that allow for faster travel times and more frequency throughout the day.</p> <p>The transportation system envisioned in the 2021 Regional Plan relies on a vast network of digital infrastructure to connect and manage the transportation system. For Complete Corridors, NextOS, Flexible Fleets, Transit Leap, and Mobility Hubs to succeed, a robust broadband and telecommunications network is essential. The Plan includes an investment in the backbone fiber infrastructure needed to support the transportation network however SANDAG is also developing a Regional Digital Equity Strategy &amp; Action Plan to support the expansion of broadband county-wide. The Strategy &amp; Action Plan will define strategies for expanding broadband and internet connectivity in the San Diego region to support quality of life, transportation, and equity.</p> <p>The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.</p> <p>The proposed final 2021 Regional Plan supports the electrification of the region's transit buses and the state's Innovative Clean Transit regulation. Appendices A and B include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a></p>
W32	Andrew Sturm	Casa Familiar	<p>The first major feedback that I have is in regards to short term solutions for public / shared transportation in the South Bay - specifically San Ysidro - to better connect us with the rest of San Diego and specifically to employment and entertainment centers, via public transportation. The future plans that are outlined in the plan, are solid but they will take a very long time to implement and we need better public transportation access now. It has actually been a critical need for many years. What plans are you pursuing that get us from now until the more long term</p>	<p>The 2021 Regional Plan envisions several projects and programs to better connect communities throughout the region, including communities in the South Bay. Several areas throughout the South Bay are identified within the network of Mobility Hubs outlined in the plan. These facilities will expand multimodal transportation options and connect the adjacent community to the regional system. A near-term action of the Regional Plan is the planning and conceptual design work for the future San Ysidro</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
			<p>solutions are in place? What about dedicated lanes for Bus Rapid Transit on existing freeways at peak times, for example?</p> <p>The second major feedback is regarding the traffic congestion at the border and how the resulting air pollution from that is creating very poor health outcomes in San Ysidro and Tijuana. What solutions do you have for mitigating this in the short term. How can SANDAG as a regional entity help to apply pressure on the federal government to address the poor air quality their policies and processes are creating and how can you be a part of the solution with more and better public transit options that are available at the border? Not just in 10 years or 20 years - but this year or next year.</p>	<p>Mobility Hub. This effort will also prime a suite of near-term improvements that includes trolley capacity enhancements and pedestrian safety and connectivity measures for early action. Better connecting bus Rapid services to San Ysidro will be a focus of that planning work as well.</p> <p>Regarding the second question, SANDAG is aware of the environmental concerns and disadvantages border communities like San Ysidro and Tijuana face, as it relates to air pollution stemming from vehicle delay at the Port of Entry. With the implementation of the 2021 Regional Plan SANDAG anticipates higher levels of non-motorized mode-share to occur for crossborder trips as cleaner and more efficient transportation options come online. Also, SANDAG maintains working relationships with government entities at all levels in both the U.S. and Mexico, and pursues partnerships to address concerns and collaborate on joint efforts. SANDAG will continue to coordinate on a binational level to raise awareness and expedite transportation projects that serve the border. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W33	Angelica Reyes	National Latino Research Center	<p>Me gustaría que el transporte público que pase mas de 25 mins, mas frecuente como este plan. ***</p> <p>I would like public transportation to pass more frequently than every 25 minutes, like this plan.</p>	<p>El Plan Regional incluye mejoras significativas a la frecuencia del transporte. Se está planificando que todos los medios de transporte del transporte público operen cada 10 minutos. ***</p> <p>The Regional Plan includes substantial frequency improvements. Transit is planned to operate every 10 minutes on all modes.</p>
W34	Angeline Kaufman	The San Diego LGBT Community Center	<p>I am writing to urge the board to amend Appendix A of the 2021 Regional plan to declare that no-cost transit passes for youth ages 24 and under receive priority when transit fare subsidies are allocated.</p> <p>I believe that every San Diegan deserves access to high-quality transportation and economic mobility, especially going people ages 24 and under, who have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes are a key investment that will provide a foundation for our regions equitable economic recovery.</p> <p>When young people have access to no-cost transit passes, they are better able to access work, school, medical care, and resources otherwise not accessible. I know that my family and I cannot get help because of transportation (work and medically) both of my parents have no car and currently no job because of transportation. Having free public transportation would help my family as well as others with finding jobs.</p> <p>I urge the board to take bold action to build a healthier, prosperous, and just future in San Diego. Please amend the plan to include youth opportunity passes as a priority.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W35	Anita Bandrowski	UCSD	<p>Really looking forward to upgraded bike lanes and micro-mobility improvements in 92122.</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>. The 2021 Regional Plan data viewer can be used to explore Regional Plan projects in your area.</p>
W36	Anjali Vaidya		<p>I support no-cost transit passes for young people 24 and under.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W37	Ann Miller		<p>The proposed mileage tax on vehicle's to replace the gas tax needs to be assessed to all drivers including tourist, visitors, traffic from South of the border etc. it can be done by a chip on your windshield attached to your credit card. If you don't have one a booth at the entrance of significant roadways can provide one via 'credit card'. This should be assessed on ALL users not just San Diego residence. And should motorcycles and bicycles be included because they use the roadways as well?</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group are paying more</p>

ID	Commentor Name	Agency	Comment	Response
				than their fair share. The initial thinking is to fairly charge users of San Diego roadways regardless of where they reside.
W38	Anna Harley-Trochimczyk		I want to express strong support for the commuter rail plans, especially connecting dense residential areas like Hillcrest and North Park to job centers in UTC and Sorrento Valley. Sorrento Valley is one of the most impacted areas of the region in terms of commute traffic and the existing trolley lines and Coaster lines are not really accessible at all to the Uptown communities. Additionally, the plan for a trolley line that encircles Balboa Park would be huge! It would be useful for tourism as well as residents to easily get around without a car. Bus service connecting downtown and North Park right now is so slow. Managed lanes along the various highways are another important piece of the puzzle, but the vision towards new transit options like a commuter rail and new trolley lines is where the biggest shifts in habit will happen. These are what are necessary for residents to be truly car-free, as opposed to managed lanes which would hopefully encourage carpooling but that still keeps people in their cars.	<p>We appreciate your support and feedback.</p> <p>The Mid-City Trolley Line (Purple Line) is included as the first major new rail project in the Plan and will serve the north-south travel needs in Sorrento Mesa, National City, Kearny Mesa, and University Heights. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is completing a more detailed ridership analysis of this route. The analysis is studying an alignment that would include stations in City Heights and at San Diego State University (west campus). Also, transit subsidies are a component of the proposed Final Plan and implementation of those subsidies would include a consideration of low-income and youth populations.</p> <p>The 2021 Regional Plan envisions a system of complete corridors with managed lanes that support Rapid bus service and Flexible Fleets to improve options to driving a car.</p>
W39	Anne Barron	Peace Resource Center of San Diego	Pls include environmental justice everywhere in the county's RTP & prioritize impacted (EJ) communities and list the projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025. I ask that an equity specific project list be included in Appendix A.	SANDAG will include the projects that benefit EJ communities in Appendix A in the proposed Final 2021 Regional Plan. This information was published in Appendix H Attachment 3 of the Draft but will be moved to Appendix A and updated.
W40	Anne Barron	Peace Resource Center of San Diego	Time for 24-hour service on popular transit routes to connect late night and early morning workers to their job. Clarify the language in both Appendix A and Chapter 2 to specify 24 hr. service on popular transit routes and present a clear implementation schedule.	The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.
W41	Anush Badii	UCSD	Air Quality and Congestion Relief both go hand in hand, it is a well-known fact that there is a 100-gram reduction in generation of Green House Gas per mile when an average vehicle travels at 50 MPH versus 30 MPH. Multiply that by the number of miles driven in San Diego at 30 MPH yearly which is about 4 Billion miles yearly in San Diego County and you get 400,000 Tons of GHG that was generated due to congestion. Congestion relief is possible through the implementation of correct ramp metering procedures. The current ramp metering method deployed by Caltrans was invented almost 50 years ago and is deficient in addressing the nonlinear nature of traffic flow. Here at UCSD, we have developed a new ramp metering paradigm "Particle Filter- Model Predictive Control" that will increase the traffic flow rate and speed, and decrease the travel time. As such it will also reduce or eliminate the 400,000 Tons/year of unnecessary generation GHG from San Diego's environment. I recommend that you contact Dr. Ramesh Rao the director of Qualcomm Institute at UCSD for a detailed presentation on this matter.	<p>These are the types of system efficiency enhancements that are envisioned for the region as part of the Complete Corridors proposed strategies complimented with the Next OS that will serve as the brain to help managed such strategies in an integrated and multi-modal approach. In addition to corridor-wide and adaptive ramp metering other strategies include Dynamic Lane Management, Smart Intersection Systems and Active Travel Demand Management Systems. As technology components of the Regional Plan advance toward implementation SANDAG will actively engage with technology leaders to implement best practices.</p> <p>Your comment was forwarded to Caltrans.</p>
W42	Araceli Hernandez	El Cajon Collaborative/Barrio Logan College Institute Parent Spanish	Communication is sometimes hard when I try to find out about buses and the schedule. Can they make a phone app in Spanish we can use when we need to catch a bus? (We talked about technology and apps in the future including Pronto) Thank you so much for the new Pronto. I look forward to all the Plan coming true.	<p>The Next Operating System includes comprehensive improvements that are focused on making schedule identification and fare payment easier. As new apps are rolled out they will be available in Spanish.</p> <p>Your comment has been forwarded to North County Transit District (NCTD) and San Diego Metropolitan Transit Service (MTS).</p>
W43	Arden Santos	Self	Just remember; many people were forced out of San Diego proper to North County where we are already paying Fastrack fees and expensive gas prices. Many of us commute into the city so as you "decide" on all our bicycle lanes and scooter lanes there are those of us who travel over an hour a day to our jobs down the 15. Charging us MORE money is out of the question.	Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like greenhouse gas emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.

				<p>The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p> <p>The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, fair to all.</p>
W44	ariana federico	Mid-City CAN	<p>Every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under and seniors. We urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p> <p>Transit-dependent youth have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes is a key investment necessary for our region's equitable economic recovery. No-cost transit passes for all youth ages 24 and under ensures generations of lifelong transit riders are part of our long-term strategy to build a greener and equitable San Diego. No-cost transit passes will connect youth to school, work, medical care, internships, and other early-career opportunities.</p> <p>Programs like these exist with great success in Alameda County, Boston, San Francisco, and most recently Sacramento and Los Angeles.</p> <p>I urge the board to take bold action to build a greener, healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity passes as a priority.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W45	Arnold Durbin	Resident, Borrego Springs	<p>Back in the 1980's, we were promised that the trolley system would provide a rapid, convenient transit system that would be highly-utilized and result in urban villages popping up around the stations. Forty years later, we're being told that the previous system is slow and underutilized because density around the stations hasn't been as robust as planners imagined and the system isn't as rapid in design. SD Forward isn't so much as a bold vision as it is a repackaging of the same arguments taxpayers and residents were told in previous generations. If one train system didn't pan out as envisioned, what's so different and unique about this one? I'm not totally against exploring alternatives to increasing lane miles, but I'm also pragmatic and a realist and the SD Forward plan needs a better argument for constituents like me. I want to know the costs: How long will it be before the system as envisioned is paid off? How long we will be taxed, fee'd, tolled or fined? The Coronado Bridge eventually paid for itself, but it doesn't seem clear to me that this project ever will. The bridge began construction the year I was born and it was paid off sometime when I hit my 40's. I want to know if my grandchildren and their grandchildren will be paying for this new system, or will they be told that the system doesn't work as it was envisioned, much like the trolley system is now.</p> <p>Another glaring omission from this plan is its neglect of the backcountry rural areas. Hwy 67 needs to be upgraded into a regional byway - it has clear commuter patterns that make it unsafe, unpleasant and inefficient. Ramona needs to be better connected to Poway and Lakeside - and I'm not advocating for Ramona's needs as much as I am for a broad swath of the backcountry. Borrego Springs, Santa Ysabel, Julian - we all use Ramona as a hub to get further into the urban areas of the county. By not safely connecting Ramona to the urban highway network, this plan jeopardizes the safety and well being of a lot backcountry rural communities. We need a safer and less stressful means to access medical and professional services and goods in San Diego's urban markets! As a homeowner in Borrego Springs, I often choose to spend my tax and spending power in Temecula because the highway 79 is perceived as being safer than Hwy 78 or Hwy 67. I'd prefer to keep my tax dollars in SD County, but it looks like this plan won't</p>	<p>The transit system envisioned in this Plan responds to updated growth projections and focuses on high-speed services that will connect jobs and offer service with similar travel times as autos. Previous plans focused on access but not necessarily speed of travel and equivalency with other options, thereby making these planned services much more desirable to the traveling public.</p> <p>In terms of the costs, the Plan includes revenue assumptions from a variety of sources that are anticipated during the life of this Plan. In other words, the revenues match the costs for all projects and programs in the Plan through 2050. The Plan includes improvements on State Route 67 and other rural routes that were derived from the Intraregional Tribal Transportation Study, 2018. <a href="http://sandag.org/itts">sandag.org/itts</a></p>

			likely result in that. One final note: As an enrolled member of one of San Diego’s sovereign Native American nations, I take offense at this plan using our people as an example of our ecological insight and geographical knowledge in the introduction, then completely ignores these communities in this plan. SD’s native communities are now major employers that contribute to the economic powerhouse that is San Diego County’s economy. Those workers will need safer and better alternatives and this plan doesn’t even mention the county’s tribes except acknowledging that we were here first. This plan does nothing to improve connections between San Diego’s sovereign Indian lands and the County. Where’s the equity in this plan for rural and backcountry residents? I assume some part of our tax dollars will pay for this plan and you need to provide more concrete ways that we will benefit. We need more than just “additional shoulder space and straightened curves” on our rural highways. We need actual bike lanes - not just improved shoulders! Bike lanes will benefit urban residents more as they are the ones that come up here and ride in the open country. There’s not many rural residents that trust our drivers enough that they’d ride a bike on Hwy 78 or 79.	
W46	Autumn Ortiz	Community Interface Services	Transportation access and flexibility is vital for individuals in San Diego. Particularly in North County. I support the proposed “5 Big Moves” RTP and want to see more flexible options implemented in North County as quickly as possible!	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="https://sdforward.com">SDForward.com</a> .
W47	Barbara Green		Transportation needs to be easily accessible, which means affordable, so I think this is definitely a step in the right direction.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="https://sdforward.com">SDForward.com</a> .
W48	Becky Thimm	So. Bay Eco Justice	It would have been nice if info about this meeting had been put out a few days BEFORE the day of the meeting! I did not get this until AFTER the meeting was over. Being at the North or Central San Diego County doesn’t really meet the needs of the South County area.	All recording of our public work shops and meetings can be found at: <a href="https://sdforward.com/about-san-diego-forward/calendar">https://sdforward.com/about-san-diego-forward/calendar</a>
W49	Beth N		I am strongly opposed to a mileage tax or other fees to fund this. First of all, I don’t know how it would be implemented ( I don’t want anyone tracking my mileage- that is an invasion of privacy), and second of all, we have seen how the gas tax that we paid for years has not been used to build more highway infrastructure as promised. Until you use the money to build the roads as promised before, I would oppose any additional fees or taxes for the transportation projects. No bait and switch. You do not deserve any more tax dollars.	Thank you for your comment.
W50	Blair Overstreet	Center on Policy Initiatives	As a long-time resident of San Diego, and a former member of City Heights Area Planning Committee, I’d like to see greater investment in sustainable transit solutions and access for those that most need it. For that reason, I’m asking you to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive TOP PRIORITY when Transit Fare Subsidies are allocated. Youth will have access to education and opportunities that increase in our investment in the economic and long-term health of our community.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W51	Bob Nelson	Oceanside Resident / Architect	As a 34 year resident of Oceanside and having commuted by car, bicycle and train to employment in San Diego and Orange County Cities and by Train and bicycle via the Coaster, Sprinter, AMTRAK, METROLINK and the MTS Trolley System I have experience with the issues in transportation and have worked with many EIR’s. A major general concern with this Regional Plan is that it seems to be San Diego and Tijuana Border centric and does not deal with the million plus residents of Southwest Riverside County and the three million residents of Orange County as well as the rest of the LA Region that impacts transportation and mobility in San Diego County. While most of the Vision Deals with transportation improvements for commuting within Southwest San Diego County the Plan ignores the fact that Tourism and Commuting also occurs from and to Riverside and Orange Counties. The I-5 corridor is most heavily impacted Thursday through Sunday between south Orange County and Del Mar. The I-15 is also becoming more congested due to the congested I-5 on weekends. It also ignores the commuters from SW Riverside and North San Diego County on the 76 Expressway that travel to south Orange County. The 76 is the primary route to the Beaches from SW Riverside County, and a primary route to the Casinos on the 76 east of the I-15. It is listed as a ‘Rural Route’ in the plan but is actually a much more impacted route between the I-5 and I-15. The congestion is already impacting parallel and some north / south roads. The commuter Trains have very limited schedules on the weekends and midday and are shut down several weekends every year for maintenance on weekends making them an unreliable	Appendix J of the draft 2021 Regional Plan includes information on SANDAG’s approach to planning within the context of the megaregion and the importance of strategies that leverage partnerships with all neighboring jurisdictions to advance regional goals related to the environment, economy, and quality of life. Implementation of the 2021 Regional Plan will involve close coordination with partners in Orange, Riverside, and Imperial County to align priorities and projects to facilitate and improve mobility for these interregional flows. The SR 76 is an important facility for regional travel. Appendix A highlights several straightening, intersection, shoulder widening, and other facility improvements to address corridor safety and efficiency. The LOSSAN Rail Corridor improvements include full completion of double tracking to the Orange County Line that benefits Amtrak Pacific Surfliner, NCTD COASTER, Metrolink, and BNSF Freight trains. These capacity improvements allow for more trains to operate north of Oceanside to Orange and Los Angeles Counties and beyond. Although outside of the SANDAG region, siding tracks are planned in South Orange County by OCTA and Metrolink. New cleaner EPA Tier 4 diesel locomotives have entered service on Amtrak, COASTER, and Metrolink trains operating in San Diego County. There are many emerging technologies in the rail industry for zero-emission trains that should become commercially viable within the horizon of the regional plan. Please continue to follow along in this process by visiting <a href="https://sdforward.com">SDForward.com</a> .

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			<p>option. Double tracking will help but the San Clemente to Laguna Niguel area is mostly single track with limited options to double track. This bottleneck should be addressed in the plans as it might affect the adequacy of the SANDAG Vision. The trains are also a fairly significant health hazard that is not discussed. while the Diesel Locomotives on the commuter trains are slowly being replaced with cleaner air versions they are still toxic to passengers at Stations from fumes, heavy metals from braking into stations and very loud engines and brakes, damaging regular customers hearing. Trains also run as fast as 70 MPH through some stations with passengers on platforms a few feet away, 3'+. The APCD should be consulted to explore the real impacts of these vehicles on the Health of the Communities they serve. Additional comments will be sent on another form.</p>	
W52	Bob Nelson	Oceanside Resident / Architect	<p>These are additional comments to my previous: AT-030 has a name referring to Alta Loma Bridge. It is actually Loma Alta Bridge at Buccaneer Park in Oceanside. I would recommend routing the Bike Trail under the train bridge and then south along Broadway to Cassidy street rather than the existing trail crossing at grade at Cassidy, a safer connection.</p> <p>For AT-068 Camp Pendleton Trail between Oceanside and Las Pulgas Road the routing should be a separated trail versus having to go along the two lane Stuart Mesa Road as this route is not allowed by the Marines at night and also requires an ID check. This has many long distance riders and bicycle travelers having to use the shoulders of I-5, which is very dangerous. When freeway drivers see cyclists on the road edge they often panic brake, especially at night with those cyclists using flashing tail lights.</p> <p>Another recommendation on the Bicycle Plans; A connection Trail route should be included from the Melrose Avenue Sprinter Station / Inland Rail Trail to the Guajome Regional Park and the San Luis Rey River Trail. This is a shorter and much safer connection than the Vista Way Connection indicated, although the bike lanes on Vista Way should be completed within the City of Vista. A Goal of the entire Bicycling plans should be to eliminate bottlenecks and preferential treatment of motorized vehicles over cycling facilities. Particularly at chokepoints at freeway crossings and conformance with bike share lanes and bike lane widths with CALTRANS standards, EG: bike lanes should be wider than minimum 5' width when speed limits exceed 35 MPH and 5' widths of paving outside of gutters, and Bike share lanes should have a 30 MPH Maximum Speed Limit I believe. Many areas also have bicycle lanes deleted in favor of vehicle right turn lanes. These issues make bicycling too dangerous for most people.</p>	<p>As an early action our of the Regional Plan, SANDAG will be developing a new Active Transportation Plan. The plan will take a fresh look at the network and the options to make it safe and comfortable to use active transportation. SANDAG prioritizes community engagement and will develop these connections in partnership with the community so that we can make sure the routes take people where they want to go.</p> <p>Even sooner, I'd encourage your organization to be involved with the efforts of the North County CMCP if you are not already <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=609&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=609&amp;fuseaction=projects.detail</a></p> <p>SANDAG follows national and international best practices in bikeway design to create safe facilities for users of all ages and abilities. Multiple studies show that most people feel safer in protected bikeways, and when well designed, they are safer than any other type of bike facility. The focus of our efforts is on people who may be "interested but concerned" in riding a bike alone or with family. For those who do not feel comfortable riding in protected bikeways, the California Vehicle Code allows people to bike in the roadway with traffic. While protected bikeways are a great solution in many cases, we know they are not always the best solution. Every project goes through a detailed and context sensitive design process which results in decisions regarding the best facility, which may include protected bikeways, buffered bikeways, shared use paths, or shared streets with significant traffic calming elements. The Regional Plan also includes funding for upgrading existing bikeways that may not meet current best practices in maintenance or bikeway design.</p> <p>Your comment was forwarded to agencies that oversee these facilities.</p>
W53	Brett Fisher	Interfaith Community Services	<p>Transportation access for clients is a vital necessity. I/we support the proposed "5 Big Moves" RTP and want to see "flexible fleets" implemented in North County as quickly as possible! My your comment is via The Alliance.</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>. The 2021 Regional Plan data viewer can be used to explore draft plan projects in your area.</p>
W54	Brian Nixon		<p>Need additional miles of Protected Bikeway(off street) and those proposed should be completed decades prior to 2050. All freeway projects and new major roads should also include protected bikeways being built. Protected bikeways should also be considered from residential areas to employment centers along existing non freeway corridors.</p>	<p>The projects from the active transportation network were laid out and prioritized based on the analysis performed in Riding to 2050, SANDAG's Adopted Regional Bike Plan. While the deadline year for build out is 2050, this just means it would be proposed to be completed by that time. Many projects will likely be completed earlier. This is especially true as new funding sources come available. Additionally, as an early action out of the Regional Plan, SANDAG will be developing a new Regional Active Transportation Network in which projects will be reassessed and reprioritized based on data and community engagement. There are also opportunities for the development of protected bike network vis "Complete Streets in Mobility Hubs" funding, which is intended to fund retrofits to facilitate short trips of less than 3 miles in a safe and comfortable way to make it easier and more attractive to choose active transportation. Finally, the intention of the network proposed in this plan is a regional framework which facilitates strips associated with regional purposes (trips to school and work, trips within Mobility Hubs, trips to major destinations, and others). The regional network compliments the much more extensive networks which local jurisdictions plan and construct on their own streets.</p>
W55	Bruce Higgins	Retired	<p>Wrong plan for this region, it is out of touch with existing transportation needs, and seeks to force people to adapt to the plan by fees, taxes and assessments, rather than adapting the plan</p>	<p>Thank you for your comments.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			<p>to the needs of the people.</p> <p>The plan to pay for this is DOA. We have paid for our roads once through taxes and bonds, we are not going to pay a per mile tax to pay for this pipe dream. The plan envisions very expensive equipment that will never be used to its potential (High Speed Rail) and then asks us to shoulder a 30 yr. tax burden to pay for this white elephant.</p> <p>My other objection is without the social engineering this plan envisions, the plan does not work. If the voters reject major portions of the plan, the whole house of cards collapses of its own weight, and there doesn't seem to be a plan B.</p> <p>I would start of one now, because I don't think this will fly. You might consider how to implement things in sections as SANDAG gains credibility, right now you have none. You lied to the voters the last time, why should we trust you again?</p>	
W56	Carlos Ramon		I believe youth passes should be a high priority. The ability to access transit for school would be a major win for families.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W57	Carol Lewis	El Cajon Collaborative	I have been involved in outreach for the Regional Plan for several years. This is the first time I have seen social equity written into every aspect of the Plan. Thank you for the process of developing a Social Equity Statement and I look forward to seeing how SANDAG continues to develop strategies to maintain community involvement and equity into every project that is currently being developed and those into the future. Thank you for making outreach so much more enjoyable this time around since it is so inclusive of our underserved communities.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="https://www.sdfwd.com">SDForward.com</a> .
W58	Carol Lewis	El Cajon Collaborative	Having a train and a transit center in El Cajon has been the biggest surprise to everyone. Thank you for including El Cajon and East Region into so much of the plan and we hope that SANDAG will be equitable to bringing these projects to this community first since we have been so underserved in the past.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="https://www.sdfwd.com">SDForward.com</a> .
W59	Carolyn Chase		You refer to “high speed” and “fast” transit services in several places. What are the definitions for “high speed” and “fast”? Light Rail cannot be consider “fast” or “high speed” - busses in regular transit lanes cannot be considered “fast” or “high speed.” The definition for “High Speed Rail” is even not very high speed. What portion of the transit network would be high speed - and what would those speeds be? Also the section on COVID-19 is poor. It does not acknowledge that significant ridership is down and fewer people will be willing to change to transit. Finally, where are the stats about how many drivers would have to change to transit to reduce their climate impacts and considering the increasing change to electric cars that will transform the emissions of the fleets within the next decade significantly.	<p>Vehicle type, detailed ridership, and more detailed station-by-station routing would be explored through advanced planning of regional rail lines. This regional scale approach presents the vision for a more connected and high speed network that better addresses future population, housing and employment growth.</p> <p>The planned network includes vast, interconnected rail system that is separated from vehicle traffic. Future studies will need to be conducted to determine if these services will be above or below ground. The Regional Plan's Commuter Rail system is planned for speeds up to 110 MPH using vehicles that are zero-emission.</p> <p>The Regional Plan supports investments in the electrification of cars, trucks and buses and their supporting infrastructure (e.g., EV charging stations and hydrogen fueling stations). These electric vehicle investments are one of the ways SANDAG is working to reduce climate impacts and improve local air quality. Appendices A (Table A.17) and B show SANDAG's proposed EV commitments. Innovation and advanced technologies will be critical to meeting regional GHG reduction goals in 2035 and 2050.</p>
W60	Carolyn Woodbury		Please prioritize school age youth and low income riders on public transportation. Free or very low cost (like 25 cents) rides. This will help get cars off the roads and make it possible for students to stay after school, go to libraries and to see their friends , regardless of their parent's income.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.

W62	Cathryn Rathsam	Peace Resource Center and SD 350	<p>Thank you for this important plan! It's vital to the health and wellbeing of our communities and our planet. There must be an independent oversight committee from the community, not instituted from Sandag. We need to serve the economically disadvantaged areas first. There needs to be oversight of the security guards and police as well, to insure everyone feels safe while traveling, without sexual harassment. There should be a simple, orderly, non-invasive way to insure that people have a pass or card, as in Europe, eliminating the need to have guards and police checking. It should be very economical for families and those with limited incomes. Clean bathrooms should be easily accessible. I wish you all the best in the implementation of these plans.</p>	<p>SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements.</p> <p>Oversight of public agencies is important and SANDAG welcomes public review of its work and processes. Federal and state agencies regularly review SANDAG and there are two ongoing local oversight processes with the Office of the Independent Performance Auditor and the Transnet Independent Taxpayers Oversight Committee. MTS has unveiled the Pronto card to make transit payments much easier. Transit subsidies are included in the Plan to assist everyone but with programs specifically for low-income populations first. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations.</p>
W63	Cecilia Villareal	El Cajon Collaborative/Barrio Logan College Institute Parent Spanish	<p>I try to help out in the community. We need to be asked more often to help. We would like to get involved in planning projects in El Cajon and be sure we are not forgotten. This is a good plan that looks at so many areas of transportation. I am happy they are going to be more equitable with projects and bring more projects to East County. I really like the El Cajon transit center.</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>

				jóvenes menores de 19 años. *** One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W65	Celine Khoury	UC San Diego	I call for a 24-hour service by 2025 on popular transit routes to connect late night and early morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr. service on popular transit routes and present a clear implementation schedule.	SANDAG is currently undertaking a social equity pilot analysis that will evaluate which routes could operate 24 hour service and how to create a network of routes that would provide a complete trip.
W66	Celine Khoury		I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.	The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line.
W67	Césaire Carroll-Domínguez	SDSCPA SD youth Antifa group	<p>Hey @everyone SANDAG is discussing their 2021 plan and this is an opportunity to pass an important measure that affects youth's access to public transportation. Below are all the details you will need to submit an e-comment. The deadline to comment is TODAY, Friday August 6th at 5PM. Please share this!</p> <ol style="list-style-type: none"> <li>1. Go to the e-comment website: <a href="https://regionalplancomment.sandag.org/">https://regionalplancomment.sandag.org/</a></li> <li>2. Enter your information</li> <li>3. Organization: The San Diego LGBT Community Center</li> <li>4. Chapter: General Comment</li> <li>5. Appendix Type: Appendix A Transportation Projects, Programs, and Phasing</li> <li>6. You can create your own comment or use the sample comment below</li> </ol> <p>I am a supporter of The San Diego LGBT Community Center and I am writing to urge the Board to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p> <p>I believe that every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under, who have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes are a key investment that will provide a foundation for our region's equitable economic recovery.</p> <p>When young people have access to no-cost transit passes, they are better able to access school, work, medical care, and resources otherwise not accessible.</p> <p>I urge the Board to take bold action to build a healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity Passes as a priority.</p>	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W68	Christina Abbott	Private citizen	No, no, and no. We are taxed beyond the max. Current taxes are grossly misspent. The rail system is a joke. Administration personnel are overpaid, and too many politicians are crooks.	Thank you for your comments.
W69	Christine Turrentine	N/A	<p>With your interest in North County Transportation:</p> <p>First, you have not honored your commitment to us in regard to taxes you have levied, collected and then sat on to fix, repair, or widen roads in the North County and now you want us all to use public transportation, or be taxed again for the miles we travel. My husband and I have been looking at buses as we go about our daily responsibilities and find that there are only one or two people riding a bus. A trip by Coaster from Escondido to Oceanside takes almost an hour. The</p>	A regional plan is a long-term blueprint for how the San Diego region will grow and how we will get around. It's a broad-based community effort that addresses many important issues, including using land more wisely, building a more efficient and accessible transportation system, protecting the environment, improving public health, promoting a strong regional economy, better managing our access to energy, incorporating equity into the planning process, addressing pressing needs on tribal lands, and supporting a vibrant international border.

			<p>problem is that our cities are not like older cities that have a centralized area for banking, grocery shopping, and other commodities that are needed to live, we are all spread out. Our centers are spread out, our grocery stores may be three or four miles away, and if I were to travel by bus to do my grocery shopping, it would take me more than half a day to buy a loaf of bread.</p> <p>Construction the magnitude of your desires would cause a major disruption to the lives of many people in many cities, and you still wouldn't have done what you promised years ago and collected taxes for.</p> <p>Come up with a better proposal- or actually do what you have already promised!</p>	
W70	Christoph Weber		<p>I strongly urge you to not route the Coastal Rail Trail along Rose Canyon and instead follow Gilman Drive and then route through UCSD. This was originally intended, makes sense in a lot of levels (population density along the route, points of interest along the route, demographics. among others), and it is unclear to me why anyone would see Rose Canyon as the better option. As a longtime resident nearby and avid cyclist I have always wished for a better and safer way to cycle along the originally planned route, but never for the current option.</p>	<p>The City of San Diego's project S00951 follows the Gilman Drive alignment and is on the Adopted Regional Bike Network included in this Regional Transportation Plan, it is on the City's CIP list to begin construction in 2022, please see webpage here for more details <a href="https://cipapp.sandiego.gov/CIPDetail.aspx?ID=S00951">https://cipapp.sandiego.gov/CIPDetail.aspx?ID=S00951</a>.</p> <p>It is going to be a vital connector to SANDAG's recently upgraded Rose Canyon Bike Path and SANDAG's newly constructed Rose Creek Bikeways to the south. Extending north, however, there remains a desperate need for safe, direct, all ages and abilities active transportation alternatives extending into currently underserved residential (University) and employment centers (UTC, Sorrento Valley) to improve alternatives in this major transportation corridor. In order for SANDAG to stimulate the shift from personal motor vehicle use to people choosing to bike, a network of well-designed routes is essential. The City of San Diego's project on Gilman Drive is greater than 2 miles away from the Coastal Rail Trail Rose - UTC - and Roselle segments. Together these segments represent 6.2 miles of contiguous regional bikeways connecting to the existing Sorrento Valley Coaster Station, as well as future Transit Leap services.</p> <p>These projects and this alignment were first identified in the 2000 Coastal Rail Trail Project Study Report <a href="https://www.keepsandiegomoving.com/Libraries/Transnet-doc/Coastal_Rail_Trail_Project_Study_Report_reduced.sflb.ashx">https://www.keepsandiegomoving.com/Libraries/Transnet-doc/Coastal_Rail_Trail_Project_Study_Report_reduced.sflb.ashx</a> These projects were approved by the SANDAG Board of Directors In 2010 with the development of a comprehensive regional bike network - Riding to 2050: The San Diego Regional Bike Plan <a href="https://www.sandag.org/index.asp?projectid=353&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?projectid=353&amp;fuseaction=projects.detail</a> and again these Coastal Rail Trail segments were identified as a priority project in 2013 via the Bike Early Action Program (EAP) <a href="https://www.sandag.org/index.asp?classid=34&amp;subclassid=122&amp;projectid=497&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=34&amp;subclassid=122&amp;projectid=497&amp;fuseaction=projects.detail</a></p>
W71	Christopher Guerrerri	U.S. Navy	<p>Please do no tax drivers per mile. I commute to Camp Pendleton from Eastlake Chula Vista, approx. 120 miles a day. I already survive off 1 military paycheck for a family of 3 and the gas alone is \$350 a month. Adding a tax on miles driven would absolutely bankrupt my family and I.</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those commuting long distances, are paying more than their fair share, leveraging different mechanisms such as caps and rebates to ensure a fair system.</p>

			<p>We ask that you move faster in meeting targets for emissions reduction, transit projects, and the hours of service and frequency of transit so that our public transit system can be a meaningful alternative to cars.</p>	<p>goals related to carbon neutrality requires actions at all levels of government. SANDAG looks to support and encourage local jurisdictions, state agencies, and other partners to reduce emissions beyond what is included in the 2021 Regional Plan.</p> <p>Additionally, SANDAG staff is bringing forward an item to the SANDAG Transportation Committee and the Board of Directors to amend the agency budget and act now to increase services on transit lines that have infrequent service in the evenings and late nights. Further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.</p>
W77	Colleen dietzel		<p>Please make efficient, reliable and affordable public transportation, preferably electrified buses, your top priority. I support Environmental Health Coalition's and other respected groups demands which are: 1. Prioritize environmental justice communities who need public transit most 2. Improve the bus system now 3. Fund the Blue Line Express 4. Provide 24-hour service 5. Fund the Purple Line 6. Provide Youth Opportunity Passes for 24 and under 7. Electrify the bus fleet by 2030 8. Fund anti-displacement efforts 9. Provide bathrooms 10. Ensure an emergency ready transit system</p>	<p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand. SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan. The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line. The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego. One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. The proposed final 2021 Regional Plan supports the electrification of the region's transit buses and the state's Innovative Clean Transit regulation. Appendices A and B include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p>

				<p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG’s housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations. MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG’s specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p>
W78	Colleen FitzSimons		<p>Every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under and seniors. I urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under and seniors will receive priority when Transit Fare Subsidies are allocated.</p> <ul style="list-style-type: none"> <li>- No-cost transit passes will connect youth and seniors to school, work, medical care, internships, and other early-career opportunities.</li> <li>- Programs like these exist with great success in Alameda County, Boston, San Francisco, and most recently Sacramento and Los Angeles.</li> </ul> <p>I urge the board to take bold action to build a greener, healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity passes as a priority. Thank you.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. W79	craig a nelson	Nelson Financial Consulting Group	<p>Iky should be fired and sent back to LA. Waste of taxpayer \$\$. Nobody rides the train or the bus ....all EMPTY!! and you will never change it. Fill the potholes and widen the freeway. Y'all are dumber than a bag o rocks.</p>	<p>Thank you for your comments.</p>
W80	Craig Benedetto	NAIOP and BOMA San Diego	<p>NAIOP San Diego, the Commercial Real Estate Development Association and the San Diego Building Owners and Managers Association (AKA BOMA San Diego) appreciate the opportunity to review the draft regional plan. Both organizations will receive presentations in September, but wanted to offer some general comments in advance of those discussions. First, infrastructure improvements in our region are critical. Both organizations were supportive of the extension of the Transnet Sales Tax as a means to that end. As organizations providing jobs space to our region’s employers, we believe it is critical that goods, services and people are able to move freely to and from work spaces and encourage plans that achieve that end. Both organizations believe strongly in multi-mobility, but not necessarily to the detriment of transportation of cars and other vehicles. It is important, as our members have embraced electric vehicles, that these vehicles have the same ability to move around efficiently in our county as transit. A balanced mix of projects is critical to that end, particularly if any funding source requires public approval. Voters will demand projects that meet their needs, which was how the Transnet Extension was passed with over 2/3rds vote. Lastly, funding for these projects is certainly on the minds of our members. Impediments to economic growth in our region from overly punitive funding measures, particularly those that tax miles traveled could seriously hurt the movement of goods and services throughout the region, and ultimately lead to the increase in price for those very</p>	<p>The 2021 Regional Plan contains investments in many forms of mobility to enhance quality of life for all in our region. Our vision for an improved transportation network considers the needs of all travel modes in order to meet state and federal mandates on GHG emissions and air pollution, reduce congestion, and improve social equity. Please continue to follow along at <a href="http://SDForward.com">SDForward.com</a>.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			<p>goods and services. Additionally, these types of taxes could also impact workers, particularly those who can least afford it. Not everyone or every job can be accessed through transit. Autos provide critical flexibility to many, particularly when viewed against current transit availability and the long lead times to create a more functional system. We encourage careful consideration of funding that doesn't inordinately impact jobs creators, the employment spaces or the employees. The cost of living as well as operating a business in this region is already high, we should be careful not to make it significantly worse. We understand this is a delicate balancing act, and the need for investment in our roads and transit systems is strong. We look forward to further discussions about the plan and how to fund it when our organizations meet with SANDAG staff in the future.</p>	
W81	Craig Hanson		<p>I am a resident of Mission Hills in San Diego. I support the creation of a central Mobility Hub in either downtown San Diego or Old Town. We need to improve transportation to the airport, to San Diego neighborhoods and to the surrounding metropolitan area. The focus should be on forms of transportation that will minimize any negative impact on the environment, particularly climate change. The region also needs to expand its use of mass transit centers to provide for critical transportation needs of current and future San Diego residents and visitors.</p>	<p>The central Mobility Hub will provide direct connections to the airport and support all existing and planned transit modes.</p>
W82	Craig Hanson		<p>The San Diego region also has a serious need to substantially expand its supply of mixed income affordable housing, including both low and high density housing scattered throughout urban areas. Developers of multi-family housing should be required to set aside 20% to 30% of residential units for low-income households. The county also needs to avoid further development of residential and commercial buildings in high-risk wildfire areas.</p>	<p>SANDAG is currently developing a Regional Housing Incentive Program that will support the development and adoption of policies and process improvements to accelerate housing production for very low-income-, low-income-, and moderate-income housing while taking several factors into consideration to ensure the program meets the goals of the Regional Plan.</p> <p>California has experienced unprecedented wildfire damage in the last several years as climate change has increased temperatures and dried out land and vegetation. At the same time, the state is experiencing a massive housing shortage, which is driving up the cost of housing and forcing people to move farther away from job centers in search of more affordable housing. The connection between housing policy and climate change is clear. To mitigate wildfire risks, SANDAG will support the development of new homes through its Inter-Governmental Review (IGR) process to ensure that growth is consistent with the Regional Plan and is in safe in-fill locations such as existing urbanized areas and/or in Mobility Hubs that align with public resources to support the construction of affordable housing or in areas that are less impacted by wildfire risk and are not located in the Wildland Urban Interface (WUI)—the transition zone between uninhabited land and human development.</p>
W83	Craig Jones	Alliance for Regional Solutions	<p>We support approval of the draft RTP, and stress that a) Full and rapid implementation of flexible fleets access will be a key to achieving transportation equity for disadvantaged communities; please fund and advance flexible fleets projects in partnership with community agencies/CBOs to optimize equity and achieve social justice. b) Implementation of all components of the RTP should be geographically prioritized in disadvantaged communities to advance social equity. c) Climate change is real, and impacts disadvantaged communities first and worst. Aggressive measures to reduce GHGs are absolutely necessary, above and beyond the 20% measure expected via this regional plan. Land use sprawl must be ended and affordable housing promoted to also advance equity.</p>	<p>Improving social equity and reducing greenhouse gas emissions are primary goals for the Regional Plan. We also want to do more than achieving the greenhouse gas reduction mandates. Chapter 3 and Appendix B describe implementation actions. The first priority implementation action is to Apply the Social Equity Planning Framework to ensure that equity is considered throughout 2021 Regional Plan implementation. Other implementation actions focus on partnering with communities to implement Flexible Fleet services, climate action planning, affordable housing, and land use planning in support of these goals.</p>
W84	Craig Jones	Alliance for Regional Solutions	<p>My comments are specific to North County. In North County, for there to be a meaningful alternative to the private auto, there must be public transportation which is as fast or faster than using a car, and which is frequent enough. The draft RTP plans for North County will not accomplish this. There must be NextGen Rapid Bus which not only is fast north/south, but also east-west; the draft RTP Rapid Bus routes currently planned are circuitous, not connected from Oceanside to Escondido, and it will take about an hour to use bus service between these two cities, then add on (hopeful) flexible fleet time at both ends. It takes about 20 minutes to drive between Oceanside and Escondido points, door to door. I am informed that NCTD has asked that Rapid Bus not "compete" with the Sprinter, but even with improvements the Sprinter will take about an hour to connect between Oceanside and Escondido. There MUST be better Rapid Bus service which will compete in time with the private auto. Please amend the RTP plan to accomplish this.</p>	<p>The North County Comprehensive Multimodal Corridor Plan (CMCP) work is digging into the finer details of what is proposed in the Regional Plan, and may propose additional Rapid Routes.</p>

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
W85	Dan Gallagher		I did not see anything in the Regional Plan on Public Health and the Built Environment. Given we are in an ongoing pandemic it is important to discuss how CDC protocol may affect mobility access.	Appendix T: Network Development and Performance includes modeled performance analysis. Public health measures in this analysis include particulate matter exposure and transportation related physical activity.  SANDAG relies on partner agencies for tracking public health benchmarks, including the San Diego County Air Pollution Control District, San Diego Food Systems Alliance, and Health and Human Services Agency.
W86	Dan Gallagher		In order for EV's to gain widespread adoption charging stations must be available in the parkways of all public sidewalks esp. in dense urban neighborhoods where most park on the street and don't have access to a garage. Charging stations integrated into street lights may work.	The Regional Plan supports investments in the electrification of cars, trucks and buses and their supporting infrastructure. Appendices A (Table A.17) and B address SANDAG's proposed EV commitments. For light duty vehicles, SANDAG plans to invest \$45 million by 2025 and a total of \$270 million by 2050 for EV charging station incentives. On-street charging is currently eligible for the EV charger rebate program, CALeVIP San Diego County Incentive Project. SANDAG will review future program phases to enable inclusion of on-street charging is an option, including chargers integrated with streetlights.
W87	Daria Flores	SanDiego350	I would like you to write into the plan specific, measurable language that would guarantee that fares will be affordable for low income residents. Student, senior, and young adult discounts are a good start, but this is not enough.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W88	dave nicolai		We sure have a lot of "Karens" around here whining about the inconvenience of sharing the road with other means of transportation (FB page) Those are the ones that need to get off their fat a**** and move a different way. I'm not a complete fan of your plan, especially with the class IV bikeways going in on 30th, 4th and 5th. As a seasoned commuter (i use my bike for a good amount of errands, & also own a car), I feel less safe using those lanes, and will choose to use other streets that have not been modified. If you look at Cardiff, and in Honolulu (King St.), there are plenty of pitfalls by putting up this type of layout.	Thank you for your comment.
W89	David Breidenthal		I generally like the regional plan and appreciate the emphasis on transit options. In an ideal world we could finally begin to approach even a hint of the San Diego electric railway of the 1920's and 30's. I think we should focus less on self driving cars as that doesn't really fix the parking and congestion issues we see on the roads. Average occupancy for a car is 1.6 people regardless of whether or not it drives itself. We need to avoid becoming a city of Parking lots and instead encourage people to take various other transit options as our network becomes better Integrated. I look forward to the Regional Plan coming to fruition, keep up the good work despite they naysayers who want nothing more than highway lanes and unlimited land to park on. A better, cleaner, more integrated and walkable city is possible	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W90	David Williams II	Personal	NCTD needs a lot of help, very unreliable. Must have one hell of a Union for what I've seen in the last 6 years. I would really like to speak to someone about it	Thank you for your comment.  Your comment was forwarded to North County Transit District (NCTD).
W91	dawn saad	self	It concerns me about how the \$0.02/mile will be assessed. The mileage specifically has to be within the country, the state and county. This means specific GPS tracking and record logging. This seems to be a direct violation of privacy. Will every car be equipped with the SW and connection necessary to obtain the exact mileage and the exact measurements of county/state/country lines? how will the mileage be obtained? There is concerns about the people who don't live in CA or SD county, how will they be assessed? Have you considered that there are many people who volunteer and required their vehicle to do so? I ask because there are many who drive people to/from appointments and grocery stores, because the folks don't have a car, cannot drive, and/or mobility issues. Many of these people cannot afford other means of transportation) There will be a reduction of desire to drive around and help others. This is yet another way to neuter the volunteer forces from being able to serve when more of the donated money will have to go to the government (the \$0.02 mile) just to keep the activities running. The government will also have to spend more \$ on getting these elderly and infirmed people to their appointments.	SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.  The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure

W92	Deborah McDaniel-Lindsey	La Mesa First United Methodist Church	Environmental justice must be embedded in our mobility in San Diego. Therefore, I ask that the 10 Big Moves to Transportation Justice be included in the 2021 Regional Transportation Plan. I listened to regular riders of the City Heights Community and they clearly explained how they felt their transportation needs have been slighted. I call for the funding of the planning, environmental review, engineering, and capital for the Purple Line as a rail line that connects EJ communities in Central City Heights and South Bay to Sorrento Valley. According to SANDAG staff, the alignment includes City Heights in the 2050 RTP with a 2035 implementation. However, it should be listed in the document to demonstrate that project phasing prioritizes central City Heights and the South Bay region, and a 2035 completion.	<p>that no particular group, such as those driving fuel-powered vehicles, are paying more than their fair share.</p> <p>The Mid-City Trolley Line (Purple Line) is included as the first major new rail project in the Plan and will serve the north-south travel needs in Sorrento Mesa, National City, Kearny Mesa, and University Heights. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is completing a more detailed ridership analysis of this route. The analysis is studying an alignment that would include stations in City Heights and at San Diego State University (west campus). Also, transit subsidies are a component of the proposed Final Plan and implementation of those subsidies would include a consideration of low-income and youth populations.</p> <p>Additionally, Rapid services are planned that can use dedicated roadway space to increase speeds and avoid congestion. The vast majority of these Rapids also are planned in near-term phases of the Plan.</p>
W93	Delia Contreras	Voluntaria Independiente de la Comunidad De City Heights and Voluntaria de Hoover High School	<p>Autorizacion par pases no costo para jovenes y niños en edad escolar ( estudiantes ). *** Authorize free passes for school aged youth and children.</p>	<p>Una de las Acciones de Implementación enumeradas en el Anexo B es un Estudio del Impacto Regional de las Tarifas. Este estudio permitirá que las partes interesadas públicas tengan la oportunidad de expresar su opinión sobre las alternativas. Se espera que el estudio finalice en el año fiscal (FY) 2024 e incluirá una evaluación de los subsidios para las tarifas de las personas de bajos ingresos, los adultos mayores, los estudiantes y los jóvenes. Mientras tanto, el personal de SANDAG, MTS y NCTD está trabajando con las partes interesadas en un programa piloto de un año que puede ofrecer tarifas gratis a los jóvenes menores de 19 años. ***</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W94	Denise Mc Andrews	Poway Unified School District	Please keep in mind that we need public transportation to connect adults to schools and community-based organizations that provide career education and language classes as well as supports. In San Diego County, there are several adult schools that are part of the overall education system. Poway Adult School, for example, is located on Twin Peaks Road. But, there is not currently a public transportation option to (or close to) the Adult School.	<p>We would like to refer you to our Data Viewer on the SDForward website (<a href="https://sandag.maps.arcgis.com/apps/Cascade/index.html?appid=897af882e8c14b1e996c33e48bc15347">https://sandag.maps.arcgis.com/apps/Cascade/index.html?appid=897af882e8c14b1e996c33e48bc15347</a>). There, you will find through the Regional Plan, Twin Peaks Road, which connects to the Poway Adult School, is part of our Complete Corridor Regional Arterials. Complete Corridors are designed to provide priority access for transit and Flexible Fleet shared ride services on our regional arterials and provide safe and comfortable transportation options to get people to their destinations safely and efficiently.</p> <p>For more details on Complete Corridors, please see Chapter 2: Sustainable Communities Strategy of the 2021 Regional Plan. Your comment has been forwarded to North County Transit District (NCTD) and San Diego Metropolitan Transit Service (MTS).</p>
W95	Deron Bear	Marian Bear Natural Park Advisory Group	<p>The Marian Bear Natural Park Community Advisory Group has the following comments regarding the Regional Transportation Plan (Draft, 2021): Project ID CC004 CC085 CC086 CC003 CC004 CC028 CC039</p> <p>All these projects involve additional freeway lanes or connectors between lanes bordering Marian Bear Memorial Park. In addition, portions of Project AT119 involve constructing a bike way along SR-52 adjacent to the</p>	<p>Many of the complete corridor projects in the draft plan utilize existing right-of-way, and in many cases existing roadway shoulders without encroaching into any additional land. This will greatly reduce environmental impacts, speed project delivery, and reduce costs. Where this is not an option additional project specific outreach and engagement will be conducted with affected residents and stakeholders. This process aims to develop projects with minimal impacts. For clarification a few of the projects listed aren't adjacent to Marian Bear Natural Park. CC004 and CC003 are along Interstate 5, CC039 is along SR 163, CC085 and CC086 are managed lane connectors between Interstate 805 and SR 52.</p>

			<p>Park.</p> <p>1. We oppose any encroachment on Park property that violates the terms of the Multiple Species Conservation Act applicable to Marian Bear Natural Park. This includes widening of existing lanes and “spot” widening associated with lane connectors.</p> <p>2. Mitigation of environmental impacts of construction needs to consider off-site impacts on wildlife from noise, light, and habitat disruption in Marian Bear Memorial Park.</p> <p>3. Habitat adjacent to park boundaries affected by construction must be replaced using appropriate materials conforming to the Marian Bear Memorial Park Natural Resources Management Plan. This includes freeway embankments bordering the Park.</p>	
W96	Desdemona Aviña		<p>I am a supporter of The San Diego LGBT Community Center and I am writing to urge the Board to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p> <p>I believe that every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under, who have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes are a key investment that will provide a foundation for our region’s equitable economic recovery.</p> <p>When young people have access to no-cost transit passes, they are better able to access school, work, medical care, and resources otherwise not accessible. As a low income student, transportation is one of the largest obstacles that I face. A free youth pass would advantage me and my peers who would be able to serve our community due to the opportunity of transportation. As an environmentalist, public transportation is a service that I respect and love. I know that many youth are dissuaded to use this amazing service because of the cost. A free youth pass would encourage more use from public transportation.</p> <p>I urge the Board to take bold action to build a healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity Passes as a priority.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W97	Dheman Suldan	Nile sisters development initiative	<p>Amazing projects specially the affordable housing.</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W98	Diego Olivera		<p>This is unfair to those with low income and can’t afford an expensive apartment or house in San Diego that’s close to work. They’re forced to live in lower income areas far from San Diego and have long commutes.</p>	<p>SANDAG recognizes the need for more affordable housing for people of middle- to low-income households that are near employment centers and a variety of transportation options. SANDAG is currently developing a Regional Housing Incentive Program that will consider climate change, climate resilience, and consistency with the transportation improvements and land use goals included in the 2021 Regional Plan.</p>
W99	Diego Soto Lopez	Gompers Preparatory Academy	<p>Barry mentioned during the zoom meeting that we need to spread the word and idea of sustainable transportation for students. I believe the best way to achieve this is through a school announcement during school hours for all of the people at Gompers to hear. This announcement can take place in the morning before students go to their classes and whilst all the students are lined up waiting to enter campus. We can also pass out flyers or cards with this info at the school entrance. Maybe we can even set up a presentation at our school assembly presenting all of this information.</p>	<p>Sustainable transportation is a key component of the 2021 Regional Plan and public engagement is critical to a successful plan. Appendix G of the 2021 Regional Plan includes the Public Involvement Plan and details the strategies used to consult with the public. Additional engagement will be conducted as elements of the plan move forward to its implementation phases.</p>
W100	Dionne Nguyen	The Urban Collaborative Project	<p>I am an intern working at The Urban Collaborative Project. Last Wednesday at the transportation meeting with SANDAG, community members voiced their concerns about transportation issues within their neighborhoods. Some of the topics that were brought up in our discussion include but are not limited to bus frequency, traffic and bus routes, the digital divide with smart infrastructure, broader sidewalks, traffic congestion, accessibility accommodations. Community members are seeing transportation changes in their neighborhoods and are offering their thoughts on what is changing. This is just a sliver of the concerns that they would like to be addressed going forward.</p>	<p>The planned transit frequency improvements and spans of services for all routes, including existing local service and future regional services, will be added to Appendix A for the proposed Final Plan and can be currently viewed as part of the Social Equity Working Group agenda from August 5, 2021. Also, the Plan includes Complete Streets improvements to address sidewalks and accessibility accommodations.</p>
W101	Dionne Nguyen	The Urban Collaborative Project	<p>On behalf of the District 4, Southeast San Diego community that UCP represents, we ask for the following to be a part of your 2021 Regional Plan: better bus frequency, bus routes in more neighborhoods, broader and more accessible sidewalks, a roundabout on Euclid and Imperial St</p>	<p>SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of</p>

			(and other busy intersections), request for a Mobility Hub in our community located at our current Orange line trolley station, MTS youth passes for youth up to 24 years, fiber optics underground to ensure that our communities are ready for the state of the art transportation system that is currently being designed, coverings on our MTS bus stops (structures), consider 24-hour service on the lines that are taking residents to work, focus on transitioning to all-electric buses in the 2-3 years of implementation, improve the frequency and reliability of our bus routes, ensure all out our streets are designed with the “complete streets” design.	<p>approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.</p> <p>The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p> <p>The proposed final 2021 Regional Plan supports the electrification of the region’s transit buses and the state’s Innovative Clean Transit regulation. Appendices A and B include SANDAG’s proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050for zero-emission buses and infrastructure to accelerate the implementation of MTS’ and NCTD’s Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p>
W102	Doaa Polus	El Cajon Collaborative/Barrio Logan College Institute Parent Arabic	I like the idea of car sharing, especially Smart cars or Zip cars. Since many refugees do not have more than one car, it would be wonderful to have a car to use to grocery shop, run errands and visit friends. I also like the idea of a shuttle. I approve. Thank you.	Flexible Fleet services like carshare, on-demand ridehailing, and micromobility provide greater options for different trips and needs. The Plan will expand the availability of these services in the Region, helping to reduce the reliance on owning a car to move around the region.
W103	Don Wood	San Diego Waterfront Coalition	The updated RTP needs to be far clearer on how SANDAG proposes to pay for implementing it, with explicit discussion of potential funding sources, funding strategies and plans to work with each of the funding sources to procure long term funding for all the new transportation elements of the new plan.	The Cost Estimation Methodology and Funding Strategies for the RTP were presented to the SANDAG Board of Directors on March 12, 2021, Item No. 8B. This report and presentation described the various funding assumptions developed for the draft 2021 Regional Plan. The entire Board meeting can be found at <a href="http://www.sandag.org">www.sandag.org</a> .
W104	Donna Stabe		Your transportation plan is flawed on every aspect of the proposal. San Diego is way to spread out to have a successful mass transit hub. We are not willing to spend hours and hours and transfers to get to our final destination. Expand our freeways. We do not have any carpool lanes in the east county. How dare this entity propose to charge us to drive our cars on roads and have several sales tax increases to dump additional millions of dollars into the ridiculous plan. How about this challenge. Starting in July 2021, ALL of you sell your cars and start using public transportation to get around. Let’s start with your transportation Czar and Nathan Fletcher, his wife and any Board of Supervisor who is supporting this plan. Then all City Council members do the same thing. Be the example. Also, use public transportation late at night. Let’s see how safe you feel. Be sure to bring your loved ones too. Get their feedback in using this ridiculous transportation mode.	Thank you for your comments.
W105	Eddie Meyerholz	Landscape Architecture Grad Student	From the map on page 23 there seems to be a lack of “Off-Street Bikeways”, especially in disadvantaged communities south of I-8, that connects to existing & planned Off-Street Bikeway infrastructure. It would also be great to see more Class 1 biking corridors that connect to existing and planned Commuter and Light-Rail transit systems.	<p>As an early action out of the Regional Plan, SANDAG will be developing a new Active Transportation Plan. The plan will take a fresh look at the network and the options to make it safe and comfortable to use active transportation. SANDAG prioritizes community engagement and will develop these connections in partnership with the community so that we can make sure the routes take people where they want to go.</p> <p>As each of these transportation projects moves forward there will be a great deal of planning, engineering, and design work ahead of the project’s construction. In the future there are opportunities for bike, pedestrian, and neighborhood safety projects like these you mentioned in conjunction with the RTP’s transportation projects. The</p>

				Current Community Planning Projects are a good example and I strongly encourage you to be involved in the South Bay to Sorrento project see more info here: <a href="https://www.sandag.org/index.asp?subclassid=83&amp;fuseaction=home.subclasshome">https://www.sandag.org/index.asp?subclassid=83&amp;fuseaction=home.subclasshome</a> .
W106	Edna Diaz		You have lost your minds to propose a tax for each miles driven. You have done nothing to even take care of our local streets and now you want to add taxes to “add public transportation”. If this passes, you will have an exodus from San Diego. Ridiculous!!!!	The road usage charge included in the 2021 Regional Plan is consistent with the statewide transportation plan developed by Caltrans. The Regional Plan is a long-range planning document that requires regular updates. A minimum of two more Regional Plans will be completed with updated information prior to the planned implementation of the road usage charge in 2030. Currently funding based on fossil fuel use is not sustainable as the state transitions to new fuel technologies. Maintenance, repair, and operations needs for the safety and efficient movement of people and goods remain despite changes in fuel technologies.
W107	Elaine May		The idea of a road usage tax is ridiculous. And the way Todd Gloria “cloaked” the issue, saying Tesla and other cars will pay their fair share is stupid. Put this to the people of San Diego to vote on and just see how far this gets. Tax paying residents are tired of the dumb ideas, ESPECIALLY from money-wasting SANDAG.	Thank you for your comment.
W108	Elizabeth O’Shea-West	Vista Adult School	Support Flexible fleets and quicker routes for our students to get to school and to work.	The planned transit frequency improvements and spans of services for all routes, including existing local service and future regional services, will be added to Appendix A for the proposed Final Plan and can be currently viewed as part of the Social Equity Working Group agenda from August 5, 2021. These services will help people better access school and work.
W109	Ellen McCann		I am urging SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth (ages 24 and under) receive priority when transit fare subsidies are allocated. I am 58 and have been riding buses my whole life and don’t own a car. Let’s step up our bus game.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.
W110	Elyse Dilloway		The proposal for taxing mileage driven by San Diegans each fiscal year seems unfair to those who have to travel for work because they live in more affordable areas, or people such as delivery drivers or rideshare drivers. Undoubtedly this proposal will meet public distaste, especially if the aforementioned affected groups of people don’t get a proper chance to make their voices heard.	SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.  The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.
W111	Emerito Barrientos	n/a	Very satisfactory.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> . The 2021 Regional Plan data viewer can be used to explore draft plan projects in your area.
W112	Emilia Castillo	Platicando Con Mi Gente	Who will be held accountable to get the services we need in the South East San Diego transit lines?	The Regional Plan includes frequency increases on most of the 14 routes in the South East San Diego area. A new table has been added to Appendix A showing the increases for each route.
W113	Emiliano Benitez		Reliable and free transportation for all the youth of San Diego is crucial to the well-being and overall improvement of families across the city. Young people shouldn’t have to pay to get to school or work or anywhere in the city on public transportation.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway,

				staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.
W114	Emily Barnes	N/A	Could some areas become hourly based for carpool lanes? Like they have on the 14 fwy in LA? During the hours of 10am-1pm nobody uses the carpool lane and the other lanes congest quickly.	The Managed Lanes concept envisioned in the Plan, provides the opportunity to dynamically manage the lanes based on real time conditions, time of day, and vehicle occupancy, to make all lanes more efficient and provide benefits to the system as a whole.
W115	Emmet Farrell	Creation Care Ministry, Catholic Diocese of S. D.	I call for an electrified bus fleet by 2030. Fund the implementation of California's Innovative Clean Transit rule to accelerate the electrification of the bus fleet ten years before mandated by the California Air Resources Board. We cannot afford to wait 20 years to reduce GHGs. Therefore, I ask that the transition to zero-emission buses be accelerated for a 2030 completion with the support of recently approved state and federal funding sources	The proposed final 2021 Regional Plan supports the electrification of the region's transit buses and the state's Innovative Clean Transit regulation. Appendices A and B include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a> .
W116	Emmet Farrell	Creation Care Ministry, Catholic Diocese of S. D.	I call for an environmental justice centered RTP to ensure the projects included in the RTP will prioritize environmental justice (EJ) communities identified by CalEnviroScreen (CES) by listing projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025 in EJ communities, and making all public communication easy to understand by the public in order to promote meaningful engagement. Therefore, in the RTP, I ask that an equity specific project list be included in Appendix A: Transportation Projects, Programs, and Phasing document.	The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand.
W117	Emmet Farrell	Creation Care Ministry, Catholic Diocese of S. D.	I call for an improvement in the bus system now that is fast, frequent, reliable, and accessible through increasing frequency on popular lines, especially overcrowded ones. Therefore, I call for more clarity in Appendix A: Transportation Projects, Programs, and Phasing that provides a list of specific improvements to the bus system.	SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.
W118	Emy Bernardo		I strongly oppose this 163 billion dollar plan. We do not need to "reimagine transportation" and this should NOT be paid for by a user fee or mileage tax. You are going to make San Diego even less affordable and hurt the people you supposedly trying to help with this plan. Face the reality that everyday San Diegans that have jobs and families do not want to use public transit, nor is it practical. How is that we have the highest gas taxes in the country and the roads are horrible?	Thank you for your comment.
W119	Eric Berry		Appendix does not list making Laurel Street an airport priority roadway and building new ramps to I-5. Is this no longer part of the concept or is it included in something else?	Appendix A includes a grouped collection of priority airport roadways. These improvements include: Convert Laurel Street to Primary Airport Entrance/Exit Roadway, Modify Laurel Street between Pac Highway and I-5, and Install new I-5 Freeway Ramps at Laurel and Redwood St.
W120	Eric Berry		There really needs to be new interchange improvements on the 67 south to 8 east connector and 8 west to 67 north connector. On both of these connections, traffic regularly backs up for a mile due to merging from Mollison Ave on the 8 west side and due to merging from Magnolia Ave and Mollison Ave on the 67 south side. This merging, slowing, and backup frequently causes accidents.	No reconstruction of existing interchanges is currently planned at SR 67 and I-8. However, at the project development stage (which follows the Plan), alternatives and access will be reviewed for the Managed Lane improvements that are included in the Plan and connect to at and through these interchanges.  Your comment was forwarded to Caltrans.
W121	Erika Brooks	SoCal Pre Apprenticeship Program	Eager to learn about the progress of transportation for the future and open to understanding how I can play a role in project's progress.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W122	Esther Brasmer	La Mesa First UMC	I call for a 24-hour service by 2025 on popular transit routes to connect late night and early morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr service on popular transit routes and present a clear implementation schedule.	The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.

W123	Esther Brasmer	La Mesa First UMC	I call for the development of a bathroom access plan and providing MTS with funding for a clear and accessible bathroom network open at all major transit stations. It is unclear if a bathroom network is included in the capital operations budgets.	The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations.
W124	Etelvina Tinoco	Elac	<p>Es importante que ayuden a los jovenes y adultos mayores con el costo reducido del transporte , con un veneficio hasta los 25 años .</p> <p>***</p> <p>It is important to help young adults and seniors by reducing the cost of transportation and provide this benefit until they are 25 years old.</p>	<p>Una de las Acciones de Implementación enumeradas en el Anexo B es un Estudio del Impacto Regional de las Tarifas. Este estudio asegurará que las partes interesadas públicas tengan la oportunidad de expresar su opinión sobre las alternativas. Se espera que el estudio finalice en el año fiscal (FY) 2024 e incluirá una evaluación de los subsidios para las tarifas de las personas de bajos ingresos, los adultos mayores, los estudiantes y los jóvenes. Mientras tanto, el personal de SANDAG, MTS y NCTD está trabajando con las partes interesadas en un programa piloto de un año que puede ofrecer tarifas gratis a los jóvenes menores de 19 años.</p> <p>***</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W125	Eve Simmons	TheGreenFlash.org	Please be proactive and mindful of our shared environment and the implications of all of your decisions. Please do all you can to foster the availability of clean, local, solar/wind/renewable energy. Please lessen plastic pollution, and other toxins in our air, earth, and water. Your actions matter.	The 2021 Regional Plan includes a Sustainable Communities Strategy (SCS), as required by California Senate Bill 375 (Steinberg, 2008) (SB 375), for the San Diego region. This SCS describes coordinated transportation and land use planning, and identifies Priorities for Adaptation Planning, which include serving as a resource for local agencies' Climate Action Planning efforts and the general public on the impacts of climate change. When combined with the transportation network, the SCS exceeds the state's target for reducing per capita GHG emissions set by the California Air Resources Board.
W126	Fabiola Torres	National Latino Research Center	<p>Mis ninos usan el train, quier mas suiguridad. Espero que este plan realmente suceda. Hemos tenido tantas reuniones con escuelas y otras organizaciones, para brindar comentarios y sugerencias para nuestras comunidades, pero nunca completaron su promesa. No hemos visto ningún cambio aquí.</p> <p>***</p> <p>My children use the train, we want more security. I really hope this plan succeeds. We have has so many meetings with the schools and other organizations, to present ideas and suggestions for our communities, but they never fulfilled their promise. We haven't seen even one change here.</p>	<p>SANDAG, MTS y NCTD creen que se puede hacer más para mejorar la seguridad en y cerca del transporte público y están trabajando para implementar estas mejoras ahora y en el futuro. Por ejemplo, MTS está reasignando parte de los fondos asignados a la seguridad que usualmente se usan para monitorear el pago de las tarifas a mejoras de seguridad. SANDAG trabajará arduamente con la ayuda de todos nuestros pasajeros y representantes para asegurar que este plan sea implementado.</p> <p>***</p> <p>SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements. SANDAG will be working hard with the help of all of our passengers and representatives to ensure that this plan gets implemented.</p>
W127	Fatima DaSilva	Nile Sisters development initiative	I think this would benefit my community tremendously especially with housing needs for people around the community.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W128	Fatin Amjad	El Cajon Collaborative/ Barrio Logan College Institute Parent Arabic	Submitted in Arabic- The plan is so beautiful and El Cajon will be so much better if it is successful. I wish to see signs and information about the buses and trolley in Arabic. We would like a free train (shuttle) or car (Zip cars) for low-income families to use.	<p>SANDAG will be applying a social equity planning framework throughout the implementation of the Regional Plan. Through this process, SANDAG will be working with our Community-Based Organization partners (or CBOs) to ensure that language translations (such as for Arabic) and translated educational resources on transit are available to all San Diegans. In addition language accessibility will be considered as a key factor when planning and designing the Next OS in order to improve access and travel options to all San Diegans.</p> <p>In addition to language accessibility, SANDAG will also conduct a near-term Regional Fare Impact Study for our transit services such as the trolley. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, students, and youth. You can find more information on the Regional Fare Impact Study also in Appendix B. In addition, the 2021 Regional Plan envisions subsidized</p>

			<p>struggle paying for school, rent, food, health and basic needs is great. The stress that it creates trying to survive under the system that is clearly unequal for San Diegans is huge. And as me I know there are thousands of individuals and families with the same struggle as me. I totally oppose to this action to be taken. Our community should make use of democracy and vote for or against this action. NO! To this unfair plan.</p>	<p>calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources. The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p>
W137	Frank Norton		<p>I oppose the proposed high-speed rail system as described in San Diego Forward: The 2021 Regional Plan for the following reasons:                      1) Too expensive--even assuming that the system can be completed at its current estimated cost. Plus, these types of projects are always more expensive that anticipated, e.g., California high-speed rail.                      2) Mandating high-density neighborhoods. That the envisioned high-speed rail requires imposing high-density zoning is proof that the plan has not been tailored to the needs of San Diego county. It is like requiring everyone to buy carts because you have horses to rent. I am not against high-density neighborhoods per say. Rather, SANDAG should not impose zoning and density rules on local communities. Local communities know what is best for them.                      3) Reduction in greenhouse gases (GHG) may be less than projected. Chapter 1 (page 7) states, "41% of GHG emissions come from passenger cars and trucks." However, electric vehicles are coming. By 2040, most passenger vehicles will likely be electric, drawing into question the Plan's estimate for high-speed rail's reduction in GHG. Just today President Biden signed an executive order to encourage the increase of electric-vehicle production to 50% by 2030.                      4) Fully-autonomous vehicles are coming. Instead of a high-speed rail system that requires high-density neighborhoods to ensure sufficient ridership, fully-autonomous vehicles could form the basis for a distributed transportation network that would go to where residents want to live, not where they need to live to make the high-speed rail viable.                      5) Obsolete before it is made. Widespread adoption of telecommuting and fully-autonomous vehicles plus other, currently unimagined, innovations may make the planned high-speed rail system obsolete before it is completed.                      In the end, the envisioned high-speed rail system is an update of the Shinkansen, Japan's bullet train that first went into service in the 1960's. SANDAG should look for 21st-century solutions, not attempt to update solutions from the last century.</p>	<p>The 2021 Regional Plan's Commuter Rail system is planned to be different than California's High Speed Rail, proposing speeds up to 110 MPH using vehicles that are zero-emission. Land use and zoning authority is reserved to local jurisdictions, however, SANDAG encourages cities to densify where transit is planned. State law does not allow regional plans to take credit for the GHG emission reductions resulting from the changeover of gas-powered vehicles to electric, therefore the 2021 Regional Plan outlines additional ways for the San Diego region to meet state mandated GHG reduction targets (increasing transit and other modes capacities to encourage mode shifts from solo driving to these alternative modes).</p>
W138	Fred Brown		<p>Those of us who were here in North County 40 years ago remember how wonderful it was before all the traffic congestion, the noise and pollution, the crime and high taxes. Population growth has been ruinous to North County. Growth is not progress; it's not progress when you make things worse, and things are worse. The developers have paid off the City Council members and the Board of Supervisors. It is called campaign contributions, in other words, legalized graft. The politicians benefited and the developers benefited and the residents suffered. We do not have enough water for the population we now have and the politicians are still thinking in terms of growth. We have enormous waste disposal problems, what do we do when the land fills are full ? The wild life has been destroyed, most of it is gone. Growth is not progress.</p>	<p>The County Water Authority is the agency responsible for projecting water needs in the region and their projections use the SANDAG Regional Growth Forecast as an input to their modeling effort.</p>
W139	Frederick Simson		<p>I see a greater need for more public education outlining responsibilities of individual motorists, bicyclists, and pedestrians in regards to their interactions with each other within the shared network. These 3 components do not "play well together" as each claims superiority over the others. ALL are breaking rules assumed to be followed by the planning hierarchy. New constructs such as North Park's round-about traffic circles are foreign to local users who cannot grasp the concept of "Yield". I would triple the size of the Yield signs and reduce the size of the circular arrows. Motorists are confused by the absence of stop signs.</p>	<p>SANDAG is actively working on developing an outreach program for all roadway users focused on the projects being constructed in the Regional Bike Early Action Program. We have received a competitive State Active Transportation grant to develop and implement and education and outreach program that is beginning soon.</p> <p>Your comment was forwarded to the City of San Diego.</p>

W140	G King	Local Citizen Taxpayers	<p>SANDAG has not followed the law or provided representative government. You ignored &amp; failed your obligation made by promises from funded ballot measures to provide additional freeway lanes for commuters in single occupant vehicles &amp; work trucks.</p> <p>You intentionally depleted the funding by using it solely for mass transportation, HOV &amp; toll lanes, your outrageous salaries &amp; pensions, and self promotion.</p> <p>SANDAG ignores the new situation that was forced upon us by the Covid-19 Pandemic, which makes mass transit unusable due to respiratory-disease transmission.</p> <p>Mass transit has also become dangerous due to the skyrocketing crime rate. Trolley stations are hot spots for crimes like assault, robbery &amp; murder.</p> <p>People need &amp; want the freedom to own their own vehicle and move about freely. We can't spend 2 1/2 hours to get somewhere that only requires a half hour drive. We can't walk miles to &amp; from bus stops to work or carry enough bags of groceries on a train, trolley or bus.</p> <p>We refuse your oppressive gas taxes, tolls, and per mile charges! We already pay the highest gas taxes in the country, but it's never enough to satisfy you. Your social engineering repulses us. You spend &amp; waste billions of our tax dollars without being accountable or following the law.</p> <p>Seniors can't afford to live here if you get your way, but you would force grandma into danger &amp; poverty. You are truly heartless.</p>	<p>Transit Leap greatly increases transit speeds, frequency, and span of service providing a compelling alternative to driving. Flexible Fleets help address access to transit facilities and travelers' final destinations. Complete Corridors with continue to provide mobility and access to all modes throughout the region.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. While the design of the program has not yet been determined, initial assumptions included in the Regional Plan is that the regional road usage charge would be a user-fee for use of roads in San Diego County. So a San Diego County resident would not be charged a San Diego user fee for miles drive in other counties, and residents of other counties would be charged for miles driven in San Diego county. SANDAG will rely on coordination with other agencies in California along with the State Department of Transportation to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers.</p> <p>Oversight of public agencies is important and SANDAG welcomes public review of its work and processes. Federal and state agencies regularly review SANDAG and there are two ongoing local oversight processes with the Office of the Independent Performance Auditor and the Transnet Independent Taxpayers Oversight Committee.</p> <p>SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements.</p>

			<p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Drone transportation. Explore replacing a substantial part of the transportation energy (electric and fossil fuel) by investing in nuclear energy transportation solutions.</p> <p>Projects that should be a priority for SANDAG: Overdue freeway fixes. Transportation that focuses on public safety.</p> <p>Additional questions and public comments: Fund safe and clean transportation before building new infrastructure for low ridership.</p>	<p>805 and Mast Blvd is proposed for 2035. SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements. SANDAG and Caltrans are currently preparing Comprehensive Multimodal Corridor Plans that includes both corridors which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor.</p> <p>The Plan also includes near-term and continuing actions to expand regional programs on low-carbon transportation options, roadway safety and maintenance, and nature-based climate solutions.</p>
W144	Gary Clasen		<p>Safety concerns in East County: Highway 67.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Focus on creating economic hubs in the East County Region to lessen traffic on the freeways. Focus on other goals than trolleys, buses and bike lanes. These goals do not meet the needs of East County. You goals should be to meet the needs of each region, not just along the hwy 5 corridor.</p> <p>Projects that should be a priority for SANDAG: Highway 67. Develop alternative solutions that will reflect our needs. Realize the needs in each region are different, but as equal to all project on the west side of hwy 5. Re-prioritize Hwy 67 to meet immediate needs, do not postpone until 2035, which will be too little, too late.</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor.</p> <p>The 2021 Regional Plan includes Mobility Hubs for East County which can facilitate creating additional economic opportunities within that hub. Mobility Hubs are communities with a high concentration of people, destinations, and travel choices. They offer on-demand travel options and supporting infrastructure to enhance connections to high-quality Transit Leap services while helping people make short trips around the community on Flexible Fleets. Mobility Hubs vary in their size, needs, and services being unique to each community.</p>
W145	Gary Clasen		<p>Safety concerns in East County: The 67/Mapleview intersection continues to be dangerous - likewise the proposed removal of lanes on Woodside Ave to convert them to bike lanes aren't needed and will only contest the area worse than it already is.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: According to SANDAG's own 2019 report, the use of marijuana amongst juveniles has increased - so SANDAG needs to have a backbone and deny the city forcing easy county to accept marijuana shops and grow areas because the city is supported by Lobbyists and not listening to the citizens of east county. As presented , the Lakeside Community planning group brought this issue to the community and the room was filled with lakeside citizens who didn't want this project. Why are you keeping silent?</p> <p>Projects that should be a priority for SANDAG: For East County- the 67 corridor upgrade- the expansion of 52.</p> <p>Additional questions and public comments: Sandbag criminal justice research division conducted a report in 2018 that showed a 66% increase of juveniles vaping THC. Forcing east county to take marijuana stores and grow areas are going to be inequitable to the lower socioeconomic citizens that outnumber the medium income earners. Forcing lakeside to accept weed stores when they've told you they don't want it should be criminal- your own reports show how this would disproportionately affect lakeside and increase theft, health and increase the use of other harder drugs. Keep the marijuana market out of Lakeside!</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor.</p> <p>Land use authority and decisions related to the types of commercial uses are reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively, understand the unique needs of their communities and geographies. SANDAG does make it a priority to share public safety information and data through publications and SANDAG's Public Safety Committee.</p>
W146	Gary Clasen		<p>Safety concerns in East County: Highway 67 and other routes that need updating and made much, much safer.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: The East County and other non-urban, non-downtown, non-coastal areas have different needs that need to be addressed. Bike routes, trolley stops, "fast" buses are not the answer. Better highways, shorter travel times (less time idling in traffic jams) are required and were promised when taxes were raise.</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements from Mapleview to Dye Road. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor. ID	Commentor Name	Agency	Comment	Response
			<p>Projects that should be a priority for SANDAG: Routes 67 and 78 and other areas that need to be safer and often more lanes added.</p> <p>Additional questions and public comments: Don't just think about the urban areas. NOBODY is going to take a bus or ride a bike from Ramona or Campo, Lakeside or Jamul, Escondido or Vista to job centers in cities or along the coast. Many people in these areas work construction, so they need trucks, vans, and other private vehicles not only to get to jobs, but to work from as part of their routine. Don't forget about us. Did I miss the community meeting in Lakeside, BTW?</p>	<p>Additionally, the 2021 Regional Plan includes a system of managed lanes including on State Route 78. SR78 includes four managed lanes proposed for 2035 and supporting managed lane connectors.</p>
W147	Gary Clasen		<p>Safety concerns in East County: Homelessness increase. 52 Freeway needs more lanes, should be a priority. Trolley should connect Santee to North County.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: 52 freeway size increase within 5 years. Trolley to connect Santee to North County in 5 years or less.</p> <p>Projects that should be a priority for SANDAG: 52 freeway increase in lanes. Trolley to connect Santee to North County.</p>	<p>The 2021 Regional Plan re-envision the transportation network which includes a system of managed lanes supported by technology improvements. Managed lanes operate very similar to the I-15 Express Lanes which prioritize use of transit, carpools, vanpools, and rideshare. The Plan includes three managed lanes on SR52.</p> <p>SANDAG and Caltrans are developing a Comprehensive Multimodal Corridor Plan (CMCP) for the Coast, Canyons, and Trails corridor which includes SR52. The Coast, Canyons, and Trails CMCP aims to guide the development of an innovative transportation network, transforming the way people and goods move east and west through the central San Diego region. This CMCP evaluates all travel modes and transportation facilities in the Coast, Canyons, and Trails study area and tailors solutions for the travel needs of the corridor. Major transportation network improvements by 2050 include additional Managed Lanes and ramp improvements along portions SR 52. By 2050, active transportation projects include buildout of SR 52 Bikeway and several enhanced bike lanes through Santee, El Cajon, La Mesa, and unincorporated San Diego County.</p> <p>For more information regarding the Coast, Canyons, and Trails corridor please visit: <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=610&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=610&amp;fuseaction=projects.detail</a>.</p>
W148	Gary Clasen		<p>Safety concerns in East County: Highway 67 improvements have been put off for over 20 year already. People continue to die in accidents on this highway. Now we're seeing another 15 years added to the timeline???? This is unacceptable. Bike lanes should not come before Highway improvements that can SAVE LIVES!!!</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Improve Highway 67 ASAP.</p> <p>Projects that should be a priority for SANDAG: San Vicente - Highway 67 Improvements.</p> <p>Additional questions and public comments: What is your reasoning when you put Bike Lanes as a priority over SAVING LIVES?</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements from Maplevue to Dye Road in the plan phase year 2035. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor. For more information regarding the San Vicente Corridor please visit: <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail</a>.</p>
W149	Gary Clasen		<p>Safety concerns in East County: Short on-off ramps. Highway 67...scary speeds, narrowing of lanes allows stupid people to still pass on the right.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Same/similar as past years...make highway 67 slower/better. Remedy those short on-off ramps to determine which ramps cause the most accidents. Clearly the one at 67 N just past the bridge and before Riverford! Horrible on-ramp.</p> <p>Projects that should be a priority for SANDAG: See above.</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements from Maplevue to Dye Road in the plan phase year 2035. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor. Flexible Fleet services may complement fixed-route services, even in more suburban communities such as Lakeside. They offer additional convenience, as the on-demand nature of Flexible Fleet services allows people to book a ride almost anywhere and anytime.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			Additional questions and public comments: Public transportation for our Lakeside, utilizing smaller vehicles to allow them to have better cost effective results.	For more information regarding Flexible Fleets please visit: <a href="https://www.sdforward.com/mobility-planning/flexible-fleets">https://www.sdforward.com/mobility-planning/flexible-fleets</a> .
W150	Gary Clasen		<p>Safety concerns in East County: Hwy 67 from Vigilante Rd. up north to Ramona.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Roads in east county and Hwy 67 now.</p> <p>Projects that should be a priority for SANDAG: Hwy 67.</p> <p>Additional questions and public comments: Please do not support any additional road tax not the mileage tax we seniors struggle now just to pay the registration fees.</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements from Mapleview to Dye Road in the plan phase year 2035. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor. For more information regarding the San Vicente Corridor please visit: <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail</a>.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those driving fuel-powered vehicles, are paying more than their fair share.</p>
W151	Gary Clasen		<p>Safety concerns in East County: 67 needs to be widened for safer travel.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Projects that should be a priority for SANDAG: street repair.</p>	<p>State Route 67 is slated for roadways improvements: shoulder widening and straightening improvements from Mapleview to Dye Road in the 2021 Regional Plan's phase year 2035.</p> <p>For more information regarding the San Vicente Corridor please visit: <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail</a>.</p>
W152	Gary Clasen		<p>Safety concerns in East County: Highway 67 south and highway 8 connection is dangerous and to backed up plus highway 8 west getting onto 67 very backed up.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Projects that should be a priority for SANDAG: Highway 67.</p>	<p>State Route 67 is slated for roadways improvements: shoulder widening and straightening improvements from Mapleview to Dye Road in the 2021 Regional Plan's phase year 2035.</p> <p>For more information regarding the San Vicente Corridor please visit: <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail</a>.</p>
W153	Gary Clasen		<p>Safety concerns in East County: Aviation Pollution and aviation crashes.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Affordable housing, bike lanes.</p> <p>Projects that should be a priority for SANDAG: Move Gillespie Field Airport, waste of money and pollution.</p>	<p>Land use authority is reserved to local jurisdictions – the cities and the county. Gillespie Air Center is in the jurisdiction of the City of El Cajon and subject to the city's zoning and ordinances.</p> <p>In recognition of the lack of affordable housing, SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed 2021 Regional Plan. The proposed 2021 Regional Plan has a full network of transit stations throughout the San Diego region that are located where key mobility connections need to be made between residential, commercial, and employment centers, such as UTC and Old Town. SANDAG will work closely with local jurisdictions to determine design and services of Mobility Hubs based on the community's needs.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			Additional questions and public comments: Why are we building two transit hubs? One in UTC and one in Old Town Makes no sense, Lindberg is an embarrassment. We need a WORLD airport ai Miramar MCAS You are playing politics with our transportation tax monies.	
W154	Gary Clasen		<p>Safety concerns in East County: Evacuation in an emergency will be impossible because Rte. 52 will be clogged (not enough lanes) when trying to get to other freeways. Likewise, the junction of 125 South and 94 West will also be clogged.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Add lanes to Rte. 52 where it junctions with Rte. 67 and continuing all the way to the I-5. Morning traffic is at a standstill on the 52 in East County heading West. Afternoon traffic is stop and go going East. Also, add lanes to the junction of the 125 South and 94 West.</p> <p>Projects that should be a priority for SANDAG: Freeways from East County heading West need to have more lanes.</p> <p>Additional questions and public comments: Why is it that projects in East County are usually moved to the “back burner?” Why not give the same priority to all county residents?</p>	<p>MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG’s specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p> <p>The 2021 Regional Plan includes managed lanes network for SR52 and supporting managed lane connectors, included in Appendix A: Transportation Projects, Programs and Phasing. The Plan includes three phase years, 2025, 2035 and 2050. SR52 between I-805 and Mast Blvd is proposed for 2035. SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements. SANDAG and Caltrans are currently preparing Comprehensive Multimodal Corridor Plans that includes both corridors which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor.</p>
W155	Gary Clasen		<p>Safety concerns in East County: Mapleview Ave and highway 67 stoplight.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Widening 67 at choke points in Ramona.</p> <p>Projects that should be a priority for SANDAG: Bradley Ave bridge over 67 highway.</p> <p>Additional questions and public comments: Spend money on roadways which our gas tax is supposed to be spent on. Don’t allow the head of SANDAG to spend majority of budget(taxpayers) money on public transit.</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements from Mapleview to Dye Road in the plan phase year 2035. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor. ID	Commentor Name	Agency	Comment	Response
			<p>Investments I would like to see from SANDAG: East County roads are pretty bad in general and need to be repaired. I would like to see more investment in fixing the roads and less in public transportation. I see so many empty busses and trolleys and spending major money on the transit system in San Diego doesn't seem practical.</p> <p>Projects that should be a priority for SANDAG: REPAIRING ROADS.</p>	<p>and equitable transportation solutions that are tailored to the needs of the corridor. For more information regarding the San Vicente Corridor please visit: <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail</a>.</p>
W158	Gary Clasen		<p>Safety concerns in East County: Homeless population increasing.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Community development, more housing, no gas tax for miles traveled. NOW.</p> <p>Projects that should be a priority for SANDAG: Housing, Road repairs, Community enhancements. Bringing in more small, med and large businesses to our community.</p> <p>Additional questions and public comments: How could you push out some of the programs until 2035 to 2050. That is hard to fathom that this can be done when each project proposed has a need now and in the future. By the time those years come around, all the needs would have changed.</p>	<p>The 2021 Regional Plan considers the needs of the San Diego region, including communities in east county. The plan includes investments in an affordable housing program, road repairs, and community enhancements, particularly in Mobility Hub areas. These are areas where multiple travel options come together. The Regional Plan is a long-term blueprint for the region and is updated every four years to account for new data and information, changes in population forecasts, new technology, and policies.</p>
W159	Gary Clasen		<p>Safety concerns in East County: Otay Lakes being allowed to be a share the road for cyclist.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Make a bike loop from Chula Vista along Otay Lakes Rd to Campo Rd (HWY 94) to Proctor Valley Rd to Chula Vista. It would be a safer and a well used two way bike lane and will attract active bikers an encourage more health in the community.</p> <p>Projects that should be a priority for SANDAG: Widen Hwy 94 and Otay Lakes.</p> <p>Additional questions and public comments: How many people, mostly bicyclist have to die to make the simple change.</p>	<p>While this segment of roadway is not included in the 500+ miles of SANDAG's Regional Bikeway Network, the Otay Lakes Road bikeway is a Local Bike Project in the City of Chula Vista's adopted Active Transportation Plan, available at: <a href="https://www.chulavistaca.gov/home/showpublisheddocument/20838/637346375732130000">https://www.chulavistaca.gov/home/showpublisheddocument/20838/637346375732130000</a>.</p> <p>More details on that effort, including staff contact information, can be found at: <a href="https://www.chulavistaca.gov/departments/engineering/active-transportation-plan">https://www.chulavistaca.gov/departments/engineering/active-transportation-plan</a>.</p> <p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p> <p>Your comment was forwarded to agencies that oversee these facilities.</p>
W160	Gary Clasen		<p>Safety concerns in East County: East County is not represented fairly at SANDAG. New SANDAG plan will not work!</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Defund and dissolve current SANDAG, and create a new regional entity that is capable, honest, and balanced. Invest in better road planning and housing approvals that prevent super dense neighborhoods. See project recommendations.</p> <p>Projects that should be a priority for SANDAG: Defund and dissolve current SANDAG. For a new Regional entity - 1) water &amp; electricity availability for growing population, 2) population management / control based on utilities available (water, electricity), 3) better road planning to avoid gridlock and out of touch green energy ideas that are not realistic - planning should not based on SANDAG or County staff recommendations, but heavy on citizens input, which is ignored most of the time. 4) Help solve the border crisis - help complete building the border wall and contribute to creative solutions to stemming illegal</p>	<p>Thank you for your comments.</p>

				<p>improve transportation safety, maintain rural community character, create greater trip reliability and efficiency, and provide emergency evacuation options in the event of fire or other natural disaster.</p> <p>For more information regarding the San Vicente, please visit:  <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail</a>.</p>
W163	Gary Clasen		<p>Safety concerns in East County:                      The plan is not a set of strategies, but rather a set of aspirational statements, goals and principles that have few specific actions. And there is no recognition that to achieve the image of the future state will require changes in voluntary behavior by citizens, as well as participation by multiple industries. Specifically not mentioned is the main tool of government to enact such designs, i.e., regulation. Also, local government must operate within state and federal frameworks as well. So the city and county of San Diego can't implement requirements, technologies and infrastructure unilaterally. The plan makes no mention of the coordination of these human and governmental elements.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG:                      I don't know what SANDAG's budget is, so I don't know what is possible. If the proposed \$163 billion was arrived at through analysis with more data than presented by the document, in terms of why the amount is what it is. The source of funds was not clear as to whether new taxes will be required; "new sources of funding" will be required. Without knowing the boundaries of the budget, I cannot offer opinions on what I'd like to see the money spent on.</p> <p>Projects that should be a priority for SANDAG:                      I didn't see anything in the report (maybe I missed it) that talked about autonomous vehicles, the impact of higher remote working ratios, the conversion to electric mobility, the impact of delivery services that will remain post-pandemic, etc. All of these factors will contribute to less need for mobility in terms of frequency of travel by humans. Have these trends been considered?</p> <p>Additional questions and public comments:                      Is this publicly available version of the plan simply a "Cliff's Notes" marketing version, meant to raise awareness and hopefully increase public support for taxes raised to pay for the projects?</p>	<p>The 2021 Regional Plan is a long-range planning document and is required by federal law to provide a reasonably feasible funding strategy for the projects, policies, and programs of the plan. As described in Chapter 3 and Appendix B, additional work, including advanced planning, public involvement, pilot testing, and legislation will be necessary to implement elements of this plan. SANDAG updates the Regional Plan every four years with the latest in planning ideas and concepts.</p> <p>The 2021 Regional Plan envisions a transportation system that will evolve as our mobility needs continue to change well into the future. Flexible Fleets, which include shared, electric, connected and eventually autonomous vehicles, work in concert with mass transit, providing on-demand solutions. SANDAG continues to monitor the development and deployment of autonomous vehicles as there is great uncertainty about when fleets of fully autonomous and connected vehicles capable of operating will be ubiquitous.</p>
W164	Gary Clasen		<p>Safety concerns in East County:                      Parking, Policing, Total Gov Reform.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Projects that should be a priority for SANDAG:                      Termination of Bloated city-county employees at the top.</p>	Thank you for your comment.
W165	Gary Clasen		<p>Safety concerns in East County:                      Maplevue Ave and highway 67 stoplight.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG:                      Widening 67 at choke points in Ramona.</p> <p>Projects that should be a priority for SANDAG:                      Bradley Ave bridge over 67 highway.</p> <p>Additional questions and public comments:</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements from Maplevue to Dye Road in the plan phase year 2035. SANDAG and Caltrans are currently preparing a Comprehensive Multimodal Corridor Plan which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor. For more information regarding the San Vicente Corridor please visit:  <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=607&amp;fuseaction=projects.detail</a>.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

			Spend money on roadways which our gas tax is supposed to be spent on. Don't allow the head of SANDAG to spend the majority of budget(taxpayers) money on public transit.	
W166	Gary Clasen		<p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Additional carpool lanes asap.</p> <p>Projects that should be a priority for SANDAG: Carpool lanes, electric vehicle chargers, NOT trains to Ramona or other distant areas, and NOT more empty busses with no one riding other than the driver as currently seen all over north county.</p> <p>Additional questions and public comments: Address what the public actually wants and not some politicians' pipe dream. We DO NOT want to be like Los Angeles.</p>	<p>The Managed Lanes concept is envisioned in the 2021 Regional Plan. They provide a system of managed lanes allowing the opportunity to dynamically manage the lanes based on real time conditions, time of day, and vehicle occupancy, to make all lanes more efficient and provide benefits to the system as a whole.</p> <p>SANDAG will explore ways to integrate EV charger location and availability data into the Next OS platform.</p> <p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W167	Gary Clasen		<p>Projects that should be a priority for SANDAG: NOT road user fees.</p> <p>Additional questions and public comments: A BIG NO! to Road User Fees (page 47 of The 2021 Regional Plan). I'm fine with Managed Lanes, people can choose to pay extra to use the faster lane or not (we'll see if they actually end up being faster). But you will have a grassroots uprising if you try to start taxing us to drive on the roads! I am retired and have worked hard all my life. I am already over-taxed here in CA, but this is my home and I plan to continue living here. I don't want to be forced to take public transportation. I am usually going several different places when I drive somewhere - various errands and shopping and hiking. So I am bringing things with me and then also carrying bags of groceries. I DO NOT support Road User Fees!!!</p>	<p>Dramatic changes are necessary to address unprecedented challenges facing our region, and state. One component of these necessary changes are updates to how transportation systems are funded. The funding structure we grew up with, paying at the pump, will not carry us into the future as the state transitions to alternative fuel vehicles to address necessary climate change goals and alternate travel modes that still require funding support.</p>
W168	Gary Clasen		<p>Safety concerns in East County: Why is the forest service so dysfunctional?</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Invest more in hydrogen gas-powered vehicles.</p> <p>Projects that should be a priority for SANDAG: Invest more in the fuel of the future hydrogen.</p> <p>Additional questions and public comments: Why is the transition to hydrogen fuel going so slowly?</p>	<p>The Regional Plan supports investments in the electrification of cars, trucks and buses and their supporting infrastructure (e.g., EV charging stations and hydrogen fueling stations). These electric vehicle investments are one of the ways SANDAG is working to reduce regional GHG emissions and improve local air quality. Appendices A (Table A.17) and B show SANDAG's proposed EV commitments. Innovation and advanced technologies will be critical to meeting regional GHG reduction goals in 2035 and 2050.</p> <p>The proposed zero emission vehicle incentive program will provide rebates for both plug-in electric vehicles and fuel cell electric vehicles powered by hydrogen. SANDAG investments will also support the transition of transit and freight vehicles to zero emission including funding for hydrogen fuel cell electric buses and battery electric buses.</p>
W169	Gary Clasen		<p>Safety concerns in East County: Because of years of neglect and lack of forest/brush management, the landscape is littered with dead and dying trees, shrubs, grasses, etc. which are tinder dry and ready to create a difficult, if not impossible, to stop fire storm. Emergency evacuations from Ramona, San Diego Country Estates, Barona Mesa, and other areas are bottlenecked with only Highway 67 south (one lane in each direction for the most part) and Wildcat Canyon Road (one lane in each direction) available for egress. As was demonstrated during the last 2 huge fires, these routes do not allow for the evacuation of the area. Vehicles were lined up for hours stuck in line to get out. This deadly condition has been recognized for the last 25 years in official reports describing the situation, and the area's population has continued to increase while the outdated roads have stayed the same.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Highway 67 must be widened to a minimum 4 lanes (2 in each direction) beginning immediately.</p>	<p>SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements from Maplevue to Dye Road in the plan phase year 2035. These additional improvements could help address crashes and evacuation needs in the rural areas, evacuation in the event of wildfire or other disasters. Additionally, in conjunction with the Regional Plan, SANDAG and Caltrans are actively preparing the San Vicente Comprehensive Multimodal Corridor Plan, which is a more focused effort to identify projects and strategies that integrate transportation options, wildlife connectivity, and technology deployment to improve mobility and evacuations along the SR 67 corridor.</p> <p>Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p> <p>The 2021 Regional Plan is required to reduce greenhouse gas (GHG) emissions from passenger vehicles and light-duty trucks by 19% per capita by 2035 compared to 2005</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

			<p>Projects that should be a priority for SANDAG: As above. Next priority--throw away the 'SANDAG 2021' Regional 'Plan' and research, with independent scientists, planners, engineers, etc. a realistic and beneficial plan that will actually help the region.</p> <p>Additional questions and public comments: A bus, trolley, or train carrying a few people does nothing to help the region, environment, or the earth. It has been blatant to anyone willing to do the research that electric vehicles when considering the environmental damage and costs their production, use, and scrapping causes, are more polluting and less practical than standard internal combustion-powered vehicles. Their range is limited, technology is still in its infancy, safety issues not resolved (for example, if the battery in an electric vehicle combusts, it is virtually impossible to extinguish short of dropping the vehicle into a swimming pool), not to mention the inane promise that by 2035 a state that can barely keep its lights on will allow only electric vehicles to be sold, relying on solar and wind power to produce the massive amounts of electricity necessary. There are so many problems with this so called 'regional plan' that it would make more sense to start over.</p>	<p>levels, as mandated by Senate Bill (SB) 375. Reducing GHG emissions from all sectors and achieving state goals related to carbon neutrality requires actions at all levels of government. Implementing the 2021 Regional Plan, while also facilitating the development and implementation of local Climate Action Plans (CAPs) across our region, will help everyone—the State, SANDAG, cities, and other public agencies—achieve their climate goals.</p>
W170	Gary Clasen		<p>Safety concerns in East County: Hwy 67 from Mapleview to Scripps Poway Parkway.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: East county needs improvements to SR 52, Hwy 67, and the 94.</p> <p>Projects that should be a priority for SANDAG: Widening SR 52, Hwy 67, and the 94.</p>	<p>The 2021 Regional Plan includes managed lanes network for SR52 and supporting managed lane connectors, included in Appendix A: Transportation Projects, Programs and Phasing. The Plan includes three phase years, 2025, 2035 and 2050. SR52 between I-805 and Mast Blvd is proposed for 2035. SR67 includes safety and operational improvements such as shoulder widening, curve realignments, and technology improvements. SANDAG and Caltrans are currently preparing Comprehensive Multimodal Corridor Plans that includes both corridors which aims to create a comprehensive set of safe, sustainable, and equitable transportation solutions that are tailored to the needs of the corridor. Three managed lanes are also proposed for SR94. SANDAG and Caltrans will be complete a Comprehensive Multimodal Corridor Plan for SR94 to evaluate transportation solutions tailored to the community needs.</p>
W171	Gary Clasen		<p>Safety concerns in East County: Fire safety.</p> <p>I do feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Promote the development of more and better jobs where people already live (i.e., around employment centers).</p> <p>Projects that should be a priority for SANDAG: Growing existing employment centers throughout the County.</p>	<p>The 2021 Regional Plan considers the needs of east county and prioritizes investments in rural corridors and climate resilience programs to assist with fire safety concerns. The proposed land use pattern in the Regional Plan envisions future jobs and housing to be concentrated in Mobility Hubs throughout the region. Many Mobility Hubs are employment centers and SANDAG envisions both job and housing growth in these areas to facilitate more mixed use development.</p>
W172	Gary Clasen		<p>Safety concerns in East County: The intersections of freeway transitions, including to local roads; the need to assess job center creations/enhancements that support climate change policies that impact health.</p> <p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Reversal of some of the proposals that are pushed out to 2050 but are needed sooner.</p> <p>Projects that should be a priority for SANDAG: Some that the plan projects for 2050 should be earlier - 125/8/67/52 corridors.</p> <p>Additional questions and public comments: Can SANDAG consider Mobility Hub developments that consider senior citizen facilities (current and future) like Lantern Crest in Santee and La Vida Real in Rancho San Diego?</p>	<p>Thank you for your comment. Safety in and around regional Mobility Hubs including transit stops situated throughout these communities is of utmost importance. We are planning for complete corridor infrastructure that better protects people walking and biking from vehicular traffic.</p> <p>Mobility Hubs will be implemented in close coordination with local jurisdictions to align with the unique needs of each community. Many Mobility Hubs are employment centers or other popular destinations, and SANDAG would work with local jurisdictions to update plans and policies to allow for more housing in these locations where feasible. A map of all of the Mobility Hubs is included in Appendix A. Local jurisdictions maintain land use authority and are responsible for decisions regarding density, zoning, and housing policies. Regarding the highway improvements, State laws have changed from requiring congestion relief (usually solved in the short term by widening roadways) to reducing vehicle miles traveled and greenhouse gas emissions (usually solved by people living closer to destinations and using alternative modes of transportation such as walking, biking, carpooling and taking public transit). The Regional Plan reflects this shift.</p>

W173	Gary Clasen		<p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: Roads repaired.</p> <p>Projects that should be a priority for SANDAG: Roads repaired and freeway updated.</p> <p>Additional questions and public comments: My big concern is the mileage tax it would mean with being charged .06\$ a mile I wouldn't be able to go anywhere. We already pay the highest gas tax in the USA. How many SANDAG people use mass transit to get to their meetings?</p>	<p>Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like greenhouse gas emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.</p> <p>The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p> <p>The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, fair to all.</p>
W174	Gary Clasen		<p>I do not feel the SANDAG 2021 Regional Plan meets the needs of my community.</p> <p>Investments I would like to see from SANDAG: The focus and area where cooperation with tribes seems to be most well developed is regional transportation planning. Appendix I page 7 does not include the Mesa Grande Band of Mission Indians; and page 19 does not include tribal corridor SR 78, the Band's primary access to tribal housing and access to a very large portion of its undeveloped reservation and semi-developed fee lands. I would like to see more emphasis on working with individual tribes (rather than collectively through SCTCA) on economic development as well; and how San Diego County and other governments in the region can help remove barriers to non-gaming tribal development of tribal economies on their own lands.</p> <p>Projects that should be a priority for SANDAG: Many east county rural economic development projects are thwarted by SDG&amp;E shutdowns during wind and heat events; what role can SANDAG play in responding to or working with SDG&amp;E to mitigate these circumstances?</p> <p>Additional questions and public comments: In tandem with the above question, what role can SANDAG play in non-gaming tribes' tribal energy development plans and concerns?</p>	<p>The San Diego Forward 2021 Regional Plan is a comprehensive regional planning document. The regional plan is required by both state and federal legislation. The plan is intended to be applied to the entire San Diego region and might not have details for subregional areas. For information that is more specific to SR 78, Mesa Grande, and emergency preparedness, please the San Vicente Comprehensive Multimodal Corridor Plan at: <a href="https://sandag.mysocialpinpoint.com/sanvicente">https://sandag.mysocialpinpoint.com/sanvicente</a>.</p> <p>The Mesa Grande Band of Diegueño Mission Indians are listed in the 11th row of Table I.1.</p> <p>As a Council of Governments (COG) SANDAG established a government-to-government framework with its counterpart - The Southern California Tribal Chairmen's Association (SCTCA). At a policy level the SCTCA advises SANDAG on the Board and Policy Advisory Committees and Mesa Grande in the past has represented the SCTCA on the Borders Committee. However, at a technical level, all tribes, representing their nation can be a member of the Interagency Technical Working Group on Tribal Transportation Issues which serves as a forum for all tribes to discuss transportation and other planning issues with the public agencies who impact tribal communities. We encourage Mesa Grande to become a member again. That said, we appreciate your suggestions to do more one on one communication with individual tribes. SANDAG as a regional planning agency has a role facilitating the regional energy strategy and one of our collaborative strategies with the SCTCA is to explore how the tribes can contribute to the energy planning in the region - especially to benefit non-gaming tribes. We look forward to more discussions.</p>
W175	Gary Clasen		<p>It is sad to see the needs of East County residents be put on the backburner. I believe that the Regional Plan should allocate equitable resources and programs to East County residents because they have paid their fair share through taxes and continually do not see the benefits within their communities.</p>	<p>A critical component of reviewing the impacts of the 2021 Regional Plan is evaluating the effects on historically underserved and systemically marginalized groups. This evaluation is known as a social equity analysis and focuses on communities of color, residents with low incomes, and seniors. While the 2021 Regional Plan delivers improvements to the entire region, this review ensures that the benefits are shared by everyone, including our</p>

ID	Commentor Name	Agency	Comment	Response
			<p>East County has some of the largest amounts of low-income, refugee, immigrant, and rural community members in San Diego. It is disappointing, but not surprising, to see the needs of these communities continually dismissed.</p> <p>One area that I believe must be addressed before anything else is fire safety within East County San Diego. Wildfires will continue to get worse over the next several years and a lack of investment in infrastructure will quite literally cost lives. I hope to see SANDAG invest in increased lanes for rural communities to be able to safely evacuate when needed. East County is particularly prone to wildfires because of the heat and bush; it is crucial that San Diego invests in reliable, sustainable, and fire safe programs to prepare for the next several years. The problems with fire safety have been shown through recent fire scares and it will continue to worsen and cost people their livelihood and lives if it is not addressed immediately.</p> <p>Thank you for your work, I am sure this is an extremely difficult project!</p>	<p>social equity focused populations, and that the burdens of the 2021 Regional Plan's changes are not disproportionately shouldered by any social equity focus population.</p> <p>The 2021 Regional Plan proposes a system of managed lanes including corridors that serve East County such as I-8, SR52, and SR94. Additionally, rural corridors such as 67 include investments such as shoulder widening, curve realignment, and technology improvements to address safety and operational improvements to facilitate ingress/egress during peak travel and emergency evacuation conditions. MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG's specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p>
W176	Gayle Martin		<p>I feel we should use small electric buses, vans, vehicles, etc. that can easily handle handicapped, children and luggage that run frequently and everywhere to central areas that connect to larger buses/vans/vehicles that travel on dedicated lanes with only one or two stops on the way to large workplaces, airport, stadium, etc. This would use our current streets &amp; highways. We should also ensure that everyone is given a computer, a cell phone, and a very low cost provider, in order to have access to the reservation system, which would include free automatic software/hardware upgrades and technical support. There must be train/bus/vans/vehicles from Escondido with several stops on the way to San Diego. Need to start NOW as bulk of funds are much later in availability. Fares must be low cost with free transfers. Maps of the transit network should be everywhere.</p>	<p>The Transit network will provide frequent service along the County including fast and reliable NextGen Rapid services from Escondido to Central San Diego. To complement these transit services, Flexible Fleets will be available to provide quick and convenient connections to transit. Flexible Fleets can range from bikes and scooters to autonomous shuttles that provide on-demand service for all sorts of trips. These vehicles contain different features and amenities that cater to different mobility needs such as wheelchair accessibility, space for luggage/stroller, bike storage, and real-time arrival information. Flexible Fleet services will also provide options so that all people can benefit from the service like free or reduced fare options, call center, cash payment options, or travel kiosks around the County to help riders book a ride. SANDAG plans to start testing different Flexible Fleet applications and services models in 2022.</p>
W177	Gayle Martin		<p>How is the system tracking how many miles you've used?            What happens when the system makes an error and charges fees to the wrong person?            What happens when the system network crashes? Or, is hacked?</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG will rely on coordination with the other Metropolitan Planning Organizations (MPOs) in California along with the State department of Transportation to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers. There are various methods that are being explored to track how many miles are being driven, and your important concerns will be considered while coordinating with other agencies in the State to select the best possible system to administer the program.</p>
W178	Gener Abdon		<p>I call for an environmental justice centered RTP to ensure the projects included in the RTP will prioritize environmental justice (EJ) communities identified by CalEnviroScreen (CES) by listing projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025 in EJ communities, and making all public communication easy to understand by the public in order to promote meaningful engagement. Therefore, in the RTP, I ask that an equity specific project list be included in Appendix A: Transportation Projects, Programs, and Phasing document.</p> <p>I call for an improvement in the bus system now that is fast, frequent, reliable, and accessible through increasing frequency on popular lines, especially overcrowded ones. Therefore, I call for more clarity in Appendix A: Transportation Projects, Programs, and Phasing that provides a list of specific improvements to the bus system.</p> <p>I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.</p> <p>I call for a 24-hour service by 2025 on popular transit routes to connect late night and early</p>	<p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand. SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan. The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual</p>

			<p>morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr service on popular transit routes and present a clear implementation schedule.</p> <p>I call for the funding of the planning, environmental review, engineering, and capital for the Purple Line as a rail line that connects EJ communities in Central City Heights and South Bay to Sorrento Valley. According to SANDAG staff, the alignment includes City Heights in the 2050 RTP with a 2035 implementation. However, it should be listed in the document to demonstrate that project phasing prioritizes central City Heights and the South Bay region, and a 2035 completion</p> <p>I call for no-cost transit passes for all youth 24 years old and under in order to ensure generations of lifelong transit riders and encourage significant mode shift. Further, I ask that it be accelerated for a 2035 implementation rather than the current delayed plan to implement in 2027.</p> <p>I call for an electrified bus fleet by 2030. Fund the implementation of California's Innovative Clean Transit rule to accelerate the electrification of the bus fleet ten years before mandated by the California Air Resources Board. We cannot afford to wait 20 years to reduce GHGs. Therefore, I ask that the transition to zero-emission buses be accelerated for a 2030 completion with the support of recently approved state and federal funding sources.</p> <p>I call for the funding of to protect vulnerable communities living near transit corridors by anti-displacement efforts developing an anti-displacement strategy that includes affordable/low-income housing and preservation of naturally occurring existing affordable housing, community ownership, and tenant protections. Therefore, I request an update on the status of the anti-displacement study.</p> <p>I call for the development of a bathroom access plan and providing MTS with funding for a clear and accessible bathroom network open at all major transit stations. It is unclear if a bathroom network is included in the capital operations budgets.</p> <p>I call for the funding of the planning and implementation of a transit emergency response strategy to provide safety particularly to EJ communities during community-wide emergencies. Currently, this is not included in the RTP.</p>	<p>Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line. The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego. One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. The proposed final 2021 Regional Plan supports the electrification of the region's transit buses and the state's Innovative Clean Transit regulation. Appendices A and B include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG's housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations. MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG's specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p>
W179	George Ho	Sunrise Movement San Diego	<p>For the final plan, I urge this Board to (1) maximize emissions reductions, (2) prioritize investments in the communities on the frontlines of environmental injustice and the climate crisis, and</p> <ul style="list-style-type: none"> <li>+Improve the Bus System</li> <li>+Create a Blue Line Express</li> <li>+Provide 24 Hour Service by 2025</li> </ul>	<p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand.</p>

W180	Glen Farrell	self and family	<p>Please stop with additional plans and "Use fees." This is in effect a regressive tax on middle and lower class working families, and instead of better using existing tax dollars like SB-1 funds, past experience proves it will be raided with little going to the actual infrastructure. SANDAG should not be voting on this, it should go to a vote before the people of the county and it should ideally require a supermajority to impose this tax. We are already looking at having to Leave CA because it is simply getting too expensive and rather than becoming more efficient, the solution is to impose new taxes (or fees) to make up for squandering the existing revenue. Please vote down any proposal that imposes new costs on taxpayers.</p> <p>Also any use fee should properly go to the counties where the driving occurred. It is not right that a family vacationing in the rest of the state or out of that pays San Diego County.</p>	<p>Significant additional work, including public involvement, pilot testing, legislation and much more will be necessary to inform implementation of elements of this plan, including the road usage charge. At a minimum this plan is updated every four years with the latest in planning ideas and concepts. Further research will, and is currently, being conducted at the regional, state, and federal level on how to effectively implement these new funding options while safeguarding the public's privacy.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources. The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation.</p>
W181	Glen Hopkins		<p>Having read through the regional plan (marketing pitch) I submit that there are number of "flawed assumptions" coupled with significant "conformational bias" that need to be brought forward and addressed. There are risks when people passionate about a given topic are entrusted to develop a truly objective analysis taking in all facts and realities. In this case people that clearly believe mass transit is the only acceptable approach, and thus, come at it from that vantage point finding ways to sell that belief and force its implementation upon others. Contrast that with an open and objective analysis by non-partisans on the topic of: "What are the best (most economical, most convenient, most likely, most affordable, highest ROI) ways to move people around San Diego in the future?".</p> <p>Recognizing that mass transportation is only economically feasible for mass population densities, the plan's low population growth projections is in itself NOT going to create any materially worse problems than San Diego currently has which are significantly less than larger metro areas on the west coast. By the plan's own admission, 60% of the population growth in 2050 will be from people 75 years and up. It is a known fact that people drive &amp; travel significantly less as they leave the workforce and age. Additionally, the plan discusses the large number new job in the areas of "innovation" or knowledge workers without acknowledging the dynamics in this space which is large movement to completely remote work or hybrid workforces resulting in positive impacts on automobile congestion in the future. Furthermore, it is also a known fact that people shopping remotely for everything will only continue to grow in the coming decades further reducing congestion associated with cars. Net-net, it is highly questionable to state that there will be materially more cars on the road in 2050 than there is right now in 2021 requiring huge new investments in rail and bus.</p>	<p>A key goal of the public involvement process is to hear from diverse stakeholders and residents to gain additional insights, better understand concerns, address them or adapt ideas. To reduce bias SANDAG uses an evaluation criteria process for evaluating project bundles (Appendix T) and an activity based model to assess the performance of the transportation system (Appendix S)</p> <p>The transit system envisioned in this Plan responds to updated growth projections and focuses on high-speed services that will connect jobs and offer service with similar travel times as autos. Previous plans focused on access but not necessarily speed of travel and equivalency with other options, thereby making these planned services much more desirable to the traveling public.</p> <p>Although population growth is forecasted to be slower between now and 2050 than it was forecasted to grow in previous decades, the population of the region is still forecasted to grow, adding population of all age groups to the region.</p>
W182	Glen Hopkins		<p>In addition to the demographic trends mentioned above, the report absolutely ignores the impact of convenience, or the lack thereof, that comes with mass transit. For all people, time is</p>	<p>The transportation system is designed to provide convenient travel choices for residents, employees, and visitors. Fast and frequent transit remains the most effective way to</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			<p>precious! Based on San Diego’s predicted density there is little chance that mass transit will be more convenient for a very large majority of individuals living, working, or visiting San Diego. What the report also does NOT acknowledge is that the vast majority of people love cars, want cars and there is no factual information anywhere that says they are going to be willing to give them up. The plan also does not point out the aggressive plans in place to make cars more sustainable. There is though factual information that says when car and gas prices come down, higher numbers of lower economic echelons of society access them (cars) for all the obvious reasons. As such, if we really cared about equity, we would be talking about making cars (or ride sharing – Lyft &amp; Uber) more affordable and practical for everyone in San Diego.</p>	<p>move a lot of people and studies indicate that this will continue to be the case well into the future. Commuter rail operating along the region’s urban corridors, can serve longer-distance regional trips and providing a remedy for today’s congested corridors. Additionally, Flexible Fleets like e-bikes, shuttles, or autonomous ridesharing will be available to serve shorter trips or areas where traditional fixed transit may not work well. Analysis during development of the Plan found that over 90 percent of the county’s population is within a 10-minute Flexible Fleet ride to transit. Together, these multimodal services provide greater and more convenient choices than what is available today. SANDAG is planning to start testing and launching Flexible Fleet pilots in 2022. Pilots will be designed to provide affordable and convenient options based on community needs.</p>
W183	Glen Hopkins		<p>And finally, in the body of the report there is no acknowledgement that MTS is currently “struggling” at best other than what can be found in the last auditors report buried in the appendix. Huge investments have been made over the last two decades, fare prices are highly subsidized, yet ridership, like virtually every other city in the country, has been declining over the years. Contrast this with the airline and automobile ecosystems that have not, and do not, require massive government subsidies. Cars and planes are an instructive example of free market capitalism at work – people want to drive their own cars (or take Uber), people want to selectively fly, and thus industries are willing to invest, and people are willing to pay. In summary, I find the SANDAG Regional Plan flawed on multiple accounts. The focus should be on more convenient and more efficient automobile infrastructure investments selectively augmented with other transportation means, not the reverse.</p>	<p>While SANDAG is primarily concerned with ground transportation, both the airline and automobile transportation systems receive massive government subsidies annually. Transportation Network Company services like Uber and Lyft are being subsidized by venture capital.  SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system, how different modes are being subsidized, and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p>
W184	Gloria Van Grove		<p>We DO NOT need a high speed railway down the coast. There is already a sufficient travel method via rail (Coaster &amp; Trolley). We need a viable solution such as a trolley line along the I 15 corridor. This freeway is congested much of the day between Mira Mesa and Rancho Bernardo. Please reconsider removing parking from businesses and apartment complexes until the infrastructure is in place. Even if one lived within walking distance of transit, it is unlikely that the destination is also (and vice versa). It is inconsiderate to the disabled, lower, and middle class to force us to hire a ride. I cannot get anywhere I want to go without a car. Please reconsider and listen to the residents of the county. That is what the city counsel and board of supervisors were elected to do. Don’t assume that you know best for us. And stop the ADUs from destroying suburban communities. More housing would be available if you at least enforced the current laws and enacted stricter laws concerning vacation rentals.</p>	<p>The Coaster is the only commuter rail planned for the I-5 corridor. No additional rail lines are proposed. The I-15 Corridor is difficult to serve with rail because of the development patterns which resulted in widely spread out communities. This area is served by Rapid bus routes which will be expanded in the future with more services. All of our major capital projects go through additional planning that will assess the impacts to parking. In the event parking is removed a viable transportation option will be available. SANDAG does not have housing authority but makes recommendations that housing density be placed near major transit nodes.</p>
W185	Greg Lefevre		<p>Photo in your and says it all: your plan caters to a tiny minority, cyclists, young who bike for recreation. It ignores the majority, including seniors who rely on vehicles for transportation, shopping, commuting, medical and personal visitation. You pattern after the failed Encinitas model which has brought only injuries, congestion, hampered movement and dissatisfaction. Your solutions are based on &lt;mile planning while the populations you pretend to serve are &gt;mile communities.</p>	<p>The 2021 Regional Plan aims to provide a system that improves access for all including seniors and those who bike, walk, drive or take transit. The Plan improves access for those who drive but also improves access to a quality public transportation system for all San Diego residents, especially for seniors and other disadvantaged populations.</p>
W186	Guadalupe Lopez	El Cajon Collaborative/Barrio Logan College Institute Parent Spanish	<p>Thank you for all the work you put into the plan (SANDAG). We are happy you are including the community in your planning. I like the transit center in El Cajon and look forward to it being built. The train will be very beneficial to residents in El Cajon. I also like the downtown transit center and happy there will be a train to the airport.</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W187	Guadalupe Rosas	NLRC	<p>I’m from Los Angeles but I attend Cal State San Marcos. I’m going into my 5th year there and something I have noticed about the city of San Marcos and its that skate boards are prohibited. With that I’m assuming so are scooters and rental bikes. I would like for that to change because I know SD has many of those scooters that anyone can use, would be very helpful for the students that attend CSUSM. I lived in the dorms and it was very challenging to be able to get groceries especially since I didn’t have a car. If I wanted to take an Uber it would be like \$5 just to go to Ralphs which is down the street. If the scooters were available it would be so much helpful and affordable for the students that live around that general area.</p>	<p>While the various cities in our region (e.g. San Marcos) can apply and enforce regulations on their roadways, the Regional Plan encourages access to transit and to future Mobility Hubs via a number of mobility options, including scooters and skateboards. SANDAG is committed to working with the local jurisdictions to ensure safe access to all transportation options and will be developing a Flexible Fleet Implementation Strategic Plan upon adoption of the Regional Plan.  Your comment was forwarded to the City of San Marcos.</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

W188	Guy Johnson	Voter	<p>SANDAG's plans for the county will continue to isolate the communities they believe they are helping. Commute times from the east, north and south parts of the county will not improve. These times are not reasonable even where public transportation is available (trolley and bus services). SANDAG's support of the states proposed road home program will further isolate these outlying communities. These additional taxes based on distances driven discriminates against those who can't afford to live in the coastal communities. Creating additional governmental bureaucracies will only cost taxpayers more. Do your job improve the existing roads. At some point you need to realize somethings (bike lanes, bus and trolley lines) are not cost effective. At what cost to the taxpayers do you put the environment and you personal agendas? Represent the people and give us our independence, freedom and choices without Government interference. SANDAG has its own agenda not the citizens who pay your salaries.</p>	<p>The 2021 Regional Plan includes a variety of transportation options serving communities across the region. In particular, the services envisioned as Flexible Fleets will offer convenient, on-demand transportation options that may be preferred to driving a personal vehicle for certain trips. The plan includes improvements to existing transit services and an expanded transit network to serve more communities. Maintenance of existing roads continues to be a priority of the plan's Fix-It First policy area. In particular, many improvements are identified in the rural corridors of the region as described in Appendix A.</p>
W189	Hannah Doermann	UCSD	<p>Environmental justice must be embedded in our mobility in San Diego. Therefore, I ask that the 10 Big Moves to Transportation Justice be included in the 2021 Regional Transportation Plan. I call for an environmental justice centered RTP to ensure the projects included in the RTP will prioritize environmental justice (EJ) communities identified by CalEnviroScreen (CES) by listing projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025 in EJ communities, and making all public communication easy to understand by the public in order to promote meaningful engagement. Therefore, in the RTP, I ask that an equity specific project list be included in Appendix A: Transportation Projects, Programs, and Phasing document.</p> <p>I call for an improvement in the bus system now that is fast, frequent, reliable, and accessible through increasing frequency on popular lines, especially overcrowded ones. Therefore, I call for more clarity in Appendix A: Transportation Projects, Programs, and Phasing that provides a list of specific improvements to the bus system.</p> <p>I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.</p> <p>I call for a 24-hour service by 2025 on popular transit routes to connect late night and early morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr. service on popular transit routes and present a clear implementation schedule.</p> <p>I call for the funding of the planning, environmental review, engineering, and capital for the Purple Line as a rail line that connects EJ communities in Central City Heights and South Bay to Sorrento Valley. According to SANDAG staff, the alignment includes City Heights in the 2050 RTP with a 2035 implementation. However, it should be listed in the document to demonstrate that project phasing prioritizes central City Heights and the South Bay region, and a 2035 completion I call for no-cost transit passes for all youth 24 years old and under in order to ensure generations of lifelong transit riders and encourage significant mode shift. Further, I ask that it be accelerated for a 2023 implementation rather than the current delayed plan to implement in 2027.</p> <p>I call for an electrified bus fleet by 2030. Fund the implementation of California's Innovative Clean Transit rule to accelerate the electrification of the bus fleet ten years before mandated by the California Air Resources Board. We cannot afford to wait 20 years to reduce GHGs. Therefore, I ask that the transition to zero-emission buses be accelerated for a 2030 completion with the support of recently approved state and federal funding sources.</p>	<p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand.</p> <p>SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.</p> <p>The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line.</p> <p>The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.</p> <p>The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego.</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
				<p>that may provide free fares for youth under age 19.</p> <p>The proposed final 2021 Regional Plan supports the electrification of the region’s transit buses and the state’s Innovative Clean Transit regulation. Appendices A and B include SANDAG’s proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS’ and NCTD’s Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p>
W190	Haoyu Jia	UC San Diego	<p>Two questions regarding the transit leap projects:</p> <p>For the 2025 transit leap projects, I see a lot of comments about light versions of the Rapid. What does that entail exactly? Does it include 10 minute headways, bus lanes, or signal priority? Or would it be more like the Superloop (just larger bus shelters without much changes)?</p> <p>For the high speed commuter rail that’s being proposed, does SANDAG have any detailed plans for implementation? Namely, approximately how much tunneling or viaducts will be needed for commuter rail lines, what kind of rolling stock would be required, and would overhead electrification (i.e. Caltrain) be involved? I might have the math wrong, but it seems like y’all are budgeting for 250 million USD per km, which is much lower than what underground/elevated rail normally costs in the US, while the current study for Coaster improvements already estimates total cost of 4.2 billion USD.</p>	<p>Light versions of Next Generation Rapids are only planned for the earliest years of the plan to get these routes in operation sooner. The routes will be fully upgraded by 2035. The light version of Rapids include the higher frequencies and span of service but will not include all of the same infrastructure as the full implementation Rapids.</p> <p>With regard to commuter rail, SANDAG uses Federal Transit Administration costing sheets which include the estimation for below ground, viaducts, culverts, and at-grade. It also includes the rolling stock.</p>
W191	Hayden Schill		<p>I am a volunteer with San Diego 350. I believe every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under and seniors. I urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.</p>
W192	Heba Hadaya	El Cajon Collaborative/ Barrio Logan College Institute Parent Arabic	<p>Submitted in Arabic- I wish the Arabic translation would be available for the schedule so Arab immigrants can use transportation more, and also classes for us to know how to use the transportation because most of us are not capable of using them. We are afraid that we are going to make the right time and place. A free local train (shuttle) would be nice.</p>	<p>One of the Regional Plan’s near-term actions includes developing a Digital Equity Strategy and Action Plan that will address regional accessibility gaps in communications infrastructure, technology, and digital literacy. We have been working with our Community-Based Organization partners (CBOs) to ensure that language translations (such as schedules in Arabic) and translated educational resources on transit are readily available as we advance with our next OS system and build upon improving our existing transportation systems. For more information, I would like to refer you to Appendix B: Implementation Actions, for more information on the Digital Equity Strategy and Action Plan.</p> <p>In addition to language accessibility, SANDAG will also conduct a near-term Regional Fare Impact Study for our transit services such as the trolley and shuttles. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. You can find more information on the Regional Fare Impact Study also in Appendix B.</p> <p>Your comment has been forwarded to North County Transit District (NCTD) and San Diego Metropolitan Transit Service (MTS).</p>
W193	Heba Hadaya	El Cajon Collaborative/ Barrio Logan College Institute Parent Arabic	<p>The lecture was very useful and valuable with good information. Our children need this support to go to school (university) and do other things in faraway places from home. We wish the information was available in Arabic for the community of El Cajon.</p>	<p>One of the Regional Plan’s near-term actions includes developing a Digital Equity Strategy and Action Plan that will address regional accessibility gaps in communications infrastructure, technology, and digital literacy. 				<p>Plan.</p> <p>In addition to language accessibility, SANDAG will also conduct a near-term Regional Fare Impact Study for our transit services such as the trolley and busses. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth.</p> <p>In Appendix U: Cost Estimation Methodology, Table U.2 captures the transit fare subsidies to riders throughout FY2026-FY2050. For more information on the Value Pricing and User Fee Implementation and the Regional Fare Impact Study, please see Appendices B and U.</p>
W194	Heba Hadaya	El Cajon Collaborative/ Barrio Logan College Institute Parent Arabic	Submitted in Arabic- It was a beautiful lecture and very useful for me. Now I have hope of changing many things in my life. We will be able to move easier and visit places with our family. I wish for everybody working on this project success and achievement. Now we need a class on how to move around.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W195	Heba Hadaya	El Cajon Collaborative/ Barrio Logan College Institute Parent Arabic	Submitted in Arabic- We wish from new plan to help us use the train (trolley). We need to get there faster. Arabic language is very important. We are afraid if we lose our way and don't know how to get home. I hope all information will be in Arabic. Free or low prices are also very important. Classes will help us break the fear factor.	<p>SANDAG will be applying a social equity planning framework throughout the implementation of the Regional Plan. Through this framework, one of the Regional Plan's near-term actions includes developing a Digital Equity Strategy and Action Plan that will address regional accessibility gaps in communications infrastructure, technology, and digital literacy. We have been working with our Community-Based Organization partners (or CBOs) to ensure that language translations (such as in Arabic) and translated educational resources on transit are readily available as we advance with our next OS system and build upon improving our existing transportation systems. For more information, I would like to refer you to Appendix B: Implementation Actions, for more information on the Digital Equity Strategy and Action Plan.</p> <p>Your comment has been forwarded to North County Transit District (NCTD) and San Diego Metropolitan Transit Service (MTS).</p>
W196	Heba Hadaya	El Cajon Collaborative/ Barrio Logan College Institute Parent Arabic	Submitted in Arabic- All the plans were very good and it is good to know. If we put good information about buses and trains (trolley) in Arabic we will use it and enjoy. I wish for a free bus or train (shuttle) in El Cajon for low-income people.	<p>One of the Regional Plan's near-term actions includes developing a Digital Equity Strategy and Action Plan that will address regional accessibility gaps in communications infrastructure, technology, and digital literacy. We have been working with our Community-Based Organization partners (or CBOs) to ensure that language translations (such as for Arabic) and translated educational resources on transit are readily available as we advance with our next OS system and build upon improving our existing transportation systems. W201	Ioana Tcholakova	Interfaith Coalition for Earth Justice	<p>I call for an environmental justice centered RTP to ensure the projects included in the RTP will prioritize environmental justice (EJ) communities identified by CalEnviroScreen (CES) by listing projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025 in EJ communities, and making all public communication easy to understand by the public in order to promote meaningful engagement. Therefore, in the RTP, I ask that an equity specific project list be included in Appendix A: Transportation Projects, Programs, and Phasing document.</p> <p>I call for an improvement in the bus system now that is fast, frequent, reliable, and accessible through increasing frequency on popular lines, especially overcrowded ones. Therefore, I call for more clarity in Appendix A: Transportation Projects, Programs, and Phasing that provides a list of specific improvements to the bus system.</p> <p>I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.</p> <p>I call for a 24-hour service by 2025 on popular transit routes to connect late night and early morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr service on popular transit routes and present a clear implementation schedule.</p> <p>I call for the funding of the planning, environmental review, engineering, and capital for the Purple Line as a rail line that connects EJ communities in Central City Heights and South Bay to Sorrento Valley. According to SANDAG staff, the alignment includes City Heights in the 2050 RTP with a 2035 implementation. However, it should be listed in the document to demonstrate that project phasing prioritizes central City Heights and the South Bay region, and a 2035 completion</p> <p>I call for no-cost transit passes for all youth 24 years old and under in order to ensure generations of lifelong transit riders and encourage significant mode shift. Further, I ask that it be accelerated for a 2035 implementation rather than the current delayed plan to implement in 2027.</p> <p>I call for an electrified bus fleet by 2030. Fund the implementation of California’s Innovative Clean Transit rule to accelerate the electrification of the</p>	<p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand. SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan. The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line. The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego. One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for</p>

			<p>bus fleet ten years before mandated by the California Air Resources Board. We cannot afford to wait 20 years to reduce GHGs. Therefore, I ask that the transition to zero-emission buses be accelerated for a 2030 completion with the support of recently approved state and federal funding sources.</p> <p>I call for the funding of to protect vulnerable communities living near transit corridors by anti-displacement efforts developing an anti-displacement strategy that includes affordable/low-income housing and preservation of naturally occurring existing affordable housing, community ownership, and tenant protections. Therefore, I request an update on the status of the anti-displacement study.</p> <p>I call for the development of a bathroom access plan and providing MTS with funding for a clear and accessible bathroom network open at all major transit stations. It is unclear if a bathroom network is included in the capital operations budgets.</p> <p>I call for the funding of the planning and implementation of a transit emergency response strategy to provide safety particularly to EJ communities during community-wide emergencies. Currently, this is not included in the RTP.</p>	<p>people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. The proposed final 2021 Regional Plan supports the electrification of the region's transit buses and the state's Innovative Clean Transit regulation. Appendices A and B include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG's housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations. MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG's specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p>
W202	Irwin von Winckelmann	Global Ohana	<p>I would like to see an improvement to the bike lanes that are not protected by parked cars or a barrier. Any and all bicycle lanes should be marked with reflective paint and also have that bicycle separation line marked using a rumble strip. When cyclists are not in the bicycle lane, automobiles regularly cross over into the bicycle lane. Providing the rumble strip will help separate the traffic lane from the bicycle lane. The rumble strip also works as an important reminder to drivers, that the bicycle lane is there and to stay to the left and in their own traffic lane. Let's make it a habit for people to stay away from the bicycle lane by adding the rumble strip to all bicycle lanes that share traffic lanes with the automobile.</p>	<p>SANDAG follows national and international best practices in bikeway design to create safe facilities for users of all ages and abilities. Multiple studies show that most people feel safer in protected bikeways, and when well designed, they are safer than any other type of bike facility. The focus of our efforts is on people who may be "interested but concerned" in riding a bike alone or with family. For those who do not feel comfortable riding in protected bikeways, the California Vehicle Code allows people to bike in the roadway with traffic. While protected bikeways are a great solution in many cases, we know they are not always the best solution. Every project goes through a detailed and context sensitive design process which results in decisions regarding the best facility, which may include protected bikeways, buffered bikeways, shared use paths, or shared streets with significant traffic calming elements. The Regional Plan also includes funding for upgrading existing bikeways that may not meet current best practices in maintenance or bikeway design.</p>
W203	Jacquelyn Clark	NAACP San Diego, Chair Environmental & Climate Justice Committee	<p>Overcoming the fear of being hit by a vehicle is a top concern for many pedestrians and those who already take public transportation. Even with clearly marked bike lanes, drivers still cross over those lines all the time. In areas where there are no sidewalks, walking in the bike lane would seem like a safe bet, but is actually very scary and dangerous. There is no barrier between a bicyclist and a vehicle. There needs to be some kind of barrier. Consideration should be given to also places where riding a bicycle excludes motor vehicles. To have the full benefit of clean, fresh air from the reduction of pollutants being released in the air, having a safe place to ride bicycles is also a way to have improved outcomes of better health.</p>	<p>SANDAG follows national and international best practices in bikeway design to create safe facilities for users of all ages and abilities. Multiple studies show that most people feel safer in protected bikeways, and when well designed, they are safer than any other type of bike facility. Every project goes through a detailed and context sensitive design process which results in decisions regarding the best facility, which may include protected bikeways, buffered bikeways, shared use paths, or shared streets with significant traffic calming elements which includes improvements for people walking or using transit. The Regional Vision also includes funding for upgrading existing bikeways that may not meet current best practices in maintenance or bikeway design. Additionally, as an early action out of the Regional Plan, SANDAG will be developing a</p>

				new Regional Active Transportation Network in which projects will be reassessed and reprioritized based on data and community engagement.
W204	Jacquelyn Clark	NAACP San Diego, Chair Environmental & Climate Justice Committee	For the emergency preparedness bringing awareness to communities about what bus lines and trolley lines are in the community would benefit the households by knowing in advance what is available close to where they reside. Maintaining the signals at trolley stops Lemon Grove in particular is important if traffic will be diverted to flow in a certain direction. It is terribly frightening at the Lemon Grove crossing because the lights never work. That is so unacceptable. Several trolley stations on The Orange Line need to be re-evaluated for safety and emergency preparedness. The current infrastructure does not seem like it would hold up if a widescale evacuation of the areas were necessary.	<p>MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG's specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q: Transportation Security and Safety also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p> <p>Your comment has been forwarded to North County Transit District (NCTD) and San Diego Metropolitan Transit Service (MTS).</p>
W205	Jacquelyn Clark	NAACP San Diego, Chair Environmental & Climate Justice Committee	All I can say is that it took nearly 2 hours to get from Lemon Grove to Old Town Trolley, to get a bus to Ocean Beach. That's like traveling by vehicle to Los Angeles on a good day.	The Regional Plan includes a variety of new commuter rail services that will provide higher speed transit with reduced travel times. Additionally, existing transit is envisioned to be upgraded with grade separations that allow for faster travel times and more frequency throughout the day.
W206	Jacquelyn Clark	The San Diego Urban Collaborative Project	Gain meaningful input from a broad range of individuals, organizations, agencies, and (The MTS has the opportunity to reach the broadest and pertinent individuals. Those who actually use public transportation have the most at stake. When the Public Safety Officers board the trolley to check for fares they announce themselves and give instructions to have fare and passes ready for instruction. Also, with the rollout of the new Pronto system public outreach is happening at different stations at different times. Perhaps there is an opportunity to utilize the same method to engage public involvement by going more consistently to those who are already on a transit system and who use it frequently. Occasional public transportation users experiences are different from regular, frequent user's experiences. There is a difference between choosing public transportation as an option and it being your only option. Each experience matters, but the one who rides more often has more to gain or lose. Seeking input from both groups adds value however I am more partial to those who rely on public transportation to get to work, appointments, grocery shopping, school, etc... Offering something free, daily, weekly or monthly passes for participating is a sure way to get their attention and participation. I would definitely perk up and listen if I was offered a free pass. I do not purchase a monthly pass because I primarily telework. However I still like to get out and around San Diego. So each time I pay for a daily pass. I'd love to be given a daily pass to use for future travel. Those are the things frequent public transportation users appreciate. Something- Anything free and useful.)	Meaningful input and public participation is key to the success of the Regional Plan. One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W207	Jaime Gonzales		We do not need transit at the NAVWAR facility, which would bring untenable scarifies to the life, cultural, and historical experience of San Diego citizens and visitors today and in the future (350 ft buildings, density that matches Coronado, 70K added car trips a day). The tradeoffs do not justify the returns nor has the Navy provided even close to adequate mitigations to address the risks introduced by the proposals. Put transit downtown at the Santa Fe Station where it can be connected to other regional lines and serve as a hub for our vibrant downtown community.	Development of the NAVWAR facility project is being led by the Navy. Please visit: <a href="https://navwar-revitalization.com/">https://navwar-revitalization.com/</a> for more information regarding the NAVWAR facility project.
W208	james brannen		I do not envision going anywhere on a bicycle. I am deeply offended that your "plan" is being crammed down my throat. I am seriously considering moving to another state	Thank you for your comment.
W209	Janae Kenner	N/A	<p>I would like to share my feedback on the proposal for a transportation tax for San Diego residence.</p> <p>No, no, no! Don't do this to me. This tax will affect those of us who already can't afford to live near our jobs and have to commute into more affluent areas for work. We commute because there aren't many jobs where we live and we have to commute long distances because we aren't paid enough to live in the area where jobs are located. People say that they need workers and that jobs aren't being filled, I believe this tax will make it harder for people to get to work.</p> <p>I am a parent and in order provide my child with access to activities and opportunity, I drive him</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents,</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			<p>to more affluent areas and it helps us. The education and instruction is better. If you have this new tax it will crush us. We can barely afford to have in these activities with our limited one income budget.</p> <p>If you pass this transportation tax it will affect his entire life prospects. We may not be able to continue taking him to these places in San Diego because we can't afford to. He is the only representative of his ethnicity there.</p> <p>This tax will increase the gap between the haves and the have-nots. It will negatively impact the elderly and anyone who is on a fixed income. It will gravely affect the poor and middle-class families. It will create isolated islands based on where you live and severely reduce diversity and socialization between social classes. STOP this tax!!!</p>	<p>visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. While the design of the program has not yet been determined, initial assumptions included in the Regional Plan is that the regional road usage charge would be a user-fee for use of roads in San Diego County. So a San Diego County resident would not be charged a San Diego user fee for miles drive in other counties, and residents of other counties would be charged for miles driven in San Diego county. SANDAG will rely on coordination with other agencies in California along with the State Department of Transportation to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers.</p>
W210	Jane Illades		<p>I call for an Environmental Justice RTP, including 24 hour service, Purple Lline alignment, More investment in the Blue Line Express, Electrified Bus Service by 2030, And Anti-Displacement that doesn't gentrify communities</p>	<p>The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.</p> <p>The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego.</p> <p>The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line.</p> <p>The proposed final 2021 Regional Plan supports the electrification of the region's transit buses and the state's Innovative Clean Transit regulation. Appendices A and B include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG's housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues.</p>
W211	Janet Lettang	self	<p>REMEMBER THE DISABLED WHEN YOU ARE CREATING THIS PLAN!</p>	<p>The 2021 Regional Plan makes significant investments in paratransit programs as well as including 'universal design' in projects to ensure that transportation means access for all.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			<p>As it is now it is difficult for the disabled to get from place to place. Some of us have no other option than to drive our own cars (for us with a wheel chair lift to get to our appointments and essential outings.</p> <p>Please keep in mind the challenges of the disabled when you finalize your plan.</p>	<p>SANDAG also has an advisory group, Social Services Transportation Advisory Council (SSTAC), who represent social service agencies, individuals, transportation providers, and the Consolidated Transportation Services Agency. The mission of SSTAC is to review, recommend, and promote the development and use of accessible transportation services within the San Diego region.</p>
W212	Janette Olivera		<p>Even though this plan has good intentions, it is unfair to those of us that are lower income and simply cannot afford to travel less. It is extremely unfair to those that live further from jobs in the city of San Diego and have long commutes due to housing closer to work simply being unaffordable to an average American with an average income. Californians already pay outrageously high taxes and the government is not transparent or specific enough about how our collected taxes are invested in infrastructure or other programs. I oppose this plan!!</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p>
W213	Janice Valdivia		<p>OCEANSIDE (KUSI) – SANDAG’s \$160-billion plan to expand rail, bus and other transportation services relies heavily on getting more money from drivers by way of a road charge.</p> <p>The fee would charge drivers a set price for every mile traveled within the state.</p> <p>SANDAG has still not yet decided how to collect the road charges, which it anticipates collecting more than \$34 billion through to 2050.</p> <p>I find this to be rather counter-productive to SANDAG’s goal of ensuring equity in the transportation sector by charging those who drive THROUGHOUT the state of California to use the roads our high taxes (gas and local) are already paying for. This isn’t about any type of improvement in life, it’s about making those who can pay, pay more. Just WHO will be able to afford to drive anywhere? Take a road trip, don’t think so. Drive to see elderly family members--- let me check my bank account. This will cause more harm than good if you look at the whole picture. Just how much will it cost me to go to work every day? Who is going to drive to shop, dine out when charged to do so? Please re-think your plan. It’s harmful and unjust.</p>	<p>Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like greenhouse gas emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.</p> <p>The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p> <p>The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, fair to all.</p>
W214	Jeanne Rawlings	San Diego Commons	<p>Does SANDAG’s projected 2050 13% population increase account for the projected significant regional water supply decrease and potential water insufficiency to support that level of growth?</p>	<p>The future population projections used in the Regional Growth Forecast are based on the vintage 2019 Department of Finance population projections release on January 10, 2020</p>

				and are not based on water availability in the region. The County Water Authority (CWA) uses SANDAG's Regional Growth Forecast in their water planning efforts.
W215	Jeannette Temple	Atlantis Group Land Use Planning	Love it!! We need to move beyond cars. Demand must happen before transit expands...	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W216	Jeff Bonine	Mid-City CAN	I am a volunteer with Mid-City CAN and an educator in City Heights for over 15 years. Every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under as well as our seniors. We urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated. Not only do programs like this create life long transit riders, no-cost transit passes will connect youth to school, work, medical care, internships, and other early-career opportunities. Something that is critical to our youth's success. Programs like these exist with great success in Alameda County, Boston, San Francisco, and most recently Sacramento and Los Angeles. I urge the board to take bold action to build a greener, healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity passes as a priority.	SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.  Transit subsidies also are a component of the Plan and implementation of those subsidies would include consideration of low-income and youth populations.
W217	Jeff Huston		Your plan sucks. Period. Stop taxing me	Thank you for your comment.
W218	Jeffrey Joseph		Toll roads are offensive because motorists are already paying for roads. Plus it's regressive and discriminates against motorists who are forced to live longer distances due to housing costs. Finally, what is SANDAG's authority to impose user fees on the public?	SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.  The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. While the design of the program has not yet been determined, initial assumptions included in the Regional Plan is that the regional road usage charge would be a user-fee for use of roads in San Diego County. So a San Diego County resident would not be charged a San Diego user fee for miles drive in other counties, and residents of other counties would be charged for miles driven in San Diego county. SANDAG will rely on coordination with other agencies in California along with the State Department of Transportation to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers.
W219	Jeffrey Mihalik		I am a strong supporter of the plan. I am particularly happy that the plan increases bus frequencies to every 10 minutes on key routes - great idea!  But I can't find anything on trolley frequencies. We should aim for every 5 mins on the Blue line and every 10 mins on Green and Orange lines, minimum.	The planned transit frequency improvements and spans of services for all routes, including existing local service and future regional services, will be added to Appendix A for the proposed Final 2021 Regional Plan and can be currently viewed as part of the Social Equity Working Group agenda from August 5, 2021.
W220	Jeffrey Mihalik		I support the plan's vision for a network of high-speed regional rail lines linking our county together. Please make sure these lines are fully electric, with overhead catenary, following the best practices for regional rail lines in countries like Germany and Switzerland. I would also encourage SANDAG to build the north-south (Oceanside-San Ysidro) line first, as this seems the highest potential ridership. Also make sure a one-seat ride from Oceanside to San Ysidro is possible. Having to change trains downtown would waste time.	Vehicle type, detailed ridership, and more detailed station-by-station routing would be explored through advanced planning of regional rail lines. This regional scale approach presents the vision for a more connected and high speed network that better addresses future population, housing and employment growth. The commuter rail line between National City and Sorrento Mesa would be phased first with other connecting segments to follow based on funding availability. However, other alternatives would be studied during the specific analysis of that corridor which would follow the adoption of the Regional Plan.

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
W221	Jeffrey Mihalik		Please make sure this plan will increase blue line trolley frequency to every 5 minutes and orange and green line frequency to every 10 minutes. Also please make sure all bus routes come at least every 15 minutes. Increasing service is the easiest and cheapest way to make transit more useful.	The planned transit frequency improvements and spans of services for all routes, including existing local service and future regional services, will be added to Appendix A of the proposed Final 2021 Regional Plan and can be currently viewed as part of the Social Equity Working Group agenda from August 5, 2021.
W222	Jeffrey Mihalik		I support SANDAG’s plan for a regional rail system. Please make sure it is fast and runs frequently, with man good connections. I would also make sure there is a one seat ride all the way from Oceanside to San Ysidro.	SANDAG is working on a commuter rail plan that would get the vehicles up to 110 mph and trains coming every 10 minutes. The current plan does not include a route from Oceanside to San Ysidro, however, there will be opportunities for a seamless connection at several stations that would allow a passenger to make this trip.
W223	Jennifer Avina		I am happy with the focus on transportation alternatives to cars. Please continue to work for easier public transit options to our beaches and airport. I also support increasing dedicated bike lanes at the expense of car access and parking. Thank you.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W224	Jennifer Dunaway		SANDAG already has enough taxpayer money. You do not need more of taxpayer hard earned money to spend as you see fit. Spend what you have and do what said you were going to do earlier. Two HOV lanes on I-5, one on 78; follow through with your plans.	<p>The <i>TransNet</i> measure approved by San Diego county voters in 2004 focused on congestion relief and included a set of transportation improvements, many of which have been completed. The remaining projects in the <i>TransNet</i> measure may not be constructed due to changes in regional needs, changes in state law, and technology advancements that would suggest a different transportation solution.</p> <p>The SANDAG Board of Directors may review the <i>TransNet</i> ordinance and discuss possible updates. This process is outside of the development the 2021 Regional Plan.</p>
W225	Jennifer Dunaway	private citizen	If you truly want comments, you need to put choices on a ballot for citizens to choose from. NO MILE TAX! Use our outrageous income taxes, increased gas taxes, and property and sales taxes to fund roadway improvements. We just increased gas taxes. California’s income tax is extremely high; use some of that for roadway and trolley improvements. Stop coming after taxpayers for yet more money. Stay out of our lives and our cars.	Modern funding solutions, such as a road usage charge, provide an opportunity to achieve multiple goals, such as: generating revenue to maintain and improve our transportation system; reducing greenhouse gas emissions; optimizing performance of the transportation system; relieving congestion; improving mobility; improving equity by exploring opportunities to reduce the burden on lower income individuals; and promoting fairness.
W226	Jennifer Saliwan		<p>I have lived in San Diego County for almost 50 years. My family and I live in the southeastern part of the county. We live here because it’s more affordable. I am strongly opposed to the idea of a per mile tax. If you add a per mile tax to San Diego County residents, you will be unfairly burdening the less affluent people who live farther away from business centers. Look at a map and find the communities that are furthest away from downtown, Mission Valley, Mira Mesa, etc. Those are the communities that will pay the most and they can least afford it! Public transportation is not a viable option. It would take me two hours to get to work and it would involve more than 40 bus stops and 6 trolley stops. Not to mention that no one in my family feels safe on public transportation.</p> <p>Use the money you already have, stop wasting it on trolleys that no one uses, and widen our freeways in the south and east county. Give us a carpool lane on 8. Don’t keep ignoring us because we are poor and brown!</p> <p>Do you want the real solution to our traffic problems? Give businesses who utilize work-from-home employees a tax incentive. We all saw the empty freeways and breathed the clean air in March 2020. Incentivize THAT!</p>	<p>The 2021 Regional Plan re-envision the transportation network which includes a system of managed lanes supported by technology improvements. Managed lanes operate very similar to the I-15 Express Lanes which prioritize use of transit, carpools, vanpools, and rideshare. The plan proposes 4 managed lanes on I-8 from I-5 to Greenfield Dr. Near-term and continuing actions in the plan include an updated and expanded Regional Telework Assistance Program and transportation demand management grant and incentive programs to expand the region’s low-carbon transportation options.</p> <p>Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like greenhouse gas emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.</p> <p>The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are</p>

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

				multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.
W227	Jerry Holden		Let's focus on common sense the easiest thing for our community is to expand the 805 and the 5 freeways so people that don't have to sit in traffic. Fix the potholes on the streets to make biking safer I never bike at night because there's so many potholes. Sadly we wasted 2 billion dollars on a trolley going to UTC that will get limited no use. We've shut down Friars Road now for over a month and I can't get to PB in a timely manner. If your organization has all the time and money the wastes in such a plan I will not be voting for any tax increases for SANDAG in the future.	The Regional Plan is a federally required document with updates every four years. The draft Regional Plan seeks to provide transportation options through highway improvements, enhancements to transit, complete corridors for all modes and much more. Regarding pavement, the draft Regional Plan includes a Fix-it-First infrastructure program to support pavement preservation and maintenance across the region in addition to Local Streets and Roads dollars which are allocated to the cities and County within the region.
W228	Jim Curl	Oceanside Bicycle and Pedestrian Committee.	Please consider this a letter in support of the letter sent to SANDAG on 7/15/21 by Tom Lichterman, Chairman of the Oceanside Bicycle and Pedestrian Committee about the completion of the Inland Rail Trail section that serves the Oceanside Community. My opinions are contained in that letter, but it might be helpful to consider that our committee (I am co-chair) has worked for nearly 15 years on this issue and to wait for completion of this section until 2035 - 40 years after it was approved! Thank you for your consideration.	We have reviewed and responded to the Oceanside Bicycle and Pedestrian Committee via Tom Lichterman. I'd encourage your organization to be involved with the efforts of the North County CMCP if you are not already. <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=609&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=609&amp;fuseaction=projects.detail</a> .
W229	Joanna Gonzalez	El Cajon Collaborative/Barrio Logan College Institute Parent Spanish	Please keep us posted as new projects come to El Cajon. We would like to be included in more conversations. This has been very helpful, and we always enjoy Carol Lewis' information on the plan and how it was put together. Thank you for including us. Please be sure that there is money for street improvements. We need more crosswalks and bike lanes.	The plan includes funding for local streets and road and active transportation projects that would include features like crosswalks and bike lanes in El Cajon. We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W230	John Berry		Notes regarding the proposed Draft. 1) Too much money goes to mass transit, bikes, scooters	Thank you for your comment.
W231	John Berry		2) Not enough emphasis on expanding and/or building new roadways.	Thank you for your comment.
W232	John Berry		3) This plan will penalize drivers.	Thank you for your comment.
W233	John Berry		4) Where is the equity for self employed service contractors? You can't take a ladder on a bus or a scooter!	The 2021 Regional Plan aims to provide a system that provides transportation choices and improves access for all including those who bike, walk, drive or take transit.
W234	John Berry		5) The proposed "Grand Central Station" has been done it's called 1 America Plaza	The Central Mobility Hub will serve as a central gateway to the region with direct and convenient connections between every transit mode, the airport, the regional highway system while serving as a catalyst for transit oriented development.
W235	John Berry		6) Let technology deal with GHG through efficiency and Electric Vehicles.	The Regional Plan supports investments in the electrification of cars, trucks and buses and their supporting infrastructure (e.g., EV charging stations and hydrogen fueling stations). These electric vehicle investments are one of the ways SANDAG is working to reduce regional GHG emissions and improve local air quality. Appendices A (Table A.17) and B show SANDAG's proposed EV commitments. Innovation and advanced technologies will be critical to meeting regional GHG reduction goals in 2035 and 2050.
W236	John Dismukes	Capstone Studios	We live by Santa Fe Depot The trollies are very noisy can they reduce the beeping ? The Coaster train is terrible blowing horn and binging.	Quiet zones have been installed at all downtown at-grade crossings. These quiet zones reduce train horn noise, but operators have the obligation to sound horns if there are people or cars on the tracks. There are federal safety requirements for horns and bells at stations.
W237	John Eldon		The stack-and-pack infill Mobility Hub concept will destroy established residential neighborhoods in Encinitas, Solana Beach, and other coastal communities that are already bumping up against very real limits to population growth.	Mobility Hubs will be implemented in close coordination with local jurisdictions to align with the unique needs of each community. Local jurisdictions maintain land use authority and are responsible for decisions regarding density, zoning, and housing policies.
W238	John Eldon		For transit to work we do indeed need density at commercial, office, cultural, shopping, education, and employment destinations, because the Last Mile Problem is challenging. We do NOT need density at the source/origin end, because the First Mile Problem is trivial to solve with park&ride, bike&ride, kiss&ride (drop-off), etc. Don't destroy established residential neighborhoods with dense infill.	The 2021 Regional Plan envisions forecasted growth to be concentrated in Mobility Hubs throughout the region, which will be implemented in close coordination with local jurisdictions to align with the unique needs of each community. Many Mobility Hubs are employment centers or other popular destinations, and SANDAG would work with local jurisdictions to update plans and policies to allow for more housing in these locations where feasible. Local jurisdictions maintain land use authority and are responsible for decisions regarding density, zoning, and housing policies.

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
W239	John Escher		The vast majority (95%?) of San Diego County residents want to continue to use cars for transportation. Even if we spend billions of dollars on mass transit only a small percentage of the population will use it. What we need is cleaner air. Mass transit will only have a tiny impact on improving air quality over the next 40 years. If we can get people to want and buy electric cars and trucks we could see a very substantial improvement in air quality in the next 10 years. SANDAG and the State of California should either be building out a very extensive very high speed “charging station” system on state and federal road ways or by providing private enterprise substantial subsidies to build out a very complete charging station system.	The 2021 Regional Plan supports investments in the electrification of cars, trucks and buses and their supporting infrastructure (e.g., EV charging stations and hydrogen fueling stations). These electric vehicle investments are one of the ways SANDAG is working to reduce regional GHG emissions and improve local air quality. Appendices A (Table A.17) and B show SANDAG’s proposed EV commitments. Innovation and advanced technologies will be critical to meeting regional GHG reduction goals in 2035.
W240	John Wotzka	Public speaker	Information on up coming floating offshore wind projects in California at the Morro Bay 399 Area with 3-GW of power and a project in the Humboldt Call Area. A lease sail could be done by mid-2022. Marine Log June 2021 pp. 26-27 Please allow me to send you comments by putting me on your list to do so. I attended public meeting for over 5-years before the pandemic closed us off at 401 B Street and I have not been able to send you comments.	The Port of San Diego would be the local lead agency for any Offshore Wind project. SANDAG will work with the Port of San Diego to discuss their efforts related to Offshore Wind projects and future transportation needs.  Your comment was forwarded to the Port of San Diego.
W241	John Wotzka	Public speaker, self, Regional Transportation Committee and research of energy issues.	Offshore Wind development is picking up off California with floating off shore turbine units concepts and lease areas. Funding is there from the Biden Administration and ports will be need to receive components and provide facilities for maintenance. Planning and development will be need in the Bold New Vision for the 2021 Regional Plan. These offshore units will provide power for the High Speed Rail system in the future too. This will reduce GHGs and provide a cleaner atmosphere in the future for the California coastal areas.	The Port of San Diego would be the local lead agency for the Offshore Wind project. SANDAG will work with the Port of San Diego to discuss the Offshore Wind project and other future transportation needs.  Your comment was forwarded to the Port of San Diego.
W242	John Wotzka	Public speaker, self, Regional Transportation Committee and research of energy issues.	There is a good update on the Navy’s shipbuilding for the future in the Congressional Research Service reports. They envision a Navy force-level goal for a 2045 fleet of 382 to 446 manned ships and 143 to 242 large unmanned vessels. Ref: Marine Log July 2021 pp. 15-18.	SANDAG works very closely with our military partners. Growth in their fleets and populations are included in our growth forecasts. We also work with our military partners on innovative transportation solutions for their commutes.
W243	John Wotzka	Public speaker, self, Regional Transportation Committee and research of energy issues.	With the changing of transportation systems to depend on energy supply’s moving away from fossil fuels to solar, on-land wind turbines, floating offshore wind turbines on the West Coast, and low carbon renewable fuels, such as hydrogen and biofuels, elsewhere, we will have less health issues and a longer and heather life span. As for power plants for energy for the transportation system, we will depend more on renewables and energy storage systems and will also have renewable and sustainable resources such as renewable fuels and more efficient ships in the future that are being developed for the Import/Export fleets. IMO’s mandates for a greener shipping fleet are in place and coming to mandated levels. Ports will need upgrades to use renewables and move away from fossil fuels in their infrastructure, to become less carbon intensive. Offshore wind will play a roll here too, as the ports are on the coasts. High Speed Rail will reduce carbon emissions by using less air travel and reducing vehicles on the roads with renewable energy sources from offshore wind systems along the California Coast. Smart energy management grid systems and home systems will help home owners to use energy more wisely such as using EVs as a backup to reduce power companies needs to build more power plants and be the home owners will able to save money on their electric bills by selling energy to the power companies, equating to less carbon issues in the atmosphere by utility power plants.	The Port of San Diego would be the local lead agency for the Offshore Wind project. SANDAG will work with the Port of San Diego to discuss the Offshore Wind project and other future transportation needs.  Your comment was forwarded to the Port of San Diego.
W244	Jonathan George		It seems like a devious move to charge people more to drive on freeways due to a loss in gas tax; especially when one considers how much local political and government leaders pushed all electric vehicles as a means to protect the environment. Poor planning and future forecasting should not result in more taxes and a punishment to the public. You created this problem local civic leaders when you failed to plan correctly, you need to fix it without continually taxing the traveling public. We’ve been overtaxed in this state already!!!!	The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, and fair to all.
W245	Jose Dennis Alabaso	California Abilities Network	I would like to know is there a brand new way to use Proposed Metrolink Services between Fullerton (North Orange County) and Escondido (North San Diego County)? For Example: The Metrolink route begins at Fullerton Transportation Center, and then continues in West Corona, North Main Street Corona, Dos Lagos Corona, Lake Elsinore, Murrieta/Temecula, and then ends at the Escondido Transit Center. Okay?	SPRINTER service from Escondido to Oceanside will provide timed connections to COASTER service to San Diego, Metrolink service to Orange and Los Angeles County, and Amtrak Pacific Surfliner Service. Furthermore, the California high-speed rail system is slated to connect Los Angeles to San Diego via the Inland Empire with stations planed in Murrieta/Temecula and Escondido.

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
W246	Joseph Coppola	N/A	I will keep this short. We are SICK of constant tax increases. I can understand taxing electric vehicle owners but for persons using gasoline, we are already paying more gas taxes than any other state! Please use what other sources you have, state, federal, etc. BUT NO MORE GAS TAX!	Thank you for your comment.
W247	Joseph Nevins		The plan is lacking the necessary focus on converting drain vehicles to active travel for schools. There should be pedestrian and cycling pathways throughout neighborhoods surrounding schools connecting playgrounds to schools and subdivisions. There should be free transit for children and supervisors on the transit vehicles. There should be paid supervisors for walking and cycling 'trains' to and from schools. Vehicles should be required to have systems to capture tire micro particles. Transit agencies need to be consolidated into larger regional divisions within CALTRANS to ensure full cohesion of system design and implementation.	Active travel to school is an important component of a transportation strategy. The plan includes funding for "Complete Streets in Mobility Hubs," which will include active transportation improvements on local streets within the Hubs that will facilitate these kinds of connections. The intention is to make trips less than 3 miles more attractive for walking and biking. Local jurisdictions also have access to Safe Routes to Schools programs and funding which can assist with infrastructure, outreach, and other elements.
W248	Josephine Thompson		I was just in Aspen, CO. There was free bus transit between Aspen and Snowmass. I was with my daughter who is the transit committee in Tucson where they will offer free bus transit in Tucson. There should be free bus transit in San Diego county. FREE TRANSIT.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W249	Josephine Thompson		The buss transit in Aspen area run EVERY 15 MINUTES AND ARE RUNNING 7 DAYS A WEEK, EVERY DAY!!! BUS TRANSIT IN SAN DIEGO COUNTY EVERY ROUTE SHOULD RUN 7 DAYS A WEEK EVERY 15 MINUTES!	The Regional Plan includes substantial frequency improvements on local bus and planned Rapid routes. Routes are planned to operate at 10 minute frequency across the system, allowing passengers to easily connect.
W250	Josephine Thompson		THERE SHOULD ALWAYS BE A SECURITY OFFICER FOR EVERY BUS TO ENSURE CLEANLINESS, SAFETY, NO VULGAR LANGUAGE, NO THREATS TO ANYONE, AND EVERY RIDER IS SOBER.	Buses currently receive daily maintenance. As part of COVID-19 safety protocols, buses are wiped and cleaned at the end of each run throughout the day. Additionally, all riders are required by federal mandate to wear a face covering or mask while on public transit.  SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements. SANDAG will be working hard with the help of all of our passengers and representatives to ensure that this plan gets implemented.
W251	Joshua Olmstead		1. I see social equity as equal in importance to climate change impacts as part of the transportation strategy. I'm happy to see the significant considerations being made there for social equity. In some regions, public transit is seen as superior to personal transit—I feel we must aspire to reach this to remove not only remove a negative stigma from public transit, but also the impact it creates for all who cannot afford or use private transit options.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="https://www.sdfwd.com">SDForward.com</a> .
W252	Joshua Olmstead		2. I would like to understand what considerations are being made regarding mobility and transit hubs to make them safe and comfortable for all users who may not have a workplace or home in that spot. How are comfort and productivity being considered for folks utilizing these liminal spaces being considered for both commuters and other transit users in equitable ways? I see a higher need to social services at these locations to support those that don't have resources at home/work/school or wherever their origin or destination.	Safety in and around regional Mobility Hubs including transit stops situated throughout these communities is of utmost importance. We are planning for complete corridor infrastructure that better protects people walking and biking from vehicular traffic. Additionally, transit or Flexible Fleet waiting areas throughout the region could be equipped with a variety of Mobility Hub amenities like complimentary Wi-Fi and mobile device charging ports to help keep people connected while they wait for their ride. Well-lit stations that also offer amenities like clean public restrooms or secure parking for personal bikes and other micromobility devices contribute to comfort and convenience as well.
W253	Joshua Olmstead		3. What considerations are being made for business districts to incorporate pedestrian malls and plazas to reduce vehicular traffic and promote active transportation in a way the prioritizes transit over private vehicles? For example applying the Bird Rock area roundabout concept with additional pedestrian space and bike lanes to an area like Park Blvd in University Heights.	As each of these transportation projects moves forward there will be a great deal of planning, engineering, and design work ahead of the project's construction. In the future there are opportunities for bike, pedestrian, and neighborhood safety projects like these you mentioned in conjunction with the 2021 Regional Plan's transportation projects. The Current Community Planning Projects are a good example of next steps, and so too will be the inevitable future Station Access and Specific Plans for placemaking projects. More information can be found at: <a href="https://www.sandag.org/index.asp?subclassid=83&amp;fuseaction=home.subclasshome">https://www.sandag.org/index.asp?subclassid=83&amp;fuseaction=home.subclasshome</a> .

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
W254	Joshua Olmstead		4. I see commuter rail as an essential element. Understanding the high cost and frequently slipping timelines of similar projects (ex. purple line in London and Los Angeles), what is being done to ensure this becomes reality affordably and well within the plan's timeframe?	Lessons learned on other commuter rail projects will be an important consideration during final design. All efforts will be made to maintain schedule and budget once the project enters into construction.
W255	Joshua Olmstead		5. What considerations are being made with regard to generational transit preferences and adapting to future transit preferences? What about the rapid and constant evolution of technology and how it will impact our present plans?	The 2021 Regional Plan accounts for advancements in technology that may impact the transportation system. Flexible Fleets leverage technology and adapt as user preferences or demands change.
W256	Joshua Olmstead		6. I'd like to see more rapid progress on a rapid transit solution for folks living on the I-15 corridor in Riverside, especially rail service. Considering housing prices and the already significant number of commuters, it feels like this route could be important to reducing emissions as that commuting population booms.	While there currently are no routes in the 2021 Regional Plan for the I-15 north of Escondido, the North County CMCP is looking into finer details to see if such a route would be feasible. Carpool and Vanpool options are still out there, please visit <a href="#">icommuter's website</a> to learn more.
W257	Joshua Olmstead		7. Given our unique terrain, often things close "as the crow flies" are not convenient for a pedestrian. How is this considered in planning routes now and in the future? For example the Green Line in Mission Valley is hardly accessible to people 1/4 mile away up in North Park or Linda Vista. Any plans for aerial tramways to connect steep hillsides to transit? I'm also concerned about urban barriers that separate/break communities, like transit within freeway corridors rather than through the core of the community where it is accessible.	The 2021 Regional Plan includes a new mobility option - Flexible Fleets, that are designed specifically to allow people to obtain first and last mile access to transit when walking is not convenient. Micro-transit options such as shuttles, e-bikes, e-scooters are identified as part of Flexible Fleets and will be closely linked to transit.
W258	Joyce McClenney		What I notice is that nothing is planned for upgrading either transportation or communication for my rural community; I can't even read the maps because I do not have a strong enough internet connection (no cable here in nowhereland). We are moving out of the area for this reason.	<p>The Regional Plan primarily includes safety improvements to address crashes and evacuation needs in the rural areas, the event of wildfire or other disasters. However, in conjunction with the Regional Plan, SANDAG and Caltrans are actively preparing the San Vicente Comprehensive Multimodal Corridor Plan, which is a more focused effort to identify projects and strategies that integrate transportation options, wildlife connectivity, and technology deployment to improve mobility and evacuations along the SR 67 corridor.</p> <p>For these transportation technologies to work, broadband connectivity is essential. SANDAG is developing a Regional Digital Equity Strategy to develop a roadmap that will lead to an expansion of broadband services in the San Diego region. SANDAG recently initiated a project in partnership with Caltrans and the County of San Diego to expand fiber connectivity for high speed internet access along the SR 67 corridor. More information on our digital equity efforts can be found at <a href="http://www.sandag.org/digitalequity">www.sandag.org/digitalequity</a>.</p>
W259	Julia Capper	SDEA	Please prioritize free transportation passes for youth. It is a hardship for students who use the bus to get to school every day.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W260	Jusitn Grant	security guard	Need to run the bus and trolley at least until 2am.	The 2021 Regional Plan includes increased service spans (longer hours of service) for the trolley and buses up to twenty hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24 hour service.
W261	Karen Moyers		A "road user charge" that charges citizens per mile driven is an invasion of privacy and is probably unconstitutional. Government should not be allowed to track a citizen's mileage or where they drive. If legislated, any type of technology added to a vehicle or a cellphone to track distance can only be voluntary, not mandatory. I for one will never allow government to put a tracking device on my vehicle.	We understand there are concerns around the privacy and implementation of a road usage charge. There are several ways to implement the road usage charge that does not involve transformers or tracking devices in private vehicles. Significant additional work, including public involvement, pilot testing, legislation and much more will be necessary to inform implementation of elements of this plan, including the road usage charge. At a minimum this plan is updated every four years with the latest in planning ideas and concepts. Further research will, and is currently, being conducted at the regional, state, and federal level on how to effectively implement these new funding options while safeguarding the public's privacy.
W262	kate yavenditti	law office	I support the call by Mid-City CAN and their Youth Council for free fares for riders under the age of 24. Most youth in this category that ride transit are students or low income workers and people of color and use mass transit for these purposes. It is our responsibility as a community to support this population and we can afford it.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway,

				staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under
W263	Kathleen Amaya		There seems to be a mistake with the Coastal Rail Trail being marked through Rose Canyon rather than down Gilman and the UCSD campus. It is essential this is corrected with expediency as we must protect the pockets of wildlife that are still preserved.	<p>The City of San Diego's project S00951 follows the Gilman Drive alignment and is on the Adopted Regional Bike Network included in this Regional Plan. It is included in the City's CIP list to begin construction in 2022, please see webpage here for more details: <a href="https://cipapp.sandiego.gov/CIPDetail.aspx?ID=S00951">https://cipapp.sandiego.gov/CIPDetail.aspx?ID=S00951</a>.</p> <p>It will be a vital connector to SANDAG's recently upgraded Rose Canyon Bike Path and SANDAG's newly constructed Rose Creek Bikeways to the south. Extending north, however, there remains a desperate need for safe, direct, all ages and abilities active transportation alternatives extending into currently underserved residential (University) and employment centers (UTC, Sorrento Valley) to improve alternatives in this major transportation corridor. The City of San Diego's project on Gilman Drive is greater than 2 miles away from the Coastal Rail Trail Rose - UTC - and Roselle segments. Together these segments represent 6.2 miles of contiguous regional bikeways connecting to the existing Sorrento Valley Coaster Station, as well as future Transit Leap services.</p>
W264	Kathy Vandenneuvel	Greater Golden Hill Planning Committee	Please prioritize the Pershing Bike Project. Our community has been waiting for this project for years and we recently lost another life in a bike accident along Pershing in July. Please implement this project today before more lives are lost. Thank you!	Pershing Bikeway project has been advertised for construction and the bidding process has begun, a contract should be awarded this year and construction is expected to start in early 2022.
W265	Katie Spencer	Community member	I live in City Heights near the 94 & 805 freeways. My community is very close to the bay front but we do not have access to any bike paths or safe routes to ride or connect with existing paths in the South Bay or along the bay front. We need improved access and connections for City Heights. Currently we are cut off by the limitations of freeway-only accessibility.	The Chollas Creek Bikeways: North Fork - Bayshore Bikeway to University Bikeway and South Fork - Petway Park to Market Creek Plaza has been incorporated into the Regional Plan and will help facilitate the connections you've described. This project can be found in the updated data viewer and Appendix A's tables and maps for quick reference in the forthcoming proposed final 2021 Regional Plan.
W266	Keara Pina	Center on Policy Initiatives	<p>As a member of the San Diego Transportation Equity Working Group, we fully support the 10 Transit lifelines and request their inclusion in the 2021 Regional Plan (RP). They represent the priorities that residents at the frontlines of the climate crisis in Barrio Logan, City Heights, and National City have identified through a community-driven process. Though identified by residents in these three areas, the 10 lifelines reflect a vision to advance affordable and frequent transit solutions that will benefit all San Diegans.</p> <p>The RTP should include environmental justice-specific solutions to be completed by the year 2025 with an additional focus on connecting low-income workers to jobs. This comment will highlight five of the ten Transit Lifelines that will benefit workers the most and transform people's access to jobs in the region.</p> <p>Youth Opportunity Passes (YOP): Provide no-cost transit passes for all youth ages 24 and younger. YOP will build generations of lifelong transit riders and connect youth to school, work, internships, and early career opportunities. While reference to transit subsidies is included in the plan, more explicit inclusion of no-cost transit for youth 24 and younger is needed.</p> <p>Bus Service every Ten Minutes: Make bus service reliable and affordable now - we can't afford to wait. Buses are one of the most cost-effective ways to get workers where they need to go while cutting climate pollution. The RTP should include MTS as a collaborating agency in the RTP to ensure these immediate improvements are prioritized for 2025 implementation.</p> <p>Blue Line Express: Build a third track for a 24-hour Express Blue Line. The Blue Line already has the highest ridership and is the best-performing transit line in the region. This priority is not currently in the RTP, but is one of the most important improvements needed to better connect low-income communities in the South Bay to jobs throughout the region.</p> <p>24 Hour Service: Connect late-night and early-morning workers by 2025. Many workers are unable to use transit or are left stranded at the end of very late night or very early morning shift changes. By providing 24-hour service on popular transit routes, workers will be better and more efficiently connected to their destinations. The RTP should include explicit reference 24-hour</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan. The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions).</p> <p>The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line. The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation.</p> <p>Land use authority is reserved to local jurisdictions –the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their</p>

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
			<p>service.</p> <p>Anti-displacement Strategies: Protect low-income communities of color living near transit corridors from gentrification with proactive strategies that include building affordable housing and maintaining access to existing low-cost housing while ensuring high health and safety standards. In addition, provide increased community ownership opportunities and tenant protections. A Region Wide Displacement Study is included in the RTP for near-term implementation. This study should be completed within the next 6 months with clear implementation goals for the recommendations in order to truly prevent displacement due the RTP implementation.</p> <p>We urge the SANDAG Board to support these and all of the 10 Transit Lifelines and ensure their inclusion in the 2021 RTP.</p>	<p>communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG's housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues.</p>
W267	Kerry Forrest	Descanso Community Planning Group, County of San Diego	<p>When I look at the discussions and graphics it would appear that the county ends at Alpine. There has been no contact with communities in the East County region AKA Back County. All the focus is on the City areas of the County. We in the backcountry live here because housing is less expensive and we are willing to make the long commute to provide for our families, This proposal does not address the impacts to the residents and to our communities. VMT impacts would be extreme for us financially, there are no other options for our commute. Transit improvements are not projected for improvements in the 2035 projections which stop at El Cajon. We cannot Bike, Walk, Ride a horse to work. The internet is inadequate to work from home. The VMT Fees would be highly burdensome to those of us who commute to work. I would like to bring up the potential for a rural resident exclusion from the planned mileage tax. This tax will kill our backcountry way of life, we could no longer afford to live here and there is not a viable option being offered for transportations to commuters in rural areas of the county.</p>	<p>Updates have been made in the proposed final 2021 Regional Plan to better represent to east county areas of the San Diego region.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p>
W268	Kevin DelMastro	UCSD	<p>It's great you're going BOLD! San Diego has such potential and needs forward thinkers going outside the box, like you. Thanks for prioritizing public transit, bike lanes, complete streets and communities, and mixed use spaces. I love our vibrant neighborhood feel all over our city!</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W269	Kevin Krause	SKRE	<p>Our family has been fortunate to call coastal North SD County our home since the 90's. We feel we need to focus on making non-auto transportation options safer and more efficient. Please keep adding separated bike and walk options close to the dense coastal areas west of the 5 freeway.</p>	<p>The Regional Plan includes investments in active transportation projects, complete street makeovers, Vision Zero programs, and transportation demand management programs to create safer environments for non-auto transportation and to encourage people to bike and walk for short trips.</p>
W270	Kevin Krause	Segovia Krause Coastal RE	<p>We need a better system to get from A to B. Coaster &amp; Sprinter are good. Buses do not work as well. We need more help for the last mile after getting off at the station. Also make the pavement on the freeways the low noise ones as in AZ etc.</p>	<p>The 2021 Regional Plan includes the development of a high speed transit system which includes first and last mile solutions via Flexible Fleets investments.</p>
W271	Kimberly Caldwell	San Diego Unified	<p>Please allow funding for free youth bus passes for age 24 and under to attend work and/or school/college. Our youth's education is very important.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W272	Kimberly Cooke		<p>I read that today was the last day to put input into road fee tax. As it is there is ample methods for taxation, vehicle registration , - a portion of what is paid yearly goes towards Transportation improvement fee. Since this is not enough a tax is placed on each gallon of gas. This was</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on</p>

ID	Commentor Name	Agency	Comment	Response
			<p>supposed to be a temporary tax now since you are going to remove the extra gas tax there is a plan to tax per mile usage? This isn't acceptable for a person like myself, I only make 50K per year, my vehicle gets 23 miles to the gallon and due to the state charging over 1 dollar and twenty cents MORE per gallon than the national average. And now you want to charge me to use the road as well, I'm taxed per year to use the vehicle I'm taxed per gallon to fuel the vehicle now you wish to tax per mile to drive the vehicle. Please don't do this.</p>	<p>calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those driving fuel-powered vehicles, are paying more than their fair share. There are multiple mechanisms that will be explored to ensure a fair system. For example, drivers of fuel-powered vehicles in the state of Oregon receive a credit for fuel tax and remote emissions testing through their road usage charge program called OReGO.</p>
W273	Kip Lund	Sunrise	<p>Please create a youth opportunity pass so that transportation can be free for all youth under 24 years old. Not only will this help youth access education and jobs, but it also encourages youth to learn how to get around using public transit. I would like to also advocate for a better restroom system, so riders and the unhoused can have a place to use the restroom. Thank you.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Transit Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W274	Kurt Haider	San Diego County Bicycle Coalition; Oceanside Bike Walk Committee	<p>Oceanside should not have to wait 40 years to receive North County's last portion of Inland Rail Trail. The other option for east west travel is Oceanside Blvd., which has a narrow bike lane accompanied by a large volume of truck traffic.</p>	<p>The projects from the active transportation network were laid out and prioritized based on the analysis performed in Riding to 2050, SANDAG's Adopted Regional Bike Plan. While the deadline year for build out is 2050, this just means it would be proposed to be completed by that time. Many projects will likely be completed earlier. This is especially true as new funding sources come available. Additionally, as an early action out of the Regional Plan, SANDAG will be developing a new Regional Active Transportation Network in which projects will be reassessed and reprioritized based on data and community engagement.</p>
W275	Kyle Paoletta		<p>I've been considering moving to San Diego from Boston, but have been somewhat reluctant to out of fear that I'd have to rely on a car there because there's no comprehensive public transit network. Imagine my delight to see the ambitious proposals laid out in this plan! I really hope the county makes the necessary investments to complete everything from the new commuter rail lines to the much improved bicycle infrastructure— being able to enjoy the climate and culture of Southern California without having to sacrifice too much of the density and walkability of a city like Boston would be a total dream.</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W276	Kyle Weinberg	San Diego Education Association	<p>I am the Vice President of the San Diego Education Association, proudly representing over 6000 certificated educators in the San Diego Unified School District.</p> <p>Every San Diegan deserves access to high-quality transportation and economic mobility, especially the students in San Diego Unified School District, other young people ages 24 and under and seniors. We urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p> <p>Transit-dependent youth have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes is a key investment necessary for our region's equitable economic recovery. No-cost transit passes for all youth ages 24 and under ensures generations of lifelong transit riders are part of our long-term strategy to build a greener and equitable San Diego. No-cost transit passes will connect youth to school, work, medical care, internships, and other early-career opportunities. And programs like these exist with great success in Alameda County, Boston, San Francisco, and most recently Sacramento and Los Angeles.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

			I urge the board to take bold action to build a greener, healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity passes as a priority.	
W277	Lanni Smith		<p>By “making electric vehicle drivers pay their fair share” not only are you forcing gas vehicle drivers to pay twice as much to use the road (thanks corruptly passed gas tax) you’re also punishing consumers for having to abide by regulations legislated to delay climate change. You are punishing consumers who already live hand to mouth to use roads they can barely afford to have a vehicle to use, to “rent the roadway” which we’ve seen be a MASSIVE failure in the inland empire (91 express lanes Anaheim to Corona) reach fees of over \$30 for less than 5 miles of road that STILL become gridlock traffic because you STILL have the same amount of commuters. This is a flawed plan and best and a poorly funded cash grab/way to keep poverty levels rising at best. Public transport is not as efficient as personal, and people do not like to choose to add hours onto their commute. They have to. Utilizing public transport is also a mark against a possible employee/employer relationship thus increasing unemployment rates since managers don’t view it as reliable way to be at work on time.</p> <p>This plan may be good for the county’s funding accounts, but it’s so at the expense of quality of life and affordability to live here which is already running more and more people out of the state instead of bringing them in. You’re not finding the “type of desired resident”. You’re running out the loyal families that have spent generations here.</p>	<p>Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like greenhouse gas emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.</p> <p>The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p> <p>The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, fair to all.</p>
W278	Laura Constantinides		We already pay an extra tax for fuel cost, housing, property taxes, and everything else. Now you want to gauge us for money because we may have 1 electric car? You will be forcing our hands to make us move out of California. It is way too costly to live here, and now your creating another fee? Tax the millionaires!!! The middle class backs are broken for paying the bulk of taxes; for everything!!! First to pay, and last to receive help from the government.	The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, fair to all.
W279	Lauren Edwards		How will you address the inequity of road use fees will impact those at lower income levels that have to live further away from jobs to afford housing will be paying more to get to work. Example, I cannot afford housing closer to Sorrento Valley, but will be paying more to drive due to miles driven taxes than someone who can afford to live closer. I also have no public transit routes that come close to the time it takes to drive. My car commute is ~1.5 hrs. round trip. A transit trip to work would be 4.5 hours round trip.	The 2021 Regional Plan is a long-range planning document and is required by federal law to provide a reasonably feasible funding plan. Significant additional work, including public involvement, pilot testing, legislation and much more will be necessary to inform implementation of elements of this plan. At a minimum this plan is updated every four years with the latest in planning ideas and concepts. There will be two additional regional plans developed prior to the 2030 planned timing of the roadway usage fee.
W280	Leanne Best	Nile Sisters Development Initiative	Thank you for the great videos! This sounds wonderful. Please let me know how I can be of assistance.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="https://www.sdfwd.com">SDForward.com</a> .
W281	Leslie Stepanek	resident	I call for an electrified bus fleet by 2030. Fund the implementation of California’s Innovative Clean Transit rule to accelerate the electrification of the bus fleet ten years before mandated by the California Air Resources Board. We cannot wait 20 years to reduce GHGs.	The proposed final 2021 Regional Plan supports the electrification of the region’s transit buses and the state’s Innovative Clean Transit regulation. Appendices A and B include SANDAG’s proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS’ and NCTD’s Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a> .
W282	Leslie Stepanek	resident	I call for funding to protect vulnerable communities living near transit corridors by anti-displacement efforts: developing an anti-displacement strategy that includes affordable/low-	SANDAG is currently developing a Regional Housing Incentive Program and will take several factors into consideration to ensure the program meets the goals of the 2021

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

			income housing and preservation of naturally occurring existing affordable housing, community ownership, and tenant protections.	Regional Plan. The program will consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with other SANDAG grant programs. Additionally, SANDAG will coordinate with the Social Equity Working Group and other interested stakeholders to ensure the housing program promotes equity and addresses issues like gentrification and displacement.
W283	Lilia Escalante	EHC	<p>I call for an environmental justice centered RTP to ensure the projects included in the RTP will prioritize environmental justice (EJ) communities identified by CalEnviroScreen (CES) by listing projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025 in EJ communities, and making all public communication easy to understand by the public in order to promote meaningful engagement. Therefore, in the RTP, I ask that an equity specific project list be included in Appendix A: Transportation Projects, Programs, and Phasing document.</p> <p>I call for an improvement in the bus system now that is fast, frequent, reliable, and accessible through increasing frequency on popular lines, especially overcrowded ones. Therefore, I call for more clarity in Appendix A: Transportation Projects, Programs, and Phasing that provides a list of specific improvements to the bus system.</p> <p>I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.</p> <p>I call for a 24-hour service by 2025 on popular transit routes to connect late night and early morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr service on popular transit routes and present a clear implementation schedule.</p> <p>I call for the funding of the planning, environmental review, engineering, and capital for the Purple Line as a rail line that connects EJ communities in Central City Heights and South Bay to Sorrento Valley. According to SANDAG staff, the alignment includes City Heights in the 2050 RTP with a 2035 implementation. However, it should be listed in the document to demonstrate that project phasing prioritizes central City Heights and the South Bay region, and a 2035 completion.</p> <p>I call for no-cost transit passes for all youth 24 years old and under in order to ensure generations of lifelong transit riders and encourage significant mode shift. Further, I ask that it be accelerated for a 2035 implementation rather than the current delayed plan to implement in 2027.</p> <p>I call for an electrified bus fleet by 2030. Fund the implementation of California's Innovative Clean Transit rule to accelerate the electrification of the bus fleet ten years before mandated by the California Air Resources Board. We cannot afford to wait 20 years to reduce GHGs. Therefore, I ask that the transition to zero-emission buses be accelerated for a 2030 completion with the support of recently approved state and federal funding sources.</p> <p>I call for the funding of to protect vulnerable communities living near transit corridors by anti-displacement efforts developing an anti-displacement strategy that includes affordable/low-income housing and preservation of naturally occurring existing affordable housing, community ownership, and tenant protections. Therefore, I request an update on the status of the anti-displacement study.</p> <p>I call for the development of a bathroom access plan and providing MTS with funding for a clear and accessible bathroom network open at all major transit stations. It is unclear if a bathroom network is included in the capital operations budgets.</p> <p>I call for the funding of the planning and implementation of a transit emergency response</p>	<p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand. SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan. The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line. The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego. One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. The proposed final 2021 Regional Plan supports the electrification of the region's transit buses and the state's Innovative Clean Transit regulation. Appendices A and B include SANDAG's proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS' and NCTD's Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive</p>

			strategy to provide safety particularly to EJ communities during community-wide emergencies. Currently, this is not included in the RTP.	Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG’s housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations. MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG’s specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.
W284	Lillian Cross	N/A	I also read an article in the local paper about the road user fee. Gas is going up again another \$.50 a gallon and now SANDAG wants to charge a road, per mile, user fee to recoup the loss of the gasoline tax because Californians are moving to more fuel efficient vehicles like hybrids and all electric. How much more can we take? Businesses are going to suffer another recession because people are not going to drive to a store or restaurant. I drive less than 50 miles a month, and if a user fee is imposed, I'll drive 50 miles in two months. No wonder people are complaining about California and the high cost of living here. This is nuts.	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>While SANDAG does not influence State budget decisions, SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a regional road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group are paying more than their fair share.</p>
W285	Lilly K		<p>As a tax paying citizen, I definitely DO NOT support any version of road charges for non-commercial drivers.</p> <p>1. In a county where the AVERAGE price of a home is now \$800k, you’re not giving us much choice on how close we live to our jobs or hospitals or other destinations. You’re essentially taxing poorer people who need to travel for work, caretaking, or other necessities MORE because you created an environment where they’re forced to live further away from their destinations. UNACCEPTABLE. You’re complicit here.</p>	SANDAG recognizes the need for more affordable housing for people of middle to low incomes households that are near employment centers and a variety of transportation options. SANDAG is currently developing a Regional Housing Incentive Program that will consider climate change, climate resilience, and consistency with the transportation improvements and land use goals included in the 2021 Regional Plan.
W286	Lilly K		<p>2. We already pay more than enough in taxes. This city and state has one of the highest tax rates in the nation. Where is your accountability for living within your budget? Where is your accountability to your constituents for not continuously taking more money? You fail at even providing annual reports for how much was collected, where it was spent, and what progress was made. Furthermore, you don’t even provide great services. Our roads are bad (even though you’ve been taking that gas tax), our water infrastructure is frighteningly bad, our power grid is highly susceptible, our schools are bad (D/F averages despite continuously increasing their funding), you’re talking about “defunding the police” (despite taking zero community votes about whether constituents actually support that), and I don’t have a high degree of confidence in our medical/ emergency response infrastructure either. No more money. You need to figure it out with what you have. There’s plenty available, including just enforcing basic quality standards for CALTRANS. FRAUD, WASTE, AND ABUSE.</p> <p>3. The state has said numerous times it has a multi million dollar surplus. To quote Don Draper, “That’s what the money’s for!!!”. Why are you planning to take more money when you’re not even spending the money you have?! Rude, and sheer mismanagement.</p>	<p>SANDAG has never made any statement regarding defunding the police and is not covered in the 2021 Regional Plan.</p> <p>The federal gas tax was the largest source of maintenance and operation funding for many decades. However, the federal gas tax per gallon has not changed since 1993, that is when the minimum wage in California was \$4.25 and the federal gas tax does not grow with inflation. Additionally, the revenue collected per vehicle, by the federal gas tax diminished as vehicle miles per gallon (MPG) improve, but the cost of road maintenance increased. Also, road degradation is a function tied to the weight of the vehicles and multiplied by the amount of vehicle traffic. The average weight of passenger vehicles has largely increased since the 1980s, while gas tax revenues have decreased. Resulting in less revenue, but greater road degradation.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing</p>

				<p>revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The 2021 Regional Plan is a federally required long-range planning document with horizon years of 2035 and 2050. It is a federal requirement to provide a reasonable and feasible funding plan. The road usage charge may be phased in as gasoline sales continue to be phased out through emerging technologies.</p>
W287	Lilly K		<p>4. I have significant privacy issues with this and will take those to court if needed. The way this is envisioned, it's far beyond your scope and you're collecting too much personal information. Not to mention, you're going to outsource part of the collection to private industry? No. I would prefer just another flat tax if it came down to it.</p> <p>5. What's the enforcement mechanism? Seems like that will be a significant cost driver for the estimate.</p> <p>100% do not agree with this. I pay hundreds of dollars every year for registration, additional hundreds in extra California gas taxes, AND smog. Not to mention property taxes and the nearly 9% sales tax you tack on to almost everything. You get enough. Go revisit your recent poor spending choices instead of exploiting your citizens.</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>SANDAG will rely on coordination with other agencies in California and the State Department of Transportation to integrate the selection of technology, collection methods, and account management. California has strict data privacy laws to protect consumer privacy. In line with this, SANDAG remains committed to protecting personal privacy and it will be a strong consideration for SANDAG and other agencies around California when selecting technology and methods to administer the program.</p>
W288	Linda Alley		<p>Where is there the promised Quiet Zones along the railway routing at the intersections? This affects the quality of life for thousands of people!</p>	<p>That is one of the reasons why we want to build future rail that does not intersect with cars or pedestrians and is fully grade separated. For existing rail, SANDAG has worked with the transit agency and local cities to add Quiet Zones where most needed.</p>
W289	Lisa Sparaco		<p>This comment is to urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth (ages 24 and under) receive priority when transit fare subsidies are allocated. This will ensure that the RTP is equitable and inclusive of all communities and their needs.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>

W291	Lourdes García Chepe	Platicando Con Mi Gente	SANDAG and MTS all together with the other organizations has to move on quickly, and no wait too many years in order to put more buses for all the communities that are minorities	SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan.
W292	Lucas Karasch		Please connect the Coaster Commuter train system with the Mid-Coast Trolley system to allow for north county coastal residents to commute to their offices in UTC. I would use it daily.	The Regional Plan includes a rail tunnel under UTC that bypasses the Miramar Hill and connects with the Mid-Coast trolley with an underground station to serve regional connections to key job centers.
W293	Luis Montero-Adams	The San Diego LGBT Community Center	<p>On behalf of The San Diego LGBT Community Center, I am writing to urge the Board to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p> <p>Every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under, who have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes are a key investment that will provide a foundation for our region's equitable economic recovery.</p> <p>When The Center was choosing the location of both its Hillcrest Youth Center and South Bay Youth Center, accessibility via public transportation was critical, as we know that so many of our youth cannot count on dependable transportation from their households. When young people have access to no cost transit passes, they are better able to access school, work, medical care and resources otherwise not accessible. (I want to add an additional line about the need for public transit within the LGBTQ youth community but don't know this talking point well enough. Should I reach out to Yey?)</p> <p>I urge the Board to take bold action to build a healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity Passes as a priority.</p>	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W294	Luke Yarnall		I strongly support the overall goals and vision of the 2021 Draft Regional Plan. However, I am concerned that the proposed timeline for Active Transportation projects is too slow. These projects are much less expensive than other aspects of the plan and have disproportionate benefits for safety, congestion relief, and livability. Therefore, they should be prioritized as soon as possible. In particular, EAP projects scheduled for 2035 completion should be brought forward to 2030 or earlier, and projects with a 2050 scheduled completion should also be implemented much earlier. Since these projects are both important and affordable, they should be prioritized. Thank you for your consideration.	The EAP projects are slated for 2025 implementation (\$200 million) and there are a host of other routes that will follow based on the corridor lists provided in Appendix A. Additionally, Complete Streets improvements (another Plan investment areas) will complement this anticipated Bike infrastructure.
W295	Luke Yarnall		In Figure L.8: Modal Families, “roller blade” is misspelled “rollar blade”.	Thank you for bringing this to our attention, the figure text has been updated.
W296	Luna Prieto	NLRC	I like the regional plans' ideas for improvement for future transportation. I like that focus will be given to trolley and sprinters. I feel like it is important to place waiting stations closer to the community and also to extend the travel routes. I live in lakeside and commute to San Marcos for school. Currently the bus, trolley, and sprinter routes and times are terrible for riders. It's slow and there are many connecting stops because there isn't a direct route. I also think we need basic needs met, like shelter on these waiting stops or simple improvements in the machines for ticket processing. I appreciate an effort to improve and protect the environment and pollution. I also see that equity is important for the plan but what are the plans to implement or target these efforts?	<p>SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights.</p> <p>SANDAG will also be conducting pilot programs for the implementation of Flexible Fleets and other micro-mobility options to help connect people in less dense regions into the greater transit network. Information regarding Flexible Fleets can be found in Appendices A and N.</p>
W297	lynn aliment	private citizen	As a native and life-long San Diegan, I absolutely do not support this plan. It's a beautiful, comprehensive plan suitable for cities like Tokyo, New York, Paris, and London – which have the infrastructure base in place. You're trying to shove a big square peg into a small round hole and	SANDAG's vision for a transformed regional transportation system is centered on the fundamental idea that increased personal mobility can help drive future economic prosperity regionwide, create opportunities for advancement for more people across our

			that never works. I have more reasons than space allowed and am happy to talk with anyone at SANDAG if willing to call me at XXX-XXX-XXXX. My reasons include: 1) plan will cost at least double the \$160B – just look at the bullet-train to nowhere for comparison. Remember, government doesn't create income – government re-distributes everyone else's revenue. Every dollar in taxes and fees is one less dollar for education, food, health care, and housing.	region, and improve the overall quality of life for everyone. Appendix V contains a detailed list of revenue sources that are expected to fund the 2021 Regional Plan.
W298	lynn aliment	private citizen	2) Already pay highest gas taxes and fees in the country.	Nationwide states and regions are confronting the shortfalls of gas tax revenues to fund maintenance, operations, and construction of their transportation systems. The federal gas tax was the largest source of transportation funding for many decades. However, the federal gas tax per gallon has not changed since 1993, that is when the minimum wage in California was \$4.25. The federal gas tax does not grow with inflation and the purchasing power of that source has diminished over time. States and regions have implemented their own sales and gas tax measures to try and meet the needs of their transportation systems. However, the best tax measures tied to fossil fuel consumption will continue to erode in time as vehicle technologies change.
W299	lynn aliment	private citizen	3) There's plenty of money – just stop syphoning it off for other “pet” projects like bike lanes. Time for bicyclists to start paying their share of the costs through annual licensing fees.	The road usage charge is intended to replace the revenue losses from gas taxes in recent years due to more fuel efficient vehicle technology and electric vehicles. Gas taxes are implemented to fund the maintenance and operations of our current transportation system resulting from wear and tear from regular vehicle use, as well as unrealized costs of carbon emissions on the environment. Roadway wear and tear by bicycles is negligible and zero carbon emissions. Currently, gas taxes do not apply to cyclists and the proposed road usage charge would be expected to continue that practice.
W300	lynn aliment	private citizen	4) Promises made and not kept. Extended 0.5 cent sales tax and agreed to higher registration fees to pay for specific roadway projects and they are not being done. Finalizing Hwy 52 from 125 to 163 (RTIP #21-03 / Map ID CAL 536) was “promised” by 2022. You now show 2035.	CAL536, shown in the 2021 RTIP, is a project for Operational Improvements to SR 52 which include a truck climbing lane, bike lane, and an auxiliary lane. This project is currently expected to open to traffic in September of 2024. The project shown in the Regional Plan in 2035 includes the addition of 3 managed lanes to SR 52. When <i>TransNet</i> was adopted the anticipated future land use pattern included significant development in East County. Those developments are no longer expected due to expanded land preservation, slower regional growth rates, and state regulations focusing development near existing infrastructure. Many of the <i>TransNet</i> projects that have not yet been built were designed to support the East County growth that has not happened and is no longer anticipated.
W301	lynn aliment	private citizen	5) You say this is needed for transportation greenhouse gases and future population growth. Greenhouse gas problem is already being solved with EVs. you show 480K EV's by 2030. DMV shows 3M registered vehicles. Your EV projection equals 16% of vehicles – and by extrapolation and approximate 16% reduction in greenhouse gasses, with greater decreases each subsequent year. Population growth estimates range from 4M to 4.5M compared to current 3.3M. Growth is already off and will top out at 3.5M. Two reasons – first – we have too little water for all these people. Second –we have too many NIMBY's that sufficient housing will never be built (and I want more housing). I've lived in Santee since '84. Fanita Ranch on the map in '84. 38 years later it is still tumbleweeds and rattlesnakes – and it always will be.	The 2021 Regional Plan is required to reduce greenhouse gas (GHG) emissions from passenger vehicles and light-duty trucks by 19% per capita by 2035 compared to 2005 levels, as mandated by Senate Bill (SB) 375. The SB 375 reduction target must be achieved by reducing per capita VMT, not through the use of zero emission vehicles. Population growth is forecasted to slow in coming decades as compared to previous forecasts, however the population will continue to grow in the future due to natural increase (more births than deaths) and not due to in-migration in the region. More information about the components of population change in the Regional Growth Forecast can be found in Appendix F.
W302	lynn aliment	private citizen	6) Mileage tax and FastTrack fees – government is a horrible steward of the taxpayer's money. why would you think we will give you another dollar when the money we give is wasted or handed out for non-roadway projects. One example-expensive masonry sound walls built by over-priced union labor, when states like Texas and North Carolina use modular systems. Walls completed in a fraction of the time at a fraction of the cost – and are cheaper to repair when damaged. And their sound walls are more attractive than ours. 7) highspeed inner city rail – are you kidding! Neighborhoods will never allow it.	In order for a sound wall to be recommended for construction, it must meet criteria established by the Federal Highway Administration, which determine the level that future noise projection must approach or exceed to qualify for noise abatement measures. Noise abatement measures must also reduce the future noise levels by a minimum of 5 decibels to be preliminarily recommended for construction in the project's NADR. Learn more about the sound walls, visit the Build NCC “Sound Walls” tab at <a href="http://www.keepsandiegomoving.com">www.keepsandiegomoving.com</a> .
W303	lynn aliment	private citizen	8) Light-rail – if you believe that the proposed improvements will be so well accepted, then they should be easily paid for by revenue bonds backed by ticket revenue.	The funding strategy for the 2021 Regional Plan includes funding from a variety of sources, many of which may only be used to fund certain projects, programs, and operations. Additional revenue sources assumed for the plan are described in detail in Appendix V.
W304	lynn aliment	private citizen	8) I do not see where you project cost estimates factor in the millions in yearly subsidies that taxpayers will have to pay to support these mass-transit lines for perpetuity.	The Cost Estimation Methodology and Funding Strategies for the RTP were presented to the SANDAG Board of Directors on March 21, 2021, Item No. 8B. This report and presentation described the various funding assumptions developed for the draft 2021

				Regional Plan. The entire Board meeting can be found at <a href="http://www.sandag.org">www.sandag.org</a> . The methodology for estimating the costs for operating and maintaining transit services is included in Appendix U.
W305	lynn aliment	private citizen	9) concern is falling gas tax revenue from EVs – simple solution is a \$250/yr. fee on EV (only EV) vehicle registration to replace lost gas tax (12,000mi divided by 25mpg times \$0.50/gal tax). In closing, SANDAG has lost credibility from the 80% of the population that does not approve of this plan (other 20% being unions and environmentalists). A century and trillions of dollars spent on existing transportation infrastructure – infrastructure that will remain the core mode of transportation for the remainder of this century (or until cars can fly..). By taking actions today to build out the highway, road, and bridge network in San Diego will provide immediate reductions in greenhouse gasses and transportation – verses the 10+ years it will take to get any of the proposed initiatives up and running (remember that this is CA and nothing is done quickly).. Please call me, I would like to have a meaningful conversation on this subject.	California leads the nation when it comes to driving more fuel-efficient and zero-emission cars. That’s a good thing! However, because these cars consume less or no gas at all, pressure is growing to find a replacement for the gas and diesel excise taxes that fund so many of the state and local transportation programs which support new infrastructure, as well as maintenance and operations of the current transportation system. Multiple officials and agencies within the State of California have expressed a desire to consider different road charging options, and many studies continue regarding implementation strategies, the timing of the road charge phase-in and rate setting. SANDAG’s 2021 RP assumes the road usage charge will replace the gas tax revenue lost by the move to fuel efficient and zero emission vehicles.  These and other revenues are planned for investments in a variety of transportation infrastructure types. Our 20th-century car culture, where driving alone dominates over public transit, carpooling, and other forms of shared rides, will not help us achieve our 21st-century goals: reducing congestion and improving safety, meeting state and federal mandates for reducing GHG and air pollutants, making a more socially equitable region, and improving the overall quality of life for everyone
W306	Lynn Sharpe Underwood	Black Girls Do Bike	SANDAG can do more to establish more of a cycling culture in our community and encourage cycling as a viable means of transportation: *Community Talks should cover bike lanes and safety *Community Talks should underscore not only road bikes, gravel bikes but ebikes (they are not just for old folks-different types should have different “rules”- I have a Strommer!) *Community talks should encourage day trips and over night camping trips *Community outreach should have a bike map and index in it. *SANDAG should call together Cycling groups...on a regular basis.  Please tell Cindy Burke I said Hello!!! Thanks!	SANDAG is actively working on developing an outreach program for all roadway users focused on the projects being constructed in the Regional Bike Early Action Program. We have received a \$1.9 million competitive State Active Transportation grant to develop and implement and education and outreach program that is beginning soon. We’ll discuss your ideas as a team and reach out to continue a conversation as appropriate. Will also tell Cindy hello, it has been great to work with her on the biking and walking InfoBits!
W307	Lynne Shaprio	N/A	This is a waste of bus transit riders time. We went to SANDAG to stop the MTS map blind destination insensitive engineer planners from imposing their spread sheet metric speed of vehicle trip 2018 Transit Optimization plan that harmed access to mid-city destinations including social service centers (Kroc Center, Social Security Administration offices, City Hall offices), and other key destinations for older adults, disabled people, women with children. You said you could do nothing. So you can have plans galore but if the MTS has unequitable access policies for route and schedule planning it is all for nothing.	SANDAG is committed to implementing projects and programs that ensure equity and increase mobility options for all residents. Coordination between agency partners, including MTS, is and will continue to be a consistent part of our planning process. Planned transit frequency improvements and spans of services for all routes, including existing local service and future regional services, will be added to Appendix A for the proposed Final Plan and can be currently viewed as part of the Social Equity Working Group agenda from August 5, 2021. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W308	Magdalena Ruiz	Bayside community center	Me gustaria que el transporte sea mas economico para las familias de bajos recursos me parese una idea increible para la ciudadania y mi comunidad pero es muy importante arreglar las banquetas y calles porque es dificil para el acceso en patineta estan en muy mal estado. Tambien hay mucha contaminacion y basura en las calles y neseditamos mas alumbrados en callejones y calles de nuestra comunidad de Linda Vista. *** I would like transportation to be more economical for low-income families. I think this is a great idea for the residents and the community, but it is very important to fix sidewalks and streets because they are difficult to access on a skateboard and they are in very bad shape. There is also a lot of pollution and trash on the streets, and we need better lighting in the alleys and streets of our Linda Vista community.	La red del Plan Regional 2021 incluye mejoras operativas y tecnológicas en las arterias regionales, incluyendo infraestructura inteligente e intersecciones inteligentes. La Red Regional para Bicicletas adoptada apoya a la red de arterias regionales e incluye tanto mejoras en las calles como fuera de las calles para crear un espacio seguro y cómodo para las personas que viajan a pie, en bicicleta o usan alternativas de micromovilidad.  Su comentario ha sido compartido con la ciudad de San Diego. *** The 2021 Regional Plan network includes operational and technological improvements for regional arterials, including smart infrastructure and smart intersections. The adopted Regional Bike Network supports the regional arterial network and includes both on- and off-street improvements to create a safe and comfortable space for people to walk, bike, and ride micromobility options.  Your comment was forwarded to the City of San Diego.
W309	Manuel Gonzalez	Keiller leadership Academy	No-cost transit passes for all youth ages 24 and under ensures generations of lifelong transit riders are part of our long-term strategy to build a greener and equitable San Diego.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The

W310	Maria C	National Latino Research Center	<p>Me gusta que los trabajadores son muy amable ahora, ayudan a la jente y no son muy estrictos. Nos dejan a llevar el carrito del madado y se no compran el ticket, entienden. Espero que el plan tengamos personas que nos repectan y que se puedan comunicar con nosotros.</p> <p>***</p> <p>I like that the workers are now really friendly. They help the people, and they are not very strict. They let us carry our carts, and if we can't buy a ticket, they understand. I hope that plan has people that respect us and who can communicate with us.</p>	<p>Gracias por su comentario.</p> <p>***</p> <p>Thank you for your comment.</p>
W311	Maria Gonzalez	Southern Caregiver Resource Center	I urge that no-cost transit passes for youth (ages 24 and under) receive priority when transit fare subsidies are allocated.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W312	Maria Libia Cabrera	El Cajon Collaborative/Barrio Logan College Institute Parent Spanish	Thank you for coming to talk to us about transportation. And thank you to all the people who have been working on this plan for such a long time. We need more people to look out for the low-income families and to be sure that the plan includes everyone. I really like the plan. It should be affordable and accessible. Please be sure to include languages in the Plan. Also, we would like a free shuttle in El Cajon we could use to go shopping and to the trolley.	Thank you for your comment. SANDAG is studying different opportunities for Flexible Fleets in the region and intends to begin launching on-demand Flexible Fleet services starting in 2022. Flexible Fleets will vary based on the community they serve and will be designed to provide affordable and convenient mobility choices so that everyone in the community can benefit.
W313	Maria Navarro	El Cajon Collaborative/Barrio Logan College Institute Parent Spanish	It is so wonderful that SANDAG is asking us what we think. Too often we are not asked our opinion and we are the ones who use transit. Thank you for including us. Transit should be for everyone including low-income families and those who need to go to their jobs. It will be nice to have more rapid buses that could take us to job centers up north. We also need more frequent buses that are on time. Thank you again for this Plan.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W314	Mariana Duenas	Interfaith Community Services	TRANSPORTATION ACCESS IS A NECESSITY, AND A RIGHT.	Thank you for your comment.
W315	Maribel Arias	Comité organizador latino de city heights	<p>Necesitamos que apoyen a los jovenes estudiantes de hasta 24 años con pase gratis para que puedan ir a la escuela y trabajo.</p> <p>***</p> <p>We need to support young students up to 24 years of age with free passes so they can go to school and work.</p>	<p>Una de las Acciones de Implementación enumeradas en el Anexo B es un Estudio del Impacto Regional de las Tarifas. Este estudio asegurará que las partes interesadas públicas tengan la oportunidad de expresar su opinión sobre las alternativas. Se espera que el estudio finalice en el año fiscal (FY) 2024 e incluirá una evaluación de los subsidios para las tarifas de las personas de bajos ingresos, los adultos mayores, los estudiantes y los jóvenes. Mientras tanto, el personal de SANDAG, MTS y NCTD está trabajando con las partes interesadas en un programa piloto de un año que puede ofrecer tarifas gratis a los jóvenes menores de 19 años.</p> <p>***</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. 			<p>No-cost transit passes will connect youth to school, work, medical care, internships, and other early-career opportunities. Programs like these exist with great success in Alameda County, Boston, San Francisco, and most recently Sacramento and Los Angeles.</p> <p>I urge the board to take bold action to build a greener, healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity passes as a priority. Thank you.</p>	
W317	Mark Grant	N/A	<p>I just read through much of your document and it is indeed very bold, thorough, and ambitious. I do not agree with your big emphasis on transportation hubs and public transportation. Though this plan will attempt to change people's behavior to make them give up their cars and get on public transportation, I know that Californians will always have the opposite desire. People only use public transportation until they have the means to purchase a car. It is noble to focus on underserved communities, but the vast majority of your funds should go towards expanding roads and freeways, with lesser funds towards the various other forms of transportation. Middle class families do not want to ride a city bus or train. They do not want to raise their kids in hubs of high-density housing. This plan, as I read it, is mainly for the "underserved," the poor working class. It is, indeed, addressing a need that is out there. But it is my humble opinion that the middle class worker who drives a car is the backbone of San Diego.</p>	<p>State laws have changed from requiring congestion relief (usually solved in the short term by widening roadways) to reducing vehicle miles traveled and greenhouse gas emissions (usually solved by people living closer to destinations and using alternative modes of transportation such as walking, biking, carpooling and taking public transit). The bold changes are necessary to address unprecedented challenges facing our region, and state.</p>
W318	Mark Larson	Citizens for logical transportation.	<p>The trolley is a folly. It's irrational to build big new railroad networks, that is 150 year old technology.</p> <p>Mass transit trolleys are very expensive, require lots of security guards, and are primarily a haven for the homeless and criminals. Private citizens do not like mass transit, and most people who can afford a private vehicle will always choose a private vehicle over sitting on a train with homeless people. The future is likely private individual automated electric cars, like a Chevrolet Volt car for everyone that is automated. Please wake up, drop that silly, expensive, irrational massive train idea and focus on building more roads for private electric vehicles.</p>	<p>Fast and frequent mass transit is the most efficient and sustainable way to move large amounts of people – particularly in our urban corridors that are carrying the largest number of trips the longest distances. These corridors experience the greatest congestion which is why they have been slated for commuter rail that is much faster and more frequent than the rail service provided in the region today. Industry projections suggest that high capacity and higher speed rail will continue to be relevant into the future moving more people than any form of ground transit. In fact, a 2020 report by McKinsey &amp; Company found that by 2050, rail would carry about 13 times as many people as vehicles that are shared.</p> <p>Flexible fleets, which include shared, electric, connected and eventually autonomous vehicles, work in concert with mass transit, providing demand responsive solutions best suited for short to medium distance trips that traditional fixed route transit does not serve well. However, there is great uncertainty about when fleets of fully autonomous and connected vehicles capable of operating as you've proposed will be ubiquitous. Widespread deployment is unlikely until 2035 or beyond, but more and more cities will have automated rideshare available in selected geofenced areas over time.</p>
W319	Martin Pagel		<p>Multiple aerial gondola Skyway projects have been considered in the last few years (Balboa, airport, Coaster...), I was surprised that the regional plan does not mention Skyway. How would it fit in? Transit Leap?</p>	<p>The Regional Plan does not include Skyway projects because several new projects (Commuter Rail, Next Generation Rapid routes, and Flexible Fleets) have been identified in the plan to serve those travel markets and destinations.</p>
W320	Marvin Hernandez-Villareal	El Cajon Collaborative/Barrio Logan College Institute Parent Spanish	<p>I really like the Plan. We really need better, affordable housing for low-income families with some discounted rates for public transportation. I like the trolley, but it is too expensive to use. I also do not know how to use it. Our apartments are very old, and it is not safe to walk after dark in El Cajon. I would like more education for people in the plan and more housing around transit centers. Thank you for the Plan. I approve.</p>	<p>SANDAG is actively working on developing an outreach program for all roadway users focused on the projects being constructed in the Regional Bike Early Action Program. We have received a \$1.9 million competitive State Active Transportation grant to develop and implement an education and outreach program that is beginning soon.</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG's</p>

				<p>housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues.</p> <p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W321	Mary Oren		<p>Faster, Fairer, Cleaner? I'm on board!!! Thank you for your responsible effort to gather data, important feedback and put the right people in place to make this happen, we are grateful to SANDAG and the dedicated team effort!!! Now make it happen, all of it, another minute lost will only cost more financially, environmentally, impact safety and quality of life etc. Do not let anything stop you now please !! We've had moments of awakenings with covid, we can adjust to new behaviors and end bad habits. Bigger roads and electric cars will not guarantee safety or dependable arrivals - transit all over will! More tracks, more electric trains, more bike safety, urban housing, vertical housing near transit, all of it is important. All anyone from San Diego has to do is get out of town and see how other communities had evolved starting over 100 years ago in Europe, our East Coast (NY, DC etc.) it's easy to imagine in San Diego!! In addition we must commit to improving transmission, storage and charging stations for electric vehicles and housing. THIS is huge component, STORAGE is vital!! Community energy too!! Thank you again, let's go!!</p>	<p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W322	MaryKatherine Reeber	Retired US State Dept	<p>You rightly note that the proportion of senior citizens in the area is going to increase. I am one of them who feels that with the understandable desire to reduce emissions and traffic congestions car owners are given second class citizenship in today's planning. Please include adequate reasonably priced parking by your mass transit stations as well as in business districts. I can assure you that if you do not many increased emissions will be due to frustrated seniors frantically circling the blocks trying to find a place to park.</p>	<p>The draft 2021 Regional Plan's network of Mobility Hubs includes strategies such as priced parking in commercial areas in combination with the deployment of on-demand Flexible Fleets, including services for seniors. Parking pricing is one of many travel demand management strategies communities can implement while ensuring there is adequate curb space for both parking and loading/unloading of passengers and goods.</p>
W323	Matt Cantor		<p>Population growth is flat in the country. That means that everyone wants to come to California. At what point does California say that there are enough people living here, live elsewhere? When the water dries up? When you can't go anywhere or do anything because the population density is too great for any movement? The state is not in a housing crisis, it is in a population explosion crisis and the government needs to recognize that fact.</p>	<p>Population growth for the region and state is still projected to grow, however at a slower rate than in past decades. In San Diego County the increase to the population is the result of more births than deaths (called natural increase) and not to in-migration to the region. Please see Appendix F for more information on the Regional Growth Forecast.</p>
W324	Matt Moody	San Diego Education Association	<p>Please include a grant for free transit ridership for 24 and under. All three of my kids will be taking bus and trolley from Oak Park to University City over the next 8 years. Lots of my former students also took transit to UC from as far away as Chula Vista. Many students have parents who work two jobs and now that transportation funding is low in school districts, it's been harder for students to make it to schools of choice.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W325	Matthew Lee		<p>NO MILEAGE TAX. Mileage taxes are punitive to essential workers. San Diego's housing is unaffordable and these people have no choice. Office workers who can telecommute are being told to commute by their employers. TAX the employers who are forcing employees to commute instead!!!</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. While the design of the program has not yet been determined, initial assumptions included in the Regional Plan is that the regional road usage charge would be a user-fee for use of</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
				roads in San Diego County. So a San Diego County resident would not be charged a San Diego user fee for miles drive in other counties, and residents of other counties would be charged for miles driven in San Diego county. SANDAG will rely on coordination with other agencies in California along with the State Department of Transportation to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers.
W326	Maureen Phillips		<p>Once again the rural unincorporated areas of the county are unrepresented in a transportation plan, except most notably in the recommendation/suggestion to inequitably implement user fees (VMT) to citizens, including Native Americans, seniors and others you recognize in the plan as historically marginalized, and have or have been afforded few, if any, options for transportation except the use of private vehicles.</p> <p>VMT, according to 2 land use commissioners recently ruling on a large scale energy development, “will limit building in small communities in east county” and with it the hope of economic improvement or creating more sustainable communities that serve as more than revenue or energy sources in the County’s overall Climate Action Plan.</p> <p>Rural Interstate 8 is not even recognized as a corridor, complete or otherwise, or the subject of improvements or actions. This despite the fact that it provides the most access to urban San Diego for private vehicles and commerce to and from Imperial county, Arizona tourists, and more, no mention on how VMT might be imposed on those travelers contributing to greenhouse emissions. For local citizens, Interstate 8 areas could become the source of Mobility Hub and transit leap innovative transportation resources (improving on the existing sources), such as microbuses, ridesharing, and more.</p> <p>Absence of broadband access in rural unincorporated areas is highlighted within the plan, and no more obvious than in Appendix C, the Public Involvement Program. Most of the communication and participation strategies involve the need to access information through broadband, which is essentially absent (and expensive) in rural areas, limiting people’s ability to learn and comment on plans and actions like this; those that directly affect our lives and quality of life. Its absence prevents working from home and educational opportunities. Aside from that, you cannot actually implement most of these recommendations without the availability of broadband or technology.</p> <p>I call upon you to find more equitable ways to communicate with, engage and invest in the rural unincorporated areas of the county.</p>	<p>Social equity disparity analysis is required by both state and federal law via Title VI of the Civil Rights Act of 1964 and Executive Order 12898. During the process of evaluating the 2021 Regional Plan, calculations were made to determine improvements in mobility by percent point difference, between a No-Build projection and the Build projection. SANDAG found marginal percentage point differences between each population, with slight advantages leaning in favor of low income, aging populations, and other disadvantaged populations. For more information regarding social equity, methodology, and state requirements see Appendix H. Interstate 8 is identified in the 2021 Regional Plan as a rural corridor and Appendix A describes the specific improvements anticipated for Interstate 8.</p> <p>SANDAG works closely with the County of San Diego and tribal nations to ensure transportation needs are met. SANDAG is currently preparing a Digital Equity Strategy to support advancement of access to broadband in areas with insufficient access.</p>
W327	Md jahangir hossen	N/A	We need bus transportation.	The Regional Plan includes increases in service span (hours of service) and frequency throughout the region. Many routes will operate all day long at 10 minute intervals.
W328	Meaghan Baril	University of California, San Diego	I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.	The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line.
W329	Meaghan Harrigan		I urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth (ages 24 and under) receive priority when transit fare subsidies are allocated.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth under age 19.
W330	Melodee Takasugi		This proposed gas tax would hurt the most vulnerable people of this county -- low income, seniors, and middle class. The tax will cause what little money we have to go into wasteful ideas. You are causing more of us to flee the state with your incessant tax raises. I fact, you should be closed off as you are doing nothing to improve life in San Diego county.	Thank you for your comment.

## Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
W331	Michael Hampson	Private citizen	For all protected bicycle lanes. I highly recommend you stop adding rocks and/or cement inside the protected bicycle lane curbs, as a filler. If someone falls off a bicycle onto these rocks, this will harm the bicyclist. For the protected bicycle lanes, where you need add a filler in between the curbs of the new protected bicycle lane curbs, please use the rubber that is now found in many playgrounds. If you don't understand what I mean, please have someone call me. I live in Hillcrest.	SANDAG works in coordination with local jurisdictions in the design and construction of these bikeways. Ultimately, the material choices up to the local jurisdictions who accept and maintain the bikeways once construction is finished. We will bring up the potential for use of different material types with them, but it will ultimately be their decision what materials get installed.
W332	Michael Ohnysty		Regarding the mileage user tax on page 38 and 42. This is unfair. There does need to be an offset to the all-electric plug-in car not paying the gas tax and the way to do that is to have just the all-electric plug-in cars pay the new mileage tax. Having gas car drivers pay the new tax would be a double tax. If just the all-electric plug-in cars pay it and it is done right it will balance the funds and will be fair because the all-electric plug-in cars need to pay too as they also use the roads.	<p>The federal gas tax was the largest source of transportation funding for many decades. However, the federal gas tax per gallon has not changed since 1993, that is when the minimum wage in California was \$4.25 and the federal gas tax does not grow with inflation. Additionally, the revenue collected per vehicle, by the federal gas tax diminished as vehicle miles per gallon (MPG) improve, but the cost of road maintenance increased. Also, road degradation is a function tied to the weight of the vehicles and multiplied by the amount of vehicle traffic. The average weight of passenger vehicles has largely increased since the 1980s, while gas tax revenues have decreased. Resulting in less revenue, but greater road degradation.</p> <p>The 2021 Regional Plan is a federally required long-range planning document with horizon years of 2035 and 2050. It is a federal requirement to provide a reasonable and feasible funding plan. The road usage charge may be phased in as gasoline sales continue to be phased out through emerging technologies.</p>
W333	Michael Parker		I feel that the plan to charge a use fee for miles traveled would be very unfair to people who live outside the major community centers, rural areas do not allow for the movement like mentioned in the Plan, also if the COVID crisis showed the more people are packed together the faster something like COVID is transmitted. This plan is also racist in the aspect that a lot of minorities cannot afford to live in the major city areas, and are therefore forced to live and commute. The gas taxes increase but are not being used as was voted for . Someone needs to step up to the plate and hold the politicians accountable!	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as rural residents, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p>
W334	Michael Simons		Overall too board and too vague. Against any funding where based on mileage driven. Break plan up into bite size chunks with their own budget, where public can judge and approve continuation based on keeping to budget and timelines.	Thank you for your comments.
W335	Michael Verdu	Encinitas Resident	<p>I live in Encinitas and am very active in local and regional politics. I also work in technology. I'm writing with feedback about the 2021 SANDAG Regional Plan.</p> <p>While I believe the new SANDAG vision was created with the best of intentions, the proposed multi-modal hub-and-spoke system is impractical, prohibitively expensive, and is fighting powerful headwinds like the decline in train/subway/bus ridership (pre-pandemic), the explosion of ride-sharing services, slowing regional population growth, and a likely permanent shift to working from home for a growing segment of the population.</p> <p>Even with improved train frequency and shorter trip times, a multi-modal system based on commuter rail will be at a severe disadvantage relative to the point-to-point service that will be provided by networked autonomous cars and buses. We run the risk of having empty trains running on our hugely expensive new rail system while neglecting the roads that will serve the centrally dispatched autonomous vehicles that are coming whether we like it or not.</p>	<p>The 2021 Regional Plan provides a range of transportation options for different types of trips. This includes deployment of Flexible Fleet services that complement investments in transit and Mobility Hubs. Flexible Fleets range from bikes and scooters to autonomous shuttles and on demand rideshare, increasing the number of mobility choices for residents and visitors to use.</p> <p>Fast and frequent mass transit is the most efficient and sustainable way to move large amounts of people – particularly in our urban corridors that are carrying the largest number of trips the longest distances. These corridors experience the greatest congestion which is why they have been slated for commuter rail that is much faster and more frequent than the rail service provided in the region today. Industry projections suggest that high capacity and higher speed rail will continue to be relevant into the future moving more people than any form of ground transit. In fact, a 2020 report by McKinsey &amp; Company found that by 2050, rail would carry about 13 times as many people</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
			<p>I'd also like to address the quote by Hasan Ikhata comparing local resistance to this multi-modal plan to the opposition to BART in the Bay Area. BART was built in a different time (before ride-sharing and a revolution in tele-commuting) to serve a city with vastly different geography (with jobs concentrated in a highly constrained urban area). Our solutions need to be forward-looking, not backward-looking.</p> <p>The alternative to spending tens of billions of dollars on a multi-modal system based on "Mobility Hubs" is to lean into the autonomous vehicle revolution. Let's leverage the already gigantic investments in autonomous vehicle technology including sensors, software, networks, and batteries. Charging stations would be a good place to start, but there may be other ways we can accelerate the deployment of networked autonomous vehicles at scale.</p> <p>The faster we can roll out true autonomous vehicle technology, the more efficient our road systems will become. The logical end point for private ride sharing services like Uber and Lyft is the disappearance of private car ownership. Let's accelerate that process rather than making a wrong turn into the past.</p> <p>Local leaders have called out the inefficient and broken public funding mechanisms for road infrastructure - and they're right. But I think it would be cheaper and better to fix that problem rather than work around it with expensive and non-optimal multi-modal solutions.</p> <p>Finally, I want to address the idealistic vision for higher density housing springing up around the new train stations on the 200 miles of proposed commuter rail in the multi-modal transit plan. That's not likely to happen. Encinitas and Solana Beach are targeted for the initial leg of the new system, but these cities have a history of fierce resistance to high density development, and that's unlikely to change. Higher density will run into a buzz-saw of opposition in other North County cities and San Diego neighborhoods as well.</p> <p>Commuter rail is not the answer to our affordable housing crisis in the same way that it isn't the answer to our transportation problems. We need other answers.</p> <p>I believe that you're going to see sharp and sustained opposition to this plan and to the 1-cent tax and per-mile fees required to pay for it. I'm inclined to fight the plan as proposed.</p> <p>We can do better.</p>	<p>as vehicles that are shared.</p> <p>Flexible Fleets, which include shared, electric, connected and eventually autonomous vehicles, work in concert with mass transit, providing demand responsive solutions best suited for short to medium distance trips that traditional fixed route transit does not serve well. However, there is great uncertainty about when fleets of fully autonomous and connected vehicles capable of operating as you've proposed will be ubiquitous. Widespread deployment is unlikely until 2035 or beyond, but more and more cities will have automated rideshare available in selected geofenced areas over time.</p>
W336	Michele Shoemaker		<p>In the section called Transit Leap, there is no "Local Bus" connectors to the "Next Gen Rapid Bus Service" along Highway 56. There is zero bus service in Carmel Valley. This forces residents to drive everywhere. Families have 5 cars!!!! Help us not drive, please.</p>	<p>Flexible Fleets will offer people a variety of on-demand shared vehicles. Flexible Fleet services may complement fixed-route services, even in more suburban communities. They offer additional convenience, as the on-demand nature of Flexible Fleet services allows people to book a ride almost anywhere and anytime. Proposed Clean Transportation policies will also ensure that Flexible Fleet vehicles transition to zero-emission vehicles to further meet air quality mandates. In addition, the Regional Plan proposes investments in active transportation and Vision Zero policies to create a safer environment for biking. These strategies combined will make it easier to drive around without driving a car.</p>
W337	Michele Shoemaker		<p>"Regional Bike Network" in Carmel Valley needs improving. The Hwy 56 Bike Path does not connect to Carmel Valley Road and then Del Mar Heights Road. There are 3 high schools, 2 libraries, multiple parks, a middle school, and multiple shopping centers not connected to the bike path. I tried so hard to get this to happen before the land was developed but I was told it was too late. How did the planning department miss this obvious connection. We need planners that are thinking ahead!!!!!!</p>	<p>The bike network shown in the plan is the Adopted Regional Bike Network, which was adopted in 2010. As an early action out of the 2021 Regional Plan, SANDAG will develop a new Active Transportation Plan which will look at adding in a number of new connections like these. SANDAG prioritizes community engagement and will develop these connections in partnership with the community so that we can make sure the routes take people where they want to go.</p>
W338	Michele Shoemaker		<p>"Climate Strategies" indicates 41% GHG emissions are from transportation. Why do we allow parents to drive their kids to school? We do not have school buses in Carmel Valley. Idling cars queue up at least twice daily. These emissions are not counted. Let's get electric school buses!</p>	<p>The 2021 Regional Plan is required to reduce greenhouse gas (GHG) emissions from passenger vehicles and light-duty trucks by 19% per capita by 2035 compared to 2005 levels, as mandated by Senate Bill (SB) 375. The SB 375 reduction target must be achieved by reducing per capita VMT, not through the use of zero emission vehicles.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
			Also, parents waiting for their kids at places like sport practice and tutoring less as be their cars running. We are missing these emissions too.	The Local jurisdictions and special districts such as School Districts, can and will identify GHG reduction targets and measures to reduce emissions beyond what is included in the 2021 Regional Plan.
W339	Michele Shoemaker		I support free transit passes for youth and students (all ages).	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W340	Michele Shoemaker		To encourage public transit, make it free for riders.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under
W341	Michelle Kearney		Please amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth (ages 24 and under) receive priority when transit fare subsidies are allocated.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W342	Michelle Rodriguez	san diego mesa college	I am a many year bicycle commuter who lives in Clairemont. I teach full-time at San Diego Mesa College and serve as the chair of the Transportation subcommittee of their Environmental Sustainability Committee at the college. I support any improvements that can make cycling safer for commuters and students. Clairemont is a difficult place to ride because the main corridors, like Balboa and Genesee, include steep hills. This makes riding difficult (which is why I use an electric bicycle), but it also makes it scarier because cars speed down the hills at frightening speeds. I hope to be able to ride my bicycle to one of the 2 new trolley stops in Clairemont, but, so far, bicycling to them is still too unsafe. I hope more can be included in the plan to slow down these cars.	The bike network shown in the plan is the Adopted Regional Bike Network, which was adopted in 2010. As an early action out of the Regional Plan, SANDAG will develop a new Active Transportation Plan. Although the original plan considered topography, we will take a fresh look in the new one. With the ever increasing popularity of e-bikes, we do feel it is important to build bike network in both flat and steep areas so provide as many network connections as possible. Additionally, the prioritization will include more recently completed and near-term transit projects to facilitate connections like those you mention.
W343	Mike Bullock	Retired	Regarding Active Transportation, I support the following sections of the letter from the Oceanside Bike=Ped Committee:  1.) The improved car-parking system for the Civic Center Car Parking Garage for both the City Employees and the general public that registers their car in the new system. 2.) The Coast Highway Road Diet and Incentive Zone 3.) The Inland Rail Trail	Thank you, and noted, we have reviewed and responded to the Oceanside Bicycle and Pedestrian Committee via Tom Lichterman and appreciate your specific recommendations for projects here, too.
W344	Mike Bullock	Retired	From the Oceanside Bike-Ped Committee letter, I strongly support the Bike Bridge over I-5 Between Vista Way and Kelly Street. The shopping is a high-trip-count destination and the Active Transportation community deserves access. Also, coastal access should be improved for that community that lives east of I-5.	We have reviewed and responded to the Oceanside Bicycle and Pedestrian Committee via Tom Lichterman and appreciate your specific recommendations for projects here, too.
W345	Mike Harp		I am against this plan as a tax payer. There is no universe where this kind of taxing and spending is acceptable.  \$168 Billion is oddly (get out the calculator) exactly \$50,000 per person, adult and children. Really? I see projects enumerated, but to come up with \$50k per person is telling of the methodology you used to see how much money you could extract from taxpayers.  This is shameful. California already has the highest gas tax, San Diego has the highest electricity rates. Where are you going to get this money from?	Dramatic changes are necessary to address unprecedented challenges facing our region, and state. One component of these necessary changes are updates to how transportation systems are funded. The funding structure we grew up with, paying at the pump, will not carry us into the future as the state transitions to alternative fuel vehicles to address necessary climate change goals and alternate travel modes that still require funding support.
W346	Mike Harp		The Next Operating System costs are wildly underestimated. I help provide IT services to government. \$32M to build? \$63M to operate (over how long?) \$19M for smart intersections? Do you know the Chesterfield intersection in Cardiff cost almost \$7M to build with smart technology,	The estimated costs for Next OS planning, development, system integration, and operations are included in Appendix A. In addition to planning, operations and

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
W347	Mike Harp		<p>and you can barely turn left there. Of course you did, you planned it. How many of these are you going to build?</p> <p>I am against fee-based (per-mile) pricing. Unless these are self-reporting (they won't be), they are an invasion in privacy via government tracking (Privacy Act, 4th Amendment).</p> <p>We have a gas tax that has worked for transportation for since 1932 (federally). SANDAG has a sales tax. California has a SBI tax, and the highest gas tax costs in the country.</p> <p>Gas taxes are paid at the source. I understand you cannot collect gas taxes for electric cars. However, you should charge electric cars taxes at the source (the electric meter), since there are separate electric meters for residential/commercial and car charging.</p> <p>Per-mile taxes turn all roads into toll roads. Of course, this is your goal to raise \$168B.</p> <p>I traveled last week, on a Saturday morning, on an empty toll road in Orange County for 4 (four) miles. Do you know what my toll was? \$8.82. I am sure your models are using this data to project your revenue. No one told me what the rate was. I just got billed for it. I think 10 years ago, it was \$1.25.</p> <p>Per-mile pricing is money grab that will result in ever-increasing tolls (which is undefined, and there is an intent to make "congestion" pricing very expensive), on top of the highest gas taxes.</p> <p>This is shameful.</p>	<p>maintenance costs, Appendix U includes technology and digital infrastructure investment costs.</p> <p>Nationwide, states and regions are confronting the shortfalls of gas tax revenues to fund maintenance, operations, and construction of their transportation systems. The federal gas tax was the largest source of transportation funding for many decades. However, the federal gas tax per gallon has not changed since 1993, that is when the minimum wage in California was \$4.25. The federal gas tax does not grow with inflation and the purchasing power of that source has diminished over time. States and regions have implemented their own sales and gas tax measures to try and meet the needs of their transportation systems. However, the best tax measures tied to gas and diesel fuel consumption will continue to erode in time as vehicle technologies change.</p> <p>We understand there are concerns around the privacy and implementation of a road usage charge. Significant additional work, including public involvement, pilot testing, legislation and much more will be necessary to inform implementation of elements of this plan, including the road usage charge. At a minimum this plan is updated every four years with the latest in planning ideas and concepts. Further research will, and is currently, being conducted at the regional, state, and federal level on how to effectively implement these new funding options while safeguarding the public's privacy.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p>
W348	Mike Harp		<p>I am against SANDAG takeover and taxation of "managed lanes", roadway that has already been paid for.</p> <p>Converting roads into "managed lanes" for the sake of charging "variable tools" on top of the highest gas tax in the nation, and soon-to-be mileage taxes is too much. Rates would adjust based on congestion levels? Are you kidding me? Last week, I was on the 73 toll road, which was empty on a Saturday morning, for about four (4) miles. My bill? \$8.82. What would it be when it was "congested"? But of course, you know this since this data is probably already in your models.</p> <p>This is a scheme to extract a maximum amount of money from working families and taxpayers, and a regressive tax for poor people.</p>	<p>The 2021 Regional Plan maximizes our existing roads using technology to manage how lanes are used which reduces traffic congestion and delay. The proposed network of managed lanes also encourages carpooling, vanpooling and taking transit which creates more roadway capacity without adding additional lanes. This model is very similar to how the I-15 Express Lanes operate today.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p>
W349	Mike Harp		<p>The shortfall in the number of building permits, as asserted on page 18, is largely because of CEQA and state and local regulations that make housing more expensive.</p> <p>You acknowledge as much in Appendix B as it states you would support strategies "Minimum zoning near transit", "Permit process streamlining", "Fee-waiver program".</p> <p>Are you advocating the waiver of CEQA and other regulations in the "transit hubs"?</p> <p>And if so, will you also advocate elsewhere for 14th amendment equal protection for all? "No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."</p>	<p>CEQA has been modified many times over the years by the state legislature to expedite judicial review and create exemptions for projects such as selected housing projects or housing near transit. The Mobility Hubs are areas near transit that align with these efforts from the state. SANDAG intends to coordinate with local jurisdictions to identify permitting and process improvements that increase density and streamline the production of housing in Mobility Hubs and transit priority areas.</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
W350	Mike Harp		<p>The graph on Appendix B, page 31 shows a steep rise in the number / % of electric vehicles on the road. (40k-450k in 9 years).</p> <p>How, specifically, does SANDAG believe that the electrical grid and generation can handle this increase in the time frame? How can SANDAG create other than conceptual models without understanding this basic problem of scaling renewable energy?</p> <p>There are two logical outcomes. Either there is not enough electricity to go around, and people can't charge their cars, OR electric base load relies further on "dirty" generation. Ironic that "electric cars" are really "coal" cars. People are already being told not to charge their cars overnight because there is not enough power (!?! when else would they do this to go to work).</p> <p>You are trying to sell a region-wide electric car/bus/truck vision. You need to say how we, as a region, will be able to cope with the increased generation demands. To just sell electric cars and charging stations without addressing supply is negligent.</p>	<p>The graph on Appendix B, page 31 of the draft 2021 Regional Plan was derived from Governor Brown's Executive Order B-48-18 that calls for 5 million zero-emission vehicles (ZEVs) on California roads by 2030. Based on population data, the region's theoretical share of that would be about 450,000 ZEVs in 2030. The final Regional Plan will include an updated figure based on Governor Newsom's Executive Order N-79-20 and the California Energy Commission's Assembly Bill (AB) 2127 Electric Vehicle Charging Infrastructure Assessment, available at <a href="https://www.energy.ca.gov/programs-and-topics/programs/electric-vehicle-charging-infrastructure-assessment-ab-2127">https://www.energy.ca.gov/programs-and-topics/programs/electric-vehicle-charging-infrastructure-assessment-ab-2127</a>, which will require planning for even greater numbers of ZEVs and infrastructure.</p> <p>The 2021 Regional Plan commits SANDAG to making investments to support the region's transition to electric cars, trucks, and buses. As SANDAG develops vehicle and infrastructure programs, it will continue to coordinate with SDG&amp;E as well as community choice energy (CCE) providers in the region on their programs to provide clean power and manage load. San Diego Community Power is committed to providing entirely clean and renewable electricity by 2035 or sooner and the state requires utilities including SDG&amp;E to provide a minimum of 50% renewable power by 2030 leading up to the state's carbon neutrality goal for 2045.</p> <p>In addition to regional scale load management that is led by the utility, CCEs, and larger power users, SANDAG's EV programs will encourage the use of load management tools and integrated renewable energy at the project level. SANDAG's current EV charger rebate program is CALeVIP San Diego County Incentive Project, with information available at <a href="https://calevip.org/incentive-project/san-diego-county">https://calevip.org/incentive-project/san-diego-county</a>. This and future charger programs will provide rebates for workplace chargers to enable a greater number of drivers to charge during the day when renewable energy is most available.</p>
W351	Mike Harp		<p>Several of the main documents and attachments advocate "transit fare subsidies" as a way to increase failing ridership.</p> <p>How much "subsidies" can SANDAG do? As a random sample, your published report (<a href="https://www.sandag.org/uploads/publicationid/publicationid_4602_25956.pdf">https://www.sandag.org/uploads/publicationid/publicationid_4602_25956.pdf</a>) says SPRINTER realized only "13.9% in FY2018" "farebox recovery" of operating costs, and system-wide was 17.6% in FY2018.</p> <p>At service that are only 13% paid for, how much more subsidies are you selling the public on? How about making it free?</p> <p>The whole model is broken. Using your math, I could ride the Coaster and take other regional public transportation for a round trip to downtown for \$13.00. at \$13% recovery, that trip cost taxpayers \$100! We could fly to Vegas and back for that.</p> <p>Yet this is the model you want to go forward with. I am strongly against your \$168B plan since you have no cost management and recovery capabilities and are only relying on the taxpayer for funding.</p>	<p>Thanks for your comments</p>
W352	Mike Harp		<p>Page 7 states your model is generating 10X the revenue from gas taxes via Managed Lanes tolls? Really? What sort of model are you looking at?</p> <p>What is your plan for managed lanes? 10X gas tax? More?</p> <p>Also absurd (NCTD v-7), "From 2023 forward, the passenger farebox recovery rate is maintained at 35%" when in 2018 it was 13%," with the promise of "subsidies". This accounts for \$22.7B in revenue that will never come in. You operate at a 87% loss. What kind of business or government entity would do that? Unless you are going the fact your own models don't pencil out this on taxpayers.</p>	<p>The \$2.3 billion of revenue listed in the "City/County Gas Tax" category is just a small subset of all the programs that are funded by the gas tax. The Road Maintenance and Rehabilitation Account (RMRA) is also funded by the gas tax and is expected to bring in \$19.6 billion in revenue. The managed lane revenue estimates are significant as the Managed Lane Network is expected to be built out. They are expected to be variably priced based on congestion, like the Managed Lanes on I-15 are today. The revenue expected to be collected from these future managed lanes are less than the revenues expected to be collected from gas taxes.</p> <p>In regard to farebox recovery ratios, the pre-COVID numbers were used. Fares are just one part of the revenues that transit receive to operate their services. The rest of the transit agency's funds come from other sources: federal, state, and local. Like every other</p>

W353	Mike Harp		<p>Converting General-Purpose Lanes to Managed Lanes --NO! you cannot convert vehicle lanes that have been paid for (in some cases I-5 are being built) to Toll roads. Managed lanes is just another word for toll roads. We pay the highest gas tax in the country. Why do you need to get toll revenue from non-toll roads we already paid for?</p> <p>Well, because this SANDAG plan asks for \$50,000 per person in the county, \$168 Billion. That is absurd.</p> <p>Managed lanes==tolls by your SANDAGs own plan. I went four (4) miles, on the 73 toll road in Orange County, last Saturday. The toll was \$8.83, over \$2/mile. SANDAG knows this and this is in their models. We will be paying highest gas tax, highest per mile tax, and highest managed lane tax (AND all lanes are managed lanes--they will be variable by signs made up by SANDAG at the time).</p> <p>This amounts to a regressive tax (for poorer people who have to drive, and cannot be shoved into SANDAG/SD/NCTD busses that operate a 87% loss). The ones SANDAG wants to help will be hurt the worst.</p> <p>This whole plan stinks of people that want to get to a \$168B+ pool of money.</p>	<p>transportation service in the nation (highways, roads, air travel), without the subsidies from taxpayers they would not be able to survive.</p> <p>The 2021 Regional Plan maximizes our existing roads using technology to manage how lanes are used which reduces traffic congestion and delay. The proposed network of managed lanes also encourages carpooling, vanpooling and taking transit which creates more roadway capacity without adding additional lanes. This model is very similar to how the I-15 Express Lanes operate today.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p>
W354	Mike Harp		<p>“Transit Leap would create a complete network of high-speed, high-capacity, high-frequency transit services that connect major residential areas with employment centers and attractions throughout the San Diego region.”</p> <p>Wow..this is wildly underestimated, undefined and why would the tax payers be expected to pay for this??. I am against this.</p> <p>OK, so reality is, \$1.5 B won't be enough for this. SANDAG's plan says “would include new high-speed services that cover longer distances with limited stops, and these services would be separated from vehicle traffic with bridges, tunnels, or dedicated lanes.”</p> <p>Do you know how much a tunnel costs?? In case the folks at SANDAG forgot, as stated here (<a href="https://www.delmartimes.net/news/story/2021-04-27/study-shows-best-route-for-train-tunnel">https://www.delmartimes.net/news/story/2021-04-27/study-shows-best-route-for-train-tunnel</a>) a simple tunnel through sand stone (using your own words) “Construction alone is expected to cost \$3 billion or more”. Not to mention project, engineering, design and all that extra stuff SANDAG does. And for a service that has 13% cost recovery (customer pays \$13 round trip ticket, tax payers pay \$87=\$100 ticket (lets go to Vegas!))</p> <p>I'm wondering if you have some white-paper promising big things?</p>	<p>The Regional Plan envisions a transportation system that provides sustainable mobility choices in the region. Fast and reliable transit remains the most efficient way to move the largest number of people – particularly in our urban corridors that are carrying the largest number of trips the longest distances. Industry projections suggest that high capacity and higher speed rail will continue to be relevant into the future moving more people than any form of ground transit. In fact, a 2020 report by McKinsey &amp; Company found that by 2050, rail would carry about 13 times as many people as vehicles that are shared. Transit services will also be complemented by Flexible Fleets, which include shared, electric, and eventually autonomous vehicles. Flexible Fleets provide greater travel choices for connections to transit or areas where transit may not work well.</p>
W355	Mike Harp		<p>This whole attachment should be deleted. It is a collection of unaffiliated attachments, data, whitepapers, covering a number of topic areas and 303 pages.</p> <p>Who is Ascent? WSP? Who paid them? What does this mean to Tax Payers?</p> <p>The research and attachments should be attached to each topical areas as references, or you should delete this appendix, as it appears to “hide” the real data, groups and organizations behind influencing this plan.</p> <p>These documents should be clearly embedded in each attachment of the plan.</p>	<p>Appendix S includes documentation of SANDAG's travel demand model and off-model greenhouse gas reduction calculators. These documents are required to demonstrate to the California Air Resources Board that the 2021 Regional Plan will meet the region's greenhouse gas reduction target.</p>
W356	Mike Harp		<p>“Leveraging Next OS technology offers the capability to provide discounts to certain populations.” - Page 47</p> <p>No, first of all, what do you mean “certain populations”? How would you protect privacy? Are you going to do this by income? Race and DNA makeup? If by Race, how much DNA does someone</p>	<p>We understand there are concerns around the privacy and implementation of a road usage charge. Significant additional work, including public involvement, pilot testing, legislation and much more will be necessary to inform implementation of elements of this plan, including the road usage charge. These efforts will assess equity impacts and test mitigation strategies. At a minimum this plan is updated every four years with the</p>

			<p>need to have?</p> <p>This is very much big brother technology that we should be as tax payers scared about. It is very Orwellian when the government can charge you based on the % melanin in your skin, zip code or other characteristics to use the roadways, freeways and transportation system.</p> <p>But hey! SANDAG said the quiet part out loud.</p>	<p>latest in planning ideas and concepts. Further research will, and is currently, being conducted at the regional, state, and federal level on how to effectively implement these new funding options while safeguarding the public's privacy.</p>
W357	Monique Clifford	Public School Teacher SDUSD and mother of San Diego youth	<p>I am a volunteer with Mid-City CAN. Every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under and seniors. We urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated. Transit-dependent youth have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes is a key investment necessary for our region's equitable economic recovery, while connecting youth to school, work, medical care, internships, and other early-career opportunities. Programs like these exist with great success in Alameda County, Boston, San Francisco, and most recently Sacramento and Los Angeles. I urge the board to take bold action to build a greener, healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity passes as a priority.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W358	Mulugheta Habtemariam	Concerned citizen	<p>Please no more taxes. We have been told that new taxes will fix our roads, traffic and environment still when I drive in San Diego I see the same road conditions our government promised those new taxes would fix. We can't breath anymore, we have to have a different solution than just raising taxes.</p>	<p>Nationwide states and regions are confronting the shortfalls of gas tax revenues to fund maintenance, operations, and construction of their transportation systems. The federal gas tax was the largest source of transportation funding for many decades. However, the federal gas tax per gallon has not changed since 1993, that is when the minimum wage in California was \$4.25. The federal gas tax does not grow with inflation and the purchasing power of that source has diminished over time. States and regions have implemented their own sales and gas tax measures to try and meet the needs of their transportation systems. However, the best tax measures tied to gas and diesel fuel consumption will continue to erode in time as vehicle technologies change.</p>
W359	Mylie Whipple	The San Diego LGBT Youth Center	<p>I am a supporter of The San Diego LGBT Community Center and I am writing to urge the Board to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p> <p>I believe that every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under, who have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes are a key investment that will provide a foundation for our region's equitable economic recovery.</p> <p>When young people have access to no-cost transit passes, they are better able to access school, work, medical care, and resources otherwise not accessible.</p> <p>I urge the Board to take bold action to build a healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity Passes as a priority.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W360	N/A		<p>I already pay taxes to drive on the roadways, why should I have to pay more? Wasn't there a bump up in gas tax just a few years ago? So, I'm going to be charged more to use the roads I'm already paying for? Really? Why don't you find more efficient ways to spend the crazy high taxes I already pay? How much do you want to bleed from people. How far do you want to push folks? This will be one more reason why educated residents will decide to leave the state.</p>	<p>The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, and fair to all.</p>
W361	N/A		<p>No freeway fees (use tax)!</p>	<p>Thank you for your comment.</p>
W362	N/A		<p>Lower income households are often forced into suburban or rural areas due to the price of housing in urban centers. People living away from the urban centers have to travel farther to get to work and services. These people rely on their cars to get places and still have time to spend with their families.</p>	<p>Every attempt has been made in the Regional Plan to provide viable high speed transit service in the region where it makes sense. High speed commuter rail is included in the Plan via Route 581 which will connect Downtown with El Cajon as fast or faster than driving.</p>

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
			My community opposes the strategy to “prioritize non-solo driving” unless the alternatives shorten travel time. Current transit in our County is too slow, so few people want to ride it. Let’s not waste more money on that failed strategy. If there is a way to make it take less than 30 minutes to get from El Cajon to Downtown, that kind of speed, then I would support it. I definitely do not support making car travel slower to make transit competitive.	
W363	N/A		Regular traffic lanes should not be converted to managed lanes unless the managed lanes are going to be completely full. Otherwise it is just taking away traffic capacity that we already paid taxes to build.	<p>Experience and research have demonstrated that expanding roadways ultimately leads to more traffic and greenhouse gas emissions. For example, in the Houston area, a 26-lane-\$2.8 billion mega-freeway project was built to alleviate traffic congestion. Within a few years after construction was completed, congestion worsened and travel times increased 30% during the morning commute and 55% during the evening commute.</p> <p>The 2021 Regional Plan maximizes our existing roads using technology to manage how lanes are used which reduces traffic congestion and delay. The proposed network of managed lanes also encourages carpooling, vanpooling and taking transit which creates more roadway capacity without adding additional lanes.</p>
W364	N/A		I am opposed to any subsidies that are not applied to everyone. The rich have plenty of money to pay additional fees, the poor get special prices, but middle class families suffer (They have to pay higher prices to cover the subsidies). This causes more people to drop into poverty.	Thank you for your comment.
W365	N/A		Please reduce the magnitude of the plan to reduce the cost. We already pay too much of our income to government taxes and fees. The middle class already struggle to make ends meet.	Thank you for your comment.
W366	N/A		Sorry, but you are all a bunch of idiots (the Emperor has no clothes) spending OUR money! Defund SANDAG NOW.	Thank you for your comment.
W367	N/A		Wow I read it once through but it’s really thick with info and deep. I have to read it again but it sounds convincing that there is a real relationship going on at the border and economically it vital to us as a country... like you have convinced me we need TJ (Mexico) for more than one reason....and We actually have a standing economic relationship with them; I didn’t realize either how it all tied into travel means 🤔🤔wow!!! That’s such a cool place to be!! Who would have known these things!!!! 🤔👍	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W368	N/A	El Cajon Collaborative/Barrio Logan College Institute Parent Arabic	Our children want to go to college, but we only have one car in the family. Expenses are too great for college including purchasing a car. What means of transportation are available for them to access colleges and universities. I am happy that there will be trolley service to UCSD, USD and SDSU. Thank you.	<p>SDSU is accessible via the existing Green Line trolley, and UCSD will be accessible later this year when the Mid Coast Trolley Extension connects the Blue Line to University City. Additional future transit routes, highlighted by Corridor in Appendix A of the Plan, will increase transit access to colleges and universities in the San Diego Region.</p> <p>One of the Implementation Actions listed in Appendix B will be a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, students, and youth. SANDAG also is currently working with the Social Equity Working Group to develop near-term solutions to address transit service improvements, amenities, and subsidized transit fares.</p>
W369	Nam Nguyen	Hillcrest Indivisible	<p>The market will not provide the number of affordable housing needed for our region. Any inch given to developers to build density will be towards market-rate. Nor will the traditional avenues give an opportunity for communities to gain home-ownership and generational wealth.</p> <p>What needs to be done to definitively make housing around transit zones, hubs, and corridors possible is a new push for public-private housing. This housing should be a hybrid of the cooperative and community land trust, where the residents have self-determination - removing the possibility of eviction by never-present landlords.</p> <p>City land. Public-Private funded construction. Resident Cooperative/Building Trust pays the city down for a portion of the construction costs as well as ongoing property taxes.</p> <p>The San Diego housing market will never serve the needs of the lower half of earners. It is within</p>	<p>SANDAG is currently developing a Regional Housing Incentive Program and will take several factors into consideration to ensure the program meets the goals of the proposed final 2021 Regional Plan. The program will consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with other SANDAG grant programs. Additionally, SANDAG will coordinate with the Social Equity Working Group and other interested stakeholders to ensure the housing program promotes equity and addresses issues like gentrification and displacement.</p> <p>Land use decisions remain under the discretion of local jurisdictions, but SANDAG looks forward to working closely with jurisdictions to promote fair and equitable housing throughout the San Diego region.</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

ID	Commentor Name	Agency	Comment	Response
W370	Nam Nguyen	Hillcrest Indivisible	<p>the purview of the City, County, and SANDAG to put down the avenue for creating housing density and homeownership for more of its citizens.</p> <p>Every transit station at every level within the jurisdiction of SANDAG's regional plan should incorporate renewable energy. From a major Mobility Hub that has Megawatt-capacity to back-up the utilities grid, to a bus station that has a phone-charger hub, there should be renewable technologies integrated in. Solar panels, batteries, micro-wind turbines, and others can create a county-wide micro-grid that bolsters resilience to communities and the region.</p> <p>I would very much like to emphasize community and house-hold level engagement for how they can prepare and react to climate crises. If that means activating CERT to give seminars workshops, and a publicly-led distributed solar/battery program, then those are steps necessary to make sure no one gets left in the dark when the next wildfire threatens the grid. We know there will be more wildfires.</p>	<p>The 2021 Regional Plan includes a Sustainable Communities Strategy (SCS), as required by California Senate Bill 375 (Steinberg, 2008) (SB 375), for the San Diego region. This SCS describes coordinated transportation and land use planning, and identifies Priorities for Adaptation Planning, which include prioritizing resilience and developing innovative solutions. Appendix B describes both Near-term and Continuing Actions for 2021 Regional Plan implementation, integrating a resilient capital grants and innovative solutions program, the preparing a regional resilience framework, and serving as a resource for local agencies' Climate Action Planning efforts and the general public on the impacts of climate change.</p> <p>Regarding a network of EV charging stations and other amenities for the Mobility Hub network, SANDAG plans to implement measures to reduce GHG emissions from development projects to address climate resilience and energy redundancy including consideration of distributed energy resources to provide zero emission redundant power. That way, SANDAG can ensure charging stations and other amenities are reliable, accessible, and cost effective. Additionally, SANDAG will explore integrated renewable energy options for EV chargers throughout at Mobility Hubs while also considering valuable microgrid options to address climate and energy resiliency for an array of Mobility Hub amenities that rely on electricity.</p>
W371	Nam Nguyen		<p>To secure “complete corridors”, SANDAG should work with municipalities to produce 100% affordable public housing and commercial space along transit lines. Not only would these alleviate the housing crisis and increase transit use (thereby securing income for said transit lines), the diversity of people and culture will generate activity that draws middle/upper economic class residents and tourists.</p> <p>Please note that I have expressly stated affordable housing AND commercial space. Creating space for living and economic opportunities fulfills the full spectrum of habitation that, when combined with transit in close proximity, enables the current zeitgeist of the “15 Minute City”.</p> <p>SANDAG must see that public transit is a service like any other transportation corporation like FEDEX or UPS. The product is a service, and the service is to transport products. The product transported is people. If there are no people, there is no service. Likewise, if there is no customer to deliver products, there is no service. If major transit hubs become both homes and destinations for all San Diegans, then the transit will more likely be sustainable. If you build it, they will come, and they will come via public transit.</p> <p>It is my sincere demand that SANDAG works with every San Diego County municipality, with funds from the state and federal level, to push for wrapping the projected transit lines with Public Housing and Commercial and Cultural Projects. Blanket the region with thriving communities that will be the envy of the nation.</p> <p>Sincerely, Nam Nguyen</p>	<p>SANDAG wholeheartedly agrees in the value of mixed use development along transit corridors including the provision of affordable housing and commercial space. Supportive land use combined with high quality transit service and an array of on-demand Flexible Fleets can offer a ‘15-minute city’ experience in and around each of the regional Mobility Hub areas featured in the Plan. SANDAG will continue to work closely with local jurisdictions to concentrate future population and job growth within reach of transit while introducing a new housing incentive grant program that includes a focus on affordable housing. The Plan envisions a world class transportation system where anyone regardless of mode, age, income, or ability can travel safely and with ease to access work, school, shopping, recreation and services.</p>
W372	Nam Nguyen		<p>I think that there should be capital investments in each of the bus stops in San Diego, if not the county.</p> <p>While some are tied into larger stations, most are a simple bench and signpost.</p> <p>I think that each bus stop - each and every single one - should have a greater minimum level of structure to alleviate the stresses on riders.</p> <p>Minimum level: - Bench (without any anti-homelessness measures, as they are inhumane)</p>	<p>MTS and NCTD evaluate their bus stops for the potential to add amenities when budgets allow. When their budgets increase enough, they look to add features like you mention.</p> <p>Your comment has been forwarded to North County Transit District (NCTD) and San Diego Metropolitan Transit Service (MTS).</p>

**Draft 2021 Regional Plan Responses to Comments – Website Sourced**

			<ul style="list-style-type: none"> <li>- Signpost</li> <li>- Shade structure</li> <li>- Embedded Map with transit lines, fares, etc.</li> <li>- Waste Bins</li> </ul> <p>Increased level</p> <ul style="list-style-type: none"> <li>- Benches</li> <li>- Digital Signpost with ETAs of next buses</li> <li>- Shade structure with rooftop solar</li> <li>- Embedded batteries with USB Charging hubs, connected to utilities as a microgrid</li> <li>- Waste and Recycling bins</li> </ul>	
W373	Nam Nguyen		<p>If there are any plans by the Port of San Diego to redevelop Harbor Island, a ferry service from Downtown to Harbor Island would be nice.</p>	<p>Ferry service is being considered by MTS and the cities of San Diego and Coronado. As their plans develop, SANDAG may include them in future Regional Plans.</p> <p>Your comment was forwarded to the Port of San Diego.</p>
W374	Nam Nguyen		<p>I really want smart stoplights. We are living in the 21st century, with the Internet-of-Things, we should not be waiting at stoplights on an empty intersection because the lights are still on timers.</p>	<p>A regional Smart Intersection System (SIS) is in the proposed final Regional Plan to upgrade stoplights and improve overall traffic flow on major roads throughout the region. The SIS will implement advanced technologies that can adapt to traffic patterns in real-time and provide the optimal signal timing for all modes of transportation. Funding is proposed in the Plan for the implementation of the SIS.</p>
W375	Nam Nguyen		<p>I would like to add additional support for a uniform regional method of payment for all transit systems. If I could purchase one card and upload funds (online) and go from bus to trolley to train, that would make trips convenient not just in terms of saving the headache of multiple forms of payment, but also facilitating ad hoc, impromptu, unplanned trips.</p> <p>Imagine that if someone uses the card and, if there was insufficient funds on the card, they would be billed for the balance that could be paid later. A resident could go on a casual trip on transit recreationally without the hassle of pre-planning too much. Break down the barriers to ridership.</p>	<p>Next Operating System (Next OS) includes a system that would allow for a comprehensive fare payment system that would cover several modes. In the interim, MTS and NCTD just launched its Pronto Fare System which is a building block to a comprehensive fare payment system.</p>
W376	Nam Nguyen		<p>As a manner of creating more corridors for transit, one could recreate the “Streetcar Suburbs” with smaller-sized electric buses.</p> <p>Instead of the common 45’ or larger bus that runs through cities and major thoroughfares, a smaller sized bus could transport persons through the single-family residential zones with stops at major commercial and civic centers. These minibuses could also smoothly navigate suburban streets.</p> <p>For example, for all of the major routes along major streets, smaller Suburb Buses (SuBuses) could pass through and act as connectors from the suburb streets of Mira Mesa to Mira Mesa Blvd. Then a person could realistically walk from their door to their Sorrento Valley office.</p> <p>To wit, Electric Streetcar “Buses” could be the last mile service necessary to integrate the suburbs of San Diego county into the greater Transit System.</p>	<p>What is described is a good example of our proposed Flexible Fleet services. Micromobility can be provided via small buses, electric vehicles, scooters and bikes and e-bikes. These services can be utilized to provide on-demand travel within the community as described or provide first and last mile access to transit. SANDAG will be launching pilot programs in different communities for services similar to what is described.</p>
W377	Naomi Nussbaum	Synergy Arts Foundation	<p>San Diego County is home to hundreds of artists, most of whom are struggling to make ends meet with the cost of living increasing constantly. Please consider providing affordable housing specifically for our community of artists. We are beginning to lose them to other parts of the country. A city without artists has no soul.</p>	<p>SANDAG is currently developing a Regional Housing Incentive Program and will take several factors into consideration to ensure the program meets the goals of the 2021 Regional Plan. The program will consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with other SANDAG grant programs. Additionally, SANDAG will coordinate with the Social Equity Working Group and other interested stakeholders to ensure the housing program promotes equity and addresses issues like gentrification and displacement.</p>
W378	Naomi Nussbaum	Synergy Arts Foundation	<p>Having lived in San Diego for close to 40 years and being very active in the arts community here, I am requesting you consider how powerful the arts are as an economic driver for our County. San Diego, in its geographic location, together with Tijuana (which boasts a very vibrant arts culture), should be an international cultural destination.</p>	<p>The San Diego region benefits from a rich social and cultural exchange between the U.S. and Mexico, including a vibrant arts community and shared history. SANDAG supports all efforts to highlight arts and culture as a way to elevate quality of life in the region. For example, SANDAG has supported a recent bid to designate the San Diego-Tijuana</p>

				binational region as the 2024 World Design Capital, which recognizes cities for their effective use of design to drive economic, social, cultural, and environmental development. SANDAG supports the incorporation of design of all aspects to further emphasize the unique cultural character of the region, including the arts. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W379	Natalie Rogel	TrueCare	I support the proposed “5 Big Moves” RTP and I want to see “flexible fleets” implemented in North County as quickly as possible, including Ramona. TrueCare has many patients coming from Ramona and has become a challenge with transportation.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> . The 2021 Regional Plan data viewer can be used to explore draft plan projects in your area.
W380	Nathan Wheeler		We pay a federal gas tax, we pay a state gas tax, we have high vehicle registration fee’s, we have horrible free ways, rail that is expensive and not as user friendly, we are told to buy more EV’s for “climate” concerns, we have housing that people can’t afford, water and electricity rates climbing, and yet we are going to be taxed even more with a fee to drive on the roads? Isn’t that what my gas taxes are for? Where do we stop. CA is already one of the highest states for taxes and yet you want more? I wonder why people are leaving this state?	<p>Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like greenhouse gas emissions reduction and improving equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.</p> <p>The study will assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will consult with its Board of Directors, stakeholders, and community members to develop implementation strategies for a road usage charge. This includes policies such as who will pay what and how much, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no group, such as those driving fuel-powered vehicles, low-income individuals, rural residents, or those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p> <p>The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, fair to all.</p>
W381	Neil and Marjie Larson		Children and youths 24 and under in age should be able to ride the transit for free. Please make this a priority.	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W382	Nichole Rocero	You Belong Here	I am a resident and business owner in City Heights and have many concerns on the equity of a new transportation system. I applaud SANDAG and San Diego’s attempt to create a new transportation system. I do want to have a voice in the development of such an overhaul. As a small business I am greatly impacted by the ability to serve my community. Many of my patrons do not have access to transportation; bus rides can require multiple transfers that are not efficient for their time. Ridesharing is vastly overpriced post/during COVID, bikes are not always an option for the community I serve, as cost and space to store a bike is not always feasible. I would love to be able to serve my community/customers, but often there are many setbacks for them to access my resources. I would love to see a regional transportation plan that can consider subsidizing rideshare programs, bikes, and bus rides. I feel the city providing programs to those marginalized and underserved with a monthly transportation allowance will be a huge step to building accessible and equitable communities. Furthermore, I would love for the city to	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. 			<p>subsidize the cost of a bus ride from certain regions traveling to culture hubs. For example, for those who may reside in Paradise Hills will they have the opportunity to hop on a bus for free that will be taking them to areas such as Barrio Loga, North Park, East Village, free of charge. If we are forever charging a price and delivering inefficiency to access culture then we stay away, and staying away means we are divided and miss out connection and outside experiences.</p> <p>Furthermore, I live in a region of town overrun by vast amounts of auto shops, where staying in your community for all of your needs (i.e., grocery, lifestyle, arts &amp; culture) cannot exist within a 2 mile radius. I'm fearful that because of all of these businesses being zoned in this region, that we will again, be overlooked for opportunities such as parks and transportation hubs because the City has to build past and around these types of businesses. How will this new regional plan ensure that marginalized and underserved communities will have easy access to the essentials and all the city has to offer. How can we ensure that the development of a new transportation system, will also lead to the development of new placemaking that can help us enjoy and stay within our communities, limiting the need for long distance travel just to access a grocery store?</p> <p>These are some things I hope SANDAG will keep in mind.</p>	access for low income communities of color living near Mobility Hubs triples access.
W383	Nichole Rocero	You Belong Here	<p>I live in City Heights and a great amount of my neighbors and community do not have access to the beach. The oceans are a great way to build family togetherness, allow community to participate in culture and arts, have access to alternatives to air conditioning, and build awareness of environmental justice and being advocates for our coastlines and beaches. If we do not have access to it, then for many of us, it is not our problem nor our fight.</p> <p>I propose that SANDAG develop regularly scheduled shuttles dedicated to Beach Days for those in our community who do not have access to transportation nor the time to spare transferring from bus line to bus line just to get to the beach.</p> <p>With the climate rising, more people in underserved regions need a way to escape the heat! what better way than to spend a day at the beach!</p> <p>We make it much too hard and unaffordable to get to the beaches. This looks like segregated beaches and communities. We lack diversity and are unable to occupy spaces such as the beach because they were not built with us in mind.</p> <p>Please develop easier, affordable, and faster ways for our marginalized communities to access communities that were not built for us to occupy.</p>	The transit network that has been developed for the Regional Plan includes faster access to the beach. There are Rapid and Commuter Rail routes that will operate between Mid-City and the proposed Central Mobility Hub. From that location you can seamlessly transfer to routes that will take you to Ocean Beach, Pacific Beach and La Jolla.
W384	Nicole	N/A	We need more transportation (bus stop), shade and benches at the bus stop.	MTS and NCTD currently provide shelters wherever it is physically feasible. As part of larger infrastructure projects like Next Generation Rapid, Trolley and Commuter Rail, all stations will have shelters.
W385	Nytziagisel Gallegos	Climate reality project	I am urging u to pass no cost passes to our youth	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.
W386	Oscar Gittemeier	San Diego Public Library	I would love to see transportation linked to public institutions like public libraries. (Ex. Bike racks with charging ports for residents that need to plug in their e-bike)	The 2021 Regional Plan envisions a network that provides various mobility options that connect travelers with residential, commercial, recreational, and employment centers.
W387	Paige Ball		As a soon-to-be resident of San Diego, I am very excited by this plan, particularly the expanded transit network. I think it has the opportunity to do great good for the county by removing cars from the road and making it easy to get around without a vehicle. This has the potential to make San Diego a real top transit city in the country and I couldn't be more thrilled!	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W388	Pamela Chambers		Defund SANDAG. Outrageous use of tax dollars.	Thank you for your comment.
W389	Pamela Vizcarra		While I would like more efficient public transportation I don't agree with the way the money will be acquired which is more fees and taxes such as the road charge. There was a surplus in 2021.	Next year, SANDAG will study usage-based fees and the effect the fees will have on meeting established goals like greenhouse gas emissions reduction and improving

Draft 2021 Regional Plan Responses to Comments – Website Sourced

			<p>Instead of spending it on a lottery to encourage people to vaccinate. Better use of that money was to implement it on fixing the roads and building public transportation. California has never been great at being frugal and responsible with money and I don't believe that SANDAG will be any better than other governmental institutions. Like the high speed rail that is costing far more than it should have and is already way past its deadline, the regional plan will as well turn into a boondoggle that is the high speed rail. Please do not use my tax money for frivolous things less than 20% of the population uses.</p>	<p>equity for different income levels and different populations. The first phase of the study will calculate the true cost of driving a vehicle – the cost to own and operate a vehicle, the effect on road wear and tear, the cost of increasing capacity of the transportation system to meet demand, local and global pollution caused by both fuel powered and electric vehicles, traffic accidents, traffic congestion, and the cost of delays caused by congestion to the economy and to the quality of life of travelers. The study will determine how existing revenues currently funds different parts of the transportation system and how different populations are impacted. This foundational understanding will help SANDAG design a road usage charge program that encapsulates multiple factors to make it more fair across the community than the current transportation funding sources.</p> <p>SANDAG does not influence State budget decisions. While exploring implementation strategies for a regional road usage charge, SANDAG will work with Board Members, stakeholders, and community members to develop high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group is paying more than their fair share.</p>
W390	Patricia Rollison		<p>Environmental justice must be embedded in our mobility in San Diego. Therefore, I ask that the 10 Big Moves to Transportation Justice be included in the 2021 Regional Transportation Plan. I call for an environmental justice centered RTP to ensure the projects included in the RTP will prioritize environmental justice (EJ) communities identified by CalEnviroScreen (CES) by listing projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025 in EJ communities, and making all public communication easy to understand by the public in order to promote meaningful engagement. Therefore, in the RTP, I ask that an equity specific project list be included in Appendix A: Transportation Projects, Programs, and Phasing document.</p> <p>I call for an improvement in the bus system now that is fast, frequent, reliable, and accessible through increasing frequency on popular lines, especially overcrowded ones. Therefore, I call for more clarity in Appendix A: Transportation Projects, Programs, and Phasing that provides a list of specific improvements to the bus system.</p> <p>I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.</p> <p>I call for a 24-hour service by 2025 on popular transit routes to connect late night and early morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr. service on popular transit routes and present a clear implementation schedule.</p> <p>I call for the funding of the planning, environmental review, engineering, and capital for the Purple Line as a rail line that connects EJ communities in Central City Heights and South Bay to Sorrento Valley. According to SANDAG staff, the alignment includes City Heights in the 2050 RTP with a 2035 implementation. However, it should be listed in the document to demonstrate that project phasing prioritizes central City Heights and the South Bay region, and a 2035 completion</p> <p>I call for no-cost transit passes for all youth 24 years old and under in order to ensure generations of lifelong transit riders and encourage significant mode shift. Further, I ask that it be accelerated for a 2023 implementation rather than the current delayed plan to implement in 2027.</p> <p>I call for an electrified bus fleet by 2030. Fund the implementation of California's Innovative Clean Transit rule to accelerate the electrification of the bus fleet ten years before mandated by the California Air Resources Board. We cannot afford to wait 20 years to reduce GHGs. Therefore, I ask that the transition to zero-emission buses be accelerated for a 2030 completion with the support of recently approved state and federal funding sources.</p> <p>I call for the funding of to protect vulnerable communities living near transit corridors by anti-displacement efforts developing an anti-displacement strategy that includes affordable/low-</p>	<p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand. SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan. The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line. The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego. One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. The proposed final 2021 Regional Plan</p>

			<p>income housing and preservation of naturally occurring existing affordable housing, community ownership, and tenant protections. Therefore, I request an update on the status of the anti-displacement study.</p> <p>I call for the development of a bathroom access plan and providing MTS with funding for a clear and accessible bathroom network open at all major transit stations. It is unclear if a bathroom network is included in the capital operations</p>	<p>supports the electrification of the region’s transit buses and the state’s Innovative Clean Transit regulation. Appendices A and B include SANDAG’s proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS’ and NCTD’s Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here:  <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG’s housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations.</p>
W391	Patrick Trepanier	Private citizen	<p>Your 2021 Regional Plan is one of the reasons I am leaving California.</p> <p>Last year there was a net migration of Californians OUT of California. Why? Terrible governmental mismanagement at the state, local and regional level, absurdly high cost of real estate, utilities, transportation, taxation, rising crime, poor education...would you like me to keep going?</p> <p>The 2021 Regional Plan is not a bold reimagining - it is more of the same “let’s raise taxes” thinking which will continue to drive up the cost of living in California and drive more Californians out of the state.</p> <p>Let me give two specific items of feedback:</p> <p>1. Your proposal to raise “user fees” for freeways is absurd. You note that transportation tax revenues are declining in some small way due to the rise in EVs. Sandag’s bold thinking? Raise taxes. Because it’s fair. Seriously? The average driver in San Diego buys a \$20K new car and the average Tesla Model 3 is like \$35K. The EV owner (I had a Chevy Bolt) paid more for their car and often bought EV because they wanted to help the environment. Now you’re going to punish those drivers? You told us to buy EVs, we paid a lot for them and now you’re saying “you need to pay your fair share????” Along the lines of bold thinking - a couple of years ago, Newsom’s genius idea for improving transportation was to raise the gas tax - making already California gas tax the most expensive in the nation. He could have looked to cut spending - especially in the ridiculously expensive and inefficient bullet train in the middle of the state. More transportation taxes from Californians is NOT BOLD THINKING.</p> <p>2. In section 3, there was some language about reimagining transportation in San Diego, regardless of “racial, or ethnic background.” (p.44). Race and ethnicity have absolutely nothing to do with how many cars are on the road and how effective, safe and efficient our transportation system is. Seriously, when an Asian driver or a White driver is exiting the 805 freeway to the 52 freeway, do you think that the cement, asphalt and lane lines care one iota about the race of the driver of the car???? This is not a “bold reimagining of transportation in San Diego,” this type of thinking completely distracts people who should be thinking about transportation with issues like race and ethnicity which have nothing to do with traffic flow and improving traffic efficiency and safe roads.</p> <p>3. Here is some real bold thinking:</p>	Thank you for your comments.

Draft 2021 Regional Plan Responses to Comments – Website Sourced

ID	Commentor Name	Agency	Comment	Response
			<p>a. Tell the insurance companies to take a hike and implement “pay at the pump insurance.” It is much more fair than the current system and then everyone is covered. You can come up with some reasonable insurance payment scheme for EVs based on miles driven.</p> <p>b. Give large employers tax incentives to continue to allow workers to “work from home” more days of the week to significantly reduce rush hour traffic. The pandemic should have taught us bold reimagining of transportation.</p> <p>c. Get totally creative with Sandag employees. Instead of coming up with yet another tax on California citizens, why don't you give bonuses to Sandag employees who can be bold and reimagining transportation in San Diego by cutting costs???? I am 100% sure that there is plenty of waste within every government office in California (see bullet train above). Do more with less. instead of just “growing your budget,” look for ways to reduce your overall budget and spend money only where you can be more efficient.</p> <p>If you continue to tax Californians more and try and break everything down to race/ethnicity, more Californians will leave this state. And then you will have lower tax revenues, and your transportation problems will get even worse.</p>	
W392	Patrick Williams		<p>I am a teacher and can not afford to live near the school I work for, I therefore commute 25 miles each way in order to live. You are proposing a fee of up to 30 dollars per month for me to simply drive to and from work? We already pay exorbitant taxes for gas, income, and more. Stop taxing those that can't afford it!</p>	<p>Dramatic changes are necessary to address unprecedented challenges facing our region, and state. One component of these necessary changes are updates to how transportation systems are funded. The funding structure we grew up with, paying at the pump, will not carry us into the future as the state transitions to alternative fuel vehicles to address necessary climate change goals and alternate travel modes that still require funding support. As an alternative to traditional funding revenues through gas tax, road usage charges are becoming more commonplace across the country.</p> <p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. SANDAG is committed to developing a carefully constructed program that will ensure that no particular group, such as those with long commutes, are paying more than their fair share. There are multiple mechanisms, such as caps and rebates, that will be explored to ensure a fair system.</p>

One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. The proposed final 2021 Regional Plan supports the electrification of the region’s transit buses and the state’s Innovative Clean Transit regulation. Appendices A and B include SANDAG’s proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS’ and NCTD’s Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG’s housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations. MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG’s specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.</p>
W394	Peggy Foster	Private Citizen	<p>This whole thing is so misguided and tragic for the residents of San Diego County. “The 2021 Regional Plan is projected to cost \$163 billion.” And that’s where it ends? I don’t think so. A massive public transit system is not workable for geographically spread out San Diego county. We are not San Francisco.</p> <p>Fix and improve our existing freeways. You have more than enough funds to do that. And enough with the damn bicycle lanes. No, I am NOT going to ride a bicycle from my home in Scripps Ranch to my sisters house in North Park. Get real!!</p>	Thank you for your comment.

			<p>As far as a “miles driven tax”, NO WAY. Everyone is so concerned with fairness, a miles driven tax is UNFAIR. I cannot express how disgusted I am with SANDAG. Under the “guidance” of Mr. Ikhata and the board, including Todd Gloria, SANDAG has become an enemy of the taxpaying citizens of San Diego.</p>	
W395	Pete Reinagel	Concerned citizen	<p>This is the second time I've written to express my concerns on the draft Regional Plan. This plan is almost solely focused on high speed transit and the costs are PROHIBITIVE! The taxes hikes to effect all this would drive even more residents from CA.</p>	<p>Dramatic changes are necessary to address unprecedented challenges facing our region, and state. One component of these necessary changes are updates to how transportation systems are funded. The funding structure we grew up with, paying at the pump, will not carry us into the future as the state transitions to alternative fuel vehicles to address necessary climate change goals and alternate travel modes that still require funding support.</p>
W396	Pete Reinagel	Concerned citizen	<p>What I don't see in this plan is anything to improve the transportation safety for the tens of thousands that live in the unincorporated parts of the county. SANDAG has been told for years that Ramona, Santa Ysabel, Julian, and other outlying communities rely on a few highways to our rural properties. Hwys 67 and 78 are not wide enough to handle emergency vehicles entering north county as residents flee during a major emergency. It's well documented that these highways were gridlocked during the fires of 2003 &amp; 2007. When planners realize these are agricultural areas that also have horse trailers that should also be considered in the evacuation routes design.</p> <p>Your Factsheet states SANDAG wants to “take everyone's needs into account” so prove that by (1) adding Hwy 67 &amp; 78 widening to save lives when the next conflagration occurs and (2) acknowledging my input. Buses and trains are not a panacea for all transportation ills! Ramona and other rural communities highly value our open space and agricultural properties. That's the reason we moved here from Mission Valley. We drive an electric vehicle to reduce our environmental impact. Please consider all SD residents not just those near the coast.</p>	<p>The 2021 Regional Plan includes safety improvements in the rural areas such as the SR 67 communities to address crashes and evacuation needs in the event of wildfire or other disasters. However, SANDAG has recently been exploring opportunities to improve broadband internet connectivity and has begun a project in partnership with Caltrans and the County of San Diego to expand fiber connectivity for high speed internet access on the State Route 67 corridor to Ramona.</p> <p>SANDAG and Caltrans are also currently working on the San Vicente Comprehensive Multimodal Corridor Plan (CMCP) to identify transportation projects to improve mobility along the SR 67 corridor.</p> <p>The CMCP study identifies ways to improve roadway safety, enhance the urban-rural transportation interface (with special consideration given to limiting impacts on surrounding environmental habitats and wildlife), engage with tribal nations, and create greater trip reliability and efficiency throughout the study area while supporting climate action initiatives. The suite of solutions will include active transportation, clean transportation, transit, resilience and environment, right- of- way and utilities, equity, and evacuation considerations.</p>
W397	Peter Fen	Sunrise Movement	<p>City Heights needs an extension of the line to serve that community's public transportation needs.</p>	<p>Commuter Rail Line 582 is included in the Plan to serve north-south travel needs in Sorrento Mesa, National City, Kearny Mesa, and University Heights. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is completing a more detailed ridership analysis of this route. The analysis is studying an alignment that would include stations in City Heights and at San Diego State University (west campus).</p>
W398	Peter Hoss		<p>No mileage tax. I already pay a gas tax. Plenty of other states have great roads with less money. Do your job and cut useless jobs and projects to make up for your need for money. Quit wasting the money you already have on mass transit that no one wants to use.</p>	<p>Thank you for your comment.</p>
W399	Philip Ellsworth		<p>I am totally against this idea of having a road tax, totally dumb. First of all you don't even have the infrastructure in place to give people the alternative to NOT drive their vehicles. Build it first , then they will come. Charging people who have to live further from their work is totally charging and punishing people because of their economic class , some people have to live in El Cajon , or lakeside where it's affordable because they can not afford in the city of San Diego. This is a BAD plan without the proper infrastructure in place to give people a CHOICE of either driving or using public transportation. Right now it takes over an hour on the trolley to get to downtown San Diego from Chula Vista and longer from El Cajon. Your plan is all about busses when it should be a light rail system. The trolley doesn't even go to the airport and if it does in the future I'm sure it will be riddled with NUMEROUS stops along the way creating a long commute. Look at the BRT low ridership you know why because it's a bus system, it takes about 25 minutes to get to one side of Chula Vista to the trolley station by the I-5. Fix what we have, put infrastructure in place to give us a choice THEN and only then charge people for using the roadways. We are taxed way too much in this state, we have one of the highest gasoline prices in the country when we make gasoline in this state.</p>	<p>SANDAG will launch a study in the next year to further study the potential of usage-based fees and their capabilities in addressing various goals, including equity and greenhouse gas emissions reduction. The initial phase of this study will focus on calculating the true cost of driving, and better understanding what sources of existing revenue are funding different parts of the system and how different populations are impacted by existing revenue mechanisms. This foundational understanding will help SANDAG to design a road usage charge program that is more fair than current transportation funding sources.</p> <p>The study will also assess the potential impacts of user fees on San Diego residents, visitors, and businesses, particularly those relying heavily on transportation. SANDAG staff will work with Board Members, stakeholders, and community members to develop implementation strategies for a road usage charge, including high level constructs of the program, such as who will pay, the fee structure, and the distribution of revenues. While the design of the program has not yet been determined, initial assumptions included in the Regional Plan is that the regional road usage charge would be a user-fee for use of roads in San Diego County. So a San Diego County resident would not be charged a San Diego user fee for miles drive in other counties, and residents of other counties would be</p>

W400	Philip Petrie	Interfaith Coalition for Earth Justice	<p>I call for an environmental justice centered RTP to ensure the projects included in the RTP will prioritize environmental justice (EJ) communities identified by CalEnviroScreen (CES) by listing projects that will directly benefit EJ communities, outlining immediate benefits via projects that will be implemented by 2025 in EJ communities, and making all public communication easy to understand by the public in order to promote meaningful engagement. Therefore, in the RTP, I ask that an equity specific project list be included in Appendix A: Transportation Projects, Programs, and Phasing document.</p> <p>I call for an improvement in the bus system now that is fast, frequent, reliable, and accessible through increasing frequency on popular lines, especially overcrowded ones. Therefore, I call for more clarity in Appendix A: Transportation Projects, Programs, and Phasing that provides a list of specific improvements to the bus system.</p> <p>I call for increased funding for the planning, environmental review, engineering, and capital for the additional Blue Line track that allows express, 24-hour service, and additional frequency enhancements. The information for the Blue Line needs to be clarified; it is unclear if the double/third tracking included in Appendix A refers to an additional track that will provide express connectivity from the border to downtown San Diego.</p> <p>I call for a 24-hour service by 2025 on popular transit routes to connect late night and early morning workers to their job. Therefore, the information in the RTP needs to be clarified; the language in both Appendix A and Chapter 2 should specifically call for 24 hr service on popular transit routes and present a clear implementation schedule.</p> <p>I call for the funding of the planning, environmental review, engineering, and capital for the Purple Line as a rail line that connects EJ communities in Central City Heights and South Bay to Sorrento Valley. According to SANDAG staff, the alignment includes City Heights in the 2050 RTP with a 2035 implementation. However, it should be listed in the document to demonstrate that project phasing prioritizes central City Heights and the South Bay region, and a 2035 completion</p> <p>I call for no-cost transit passes for all youth 24 years old and under in order to ensure generations of lifelong transit riders and encourage significant mode shift. Further, I ask that it be accelerated for a 2035 implementation rather than the current delayed plan to implement in 2027.</p> <p>I call for an electrified bus fleet by 2030. Fund the implementation of California’s Innovative Clean Transit rule to accelerate the electrification of the bus fleet ten years before mandated by the California Air Resources Board. We cannot afford to wait 20 years to reduce GHGs. Therefore, I ask that the transition to zero-emission buses be accelerated for a 2030 completion with the support of recently approved state and federal funding sources.</p> <p>I call for the funding of to protect vulnerable communities living near transit corridors by anti-displacement efforts developing an anti-displacement strategy that includes affordable/low-income housing and preservation of naturally occurring existing affordable housing, community ownership, and tenant protections. Therefore, I request an update on the status of the anti-displacement study.</p> <p>I call for the development of a bathroom access plan and providing MTS with funding for a clear and accessible bathroom network open at all major transit stations. It is unclear if a bathroom network is included in the capital operations budgets.</p>	<p>charged for miles driven in San Diego county. SANDAG will rely on coordination with other agencies in California along with the State Department of Transportation to integrate the selection of technology, collection methods, and account management to ensure a consistent experience for travelers.</p> <p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand. SANDAG agrees that action is needed now to provide fast, frequent, reliable, and accessible transit, especially on highly utilized routes. Staff are bringing forward an item to the SANDAG Transportation Committee and to the Board of Directors in advance of approval of the 2021 Regional Plan to amend the agency budget and act now to invest in transit that benefits environmental justice communities. This action seeks to increase services on transit lines that have infrequent service in the evenings and late nights, and/or provide fare subsidies for youth riders. Additionally, further clarification on planned improvements to the bus network, including frequency and span-of-service improvements, will be added to Appendix A in the proposed final 2021 Regional Plan. The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line. The proposed final 2021 Regional Plan includes increased service spans for the Trolley and bus service up to 20 hours per day. As SANDAG and the transit agencies move into more detailed planning efforts in the near future, some routes will be considered for 24-hour operation. The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista, and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego. One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under. The proposed final 2021 Regional Plan supports the electrification of the region’s transit buses and the state’s Innovative Clean Transit regulation. Appendices A and B include SANDAG’s proposed commitment of \$75 million through 2025, \$250 million between 2026 to 2035, and \$332 million between 2036 and 2050 for zero-emission buses and infrastructure to accelerate the implementation of MTS’ and NCTD’s Zero Emission Bus (ZEB) Rollout Plans. Transit agency ZEB Rollout Plans are on the CARB website here: <a href="https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans">https://ww2.arb.ca.gov/our-work/programs/innovative-clean-transit/ict-rollout-plans</a>.</p> <p>Land use authority is reserved to local jurisdictions – the cities and the county. The cities and the county are best positioned to effectively implement the objectives outlined in the 2021 Regional Plan as those jurisdictions understand the unique needs of their communities and geographies. SANDAG is developing a Regional Housing Incentive Program and it will meet the goals of the proposed final 2021 Regional Plan. SANDAG’s</p>

			I call for the funding of the planning and implementation of a transit emergency response strategy to provide safety particularly to EJ communities during community-wide emergencies. Currently, this is not included in the RTP.	housing incentive program will include development of a regional anti-displacement strategy, consider climate change and resilience, consistency with the transportation improvements included in the Regional Plan, and alignment with SANDAG grant programs. Additionally, SANDAG will coordinate with its Social Equity Working Group, tribal nations, and other interested stakeholders to ensure the housing incentive program promotes equity and addresses gentrification, displacement, and other issues. The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations. MTS and NCTD work closely with the County Office of Emergency Services to ensure that transit vehicles can be used in the case of any public emergency. Additionally, SANDAG’s specialized transportation grant program requires all grantees to work with the County to get their wheelchair accessible vehicles registered to assist in emergencies. Appendix Q also describes emergency evacuation strategies, including signaling, traffic control guides, roadblocks and barricades, electronic signage, land expansion, contra-flow lanes, traveler information services, use of mass transit, and airport uses.
W401	Pornthima DelMastro		Please prioritize reducing greenhouse gasses and fossil fuels in San Diego’s plan. We love taking public transit and biking and walking!	The 2021 Regional Plan is required to reduce greenhouse gas (GHG) emissions from passenger vehicles and light-duty trucks by 19% per capita by 2035 compared to 2005 levels, as mandated by Senate Bill (SB) 375.
W402	R Michael Wilkinson		The plan to put mileage monitors into cars and charge a per mile fee should be aborted. This is a massive invasion of privacy and will not be tolerated. California has the hither gas taxes in the nation already and a \$76,000,000,000 surplus. Find your funding elsewhere!	We understand there are concerns around the privacy and implementation of a road usage charge. Significant additional work, including public involvement, pilot testing, legislation and much more will be necessary to inform implementation of elements of this plan, including the road usage charge. At a minimum this plan is updated every four years with the latest in planning ideas and concepts. Further research will, and is currently, being conducted at the regional, state, and federal level on how to effectively implement these new funding options while safeguarding the public’s privacy.
W403	R. Michael Wilkinson		California is already too highly taxed! The idea of mileage transponders in private citizen cars is a bridge too far even for crazy California!	We understand there are concerns around the privacy and implementation of a road usage charge. There are several ways to implement the road usage charge that does not involve transformers or tracking devices in private vehicles. Significant additional work, including public involvement, pilot testing, legislation and much more will be necessary to inform implementation of elements of this plan, including the road usage charge. At a minimum this plan is updated every four years with the latest in planning ideas and concepts. Further research will, and is currently, being conducted at the regional, state, and federal level on how to effectively implement these new funding options while safeguarding the public’s privacy.
W404	Rachael Cunningham	Nile Sisters Development Initiative	I would like the future plan to take into account our fellow San Diegans who do not have the same access to technology as some of us do. San Diego should focus on developing its bus/metro system before adding in other means of getting around.	Transit Leap will offer people a network of high-capacity, highspeed, and high-frequency transit services that will incorporate new modes of transit while also providing improved existing services. Transit Leap includes Next Gen Rapid Bus Service, local bus, and Flexible Fleet services to complete the Transit Leap network. This bus network would offer faster and more reliable service with increased frequencies and longer service hours.  Flexible Fleets can range from bikes and scooter to autonomous shuttles that provide on-demand service that are ADA compliant and provide options for users that may not have access to a smartphone or internet device to hail a ride.
W405	Rael Gisqu	El Cajon Collaborative/Barrio Logan College Institute Parent Arabic	We need better streets in El Cajon. Many do not have sidewalks and there are many pedestrian and bicycle accidents every year. How do we improve the streets around our school but also are they included in the Plan. After the focus group. . . thank you for including so many bicycle lanes, smart signals, crosswalks and more in the Plan.	Active travel to school is an important component of a transportation strategy. The plan includes funding for “Complete Streets in Mobility Hubs,” which will include active transportation improvements on local streets within the Hubs that will facilitate these kinds of connections. The intention is to make trips less than 3 miles more attractive for walking and biking. Local jurisdictions also have access to Safe Routes to Schools (Cajon Valley School District for example) programs and funding which can assist with infrastructure, outreach, and other elements. Please seek out opportunities to provide input and feedback to City of El Cajon traffic engineering and planning staff as well on more near-term projects at specific places in your community which may not be in the regional bike network in this plan but instead in your local Active Transportation Plan.

ID	Commentor Name	Agency	Comment	Response
				Your comment was forwarded to the City of El Cajon.
W406	Rafael Hernandez	National Latino Research Center	<p>I appreciate the emphasis on addressing regional transportation challenges including economic and social inequities, climate change, public health, and safety, as well as coordination with community-based organizations and tribal governments throughout the planning process. It is good to see that the plan includes working with community partners to develop affordable housing development incentives. The regional plan acknowledges issues that are unique to our U.S.-Mexico border region, as well as systemic racism, redlining, and the taking of tribal lands by settlers, but does not address the safety concerns affecting our communities from the presence of border patrol and law enforcement on public transportation.</p> <p>Technology innovation is an exciting part of the regional Plan, but equity in our regions is a must. It will be crucial to address the basic unmet needs in our marginalized communities like adequate shelter, functioning vending machines, and staff that speak the various languages of our communities in the transit stops and stations. While some communities will be gaining state of the art technology, we cannot allow other communities to continue to lack basic services, resources, and infrastructure.</p> <p>I support the 2021 Regional Plan’s mission to improve the transportation system in our region, and I want to emphasize the need to address issues of equity, especially for our historically marginalized and underserved communities.</p>	<p>Transit station security and operations are a function of MTS and NCTD. MTS’s website states that they have been making changes to its security policies and practices, to ensure their operations are in line with best in practice policies. Recent measures include increased training for internal and contract security staff, updated use of force policy, conducting an outside audit, using more visible and customer friendly uniforms, and more. NCTD’s website states that they contract with the San Diego Sheriff’s Office and local law enforcement agencies to patrol and provide law enforcement and security services at our transit centers. Your comment was shared with the Director of Planning at MTS and Chief of Planning, Strategy &amp; Innovation at NCTD. Additionally, SANDAG’s Public Safety Committee provides a forum for which regional public safety issues and concerns can be addressed. NCTD and MTS serve on the Public Safety Committee as advisory members.</p> <p>SANDAG will be applying a social equity planning framework throughout the implementation of the Regional Plan. As a near-term action, the proposed 2021 Regional Plan includes developing a Digital Equity Strategy and Action Plan that will address regional accessibility gaps in communications infrastructure, technology, and digital literacy. We have been working with our Community-Based Organization partners (or CBOs) to ensure that language translations and educational resources on transit are available to all San Diegans as we advance with our next OS system. Additionally, both MTS and SANDAG are working to provide enhanced amenities at transit stops and stations including comfortable shelters, bathroom facilities, and improved wayfinding kiosks.</p> <p>We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a>.</p>
W407	Ralph Nelson	SDBC, SDCBC, Swami’s.	<p>I understand that the current plan for completion of the Inland Coastal Rail trail in Oceanside is not scheduled for completion until 2035! This is unacceptable! We continue to prioritize projects in support of motor vehicle use at the expense of adequate facilities for alternate transportation like bicycles.</p>	<p>We are committed to complete this project and invite you to check out the project webpage at Keep San Diego Moving, sign up for updates at the link below if you have not already.  <a href="https://www.keepsandiegomoving.com/RegionalBikeProjects/inland_rail_trail_intro.aspx">https://www.keepsandiegomoving.com/RegionalBikeProjects/inland_rail_trail_intro.aspx</a></p> <p>I’d encourage you to be involved with the efforts of the North County CMCP too, again if you are not already doing so -  <a href="https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=609&amp;fuseaction=projects.detail">https://www.sandag.org/index.asp?classid=12&amp;subclassid=83&amp;projectid=609&amp;fuseaction=projects.detail</a></p>
W408	Randy Walton	Self Employed	<p>Thank you to the SANDAG staff and those board leaders who recognize that the status quo is unsustainable from a climate and congestion management perspective, and that any county that is expected to add 100K+ houses in the next decade deserves a comprehensive transportation system that moves people around without adding to the emission or the gridlock. We are a region known worldwide for innovations in science and technology, there is no reason our transportation systems can’t have that same reputation. If I had one specific request, it would be to make sure that North County receives equal attention and priority to any other part of the county when it comes to future projects.</p>	<p>The 2021 Regional Plan includes extensive transportation improvements focused on North County communities.</p>
W409	Reva Kareem	El Cajon Collaborative/Barrio Logan College Institute Parent Arabic	<p>How can we use the trolley and buses when we don’t speak English and there is no translation available for us? Will the Regional Plan include transit trainings and translation services and information for refugees and immigrants? This is the largest problem we all have. We don’t leave El Cajon because it is too scary to use the trolley when you don’t know what time and where to get off. Thank you for the Plan. I look forward to the new technology.</p>	<p>One of the proposed final 2021 Regional Plan’s near-term actions includes developing a Digital Equity Strategy and Action Plan that will address regional accessibility gaps in communications infrastructure, high-speed broadband internet access, technology, and digital literacy. We have been working with our Community-Based Organization partners (CBOs) to ensure that language translations and educational resources on transit are available to all San Diegans as we advance with our Next Operating System (Next OS). Additionally, the Metropolitan Transit System (MTS) is increasing its programs in assisting newcomers learn the transit system. This is an area we would like to support in partnership with local jurisdictions and organizations who support newcomers.</p>

ID	Commentor Name	Agency	Comment	Response
				<p>For more information, I would like to refer you to Appendix B: Implementation Actions, Table B.1 on more information on the Digital Equity Strategy and Action Plan. For more information on our community-based outreach please see Appendix H: Social Equity: Engagement and Analysis.</p> <p>Your comment has been forwarded to North County Transit District (NCTD) and San Diego Metropolitan Transit Service (MTS).</p>
W410	Rhonda Delgadillo		Please do not tax us now on how many miles we drive!! It is ridiculous with the new ways you come up with. We can't even afford to live here any more. You need to budget better instead of taxing. Do your jobs and budget!!	Thank you for your comment.
W411	Ricardo Flores	LISC San Diego	<p>I would like to know how the SD Draft 2021 Regional Plan complies with AB 686 Affirmatively Furthering Fair Housing and the goal to desegregate neighborhoods? What I see in your draft plan is only providing equity through access to transit to ensure that Low-Moderate-Income (LMI) residents can travel to jobs, hospitals, etc.</p> <p>Will you please add to this DRAFT policies -- like subdividing all single family land parcels 4 times -- for cities in the county to use to desegregate and comply with AB 686?</p> <p>I look forward to your response.</p>	<p>The 2021 Regional Plan includes Appendix K – Regional Housing Needs Assessment (RHNA), which discusses the 6th Cycle RHNA Plan and is in compliance with state law in furthering housing supply, infill development, jobs/housing relationship, equity, and affirmatively furthering fair housing.</p> <p>To promote equity and fair housing, the RHNA methodology includes an Equity Adjustment that assists in overcoming patterns of discrimination and segregation, transforming racially and ethnically concentrated areas of poverty into areas of opportunity by allocating a higher proportion of low-income housing units to jurisdictions with a lower share of low-income households, which tend to be jurisdictions with a high concentration of resource-rich areas.</p>
W412	Richard Brown		Grand Central Station costing 5 billion dollars is a sick joke. Sandag needs to be disbanded.	Thank you for your comment.
W413	Richard Brown		Hasan Ikhata and SANDAG need to be eliminated and disbanded.	Thank you for your comment.
W414	Richard Irvine		Please do not attempt to inject "social equity" in your proceedings and stick to infrastructure!	A Title VI Analysis is required by state and federal law to ensure that the distribution of the benefits and burdens of the infrastructure investment is fair. By examining the San Diego region through the context of social equity, we as an organization can deliver infrastructure projects that have the greatest impact increasing mobility, alleviating the most congestion, and maximizing usage of the transit system.
W415	Richard Lund	Sunrise SD	For the final plan, I urge this Board to (1) maximize emissions reductions, (2) prioritize investments in the communities on the frontlines of environmental injustice and the climate crisis, create Youth Opportunity Passes (YOP); provide no-cost transit passes for all youth 24 years old, have a Purple Line Serve Central City Heights, create a Blue Line Express, and improve the transit bathroom network.	<p>The 2021 Regional Plan is required to reduce greenhouse gas (GHG) emissions from passenger vehicles and light-duty trucks by 19% per capita by 2035 compared to 2005 levels, as mandated by Senate Bill (SB) 375. Reducing GHG emissions and achieving state goals related to carbon neutrality requires actions at all levels of government. SANDAG looks to support and encourage local jurisdictions, state agencies, and other partners to reduce emissions beyond what is included in the 2021 Regional Plan.</p> <p>The 2021 Regional Plan has been developed with equity at the forefront. An equity specific project list has been included in the draft 2021 Regional Plan Appendix H. As suggested, this list of projects with phasing will be added to Appendix A in the proposed final 2021 Regional Plan. Thank you for the suggestion and SANDAG agrees that this change will make it easier for the public to understand.</p> <p>One of the Implementation Actions listed in Appendix B is a Regional Transit Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p> <p>The South Bay to Sorrento Comprehensive Multimodal Corridor Plan is currently studying alternatives that include a station in City Heights along the Commuter Rail Route 582. The east-west Commuter Rail route 581 between El Cajon and Downtown San Diego/Central Mobility Hub via SDSU includes that station in the current proposed alignment. The first part of Route 582, from National City to Sorrento Mesa, is expected to be built by 2035 and is planned to be extended south from National City, to Chula Vista,</p>

				<p>and to the border by 2050. An additional route, Commuter Rail 583, traveling from the border to National City on the same alignment as the 582, is expected to be built by 2050 along with a branch to the Central Mobility Hub via downtown San Diego.</p> <p>The Blue Line Trolley is one of the most successful light rail lines in the nation. It recently had frequencies increased to 7.5 minutes from 5 a.m. to 7 p.m. Grade separations and track work will help to improve the reliability on the Blue Line. Appendix A includes specifics on these projects, but in the short term SANDAG will conduct a Blue Line Express Feasibility and Conceptual Engineering Study as a Near-Term Implementation Action (included in proposed final Appendix B: Implementation Actions). The study will focus the project specifications and clarify next steps for express connectivity along the Blue Line.</p> <p>The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations.</p>
W416	Richard Martindell	Self	We do not need a per mile road use fee as proposed in the plan. Drivers already pay for road repairs and maintenance through the excise tax on gasoline. This year’s state budget estimates this income for the state to be \$6.6 Billion. If all that money is used to repair and maintain roads and highways rather than being diverted to other programs not related to roads and highways there is sufficient money to take care of our roads. Very simply, the more a person drives the more gas taxes that person pays just as the outrageous program being proposed. In addition, in order to implement a road use fee you would need to create a whole new administrative structure that would require funds raised by the usage fee to be used to pay for that overhead. Don’t burden us with another government program.	The road usage charge, which is being studied by both the federal and state governments, is being considered to replace an old tax system that is no longer relevant. We know this is a challenge and we respect the concerns raised. We are committed to having authentic dialogues to work through the challenges and create a revenue system that is flexible, sustainable, equitable, and fair to all.
W417	Richard Sheresh	n/a	What I take away from the plan is a huge amount of money being spent to achieve very little impact on transportation effectiveness. I and many others live in the suburbs. I live in Chula Vista. From my residence, I can walk almost anywhere as long as my 3 mile/hour pace can get me to a destination. If I did not have a vehicle, I can either walk or use Uber-like transportation, a car option that would add more carbon because the driver has to also go from their residence to my residence and return in addition to my own destination and return. The bus option does not exist unless there is no other option. That’s because buses do not go where I want to go. To ride a bike in Chula Vista, on the street, is a non-starter because of dangers from cars. It’s no contest for a 3,000 pound car versus a 20 pound bike. And who rides bikes in the winter. This is not the Netherlands where the land is flat and bikes could actually be used safely.	The Regional Plan includes travel choices that are appropriate for different settings. For example, Flexible Fleets will offer people a variety of on-demand shared vehicles. Flexible Fleet services provide an option for people who may not want to drive a personal automobile in suburban communities where fixed route buses may not make sense. Flexible Fleets offer additional convenience, as the on-demand nature allow people to book a ride directly to their destination when they need it. Proposed Clean Transportation policies will ensure that Flexible Fleet vehicles transition to zero-emission vehicles to help meet air quality mandates. The Regional Plan also proposes investments in active transportation and Vision Zero policies to create a safer environment for biking. These strategies combined will make it easier to get around without driving a car. And for people who continue to choose to drive a car, they will benefit from the traffic reduction in their communities that result from other people who choose to take the alternative transportation options once they are available.
W418	Richard Sheresh	n/a	So what might work is to produce political policies that encourage a change in behavior. Such new laws proposed and enacted have been effective by urging and mandating changes needed. The record of CAL-EPA is a good example. They mandated vehicle changes that caused changes such as catalytic converters and better gas mileage resulting in the state, Los Angeles and San Diego almost eliminating smog and having much cleaner air. With the emphasis on electric vehicles, I can expect the automotive industry to come out with new approaches such as the Aptera and Ford electric truck and most car manufacturers will probably follow with hydrogen engines using renewable hydrogen. So using new laws, rebates, taxes and other encouragements should make an environment that makes changes that businesses and customers can support. Yes, the politicians are choosing winners and losers, but they always have done that. The tax giveaways to the fossil fuel industry is a good example. Will the public pay the bill? Of course, that will not change. But it won’t be on political actions that only benefit political supporters.	Regarding electric vehicles, the transition to cleaner vehicles will only exceed through efforts by government at all levels and industry together. California has enacted several clean vehicle laws for passenger vehicles, buses and trucks that signal the auto industry to produce cleaner vehicles. The auto industry has made major commitments and investments to shift to all electric in the coming decade(s). The 2021 Regional Plan supports incentives and other investments in the electrification of cars, trucks and buses and their supporting infrastructure (e.g., EV charging stations and hydrogen fueling stations) as one of the ways SANDAG helps reduce regional GHG emissions and improve local air quality. Appendices A (Table A.17) and B show SANDAG’s proposed EV commitments.
W419	Richard Sheresh	n/a	In driving in different parts of the county, I noticed that the freeway where 125/94 in La Mesa try to come together is a severe bottleneck almost anytime going either way. There is plenty of room to expand that section, but it was never done. It’s pretty obvious that expanding that area would reduce congestion, accidents, gas use, frustration, wasted time, etc. Now we see large buses on	The 2021 Regional Plan envisions several improvements for the SR 125 and SR 94 corridors. Projects identified in Appendix A intended to address this segment include improvements under the Complete Corridors and Transit Leap categories such as

			the freeways that pick up people at few locations and take they to other specific locations mostly empty. You use the potential rider population to justify the use and costs, but can only hope at some time there will be enough riders to cover some part of the costs.	interchange and connector projects, managed lane conversions, and Next Gen Rapid transit service. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W420	Richard Sheresh	n/a	As far as I can see, this plan is for San Diego city and not county even though it indicates this is county-wide. I feel I'll be paying for something of little or no value to me or others, except making some good jobs while restricting parking or driving. Other than EV encouragement, I believe the use of rezoning near public transportation is a reasonable policy to accommodate those who can live in an area and make use of public transportation. But doing away with parking or restricting driving in some areas, I believe, will drive customers to shopping centers where parking will still be available.	SANDAG is proposing various policies, such as parking management, to complement proposed capital investments and achieve traffic congestion relief and meet mandated air quality goals. Parking Management may include policies such as reducing or eliminating parking requirements for new developments within Mobility Hubs where various travel options are available. Although such policies may result in less parking, developers can choose to provide parking based on demand and factors such as transit availability.
W421	Robert Means	self	This plan is terrible. It is a waste of money that will inconvenience the vast majority of people without providing benefits to them. Money would be better spent on improving roads and freeways.	Thank you for your comment.
W422	Robert Wright		I strongly oppose building a massive new rail system. Most neighborhoods are not located where residents could efficiently use it. The project will end up being up being an absurd fiasco like the bullet train. Spend the money maintaining and upgrading our roads and freeways.	The proposed transit system is designed to connect the more dense areas of our region. Connecting population centers with employment centers with fast, reliable service has been proven to generate transit ridership. Funds will also be spent to ensure motorists have a safe and congestion-free road network.
W423	Ronald Dibelka	SunCoast Properties	Your plan has ruined the end of 5th avenue near the hospital, very confusing and traffic restricting, especially with all the delivery trucks blocking access -	Thank you for your comment.  Your comment was forwarded to the City of San Diego.
W424	Roxana Cerna	Nile Sisters Development Initiative	I think this is a great idea for our regional community.	We appreciate your support and feedback. Please continue to follow along in this process by visiting <a href="http://SDForward.com">SDForward.com</a> .
W425	Ryan Woodydy		The bike lanes are a complete nightmare. Unsafe at best and a disaster for the city. I'm actually fine with bike lanes but the way they've been installed provides for a bike lane an extremely wide concrete curb then parking with no room for a vehicle traffic. You get 2 full-size car and your white knuckling it, buses will now use both lanes to move down the roadway further blocking traffic This is also the huge trip hazard for the general population and creates an impossible area to traverse for a handicapped person. It gets worse at intersections. Not rounded corners but Sharp hard curbs and corners on the inside turns designed to force you to make wide turns into other lanes of traffic or inflict maximum damage to your tires and wheels. And they already have and will continue to be hit. New bus stops force the bus to stop in a lane of traffic blocking the road opposed to pulling to the curb where it's less likely to get hit (5th Ave @ Upas).The new bike lanes also create huge blind spots on the roadway and at intersections that are going to cause accidents as well as Bicycles and scooter injuries. Necessarily turn lanes and parking have been eliminated. All for the benefit of bike lanes that road bicyclist as well as scooters don't seem to be using. It's obvious the designers of the new bike lanes and roadways have no interest in the safe flow of traffic. I'm sorry I'm not more positive about this but the execution of the bike lanes on Fourth and Fifth Avenue leaves a lot to be desired.	It appears these comments relate to the Fourth and Fifth Avenue Bikeways which are currently under construction and not yet open to public. We are committed to complete this project in a timely manner, but please note it is an active construction site and all roadway users should be extra vigilant in light of these temporary and variable conditions. We invite you to review the project webpage at Keep San Diego Moving and sign up for updates if you have not already, <a href="https://www.keepsandiegomoving.com/RegionalBikeProjects/UptownSegment1_intro.aspx">https://www.keepsandiegomoving.com/RegionalBikeProjects/UptownSegment1_intro.aspx</a>
W426	Sage Rogalski	The San Diego LGBT Community Center	I am a supporter of The San Diego LGBT Community Center and I am writing to urge the Board to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.  I believe that every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under, who have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes are a key investment that will provide a foundation for our region's equitable economic recovery.  When young people have access to no-cost transit passes, they are better able to access school, work, medical care, and resources otherwise not accessible.  Thank you	One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.

			I urge the Board to take bold action to build a healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity Passes as a priority.	
W427	Sama Alyas	El Cajon Collaborative/Barrio Logan College Institute Parent Arabic	We need more affordable housing for low-income families and shelters for the homeless. These should be near public transportation but with safe streets. The apartments in El Cajon are mostly very old and need updating. They are also not always close to transportation. We must use public transportation at night or in the early hours to access jobs that are in the north. We need more buses at night. Thank you for your help and for the Plan.	<p>SANDAG is currently developing a Regional Housing Incentive Program that will support the development and adoption of policies and process improvements to accelerate housing production for very low-income-, low-income-, and moderate-income housing while taking several factors into consideration to ensure the program meets the goals of the 2021 Regional Plan. Additionally, SANDAG will coordinate with the Social Equity Working Group and other interested stakeholders to ensure the housing program promotes equity and addresses issues like gentrification and displacement.</p> <p>Most of California's homeless population resides in major metropolitan areas; however, homelessness impacts communities of all sizes. Efforts to address homelessness are led by local jurisdictions in the region and SANDAG supports their efforts to seek funding sources from the State Department of Housing and Community Development (HCD) to address homelessness, begin initiatives, or conduct pilot programs. For more information, please visit: <a href="https://hcd.ca.gov/policy-research/specific-policy-areas/homelessness.shtml#">https://hcd.ca.gov/policy-research/specific-policy-areas/homelessness.shtml#</a>.</p>
W428	SAMANTHA CRUZ	SDEA/Teacher	<p>I am a High School Special Education teacher at San Diego Unified. Every San Diegan deserves access to high-quality transportation and economic mobility, especially young people ages 24 and under and seniors. We urge SANDAG to amend Appendix A of the 2021 Regional Plan to declare that no-cost transit passes for youth ages 24 and under receive priority when Transit Fare Subsidies are allocated.</p> <p>Choose 2 talking points to include:</p> <p>Transit-dependent youth have been disproportionately impacted by the COVID-19 pandemic. No-cost transit passes is a key investment necessary for our region's equitable economic recovery. No-cost transit passes for all youth ages 24 and under ensures generations of lifelong transit riders are part of our long-term strategy to build a greener and equitable San Diego. No-cost transit passes will connect youth to school, work, medical care, internships, and other early-career opportunities. Programs like these exist with great success in Alameda County, Boston, San Francisco, and most recently Sacramento and Los Angeles.</p> <p>I urge the board to take bold action to build a greener, healthier, prosperous, and just future in San Diego. Please amend the Plan to include Youth Opportunity passes as a priority.</p>	<p>One of the Implementation Actions listed in Appendix B is a Regional Fare Impact Study. This study will ensure public stakeholders get the chance to weigh in on the options. The study, expected to be completed by FY2024, will include an evaluation of fare subsidies for people with low incomes, seniors, students, and youth. While that work is underway, staff from SANDAG, MTS, and NCTD are working with stakeholders on a one-year pilot that may provide free fares for youth age 18 and under.</p>
W429	Sarah Mahdi	El Cajon Collaborative/Barrio Logan College Institute Parent Arabic	<p>There are too many homeless in El Cajon. It makes it frightening for us to use parks and transit. We often see them urinating on trees and fences because there are no restrooms. I was very nervous during COVID-19 and the spread of germs. What can we do to make our community safer? Please add safe, clean restrooms with more shelters.</p>	<p>Buses currently receive daily maintenance. As part of COVID-19 safety protocols, buses are wiped and cleaned at the end of each run throughout the day. Additionally, all riders are required by federal mandate to wear a face covering or mask while on public transit. SANDAG, MTS, and NCTD believe that more can be done to improve the safety on and near transit and are working to make those improvements now and in the future. For example, funding at MTS for security is being diverted from fare enforcement to safety improvements. SANDAG will be working hard with the help of all of our passengers and representatives to ensure that this plan gets implemented.</p> <p>The proposed final 2021 Regional Plan includes a commitment to building bathrooms at all new rail stations and developing a bathroom access plan to study the incorporation of bathrooms into existing stations.</p>
W430	Sarah Vo	Nile Sisters Development Initiative	I'm concerned that communities that are not close to transit hubs will remain isolated. Currently it takes so long to reach your destination using public transit.	<p>The 2021 Regional Plan has redefined the transit network to include a 'support system' of regional Mobility Hubs and Flexible Fleets to expand the reach of transit to ensure major destinations are more accessible. Supportive land use combined with high quality transit service and an array of on-demand Flexible Fleets can offer a '15-minute city' experience in and around each of the regional Mobility Hub coverage areas featured in the Plan. Additionally, Flexible Fleets may be deployed to help make connections to high frequency transit more seamless and convenient. Please reference Figure 2.4 (in Chapter 2) of the Plan to see how many communities located beyond and in between regional Mobility Hub areas can benefit from a wide variety of Transit Leap and Flexible Fleet options in addition to complete streets improvements.</p>
