

**Draft 2027
Regional Transportation
Improvement Program
(RTIP)**

FYs 2027-2031

DRAFT 2027 Regional Transportation Improvement Program

July 31, 2026

SANDAG, as the Metropolitan Planning Organization and the Regional Transportation Planning Agency, is required by state and federal laws to develop and adopt a Regional Transportation Improvement Program (RTIP). The RTIP is a multi-billion-dollar, multi-year program of proposed projects for major transportation projects in the San Diego Region. Transportation projects funded with federal, state and San Diego transportation sales tax program (TransNet) must be included in an approved RTIP. The programming of locally funded projects may also be programmed at the discretion of the agency. The RTIP covers five fiscal years and incrementally implements the Regional Transportation Plan (Regional Plan), the long-range transportation plan for the San Diego region. The current Regional Plan was approved by the Board at its meeting on December 12, 2025.

The Program Budget is available in its entirety at sandag.org/funding/budget.

SANDAG Board of Directors

The Board of Directors serves as the governing body of SANDAG and is made up of elected mayors, councilmembers, and county supervisors that are appointed from each of the region's 19 local governments. The Board of Directors serves as the forum for bringing together our local governments and public agencies to plan, program, and implement cooperative comprehensive planning across the San Diego region. Members are eligible recipients of salary, per diem, and/or reimbursement of expenses from their associated governmental entity. Members should notify the Clerk of the Board if any information is incomplete or incorrect.

Chair Hon. Lesa Heebner	Vice Chair Hon. Joe LaCava	Second Vice Chair Hon. John Minto	Chief Executive Officer Mario Orso
City of Carlsbad Hon. Kevin Shin, Councilmember (A) Hon. Priya Bhat-Patel, Mayor Pro Tem (A) Hon. Keith Blackburn, Mayor		City of Santee Hon. John Minto, Mayor (A) Hon. Laura Koval, Councilmember (A) Hon. Ronn Hall, Vice Mayor	
City of Chula Vista Hon. Carolina Chavez, Councilmember (A) Hon. Cesar Fernandez, Deputy Mayor (A) Hon. Michael Inzunza, Councilmember		City of Solana Beach Hon. Lesa Heebner, Mayor (A) Hon. David A. Zito, Councilmember (A) Hon. Jewel Edson, Councilmember	
City of Coronado Hon. John Duncan, Mayor (A) Hon. Carrie Downey, Mayor Pro Tem (A) Hon. Mark Fleming, Councilmember (A) Hon. Amy Steward, Councilmember		City of Vista Hon. Corinna Contreras, Councilmember (A) Hon. Katie Melendez, Councilmember (A) Hon. Jeff Fox, Councilmember	
City of Del Mar Hon. Terry Gaasterland, Councilmember (A) Hon. Tracy Martinez, Mayor (A) Hon. John Spelich, Deputy Mayor		County of San Diego Hon. Paloma Aguirre, Supervisor Hon. Joel Anderson, Supervisor (A) Hon. Monica Montgomery Steppe, Supervisor (A) Hon. Terra Lawson-Remer Supervisor	
City of El Cajon Hon. Bill Wells, Mayor (A) Hon. Steve Goble, Councilmember		Advisory Members Imperial County Martha Cardenas-Singh, Supervisor (A) Vacant	
City of Encinitas Hon. Bruce Ehlers, Mayor (A) Hon. Marco San Antonio, Councilmember (A) Hon. Joy Lyndes, Councilmember		California Department of Transportation Ann Fox, District 11 Director (A) Allan Kosup (A) Jose Marquez	
City of Escondido Hon. Dane White, Mayor (A) Hon. Judy Fitzgerald, Councilmember (A) Hon. Joe Garcia, Deputy Mayor		Metropolitan Transit System Hon. Matthew Leyba-Gonzalez (A) Hon. Vivian Moreno (A) Hon. Ronn Hall	
City of Imperial Beach Hon. Jack Fisher, Mayor Pro Tem (A) Hon. Mitch McKay, Mayor (A) Hon. Matthew Leyba-Gonzalez, Councilmember		North County Transit District Hon. Jewel Edson (A) Hon. Priya Bhat-Patel (A) Hon. Mike Sannella	
City of La Mesa Hon. Lauren Cazares, Vice Mayor (A) Hon. Patricia Dillard, Councilmember (A) Hon. Laura Lothian, Councilmember		U.S. Department of Defense Dennis Keck, Navy Region Southwest Executive Director (A) Anna Shepherd, Navy Region Southwest (A) Muska Laiq, Navy Region Southwest	
City of Lemon Grove Hon. Alysson Snow, Mayor (A) Hon. Jennifer Mendoza, Councilmember (A) Hon. Jessyka Heredia, Mayor Pro Tem		Port of San Diego Dan Malcolm, Commissioner (A) Job Nelson	
City of National City Hon. Luz Molina, Vice Mayor (A) Hon. Ron Morrison, Mayor (A) Hon. Ditas Yamane, Councilmember		San Diego County Water Authority Hon. Joy Lyndes (A) Joel Scalzitti (A) Valentine Macedo, Jr.	
City of Oceanside Hon. Esther Sanchez, Mayor (A) Hon. Eric Joyce, Deputy Mayor (A) Hon. Jimmy Figueroa, Councilmember		San Diego County Regional Airport Authority Vacant (A) James Sly, Board member	
City of Poway Hon. Steve Vaus, Mayor (A) Hon. Peter De Hoff, Councilmember (A) Hon. Christopher Pikus, Councilmember		Southern California Tribal Chairmen's Association Hon. Raymond Welch, Chairman, Barona Band of Mission Indians Hon. Cody Martinez, Chairman, Sycuan Band of the Kumeyaay Nation	
City of San Diego Hon. Joe LaCava, Council President (A) Hon. Sean Elo-Rivera, Councilmember (A) Hon. Marni Von Wilpert, Councilmember Hon. Todd Gloria, Mayor (A) Hon. Kent Lee, Council President Pro Tem (A) Hon. Vivian Moreno, Councilmember		Mexico Hon. Alicia Kerber-Palma Cónsul General of Mexico (A) Hon. Gilberto Luna Deputy Cónsul General of Mexico (A) Hon. Barbara del Castillo	
City of San Marcos Hon. Rebecca Jones, Mayor (A) Hon. Ed Musgrove, Councilmember (A) Hon. Mike Sannella, Deputy Mayor		Association of Planning Groups Hon. Robin Joy Maxson (A) Hon. Eileen Delaney

Chapter 1

Executive Summary

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Chapter 1

Executive Summary

Overview

The 2027 Regional/Federal Transportation Improvement Program is a multibillion-dollar, five-year program of major transportation projects funded by federal, state, local, and private funding, including the TransNet local sales tax, covering FY 2027 to FY 2031.

The 2027 Regional Transportation Improvement Program (RTIP) development process, which includes the air quality emissions analysis for all regionally significant projects, requires approval by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA).

The 2027 RTIP is a prioritized program designed to implement the region's overall strategy for providing mobility and improving the safety, condition, and efficiency of the transportation system while reducing transportation-related air pollution. This is in support of efforts to meet federal performance-management targets, while also attaining federal and state air quality standards for the region. In addition, the 2027 RTIP incrementally implements the 2025 Regional Plan (2025 Regional Plan), the long-range transportation plan for the San Diego region approved by the Board of Directors on December 12, 2025.

Document Organization

This document includes five chapters: Chapter 1 provides an overview of the document; Chapter 2 describes the RTIP development process, including federal, state, and TransNet transportation programming requirements; Chapter 3 contains the detailed listings of projects; Chapter 4 provides the financial capacity analysis; and Chapter 5 describes the air quality conformity analysis.

Also included are several appendices. Appendix A provides the listing of projects included in the various grouped project listings. Appendix B provides the status of all projects not carried over from the 2025 RTIP. Appendix C outlines the Expedited Project Selection Process, which allows SANDAG to move funding between the first quadrennial element to access prior-year funding or advance the implementation of certain projects different than their programmed dates. Appendix D provides the list of Regional Arterial System projects within San Diego County based upon the approved 2025 Regional Plan. Appendix E lists the projects exempt from regional air quality conformity analysis. Appendix F includes the detailed regional air quality emissions analysis report for non-exempt or Capacity Increasing (CI) projects. Appendix G is the Title VI analysis that was performed on the 2027 RTIP. Appendix H focuses on how the projects included address federal performance management requirements. Appendix I describes the SANDAG Funding and Project Selection Process. Appendix J describes the congestion-management process for the federally funded CI projects on the Congestion Management Process Network. Appendix K describes the public participation process. Appendix L includes all public comments and responses. Appendix M is a checklist provided by Caltrans for items necessary to be included in the RTIP. Appendix N includes a glossary of terms and acronyms.

The 2027 RTIP also can be found at sandag.org/RTIP. This webpage is designed to provide background information as well as the latest updates to the program and relevant documentation.

Program Summary

A summary of the major transportation projects is provided in Table 1-1. A map illustrating major transportation projects included in the 2027 RTIP is shown in Figure 1-3. The individual project listings included in Chapter 3 have been developed in coordination with Caltrans, San Diego Metropolitan Transit System, North County Transit District, local jurisdictions, other agencies, and various San Diego Association of Governments (SANDAG) stakeholders and working groups.

Financial Capacity Assessment

Chapter 4 provides a financial capacity analysis of the major program areas. Based upon this analysis, the projects contained within the 2027 RTIP are reasonable when considering available funding sources.

For nonattainment and maintenance areas, the Regional Transportation Improvement Program (RTIP) must be a revenue constrained document with programmed projects based upon committed funding for the first two fiscal years, and/or reasonably available funding for the remaining years. Funding assumptions are generally based upon: (1) authorized or appropriated levels of federal and state funding from current legislation; (2) conservative projections of future federal and state funding based upon a continuation of current funding levels; (3) the most current revenue forecasts for the TransNet program; and (4) the planning and programming documents of the local transportation providers.

The projects programmed in the 2027 Regional Transportation Improvement Program (RTIP), covering FY 2026/27 to FY 2030/31 are expressed in future dollars. That is, they have been escalated based upon anticipated inflation and other factors to the expected year of obligation or expenditure. For the State Transportation Improvement Program (STIP) and State Highway Operations and Protection Program (SHOPP), the revenues and program are based on the 2026 Fund Estimate adopted by the California Transportation Commission in August 2025.

The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the Transportation Investment Fund and other funding sources. For the STIP and State Highway Operations and Protection Program (SHOPP), the revenues and program are based on the 2026 STIP Fund Estimate (STIP FE) adopted by the California Transportation Commission (CTC) in August 2025. The 2026 STIP FE includes total STIP program capacity over the five-year FE period of \$2.7 billion including \$1.1 billion of new programming capacity.

For the major transportation projects funded with the County transportation sales tax, TransNet, the San Diego Association of Governments (SANDAG) forecasts inflation based on recent economic trends in conjunction with three, independent, nationally recognized forecasts related to economic growth. Prices in the San Diego area, as measured by the Consumer Price Index for All Urban Consumers (CPI-U), advanced 1.4 percent for the two months ending in March 2026, the U.S. Bureau of Labor Statistics (BLS) reported. The index for all items less food and energy advanced 2.6 percent over the year.

SANDAG continuously monitors developments in funding programs and funding needs of transportation projects, as reflected by the RTIP project listing. For the TransNet Program of Projects, quarterly updates for each corridor are provided to both the Independent Taxpayer Oversight Committee (ITOC) and the Board of Directors. Any significant budget changes are reviewed by the SANDAG Transportation Committee and/or Board; if needed, SANDAG will take appropriate actions, such as an RTIP revision, to maintain the financial constraint of the RTIP. For the RTIP financial constraint tables, please refer to Chapter 4, Tables 4-1a to 4-1c.

The projects in the 2027 RTIP have been organized into categories that correlate with our Vision Strategy to communicate how we will invest the funds available to the region for the next five years. The Program Summary table below has been structured to illustrate the investment by Multimodal Corridor. All modes for the corridor are included in the corridor total. This table reflects all the funds on the projects, including prior funds.

Table 1-1: 2027 RTIP Program Summary (in \$000s)

DESCRIPTION	FEDERAL	STATE	TRANSNET	LOCAL/ PRIVATE	TOTAL RTIP (All years incl. Prior)	Prior Years
Corridors						
South Bay to Sorrento	\$94,486	\$0	\$55,905	\$0	\$150,391	\$124,468

<i>Subtotal Transportation Systems/Demand Management</i>	<i>\$124,701</i>	<i>\$0</i>	<i>\$172,319</i>	<i>\$171,806</i>	<i>\$536,876</i>	<i>\$401,882</i>
GRAND TOTAL	\$7,282,877	\$5,029,380	\$6,504,512	\$4,034,214	\$22,381,549	\$18,107,515

As our region continues to move toward complete corridors that integrate all modes of travel, there is still an interest in how the program is distributed across modes. These charts reflect how the money in the 2027 RTIP is being allocated to different modes for both the total amount programmed and the dollars programmed in the five-year period of the RTIP. The funds in the Complete Corridors above have been broken down to Transit, Highway, and Multimodal. Multimodal facilities are generally highways with High-Occupancy Vehicle (HOV) lanes that support Bus Rapid Transit. The chart also illustrates the percentage of funds spent on Active Transportation, Local Streets and Roads, and Operations and Maintenance.

Figure 1-1: 2027 RTIP Program by Mode – All Years Including Prior

Figure 1-2: 2027 RTIP Program by Mode – Current RTIP Years (2027–2031)

Figure 1-3: 2027 RTIP Major Projects

Consistency with the Regional Plan

On January 26, 2026, the FHWA and FTA issued a finding that the SANDAG Revenue Constrained 2025 Regional Plan is in conformance with federal air quality and planning regulations. The 2027 RTIP is consistent with the Revenue Constrained 2025 Regional Plan and, as a financially constrained document, it contains only those major transportation projects listed in the Revenue Constrained 2025 Regional Plan.

Air Quality Conformity Determination

Federal metropolitan planning and air quality regulations prescribe the process for determining air quality conformity. These regulations require that the RTIP:

1. Include a quantitative emission analysis of projects programmed in the RTIP, including all regionally significant projects
2. Be within the region's emissions budgets included in the applicable State Implementation Plan (SIP)
3. Provide for the timely implementation of Transportation Control Measures (TCMs)

Quantitative air quality emissions analyses were conducted for the years 2029, 2032, 2040, and 2050 revenue-constrained transportation scenarios, as shown in Chapter 5. The results of these analyses were distributed to the San Diego Region Conformity Working Group (CWG) for review and comment on June 3, 2026.

The 2027 RTIP meets the conditions for determining conformity with the applicable SIPs for air quality. A detailed description of the regional emissions analysis and modeling procedures is included in Appendix F, while Chapter 5 of this report summarizes the air quality conformity analysis for the 2027 RTIP.

The 2027 RTIP programs substantial funds for the implementation of the four TCMs (identified as Transportation Tactics) in the 1982 SIP and 2016 RAQS, which have been fully implemented. The Transportation Tactics programmed for implementation are provided in Table 5-1, with approximately \$10.9 billion, or 48.85% of the total funds programmed. Included are \$110.5 million for Ridesharing, \$9.9 billion for Transit Improvements, \$696.8 million for Bicycle Facilities and Programs, and \$200.3 million for Traffic Flow Improvements. Based upon this analysis, the 2027 RTIP provides for the expeditious implementation of the existing TCMs in the 1982 SIP and 2016 RAQS, which remain the federally approved TCMs for the San Diego region.

Table 1-2: 2027 RTIP – San Diego Region (in \$000s) Transportation Tactics

Transportation Tactic	Amount
Transportation Demand Management (TDM)	
TDM	<u>\$110,549</u>
<i>Subtotal TDM:</i>	<i>\$110,549</i>
Transit Improvements	
Mid-Coast	\$2,386,409
Ops/Maint - Transit	<u>\$7,538,718</u>
<i>Subtotal Transit Improvements:</i>	<i>\$9,925,127</i>
Bicycle Facilities	
Bicycle/Pedestrian Projects	<u>\$696,838</u>
<i>Subtotal Bicycle Facilities:</i>	<i>\$696,838</i>
Traffic Flow Improvements	
Transportation Management System/Intelligent Transportation System	<u>\$200,342</u>
<i>Subtotal Traffic Flow Improvements:</i>	<i>\$200,342</i>
Total Transportation Tactics in 2027 RTIP:	\$10,932,856
Total All Transportation Projects in 2027 RTIP:	\$22,381,549
Share of Transportation Tactics Projects in 2027 RTIP:	48.85%

Performance Management

Moving Ahead for Progress in the 21st Century Act (MAP-21) (2012) includes provisions for the establishment of a performance- and outcome-based program, which includes national performance goals for the Federal-Aid Highway Program in several areas. This act established new requirements for Metropolitan Planning Organizations (MPOs) to coordinate with transit providers, set performance targets, and integrate those performance targets and performance plans into their planning documents by certain dates. All subsequent federal transportation acts carry forward Performance Based Planning and Programming. The federal performance measures under the FHWA are categorized into three performance-management (PM) groups:

- PM 1: Safety
- PM 2: Transportation Asset Management
- PM 3: System Reliability, Freight, Congestion, and Air Quality

In addition to the three FHWA PM groups, the FTA has established performance measures and reporting requirements for transit asset management and transit safety. Performance metrics for transit asset management focus on the maintenance of our regional transit system in a state of good repair. Transit agencies have developed Public Transportation Agency Safety Plans that include safety targets for specified performance measures. The 2027 RTIP prioritizes investments in safety, transportation infrastructure, system reliability, freight, Congestion Mitigation and Air Quality, transit assets, and transit safety. These are expected to contribute toward the achievement of the targets in each performance management area. Further details on the investment and types of projects contributing to improving performance management areas are included in Appendix H of the 2027 RTIP.

Public Participation

It is the policy of SANDAG to engage public participation in the development of agency planning and programming activities. SANDAG has various working groups made up of stakeholders and other members of the public. The public is provided opportunities to participate via Board and committee meetings, SANDAG public notices of document availability and public hearings, and through the SANDAG public communications program. Presentations were provided to the Interagency Technical Working Group on Tribal Transportation Issues (Tribal TWG) and Community-Based Organizations (CBOs) requesting comments; additional details are described below. The projects included in the 2027 RTIP were discussed as part of the 2025 Regional Plan public outreach efforts and a public workshop held at SANDAG. Pursuant to 23 U.S.C. 134(i), the Board released the draft 2027 RTIP for public review and comment at its meeting on July 24, 2026, ending August 31, 2026, and scheduled a public hearing for the September 18, 2026, Transportation Committee meeting. These efforts also serve to satisfy the public participation process pertaining to the development of the Program of Projects for the FTA Section 5307 Urbanized Area Formula Program and FTA Section 5339 Bus and Bus Facilities Formula Program, including the provision for public notice and the time established for public review and comment.

Examples of public outreach efforts and ongoing participation include:

Independent Taxpayer Oversight Committee (ITOC): In conformance with the regional transportation sales tax TransNet Ordinance, the ITOC, a citizen advisory committee that oversees projects funded through the TransNet Program, was established. As the document through which SANDAG identifies TransNet-funded projects, the RTIP is reviewed by the ITOC, and its comments on the TransNet Program of Projects are conveyed to the Transportation Committee and ultimately to the Board.

Title VI: For the development of the RTIP, SANDAG relied on the Title VI analysis conducted through the development of the 2025 Regional Plan. Included in the process in developing the 2025 Regional Plan, SANDAG used performance measures to aid in making decisions intended to ensure compliance with Title VI requirements and environmental justice principles. This process included citizen representatives and CBO groups. The Title VI analysis can be found in Appendix E of the 2025 Regional Plan.

Public Workshops/Outreach: As part of the development of the 2025 Regional Plan, multiple public workshops were provided in which SANDAG provided information regarding the RTIP. A series of subregional open houses and workshops, community-based outreach events, and an online comment tool provided a foundation to start developing the plan. More information on the outreach efforts for the Regional Plan can be found at sandag.org/regional-plan.

Various workshops were held to give the community an opportunity to view maps, talk with planners, and provide comments on the draft 2025 Regional Plan.

Expansion of Electronic Notifications: In addition to the current list of external industry professionals, SANDAG continually strives to expand the notifications to other citizen--involved working groups. For the 2027 RTIP, SANDAG included tribal organizations and a regionwide network of CBOs representing low-income, senior, and disabled populations. The notice of the availability of the draft 2027 RTIP was also sent to Community Planning Groups. In addition, a notice for the public hearing was posted on the SANDAG website in English and Spanish. SANDAG continues to utilize social media outlets such as Facebook and Twitter to ensure maximum outreach.

To make the RTIP more accessible to the public, a public website was developed through ProjectTrak, an online application used by member agencies to enter projects and propose changes to the RTIP. This public website, available at projecttrak.sandag.org, allows users to view and search the most up-to-date versions of federally approved projects included in the SANDAG RTIP as well as amendments that are under development.

Appendix K in the 2027 RTIP describes the SANDAG public participation process and includes a copy of the latest Public Participation Policy (Board Policy No. 25), which contains the section specifically addressing the RTIP development and amendment process.

Public Participation Plan: The Public Participation Plan (PPP) Policy reflects the commitment of SANDAG of public participation and involvement to include all residents and stakeholders in the regional planning and decision--making process. The PPP was developed in accordance with guidelines established by the FHWA for metropolitan transportation planning (23 CFR 450.316). It fully complies with Title VI related nondiscrimination requirements and reflects the principles of social equity and environmental justice. Included in the PPP are procedures, strategies, and outcomes associated with the ten requirements listed in 23 CFR 450.316 and is available [here](#).

Status of Projects from the 2025 RTIP

When no funding is programmed in the current cycle (e.g., FY 2027 to FY 2031), the project is considered complete for purposes of the RTIP, even though construction may still be ongoing. These projects are either complete, open to traffic, or are currently in construction. There are instances where some projects may be included in the RTIP with no current cycle funding for informational purposes or for environmental purposes. There are several regionally significant projects that will not be carried over into the 2027 RTIP and are shown as complete for RTIP purposes. Projects over \$10 million are listed below:

- **(CAL29) SR 76 Middle - \$148,013,000:** This project widened SR 76 from 2 to 4 lanes in Oceanside.
- **(CAL78B) I-805 HOV/Managed Lanes – North – \$119,468,000:** This project constructed one High Occupancy Vehicle (HOV) lane in the median in each direction at Carroll Canyon Road.
- **(CAL38) SR-905 New Freeway - \$424,642,000:** This project constructed a 6-lane freeway from I-805 to the Otay Mesa East Port of Entry.
- **(CAL572) I-15 Middle Managed Lanes - \$12,900,000:** This project provided environmental clearance and design for two transit lanes and a south facing direct access ramp at Clairemont Mesa Boulevard.
- **(SAN115) San Onofre to Pulgas Double Track - \$77,183,000:** This project designed and constructed a passing track on the LOSSAN Corridor, providing 5.8 miles of second main track and signals, retaining walls, bridge replacements, and a universal crossover near San Onofre.
- **(SAN313) I-805 South: HOV Conversion to Express Lanes - \$10,900,000:** This project designed the conversion of 11 miles of existing carpool lanes to express managed lanes.
- **(SAN26C) SR 15 Bus Rapid Transit (BRT) Mid-City Centerline Stations - \$61,465,000:** This project constructed two new BRT transit stations in the median of SR 15.
- **(SAN163) Los Penasquitos Lagoon Bridge Replacement - \$45,394,000:** This project replaced three aging timber trestle railway bridges to maintain compliance with Federal Railroad Administration (FRA) standards and support intercity, commuter and freight rail services.
- **(V18) I-5/Voigt Drive Improvements - \$40,395,000:** This project constructed the realignment of both Campus Point and Voigt Drive between I-5 and Genesee Avenue.

There are projects included in the 2027 RTIP that may have already opened to traffic and continue to have funds programmed in the current RTIP cycle. Unlike the projects listed above, these projects were carried over into the 2027 RTIP because funds are programmed (for such purposes as landscaping). All other projects that did not carry over into the 2027 RTIP—because of project completion, delay, or deletion—are included in Appendix B.

Chapter 2

Regional Transportation Improvement Program Development

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Chapter 2

Regional Transportation Improvement Program Development Process

This chapter discusses the federal, state, and TransNet programming requirements and the process used by SANDAG to develop this update. It also describes the process for amendments during this cycle.

Federal Transportation Requirements

SANDAG is designated by the U.S. Department of Transportation (U.S. DOT) as the Metropolitan Planning Organization (MPO) for the San Diego region.

As the MPO, SANDAG must have a continuing, comprehensive, and coordinated transportation planning process to receive federal capital or operating funds. The planning process includes the development of: (1) a long-range—minimum of 20 years—transportation plan describing the policies, strategies, and transportation facility needs; and (2) a Federal Transportation Improvement Program (FTIP) covering at least a four-year period. As both the MPO and the state designated Regional Transportation Planning Agency (RTPA), the SANDAG Regional Transportation Improvement Program (RTIP) is equivalent to the FTIP.

Consistent with these requirements, on December 12, 2025, the Board of Directors adopted the Revenue Constrained 2025 Regional Plan (2025 Regional Plan). On January 26, 2026, the U.S. DOT approved and issued an air quality conformity finding for the Revenue Constrained 2025 Regional Plan.

Federal and state regulations identify the development process and required content for the programming document. In general, the RTIP must include all major projects receiving certain categories of federal or state transportation funding that need federal and/or state approval. The RTIP also must include Capacity Increasing (CI) projects and those projects that are identified as regionally significant. A regionally significant project (defined in 23 CFR 450.104) is a transportation project that is on a facility that serves regional transportation needs and would normally be included in the modeling of the metropolitan area's transportation network. The 2027 RTIP also includes the Program of Projects (POP) funded by TransNet, the local transportation sales tax program administered by SANDAG.

The 2027 RTIP indicates the region's priorities for the implementation of transportation projects. It is required to include realistic estimates of project costs and anticipated program revenue. It also must be a financially constrained program. This means that funding must be available and committed to implementing the projects listed in this document. As a result, all projects in the first two fiscal years must have dedicated funding, and projects in the outer years either must have a firm funding commitment or a reasonable strategy or expectation that funds will be available. In addition, all projects within the 2027 RTIP must be consistent with the 2025 Regional Plan. Finally, per federal requirements, the 2027 RTIP must be developed such that, once implemented, it makes progress towards achieving the performance-based targets set in seven areas as established in the Moving Ahead for Progress in the 21st Century Act and continued in the Investments in Infrastructure and Jobs Act/Bipartisan Infrastructure Law (IIJA/BIL).

Air Quality Conformity

On April 15, 2004, the U.S. Environmental Protection Agency (U.S. EPA) designated the San Diego air basin as nonattainment for the 1997 Eight-Hour Ozone Standard, effective June 15, 2004. Several areas that are tribal lands in eastern San Diego County were excluded from the nonattainment designation.

The air basin initially was classified as a basic nonattainment area under Subpart 1 of the Clean Air Act, and the attainment date for the 1997 Eight-Hour Ozone Standard was set as June 15, 2009. In cooperation with SANDAG, the San Diego County Air Pollution Control District (APCD) developed an Eight-Hour Ozone Attainment Plan for the 1997 Eight-Hour Ozone Standard, which was submitted to the U.S. EPA on June 15, 2007. The budgets in the Eight-Hour Ozone Attainment Plan for San Diego County were found adequate for transportation conformity purposes by the U.S. EPA, effective June 9, 2008.

However, on April 27, 2012, in response to a court decision, the U.S. EPA ruled that the San Diego basic nonattainment area be reclassified as a Subpart 2 moderate nonattainment area, with an attainment date of June 15, 2010. This reclassification became effective on June 13, 2012. Air quality data for 2009, 2010, and 2011 demonstrated that the San Diego air basin attained the 1997 Eight-Hour Ozone Standard; APCD prepared a Maintenance Plan with a request for redesignation to attainment/maintenance. On December 6, 2012, the California Air Resources Board (CARB) approved the Redesignation Request and Maintenance Plan for the 1997 National Ozone Standard for San Diego County for submittal to the U.S. EPA as a State Implementation Plan (SIP) revision. Effective July 5, 2013, the U.S. EPA approved California's request to redesignate the San Diego County ozone nonattainment area to attainment for the 1997 Eight-Hour Ozone National Ambient Air Quality Standard (NAAQS) and its plan for continuing to attain the 1997 ozone standard for ten years beyond redesignation.

On May 21, 2012, the U.S. EPA designated the San Diego air basin as a nonattainment area for the 2008 Eight-Hour Ozone National Ambient Air Quality Standard (NAAQS) and classified it as a Marginal area with an attainment date of December 31, 2015. This designation became effective on July 20, 2012. SANDAG determined conformity to the new standard on May 24, 2013, using the applicable model approved by the U.S. EPA to forecast regional emissions (EMFAC2011). The U.S. Department of Transportation (U.S. DOT), in consultation with the U.S. EPA, made its conformity determination on June 28, 2013.

Effective June 3, 2016, the U.S. EPA determined that 11 areas, including the San Diego air basin, failed to attain the 2008 ozone NAAQS by the applicable attainment date of December 31, 2015, and thus were reclassified by operation of law as Moderate nonattainment areas. States containing any portion of these new Moderate areas were required to submit State Implementation Plan (SIP) revisions to meet the statutory and regulatory requirements that apply to Moderate nonattainment areas, by January 1, 2017.

The San Diego County Air Pollution Control District (SDAPCD) submitted a SIP revision addressing Moderate area requirements to the California Air Resources Board (CARB) on December 27, 2016. CARB submitted the SIP revision document to the U.S. EPA on April 12, 2017. Effective December 4, 2017, the U.S. EPA found the motor vehicle emissions budgets for the Reasonable Further Progress milestone year of 2017 from the 2008 Eight-Hour Ozone Attainment Plan for San Diego County adequate for transportation conformity purposes for the 2008 ozone NAAQS.

On August 23, 2019, the U.S. EPA published a final rule in the Federal Register reclassifying the San Diego air basin by operation of law from a Moderate nonattainment area for the 2008 ozone NAAQS to Serious, effective September 23, 2019 (84 FR 44238). This rulemaking changed the 2008 ozone NAAQS attainment deadline to July 20, 2021, with an attainment year of 2020.

On October 26, 2015, the U.S. EPA published in the Federal Code of Regulation a new ozone NAAQS, referred to as the 2015 ozone standard. The new standard revised the allowable ozone level to 0.070 parts per million (ppm). The 2015 ozone standard became effective on December 28, 2015. On June 4, 2018, the U.S. EPA published a final rule that designated the San Diego region as nonattainment, with a classification of Moderate, for the 2015 ozone NAAQS, with an attainment deadline of August 3, 2024, and an attainment year of 2023.

At its May 24, 2019, meeting the Board adopted the 2015 Ozone National Ambient Air Quality Standard Conformity Demonstration for the 2018 Regional Transportation Improvement Program (2018 RTIP) and 2015 Regional Plan and found the documents, as amended, in conformity with the requirements of the federal Clean Air Act (CAA) and applicable SIP. The U.S. DOT, in consultation with the U.S. EPA made its conformity determination on June 21, 2019.

On November 19, 2020, CARB adopted the 2020 Plan for Attaining the National Ambient Air Quality Standards for Ozone in San Diego County (2020 SIP) developed by the SDAPCD, which addressed both the 2008 and 2015 ozone standards. Included in the San Diego 2020 SIP was a request for a voluntary reclassification to Severe nonattainment for both the 2008 and 2015 ozone NAAQS. The reclassification extended the timeline to meet the standards and aligned with air quality modeling. The reclassification was approved by the U.S. EPA on July 2, 2021. On June 4, 2021, the U.S. EPA posted on the Office of Transportation and Air Quality website the adequacy review and public comment on the 2008 and 2015 Eight-Hour Ozone Attainment Plan budgets. On October 4, 2021, the U.S. EPA published in the Federal Register the adequacy finding for the on-road transportation air quality budgets in the 2020 SIP with an effective date of October 19, 2021.

Effective July 2, 2021, the U.S. EPA approved the request from CARB to reclassify the San Diego air basin ozone nonattainment area to Severe for both the 2008 and 2015 ozone NAAQS. The reclassification of the 2008 ozone NAAQS from Serious to Severe changed the attainment date from July 20, 2021, (as a Serious area) to July 20, 2027, (as a Severe area) and the attainment demonstration year from 2020 to 2026. The reclassification of the 2015 ozone NAAQS from Moderate to Severe changed the attainment date from August 3, 2024, (as a Moderate area) to August 3, 2033, (as a Severe area) and the attainment demonstration year from 2023 to 2032. On October 4, 2021, the U.S. EPA published in the Federal Register the adequacy finding for the on-road transportation air quality budgets in the 2020 SIP with an effective date of October 19, 2021. On July 12, 2021, the 2020 SIP was found complete by the U.S. EPA by operation of law six months after the submittal date. On December 19, 2023, the U.S. EPA published in the Federal Register the proposed rulemaking approving the 2020 SIP.

On December 12, 2025, the Board adopted the 2025 Regional Transportation Plan (2025 Regional Plan) and found it along with the 2025 RTIP, as amended, in conformity with the requirements of the federal CAA and applicable SIP. The U.S. DOT, in consultation with the U.S. EPA, made its conformity determination on January 26, 2026.

Performance Targets

The 2027 RTIP must be designed such that once implemented, it makes progress toward achieving the performance targets established under 23 CFR 450.306. It shall include a description of the anticipated effect of the RTIP toward achieving the performance targets identified in the Regional Transportation Plan, linking investment priorities to those performance targets. Details of the various performance measurements, how targets are set, and how the RTIP projects address those targets are detailed in Appendix H of this document.

Congestion Management Process

FHWA 23 CFR 450.322 requires that each Transportation Management Area (TMA) address congestion management through a process involving an analysis of multimodal metropolitan-wide strategies. SANDAG, as the designated TMA for the San Diego region, monitors the Congestion Management Process (CMP) for those federally eligible projects. The passage of Assembly Bill 2419 (Bowler, 1996) allows TMAs to “opt out” of the state CMP. In October 2009, the San Diego region elected to be exempt from the state CMP, and since this decision, SANDAG has been abiding by the federal requirement to ensure the region’s continued compliance with the federal CMP.

The 2025 Regional Plan discusses several elements for use in the analysis of multimodal strategies, including: (1) performance monitoring and measurement of the regional transportation system; (2) multimodal alternatives and non-Single Occupancy Vehicle (SOV) analysis; (3) land use impact analysis; (4) the provision of congestion-management tools; and (5) integration with the RTIP process. For the 2027 RTIP, SANDAG monitors projects that add general-purpose lanes on the CMP network by requiring sponsors of these projects seeking federal funds to submit documentation that demonstrates the project was evaluated for multimodal alternatives, including non-SOV capacity improvements. The most recent federal congestion management process can be found in Appendix O to the 2025 Regional Plan and in Appendix J of this document.

Federal Funding Programs

Federal funds programmed are based on the federal authorizing legislation, the Infrastructure Investment and Jobs Act (IIJA), which was signed into law on November 15, 2021. The Infrastructure Investment and Jobs Act includes anticipated appropriations through FFY 2025/26. These federal funding programs include the following:

- Congestion Mitigation and Air Quality Program (CMAQ)
- FTA Sections 5307 (Urbanized Formula Grant), 5310 (Capital Program), 5311 (Rural Transit) Programs, 5337 (State of Good Repair), and 5339 (Bus and Bus Facilities)
- Highway Safety Improvement Program (HSIP)/High-Risk Rural Roads Program
- Surface Transportation Block Grant Program, which is administered through the state and includes Regional Surface Transportation Program (RSTP) and Highway Bridge Program (HBP) funds
- Highway Infrastructure Program (HIP)

Federal funding for the CMAQ and RSTP is apportioned by the state to the San Diego region by formula. As the MPO, SANDAG is responsible for administering the program and project selection based on priority established in the 2025 Regional Plan (see Expedited Project Selection Process in Appendix C).

CMAQ funds can be used for most categories of transportation projects that improve air quality, such as purchase of alternative-fuel transit vehicles, Transportation Demand Management (TDM) activities, transit operations, and high-occupancy vehicle facilities as provided in federal law. CMAQ funds cannot be used for projects that increase the transportation system's capacity for SOVs. RSTP funds can be used for state highway, local street and road, transit, bicycle, traffic signal, and TDM projects. Highway Infrastructure Program funds were apportioned by the U.S. DOT Appropriations Act of 2018 and can be used similarly to RSTP funds.

Federal Submittal Requirements

Following approval by the Board, the final 2027 RTIP will be submitted to Caltrans for inclusion in the Federal State Transportation Improvement Program (FSTIP), which incorporates the Transportation Improvement Programs (TIPs) from other MPOs around the state. The 2027 RTIP will also be submitted to the FHWA, FTA, and the U.S. EPA for federal approval of the air quality conformity determination. The FHWA and FTA approve the RTIP project programming as an element of the FSTIP.

The U.S. EPA acts as a commenting agency to the FHWA and FTA in the RTIP air quality conformity process. The 2027 RTIP may be amended by SANDAG as needed. However, any revisions that add or modify capacity-increasing, non-exempt projects require an air quality conformity redetermination. A listing of projects that are typically exempt from the air quality conformity determination is provided in Appendix E.

State Transportation Requirements

In addition to serving as the federal MPO, SANDAG is designated by the State of California as an RTPA. RTPAs are responsible for implementing state laws regarding transportation planning and funding and ensuring that coordinated planning efforts meet both state and federal requirements. The 2027 RTIP is a document that meets both federal and state regulations and includes major projects receiving state transportation funds.

State Transportation Improvement Program

The 2026 State Transportation Improvement Program (STIP) adopted by the California Transportation Commission (CTC) in March 2026 is the state's spending plan. The Infrastructure Investment and Jobs Act (IIJA) provides funding for a variety of alternative transportation projects, including many that were previously eligible activities under separately funded programs. The Active Transportation Program (ATP) was created by Senate Bill 99 (Committee on Budget and Fiscal Review, 2013) and Assembly Bill 101 (Committee on Budget and Fiscal Review, 2013) to encourage increased use of active modes of transportation, such as biking and walking. The ATP consolidates existing federal and state transportation programs, including the Transportation Alternatives Program, Bicycle Transportation Account, and State Safe Routes to School into a single program. ATP funds are administered by the CTC, with a separate program administered by the designated MPO, and projects are selected through a competitive process.

Pursuant to Senate Bill 45 (Kopp, 1997) (SB 45), the STIP is comprised of the Regional Improvement Program (RIP) and the Interregional Improvement Program (IIP). Under SB 45, SANDAG, as the RTPA, submits the RIP projects while Caltrans submits its IIP projects, in cooperation with SANDAG, to the CTC by December 15 of each odd-numbered year.

The CTC develops the STIP Fund Estimate (FE), which includes the RIP "County Share" and IIP fund allocations. The program is updated every two years and currently covers the five-year period 2026/27 to 2030/31. STIP-funded projects, like all other state and federally funded projects, must be listed in the RTIP for the sponsor agencies to access funding. The STIP consists of funds from the Transportation Investment Fund as well as from the Public Transportation Account and State Highway Account. Figure 2-1 illustrates the funding distribution.

Figure 2-1: State Transportation Fund Allocation Process

Seventy-five percent (75%) of the STIP funds flow to the regions by formula, whereby the regional planning agencies are charged with developing an expenditure plan for the funds. Eligible project types include improvements to state highways, local roads, public transit, intercity rail, pedestrian and bicycle facilities, grade separations, transportation system management, TDM, soundwall projects, intermodal facilities, and safety. The regional share is further divided between northern (40%) and southern (60%) areas of the state.

The remaining 25% of the funds flow through the IIP, which is a statewide competitive program administered by Caltrans. Sixty percent (60%) of the IIP shares are directed to projects that improve interregional transportation, and 40% is programmed at the discretion of the CTC subject to the north/south ratio identified above. Eligible project types include intercity passenger rail, mass transit guideways, grade separations, and state highways.

As the RTPA for the San Diego region, SANDAG is responsible for nominating projects to receive the region's share of regional STIP (STIP–RIP) funding (as discussed above). These projects in total must be constrained to the “County Share” or “target” funding amount specified in the STIP FE published by the CTC. Caltrans is responsible for nominating projects to be funded under the interregional STIP (STIP–IIP) statewide program. The CTC must approve the local projects proposed in the RIP and IIP by including them in the adopted STIP or a STIP amendment for these projects to receive funding.

For the STIP and State Highway Operations and Protection Program (SHOPP), the revenues and program are based on the 2026 STIP Fund Estimate (STIP FE) adopted by the California Transportation Commission (CTC) in August 2025. The 2026 STIP FE includes total STIP program capacity over the five-year FE period of \$2.7 billion including \$1.1 billion of new programming capacity.

For SANDAG, the priority for STIP-funded projects continues to be based upon the criteria approved by the Transportation Committee at its October 21, 2005, meeting. These criteria include:

- Complete projects currently programmed in the STIP
- Place particular emphasis on programming and completing TransNet Early Action projects
- Program projects at the earliest possible time they can be constructed or implemented
- Maintain existing STIP funding levels as a minimum on existing programmed projects
- Reflect the efforts by the region and Caltrans to complete some of these projects outside the STIP through other funding sources
- Additional programs created by SB 1 provide competitive funds. SANDAG has successfully competed in two cycles and will continue to submit projects for future grant application cycles for state funds under the ATP, Transit and Intercity Rail Capital Program, Trade Corridor Enhancement Program, and Solutions for Congested Corridors Program.

The state-administered portion of the ATP is one of the components that would help the region meet its greenhouse gas emissions targets, with the expectation that this program will help fund several regionally significant bike projects. The final funding allocation for the statewide-funded ATP projects included in the 2027 RTIP rests with the CTC. The Board approves the regionwide ATP.

A major element of active transportation is the implementation of the Regional Bikeway Program. On September 27, 2013, the Board approved the Regional Bike Plan Early Action Program (Bike EAP), which prioritized regional bike projects to be funded with, among other programs, the TransNet Bicycle, Pedestrian, and Neighborhood Safety (BPNS) Program and the Transportation Development Act (TDA) Bike Program.

In addition, Caltrans develops the 2026 SHOPP, which is divided into six project groupings—bridge preservation, collision reduction, mandates, mobility, roadway preservation, and roadside preservation. Projects funded with STIP and SHOPP are programmed in the 2027 RTIP based upon the final CTC adoption.

State Submittal Requirements

The RTIP, which includes the entire San Diego region's STIP-funded projects and all other federal and locally funded projects, must be submitted to Caltrans by September 30, 2026. Once submitted, the state will post for a 15-day public notice review before federal submittal.

TransNet Requirements

TransNet is the local half-cent transportation sales tax funding program that was approved by San Diego voters in November 2004. As part of the TransNet Ordinance, all local agencies are required to submit a five-year TransNet POP for inclusion in the RTIP. Serving as the San Diego County Regional Transportation Commission (RTC), SANDAG is required to approve a multi-year TransNet POP, consistent with the RTIP update schedule, which identifies all major transportation projects proposed to use the sales tax funds over the multi-year period. To receive TransNet revenue, transportation projects must be included in the approved RTIP/TransNet POP.

The TransNet Program includes several subprograms. After deducting for administrative expenses (2%), 2% for BPNS Program projects, and \$250,000 (plus consumer price index) for the Independent Taxpayer Oversight Committee (ITOC), the remainder of the revenues is divided between Major Corridors, Local System Improvements, and Transit System Improvements. Under the TransNet Ordinance, the highway and transit major corridor projects were specified in the approved ballot measure. The schedule and funding of the major TransNet highway and transit projects are developed cooperatively by SANDAG, Caltrans, and the region's transit operators.

The Board-adopted Bike EAP prioritized regional bike projects to be funded with, among other programs, the TransNet BPNS and the TDA Bike Program. Additionally, the Board approved setting aside \$1 million per year to support local, non-motorized projects. Projects funded under the call for projects process with local agencies as the lead agency are generally listed as a grouped-project listing in the RTIP as Various Agencies. EAP projects are listed under SANDAG as the lead agency, which can be included in a grouped project listing or individually listed. If a bike project is funded with federal or state funds in addition to the local TransNet or TDA bike funds, those projects can be listed individually by the sponsoring agency.

The San Diego region's 18 cities and the County developed the TransNet Program of local street and road projects. The local TransNet five-year POP is identified as part of the project listing located in Chapter 3. Per Section 6 of the TransNet Ordinance, the projects within each jurisdiction must be approved by each city council or the County Board of Supervisors, after holding a public hearing, in the form of a signed resolution. The TransNet Ordinance requires that this program of projects is updated every two years.

RTIP Development Process for TransNet

Designated as the region's MPO and RTPA as well as the RTC, SANDAG has the overall responsibility for developing the required RTIP document. In a memo dated March 3, 2026, SANDAG requested that project sponsors review and update the projects for submittal for inclusion into the 2027 RTIP. The individual project listings included in Chapter 3 have been submitted by the project sponsors and reviewed for compliance by SANDAG.

The 2027 RTIP has been prepared with input and cooperation from Caltrans, the cities and County of San Diego, the Metropolitan Transit System, the North County Transit District, and the SANDAG Transportation Committee, as well as other technical and advisory working groups.

Public Participation

SANDAG has provided ample opportunity for community involvement and interagency consultation in the development of the 2027 RTIP, and the SANDAG public participation process provides additional opportunity for public review and comment on the draft document prior to its adoption. Opportunities for community involvement and interagency consultation on the transportation projects included in the 2027 RTIP were provided through public meetings of the various SANDAG committees and working groups that are responsible for the development and oversight of the projects. These committees include the Transportation Committee, ITOC, and San Diego Region Conformity Working Group.

At its July 24, 2026, meeting, the Board approved the distribution of the draft 2027 RTIP for a 30-day public comment period and scheduled a public hearing on the proposed final 2027 RTIP for the Transportation Committee meeting on September 18, 2026. Public comments received and their corresponding SANDAG responses will be included in Appendix L of this document. The Board is scheduled to adopt the final 2027 RTIP at its September 25, 2026, meeting. The draft 2027 RTIP is available at sandag.org/RTIP.

RTIP Amendment Process

On occasion, circumstances may dictate changes to the current RTIP following its adoption. Federal regulations allow changes, or amendments, if the procedures are consistent with requirements for TIP development and with procedures for revisions to the FSTIP. SANDAG will consider such amendments when the circumstances prompting the amendments are compelling and when the changes will not adversely affect air quality conformity or financial constraint of the TIP. The proposed changes to projects also must be consistent with the rules of the funding program.

There are two types of processes to update the RTIP: (1) Administrative Modifications; and (2) Amendments (described in detail below). SANDAG generally processes amendments on a quarterly basis and administrative modifications on an as-needed basis. Both the 2027 RTIP and any amendment requests during the 2027 RTIP cycle that involve the TransNet Program must include the sponsor's governing board/council approval in the form of a signed resolution. The 2027 RTIP quarterly amendment schedule can be found at sandag.org/RTIP.

Caltrans currently approves amendments prior to federal approval, and is unable to approve an amendment, with exceptions to specific projects. There are circumstances, however, in which the amended projects may need revisions after SANDAG approval, should Caltrans object to the approval of a specific project. In such instances, SANDAG can revise the original submittal and resubmit the amendment.

Administrative Modifications

SANDAG received the delegation from Caltrans to approve administrative modifications for the FSTIP on July 30, 2019. The Board delegated its authority to the Chief Executive Officer. Administrative Modifications do not require federal approval. Federal agencies are notified of the updates for informational purposes. The streamlined approach helps expedite the approval process. Project requests that fall within the following criteria can be administratively amended:

- Revise a project description that does not change the scope of the project or conflict with the project environmental document, and wherein the project does not affect air quality or the timely implementation of Transportation Control Measures (TCMs) or impacts financial constraint
- Increase the funding amount up to 50% of the project cost, or \$20 million, whichever is less
- Change in funding source
- Change a project lead agency
- Split or combine individually listed projects as long as cost, schedule, and scope remain unchanged
- Change required information for grouped project (lump sum) listings
- Add or delete projects from grouped project (lump sum) listings with no limit on the changes to funding in grouped listings

Amendments

Project requests that do not meet the Administrative Modification criteria require amendments. The conditions for amendments include, but are not limited to, the following:

- Add a new federal- or state-funded project or delete an existing federal- or state-funded project
- Shift funds from beyond the first four years (FY 2030/2031) to the quadrennial element (FY 2026/2027 through FY 2029/2030) or add funds to a new phase not already programmed
- The request would affect air quality conformity or the timely implementation of TCMs
- The request would require additional air quality emissions analysis and/or a new finding of air quality conformity by adding or deleting a CI project
- The request would impact the financial constraint of the RTIP
- The request would result in major changes in scope, design, and/or concept

Amendments require an action by the Transportation Committee (Board if the amendment requires redetermination of air quality), Caltrans, FHWA, FTA, and the U.S. EPA. Due to the lengthy process involved in determining air quality conformity, amendment requests for regionally significant CI projects requiring new emissions analysis will be scheduled on an as-needed basis (not on any regular schedule).

Grouped Project Listings

Grouped projects or lump sum line items are projects grouped under a specified work type (projects must be exempt from air quality conformity). The purpose is to provide flexibility where the individual implementation priorities are unclear. In cooperation with the MPOs around the state—Caltrans, FHWA, and the FTA—and based upon 40 CFR 93.126 Exempt Tables 2 and 3, an agreed-upon list of grouped-project listings was developed for use in the RTIP. Examples of some of the groupings include, but are not limited to, the following:

- Bike and Pedestrian Facilities/ATP
- Highway Bridge Program
- HSIP
- Highway Maintenance
- Minor Safety and Hazard Projects (SHOPP)
- Pavement Resurfacing and/or Rehabilitation (SHOPP)
- Rehabilitation/Reconstruction of Track Structures and Trackbed (Coastal Rail Corridor)
- TransNet Smart Growth and Senior Mini-Grant Programs

For each grouped project listing in the RTIP, SANDAG maintains a detailed list of projects that comprise the grouped listing, which can be found in Appendix A or on the RTIP webpage [here](#).

Participation by Federal Agencies

This report was funded in part through grants from the FHWA, FTA, and U.S. DOT. The views and opinions of SANDAG expressed herein do not necessarily state or reflect those of the U.S. DOT.

Federal Land Management

SANDAG prepared the 2025 Regional Plan and 2027 RTIP in consultation with the appropriate state and local representatives from environmental and economic communities, airport, transit, and freight; federal land management agencies; state and local agencies responsible for land use, natural resources, environmental protection, conservation and historic preservation; and federally recognized Native American Tribal Governments. SANDAG is committed to ensuring that the 2025 Regional Plan and 2027 RTIP are carried out serving the needs of our diverse communities while helping reduce greenhouse gas emissions. SANDAG has analyzed potential land use impacts to accommodate the San Diego region's population growth, future employment, and housing needs to sustain our economic prosperity and protect our sensitive habitats and resources.

Chapter 3

Project Listings

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Chapter 3

Project Listings

This chapter contains the individual project listings for those major transportation projects and programs proposed to use federal, state, TransNet, and other local funding. The listings are grouped by jurisdiction in alphabetical order. The listings include descriptive material (i.e., type of work, termini length, etc.); the anticipated federal, state, and local revenue sources; and the fiscal year of proposed work. An explanation of the project listing can be found in Figure 3-1.

Federally funded discretionary projects are based upon listings from federal appropriations. Programming levels for formula programs such as Federal Transit Administration (FTA) programs are based upon the urbanized areas estimate as provided in the Federal Register. Caltrans provided the estimated revenues for the Regional Surface Transportation Program (RSTP) and Congestion Mitigation and Air Quality Program (CMAQ) programs. Also included are state-funded projects, the TransNet local sales tax program (including short- and long-term borrowings), other local funding, and private sources.

Caltrans Highway Projects

Caltrans is the project sponsor for most of the highway projects. California Senate Bill 45 (Kopp, 1997) requires that projects in the State Transportation Improvement Program (STIP) be programmed in six categories: (1) project approval and environmental document; (2) design; (3) construction engineering; (4) Right-of-Way (ROW) capital; (5) ROW support; and (6) construction capital to allow the California Transportation Commission to monitor the projects by these phases. However, for purposes of the SANDAG Regional Transportation Improvement Program (RTIP), projects are shown by fiscal year and in three phases: (1) Preliminary Engineering; (2) ROW; and (3) Construction. This provides enough detailed information for regional programming purposes and meets federal requirements.

Several highway programs are identified in the Caltrans listing as grouped projects. These state-administered programs, such as the Highway Bridge Program, State Highway Operations and Protection Program (SHOPP), and Highway Safety Improvement Program (among others) are identified by Caltrans headquarters office and administered by the local Caltrans district offices. All grouped projects listed are exempt for purposes of air quality. The list of individual projects that make up the grouped projects is available on the 2027 RTIP website at sandag.org/RTIP and can be found in Appendix A.

Local Agency Projects

The 18 cities and the County of San Diego are the project sponsors for the local agency projects included in this chapter. The local agency listings, organized alphabetically by jurisdiction and Metropolitan Planning Organization (MPO) identification number, generally consist of regional arterial, local street and road, bicycle, and traffic signal improvement projects. The local agency projects include those funded by federal, state, TransNet, and other local funding programs.

Transit Projects

Pursuant to California Senate Bill 1703 (Peace, 2002), all major regionally significant transit projects are implemented by SANDAG, with minor capital projects and operations continuing under the Metropolitan Transit System and North County Transit District. For all these projects, costs and revenues are listed by fiscal year for each project phase or for the total project.

Other Regional and Miscellaneous Projects

SANDAG is also the project sponsor for other regional projects. The project list includes the Regional Transportation Demand Management Program, the Freeway Service Patrol Program, the Electric Vehicle Charging Program, and Intelligent Transportation System projects. Planning studies using federal funds are included in the Overall Work Program (OWP) and programmed in the RTIP.

Other project listings are included for project sponsors who are not members of SANDAG that have transportation projects within the San Diego region. These include projects from the San Diego Port Authority, the San Diego County Regional Airport Authority, Tribal Governments who are advisory members of the SANDAG Board, and other requesting agencies. Some projects are programmed because the fund source being used requires inclusion in the RTIP but are not included in our air quality conformity analysis.

Federal Funding Requirements

The federal revenue sources shown in this chapter are identified either by specific federal fund category (e.g., RSTP, CMAQ) or by the STIP and SHOPP funding programs. The specific federal fund categories and federal eligibility for the specific projects funded under the STIP and SHOPP are determined by Caltrans as part of a statewide fund-management activity.

The STIP and SHOPP projects listed in this chapter must include any required non-federal matching funds. In general, Caltrans provides the non-federal matching funds for STIP state highway projects, and local agencies provide the non-federal matching funds for local street and road projects. Also, agencies may use 100% federal funding when applicable and use toll credits as a soft match to fulfill the federal match requirements.

To receive federal funding, projects listed in this chapter must provide a minimum non-federal local match, depending on the type of federal funds. The federal participation rates range from 50% (FTA, etc.) to 91.57% (Interstate Highway Maintenance).

Full 100% federal funding is applicable for projects such as traffic control signalization, pavement marking, carpooling, and vanpooling, installation of traffic signs, traffic lights, guardrails, impact attenuators, concrete barrier end treatments, breakaway utility poles, and priority control system projects.

Status of Prior RTIP Projects

Appendix B includes a list of projects from the previous RTIP that were not carried over into the 2027 RTIP. The status for each project is indicated in bold text. “Completed” indicates the project has opened to traffic or has begun construction and/or no money is programmed beyond FY 2025/2026. “Delayed” indicates that the project is ongoing but no new funding has been identified for the RTIP period or the agency has determined other priority projects to fund and may be brought back. “Deleted” indicates that the agency has decided to no longer pursue the project. With this appendix, every project from the previous RTIP is accounted for and provides a complete picture of each program’s status.

Consistency with San Diego Forward: The 2025 Regional Transportation Plan

In order to illustrate the level of consistency between the 2025 Regional Transportation Plan (2025 Regional Plan) and the RTIP and to provide additional information for each project, the individual project listing in the subsequent pages provides the following: the 2025 Regional Plan unique identification number or page number for those regionally significant projects, the Regional Arterial System as identified in the 2025 Regional Plan, the estimated total project cost, the Caltrans identification numbers, the federal earmark numbers, and TransNet-related identifiers. The RTIP Project Users Guide (Figure 3-1) points to the various sources of information provided for each project.

Advanced Construction

For some of the major projects, as well as projects funded with federal funds, agencies programmed future funds using Advanced Construction (AC). Using the AC fund source allows agencies to front local or state funds to fully fund a phase or to advance the project with the anticipation of a future reimbursement once the federal funds become available. To provide an accurate project cost, the AC funds are shown as a negative number in the future reimbursement years, netting to zero, while the federal funds are shown as “Conversion,” indicating the payback to the AC.

Toll Credits

Toll credits would act as a soft match to federal funds indicated in the RTIP as part of the project description. Although the use of toll credits does not add new funding, it does offer agencies the flexibility to use certain projects with 100% federal funds, while other projects can be funded with 100% local funds.

In March 2014, updated guidance on the use of toll credits for FTA- and FHWA-funded projects was released by Caltrans. This update allows local agencies to use other federal funding to replace the required local match for both On-System Local Highway Bridge Program projects and Highway Safety Improvement Program projects. With this option, toll credits can be applied to each federal funding component in the project to increase the federal reimbursement rate to 100%.

Glossary of Terms for Figure 3-1

MPO ID	RTIP project number
RTIP No.	For the 2027 adoption shows as Adoption: 27-00; for all amendments following, this will state the last amendment the project was approved (Ex. RTIP #: 27-01)
Title/Description	Name of the project/project information, including location, limits, and scope
EA NO/PPNO	Unique number assigned by Caltrans as the lead agency or for project oversight
RAS/RTP PG NO	In order to show consistency between the plan and the program, provides the 2025 Regional Plan page number for reference – only applies to regionally significant projects
SANDAG ID	SANDAG capital project or OWP number; provides reference to the SANDAG capital budget
FUTURE	This column includes funding which is programmed in future fiscal years to reflect the total project cost
Earmark No.	Federal legislative number
RAS	Regional Arterial System
CR/Main.	For local TransNet-funded projects, identifies either congestion relief or maintenance
RT	State route in which this project is located
Capacity Status	Indicates whether a project will increase system capacity (CI) or not (NCI); important for regional air quality determination
Exempt Category	Based upon 40 CFR part 93.126 Exempt Tables 2 and 3
Est Total Cost	Sometimes the total program is less than the estimated total project cost because additional funds are not required to be programmed, are programmed elsewhere, or the project is not yet fully funded; estimated total cost should always be consistent with the 2025 Regional Plan
Open to Traffic	All non-exempt projects will have an estimated date when the project will be available for public use; if project is exempt, the project will not have this information
Footnote	Indicated with an asterisk; any additional information pertaining to the project

Project Title:	Avenida Encinas Coastal Rail Trail and Pedestrian Improvements - Roadway segment between Palomar Airport Road and Carlsbad Boulevard							RAS (N.18)			
Project Description:	Avenida Encinas from Palomar Airport Rd. to Carlsbad Blvd (1.7 miles) - in Carlsbad, the project will construct a portion of the Coastal Rail Trail and connect to the existing Coastal Rail Trail along Avenida Encinas. Proposed improvements include expansion of the existing bicycle facilities to buffered bike lanes throughout the corridor. New sidewalks and pedestrian ramps where there are missing gaps. Enhanced intersection treatments for pedestrian and bicyclists. Pedestrian access improvements to the Poinsettia COASTER station. First phase of the project, which is along Avenida Encinas from Poinsettia COASTER station to Carlsbad Blvd, will not include road widening, It includes striping modification to enhance bicycle facilities, pedestrian ramps, new sidewalks where there are missing gaps, enhanced intersection treatments for improved bicycle and pedestrian safety, and traffic calming with a road diet at select locations along the corridor. Second phase of the project, which is along Avenida Encinas from Palomar Airport Rd and the Poinsettia COASTER station, may include widening to accommodate multi-modal transportation and traffic calming. The project will not add additional vehicle travel lane.

Project Title:		Riverford Road Intersection at SR 67						TransNet - LSI: CR			
Project Description:		Intersection on SR 67 at Riverford Road and Woodside Ave - In the community of Lakeside, improve the intersection at Riverford Road and SR 67 with two roundabouts at Woodside Ave and N. Woodside Ave. The project will improve overall operations, circulation, and provide a more complete street that is accessible for all users at the SR 67 / Riverford Road Interchange. The proposed project will not increase the number of travel lanes at the project interchange intersections or the vehicle capacity of the roadway. This project will also provide sidewalk and bicycle lane continuity. Modifications to the SR 67 and Riverford Rd. interchange are necessary to improve local and regional traffic, facilitate transit services, and improve trail, bicycle and pedestrian connectivity.

San Diego County Regional Airport Authority

MPO ID: SDAA01								ADOPTION: 27-00					
Project Title:		Airport Development Plan											
Project Description:		Access Road- North Harbor Drive, Terminal - North Harbor Drive, Administration Building - McCain Road, Structured Parking - North Harbor Drive (.5 miles) - San Diego International Airport is located approximately 2.5 miles from downtown San Diego. The northern boundary of the Airport is along Pacific Highway and it is bounded to the south by North Harbor Drive. The eastern boundary is Laurel Street and the west boundary is located along McCain Road. The Airport is projected to have up to 33 million passengers by 2030. The Airport Development Plan (ADP) project will optimize the existing Airport site to accommodate this growth while enhancing efficient and flexible transportation and mobility options. The ADP consists of the following elements: 1. Access Road - Access, curbside and circulation roadways, sidewalks, and associated infrastructure that provide connectivity with shared surface transportation including regularly scheduled bus service to the Amtrak Santa Fe Depot and the Old Town Transportation Center. 2. Terminal - Public infrastructure providing a transportation mall with facilities and services for the travelling public. Enhances the coordination between multiple public transportation modes as well as the transition to other modes of transportation (scheduled air service). 3. Administration Building - Operations center for all airport facilities. Administration of ground/surface transportation functions including transit bus monitoring and public notification systems. 4. Structured Parking - Parking structure in front of the proposed Terminal 1 capable of accommodating up to 5,000 vehicles. Parking for the traveling public connecting to either scheduled bus service, rail and light-rail services or air transportation services via the terminal.

Project Title:	Coastal Rail Trail							RAS (A.37)			
Project Description:	The proposed path will begin near the City of Del Mar at the intersection of Carmel Valley Road and Sorrento Valley Road to the north and continues to Union Station Downtown San Diego. The City is currently focusing on the northerly ten miles of the trail from the Sorrento Valley Road/Carmel Valley to the Gilman Drive/I-5 intersections. - This project is the Gilman Drive segment of the regional 40-mile bicycle corridor. The proposed alignment will follow Gilman Drive between La Jolla Village Drive and Interstate 5, installing a one-way protected cycle-track in each direction and a continuous sidewalk on the west side of the road. Project Title:		La Jolla Streetscape											
Project Description:		Not Location Specific - This project will enhance pedestrian safety, accessibility, and mobility along the corridor. The proposed bulb-outs and pedestrian crossing will shorten crossing distances, improve visibility between pedestrians and motorists, and help calm traffic by reducing vehicle speeds. The sidewalk, curb ramp, and streetscape improvements will improve ADA accessibility and pedestrian access to nearby businesses, services, and community destinations. In addition, the project will create a more comfortable and inviting walking environment through enhanced landscaping, lighting, and street furnishings, encouraging walking as a viable transportation option and supporting the City's goals for safety, connectivity, and complete streets.

Project Title:	Broadband Infrastructure Improvements							RAS (N.30)			
Project Description:	Mission Gorge Road - This project will provide the infrastructure needed for the final step in the City's disaster recover plan, which is the implementation of a redundant, off-site location to continue operations should City Hall become unusable. In addition fiber optic communication cables will be installed to connect existing traffic signals on Mast Boulevard, Magnolia Avenue and Mission Gorge Road. The project will provide a secured, wired fiber optic connection from City Hall to the City's Public Works Operations Center with the required bandwidth needed to operate an offsite "satellite City Hall" to serve the community and provide connections to Fire Station No. 4, Fire Station No. 5 and the future Community Center.										
	Capacity Status: NCI		Exempt Category: Safety - Non signalization traffic control and operating

Chapter 4

Financial Capacity Analysis

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Chapter 4

Financial Capacity Analysis

This chapter provides an analysis of the financial capacity of the San Diego region's transportation agencies to implement the programmed projects. Financial capacity is measured by a comparison of the total cost of the proposed projects against the assumed revenues and a test of the reasonableness of the revenue assumptions.

Separate analyses are provided for the state highway and local street and road projects, the Transit Program, and other transportation projects and programs. The assumptions used in the forecasts of available funding are based upon information provided in the 2026 State Transportation Improvement Program (STIP) Fund Estimate (FE) adopted by the California Transportation Commission (CTC), and other forecasts of ongoing transportation funding programs.

Funding Assumptions

The projects programmed in the 2027 Regional Transportation Improvement Program (RTIP), covering FY 2026/27 to FY 2030/31 are expressed in future dollars. That is, they have been escalated based upon anticipated inflation and other factors to the expected year of obligation or expenditure.

The State Transportation Improvement Program (STIP) is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the Transportation Investment Fund and other funding sources. For the STIP and State Highway Operations and Protection Program (SHOPP), the revenues and program are based on the 2026 STIP Fund Estimate (STIP FE) adopted by the California Transportation Commission (CTC) in August 2025. The 2026 STIP FE includes total STIP program capacity over the five-year FE period of \$2.7 billion including \$1.1 billion of new programming capacity.

For the major transportation projects funded with the County transportation sales tax, TransNet, the San Diego Association of Governments (SANDAG) forecasts inflation based on recent economic trends in conjunction with three, independent, nationally recognized forecasts related to economic growth. Prices in the San Diego area, as measured by the Consumer Price Index for All Urban Consumers (CPI-U), advanced 1.4 percent for the two months ending in March 2026, the U.S. Bureau of Labor Statistics (BLS) reported. The index for all items less food and energy advanced 2.6 percent over the year.

The Board of Directors approved a revenue forecast for the County transportation sales tax, TransNet, on February 27, 2026.

Expenditures and Revenues Demonstration of Fiscal Constraint

Tables 4-1a to 4-1c provide a summary of major funding sources (i.e., federal, state, TransNet, and other local funds) for programs, expenditures, and balance of remaining revenues for the RTIP program period. The five-year project costs and programmed revenues are contained within the individual project listings in Chapter 3. Individual projects listed in Chapter 3 include phases where full funding is reasonably anticipated to be available within the time contemplated for completion of the phase or project.

FY 2030/2031 includes programming for future years and is included here for reference only

Financing

With the approval by the voters of San Diego County of the TransNet Program, the Board approved a set of projects for accelerated implementation referred to as the TransNet Early Action Program (EAP). Since the initial list of EAP projects was approved in January 2005, the Board has added other regionally significant projects in subsequent meetings, which total 11. To accomplish this, SANDAG annually updates the TransNet Plan of Finance (POF), the financial strategy for implementing the EAP, which includes major corridor projects identified in the TransNet Extension Ordinance and Expenditure Plan. The POF is the debt-financing mechanism through which SANDAG plans to complete the EAP projects, providing much-needed congestion relief.

SANDAG firmly believes that the continuation of major transportation projects would benefit the regional economic outlook by providing jobs, containing costs (by avoiding cost increases associated with project delays), and providing congestion relief, which saves travel time. With the use of such financial tools as the Transportation Infrastructure Finance and Innovation Act (TIFIA), the financial strategies outlined in the TransNet POF, and other innovative mechanisms, SANDAG, with endorsement from its Board, fully intends to continue to aggressively promote early completion of transportation projects.

On November 22, 2019, the Board approved a new Bond Issuance to finance construction of the Bikeway EAP. First approved by the Board in 2013, the projects in the Bikeway EAP have been progressing through design, and as several of them are ready to begin construction, bonds were issued to finance the construction to lower costs and keep projects moving.

SANDAG actively monitors outstanding debt and has taken advantage of low interest rates to refinance outstanding bonds and lower borrowing costs, thereby freeing up more funds for capital expenditures and expects to continue to do so. However, based on current income projections and uncertain revenue due to the pandemic, SANDAG is approaching maximum debt-financing capacity and is transitioning to implementing projects on a pay-as-you-go basis.

Program Revenues

Federal Revenues

Federal funds programmed are based on the federal authorizing legislation; the Fixing America's Surface Transportation (FAST) Act was signed into law by the President on December 4, 2015, covering FY 2016/17 to FY 2019/20. While the Infrastructure Investment and Jobs Act added significant funding, estimates are held at FAST Act levels until Congress passes a new appropriations bill. The 2027 RTIP will be amended as new estimates are available.

These federal funding programs include the following:

- **Congestion Mitigation and Air Quality (CMAQ)/Regional Surface Transportation Block Grant (RSTBG) Program:** Both the CMAQ and RSTP formula programs are estimated and apportioned by Caltrans for the San Diego region. By SANDAG Board practice, 90 percent of these funds are allocated to supplement and match the TransNet Major Corridors program funds to complete regionally significant projects in the San Diego region. These programs are continued under the IJIA with minor changes.

- **Demonstration/High-Priority Projects:** The Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) included several San Diego region projects under the High-Priority Project Authorizations program. Projects are funded from the previous authorization; however, no new funds are included in the FAST Act. Annually since 2016, the FHWA releases guidance regarding repurposing projects funded with these discretionary funds; new projects may be proposed for these funds contingent upon approval by the FHWA.
- **Federal Railroad Administration:** The FAST Act includes authorization for rail programs for the first time in the surface transportation bill, which includes competitive discretionary grants and financing. SANDAG continues to apply for these competitive grants made available through the Consolidated Rail Infrastructure and Safety Improvement grant program, and the Federal-State Partnership for State of Good Repair Grant Program. SANDAG has been awarded an FRA State of Good Repair grant for the Del Mar Bluffs Stabilization project.
- **FTA (Federal Transit Administration) Urbanized Area Formula (Section 5307):** The FTA Section 5307 is a formula-based program. Section 5307 funds ongoing preventive maintenance, bus acquisition programs, the Regional Vanpool Program, office and shop equipment, and transit capital projects.
- **FTA (Federal Transit Administration) Capital Investment Grant (Section 5309):** The FTA Section 5309 is a competitive program commonly referred to as New Starts to fund capital investment in heavy rail, commuter rail, light rail, streetcars, and bus rapid transit. FTA and SANDAG entered into a full funding grant agreement in September 2016, with revenue operations commencing in November 2021.
- **FTA Formula Enhanced Mobility of Seniors and Individuals with Disabilities (Section 5310):** This program provides formula funding to increase the mobility of seniors and persons with disabilities. Eligible projects include both “traditional” capital investment and “non-traditional” investment beyond the Americans with Disabilities Act (ADA) complementary paratransit services. Eligible uses of these funds include capital and operating expenses for new public transportation services and alternatives beyond those required by the ADA, designed to assist individuals with disabilities and seniors.
- **FTA Rural Area Formula Grants (Section 5311) Program:** Section 5311 is administered by Caltrans and provides capital, planning, and operating assistance to support transit services in the non-urbanized areas of the region. Caltrans provides the estimates of revenues for the formula program and announces the award under the discretionary program on an annual basis.
- **FTA State of Good Repair (Section 5337) Program:** Section 5337 is a formula program. Eligible uses of the funds include replacement and rehabilitation of fixed Guideway assets

including railcars, ferry vessels, buses operating in high occupancy vehicle lanes and related infrastructure.

- **FTA Bus and Bus Facilities (Section 5339) Program:** Section 5339 is a formula program. Eligible uses of these funds include bus and bus facility replacement, rehabilitation, expansion, and enhancement projects. These funds are distributed through formula based on urbanized areas by FTA based population, vehicle revenue miles and passenger miles as well as competitive grants for bus and bus facility projects that support low and zero-emission vehicles.
- **Corridors and Borders Infrastructure:** Under the FAST Act, up to 5 percent of the state's "any area" Regional Surface Transportation Program funds may be set aside for border projects. San Diego, as a major border region, has been highly competitive for these funds and continues to assume an 80 percent share of the state's set aside. The funds are awarded through the California Transportation Commission.
- **Highway Bridge Program/High Risk Rural Roads/Highway Safety Improvement Program:** These programs are administered by Caltrans at the statewide level. All funding is provided by Caltrans and programmed as a lump sum. The most recent cycle of Highway Safety Improvement Program (HSIP) funding is funded with 100% state dollars. These projects are programmed to support the RTIP's progress towards achieving Performance Management Goals for safety. Under the IIJA, up to 10 percent of HSIP funds can be used for non-infrastructure safety projects. It remains to be seen if California will continue to substitute state funds for HSIP.

State Revenues

State revenues are based on programming actions by the CTC and/or California State Transportation Agency.

- **Active Transportation Program (ATP):** This program is to provide for a variety of alternative transportation projects, including many that were previously eligible activities under separately funded programs. The ATP consolidates existing federal and state transportation programs, including the Transportation Alternatives Program, Bicycle Transportation Account, and Safe Routes to School Program, into a single program. This program is nearly doubled with funding available from SB1. ATP funds are administered by the CTC, and the designated Metropolitan Planning Organization. Projects are selected through a multi-tier competitive process.
- **California Air Resources Board's Cap-and-Trade Program:** Funding from this program will go toward direct investments in transit programs that reduce Greenhouse Gas emissions and benefit disadvantaged communities throughout California and is supplemented with funds from SB1. The LOSSAN Corridor continues to receive funds from this program.

- **Freeway Service Patrol:** Funds are provided through the state legislature and supplemented by SB1. The Freeway Service Patrol (FSP) program costs and revenue estimates have been developed jointly by SANDAG, Caltrans, and the California Highway Patrol based upon the most current statewide FSP Act funding levels.
- **STIP and SHOPP:** The CTC programs the STIP and SHOPP on a statewide basis. The San Diego projects will be programmed in the RTIP based upon the approved 2026 STIP and 2026 SHOPP. The CTC staff recommendations for the 2026 STIP include programming through FY 2029 and cover the entire duration of this RTIP.
- **Senate Bill 1 (SB1):** Signed by the governor in April of 2017, the Road Repair and Accountability Act provides the first significant, stable, and on-going increase in the state's transportation funding in more than two decades. Guidelines have been developed for a variety of different funding programs with targeted objectives to relieve congestion, improve freight movement, provide local funds for roadway maintenance, and provide funds for regional projects to self-help areas. Funds are provided through both formula and competitive programs and are programmed based on CTC approved funding levels or awarded funds. Grant funds are programmed once they have been awarded by the CTC.
- **Formula Programs:** The Local Partnership Program (LPP) directs approximately \$100 million annually through a 60%/40% split between a formulaic and competitive program for self-help counties. The State Rail Assistance program provides a consistent fund source for intercity rail and commuter rail. Funds are programmed for both capital and operations.
- **Competitive Programs:** SB1 provides several competitive programs and adds funds to several other existing programs such as the Active Transportation Program. The Solutions for Congested Corridor Program (SCCP) provides funds to enhance transportation performance improvements in corridors that are part of a comprehensive multi-modal corridor plan. The Local Partnership Program (LPP) competitive portion is available to agencies that have approved or imposed taxes or fees solely for transportation purposes. Finally, the Trade Corridor Enhancement Program (TCEP) provides funding for infrastructure improvements along corridors with a high volume of freight movement. All competitive funds are programmed once they have been awarded by the CTC.
- **State Transit Assistance:** The State Transit Assistance (STA) budget provides funding for allocation to local transit agencies to fund a portion of the operations and capital costs associated with local mass transportation programs. STA allocations are based on sales tax generated from consumption of diesel fuel and pursuant to AB 1113 (Bloom, 2017) funds are allocated based upon the respective population of the two transit agencies' service areas. The State Controller's office is responsible for providing the estimates in January of each year. SB1 augmented

STA funding by creating the State of Good Repair program within the STA Account. Eligible projects for SGR include transit maintenance, rehabilitation, and capital projects.

Local Revenues

The TransNet Ordinance specifies several sub-programs that augment the major transportation projects in the region including Major Corridors, Bicycle/Pedestrian, and local Transit programs, Local System Improvements, and an innovative program for early mitigation for projects – Environmental Mitigation Program – the first in the state to purchase Right-of-Way (ROW) early to reduce the cost of projects in the future while preserving the ecology of the region.

- **TransNet Local Transportation Sales Tax Program:** TransNet revenues are estimated based upon taxable retail sales forecasts derived from three factors influencing the growth in taxable retail sales: (1) the population forecast from the California Department of Finance; (2) a consensus (simple average) of three independent national forecasts of real rates of growth in per-capita retail sales (nationally recognized forecasts by IHS Markit, Moody's, and Oxford Economic Forecasting); and (3) the average projected inflation rates from the same independent sources. The SANDAG Board of Directors approved a revenue forecast for TransNet, on February 27, 2026.
- **Local Agency Funding:** The local agency revenues programmed are based on reasonably expected revenues as submitted by local agencies. Some local funding may include city and county local gas tax subventions, SBI local streets and roads funds, developer fees, local public funds, and Proposition 42 funds administered by local agencies.
- **Local Privatization/Toll Revenues:** State Route 125 is a privatization/toll revenue road that provides toll revenues which fund other projects in the 2027 RTIP.
- **Transportation Development Act:** Although this is a state program, the Transportation Development Act (TDA) is administered locally. Funds are based on a one-fourth percent state sales tax, with revenues made available primarily for transit operating and capital purposes. The San Diego County Auditor's office estimates the apportionment for the upcoming fiscal year. SANDAG prepares forecasts of TDA based on a forecast of sales tax revenues for San Diego County which tie to the methodology used to forecast TransNet.

TransNet Revenue Estimates

The TransNet Ordinance and Expenditure Plan describe the process for allocating the sales tax program revenues to specified agencies and for selecting which major projects will be eligible to receive sales tax funding. Table 4-2 shows the current forecast of TransNet sales tax revenues to FY 2031.

The TransNet revenues programmed reflect the latest estimate of sales tax revenues based upon the SANDAG short-term forecast model. The programming of TransNet funds for local agencies is typically less than the TransNet receipts since a portion of the annual receipts is committed to bond debt service. Debt service information is provided as part of the annual Cash Flow Update sent to each agency at the beginning of the fiscal year.

Other Transportation Program Revenues

- **Other Funds:** These funds include contributions from various state funding sources, local agency contributions, federal discretionary grants, private sector funding, advertising income, investment earnings, passenger fare revenue, and other miscellaneous income. Revenues from these sources are based upon funding commitments from local agencies.
- **Financing:** The SANDAG Board issues long-term debt backed by TransNet to complete major transportation projects early including a Transportation Infrastructure Finance and Innovation Act (TIFIA) loan for the Mid-Coast project.

Table 4-2: TransNet Revenue Forecast
FY 2027–2031 RTIP – San Diego Region (in \$000s of future dollars)

	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	Total
Estimated Revenue¹	\$445,521	\$457,738	\$469,668	\$481,721	\$494,014	\$2,348,662
Administration²	\$8,910	\$9,155	\$9,393	\$9,634	\$9,880	\$46,972
ITOC	\$562	\$579	\$597	\$615	\$633	\$2,986
Bicycle Projects	\$8,910	\$9,155	\$9,393	\$9,634	\$9,880	\$46,972
TransNet Program Allocations						
Major Corridors	\$181,106	\$186,072	\$190,921	\$195,819	\$200,815	\$954,733
New Rapid/Rail Operations	\$34,598	\$35,547	\$36,473	\$37,409	\$38,363	\$182,390
Transit System Improvements	\$70,478	\$72,410	\$74,297	\$76,203	\$78,147	\$371,535
Local Street Improvements	\$140,955	\$144,820	\$148,594	\$152,407	\$156,295	\$743,071
Total Program Allocations	\$427,137	\$438,849	\$450,285	\$461,838	\$473,620	\$2,251,729

² 2% maximum

Note: Revenue estimates are based upon FY 2027 TransNet budget and current SANDAG short-term forecasting model.

Figure 4-1: Total TransNet Revenue Forecast
Breakdown FY 2027–2031 RTIP – San Diego Region (in \$000 of future dollars)

Operations and Maintenance Costs

Although the RTIP is a program document that includes major transportation capital projects, 23 CFR 450.218(m) and 23 CFR 450.326(j) require that the RTIP financial chapter illustrate the costs and revenue sources to adequately operate and maintain highway, transit, and other federally funded public transportation systems projects.

Transit Operating Costs

Two transit districts provide transit service in San Diego County–North County Transit District (NCTD) and San Diego Metropolitan Transit System (MTS). NCTD services 1,020 square miles located in the northern portion of the county and provides commuter rail, light rail, fixed-route, general-purpose demand response, and ADA paratransit services. For FY 2027, NCTD estimates providing 7.1 million revenue service miles carrying 8.6 million passengers. MTS provides transit service in the remaining areas of the county. In addition to providing fixed-route and ADA paratransit services, MTS also operates the San Diego Trolley light rail system. MTS estimates carrying approximately 83 million passengers over 36.4 million annual service miles in FY 2027. Both NCTD and MTS provide these services on a coordinated basis.

Table 4-3a and 4-3b show the projected ongoing operating costs as developed by the two transit districts for the next five years. The current five-year forecast for MTS shows a deficit in fiscal years 2027 through 2031.

Metropolitan Transit System

MTS continues to face long-term structural funding challenges despite adopting a balanced FY 2027 budget. The FY 2027 operating budget of \$482.5 million maintains existing bus and Trolley service levels while relying on a combination of one-time funding, capital transfers, operational efficiencies, and non-fare revenue enhancements to remain balanced. Rising labor, fuel, and operating costs continue to outpace revenue growth, resulting in ongoing structural funding pressures. MTS is pursuing cost-saving measures, expanding non-fare revenue sources, and identifying additional long-term funding solutions to preserve transit service through the end of the decade. Capital funding remains insufficient to meet all state-of-good-repair and system expansion needs, requiring the agency to prioritize investments and continue pursuing competitive state and federal grant opportunities.

Table 4-3a: MTS Operating Costs and Revenues Forecast (in \$000s)

	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	Total
Revenues	\$380,318	\$386,289	\$393,321	\$401,065	\$409,054	\$1,970,047
Less Expenses	\$482,500	\$495,462	\$513,736	\$534,375	\$556,303	\$2,582,376
Recurring Operating Income (Deficit)	\$(102,182)	\$(109,173)	\$(120,415)	\$(133,310)	\$(147,249)	\$(612,329)
Federal Stimulus Revenues	\$0	\$0	\$0	\$0	\$0	\$0
SB 125 TIRCP	\$52,264	\$59,105	\$70,281	\$2,606	\$0	\$184,256
Shift of Flexible Funding (Capital to Ops)	\$50,000	\$50,000	\$50,000	\$50,000	\$50,000	\$250,000
Non-Recurring Revenues	\$(83)	\$68	\$134	\$173	\$205	\$497
Total Deficit/Surplus	\$0	\$0	\$0	\$(80,532)	\$(97,044)	(\$180,896)

Source: MTS FY 2027 Operating Budget

North County Transit District

Slower growth in formula funding continues to be a significant budget challenge for NCTD. Federal Transit Administration (FTA), Transportation Development Act (TDA), and TransNet formula revenues continue to comprise approximately 50–60% of the agency's operating funding. Sales tax revenues (TDA and TransNet) are allocated by SANDAG, with NCTD receiving approximately 29% of regional revenues, while State Transit Assistance and State of Good Repair funds are based on State Controller estimates and FTA formula funds remain subject to annual congressional appropriations.

The FY 2027 budget also includes \$13.7 million in one-time SB 125 Transit and Intercity Rail Capital Program (TIRCP) and Zero-Emission Transit Capital Program (ZETCP) revenues, providing temporary support for transit operations and capital investments. NCTD continues to face increasing operating costs driven by inflation, higher fuel prices, and anticipated wage increases associated with collective bargaining agreements, partially offset by a hiring freeze affecting 22 full-time positions. Formula funding remains focused primarily on operating and maintenance needs, while capital investments continue to rely heavily on discretionary grant funding to address state-of-good-repair projects. Although the FY 2027 operating budget is balanced, NCTD projects structural operating deficits in future years without additional revenues or expenditure reductions.

Table 4-3b: NCTD Operating Costs and Revenues Forecast (in \$000s)

	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	Total
Revenues	\$215,113	\$192,414	\$185,688	\$186,995	\$189,530	\$969,740
Less Expenses	\$230,081	\$200,343	\$204,910	\$209,594	\$214,399	\$1,059,327
Capital Funds Prior Carryover	\$14,968	\$612				
Projected Deficit/Surplus	(\$14,968)	(\$7,929)	(\$19,222)	(\$22,599)	(\$24,869)	(\$89,587)
Net Deficit	\$0	(\$7,316)	(\$19,222)	(\$22,599)	(\$24,869)	(\$89,587)

Preventive Maintenance

Preventive maintenance projects are projects that focus on maintenance of equipment, rolling stock, and facilities for bus and rail systems. Timely preventive maintenance activities are necessary to ensure proper performance of the transportation infrastructure and enhance safety and accessibility. MTS and NCTD have programmed a total of \$466.6 million for FY 2027–FY 2031. MTS32A and NCTD02 are programmed with \$303.9 million and \$162.7 million, respectively.

Chapter 5

Air Quality Conformity Analysis

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Chapter 5

Air Quality Conformity Analysis

San Diego Air Basin Transportation Conformity Background

The federal Clean Air Act (CAA), last amended in 1990, requires the U.S. Environmental Protection Agency (EPA) to set NAAQS for pollutants considered harmful to public health and the environment. California has adopted state air quality standards that are more stringent than the NAAQS. Areas with levels that violate the standard for specified pollutants are designated as nonattainment areas.

EPA requires that each state containing nonattainment areas develop and adopt a State Implementation Plan (SIP) that meets the NAAQS by a specified attainment deadline. The San Diego County Air Pollution Control District (SDAPCD), in collaboration with the California Air Resources Board (CARB), prepares the San Diego section of the state's SIP.

SANDAG and the U.S. Department of Transportation (DOT) must determine that the 2027 RTIP conforms to the SIP for air quality. Conformity to the SIP means that transportation activities will not create new air quality violations, worsen existing violations, or delay the attainment of the NAAQS. Conformity determinations are guided by EPA's Transportation Conformity rule (40 CFR 93.100 et seq.). This document demonstrates regional transportation conformity to the 2020 San Diego Ozone SIP (2020 SIP) for the 2008 and 2015 ozone NAAQS.

- On November 19, 2020, CARB adopted the proposed San Diego Eight-Hour Ozone Attainment Plan SIP submittal, which addresses the 2008 and 2015 ozone standards. Included in the 2020 SIP is a request for a voluntary reclassification from serious to severe nonattainment for the 2008 ozone standard and a voluntary reclassification from moderate to severe nonattainment for the 2015 ozone standards as permitted under Section 181(b)(3). The reclassification extends the timeline to meet the standards and aligns with air quality modeling. The reclassification was approved by EPA on July 2, 2021.

- On June 4, 2021, EPA posted on the Office of Transportation and Air Quality website the adequacy review for public comment on the 2008 and 2015 Eight-Hour Ozone Attainment Plan budgets. On October 4, 2021, EPA published in the Federal Register the adequacy finding for the on-road transportation air quality budgets in the 2020 SIP with an effective date of October 19, 2021.

- On July 12, 2021, the 2020 SIP was found complete by EPA by operation of law six months after the submittal date. On December 19, 2023, EPA published in the Federal Register the proposed rulemaking approving the 2020 SIP. On March 4, 2024, EPA published in the Federal Register the final rulemaking, effective April 1, 2024, approving certain elements of the 2020 SIP, including the budgets (89 FR 15035).

On June 12, 2025, three resolutions under the Congressional Review Act were signed into law, rescinding three of California's waivers from EPA and impacting emissions : (1) H.J. Res. 87, Joint Resolution Providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine Pollution Control Standards; Heavy-Duty Vehicle and Engine Emission Warranty and Maintenance Provisions; Advanced Clean Trucks; Zero Emission Airport Shuttle; Zero-Emission Power Train Certification; Waiver of Preemption; Notice of Decision'; (2) H.J. Res. 88, Joint Resolution providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine Pollution Control Standards; Advanced Clean Cars II; Waiver of Preemption; Notice of Decision'; and (3) H.J. Res. 89, Joint Resolution providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine and Nonroad Engine Pollution Control Standards; The 'Omnibus' Low NOx Regulation; Waiver of Preemption; Notice of Decision'.

On May 6, 2026, EPA approved off-model adjustment factors for use in transportation conformity determinations that account in EMFAC2021 v1.02 for the estimated emission benefits attributed to California's Heavy-Duty Vehicle Inspection and Maintenance ("HD I/M") regulation, also known as California's Clean Truck Check ("CTC").

2008 Ozone Standard

On May 21, 2012, EPA designated the San Diego air basin as a nonattainment area for the 2008 Eight-Hour Ozone standard and classified it as a marginal area with an attainment date of July 20, 2015. This designation became effective on July 20, 2012.

SANDAG demonstrated conformity of the 2011 Regional Plan and 2012 RTIP to the 2008 ozone standard on May 24, 2013, using the applicable model approved by EPA to forecast regional emissions (EMFAC2011). DOT, in consultation with EPA, made its conformity determination on June 28, 2013.

On June 3, 2016, EPA determined that 11 areas, including the San Diego air basin, failed to attain the 2008 ozone NAAQS by the applicable attainment date of July 20, 2015, and thus were reclassified by operation of law as moderate for the 2008 ozone NAAQS (81 FR 26697). States containing these new moderate areas were required to submit SIP revisions that met the statutory and regulatory requirements that apply to 2008 ozone nonattainment areas classified as moderate by January 1, 2017. The 2016 SIP addressed the required revisions.

On August 23, 2019, EPA published a final rule in the Federal Register reclassifying the San Diego air basin by operation of law from a moderate nonattainment area for the 2008 ozone NAAQS to serious, effective September 23, 2019 (84 FR 44238). This rulemaking changed the 2008 ozone NAAQS attainment deadline to July 20, 2021, with an attainment demonstration year of 2020.

Effective July 2, 2021, EPA approved the request from the State of California to reclassify San Diego County ozone nonattainment area from serious to severe for the 2008 Eight-Hour Ozone Standard. The reclassification of the 2008 Eight-Hour Ozone Standard from Serious to Severe changed the attainment date from July 20, 2021, (as a serious area) to July 20, 2027, (as a severe area) and the attainment demonstration year from 2020 to 2026.

2015 Ozone Standard

On October 26, 2015, EPA announced a revised ozone standard, referred to as the 2015 Ozone standard (80 FR 65292). The new standard revised the allowable ozone level to 0.070 parts per million (ppm). The 2015 ozone standard became effective on December 28, 2015.

On June 4, 2018, EPA published a final rule that designated the San Diego air basin as nonattainment, with a classification of Moderate, for the 2015 ozone NAAQS with an attainment deadline of August 3, 2024, and an attainment demonstration year of 2023 (83 FR 25776, effective August 3, 2018).

On May 24, 2019, the SANDAG Board of Directors adopted the 2015 Ozone National Ambient Air Quality Standard Conformity Demonstration for San Diego Forward: The Regional Plan (2015 Regional Plan) and the 2018 RTIP. The conformity demonstration found the 2015 Regional Plan and 2018 RTIP, as amended, in conformity with the requirements of the federal Clean Air Act and applicable SIP. DOT, in consultation with EPA, made its conformity determination on June 21, 2019, indicating that all air quality conformity requirements have been met, including those for the 2015 ozone standard.

Effective July 2, 2021, EPA approved the request from the State of California to reclassify San Diego County ozone Nonattainment Area from Moderate to Severe for the 2015 Eight-Hour Ozone Standard. The reclassification of the 2015 Eight-Hour Ozone Standard from Moderate to Severe changed the attainment date from August 3, 2024, (as a Moderate area) to August 3, 2033, (as a Severe area) and the attainment demonstration year from 2023 to 2032.

Carbon Monoxide Standard

The San Diego region had been designated by EPA as a federal maintenance area for the carbon monoxide (CO) standard. On November 8, 2004, CARB submitted the 2004 revision to the California SIP for CO to EPA, which extended the maintenance plan demonstration to 2018. Effective January 30, 2006, EPA approved this maintenance plan as a SIP revision. On March 21, 2018, EPA documented in a letter that transportation conformity requirements for CO would cease to apply after June 1, 2018. Therefore, this attachment does not include a CO conformity analysis.

Conformity Determinations for the 2025 Regional Plan and 2025 Regional Transportation Improvement Program Amendment No. 11

On December 12, 2025, the SANDAG Board of Directors adopted the 2025 Regional Plan and associated air quality conformity determination and consistency analysis for the 2025 RTIP Amendment No. 11. On January 26, 2026, DOT, in consultation with EPA, approved the conformity determination for the 2025 Regional Plan and the consistency analysis for the 2025 RTIP Amendment No. 11.

Demonstration of Fiscal Constraint

The 2027 RTIP is consistent with the 2025 Regional Plan. As a financially constrained document, the 2027 RTIP contains only those major transportation projects listed in the Revenue Constrained 2025 Regional Plan. Chapter 4 of the 2027 RTIP includes detailed discussion on fiscal constraint and overall financial capacity to carry out projects included in the RTIP. Tables 4-1a through 4-1c are program summaries for the 2027 RTIP. Based on the analysis, the projects contained in the 2027 RTIP are reasonable when considering available funding sources.

Development of Transportation Control Measures

In 1982, SANDAG adopted four Transportation Tactics as elements of the 1982 Regional Air Quality Strategy (RAQS). These Transportation Tactics are: (1) Transportation Demand Management (TDM); (2) transit improvements; (3) traffic flow improvements; and (4) bicycle facilities and programs.

These four Transportation Tactics were subsequently approved by the SDAPCD Board and are included in the 1982 SIP for Air Quality as Transportation Control Measures (TCMs). EPA approved this SIP revision for the San Diego Air Basin in 1983. The four TCMs have been fully implemented, and continue to be funded, although the level of implementation established in the SIP has been surpassed.

The California CAA required the preparation of a 1991 RAQS, including TCMs. During 1991 and 1992, SANDAG, in cooperation with local agencies, transit agencies, and the SDAPCD, developed a TCM Plan. SANDAG approved the TCM Plan on March 27, 1992.

On June 30, 1992, the SDAPCD amended the TCM Plan and adopted the 1991 RAQS, including the amended TCM Plan. TCMs included in the 1991 RAQS include the four Transportation Tactics described above as well as a Transportation Demand Management (TDM) program, vanpools, high-occupancy vehicle lanes, and Park & Ride facilities. On November 12, 1992, CARB gave approval to the 1991 RAQS, including the TCMs.

The 1995 Triennial RAQS Update subsequently deleted the Employee Commute Travel Reduction Program contained in the TDM program because the program was no longer required under federal law. Assembly Bill 3048 (Statutes of 1996, Chapter 777) eliminated all state requirements for mandatory trip-reduction programs. As a result, the Student Travel Reduction Program, the Non-Commute Travel Reduction Program, and the Goods Movement/Truck Operation Program proposed in the 1991 RAQS were no longer statutorily mandated and were deleted from the RAQS in 1998. The 2001, 2004, 2009, and 2016 RAQS Revisions did not make changes to measures related to mobile sources or the TCM Plan.

Air Quality Conformity Requirements

SANDAG—as the Metropolitan Planning Organization—and DOT must determine that the 2027 RTIP and the 2025 Regional Plan conform to the applicable SIP. Conformity to the SIP means that transportation activities will not create new air quality violations, worsen existing violations, or delay the attainment of the NAAQS.

Based upon EPA's Transportation Conformity Rule, as amended, conformity of transportation plans and programs, including the 2027 RTIP, is determined according to the 1990 CAA Amendments [Section 176(c)(3)(A)] if the following is demonstrated:

- The 2027 RTIP provides for the timely implementation of the Transportation Tactics contained in the 1991 RAQs. These tactics also are included as TCMs in the 1982 SIP.
- A quantitative analysis is conducted on the cumulative emissions of projects programmed within the 2027 RTIP including all regionally significant, capacity-increasing projects. Further, implementation of the projects and programs must meet the motor vehicle emissions budget developed by local and state air quality agencies and be approved by EPA. The 2027 RTIP must meet the applicable emission budgets prescribed in the 2020 Plan for Attaining the National Ambient Air Quality Standards which were found adequate for transportation conformity purposes by EPA effective October 19, 2021, and which were approved by EPA effective April 1, 2024.

- In addition to the required emissions tests, consultation with transportation and air quality agencies is required. The consultation process followed to prepare the air quality conformity analysis must comply with the San Diego Transportation Conformity Procedures adopted in July 1998.
- Interagency consultation involves SANDAG, SDAPCD, Caltrans, CARB, DOT, and EPA, which form the San Diego Region Conformity Working Group (CWG).

Consultation is a three-tier process that:

1. Formulates and reviews drafts through a conformity working group.
2. Provides local agencies and the public with opportunities for input through existing regional advisory committees and workshops.
3. Seeks comments from affected federal and state agencies through participation in the development of draft documents and circulation of supporting materials prior to formal adoption.

SANDAG consulted with CWG for the preparation of the new air quality analysis of the 2027 RTIP. Conformity of the 2025 Regional Plan also is being redetermined for consistency purposes.

SANDAG consulted on the development of the air quality conformity analysis of the draft 2027 RTIP and air quality consistency analysis for the 2025 Regional Plan at CWG meetings as follows:

- At the May 2, 2026 CWG meeting, SANDAG staff presented information on the 2027 RTIP schedule and information about the criteria and procedures to be followed, including: emission model; emission budgets; the activity based model, the regional growth forecast, and the public involvement plan.
- At the June 3, 2026 CWG meeting, SANDAG staff presented additional information about the criteria and procedures to be followed, including: emission model; the list of transportation projects; the list of exempt projects; transportation control measures; and revenue constrained financial assumptions.
- On June 11, 2026, SANDAG distributed the draft air quality planning and transportation conformity analysis for the draft 2027 RTIP and consistency analysis for the 2025 Regional Plan for interagency consultation and review between June 11, 2026 and on July 10, 2026.
- At the July 1, 2026 CWG meeting, the CWG had an opportunity to discuss the conformity determination for the draft 2027 RTIP and consistency analysis for the 2025 Regional Plan and raised no issues or concerns with any aspect of the draft determination.

It is anticipated that the draft 2027 RTIP and its conformity analysis and the 2025 Regional Plan conformity redetermination will be released for public review and comment in August 2026, and that the conformity analysis will be brought to the SANDAG Board for consideration in September 2026. The following sections provide a summary of the air quality conformity analysis of the 2027 RTIP and 2025 Regional Plan in relation to the above conformity requirements.

Conformity Finding – Transportation Control Measures

The first requirement of the air quality conformity finding is to provide for the expeditious implementation of adopted TCMs, which are also the Transportation Tactics included in the 1991 RAQS. These tactics are ridesharing, transit improvements, traffic flow improvements, and bicycle facilities and programs.

The 1982 SIP established the TCMs, which identified general objectives and implementing actions for each tactic. Due to substantial investments since 1982, SANDAG has fully implemented the TCMs. Ridesharing, transit, bicycling, and traffic flow improvements continue to be funded, although the level of implementation established in the SIP has been surpassed. No TCMs have been removed or substituted from the SIP.

The 2027 RTIP programs substantial funds for the implementation of the four TCMs (identified as Transportation Tactics) in the 1982 SIP and 2016 RAQS, which have been fully implemented. The Transportation Tactics programmed for implementation are provided in Table 5-1, with approximately \$10.9 billion, or 48.85% of the total funds programmed. Included are \$110.5 million for Ridesharing, \$9.9 billion for Transit Improvements, \$696.8 million for Bicycle Facilities and Programs, and \$200.3 million for Traffic Flow Improvements. Based upon this analysis, the 2027 RTIP provides for the expeditious implementation of the existing TCMs in the 1982 SIP and 2016 RAQS, which remain the federally approved TCMs for the San Diego region.

Table 5-1: 2027 RTIP – San Diego Region (in \$000s) Transportation Tactics

Transportation Tactic	Amount
Transportation Demand Management (TDM)	
TDM	<u>\$110,549</u>
Subtotal TDM:	\$110,549
Transit Improvements	
Mid-Coast	\$2,386,409
Ops/Maint - Transit	<u>\$7,538,718</u>
Subtotal Transit Improvements:	\$9,925,127
Bicycle Facilities	
Bicycle/Pedestrian Projects	<u>\$696,838</u>
Subtotal Bicycle Facilities:	\$696,838
Traffic Flow Improvements	
Transportation Management System/Intelligent Transportation System	<u>\$200,342</u>
Subtotal Traffic Flow Improvements:	\$200,342
Total Transportation Tactics in 2027 RTIP:	\$10,932,856
Total All Transportation Projects in 2027 RTIP:	\$22,381,549
Share of Transportation Tactics Projects in 2027 RTIP:	48.85%

Conformity Finding – Quantitative Emissions Analysis

The second requirement of the conformity finding is to conduct a quantitative emissions analysis for the 2027 RTIP. The emissions analysis must show that implementation of the 2027 RTIP and 2025 Regional Plan meet the emissions budgets established in the 2020 SIP.

Beginning in April 2026 and continuing through May 2026, SANDAG prepared countywide forecasts of average weekday ROG and NOx emissions for 2029, 2032, 2040, and 2050 for the 2020 SIP using EMFAC2021 and the applicable adjustment factors described above. ROG and NOx emissions are based upon the summer season.

In May 2026, SANDAG prepared final draft countywide forecasts of average weekday ROG and NOx emissions for 2029, 2032, 2040, and 2050 for the 2020 SIP using EMFAC2021 v1.0.2 with the off-model adjustment factors approved by EPA on November 21, 2025, and May 6, 2026. Those emissions calculations, inclusive of all applicable off-model adjustments, are shown in Table 5-2. All the capacity-increasing improvements identified in the 2027 RTIP that are on the Regional Arterial System (as defined in the Regional Plan) or the Federal Highway Administration functional classification system (other principal arterials and higher classifications) were modeled.

2008 Eight-Hour Ozone Standard

On October 19, 2021, EPA found the motor vehicle emissions budgets from the 2020 SIP adequate for transportation conformity purposes for the 2008 ozone NAAQS (86 FR 54692). On March 1, 2024, EPA approved these budgets into the SIP (89 FR 15035), effective April 1, 2024.

2015 Eight-Hour Ozone Standard

On October 19, 2021, EPA found the motor vehicle emissions budgets from the 2020 SIP adequate for transportation conformity purposes for the 2015 ozone NAAQS (86 FR 54692). On March 1, 2024, EPA approved these budgets into the SIP (89 FR 15035), effective April 1, 2024.

Severe Nonattainment Area classification established 2032 as the attainment demonstration year for the 2015 Eight-Hour Ozone Standard. The 2020 SIP established air quality budgets for the 2015 ozone standard. The 2020 SIP included a voluntary Nonattainment Area classification change from Moderate to Severe Nonattainment Area for the 2015 Eight-Hour Ozone Standard.

Emissions Modeling Results

An emissions budget is the part of the SIP that identifies emissions levels necessary for meeting emissions reduction milestones, attainment, or maintenance demonstrations.

To determine air quality conformity of the 2027 RTIP and complete air quality consistency analysis of the 2025 Regional Plan, the emission analysis described in the Regional Emissions Forecast section was used.

Table 5-2 provides a summary of the results of the quantitative emissions analysis conducted for the 2027 RTIP and 2025 Regional Plan using budgets from the 2020 SIP. Table 5-2 shows that the projected ROG and NO_x emissions from the draft 2027 RTIP and 2025 Regional Plan are below the ROG and NO_x budgets from the 2020 SIP for both the 2008 and 2015 ozone standards.

Table 5-2: 2027 RTIP and the Revenue Constrained 2025 Regional Plan
Air Quality Conformity Analysis for 2008 and 2015 Eight-Hour Ozone Standards
(EMFAC2021)

Year	Average Weekday Vehicle Starts (1,000s)	Average Weekday Vehicle Miles (1,000s)	ROG		NOx	
			SIP Emissions Budget Tons/Day	ROG Emissions Tons/Day (with Adjustment Factors)	SIP Emissions Budget Tons/Day	NOx Emissions Tons/Day (with Adjustment Factors)
2029	9,930	79,241	11.0	10.7	15.9	12.6
2032	9,853	79,191	10.0	9.4	15.1	10.7
2040	9,953	80,320	10.0	7.4	15.1	8.5
2050	10,108	80,285	10.0	6.3	15.1	7.9

Note: Emissions budgets from the 2020 SIP were found adequate for transportation conformity purposes by EPA, effective October 19, 2021. On March 4, 2024, EPA published in the Federal Register the final rulemaking, effective April 1, 2024, approving certain elements of the 2020 SIP, including the emissions budgets.

Conclusion

Based upon an evaluation of projects and funds programmed and a quantitative emissions analysis, the draft 2027 RTIP and 2025 Regional Plan meet the EPA transportation conformity regulations contained within the federal guidelines published on August 15, 1997, and subsequent amendments, as well as the requirements of the federal CAA of 1990.

Detailed Listings

**2027 Regional Transportation Improvement Program
FY 2027-2031**

2024/25-2029/30 Highway Bridge Program

See the appropriate FTIP/FSTIP for current funding commitments. This listing provides the backup project information to support the lump sum amounts programmed in the FTIP.

3/18/2026, 11:31 AM

- Notes: 1) This is the FTIP lump sum “backup” list for HBP funded projects. Please see the Local Assistance web site for the most current listings:
- <https://dot.ca.gov/programs/local-assistance/fed-and-state-programs/highway-bridge-program/hbp-listings>
- 2) The purpose of this list is to show which projects being advanced by local agencies have met the eligibility requirements of the federal Highway Bridge Program and have been prioritized for funding by the Department in cooperation with local agencies for funding.
- 3) Contractual funding levels are determined at time of federal authorization/obligation for given phase of work. For details see Chapter 3 of the Local Assistance Procedures Manual.
- 4) For FTIP/FSTIP purposes, Federal Highway Bridge Program (HBP) funding constraint is managed by Caltrans.
- 5) Prop 1B bond funds for the Local Seismic Safety Retrofit Program (LSSRP) used for matching federal funds are also managed by Caltrans.
- 6) Financial constraint of LOCAL matching funds (including regional STIP funds) and LOCAL Advance Construction (AC) is the responsibility of the MPOs and their local agencies.
- 7) Some projects show that they are programmed using State STP funds. These funds are HBP funds transferred to the STP for bridge work that is not ordinarily eligible for HBP funds. See the HB Program Guidelines for details. Do not confuse these STP funds with Regional STP funds.
- 8) Corrections to this report should be addressed to the District Local Assistance Engineer:
- <https://dot.ca.gov/programs/local-assistance/other-important-issues/local-assistance-contacts>

Project ID	Lead Agency	Project Title	Project Description	Prior Year	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	Future	Total Cost
CNTY105	San Diego County	Buena Creek Specific Plan	Advance smart growth, support housing production, and coordinate infrastructure investment	\$0	\$993,000	\$0	\$0	\$0	\$0	\$0	\$993,000
CNTY106	San Diego County	Poinsettia Avenue Active Transportation Improvements Project	This project will enhance pedestrian safety and accessibility by installing sidewalks on Poinsettia Avenue (Grand Ave to Oleander Ave), benefiting students at Joli Ann Leichtag Elementary and the surrounding disadvantaged communities in San Marcos and Vista. The area ranks low in the Healthy Places Index (23.2 percentile) and high in low-income households (91st percentile), highlighting the urgent need for safe walking routes. This infrastructure improvement, requested by the community, will promote safety, connectivity, and active transportation while reducing traffic congestion.	\$156,409	\$132,409	\$895,690	\$895,690	\$0	\$0	\$0	\$2,080,198
COR29	Coronado, City of	Electric Vehicle Charging Infrastructure Needs Assessment & Master Plan - Coronado	Development of a Request for Proposals to secure a consultant to conduct the Electric Vehicle Charging Infrastructure Needs Assessment and Master Plan.	\$25,000	\$125,000	\$0	\$0	\$0	\$0	\$0	\$150,000
DM08	Del Mar, City of	Climate Action Plan Update and Greenhouse Gas Emissions Inventory Project - Del Mar	Project will develop an updated CAP and develop greenhouse gas emissions (GHG) inventories for 2 years.	\$28,000	\$130,500	\$40,000	\$40,500	\$0	\$0	\$0	\$239,000
DM09	Del Mar, City of	Camino Del Mar Bridge Replacement Project	The Camino Del Mar Bridge Replacement Project (Project) is a Capital Improvement Program project that will replace the existing roadway bridge over the San Dieguito River. The existing bridge was constructed in 1932 and is beyond its useful life; it was evaluated for rehabilitation in 2012, and it was determined that replacement is the most cost-effective solution. The existing bridge is approximately 600 feet long, 61 feet wide, and includes one northbound and one southbound vehicular roadway, one northbound and one southbound bike lane, and a pedestrian walkway on the west side. In comparison to the existing bridge, the replacement bridge would be located along the same horizontal alignment, would be slightly longer, wider, and higher, and would result in a reduction in the number of piers in the river mouth. The additional bridge width of 7-foot, 5 inches would expand pedestrian access with a new sidewalk on the east side of the bridge. The approach roadways within Camino del Mar would also require modifications to accommodate the raised elevation of the bridge from approximately Sandy Lane to 300 feet north of the existing bridge. There will be no change in vehicular capacity as the existing two-lane Camino del Mar roadway would continue to provide one vehicle traffic lane in each direction.	\$0	\$35,325,000	\$31,890,000	\$5,910,000	\$0	\$0	\$0	\$73,125,000

Project ID	Lead Agency	Project Title	Project Description	Prior Year	FY 2027	FY 2028	FY 2029	FY 2030	FY 2031	Future	Total Cost
EL41	El Cajon, City of	Main Street - Green Street Gateway	Main St. is the primary access from the Transit Center to downtown El Cajon. To revitalize the corridor into an attractive "urban-forest" gateway, tree-lined widened sidewalks and Class IV bikeways, LID planters, signage, thematic site furnishing, and lighting are proposed. Also, upgraded bike and ped links to the transit center along Marshall will transform the corridor into an accessible and multi-modal Ave.	\$2,173,350	\$326,650	\$0	\$0	\$0	\$0	\$0	\$2,500,000
EL42	El Cajon, City of	Mixed Use Overlay - El Cajon	The project proposes to establish increased housing capacity through a new walkable district in an existing commercial area. The project will expand the Mixed-Use Overlay Zone, which was approved in 2018, and provide an urban framework that allows a mix of uses, building and housing types. The project will include rezoning of properties within the new district and additional California Environmental Quality Act (CEQA) analysis based on the previously approved Program Environmental Impact Report for the Mixed-Use Overlay Zone.	\$3,000	\$477,000	\$71,000	\$0	\$0	\$0	\$0	\$551,000
EL43	El Cajon, City of	Parkway Specific Plan	The project proposes to create a comprehensive planning document for the Parkway Plaza shopping center linking to the Arnele Avenue Transit Station and its immediately adjacent high density parcels within the Mixed-Use Overlay zone. The document will plan the economic revitalization of Parkway Plaza, accommodate previously approved housing capacity, provide enhanced pedestrian and bicycle infrastructure, modernize the bus transfer station, and plan for Arnele Avenue roadway improvements from Johnson to Marshall Avenues and reconcile the varying regulatory standards that exist between the Specific Plan, Zoning, and Mixed-Use Overlay.	\$525,050	\$275,950	\$0	\$0	\$0	\$0	\$0	\$801,000
EL44	El Cajon, City of	El Cajon Boulevard Streetscape Phase 2	The proposed project is a continuation of the El Cajon Boulevard Streetscape and the Main Street Green Street Phase 2 Roundabout projects, which are funded through the Smart Growth Incentive Program. This project will complete the corridor by installing road diets and lane narrowing, construct Class II separated bikeways, sidewalks and accessible facilities, pedestrian site furnishings and drought tolerant landscaping. These improvements will extend the transit centers mobility hub and active transportation connections to nearby health care offices, schools, social services, and neighborhoods.	\$0	\$3,047,500	\$0	\$0	\$0	\$0	\$0	\$3,047,500
ENC57	Encinitas, City of	La Costa Avenue Pedestrian Path	This project includes the construction of a decomposed granite (DG) pedestrian path & a bike buffer lane along the south side of La Costa Ave between N Vulcan Ave & the I-5 southbound on-ramp. It also includes concrete curb, gutter & sidewalk along the east side of Vulcan between La Costa Ct & Ave.	\$1,197,238	\$241,640	\$0	\$0	\$0	\$0	\$0	\$1,438,878

ESC48	Escondido, City of	Grand Avenue Vision Complete Streets Improvement Project	This project implements the Grand Avenue Vision Plan to improve Grand Avenue between Juniper and Escondido, including widened sidewalks, expanded outdoor dining areas, traffic circles, improved pedestrian crossings, market lighting and diagonal parking on one side of the street. Phase I was completed in 2022. Design for Phase II, that improves Grand between Maple and Juniper, is expected to be completed in November 2023. Funding is programmed in FY23/24 to complete Phase II. The five-year planning period shows continued funding toward Phase III of the project between Escondido Blvd and Maple St. Staff recommends that a concept design also be prepared to evaluate the potential expansion of the Vision Plan to extend from Centre City Parkway to Valley Blvd.	\$14,474,794	\$4,387,100	\$2,000,000	\$1,300,000	\$1,000,000	\$500,000	\$0	\$23,661,894
ESC61	Escondido, City of	Grand Avenue Vision Project	The project will improve a downtown corridor with wider sidewalks, improved pedestrian crossings, and a roundabout in the City of Escondido.	\$0	\$4,250,000	\$0	\$0	\$0	\$0	\$0	\$4,250,000
IB25	Imperial Beach, City of	Climate Action Plan Update - Imperial Beach	To keep the City's CAP current and effective, the city plans to update its Climate Action Plan, including the greenhouse gas emissions inventory, and develop new emission reduction strategies. This process will involve community outreach to gather input and ensure the plan meets local needs and priorities.	\$0	\$150,000	\$0	\$0	\$0	\$0	\$0	\$150,000
IB26	Imperial Beach, City of	Palm Avenue Streetscape and Gateway Project	Add beautification elements, gateway signs, and landscaping features to Palm Avenue in Imperial Beach between 13th Street and Rainbow Drive	\$0	\$2,999,000	\$0	\$0	\$0	\$0	\$0	\$2,999,000
LAM62	La Mesa, City of	La Mesa Boulevard (Blvd.) Complete Streets Gateway Roundabout	Construction of a new roundabout as well as pedestrian, bicycle and landscaping enhancement and part of the La Mesa Complete Streets Project.	\$0	\$3,992,000	\$0	\$0	\$0	\$0	\$0	\$3,992,000
LG26	Lemon Grove, City of	Connect Main Street	The project will implement Phase 1 and Phase 2 of the SGIP funded Connect Main Street Plan, construction pedestrian and bicycle facilities from Broadway to San Miguel. It will enhance the north/south movement of people walking/biking by implementing a street conversion, D.G. pedestrian trail, shared-use path, pedestrian crosswalks, bulb outs, lighting, and landscape features.	\$2,196,573	\$813,406	\$0	\$0	\$0	\$0	\$0	\$3,009,979
LG29	Lemon Grove, City of	Lemon Grove Massachusetts Avenue Safe Routes to Transit Connectivity Plan	Transformative urban mobility initiative aimed at enhancing first-last mile connectivity, fostering transit oriented development housing and revitalizing key transit hubs.	\$0	\$463,567	\$0	\$0	\$0	\$0	\$0	\$463,567
LG30	Lemon Grove, City of	Lemon Grove Regional Bikeway Corridor Study	Complete a corridor study to evaluate the feasibility of implementing a regional bikeway with innovative intersections and safety enhancements	\$0	\$632,500	\$0	\$0	\$0	\$0	\$0	\$632,500

**Grouped Projects for
TransNet Smart Growth Incentive Program(V10)

LG31	Lemon Grove, City of	Broadway and Sweetwater Road Intersection Improvements	Construct a roundabout with separated bike lanes or protected intersection at the intersection of Broadway and Sweetwater Road. This is a key intersection along the proposed Regional Bikeway that is proposed along Broadway in the City of Lemon Grove.	\$0	\$3,500,000	\$0	\$0	\$0	\$0	\$0	\$3,500,000
NC53	National City, City of	National City Climate Action Plan Implementation Monitoring	Implementation of an on-going monitoring program of CAP implementation, including regular tracking, and occasional re-inventory of greenhouse gas (GHG) emissions.	\$146,000	\$13,000	\$134,500	\$0	\$0	\$0	\$0	\$293,500
NC54	National City, City of	National City Downtown Specific Plan Update	Perform comprehensive review and update to the DSP with emphasis on community and stakeholder engagement; smart growth development principles; design guidelines and incentives; sustainable communities strategies; housing and mobility choices; safety enhancements in support of Vision Zero; parking management; and expedited development review process.	\$0	\$626,000	\$0	\$0	\$0	\$0	\$0	\$626,000
NC55	National City, City of	Housing Supportive Infrastructure Assessment	The City of National City will complete a Housing Supportive Infrastructure Assessment in areas zoned for high-density housing. The assessment will include individual asset assessments of the existing sewer, storm drain, lighting, storm water quality BMPs, pedestrian facilities (sidewalks, pedestrian crossings), and roads in areas recently rezoned in National City to allow for residential or mixed-use buildings up to 250 feet.	\$0	\$750,000	\$0	\$0	\$0	\$0	\$0	\$750,000
NC56	National City, City of	National City Boulevard Smart Growth Revitalization Project	The National City Boulevard Smart Growth Revitalization Project brings walkability and safety improvements to the corridor in the form of curb extensions, pedestrian lighting, leading pedestrian intervals, and high visibility crosswalks. Beautification improvements like new sidewalk and trees promote pedestrian comfortability. All improvements will boost transit ridership, aiming to promote further development along the corridor.	\$0	\$4,375,000	\$0	\$0	\$0	\$0	\$0	\$4,375,000
NC57	National City, City of	16th and 18th Street Community Corridors	The project proposes to construct traffic calming features, pedestrian safety elements, and Class III bicycle facilities (bicycle boulevards) along 1.5 miles on 16th Street and 1 mile on 18th Street to close the gap in mobility for east-west non-motorized travelers in National City	\$0	\$4,352,895	\$0	\$0	\$0	\$0	\$0	\$4,352,895
O57	Oceanside, City of	Coast Highway Corridor Improvements Phase 1	Coast Highway Corridor Improvements Phase 1 is the first of a three-phase project to reimagine the Coast Highway Corridor to be more pedestrian friendly and implement beautification and traffic calming improvements. The project will construct a roundabout, midblock crossing, several curb extensions, bus stop enhancements, and designated bike lanes. These improvements will work together to improve walkability, safety, and promote transit ridership along the corridor.	\$0	\$5,588,242	\$0	\$0	\$0	\$0	\$0	\$5,588,242

Project Title:	Palm Avenue/Interstate 805 Interchange								RAS (N.25)		
Project Description:	On Palm Avenue at Interstate 805; - In San Diego, this project provides for improving the Palm Avenue/Interstate 805 Interchange in three phases. The first phase has been completed which included restriping of travel lanes and signal modification. The second phase consists of environmental determination and design of the project, construction repairs to the bridge approaches and abutments; bridge widening to the south, installation of sidewalk and signals; restriping; and signage modifications. The second phase will also add a Class IV bicycle facility along Palm Avenue within the project's limits. The third phase, which will be completed in a separate project once funding is identified, consists of construction of the bridge widening to the north, relocation of north bound on/off ramps and widening of the two on-ramps. All phases of the project improvements are included in the Otay Mesa Public Facility Financing Plan (Projects T1.1, 1.2, 1.3, and 1.4). (CIP 52-640.0/ S-00869).

Project Title:		Santee Town Center Specific Plan (part of Lump Sum V10)									
Project Description:		The project area is identified as the Santee Town Center Smart Growth Area (ST-1) in the Smart Growth Concept Map, within the Santee Town Center Specific Plan Area - The proposed project involves updating the goals, policies, and objectives of the General Plan, the Town Center Specific Plan, and the Arts and Entertainment District Overlay to promote and encourage new development including commercial, housing, and mixed-use development. In addition, the project involves expanding the geographic boundary of the Art and Entertainment District Overlay and amending the land use matrix to allow entertainment-oriented uses to provide unique local experiences, attract tourism, and promote economic revitalization. The project area positioning along the San Diego River and the Trolley Station increases the potential to create a focal point that provides a mixed-use activity center with residential, commercial, open space, and entertainment oriented uses. This grant would provide additional resources by supplementing the planning effort to update the 1986 Town Center Specific Plan which will encourage new investment and housing in the City of Santee.

2025 Regional Transportation Improvement Program
San Diego Region (in \$000s)

RTIP Fund Types

<i>Federal Funding</i>	
ARRA	American Recovery and Reinvestment Act (Federal Stimulus Program)
BIP/CBI	Border Infrastructure Program/Corridors and Borders Infrastructure Program
CMAQ	Congestion Mitigation and Air Quality
DEMO-Sec 115	High Priority Demonstration Program under FY 2004 Appropriations
DEMO-Sec 117/STP	Surface Transportation Program under FHWA Administrative Program (congressionally directed appropriations)
FTA Section 5307	Federal Transit Administration Urbanized Area Formula Program
FTA Section 5309 (NS)	Federal Transit Administration Discretionary - New Starts Program
FTA Section 5310	Federal Transit Administration Elderly & Disabled Program
HBP	Highway Bridge Program under SAFETEA-LU
HPP	High Priority Program under SAFETEA-LU
HSIP	Highway Safety Improvement Program
NHS	National Highway System (administered by Caltrans)
RSTP	Regional Surface Transportation Program
STP-RL	Surface Transportation Program - Highway Railway Crossings Program (Section 130)
TIGER	Transportation Investment Generating Economic Recovery (Federal Stimulus)
CMAQ/RSTP Conversion	Reimbursement of advanced federal funds which have been advanced with local funds in earlier years
<i>State Funding</i>	
ATP	Active Transportation Program (Statewide and Regional)
CMIA	Corridor Mobility Improvement Account (State Prop. 1B)
FSP	Freeway Service Patrol
SB1 - TCEP	Senate Bill 1 - Trade Corridor Enhancement Program
SB1 - ATP	Senate Bill 1 - Active Transportation Program
SB1 - LPP Formula	Senate Bill 1 - Local Partnership Formula Program
SHOPP (AC)	State Highway Operation & Protection Program
SLPP	State Local Partnership Program (State Prop. 1B)
STA	State Transit Assistance
STIP-IIP	State Transportation Improvement Program - Interregional Program
STIP-RIP	State Transportation Improvement Program - Regional Improvement Program
TCRP	Traffic Congestion Relief Program
<i>Local Funding</i>	
Local Funds AC	Local Funds - Advanced Construction; mechanism to advance local funds to be reimbursed at a later fiscal year with federal/state funds
RTCIP	Regional Transportation Congestion Improvement Program
TDA	Transportation Development Act
<i>TransNet-Border</i>	Prop. A Extension Local Transportation Sales Tax - Border
<i>TransNet-BPNS</i>	Prop. A Extension Local Transportation Sales Tax - Bicycle, Pedestrian and Neighborhood Safety Program
<i>TransNet-H</i>	Prop. A Local Transportation Sales Tax - Highway
<i>TransNet-L</i>	Prop. A Local Transportation Sales Tax - Local Streets & Roads
<i>TransNet-L (Cash)</i>	TransNet - L funds which agencies have received payment, but have not spent
<i>TransNet-LSI</i>	Prop. A Extension Local Transportation Sales Tax - Local System Improvements
<i>TransNet-LSI Carry Over</i>	TransNet - LSI funds previously programmed but not requested/paid in year of allocation

Table B-1
2025 Regional Transportation Improvement Program
San Diego Region (in \$000s)

<i>TransNet-LSI (Cash)</i>	TransNet - LSI funds which agencies have received payment, but have not spent
<i>TransNet-MC</i>	Prop. A Extension Local Transportation Sales Tax - Major Corridors
<i>TransNet-MC AC</i>	TransNet - Major Corridors - Advanced Construction; mechanism to advance TransNet funds to be reimbursed at a later fiscal year with federal/state funds
<i>TransNet-REMP</i>	Prop. A Extension Local Transportation Sales Tax - Regional Environmental Mitigation Program
<i>TransNet-SGIP</i>	Prop. A Extension Local Transportation Sales Tax - Regional Smart Growth Incentive Program
<i>TransNet-SS</i>	Prop. A Extension Local Transportation Sales Tax - Senior Services

Appendix C

Expedited Project Selection Process

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Appendix C

Expedited Project-Selection Process

Federal Regulations 23 CFR 450.332 and Title 23 of the United State Code allow for the movement of projects within the quadrennial element of the Federal Transportation Improvement Program (FTIP), subject to the procedures agreed to by the cooperating parties. SANDAG, as the Metropolitan Planning Organization for the San Diego region, has in place a formal project-selection process agreed to by all the region's partners, including the two transit districts.

SANDAG developed the project-selection process through numerous consultations and cooperation of our region's partners—Caltrans, North County Transit District, Metropolitan Transit System, and local agencies. The SANDAG Board of Directors formally adopted the process and criteria as part of the San Diego Forward: the 2025 Regional Plan (2025 Regional Plan) in December 2025; the 2025 Regional Plan is SANDAG's Regional Transportation Plan (RTP). The projects included in the 2027 Regional Transportation Improvement Program (RTIP) reflect the projects prioritized in the 2025 RTP via the project-selection process, and projects from the first four years of the 2027 RTIP (2027 FSTIP) have been selected using the approved project-selection procedures as outlined in Appendix I of this document. Projects in the quadrennial element are either already in construction or identified as ready to deliver. The project-selection criteria for these projects are derived from Appendix T from the boar RTP. This appendix describes the process for developing evaluation criteria for prioritizing transportation projects included in the 2025 RTP and the 2027 RTIP.

For projects within the State Transportation Improvement Program, SANDAG would advance projects subject to amendments or allocations approved by the California Transportation Commission.

For projects in which the State acts as the program manager, the decision for priority lies with the State. These programs include, among others, the State Highway Operation and Protection Program, Highway Bridge Program, Active Transportation Program, High-Risk Rural Roads Program, and Highway Safety Improvement Program.

2025 Regional Plan Appendix N, Attachment N3 Project Evaluation Criteria (*pages N.33-N.37*)

Attachment N3:

Evaluation Criteria

Project Evaluation

To develop the 2025 Regional Plan projects, programs, and services, including the phasing of these investments, SANDAG considered various factors within a project evaluation process. This evaluation process focused on projects expected to have significant impacts on the region and constitute a significant portion of the Regional Plan's costs. Projects included for evaluation were limited to Transit and Complete Corridors with estimated costs of \$100 million or more. This included small roadway segment improvements that are part of a larger corridor.

The evaluation process consisted of three phases, each with distinct areas of focus. Taken together, these provided information on expected performance, logistics, and goal alignment to inform prioritization discussions.

The first phase identified projects that will help maximize VMT reduction benefits in the near term (by 2035). These details informed which projects support GHG emission reduction goals by the critical date of 2035 for consideration in decision-making. The second phase looked at social equity and emissions. The third phase looked at goods movement, non-Single Occupancy Vehicle (SOV), and asset conditions.

The following section provides the methodology for project evaluation, and the subsequent section summarizes how the evaluation was applied to each project type.

Project Evaluation was just one of many considerations for project development and phasing. SANDAG considered the various partner needs and incorporated direction from its Board of Directors in refining the final network.

Project Evaluation Criteria Methodology

The following section provides additional detail on the three phases of the evaluation process:

Phase 1: Highest Priority for 2035

- **Project Readiness** identified projects that could be operational by 2035 if funding were available. Based on project type, this process assumed the length of time required from project start to end. SANDAG assumed that new rail projects generally require a minimum of 14 years to implement, while other projects could be implemented more quickly. As a result, this process assumed that new rail projects would not be ready for 2035 implementation. SANDAG assumed that all other projects could be implemented by 2035. The following table shows the project timelines associated with each project type.

Table N3.1: Project Readiness Duration Table

Project Type	Years
New Rail	14 years
Upgrades to Existing Rail	8 years
Rapid Bus	7 years
Maintenance Facilities	6 years
Managed Lanes, Connectors, Direct Access Ramps	5-6 years

- **Anticipated VMT Impacts** identified which project types will help advance climate goals; specifically, SB 375 GHG target achievement. VMT is closely related to SB 375 GHG reduction calculations. Projects were categorized into 13 project types which are correlated with five VMT impact classes ranging from high increase to high decrease. Data from model outcomes and subject matter expertise were referenced to assign a class to each project type.

See Table N3.2 Anticipated Impacts Reference Table for more information on categorization for project types, project readiness, and their associated VMT impact.

Table N3.2: Anticipated Impacts Reference Table

Project Type	Project Readiness Open by 2035	VMT Impact
Rapid Projects	Yes	Low Decrease
Light Rail Transit Projects	Yes (upgrade) No (new line)	High Decrease
Streetcar Project	No	Low Decrease
Regional Rail Projects	Yes (upgrade)	High Decrease
Converting General Purpose Lanes to Managed Lanes	Yes	High Decrease
Converting Existing Managed Lanes (HOV to HOT)	Yes	Low Increase
Constructing Additional Managed Lanes	Yes	High Increase
Interchange/Intersection improvement	Yes	Neutral
Managed Lane Connectors	Yes	Low Increase

The second and third phases of the evaluation process include a suite of support considerations to help inform equitable, safe, convenient, and healthy goal areas of the 2025 Regional Plan; goods movement; and additional items to capture national performance management goal areas.

Phase 2: Social Equity and Emissions

- **Social Equity** applied subject matter expertise to assign the anticipated impact class of benefit, neutral, or burden based on project type. CalEnviroScreen 4.0 was used to identify projects located within social equity focus communities (areas with an index percentile score of 50% or higher). Projects that do not cross a social equity focus community were tagged not applicable (n/a).
- **Crash History** (Complete Corridors only) produced a high, medium, or low categorization using 2016-2020 SWITRS crash data near each project. The process identified project locations and applied a buffer distance based on the facility type. Crash data were overlaid on the buffered project area and the number of fatal and serious injury crashes were summed. The number of identified crashes was divided by the project area to account for varying project sizes.
- **Diesel Particulate Matter (Diesel PM)** provided context for air quality impacts a project may have on surrounding communities. This identified whether a project overlaps an area that is already burdened by diesel particulate pollution using CalEnviroScreen. Projects that overlap areas that have a score of 50% or greater on the CalEnviroScreen Diesel PM Indicator map were included in this selection. Projects were reviewed and assigned the diesel PM anticipated impact classification of decrease, increase, or neutral based on the project type.
- **Particulate Matter 2.5 (PM 2.5)** indicated if a project is expected to increase, decrease, or have a neutral effect on Particulate Matter 2.5 pollution. Projects were reviewed for their anticipated effects on vehicle speeds and assigned the anticipated impact category based on how those speeds contribute to PM 2.5 emissions. Tables relating speed to vehicle emission rates from the California Air Resources Board's Emission Factors (EMFAC) model were used in this qualitative analysis. Extra emphasis was given to the effect of truck speeds since emission rates are significantly higher for trucks than for passenger vehicles.

Phase 3: Additional Project Information

- **Goods Movement** (Complete Corridors only) identified projects that overlap with freight networks including critical urban freight corridors. These projects were assigned an anticipated impact of positive, neutral, or negative.
- **Transit/Non-SOV** supports the non-SOV element of the Congestion Mitigation and Air Quality Improvement Plan (CMAQ) portion of the federal performance management rule in addition to the Regional Plan "convenient" goal area by promoting sustainable transportation options. Transit system additions, enhancements, and transit supporting infrastructure (including Managed Lanes that incentivize transit and carpool) were denoted as benefiting Transit/Non-SOV travel under this evaluation element.

- **Asset Condition** identified projects that cross or are crossed by bridges that are considered in poor condition by federal performance standards. This supports federal transportation asset management performance target achievement. Project locations were compared against the National Bridge Inventory data and classified as “yes” if they cross or are crossed by a poor condition bridge, “no” if they do not, or “unknown” if the project location could not be determined. Projects that cross or are crossed by these facilities should incorporate strategies for addressing bridge needs.

Project Evaluation Criteria by Project Type

The evaluation of Transit projects and Complete Corridor projects focused on what significant impacts those projects would bring to the region. The following section provides a review of the evaluation process for major mode and project type.

Transit Projects

Rapid Projects

Rapid projects are anticipated to be operational by 2035 under the project readiness category. The anticipated VMT impact for individual projects in this service type is expected to result in a low decrease and scored as an anticipated benefit in social equity areas. When analyzing the CalEnviroScreen Diesel PM Indicator map, the Rapid projects were assigned a diesel PM anticipated impact classification of neutral. The Rapid projects indicate an expected decrease in PM 2.5 emissions.

Light Rail Transit Projects

Light Rail Transit projects that are upgrades to existing infrastructure could be operational by 2035 under the project readiness category. Light Rail Transit projects that are new rail lines are not anticipated to be operational by 2035. Both types of Light Rail Transit projects are expected to have a high decrease VMT impact and scored as a benefit within social equity areas. Diesel PM anticipated impact classification is neutral. Light Rail projects are expected to decrease PM 2.5 emissions.

Streetcar Project

Streetcar projects are not expected to be operational by 2035. The anticipated VMT impacts for streetcar service is low decrease. This project is anticipated to benefit social equity areas. In analyzing the CalEnviroScreen Diesel PM Indicator map, the anticipated diesel PM impact classification is neutral. The streetcar project is expected to decrease PM 2.5 emissions.

Regional Rail Projects

Regional Rail projects that are upgrades to existing infrastructure could be operational by 2035. The anticipated VMT impact for Regional Rail projects is a high decrease, and the projects scored as a benefit within social equity areas. Regional Rail projects are expected to remain neutral for diesel PM and decrease PM 2.5 emissions.

Complete Corridors

Converting General Purpose Lanes to Managed Lanes

Projects that convert a general-purpose lane to a managed lane could be operational by 2035 under the project readiness category. The anticipated impacts for VMT for this project type is high decrease and is expected to be a benefit for social equity areas. This project type is expected to have a negative impact to goods movement because it reduces the number of lanes available for trucks. This is expected to increase truck idling and increase diesel PM. The project is expected to have a neutral effect on PM 2.5 emissions because increased idling would be offset by decreased VMT.

Converting Existing Managed Lanes (HOV to HOT)

Projects that convert HOV lanes to HOT lanes could be operational by 2035 under the project readiness category. The anticipated impacts for VMT for this project type is low increase. It is expected to be a benefit for social equity areas as a source of revenue for other uses like transit service in the corridor. This project type is expected to have a neutral impact for goods movement because it does not change the number of lanes available to trucks. This is expected to have a neutral effect on diesel PM and PM 2.5 emissions because there would not be substantial changes in idling or VMT.

Constructing Additional Managed Lanes

Projects that construct additional managed lanes could be operational by 2035 under the project readiness category. This project type is expected to result in a high increase in VMT and be a burden for social equity areas. This project type is expected to have a positive impact on goods movement by reducing congestion in general purpose lanes, resulting in a less idling and decreased diesel PM emissions. PM 2.5 emissions are expected to be neutral due to the decreased idling offset by the increase in VMT.

Interchange and Intersection Improvements

The project readiness for projects that included interchange/intersection improvements, roadway straightening, shoulder improvements were anticipated to be completed by 2035. The VMT impacts for this project type was neutral and is expected to result in a benefit for social equity areas by improving safety and/or evacuation capacity, depending on specific project features. This project type is expected to have a positive impact for goods movement by making truck travel smoother and more efficient. This is expected to decrease diesel PM emissions. PM 2.5 emissions are expected to be neutral due to limited overall change in idling and VMT.

Managed Lane Connectors

The managed lane connector project type could be operational by 2035. They are expected to have a low increase in VMT and be a burden within social equity areas. This project type is expected to have a neutral impact for goods movement by not affecting lanes and connectors available to trucks. Diesel PM emissions are expected to be neutral. PM 2.5 emissions are expected to increase due to the increase in VMT.

Projects Exempt from Air Quality Conformity Determination

2027 Regional Transportation Improvement Program
FY 2027-2031

Exempt Projects

40 CFR Section 93.126 exempts certain highway and transit projects from the requirement to determine conformity. The categories of exempt projects include safety, mass transit, air quality (ridesharing and bicycle and pedestrian facilities), and other (such as planning studies).

The exempt projects included in the 2025 Regional Plan are listed below. This list shows short-term exempt projects. Additional unidentified projects could be funded with revenues expected to be available from the continuation of existing state and federal programs.

Bikeway, Rail, Trail, and Pedestrian Projects

- Ash Street Bikeway
- Balboa Transit Center Connector Bikeway
- Bay to Ranch Bikeway
- Bayshore Bikeway Connector
- Bayshore Bikeway
- Bear Valley Bikeway
- Black Mountain Bikeway
- Border Access Corridor
- Camp Pendleton Trail
- Cannon Road Bikeway
- Carlsbad - San Marcos Corridor
- Carlsbad to San Marcos Bikeway
- Carlsbad Village Drive Bikeway
- Carmel Valley Bikeway
- Central Coast Corridor
- Centre City to Bear Valley Bikeway
- Chollas Creek Bikeway to Otay
- Chollas Valley Bikeway
- Chula Vista Oleander Connector
- Chula Vista Regional Connector
- City Heights/Fairmount Corridor
- Clairemont Mesa to Linda Vista Bikeway
- Clairemont Mesa to Tierrasanta Bikeway
- Coast Highway Vision & Strategic Plan
- Coastal Rail Trail
- Coastal Rail Trail Connections
- College Avenue Bikeway
- College Boulevard Bikeway
- Collwood to Euclid Bikeway
- CSUSM Bikeway
- Downtown to Southeast
- Eastlake Bikeway
- El Cajon Boulevard Bus-Bike Lane
- El Norte Bikeway

- El Prado: Cross-Park
- Encanto to Barrio Logan Bikeway
- Encinitas Community Connector
- Encinitas to San Marcos Corridor
- Escondido Boulevard Bikeway
- Genesee Bikeway
- Gilman Connector
- Golden Hill to Bayshore Bikeway
- Golden Hill to Fairmount Park
- Golden Hill to Logan Heights
- Harbor Drive
- Hillcrest - El Cajon Corridor
- Hillcrest to Balboa Park
- Hotel Circle Connection
- I-15 Bikeway
- I-805 Connector
- I-805 Multi-Use Path Bridge Main Street to Palm Avenue
- Imperial Beach Bikeways
- Imperial Beach Connector
- Inland Rail Trail
- J Street Bikeway
- Kearny Mesa to Beaches Corridor
- Kearny Mesa to Mission Valley Bikeway
- La Costa Bikeway
- La Jolla to Scripps Ranch
- La Mesa Bikeway
- Lemon Grove to Imperial Bikeway
- Linda Vista Road to Clairemont Mesa Boulevard
- Logan Bikeway
- Main Street to Bayshore
- Market Street Bikeway
- Melrose Drive Bikeway
- Mid-County Bikeway
- Midway to Pacific Beach Bikeway
- Midway to Sunset Cliffs
- Mira Mesa Corridor
- Mira Mesa Neighborhood Bikeway
- Mira Mesa to Miramar
- Mission Boulevard Bikeway
- Mission Gorge to Clairemont Mesa Bikeway
- Montezuma Mesa Bikeway
- Morena Bikeway
- National City - Chula Vista - San Ysidro Bikeway
- North Coast Bike Trail
- North County Inland Bikeway: El Camino Real
- North Mission Bay Drive to Rose Creek Bike Path
- North Park | Mid-City: Monroe Bikeway

- Ocean Beach to Mission Bay
- Pacific Beach Bikeway
- Pacific Beach to East Mission Bay
- Pacific Highway Coastal Rail Trail Airport Connections (PACTAC)
- Palm Avenue to Otay Mesa
- Palomar Street Bikeway
- Pomerado Bikeway
- Poway Loop
- Rancho Bernardo - Via De La Valle Bikeway
- Robinson Central Hillcrest Connector
- Rolando to Grossmont/La Mesa
- Rosecrans Bikeway
- San Carlos to College and Grantville Bikeway
- San Ysidro to Otay Mesa Connector
- San Diego River Bikeway
- San Diego River Bikeway Connections
- San Diego River Trail
- San Luis Rey River to Coast
- San Luis Rey River Trail
- San Marcos Bikeway
- San Ysidro Park to School Connector
- South Bay to Southeastern San Diego
- South Park to Downtown
- Spring Valley to Bayshore Bikeway
- Spring Valley to Sweetwater Bikeway
- SR 52 Bikeway
- SR 67 Bikeway
- SR 78 Bikeway
- SR 125 Connector
- SR 125 Corridor
- SR 905 Corridor
- Sweetwater Bikeway Ramp
- Sweetwater to Chula Vista Bayshore
- Sweetwater to National City
- Sweetwater to Skyline Bikeway
- Ted Williams Bikeway
- University Central Hillcrest Connector
- University Town Centre Bikeway
- Uptown to Kensington-Talmadge Connector
- Uptown: Mission Hills and Old Town Bikeways
- Uptown: Park Boulevard Bikeway
- Valencia Bikeway
- Vista to Buena Creek Station Connector
- Vista Transit Center Connector
- Washington Avenue Bikeway

Safety Improvement Program

- Bridge Rehabilitation/ Preservation/ Retrofit
- Collision Reduction
- Emergency Response
- Hazard Elimination/Safe Routes to School
- Highway Maintenance
- Safety Improvement Program
- Roadway/Roadside Preservation
- Smart Growth Incentive Program
- Safe Routes to Transit
- Safe Routes to School

Transportation System Management

- Active Traffic and Demand Management
- Commuter Services and Bike Program
- Electronic Payment Systems and Universal Transportation Account
- Employer Services and Outreach
- FasTrak®
- Flexible Fleet Pilots
- Freeway Service Patrol
- ITS for Transit
- ITS Operations
- Joint Transportation Operation Center

Transit Terminals

- San Ysidro Transit Center/Terminal
- Multimodal Integration and Performance- Based Management
- Pronto Card
- Regional Rideshare Program
- Shared Mobility Services
- Transit Infrastructure Electrification
- Traveler Information System
- Trolley Fiber Communication Network
- Various Traffic Signal Optimization/Prioritization
- Vehicle Automation

Air Quality Planning and Transportation Conformity

Executive Summary

SANDAG as the region's Metropolitan Planning Organization (MPO), must make a transportation air quality conformity determination for regional transportation plans (RTPs) and regional transportation improvement programs (RTIPs). The purpose of transportation conformity is to ensure that federally funded or approved activities are consistent with the State Implementation Plan (SIP). This ensures that no transportation activities will cause or contribute to new air quality violations, worsen existing violations, or delay the attainment of any relevant National Ambient Air Quality Standards (NAAQS). This appendix documents a demonstration of conformity for the 2008 and 2015 ozone NAAQS for the draft 2027 Regional Transportation Improvement Program (2027 RTIP) and air quality consistency analysis for the 2025 Regional Plan (2025 Regional Plan). The 2025 Regional Plan serves as the region's RTP.

Background

The federal Clean Air Act (CAA), last amended in 1990, requires the U.S. Environmental Protection Agency (EPA) to set NAAQS for pollutants considered harmful to public health and the environment. California has adopted state air quality standards that are more stringent than the NAAQS.¹ Areas with levels that violate the standard for specified pollutants are designated as nonattainment areas.

EPA requires that each state containing nonattainment areas develop and adopt a SIP that meets the NAAQS by a specified attainment deadline. The San Diego County Air Pollution Control District (SDAPCD), in collaboration with the California Air Resources Board (CARB), prepares the San Diego section of the state's SIP. Once the standards are met, further plans—called maintenance plans—demonstrate continued maintenance of the NAAQS.

SANDAG and the U.S. Department of Transportation (DOT) must determine that the 2027 RTIP conforms to the SIP for air quality. Conformity to the SIP means that transportation activities will not create new air quality violations, worsen existing violations, or delay the attainment of the NAAQS. Conformity determinations are guided by the EPA's Transportation Conformity rule (40 CFR 93.100 et seq.). This document demonstrates regional transportation conformity to the 2020 San Diego Ozone SIP (2020 SIP) for the 2008 and 2015 ozone NAAQS. The year of the SIP corresponds to the year SDAPCD developed the document.

- On November 19, 2020, CARB adopted the proposed San Diego Eight-Hour Ozone Attainment Plan SIP submittal, which addresses the 2008 and 2015 ozone standards. Included in the 2020 SIP is a request for a voluntary reclassification from serious to severe nonattainment for the 2008 ozone standard and a voluntary reclassification from moderate to severe nonattainment for the 2015 ozone standards as permitted under Section 181(b)(3). The reclassification extends the timeline to meet the standards and aligns with air quality modeling. The reclassification was approved by EPA on July 2, 2021.

¹ While most California air quality standards are more stringent than those developed by EPA, the 2015 Eight-Hour Ozone standards are the same.

- On June 4, 2021, EPA posted on the Office of Transportation and Air Quality website the adequacy review for public comment on the 2008 and 2015 Eight-Hour Ozone Attainment Plan budgets. On October 4, 2021, EPA published in the Federal Register the adequacy finding for the on-road transportation air quality budgets in the 2020 SIP with an effective date of October 19, 2021.
- On July 12, 2021, the 2020 SIP was found complete by EPA by operation of law six months after the submittal date. On December 19, 2023, EPA published in the Federal Register the proposed rulemaking approving the 2020 SIP. On March 4, 2024, EPA published in the Federal Register the final rulemaking, effective April 1, 2024, approving certain elements of the 2020 SIP, including the budgets (89 FR 15035).

On June 12, 2025, three resolutions under the Congressional Review Act were signed into law, rescinding three of California's waivers from EPA and impacting emissions : (1) H.J. Res. 87, Joint Resolution Providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine Pollution Control Standards; Heavy-Duty Vehicle and Engine Emission Warranty and Maintenance Provisions; Advanced Clean Trucks; Zero Emission Airport Shuttle; Zero-Emission Power Train Certification; Waiver of Preemption; Notice of Decision'; (2) H.J. Res. 88, Joint Resolution providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine Pollution Control Standards; Advanced Clean Cars II; Waiver of Preemption; Notice of Decision'; and (3) H.J. Res. 89, Joint Resolution providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine and Nonroad Engine Pollution Control Standards; The 'Omnibus' Low NOx Regulation; Waiver of Preemption; Notice of Decision'. On November 21, 2025, EPA approved off-model adjustment factors for use in transportation conformity determinations that remove ACT, Zero-Emission Airport Shuttle, Warranty Phase 1, and Omnibus emissions reductions from the EMFAC2021 v1.0.2 baseline.

On May 6, 2026, EPA approved off-model adjustment factors for use in transportation conformity determinations that account in EMFAC2021 v1.02 for the estimated emission benefits attributed to California's Heavy-Duty Vehicle Inspection and Maintenance ("HD I/M") regulation, also known as California's Clean Truck Check ("CTC").

2008 Ozone Standard

On May 21, 2012, EPA designated the San Diego air basin as a nonattainment area for the 2008 Eight-Hour Ozone standard and classified it as a marginal area with an attainment date of July 20, 2015. This designation became effective on July 20, 2012.

SANDAG demonstrated conformity of the 2011 Regional Plan and 2012 RTIP to the 2008 ozone standard on May 24, 2013, using the applicable model approved by EPA to forecast regional emissions (EMFAC2011). DOT, in consultation with EPA, made its conformity determination on June 28, 2013.

On June 3, 2016, EPA determined that 11 areas, including the San Diego air basin, failed to attain the 2008 ozone NAAQS by the applicable attainment date of July 20, 2015, and thus were reclassified by operation of law as moderate for the 2008 ozone NAAQS (81 FR 26697). States containing these new moderate areas were required to submit SIP revisions that met the statutory and regulatory requirements that apply to 2008 ozone nonattainment areas classified as moderate by January 1, 2017. The 2016 SIP addressed the required revisions.

On August 23, 2019, EPA published a final rule in the Federal Register reclassifying the San Diego air basin by operation of law from a moderate nonattainment area for the 2008 ozone NAAQS to serious, effective September 23, 2019 (84 FR 44238). This rulemaking changed the 2008 ozone NAAQS attainment deadline to July 20, 2021, with an attainment demonstration year of 2020.

Effective July 2, 2021, EPA approved the request from the State of California to reclassify San Diego County ozone nonattainment area from serious to severe for the 2008 Eight-Hour Ozone Standard.

2015 Ozone Standard

On October 26, 2015, EPA announced a revised ozone standard, referred to as the 2015 Ozone standard (80 FR 65292). The new standard revised the allowable ozone level to 0.070 parts per million (ppm). The 2015 ozone standard became effective on December 28, 2015.

On June 4, 2018, EPA published a final rule that designated the San Diego air basin as nonattainment, with a classification of Moderate, for the 2015 ozone NAAQS with an attainment deadline of August 3, 2024, and an attainment demonstration year of 2023 (83 FR 25776, effective August 3, 2018).

On May 24, 2019, the SANDAG Board of Directors adopted the 2015 Ozone National Ambient Air Quality Standard Conformity Demonstration for San Diego Forward: The Regional Plan (2015 Regional Plan) and the 2018 RTIP. The conformity demonstration found the 2015 Regional Plan and 2018 RTIP, as amended, in conformity with the requirements of the federal Clean Air Act and applicable SIP. DOT, in consultation with EPA, made its conformity determination on June 21, 2019, indicating that all air quality conformity requirements have been met, including those for the 2015 ozone standard.

Effective July 2, 2021, EPA approved the request from the State of California to reclassify San Diego County ozone Nonattainment Area from Moderate to Severe for the 2015 Eight-Hour Ozone Standard. The reclassification of the 2015 Eight-Hour Ozone Standard from Moderate to Severe changed the attainment date from August 3, 2024, (as a Moderate area) to August 3, 2033, (as a Severe area) and the attainment demonstration year from 2023 to 2032.

Carbon Monoxide Standard

The San Diego region had been designated by EPA as a federal maintenance area for the carbon monoxide (CO) standard. On November 8, 2004, CARB submitted the 2004 revision to the California SIP for CO to EPA, which extended the maintenance plan demonstration to 2018. Effective January 30, 2006, EPA approved this maintenance plan as a SIP revision. On March 21, 2018, EPA documented in a letter that transportation conformity requirements for CO would cease to apply after June 1, 2018. Therefore, this attachment does not include a CO conformity analysis.

Conformity Determinations for the 2025 Regional Plan and 2025 Regional Transportation Improvement Program Amendment No. 11

On December 12, 2025, the SANDAG Board of Directors ratified the action taken by the SANDAG Transportation Committee to adopt Resolution No. 2026-07, approving 2025 RTIP Amendment No. 11. Subsequently on December 12, 2025, the SANDAG Board of Directors adopted the 2025 Regional Plan and associated air quality conformity determination and consistency analysis for the 2025 RTIP Amendment No. 11. On January 26, 2026, DOT, in consultation with EPA, approved the conformity determination for the 2025 Regional Plan and the consistency analysis for the 2025 RTIP Amendment No. 11.

Transportation Conformity: Modeling Procedures

Conformity determination of the 2027 RTIP and conformity analysis of the 2025 Regional Plan have been conducted simultaneously for consistency purposes. Table 10 includes the conformity analysis for the 2027 RTIP and air quality consistency analysis for the 2025 Regional Plan. The financially constrained 2025 Regional Plan provides information on revenue assumptions in Chapter 3 and Appendix I: Funding and Revenues. In addition, this conformity determination fulfills the requirement of California Senate Bill 375 (Steinberg, 2008), which requires a Sustainable Communities Strategy (SCS) to allow for compliance with Section 176 of the federal CAA. (California Government Code Section 65080[b][2][B][viii].) The following sections provide an overview of models, modeling inputs, and processes used in transportation conformity. Additional details on population, employment, and land use are provided in Appendix F: Regional Growth Forecast and Sustainable Communities Strategy Land Use Pattern of the 2025 Regional Plan.

Growth Forecasts

Every three to five years, SANDAG produces a long-range forecast of population, housing, and employment growth for the San Diego region. The process relies upon an integrated forecasting model. The first element is the San Diego Demographic and Economic model, which provides a detailed socioeconomic forecast for the region. Next, the regionwide data are allocated to the parcel level based upon the forecasted development pattern for the 2025 Regional Plan SCS land use pattern, which must use the most recent planning assumptions considering local general plans and other factors. This includes current plans and policies of the jurisdictions and increasing density near transit and job centers, consistent with regional goals for sustainability, mobility, housing affordability, and economic prosperity. The parcel-level forecast data can be aggregated up to larger subregional areas of interest. The Series 15 Regional Growth Forecast assumptions were approved by the Board on April 26, 2024. The Series 15 Regional Growth Forecast is consistent with the 6th Cycle Regional Housing Needs Assessment Plan (RHNA), which allocated the regional housing needs at the subregional level. The 6th Cycle RHNA was adopted by the Board at its July 10, 2020, meeting.

On May 6, 2026, SANDAG consulted with the San Diego Region Conformity Working Group (CWG) on the use of the Series 15 Regional Growth Forecast, SCS land use pattern, for the air quality conformity analysis of the 2027 RTIP. Figure F-1 and Table F-1 show the regional population, jobs, and housing growth forecast for the San Diego region through 2050.

Figure F-1: Series 15 Regional Population, Jobs, and Housing Forecast

Source: Series 15 Regional Growth Forecast SCS land use pattern, SANDAG

Table F-1: San Diego Regional Population and Employment Forecast

Year	Population	Employment
2022	3,287,306	1,611,632
2035	3,404,362	1,678,929
2050	3,400,250	1,782,389

Source: Series 15 Regional Growth Forecast SCS land use pattern, SANDAG

The Series 15 Regional Growth Forecast, SCS land use pattern, uses planning assumptions from the adopted general plans and community plans and policies of the 18 cities and the county. Because many of the local general plans have horizon years of 2030—20 years before the Series 15 Regional Growth Forecast horizon year—the later part of the forecast was developed in collaboration with each of the local jurisdictions through an iterative process that allowed each city to provide their projections for land uses in those later years.

The Series 15 Regional Growth Forecast SCS land use pattern thus represents in compliance with 40 CFR 93.110(a), the “latest planning assumptions” in force at the time this conformity analysis began.

Travel Modeling

The following sections provide an overview of the SANDAG travel model and the travel model flow, spatial and temporal resolution, residents travel model, special market models, trip assignment, model inputs, data sources, and emissions modeling.

SANDAG uses a disaggregate third-generation activity-based model (ABM3) that incorporates the latest planning assumptions at the time the conformity analysis began per 40 CFR 93.110 to support the development of the 2027 RTIP and its conformity demonstration.

An ABM simulates individual and household transportation decisions that comprise their daily travel itinerary. It predicts whether, where, when, and how people travel outside their home for activities such as work, school, shopping, healthcare, and recreation.

The SANDAG ABM3 includes several methodological strengths. It predicts the travel decisions of San Diego residents at a detailed level, considering the way people schedule their day, their behavioral patterns, and the need to cooperate with other household members. When simulating a person's travel patterns, the ABM takes into consideration a multitude of personal and household attributes like age, income, gender, and employment status. The model's fine temporal and spatial resolution ensure that it can capture subtle aspects of travel behavior.

The ABM3 outputs are used as inputs for regional emissions forecasts. The estimates of regional transportation-related emissions analyses conducted for the plan conformity analysis meet the requirements established in the Transportation Conformity Regulation (40 CFR §93.122[b] and §93.122[c]). These requirements relate to the procedures to determine regional transportation-related emissions, including the use of network-based travel models, methods to estimate traffic speeds and delays, and the estimation of VMT.

The ABM3 accounts for a variety of different weekday travel markets in the region, including San Diego region resident travel, travel by Mexican residents and other travelers crossing San Diego County's borders, visitor travel, airport passengers at both the San Diego International Airport and the Cross Border Xpress (CBX) bridge to the Tijuana International Airport, and commercial travel. Many of the models used to represent demand are simulation-based models, such as activity-based or tour-based approaches, while others use an aggregate three- or four-step representations of travel. Table F-2 lists the SANDAG travel markets along several key dimensions.

There are two broad types of models and three specific types of models identified in Table 2. Disaggregate models refer to models whose demand is generated via a stochastic simulation paradigm. Both activity-based and tour-based models are simulation-based. They rely upon a synthetic population to generate travel and stochastic processes to choose alternatives. The models output disaggregate demand in the form of tour and trip lists.

The resident travel model is an ABM, in which all tours and activities are scheduled into available time windows throughout the entire day. The approach recognizes that a person can be in only one place at one time, and their entire day is accounted for in the model. A tour-based treatment is used for other special travel markets, such as Mexican resident crossborder travel, visitor travel, airport passenger travel, and commercial vehicle travel. Tour-based models do not attempt to model all travel throughout the day for each person; rather, once tours are generated, they are modeled independently of each other.

A tour-based model does not attempt to schedule all travel into available time windows. Aggregate models rely upon probability accumulation processes to produce travel demand and output trip tables. The external heavy-duty truck model and certain external travel models are aggregate.

Table F-2: SANDAG ABM3 Travel Markets

Travel Market	Description*	Model Type	Temporal Resolution	Spatial Resolution
San Diego resident travel (internal)	Average weekday travel made by San Diego residents within the county	Disaggregate activity-based	30-minute	MGRA2
Mexican resident crossborder travel (external-internal and internal-internal)	Average weekday travel by Mexican residents into, out of, and within the county	Disaggregate tour- based	30-minute	Internal MGRA – External cordon TAZ ³
Overnight visitor	Average weekday travel made by overnight visitors in the county	Disaggregate tour- based	30-minute	MGRA
Airport passenger (San Diego Airport and CBX)	Average weekday travel made by air passengers and related trips such as taxis to/from airport	Disaggregate Trip- based	30-minute	MGRA
External-External	Average weekday travel with neither origin nor destination in the county	Aggregate Trip- based	Five time periods	External cordon TAZ
Other U.S.– Internal travel	Average weekday external-internal trips made by non-San Diego and non-Mexican residents	Aggregate Trip- based	Five time periods	External cordon TAZ – Internal TAZ
Commercial vehicle model	Average weekday vehicle trips made for commercial purposes (in addition to heavy trucks, includes light truck goods movements and service vehicles)	Disaggregate tour- based	Five time periods	TAZ
External heavy-duty truck model	Average weekday vehicle trips for three weight classes for external truck travel	Aggregate trip- based	Five time periods	External cordon TAZ – External cordon TAZ; External cordon TAZ – Internal TAZ

² MGRA = Master Geographic Reference Area; 24,321 MGRAs in the Region

³ TAZ = Transportation Analysis Zone; 4,947 TAZs in the Region

ABM3 Model Flow

To simulate how San Diego residents, non-residents, and freight travel in the region, the SANDAG ABM3 includes several models and steps. Figure F-2 outlines the overall flow of the SANDAG ABM3. It starts with building an all-street-based active transportation network and creating Master Geographic Reference Area (MGRA) to MGRA and MGRA to transit stop walk, micromobility, or microtransit equivalent accessibility files; highway and transit network building and importing into Emme (traffic modeling software licensed from Bentley); then traffic and transit assignment with warm start trip tables to get the congested highway and transit skims.

After the network skims and walk access files are created, the resident travel model is executed, followed by the other disaggregate models (visitor, San Diego International Airport, CBX terminal, crossborder, and commercial vehicle) and aggregate models (external heavy truck, external-external, and external-internal). The trip tables from all the models are summed up by vehicle classes, time of day (TOD) and value of time (VOT) and are used by traffic assignment. The skims after the traffic assignment are used for the subsequent iteration in a three-feedback-loop model run. The final traffic and transit assignment and data export conclude the ABM3 modeling procedure. The outputs from the final step are used to generate input for Emission Factors (EMFAC) emissions modeling.

Figure F-2: SANDAG ABM3 Flow Chart

Source: SANDAG

Spatial and Temporal Resolution

As indicated in Table F-2, different travel markets are operated in different model types with different spatial and temporal resolutions. The following section describes the treatment of space and time in the SANDAG ABM3.

SANDAG ABM3 utilizes the SANDAG MGRA zone system, which is the one of the most disaggregate zonal systems used in travel demand models in the United States. The SANDAG MGRA system used in ABM3 consists of 24,321 zones, which are roughly equivalent to Census blocks. To avoid computational burden, SANDAG relies on a 4,947 TAZ system for roadway skims and assignment but performs transit calculations at the more detailed MGRA level, where all activity locations are tracked. The MGRA geography offers both the advantage of fine spatial resolution and consistency with network levels of service that make it ideal for tracking activity locations.

The disaggregated models function at a temporal resolution of one-half hour. These one-half hour increments begin at 3 a.m. and end at 3 a.m. the next day.

Temporal integrity is ensured so that no activities are scheduled with conflicting time windows except for short activities/tours that are completed within a one-half hour increment. For example, a person may have a very short tour that begins and ends within the 8 a.m. to 8:30 a.m. period as well as a second, longer tour that begins within this time period but ends later in the day.

A critical aspect of the model system is the relationship between the temporal resolution used for scheduling activities and the temporal resolution of the network simulation periods. Although each activity generated by the model system is identified with a start time and end time in one-half hour increments, level-of-service matrices are only created for five aggregate time periods: (1) early a.m.; (2) a.m.; (3) midday; (4) p.m.; and (5) evening. The trips occurring in each time period reference the appropriate transport network depending on their trip mode and the midpoint trip time. All aggregated models operate on five aggregated time periods. Table F-3 lists the definition of time periods for level-of-service matrices.

Table F-3: Time Periods for Level-of- Service Skims and Assignment

Number	Description	Begin Time	End Time
1	Early	3 a.m.	5:59 a.m.
2	a.m. Peak	6 a.m.	8:59 a.m.
3	Midday	9 a.m.	3:29 p.m.
4	p.m. Peak	3:30 p.m.	6:59 p.m.
5	Evening	7 p.m.	2:59 a.m.

Resident Travel Model

The resident travel model uses the ActivitySim platform for demand generation. This model system is an advanced, but operational, ABM that fits the needs and planning processes of SANDAG. The resident travel model has its roots in a wide array of analytical developments.

They include discrete choice forms (multinomial and nested logit), activity duration models, time-use models, models of individual microsimulation with constraints, entropy-maximization models, etc. These advanced modeling tools are combined to ensure maximum behavioral realism, replication of the observed activity-travel patterns, and model sensitivity to key projects and policies. The model is implemented in a microsimulation framework. Microsimulation methods capture aggregate behavior through the representation of the behavior of individual decision-makers. In travel demand modeling, these decision-makers are typically households and persons.

Decision-Making Units

Decision-makers in the model system include both persons and households. These decision-makers are created (synthesized) for each simulation year based on tables of households and persons from Census data and forecasted TAZ-level distributions of households and persons by key socioeconomic categories. These decision-makers are used in the subsequent discrete-choice models to select a single alternative from a list of available alternatives according to a probability distribution. The probability distribution is generated from a logit model that takes into account the attributes of the decision-maker and various alternatives. The decision-making unit is an important element of model estimation and implementation and is explicitly identified for each model specified in the following sections.

To simulate trips and tours made by individuals and households, the SANDAG ABM3 includes a total of eight person types (shown in Table F-4). The person types are mutually exclusive with respect to age, work status, and school status.

Table F-4: Person Types

Number	Person Type	Age	Work Status	School Status
1.	Full-time worker	18+	Full-time	None
2.	Part-time worker	18+	Part-time	None
3.	College student	18+	Any	College+
4.	Non-working adult	18–64	Unemployed	None
5.	Non-working senior	65+	Unemployed	None
6.	Driving-age student	16–17	Any	Pre-college
7.	Non-driving student	6–15	None	Pre-college
8.	Preschooler	0–5	None	None

Notes: Full-time employment is defined in the SANDAG 2022 household survey as at least 30 hours/week. Part-time is less than 30 hours/week on a regular basis.

Further, workers are stratified by their occupation to take full advantage of information provided by the land use and demographic models. Table F-5 outlines the worker categories. These models are used to segment destination choice attractiveness for work location choice based on the occupation of the worker.

The SANDAG ABM3 assigns one of the activity types to each out-of-home location that a person travels to in the simulation (shown in Table F-6). The activity types are grouped according to whether the activity is mandatory, maintenance, or discretionary. The classification scheme of activities into the three categories helps differentiate the importance of the activities. “Mandatory” includes work and school activities. “Maintenance” includes household- related activities, such as drop-off and pick-up of children, shopping, and medical appointments. “Discretionary” includes social and recreational activities. To determine which person types can be used for generating each activity type, the model assigns eligibility requirements. For example, a full-time worker will generate mandatory work activities, while a non-working adult or senior is eligible for non-mandatory activities. The classification scheme of each activity type reflects the relative importance or natural hierarchy of the activity, where work and school activities are typically the most inflexible in the person’s daily travel itinerary.

Table F-5: Occupation Types

Number	Description
1.	Management, Business, Science, and Arts
2.	Services
3.	Sales and Office
4.	Natural Resources, Construction, and Maintenance
5.	Production, Transportation, and Material Moving
6.	Health
7.	Military

Table F-6: Activity Types

Type	Purpose	Description	Classification	Eligibility
1.	Work	Working at regular workplace or work-related activities outside the home	Mandatory	Workers and students
2.	University	College+	Mandatory	Age 18+
3.	High School	Grades 9–12	Mandatory	Age 14–17
4.	Grade School	Grades K–8	Mandatory	Age 5–13
5.	Escorting	• Pick-up/drop-off children at school by parents • Pick-up/drop-off passengers (auto trips only)	Maintenance	Age 16+
6.	Shopping	Shopping away from home	Maintenance	5+ (if joint travel, all persons)
7.	Other Maintenance	Personal business/services and medical appointments	Maintenance	5+ (if joint travel, all persons)
8.	Social/Recreational	Recreation, visiting friends/family	Discretionary	5+ (if joint travel, all persons)
9.	Dining Out	Eating outside of home	Discretionary	5+ (if joint travel, all persons)
10.	Other Discretionary	Volunteer work, religious activities	Discretionary	5+ (if joint travel, all persons)

The ABM3 includes 25 modes available to residents, including auto by occupancy by VOT, walk, micromobility and bike modes, and walk and drive access to local, premium, or local and premium transit modes. All auto modes are included in traffic assignment, with Kiss & Ride to transit and TNC and taxi as shared ride modes and Park & Ride to transit as drive-alone mode. All transit modes are included in transit assignment, with TNC to transit as Kiss & Ride to transit. Table F-7 lists the trip modes defined in the resident travel model.

Table F-7: Trip Modes for Mode Choice

Number	Description
1.	Drive-Alone
2.	Share Ride 2 Person
3.	Share Ride 3+ Person
4.	Walk
5.	Bike
6.	Shared E-bike (Micromobility)
7.	Shared E-scooter (Micromobility)
8.	Walk to Transit – Local Bus Only
9.	Walk to Transit – Premium Transit Only
10.	Walk to Transit – Local and Premium Transit
11.	Park & Ride to Transit – Local Bus Only
12.	Park & Ride to Transit – Premium Transit Only
13.	Park & Ride to Transit – Local and Premium Transit
14.	Kiss & Ride to Transit – Local Bus Only
15.	Kiss & Ride to Transit – Premium Transit Only
16.	Kiss & Ride to Transit – Local and Premium Transit
17.	TNC to Transit – Local Bus Only
18.	TNC to Transit – Premium Transit Only
19.	TNC to Transit – Local and Premium Transit
20.	Taxi
21.	TNC Single
22.	TNC Pooled
23.	Microtransit
24.	Neighborhood Electric Vehicle (NEV)
25.	School Bus (only available for school purpose)

To model transit flow, the ABM3 uses three transit modes: (1) local bus only; (2) premium mode only; and (3) local bus plus premium. Each mode is by three access modes of walk, Park & Ride, and Kiss & Ride (including TNC) to transit, resulting in total of nine transit trip matrices. The premium modes include any non-local bus modes: Commuter Rail (COASTER); Light Rail Transit (LRT) (including Trolley, SPRINTER, and Streetcar); Bus Rapid Transit (Rapid)/Rapid Bus and Express Bus. The local bus plus premium mode includes transfer between local bus and premium modes.

The resident travel model comprises numerous interacting components, called “sub-models.” Figure F-3 illustrates the basic structure and flow. The model requires what is called a “synthetic population” for the San Diego region. A synthetic population is a table that has a record for every individual and household with the individual’s and the household’s characteristics. For example, if there are 41,000 18-year-old males in the region in 2050, there would be approximately 41,000 records in the table for males age 18, with each record also having other characteristics, such as school enrollment and labor force participation status. Taken as a whole, this synthetic population represents the decision-makers whose travel choices the model will simulate in later steps. For each simulation year, a full population is synthesized to match the forecasted socioeconomic and housing characteristics of each part of the region at the zonal level.

Figure F-3: Resident Travel Model Design and Linkage Between Sub-Models

Source: SANDAG

The first model in the sequence is disaggregate accessibilities. This is a recent addition to ActivitySim and the derived variables are used in downstream models such as auto ownership, coordinated daily activity patterns, tour frequency, and mandatory location choice. This model is run for all workers and students regardless of whether they attend work or school on the simulated day.

Next, a set of long-term and mobility models are run. The first model in the sequence predicts whether an autonomous vehicle is owned by the household. This model conditions the next model, which predicts the number of autos owned. If an autonomous vehicle is owned, multiple cars are less likely. Next, the mandatory (work and school) location choice models are run. The work location choice models include a model to predict whether the worker has a usual out-of-home work location or exclusively works from home. If the worker chooses to work from home, they will not generate a work tour. An external worker identification model determines whether each worker with an out-of-home workplace location works within the region or external to the region. If they work external to the region, the external station is identified. Any primary destination of any work tours generated by the worker will be the external station chosen by this model. A work location choice model predicts the internal work location of each internal worker, and a school location choice model predicts the school location of each student.

Next, a set of models predicts whether workers and students have subsidized transit fares and if so, the percent of transit fare that is subsidized, and whether each person in the household owns a transit pass. A vehicle type choice model then runs, which predicts the body type, fuel type, and age of each vehicle owned by the household; this model was extended to predict whether each vehicle is autonomous, conditioned by the autonomous vehicle ownership model. Next, a prediction is made whether each household has access to a vehicle transponder which can be used for managed lane use. The assumption is that all vehicles built after a certain year (configurable by the user) are equipped with transponders. Next, a prediction is made whether each worker has subsidized parking available at work. Finally, a prediction is made about the telecommute frequency of each worker, which affects downstream models including the daily activity pattern model, the non-mandatory tour frequency model, and stop frequency models.

Next, the daily and tour level models are run. The first daily model is the daily activity pattern model, which predicts the general activity pattern type for every household member. This model classifies daily patterns by three types: (1) mandatory (that includes at least one out-of-home mandatory activity), (2) non-mandatory (that includes at least one out-of-home non-mandatory activity but does not include out-of-home mandatory activities), and (3) home (that does not include any out-of-home activity and travel). The pattern-type model also predicts whether any joint tours will be undertaken by two or more household members on the simulated day. Because household members often travel together and to prevent situations such as young children being left alone, the pattern that one household member has can influence the patterns of other household members.

Then, mandatory tours are generated for workers and students, the tours are scheduled (their location is already predicted by the work/school location choice model), a vehicle availability model is run that predicts which household vehicle would be used for the tour, and the tour mode is chosen. After mandatory tours are generated, a school pickup/drop-off model forms half-tours where children are dropped off and/or picked up at school. The model assigns chaperones to drive or ride with children, groups children together into “bundles” for ride-sharing, and assigns the chaperone task to either a generated work tour or generates a new tour for the purpose of ridesharing. Fully joint tours – tours where two or more household members travel together for the entire tour - are generated at a household level, their composition is predicted (adults, children or both), the participants are determined, the vehicle availability model is run, and a tour mode is chosen. The primary destination of fully joint tours is predicted, the tours are scheduled, the vehicle availability model is run, and a tour mode is chosen. Next, non-mandatory tours are generated, their primary destination is chosen, they are scheduled, the vehicle availability model is run, and a tour mode is chosen for each. At-work subtours are tours that start and end at the workplace. These are generated, scheduled (with constraints that the start and end times must nest within the start and end time of the parent work tour), a primary destination is selected, the vehicle availability model is run, and a tour mode is chosen. Figure F-4 shows the available modes and mode hierarchy for both tours and trips.

At this point, all tours are generated, scheduled, have a primary destination, and a selected tour mode. The next set of models fills in details about the tours - number of intermediate stops, location of each stop, the departure time of each stop, and the mode of each trip on the tour. Finally, the parking location of each auto trip to the central business district (CBD) is determined.

Figure F-4: Tour and Trip Modes

Source: SANDAG

Special Market Models

Besides the resident travel model, ABM3 includes a few special market models: crossborder; San Diego International Airport ground access; Cross Border Xpress terminal; visitor; external; commercial vehicle; and external heavy truck.

Crossborder Model

This model simulates travel of Mexico residents (both US and Non-US Citizens) on the San Diego transportation network. In other words, the model accounts for Mexico resident demand (such as auto volume, transit boarding, and toll usage) for transportation infrastructure in San Diego County. It also forecasts border crossings at each current and potential future border-crossing station. The model is based on the 2019 SANDAG Cross Border Survey, Mexico resident border crossings into the United States, and their travel patterns within the United States. Data were collected at the three border crossing stations: San Ysidro, Otay Mesa, and Tecate.

San Diego International Airport Ground Access Model

This model captures airport travel demand on transportation facilities in San Diego County, modeling travel to and from the airport for arriving and departing passengers. It allows SANDAG to test the impacts of various parking prices and supply scenarios at the airport. The model is based on the 2023 San Diego International Airport Survey of airport passengers in which data were collected on their travel to the airport prior to their departure.

Cross Border Xpress Terminal Model

The CBX terminal is a unique facility that provides access to Tijuana International Airport from the United States via a pedestrian bridge. The terminal provides a much faster border crossing than is available at either San Ysidro or Otay Mesa, especially for returning passengers. To use the facility, each traveler must have a Tijuana International Airport boarding pass and pay a fee to cross each direction. The terminal offers parking, rental car services, airline check-in services, duty-free shopping, and dining. It opened in December 2015.

The model structure is borrowed from the SDIA ground access model. The model is calibrated based on a passenger survey conducted beginning of April 2016 at Tijuana International Airport. The survey collected information from departing passengers who either used the CBX facility or could have used the facility but chose to cross at one of the other border crossings instead.

The model segments travelers according to travel purpose, which is a combination of residence status (resident/visitor), the reported purpose of travel (business/personal) and whether the traveler's origin before departing the airport was in San Diego County or not (internal/external).

Visitor Model

San Diego is a major vacation destination, and these travelers use the county's transportation infrastructure when traveling to and from San Diego's various attractions. The visitor model captures the demand of this travel on transport facilities in San Diego County. A synthetic population of visitors is created with their lodging location as their home location, and a day of travel within San Diego County is simulated. The model is estimated based on the 2011 SANDAG Visitor Survey of airport passengers and hotel guests in which data was collected on their travel while visiting San Diego.

The visitor model has the following features:

- A disaggregate microsimulation treatment of visitors by person type, with explicit representation of party attributes
- Special consideration of unique visitor travel patterns, including rental car usage and visits to San Diego attractions like Sea World
- The full set of modes within San Diego County, including auto trips by occupancy, transit trips, non-motorized trips, and toll/HOT/HOV lanes modes

External Model

The external travel models predict characteristics of all vehicle trips crossing the San Diego County border. This includes both trips that travel through the region without stopping and trips that are destined for locations within the region. See Figure M.12 in 2025 Regional Plan Appendix M for current crossing locations, also known as cordons. Future crossing locations that can also be modeled depending on scenarios include Otay Mesa East, and Jacumba. Components modeling internal-external travel were added to the resident model (external worker identification, external workplace location, external tour identification, external tour location). External to internal San Diego travel from Mexico is covered by the Cross Border Model.

The external-external, external-internal, and internal-external trips in San Diego County were segmented into the following trip types:

- **US-US:** External-external trips whose production and attraction are both in the United States, but not in San Diego County.
- **US-MX:** External-external trips with one trip end in the United States and the other in Mexico.
- **US-SD:** External-internal trips with a production elsewhere in the United States and an attraction in San Diego County.

Commercial Vehicle Model

The SANDAG Commercial Vehicle Model (CVM) simulates the weekday demand patterns of commercial vehicle movements throughout the San Diego region. The CVM is an important part of the complete travel demand modeling system for the region, representing a market of travel that dominates the middle part of most weekdays and has been steadily growing as consumer demands for home deliveries and personal services have increased.

The primary sources of data for developing the CVM were the 2022 SANDAG Commercial Vehicle Establishment and TNC-driver surveys, which focused on goods, services, and maintenance trips, and obtained travel diaries from employees of these establishments whose jobs involve routine travel for either goods pickup and delivery or for service provision. The TNC driver survey used an identical travel diary format to the Establishment survey, the difference being that individual TNC drivers were surveyed as their own establishments who worked on behalf of an online pickup and delivery service. The Establishment and TNC surveys provided detailed travel pattern data for individual drivers and vehicles, which formed the basis for estimating and calibrating model components. The categorical definitions of attribute variables in the two surveys set the possibilities for segmentation of the model system, such as establishment industry sectors; trip origin and destination purposes, land uses, and place types; and vehicle types.

The geographic scope of the CVM are internal-to-internal trip movements. The market scope of the model includes commercial goods movements (pickup and deliveries) as well as trips made for commercial and public services. Trips made for other purposes, namely maintenance and personal, are also included in the CVM if these trips are made in the context of a commercial vehicle tour pattern. The CVM explicitly distinguishes between residential and non-residential customer types, and between three vehicle types—light, medium, and heavy—consistent with the definitions used in the Establishment Survey.

The CVM does not cover the types of work-related travel that would be expected to be covered in the ABM3 Resident model, namely workers traveling for meetings, sales calls, out-of-town travel, and similar activities. The CVM also does not model long-distance freight truck movements that enter and exit the region, which are covered by the Heavy Truck Model (HTM).

Heavy Truck Model

The HTM covers long-distance freight movements into and out of San Diego County. The source of the demand in the HTM are commodity flows between shippers and receivers throughout North America, focusing on those with either a trip end (shipper or receiver) in San Diego County or which pass through San Diego County, for example, between Mexico and Los Angeles. Commodity flows are derived from the Federal Highway Administration (FHWA) Freight Analysis Framework version 5 (FAF5), which was important to represent commodity trading and supply chain trends after the COVID-19 pandemic. The model design assumes that freight truck trips between establishments within San Diego County are covered by the CVM, which has been designed to explicitly account for truck movements involving warehouse and distribution centers and port facilities.

The key input demand source driving the HTM is the set of commodity flows between shippers and receivers throughout North America that focus on:

- Flows with one trip end (shipper or receiver) in San Diego County which are also referred to as internal-to-external or external-to-internal flows such as flows between Chicago and San Diego; and
- Flows which pass through San Diego County which are also referred to as “through trips.” An example of such flows would be freight flows between Mexico and Los Angeles.

Trip Assignment

The final steps of the SANDAG ABM3 are to assign the trip demand onto the roadway and transit networks. Assignments are run for the five time periods identified in Appendix M to the 2025 Regional Plan in Table M.2.

Traffic Assignment

The traffic assignment for the ABM3 is a 15-class assignment with generalized cost by five time periods. Auto vehicle classes are broken out by VOT bins for \$8.81 and \$18 per hour representing the 33rd and 66th percentiles for the low-income and medium-income groups, respectively. The 15 classes are drive-alone non-transponder, drive-alone transponder, shared-ride 2, and shared-ride 3+ by three VOT bins and heavy truck by three weight classes: light-heavy (8,500-14,000 lbs.), medium-heavy (14,000-33,000 lbs.), and heavy-heavy (33,000+ lbs.).

Transit Assignment

The transit assignment uses a headway-based approach, where the average headway between vehicle arrivals for each transit line is known, but exact schedules are not. Passengers and vehicles arrive at stops randomly and passengers choose their travel itineraries considering the expected average waiting time.

The Emme OpenPaths 25 transit assignment is based on the concept of optimal strategy but extended to support several behavioral variants. The optimal strategy is a set of rules that define sequence(s) of walking links, boarding, and alighting stops, which produces the minimum expected travel time (generalized cost) to a destination. At each boarding point, the strategy may include multiple possible attractive transit lines with different itineraries. A transit strategy will often be a tree of options, not just a single path. A line is considered attractive if it reduces the total expected travel time by its inclusion. The demand is assigned to the attractive lines in proportion to their relative frequencies.

Highway Networks

The regional highway networks in the 2027 RTIP and 2025 Regional Plan include all roads classified by local jurisdictions in their general plan circulation elements and Caltrans state facilities. SANDAG uses geographic information system (GIS) software to maintain feature classes of segments and nodes in an enterprise geodatabase. The highway segment feature class includes existing and planned freeways, toll lanes, high-occupancy vehicle (HOV) lanes, Managed Lanes, ramps, surface streets classified on general plan circulation elements, and some local roads needed for network connectivity. Traffic control devices are included on segments for traffic signals, stop signs, ramp meters, and rail crossings. The zone connectors are used to schematically represent how traffic from zones accesses the street system.

The route improvements and additions in the 2027 RTIP and 2025 Regional Plan are developed to provide adequate travel service that is compatible with adopted regional policies for land use and population growth. All regionally significant projects are included in the quantitative emissions analysis. These include all state highways, all proposed national highway system routes, all regionally significant arterials, and all “other principal arterials” functionally classified by the Federal Highway Administration. These include both federal and non-federal regionally significant projects. The networks also account for programs intended to improve the operation of the highway system, including high-occupancy vehicle (HOV) lanes, Managed Lanes, and ramp metering. Existing and proposed toll facilities also are modeled to reflect time, cost, and capacity effects of these facilities.

SANDAG maintains a master transportation network from which a specific year network, between the years 2010 and 2050, can be built. For air quality conformity analyses of the 2027 RTIP and 2025 Regional Plan using emissions budgets from the 2020 SIP, SANDAG built and verified four highway networks (2029, 2032, 2040, and 2050) from the master transportation network.

A list of the major highway and near-term regional arterial projects included in the conformity analysis, along with information on phasing for their implementation, are included in Tables 11 and 12. Locally funded, regionally significant projects have also been or are included in the air quality conformity analysis. These projects are funded with TransNet Extension funds—a 40-year, half-cent local sales tax extension approved by voters in 2004 that expires in 2048—and other local revenue sources.

Transit Networks

SANDAG also maintains transit network datasets for existing and proposed transit systems. Most transit routes run over the same streets, freeways, HOV lanes, and ramps used in the highway networks. The only additional facilities that are added to the master transportation network for transit modeling purposes are as follows:

- Rail lines used by commuter rail, Trolleys, and streetcars.
- Streets used by buses that are not part of local general plan circulation elements Rapid service has stop spacing like commuter (Freeway Rapid) or light rail (Arterial Rapid) rail stations and operating characteristics midway between rail and bus service. Rapid service is provided by advanced design buses operating on HOV lanes or Managed Lanes, some at-grade transit ways, and surface streets with priority transit systems.

Bus speeds assumed in the transit networks are derived from modeled highway speeds and reflect the effects of congestion. Higher bus speeds may result in transit vehicles operating on highways with HOV lanes and HOV bypass lanes at ramp meters compared to those routes that operate on highways where these facilities do not exist.

In addition to transit travel times, transit fares are required as input to the mode choice model. A customized procedure using the traffic assignment software replicates the San Diego region's fare policies for riders (seniors, disabled persons, students):

- Buses collect a flat fare between \$2.50 and \$5 depending on the type of service (COASTER Connection buses are free)
- Trolleys and SPRINTER charge a flat fare of \$2.50
- Commuter rail (COASTER) has a zone-based fare of between \$5 and \$6.50

Transit fares reflect ridership costs at the time the transportation model was developed. Fares are expressed in 2022 dollars and are held constant in inflation-adjusted dollars over the forecast period.

Near-term transit route changes are drawn from the Coordinated Plan, which was produced in cooperation with the region's transit agencies. Longer-range improvements included in the 2025 Regional Plan and other transit corridor studies remain unchanged. In addition to federal-and state-funded projects, locally funded transit projects that are regionally significant are included in the amendment air quality conformity analysis.

Active Transportation Networks

SANDAG maintains an all-street active transportation network including existing and planned bike projects to support bike project evaluation and impact analysis. Based on the proposed bike projects in the regional bikeway system, SANDAG generates year-specific active transportation networks and uses these networks to create accessibility measures from MGRA to MGRA for walking and biking and from TAZ to TAZ for biking modes. These active transportation accessibility measures are inputs to the SANDAG ABM3 to simulate people's choice of travel mode and choice of bike routes.

The active transportation network has unique characteristics that account for facility type, bike treatments, and elevation change. The active transportation networks include five classification types for bike facilities in the regional bikeway system: Class I: bike paths; Class II: bike lanes; Class III: bike routes; Class IV: cycle tracks; and Class "V": bike boulevards.

Class V is an internal designation and not a California vehicle code facility type. Once network coding is completed, the ABM3 is run for the applicable scenarios: 2029, 2032, 2040, and 2050 for the 2020 SIP.

Data Sources

Aside from network inputs, SANDAG relies on several survey datasets to estimate and calibrate the model parameters. The most important survey data is household travel. The latest household travel survey conducted for SANDAG was the 2022 Household Travel Behavior Survey (HTS2022) with smartphone-based travel diaries as the primary means of travel data collection. Since 1966, consistent with the state of the practice for the California Household Travel Survey and National Household Travel Survey, SANDAG and Caltrans conduct a comprehensive travel survey of San Diego County every ten years. HTS2022 surveyed 2,800 households in San Diego County. The survey asked all households with smartphones to participate using the smartphone-based GPS travel diary and survey app (rMove) for one week and accommodated participating households without smartphones by allowing them to complete their one-day travel diary online or by calling the study call center.

As part of a joint survey effort with the Metropolitan Transportation Commission and the Southern California Association of Governments funded by California Senate Bill 1 (Beall, 2017) (SB 1), SANDAG conducted a TNC survey in 2019 to better understand TNC usage in the San Diego region. The TNC survey includes 2,800 complete persons,⁴ 17,340 completed person-days, and 1,578 TNC trips. SANDAG used the 2019 TNC survey data to estimate TNC single and pooled in the mode choice model.

Additional data were used from the 2016 household travel survey to estimate statistical models when sample size from HTS2022 alone was not high enough. The 2015 Transit On-Board Survey (OBS2015) numbers were scaled up to match 2022 ridership counts to derive calibration targets for ABM3. OBS2015 collected data on transit trip purpose, origin and destination address, access and egress mode to and from transit stops, the on/off stop for surveyed transit routes, number of transit routes used, and demographic information.

⁴ A complete person is when a person completes all trip surveys and the daily survey for a given travel day. A person is considered complete if they have at least one complete person-day.

Tables F-8 and F-9 list data sources mentioned above along with other necessary sources of data. Modeling parking location choice and employer reimbursement of parking cost depends on parking survey data collected from 2010 into early 2011 as well as a parking supply inventory. The transponder-ownership sub-model requires data on transponder users. Data needed for model validation and calibration includes traffic counts, transit-boarding data, Census Transportation Planning Package (CTPP), Caltrans Performance Measurement System (PeMS), and Highway Performance Monitoring System (HPMS).

Table F-8: SANDAG Surveys and Data

Survey Name	Year
Household Travel Behavior Survey	2016–2017 & 2022

Motor Vehicle Emissions Modeling

Emissions Model

On November 15, 2022, EPA approved EMFAC2021 v1.0.2 for use in conformity determinations.

On June 12, 2025, three Congressional Review Act resolutions were signed into law rescinding three of California's waivers from EPA: (1) H.J. Res. 87, Joint Resolution providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine Pollution Control Standards; Heavy-Duty Vehicle and Engine Emission Warranty and Maintenance Provisions; Advanced Clean Trucks; Zero Emission Airport Shuttle; Zero-Emission Power Train Certification; Waiver of Preemption; Notice of Decision'; (2) H.J. Res. 88, Joint Resolution providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine Pollution Control Standards; Advanced Clean Cars II; Waiver of Preemption; Notice of Decision'; and (3) H.J. Res. 89, Joint Resolution providing congressional disapproval under chapter 8 of title 5, United States Code, of the rule submitted by the Environmental Protection Agency relating to 'California State Motor Vehicle and Engine and Nonroad Engine Pollution Control Standards; The 'Omnibus' Low NOx Regulation; Waiver of Preemption; Notice of Decision'. On November 21, 2025, EPA approved off-model adjustment factors for use in transportation conformity determinations that remove ACT, Zero-Emission Airport Shuttle, Warranty Phase 1, and Omnibus emissions reductions from the EMFAC2021 v1.0.2 baseline.

On May 6, 2026, EPA approved off-model adjustment factors for use in transportation conformity determinations that account in EMFAC2021 v1.02 for the estimated emission benefits attributed to California's Heavy-Duty Vehicle Inspection and Maintenance ("HD I/M") regulation, also known as California's Clean Truck Check ("CTC").

Projections of daily regional emissions were prepared for reactive organic gases (ROG) and nitrogen oxides (NOx). The following process emissions are generated for each pollutant:

- **All pollutants:** Running exhaust, idling exhaust, starting exhaust, total exhaust
- **ROG and total organic gases:** Diurnal losses, hot-soak losses, running losses, resting losses, total losses

EMFAC2021 models multiple vehicle categories, including the following:

- Passenger cars
- Motor homes
- Medium-duty trucks
- Medium-heavy-duty trucks
- School buses
- Motor coaches
- Motorcycles
- Light-duty trucks
- Light-heavy-duty trucks
- Heavy-heavy-duty trucks
- Urban buses
- Other bus types

Regional Emissions Forecasts

Regional travel demand forecasts were initiated in February 2026. Output from the ABM3 was then summarized to create EMFAC2021 inputs for emissions modeling.

Beginning in April 2026 and continuing through May 2026, SANDAG prepared countywide forecasts of average weekday ROG and NOx emissions for 2029, 2032, 2040, and 2050 for the 2020 SIP using EMFAC2021 and the applicable adjustment factors described above. ROG and NOx emissions are based upon the summer season.

In May 2026, SANDAG prepared final draft countywide forecasts of average weekday ROG and NO_x emissions for 2029, 2032, 2040, and 2050 for the 2020 SIP using EMFAC2021 v1.0.2 with the off-model adjustment factors approved by EPA on November 21, 2025, and May 6, 2026. Those emissions calculations, inclusive of all applicable off-model adjustments, are shown in Table F-10.

2008 Eight-Hour Ozone Standard

On October 19, 2021, EPA found the motor vehicle emissions budgets from the 2020 SIP adequate for transportation conformity purposes for the 2008 ozone NAAQS (86 FR 54692). On March 1, 2024, the U.S EPA approved these budgets into the SIP (89 FR 15035), effective April 1, 2024.

Consistent with 40 CFR 93.106(a)(1) and 93.118(a), conformity analysis years must include the horizon year of the plan's forecast period (2050) and no more than ten years between analysis years (2032, 2040).

2015 Eight-Hour Ozone Standard

On October 19, 2021, EPA found the motor vehicle emissions budgets from the 2020 SIP adequate for transportation conformity purposes for the 2015 ozone NAAQS (86 FR 54692). On March 1, 2024, the U.S EPA approved these budgets into the SIP (89 FR 15035), effective April 1, 2024.

Severe Nonattainment Area classification established 2032 as the attainment demonstration year for the 2015 Eight-Hour Ozone Standard. The 2020 SIP established air quality budgets for the 2015 ozone standard. The 2020 SIP included a voluntary Nonattainment Area classification change from Moderate to Severe Nonattainment Area for the 2015 Eight-Hour Ozone Standard. The new classification established 2032 as the attainment demonstration year and 2029 as a reasonable further progress demonstration year. Consistent with 40 CFR 93.106(a)(1) and 93.118(a), analysis years must include reasonable further progress demonstration years (2029), attainment demonstration year (2032), the horizon year of the plan's forecast period (2050), and no more than ten years between analysis years (2040). Additionally, the first horizon year (2029) must be within ten years from the base year used to validate the regional transportation model (2022).

Emissions Modeling Results

An emissions budget is the part of the SIP that identifies emissions levels necessary for meeting emissions reduction milestones, attainment, or maintenance demonstrations.

To determine air quality conformity of the 2027 RTIP and complete air quality consistency analysis of the 2025 Regional Plan, the emission analysis described in the Regional Emissions Forecast section was used.

Table 10 shows that the projected ROG and NO_x emissions from the draft 2027 RTIP and 2025 Regional Plan are below the ROG and NO_x budgets from the 2020 SIP for both the 2008 and 2015 ozone standards.

Table F-10: 2027 RTIP Amendment and 2025 Regional Plan: SIP Conformity Analysis for the 2008 and 2015 Eight-Hour Ozone Standards (EMFAC2021)

Year	Average Weekday Vehicle Starts (1,000s)	Average Weekday Vehicle Miles (1,000s)	ROG SIP Emissions Budget Tons/Day	ROG Emissions Tons/Day (with Adjustment Factors)	NOx SIP Emissions Budget Tons/Day	NOx Emissions Tons/Day (with Adjustment Factors)
2029	9,930	79,241	11.0	10.7	15.9	12.6
2032	9,853	79,191	10.0	9.4	15.1	10.7
2040	9,953	80,320	10.0	7.4	15.1	8.5
2050	10,108	80,285	10.0	6.3	15.1	7.9

Note: Emissions budgets from the 2020 SIP were found adequate for transportation conformity purposes by EPA, effective October 19, 2021. On March 4, 2024, EPA published in the Federal Register the final rulemaking, effective April 1, 2024, approving certain elements of the 2020 SIP, including the emissions budgets.

Exempt Projects

40 CFR Section 93.126 exempts certain highway and transit projects from the requirement to determine conformity. The categories of exempt projects include safety, mass transit, air quality (ridesharing and bicycle and pedestrian facilities), and other (such as planning studies).

The exempt projects included in the draft 2027 RTIP are listed in Attachment B. The exempt projects included in the 2025 Regional Plan are shown below. This list shows short-term exempt projects. Additional unidentified projects could be funded with revenues expected to be available from the continuation of existing state and federal programs.

Bikeway, Rail, Trail, and Pedestrian Projects

- Ash Street Bikeway
- Balboa Transit Center Connector Bikeway
- Bay to Ranch Bikeway
- Bayshore Bikeway Connector
- Bayshore Bikeway
- Bear Valley Bikeway
- Black Mountain Bikeway
- Border Access Corridor
- Camp Pendleton Trail
- Cannon Road Bikeway
- Carlsbad - San Marcos Corridor
- Carlsbad to San Marcos Bikeway
- Carlsbad Village Drive Bikeway
- Carmel Valley Bikeway
- Central Coast Corridor
- Centre City to Bear Valley Bikeway
- Chollas Creek Bikeway to Otay
- Chollas Valley Bikeway
- Chula Vista Oleander Connector
- Chula Vista Regional Connector
- City Heights/Fairmount Corridor
- Clairemont Mesa to Linda Vista Bikeway
- Clairemont Mesa to Tierrasanta Bikeway
- Coast Highway Vision & Strategic Plan
- Coastal Rail Trail
- Coastal Rail Trail Connections

- College Avenue Bikeway
- College Boulevard Bikeway
- Collwood to Euclid Bikeway
- CSUSM Bikeway
- Downtown to Southeast
- Eastlake Bikeway
- El Cajon Boulevard Bus-Bike Lane
- El Norte Bikeway
- El Prado: Cross-Park
- Encanto to Barrio Logan Bikeway
- Encinitas Community Connector
- Encinitas to San Marcos Corridor
- Escondido Boulevard Bikeway
- Genesee Bikeway
- Gilman Connector
- Golden Hill to Bayshore Bikeway
- Golden Hill to Fairmount Park
- Golden Hill to Logan Heights
- Harbor Drive
- Hillcrest - El Cajon Corridor
- Hillcrest to Balboa Park
- Hotel Circle Connection
- I-15 Bikeway
- I-805 Connector
- I-805 Multi-Use Path Bridge Main Street to Palm Avenue
- Imperial Beach Bikeways
- Imperial Beach Connector
- Inland Rail Trail
- J Street Bikeway
- Kearny Mesa to Beaches Corridor
- Kearny Mesa to Mission Valley Bikeway
- La Costa Bikeway
- La Jolla to Scripps Ranch
- La Mesa Bikeway
- Lemon Grove to Imperial Bikeway
- Linda Vista Road to Clairemont Mesa Boulevard
- Logan Bikeway
- Main Street to Bayshore
- Market Street Bikeway
- Melrose Drive Bikeway
- Mid-County Bikeway
- Midway to Pacific Beach Bikeway
- Midway to Sunset Cliffs
- Mira Mesa Corridor
- Mira Mesa Neighborhood Bikeway
- Mira Mesa to Miramar
- Mission Boulevard Bikeway
- Mission Gorge to Clairemont Mesa Bikeway
- Montezuma Mesa Bikeway
- Morena Bikeway\
- National City - Chula Vista - San Ysidro Bikeway
- North Coast Bike Trail
- North County Inland Bikeway: El Camino Real
- North Mission Bay Drive to Rose Creek Bike Path
- North Park | Mid-City: Monroe Bikeway
- Ocean Beach to Mission Bay
- Pacific Beach Bikeway
- Pacific Beach to East Mission Bay
- Pacific Highway Coastal Rail Trail Airport Connections (PACTAC)
- Palm Avenue to Otay Mesa
- Palomar Street Bikeway
- Pomerado Bikeway
- Poway Loop
- Rancho Bernardo - Via De La Valle Bikeway
- Robinson Central Hillcrest Connector
- Rolando to Grossmont/La Mesa

- Rosecrans Bikeway
- San Carlos to College and Grantville Bikeway
- San Ysidro to Otay Mesa Connector
- San Diego River Bikeway
- San Diego River Bikeway Connections
- San Diego River Trail
- San Luis Rey River to Coast
- San Luis Rey River Trail
- San Marcos Bikeway
- San Ysidro Park to School Connector
- Saturn Boulevard Bikeway
- South Bay to Southeastern San Diego
- South Park to Downtown
- Spring Valley to Bayshore Bikeway
- Spring Valley to Sweetwater Bikeway
- SR 52 Bikeway
- SR 67 Bikeway
- SR 78 Bikeway

Safety Improvement Program

- Bridge Rehabilitation/ Preservation/ Retrofit
- Collision Reduction
- Emergency Response
- Hazard Elimination/Safe Routes to School
- Highway Maintenance

- SR 125 Connector
- SR 125 Corridor
- SR 905 Corridor
- Sweetwater Bikeway Ramp
- Sweetwater to Chula Vista Bayshore
- Sweetwater to National City
- Sweetwater to Skyline Bikeway
- Ted Williams Bikeway
- University Central Hillcrest Connector
- University Town Centre Bikeway
- Uptown to Kensington-Talmadge Connector
- Uptown: Mission Hills and Old Town Bikeways
- Uptown: Park Boulevard Bikeway
- Valencia Bikeway
- Vista to Buena Creek Station Connector
- Vista Transit Center Connector
- Washington Avenue Bikeway

- Safety Improvement Program
- Roadway/Roadside Preservation
- Smart Growth Incentive Program
- Safe Routes to Transit
- Safe Routes to School

Transportation System Management

- Active Traffic and Demand Management
- Commuter Services and Bike Program
- Electronic Payment Systems and Universal Transportation Account
- Employer Services and Outreach
- FasTrak®
- Flexible Fleet Pilots
- Freeway Service Patrol
- ITS for Transit
- ITS Operations
- Joint Transportation Operation Center
- Multimodal Integration and Performance-Based Management
- Pronto Card
- Regional Rideshare Program
- Shared Mobility Services
- Transit Infrastructure Electrification
- Traveler Information System
- Trolley Fiber Communication Network
- Various Traffic Signal Optimization/Prioritization
- Vehicle Automation

Transit Terminals

- San Ysidro Transit Center/Terminal

Implementation of Transportation Control Measures

There are four federally approved Transportation Control Measures (TCMs) that must be implemented in San Diego, which the SIP refers to as transportation tactics. They include ridesharing, transit improvements, traffic flow improvements, and bicycle facilities and programs.

These TCMs were established in the 1982 SIP, which identified general objectives and implementing actions for each tactic. The TCMs required under the 1982 SIP have been fully implemented.⁵ Although the level of TCM implementation established in the SIP has been surpassed, ridesharing, transit, bicycling, and traffic flow improvements continue to be funded.

Interagency Consultation Process and Public Input

The consultation process followed to prepare the Air Quality Planning and Transportation Conformity Analysis for the draft 2027 RTIP and air quality consistency analysis for the 2025 Regional Plan complies with the San Diego Transportation Conformity Procedures adopted in July 1998. In turn, these procedures comply with federal requirements under 40 CFR Part 93. Interagency consultation involves SANDAG (as the MPO for San Diego County), SDAPCD, Caltrans, CARB, DOT, and EPA.

Consultation is a three-tier process that:

1. Formulates and reviews drafts through a conformity working group.
2. Provides local agencies and the public with opportunities for input through existing regional advisory committees and workshops.

⁵ 2020 SIP

3. Seeks comments from affected federal and state agencies through participation in the development of draft documents and circulation of supporting materials prior to formal adoption.

SANDAG consulted on the development of the air quality conformity analysis of the draft 2027 RTIP and air quality consistency analysis for the 2025 Regional Plan at CWG meetings as follows:

- At the May 2, 2026, CWG meeting, SANDAG staff presented information on the 2027 RTIP schedule and information about the criteria and procedures to be followed, including: emission model; emission budgets; the activity-based model, the regional growth forecast, and the public involvement plan.
- At June 3, 2026, CWG meeting, SANDAG staff presented additional information about the criteria and procedures to be followed, including: emission model; the list of transportation projects; the list of exempt projects; transportation control measures; and revenue constrained financial assumptions.
- On June 11, 2026, SANDAG distributed the draft air quality planning and transportation conformity analysis for the draft 2027 RTIP and consistency analysis for the 2025 Regional Plan for interagency consultation and review between June 11, 2026, and on July 10, 2026.
- At the July 1 CWG meeting, the CWG will have an opportunity to discuss the conformity determination for the draft 2027 RTIP and consistency analysis for the 2025 Regional Plan.

2027 RTIP and 2025 Regional Plan Projects

This section contains the capacity-increasing projects included in the air quality conformity analysis for the 2027 RTIP and air quality consistency analysis for the 2025 Regional Plan. Tables 11 through 13 list the projects for the 2025 Regional Plan by 2020 SIP Air Quality Phasing, including the conformity analysis year, project details, and estimated cost (2024 dollars). Table 11 has the complete corridor, transit, and flexible fleet projects by each sub-region. This table uses descriptions of managed lanes (MLs) projects that indicate the number of MLs in addition to the freeway lanes included in the total configuration for that phase. For example, a freeway segment labeled “8F+2ML” would represent eight freeway lanes plus two MLs on that segment. Other abbreviations used are “2TL” on SR 15 that refers to the existing transit-only lanes, and “4T” on SR 125 that refers to the toll lanes. Table 12 includes capacity-increasing arterial projects. Table 13 lists additional systemwide costs associated with the Local Streets and Roads Program, Highway Maintenance and Operations, and Debt Service that are incurred by the region and included in the 2025 Regional Plan. Attachment A contains capacity increasing projects for the draft 2027 RTIP. Attachment B contains exempt projects for the draft 2027 RTIP.

Table F-11: Major Projects List by Subregion

North County Subregion Projects

Project ID	Conformity Analysis Year	Project Category	Project Name	Project Description	Cost (2024\$) Million
CC006	2029	Complete Corridors: 2 Managed Lanes	I-5 Managed Lanes	I-805 to SR 78, 8F+2HOV to 8F+2ML	\$271
TL047	2029	Transit: Rapid	Mixed Rapid Route 484	Commuter Express: Carlsbad to Kearny Mesa via I-15; Palomar Airport Road, SR 78, I-15 Rancho Bernardo Transit Center	\$144
TL092	2029	Transit: Rapid	Mixed Rapid Route 277	Ramona to Sabre Springs Transit Station	\$186
TL040	2032	Transit: Rapid	Arterial Rapid Route 440	Carlsbad to Escondido Transit Center via Palomar Airport Road	\$79
TL042	2032	Transit: Rapid	Arterial Rapid Route 491	Nordahl Marketplace to East Escondido via Downtown Escondido	\$107
TL046	2032	Transit: Rapid	Mixed Rapid Route 483	Commuter Express: Riverside (Temecula) to Palomar College via I-15, SR 78, CSUSM	\$61
CC007	2040	Complete Corridors: 2 Managed Lanes	I-5 Managed Lanes	SR 78 to Vandegrift Boulevard/ Harbor Drive, 8F to 8F+2ML	\$160
CC030	2040	Complete Corridors: 2 Managed Lanes	SR 78 Managed Lanes	I-5 to College Boulevard, 6F to 6F+2ML	\$162
CC031	2040	Complete Corridors: 2 Managed Lanes	SR 78 Managed Lanes	College Boulevard to Twin Oaks, 6F to 6F+2ML	\$460

North County Subregion Projects Continued

Project ID	Conformity Analysis Year	Project Category	Project Name	Project Description	Cost (2024\$) Million
CC032	2040	Complete Corridors: 2 Managed Lanes	SR 78 Managed Lanes	Twin Oaks to I-15, 6F to 6F+2ML	\$174
CC069	2040	Complete Corridors: Managed Lane Connector	I-5/I-805 ML Connector	North to north and south to south	\$290
CC070	2040	Complete Corridors: Managed Lane Connector	I-5/SR 78 ML Connector	South to east and west to north, north to east and west to south	\$300
CC071	2040	Complete Corridors: Managed Lane Connector	I-15/SR 78 ML Connector	East to south and north to west	\$415
CC081	2040	Complete Corridors: Interchange and Arterial Operational Improvements	I-5/SR 78 Interchange/ Arterial Improvements	South to east and west to south	\$444
CC050	2040	Complete Corridors: Rural Corridor Improvements	SR 67	Rural: Maplevue to Dye Road, multimodal operational improvements with shoulder widening for enhanced emergency access	\$1,200
CC051	2040	Complete Corridors: Rural Corridor Improvements	SR 76	Rural: Rice Canyon Road to Pala Reservation, straightening	\$76
CC061	2040	Complete Corridors: Rural Corridor Improvements	SR 76	Rural: Pala Casino to Rice Canyon Road, facility improvements	\$2
CC064	2040	Complete Corridors: Rural Corridor Improvements	SR 76	Rural: Pala Reservation western boundary to Pala Reservation eastern boundary, Safety - widen shoulders along SR 76 to enhance safety for emergency response vehicles	\$6

TL004	2050	Transit: Regional Rail	Regional Rail 398	Camp Pendleton to Downtown San Diego (grade separations, curve straightening, Miramar Tunnel, new station at Camp Pendleton and UTC)	\$9,144
TL099	2050	Transit: Regional Rail	Regional Rail 598	Pacific Surfliner Rail2Rail (LOSSAN)	N/A**
TL006	2050	Transit: Light Rail	SPRINTER (Oceanside to Escondido)	Double tracking and grade separations; extension to North County Mall	\$1,950
TL091	2050	Transit: Rapid	Mixed Rapid Route 235	Escondido to Downtown San Diego via I-15 (Inline station at SR 94 and 28th Street)	\$23

Notes: *New local, express, and circulator transit routes are assumed to operate on existing roads with minimal capital costs. The Copper Line is assumed to continue to operate on existing tracks with minimal capital costs. Vehicle and operations costs for new and existing routes are reflected in TL300 through TL311 as Systemwide Investments in Table C.13.

**Pacific Surfliner Rail2Rail is a program that allows passengers with certain passes to ride either COASTER or Pacific Surfliner trains. Pacific Surfliner Rail2Rail service will benefit from planned LOSSAN upgrades reflected in projects TL003 and TL004.

TL091	2050	Transit: Rapid	Mixed Rapid Route 235	Escondido to Downtown San Diego via I-15 (Inline station at SR 94 and 28th Street)	\$23

Notes: *New local, express, and circulator transit routes are assumed to operate on existing roads with minimal capital costs. The Copper Line is assumed to continue to operate on existing tracks with minimal capital costs. Vehicle and operations costs for new and existing routes are reflected in TL300 through TL311 as Systemwide Investments in Table C.13.

**Pacific Surfliner Rail2Rail is a program that allows passengers with certain passes to ride either COASTER or Pacific Surfliner trains. Pacific Surfliner Rail2Rail service will benefit from planned LOSSAN upgrades reflected in projects TL003 and TL004.

TL093	2050	Transit: Rapid	Mixed Rapid Route 227	Otay Mesa East POE to Imperial Beach via SR 905	\$14
TL063	2050	Transit: San Ysidro Mobility Hub	U.S.–Mexico Border Transit Connection	San Ysidro Mobility Hub	\$650

Notes: *New local, express, and circulator transit routes are assumed to operate on existing roads with minimal capital costs. The Copper Line is assumed to continue to operate on existing tracks with minimal capital costs. Vehicle and operations costs for new and existing routes are reflected in TL300 through TL311 as Systemwide Investments in Table C.13.

**Pacific Surfliner Rail2Rail is a program that allows passengers with certain passes to ride either COASTER or Pacific Surfliner trains. Pacific Surfliner Rail2Rail service will benefit from planned LOSSAN upgrades reflected in projects TL003 and TL004.

***Costs associated with toll removal are reflected under HMO1 and HMO2 as Systemwide Investments in Table C.13.

****Costs listed for the SR 11/Otay Mesa East facility reflect the remaining funding needed to complete the project.

2029	CB22	Carlsbad	Avenida Encinas Coastal Rail Trail and Pedestrian Improvements – Roadway Segment between Palomar Airport Road and Carlsbad Boulevard	Avenida Encinas from Palomar Airport Rd. to Carlsbad Blvd (1.7 miles) – in Carlsbad, the project will construct a portion of the Coastal Rail Trail and connect to the existing Coastal Rail Trail along Avenida Encinas. Proposed improvements include expansion of the existing bicycle facilities to buffered bike lanes throughout the corridor. New sidewalks and pedestrian ramps where there are missing gaps. Enhanced intersection treatments for pedestrian and bicyclists. Pedestrian access improvements to the Poinsettia COASTER station. First phase of the project, which is along Avenida Encinas from Poinsettia COASTER station to Carlsbad Blvd, will not include road widening, It includes striping modification to enhance bicycle facilities, pedestrian ramps, new sidewalks where there are missing gaps, enhanced intersection treatments for improved bicycle and pedestrian safety, and traffic calming with a road diet at select locations along the corridor. Second phase of the project, which is along Avenida Encinas from Palomar Airport Rd and the Poinsettia COASTER station may include widening to accommodate multi-modal transportation and traffic calming. The project will not add additional vehicle travel lane.
2029	CB31	Carlsbad	El Camino Real Widening – La Costa Avenue to Arenal Road	In Carlsbad, along El Camino Real from 700 feet north of La Costa Avenue to Arenal Road, widening along the southbound side of the roadway to provide three travel lanes, sidewalk, and a bike lane in accordance with Prime Arterial Standards. Widen bridge to accommodate sidewalks on both sides of the bridge.
2029	CB32	Carlsbad	El Camino Real Widening – Poinsettia to Camino Vida Roble	El Camino Real from Cassia Road to Camino Vida Roble (.5 miles) – in Carlsbad, along El Camino Real from Poinsettia Lane to Camino Vida Roble, re-stripe from Poinsettia Lane to Cinnabar Way and widen El Camino Real from Cinnabar Way to Camino Vida Roble, along the northbound/east side of the roadway to provide three travel lanes, sidewalk, and a bike lane in accordance with arterial street standards..
2029	CB59	Carlsbad	El Camino Real Widening – Sunny Creek to Jackspar	El Camino Real from Sunny Creek to Jackspar (.3 miles) – in Carlsbad, on El Camino Real from Sunny Creek to Jackspar, widen along the northbound side of the El Camino Real to provide three travel lanes (currently two lanes northbound), sidewalk, and a bike lane.

2029	CHV69	Chula Vista	Heritage Road Bridge	Bridge 57C0670 - widen and lengthen bridge over Otay River from four-lane to six-lane bridge that accommodates shoulders, sidewalk, and median; project is on Heritage Road from the intersection of Main Street to Entertainment Circle. Also includes Main Street widening to accommodate a third eastbound travel lane from the intersection of Nirvana Avenue to Heritage Road.
2029	CHV87	Chula Vista	E Street Extension from Bay Boulevard to H Street	E Street from Bay Boulevard to H Street (1 miles) - Extension of E Street and F Street west of Bay Boulevard to H Street, and the realignment of Gun Powder Point Drive for the Chula Vista Bayfront redevelopment. Project also includes the construction of a roundabout (at the new intersection of E Street and Gunpowder Point Drive), Class I and II bike paths, and sidewalks. E Street between Bay Boulevard to the roundabout will be 4 travel lanes (2 per direction); all other segments will be 2 travel lanes (1 per direction). Phase 1: E Street from Bay Boulevard to Gunpowder Point Drive Roundabout. (now open to traffic) Phase 2: E Street from Gunpowder Point Drive Roundabout to H Street. The project is identified and included in the Chula Vista Bayfront Master Plan and the Bayfront Transportation Development Impact Fee Nexus Study as "BAY-13."
2029	CHV97	Chula Vista	Main Street from Heritage Road to Wolf Canyon Bridge	Main Street from Heritage Road to Wolf Canyon Bridge (.82 miles): Construction of a 6-lane prime arterial from Heritage Rd to Wolf Canyon Bridge including bike lanes and sidewalk facilities. (TDIF Facility 60A).
2029	CNTY14A	San Diego County	South Santa Fe Avenue South	South Santa Fe from Robelini Drive to Similax Road (1.19 miles) – This project will improve South Santa Fe to a four-lane divided road from west of Robelini Drive to Smilax Road, including improvements to Robelini Drive. The project will be in phases.
2029	CNTY21	San Diego County	Bradley Avenue Widening and Overpass at SR 67	Bridge 57-0552 - On Bradley Ave from Magnolia Ave to Mollison Ave, Phase 1 - Widen Bradley Avenue between Graves Ave and Mollison Ave from 2 lanes to 4 lanes including sidewalks and bicycle lanes; Phase 2 - replace 2-lane bridge over SR 67 with a 6-lane bridge including turn pockets. Construction funding shown only for Phase 1. Phase 2 construction will be funded by TransNet.
2029	ESC04	Escondido	Citracado Parkway II	Citracado Parkway from West Valley to Andreason (.5 miles) – widen from 2 to 4 lanes with raised medians, construct bridge over Escondido Creek.

Conformity Analysis Year	TIP ID	Lead Agency	Project Name	Description
2029	O22	Oceanside	College Boulevard Improvements from Vista Way to Old Grove Road	College Boulevard from Vista Way to Old Grove Road (2.5 miles) - Traffic calming without additional lanes between Waring Road/ Barnard and Roselle Street (first phase). The second phase is widening from the existing four lanes to six lanes with bike lanes and raised median between Olive Avenue and Old Grove.
2029	SD34	San Diego	El Camino Real	Bridge 57C0042 - In San Diego on El Camino Real from San Dieguito Road to Via de la Valle - reconstruct & widen from 2 to 4 lanes and extend transition lane and additional grading to avoid biological impacts (CIP 52-479.0/S-00856).
2029	SD70	San Diego	West Mission Bay Drive Bridge over San Diego River	West Mission Bay Drive Bridge over San Diego River – In San Diego, this project provides for replacing the existing four-lane West Mission Bay Drive Bridge with a six-lane bridge, sidewalk, bike lanes, and shoulder improvements. (CIP #52-643/S00871).
2029	SD102A	San Diego	Otay Truck Route Widening (Phase 4)	Otay truck route - In San Diego, from Drucker Lane to La Media Rd, add one lane, for a total of three lanes: two for trucks and one lane for emergency vehicles (Border Patrol/fire department access). From Britannia Blvd to La Media Rd, add one lane for trucks and one lane for emergency vehicles. Also, along Britannia Blvd from Britannia Court to the Otay truck route, add one lane for trucks and one lane for emergency vehicles. This project will be constructed in two phases; an eastern phase between La Media Rd and Drucker Ln, and a western phase from Britannia Blvd to La Media Rd. Current construction programming is for the eastern phase only. (CIP S-11060).
2029	SD250	San Diego	La Media Road Improvements	La Media Rd from SR 905 to Siempre Viva Rd (.75 miles): Widen La Media Rd to a six-lane primary arterial from SR 905 to Airway Rd, and a to a five-lane major between Airway Rd and Siempre Viva Rd with three southbound lanes and two northbound lanes. This project will also improve drainage at the intersection of La Media Rd and Airway Rd (CIP S-15018).
2029	SM19	San Marcos	Grand Avenue Bridge and Street Improvements	From Discovery St to San Marcos Blvd: Construct a four-lane secondary arterial bridge and a six-lane arterial street from Craven Rd to Grand Ave.

Conformity Analysis Year	TIP ID	Lead Agency	Project Name	Description
2029	SM22	San Marcos	South Santa Fe from Bosstick to Smilax #88179	Intersection at S. Santa Fe Rd. and Smilax Rd. – Realign and signalize the intersection located at S. Santa Fe Road and Smilax Road. This project will also widen S. Santa Fe in the westbound direction. Improvements will include the construction of new pavement, new intersection configuration and new bike lanes.
2029	SM31	San Marcos	San Marcos Creek Specific Plan – Discovery St. Widening and Flood Control Improvements #88265	From Via Vera Cruz Rd to Bent Ave/Craven Rd: Part of San Marcos Creek Specific Plan group of projects to widen Discovery St to four lanes secondary arterial between Via Vera Cruz and Bent Ave. Improvements include construction of roadway improvements, bike lanes, and trails.
2029	SM32	San Marcos	Via Vera Cruz Bridge and Street Improvements #88264	Bridge 57C0867: Part of San Marcos Creek Specific Plan group of projects to widen to four lanes secondary arterial and construct a bridge at San Marcos Creek.
2029	SM42	San Marcos	Discovery St. from Craven to Twin Oaks #ST007	Discovery Street from Craven Road to Twin Oaks Valley Road (.9 miles): Design and construction of all intersections, signals, utilities, drainage, and water quality components of Discovery St. as a four-lane arterial from Bent Ave. and Craven Dr and east to Twin Oaks Valley Rd. Improvements will also include bike lanes and trails along the road.
2029	SM48	San Marcos	San Marcos Creek Specific Plan: Creekside Drive and Pad Grading #88505	Creekside Drive from Via Vera Cruz to Grand Ave (.57 miles): construct approximately 3,000 feet of a two-lane collector road from Via Vera Cruz to Grand Avenue in the City of San Marcos; will include two 12' lanes, diagonal parking on the north side, and parallel parking on the south side; the project will also include a 10' bike trail meandering along the south side.
2029	SM69	San Marcos	Twin Oaks Valley Rd. & Barham Dr. Improvements #ST008	Barham Dr from Campus Dr to Twin Oaks Valley Rd (.1 miles): This project involves surface improvements including asphalt, concrete, medians, sidewalks, signage and traffic lights. Underground improvements include utility and drainage improvements, relocations and water treatment within the public right of way to accommodate the construction of additional lanes.
2032	CHV93	Chula Vista	SR 125 at Main Street and Otay Valley Road Interchanges	Interchange on SR 125 at Main Street and Otay Valley Road - Construction of freeway interchanges/overpasses on SR 125 at Main Street and Otay Valley Road.

Title VI Analysis

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Appendix G

Title VI Analysis

Introduction

Transportation projects have a significant effect on the quality of life for a region's residents by shaping access to jobs, education, housing, services, and recreational opportunities. Without proper planning and development, transportation systems can have a negative impact on communities' quality of life. The construction of roads, freeways, and rail transit systems have historically placed burdens on Title VI, hard to reach and limited mobility populations. Transportation projects may also physically divide communities, resulting in long-lasting social and economic costs.

Therefore, it is important to recognize the impacts of transportation investments on those Title VI, hard to reach and limited mobility populations, including low-income communities.

Purpose

A Title VI analysis was conducted for the 2027 Regional Transportation Improvement Program (RTIP) to provide an understanding of whether its short-term investments were expanding mobility options and improving access for these communities.

This analysis mapped the physical footprints of geographically definable projects against census tracts identified by the California Environmental Protection Agency's (CalEPA) CalEnviroScreen (CES) 5.0 tool.

Background

The analysis for the 2027 RTIP was proposed to provide an understanding of whether short-term investments were contributing to equitable transportation outcomes in the region.

The Title VI analysis and engagement performed for the 2025 Regional Plan transportation network models projected levels of transportation access for Title VI, hard to reach and limited mobility populations to key destinations through the build-out horizon year of 2050.

The RTIP itself is the short-term five-year program of projects in the San Diego region, which incrementally implements the 2025 Regional Plan. The RTIP includes investments from SANDAG, Caltrans, the transit agencies, all 18 local cities and the County of San Diego. As most projects are not completed during the development of each RTIP, the metrics examined in this analysis are based only on information we can collect and measure in a five-year timeframe.

Legal Framework

Title VI and California Government Code Section 65040.12(e)

Throughout the last several decades, federal law and guidance have been written to ensure that the spirit and intent of the Civil Rights Act are incorporated into the guiding principles and missions of federal, state, and local public agencies. Title VI of the Civil Rights Act of 1964 states that:

"No person in the United States, shall, on the grounds of race, color or national origin be excluded from participation in, be denied the benefits of, or be subject to discrimination under any program or activity receiving federal financial assistance."

As a recipient of federal funding, SANDAG follows the Caltrans Title VI guidelines for its transportation planning. The guidelines derive from California Government Code Section 65040.12(e), which defines environmental justice as fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income in respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.¹

California Senate Bill 535

Senate Bill 535 (2012) requires a minimum of 25% of Greenhouse Gas Reduction Fund (GGRF) proceeds to benefit disadvantaged communities, with at least 10% allocated to projects physically located in these areas. SANDAG utilizes the CalEnviroScreen tool to geographically define and target investments within the region's most burdened census tracts.

Methodology Development

SANDAG has completed similar analyses since the 2023 RTIP. Initially, staff reviewed the approach of other MPOs who had published similar analyses of a TIP and participated in a nationwide MPO working group to discuss environmental justice topics. As with prior years, a cross-discipline team with staff from programming, planning, modeling, geographic information systems, and Business and Workforce Compliance was formed to complete this analysis.

For the 2027 RTIP, staff conducted a place-based resource allocation assessment, overlaying 2027 RTIP project locations with CES 5.0 data. The analysis mapped the physical footprints of geographically definable projects against census tracts identified by the CES 5.0 tool.

In addition to the location-based analysis, additional data was collected for each project through the project database input screens. This data was meant to help shape the analysis by providing a more in-depth view of the projects' distribution.

Selection of Projects to Analyze

The RTIP includes a variety of projects, which are funded with federal, state, and local dollars. The projects programmed in the RTIP include projects from the Regional Transportation Plan as well as operational improvements, maintenance, safety, and operating projects. Because the Transnet Extension Ordinance requires Transnet funds to be programmed in the RTIP, the RTIP includes many projects funded by local agencies, which ordinarily would not be programmed in a Transportation Improvement Program.

Many of these projects come from local agency Capital Improvement Programs (CIPs) to fund annual transportation maintenance and improvement projects such as street overlay, sidewalk repair, and streetlight and drainage improvements. Additionally, the transit agencies program their operations and maintenance dollars. Many of these projects cannot be assigned to a specific location, and therefore identifying which populations are impacted is not possible. Some cities aggregate their similar CIP projects together on one project ID. For instance, a city may program streetlight upgrades as "various locations throughout the city." Many cities only develop a firm location plan for projects one year at a time, so we often do not have a complete picture of the locations that will be impacted. Some projects are planning in nature and impact an entire city or region, not a specific site. Finally, the RTIP

¹ California Government Code Section 65040.12(e)

includes projects that are programmed for operations of projects, which connect and cross jurisdictions, such as signal interconnections, transit operations, and operations of toll roads. Below are the representative types of projects programmed in the RTIP:

- Projects from the 2025 Regional Plan
 - Capacity Increasing & Regional Arterial
 - Bicycle and Pedestrian
 - Transit (Rail and Bus Rapid Transit)
- Operational Improvements
 - Traffic Calming
 - Signals
 - Streetlights
- Programs
 - Vanpool/Carpool
 - Youth Opportunity Passes
 - Signal Interconnect
- Operating and Maintenance Projects
 - Pavement and Bridge Rehab
 - Drainage Improvements
 - Highway Culvert/Railing/Signage
 - Transit Operations and Maintenance
 - Rideshare
 - Senior Services

Table G-1: RTIP Projects by Type

Project Type	# of Projects	% of Total
Projects from the 2025 Regional Plan	153	30%
Operational Improvements	128	25%
Programs	12	2%
Operating and Maintenance Projects	214	42%
Total Projects	507	100%

Source: SANDAG

Projects that staff can assign to a specific location have been mapped in ProjectTrak, the RTIP database software, based on the route and limits indicated in the project description. This analysis is limited to projects which staff can identify to a specific location. This figure represents approximately 39% of total projects and is slightly more than what was mapped for the 2025 RTIP (38%).

As discussed above, the mapping data for projects in the database with a defined location was imported to SANDAG's geographic information system (GIS).

Methodology

The methodology for this analysis is performed in two steps:

1. Geospatially identify project locations
2. Overlay project locations with CES 5.0 data

Defining Burdened Communities with CalEnviroScreen 5.0

Staff used CES 5.0 to identify communities experiencing moderate and high cumulative burdens throughout the region.

Developed by the Office of Environmental Health Hazard Assessment (OEHHA) on behalf of CalEPA, CalEnviroScreen is a mapping tool that identifies California communities disproportionately burdened by pollution. Environmental (e.g., air and water pollution), health (e.g., asthma), and socioeconomic information (e.g., poverty) is used to produce scores for every census tract in the state. The scores are mapped so that different communities can be compared. An area with a high score is one that experiences a much higher pollution burden than areas with low scores. CalEnviroScreen ranks communities based on data that are available from state and federal government sources.²

It calculates a single cumulative score for every census tract in the state by multiplying two main categories:

- Pollution Burden: What communities are exposed to (e.g., diesel PM, traffic density, impaired water) and the negative environmental effects around them (e.g., hazardous waste sites).
- Population Characteristics: Biological sensitivities (e.g., asthma, low birth weight rates) and socioeconomic factors (e.g., poverty, linguistic isolation) that make a community more vulnerable to the effects of that pollution.

Since the 2025 Regional Plan Title VI Analysis incorporated CalEnviroScreen 4.0, prior to the release of CES 5.0 for the 2027 RTIP Title VI Analysis, census tract scores may vary slightly between the analyses.

While the OEHHA considers the top 25% of CES 5.0 scores to be the highest burdened, it is important to note that for programs and projects such as the 2025 Regional Plan, SANDAG analyses include communities in the top 50% of CalEnviroScreen scores. The rationale for using the top 50% of CES 5.0 scores comes in two parts:

- 1) Statewide, out of the 2,258 census tracts that are considered the highest burdened, only 71 of them are in San Diego County. Using the 25% cutoff is overly limiting.
- 2) Using the Top 50% will account for moderately burdened to highest burdened communities throughout the region.

² [Draft CalEnviroScreen 5.0 Technical Report. \(2026\). Sacramento, CA: OEHHA.](#)

Therefore, for this analysis, we will look at census tracts in the top 50% of CES 5.0 scores.

- Moderately burdened communities are made up of census tracts scoring in the top 50% of CES 5.0 scores; these communities experience higher than average pollution or socioeconomic sensitivity.
- Disadvantaged communities are made up of census tracts scoring in the top 25% of CES 5.0 scores as designated by Cal EPA for Senate Bill 535; these are the highest burdened census tracts in the state.

Census tracts that score in the top 50% of CES 5.0 scores will be referred to as moderately burdened communities, while tracts that score in the top 25% will be referred to as the highest burdened communities.

Statewide, 25% of the population lives in a census tract that qualifies as one of the highest burdened. In the San Diego region, 10% of the population lives in a highest burdened census tract and more than 1,000,000 people, 34% of the region's population, live in moderately burdened areas. This data is displayed in Table G-2.

Table G-2: San Diego County Population Distribution per CalEnviroScreen 5.0

CalEnviroScreen 5.0 Percent	Total Census Tracts in CA	Total Census Tracts in San Diego County	Burdened Population in San Diego County	% of Burdened Population in San Diego County
Top 50%	4,515	225	1,093,776	34%
Top 25%	2,258	71	323,471	10%

Source: CalEnviroScreen 5.0

Results Analysis

Figure G-1 shows the distribution of CES 5.0 scores in the top 50th percentile in the San Diego region, overlaid with 2027 RTIP projects.

Figure G-1: CalEnviroScreen 5.0 Census Tracts in San Diego County

As reflected in Figure G-1, the highest burdened census tracts in the region are largely concentrated in the southwestern communities. Communities in the top 25th percentile include Barrio Logan, Logan Heights, and Southeastern San Diego in the city of San Diego, and portions of National City and Chula Vista. Communities in the top 50th percentile include pockets in the northern part of the region in the cities of Oceanside, Vista, San Marcos, and

2027 Regional Transportation Improvement Program

Escondido, as well as larger areas within the city of San Diego, the cities of Lemon Grove, La Mesa, El Cajon, National City, Chula Vista, and Imperial Beach.

Projects programmed in the 2027 RTIP directly intersect with every census tract scoring above the statewide median for cumulative burden. Notably, a significant concentration of projects are focused within the southwestern portion of the region, reflecting transportation improvements in the most heavily burdened communities.

Additional Analyses: Pollution Burden and Population Characteristics

To provide more insight into each census tract's cumulative CES 5.0 score, each tract will be broken down into its pollution burden and population characteristics percentiles.

The rationale for doing so is to identify the varying factors that make up each census tract's CES 5.0 cumulative score as some components may contribute more to a tract's vulnerability than others.

For instance, a census tract alongside heavy-use freeways for goods movement and freight may have a higher overall pollution burden score and qualify as a disadvantaged community despite possibly scoring less in the population characteristics.

Figure G-2: CalEnviroScreen 5.0 Formula

Source: CalEnviroScreen 5.0

Figure G-2 provides a visual representation of the formula used to identify each CES 5.0 cumulative score, modeled after two component groups multiplied together: Pollution Burden and Population Characteristics.

Each component group is comprised of two categories each:

- Exposures and Environmental Effects representing Pollution Burden
- Sensitive Populations and Socioeconomic Factors representing Population Characteristics.

Both component groups are weighted equally with a maximum score of 10 and are multiplied to find the cumulative CES 5.0 score. Figure G-3 is the full list of indicators in each component group that make up each CES 5.0 score.

For more information on the indicators that make up each category, please see the [OEHHA's January 2026 Draft CalEnviroScreen 5.0 Technical Report](#).

Figure G-3: CalEnviroScreen 5.0 Indicators and Component Groups

Source: CalEnviroScreen 5.0

As we did with the CES 5.0 scores, we will analyze the top 25 and 50% of both Pollution Burden scores and Population Characteristics scores in the San Diego region to identify census tracts that are vulnerable and most vulnerable to these component groups.

Figures G-4 and G-5 show the census tracts in the region that are in the top 50% of Pollution Burden scores and Population Characteristics scores, respectively, overlaid with 2027 RTIP Projects. Population Characteristics are further broken down into Minority Population and Poverty Status in Figures G-6 and G-7.

Figure G-4: CalEnviroScreen 5.0 Pollution Burden

The pollution burden percentile score measures a community's relative exposure to environmental pollutants and environmental hazards compared to all other census tracts in the state. A high percentile score means a community experiences a disproportionately high

cumulative burden of both environmental pollution and population vulnerability compared to the rest of California.

As shown in Figure G-4, communities in the top 50th percentile for pollution burden are concentrated in the urbanized areas of the region. The city of San Diego along the U.S.-Mexico border and the cities of Imperial Beach, Chula Vista, and National City all experience the highest pollution burdens. Communities with scores in the top 25th percentile, scoring 75 and above, also include downtown, southeastern and northern San Diego neighborhoods, as well as smaller portions of El Cajon, Escondido, and Oceanside. The military installation and community of Camp Pendelton in the most northern part of the region is the largest land area in the county with the highest pollution burden.

Projects programmed in the 2027 RTIP directly intersect with every census tract scoring in the top 50th percentile for pollution burden, with higher concentrations of projects in communities scoring in the top 25th percentile, reflecting transportation improvements in the highest burdened communities. The only exception is the Camp Pendelton area, which has improvements only along Interstate 5 freeway on the western border.

Figure G-5: CalEnviroScreen 5.0 Population Characteristics

Figure G-5 shows the overall population characteristic percentile scores. The Population Characteristic percentile score measures a community's relative biological and socioeconomic vulnerability to pollution compared to all other census tracts in California. A

high percentile score indicates a high concentration of health and economic stressors, compounding the negative effects of any pollution exposure.

For the San Diego region, the highest burdened census tracts are concentrated near downtown and eastern San Diego, south into National City, Chula Vista, and South San Diego near the U.S.-Mexico border. Pockets of moderately burdened communities can be seen in the cities of Oceanside, Vista, San Marcos, Escondido, El Cajon, La Mesa, Lemon Grove, Chula Vista, National City, Imperial Beach, and remaining San Diego communities. Notably, parts of the rural portion of the region experience moderate pollution burdens, largely around the Barona and Capitan Grande tribal reservations.

Projects programmed in the 2027 RTIP directly intersect with every census tract scoring in the top 25th percentile for pollution burden, reflecting transportation improvements in the highest burdened communities. Some gaps remain for communities in areas experiencing moderate burdens (50-74th percentiles), highlighting opportunities to direct additional investments in these areas.

Figure G-6: CalEnviroScreen 5.0 Population Characteristics – Minority Population

Since the release of data from the 2010 census, San Diego officially became a “majority minority” county. This means that no single race or ethnic group comprises more than 50% of the region’s total population. Figure G-6 highlights the region’s demographic diversity, demonstrating that very few census tracts have a minority population of 20% or less.

There is a notable geographic correlation between high-minority census tracts shown in Figure G-6 and high CalEnviroScreen scores shown in Figure G-1. This overlap in the central and southwest areas of the region indicates that Title VI communities experience a disproportionate share of environmental burdens and confirms that the concentration of transportation investments in these parts of the region directly align with the needs of these corridors.

Figure G-7: CalEnviroScreen 5.0 Population Characteristics – Poverty Status

For low-income populations, the threshold selected by SANDAG for the 2025 Regional Plan was populations with household income of less than 200% of the 2022 federal poverty level (FPL). The rationale to use less than 200% of the FPL was twofold. First, below 200% of the FPL reflects the higher cost of living in the San Diego region as compared to other areas of

the state and nation that might choose 100% of FPL. Second, this indicator can be forecasted. For consistency, this same threshold was used in this analysis.

A majority of the region has between 0 and 20% of the population living below twice the federal poverty level. Several large areas in the rural, unincorporated part of the region have 20 to 40% of the population living below twice the federal poverty level. The only small pocket of more than 80% of the population living below 200% of the 2022 federal poverty level is in the Barrio Logan in the City of San Diego. 2027 RTIP projects intersect with every part of the region that has more than 40% of the population living below 200% of the federal poverty level.

A large number of census tracts reflect 20-40% of the population living below twice the federal poverty level in the region. These are geographically dispersed, with significant concentrations in the rural, eastern, and northern portions of the region. The rural areas, in particular, have fewer RTIP projects that intersect. RTIP projects intersect with all areas that have concentrations of more than 40% of the population living below twice the federal poverty level.

Additional Social Equity Data from ProjectTrak

Two questions were included in ProjectTrak for the 2027 RTIP to gauge local planning agencies' level of consideration of Title VI populations impacted by their projects.

Questions Asked

- 1) Was a Title VI analysis performed? Answer choices were either (Yes, No, or Not Required/Not Applicable)
- 2) Considering race, income, languages spoken, and ability, indicate which group(s) would benefit from the project. Answer choices were either (People of Color, Low-Income Households; People with Disabilities; Limited English Proficiency Households; All of the Above; None of the Above)

Agency Responses to Title VI Questions

Table G-3 shows the number of projects with responses to each respective question, as well as cumulative counts for each response provided.

Table G-3: Agency Responses to Title VI Questions

Question	No. of Projects with Responses	Response and Response Count
1. Has a Title VI Analysis been performed for this project?	136	Yes (37) No (44) Not Required/ Not Applicable (55)
2. Which group(s) will this project benefit?	139	People of Color (0) Low-Income Households (0) Limited English Proficiency Households (0) People With Disabilities (2) All of the Above (133) None of the Above (4)

Source: ProjectTrak

What does this tell us?

Takeaways

- Most project managers answered Not Required/Not Applicable when asked if their project had performed a Title VI analysis.
- Most project managers answered All of the Above when asked if their project will benefit low-income households, people with disabilities, and those with limited English proficiency.

Limitations

- Answers are self-reported and therefore there is no way to confirm accuracy.
- It is unclear whether any Title VI analyses performed resulted in compliance or violation of Title VI legislation.
- The current interface in the project tracker does not allow the respondent to select multiple answers – for some projects, only two or three of the listed demographics may apply. In this case, selecting All of the Above would be inaccurate.

Methodology Challenges

Certain challenges present opportunities for improvement during future iterations of this analysis.

Project Location

Using project location to evaluate a project meant that we could only evaluate the less than 40% of projects included in the 2027 RTIP which could be mapped. This method does not measure the potential benefits of projects which may not fall primarily in a vulnerable

measure the potential benefits of projects which may not fall primarily in a vulnerable community or projects that are not location-specific but nonetheless provide access for vulnerable populations to farther destinations, jobs, education, and healthcare. For example, the Youth Opportunity Pass provides free transit rides for young people ages 18 and under and has provided millions of free rides for youth across the region since its launch in 2022. The Youth Opportunity Pass is not reflected as a project in this analysis since it cannot be mapped.

Finding ways to identify location information on more projects will provide more comprehensive results. This can be accomplished through more training of local agencies and more follow up as they enter projects. There is also an opportunity to identify location information through a second level of project information which is not currently housed in the RTIP database.

Five-Year Investments in RTIP

Due to the nature of the five-year RTIP, there will be variations in the dollars programmed as projects proceed through development cycles. In addition, programming rules do not allow construction to be programmed until it is fully funded. Therefore, while we are seeking funding for construction, major costs are not included in the RTIP.

Conversely, since the RTIP is a tool for the federal government to approve funding, once the funds have been provided to a project, it no longer needs to be programmed. An example of this is the Flexible Fleets Pilot project. Funds were obligated in 2020 for the pilot. While the project is ongoing and in the budget, the project is no longer in the RTIP and wouldn't be unless the pilot was completed and additional projects were funded.

Measuring Beneficial and Negative Impacts

This analysis does not account for the social, economic, and environmental impacts of a project on a particular area or specific populations. Another key assumption we are making is that projects in a specific location are synonymous with benefits. A location-based methodology does not distinguish between benefits and burdens.

As a result, negative impacts such as increased pollution, housing displacement, and overall community disruption are not captured in this analysis.

Conclusion

By mapping the physical footprints of geographically definable projects against census tracts identified by the CES 5.0 tool, the analysis was able to leverage the newly updated data. Of note is the integration of tribal water quality data, which corrected baseline gaps on sovereign lands, and the addition of the Small Air Toxic Sites indicator, which allows for evaluation of infrastructure placement against neighborhood-scale pollution pockets that traditional datasets typically miss.

Based on the analysis, we're able to conclude that regional transportation investments are being distributed in areas that prioritize moderately and the highest burdened communities and that short-term transportation investments are improving mobility options and access for burdened populations in the region.

Federal Performance Management

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Appendix H

Federal Performance Management

Transportation Performance Management

Introduction

Signed into law in 2012, the federal surface transportation bill Moving Ahead for Progress in the 21st Century Act (MAP-21) included provisions for the establishment of a performance- and outcome-based program that includes national performance goals for the Federal-Aid Highway Program in seven areas: safety, infrastructure condition, congestion reduction, system reliability, freight movement and economic vitality, environmental sustainability, and reduced project delivery delays (23 USC 150[b]). This act significantly advanced the application of performance-based planning and programming in the field of transportation. It established a system to further inform transportation planning and programming with the unified application of observed data, performance measures, and performance targets in the areas of safety, asset condition, and system performance.

The subsequent surface transportation bills, Fixing America's Surface Transportation (FAST) Act and Bipartisan Infrastructure Law (BIL), continued these performance provisions. Starting in 2016, the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) issued a series of Final Rules to implement the performance provisions. These rules establish the protocols, including the timelines, processes, data, and reporting requirements, to comply with the performance provisions.

The rules were designed to be applicable nationwide and to provide meaningful information at regional scales and larger. FHWA released three rules: transportation safety; infrastructure conditions; and system performance, freight movement, and Congestion Mitigation and Air Quality (CMAQ) (23 CFR Part 490). The performance management (PM) rules are also referred to by the order they were released: PM 1 for safety, PM 2 for infrastructure condition, and PM 3 for system performance, freight movement, and Congestion Mitigation and Air Quality (CMAQ) (23 CFR Part 490). FTA released a transit asset management (TAM) rule establishing procedures to help maintain key transit assets in a state of good repair and a public transportation safety rule. A separate transportation planning rule (23 CFR Parts 450 and 771 and 49 CFR Part 613), jointly released by FHWA and FTA, guides how performance is integrated into planning and programming processes and documents. This rule states that the regional Transportation Improvement Program (TIP) shall be designed such that it “makes progress towards achieving performance targets” and that it includes, “to the maximum extent practicable, a description of the anticipated effect of the TIP towards achieving the performance targets.”

In support of these rules, SANDAG has entered into data-sharing and target-setting coordination agreements with Caltrans, San Diego Metropolitan Transit System (MTS), and North County Transit District (NCTD).

- In March 2018, SANDAG and Caltrans signed an addendum to the Memorandum of Understanding (MOU) on Planning and Programming to meet the performance-based planning and programming requirements established in MAP-21.

- In April 2018, SANDAG and Caltrans entered into a data concurrence agreement to enable the use of mutually agreed-upon datasets for target-setting purposes.
- In May 2018, SANDAG, MTS, and NCTD signed an addendum to the master MOU adding coordination efforts on data collection and data sharing to support transit asset management regional targets.
- In January 2021, SANDAG, signed an additional addendum to the master MOU with MTS and NCTD on sharing performance information and data related to transit safety and system reliability.

As the Metropolitan Planning Organization (MPO) for the San Diego region, SANDAG is required to set targets for the performance measures in these rules. This appendix includes the targets for each federal performance measure, target-setting process details, and regional investments that help support achievement of the targets. Progress on targets and observed conditions are included in the 2025 Regional Plan, [Appendix P: Federal System Performance Report](#).

Interagency Coordination

SANDAG uses the public process to coordinate and collaborate on performance target setting and performance monitoring. Coordination involves local jurisdictions, Caltrans, public transit providers, public safety agencies, and community members. Because representatives from those agencies make up the membership of several SANDAG taskforces, and Policy Advisory Committees, those meetings are used in the public interagency coordination process, based on the particular performance management content area being covered. Beginning in November of 2022, the SANDAG Transportation Committee has the authority to approve federal performance management targets for SANDAG.

FHWA Performance Measures

The 2027 RTIP performance on the three performance management focus areas defined by the FHWA are summarized below.

Transportation Safety (PM 1)

Target Setting Process

Transportation safety performance management, also referred to as PM 1, includes five performance measures. The target-setting process consists of Caltrans, in consultation with California MPOs and the Office of Traffic Safety, establishing statewide safety targets. The statewide safety target-setting process is informed by safety plans including the Caltrans Strategic Highway Safety Plan (SHSP) and Office of Traffic Safety Highway Safety Plan (HSP). Once Caltrans has established statewide targets, SANDAG has 180 days to elect to support the statewide targets or develop and adopt regional targets or develop and adopt regional targets. Adoption of targets includes commitment to support their achievement. PM 1 requires annual target updates.

The Board of Directors approved supporting the 2022 statewide safety targets on January 28, 2022.¹ The Transportation Committee approved supporting the 2026 statewide safety targets on December 5, 2025.²

To support the statewide safety targets, SANDAG will plan and program projects that contribute to achieving the statewide safety targets. The 2018-2026 statewide safety targets for the transportation safety performance measures are shown in Table H-1.

Table H-1: Statewide Transportation Safety Performance Management Targets

Performance Measure	2018	2019	2020	2021	2022	2023	2024	2025	2026
Number of Fatalities	3,590.8	3,445.4	3,518.0	3,624.8	3,491.8	3,808.2	4,080.6	4,048.6	3,933.2
Rate of Fatalities per 100 Million Vehicle Miles Traveled (VMT)	1.029	0.995	1.023	1.044	1.042	1.216	1.300	1.26	1.2
Number of Serious Injuries	12,823.4	12,688.1	13,740.4	15,419.4	16,704.2	15,156.2	16,628.1	16,630.5	16,016.9
Rate of Serious Injuries per 100 Million VMT	3.831	3.661	3.994	4.423	4.879	4.904	4.918	4.77	5.205
Number of Nonmotorized Fatalities and Serious Injuries	4,271.1	3,949.8	4,147.4	4,340.8	4,684.4	4,131.7	4,380.5	4,373.3	4,402.5

Source: Caltrans, 2017-2026

¹ The Board of Directors previously approved supporting the statewide targets on the following dates:

- January 26, 2018, for the 2018 statewide safety targets
- January 25, 2019, for the 2019 statewide safety targets
- January 24, 2020, for the 2020 statewide safety targets
- December 18, 2020, for the 2021 statewide safety targets
- January 28, 2022, for the 2022 statewide safety targets

² The Transportation Committee previously approved supporting the statewide targets on the following dates:

- February 3, 2023, for the 2023 statewide safety targets.
- February 16, 2024, for the 2024 statewide safety targets.
- January 17, 2025, for the 2025 statewide safety targets.
- December 5, 2025, for the 2026 statewide safety targets.

Measures and Methodology

The performance measures included in transportation safety are applicable to all public roads regardless of ownership or maintenance responsibility. Table H-2 provides an overview of the calculations and data sources for each performance measure included in the transportation safety performance management area.

Table H-2: Transportation Safety Performance Measure Methodology

Performance Measure	Calculation	Data Source
1. Number of Fatalities	Five-year rolling average	• Fatality Analysis Reporting System (FARS)
2. Rate of fatalities per 100 million VMT	Five-year rolling average of annual fatality rate	• FARS • Highway Performance Monitoring System (HPMS)
3. Number of serious injuries	Five-year rolling average	• California Crash Reporting System (CCRS)
4. Rate of serious injuries per 100 million VMT	Five-year rolling average of annual serious injury rate	• CCRS • HPMS
5. Number of non-motorized fatalities and non-motorized serious injuries	Five-year rolling average of the annual sum of non-motorized fatalities and non-motorized serious injuries	• FARS • CCRS

Source: 23 CFR 490

2025 Regional Plan and 2027 RTIP Investments

SANDAG is taking an active role to advance regional traffic safety goals for the San Diego region. In 2022, the SANDAG Board of Directors adopted a [Regional Vision Zero Resolution](#) with steps toward eliminating all traffic fatalities and severe injuries while increasing safe, healthy, and equitable mobility options for all. [Vision Zero](#) rejects the idea that traffic crashes are inevitable and instead views them as preventable incidents. SANDAG launched the [Traffic Safety Dashboard](#) that includes more than a decade of robust, crash data in an easy-to-use platform. Data from this dashboard are the foundation of the SANDAG regional [Vision Zero Action Plan](#) that helps inform decision makers about the traffic and safety conditions in their jurisdictions.

The 2025 Regional Plan includes a goal for a safe transportation network for all users and integrates safety through programs and near-term and continuing actions outlined in the plan. This goal is supported by the advancement of implementation actions identified in the regional Vision Zero Action Plan. The RTIP Database (ProjectTrak) includes a Performance Management section wherein project sponsors provide project information related to investments in safety. The 2027 RTIP includes 234 safety-related projects. These projects were identified by the project sponsors and include more than \$1.5 billion in investments for the four-year RTIP program (FY 2027–FY 2030). Just under half of these projects are considered categorical safety projects under the conformity rule, with safety improvements being the main project goal. These safety category projects account for approximately 80% of the programmed safety dollars. The remaining projects include a variety of project categories and include projects where only a portion of the overall investment includes safety-related elements such as the addition of bike lanes as part of a roadway widening project. Table H-3 summarizes the 2027 RTIP safety investments by project category.

Table H-3: 2027 RTIP Safety Program Summary by Project Category (FY2027-2030)

Project Category	Safety Programming (\$000)
Safety-Focused Projects ³	\$1,260,000
Intersection and Interchange Projects ⁴	\$30,000
Studies, Landscaping, and Enhancement Projects ⁵	\$96,000
Additional Safety Improvements included in other projects ⁶	\$22,000
Public Transit ⁷	\$15,000
Bicycle and Pedestrian Improvements ⁸	\$148,000
Total⁹ (may not match due to rounding)	\$1,570,000

Source: ProjectTrak, June 2026

Illustrative Projects

- Regionwide, Caltrans District 11 is delivering the grouped projects for Highway Safety Improvements Program, CAL105. Activities include installation of high visibility crosswalks, streetlights, guard rails, and Leading Pedestrian Interval Signals. This project will also construct sidewalks, bike lanes, and implement Complete Streets measures.
- In the City of National City, project NC50 Pedestrian Safety Enhancements includes the installation of pedestrian countdown signal heads, advancement of a stop bar before

³ Examples include Safety Improvement Program projects, railroad/highway crossings, pavement resurfacing and/or rehabilitation, non-signalization traffic control, lighting improvements, increasing sight distance, hazard-elimination program, guardrails, median barriers, crash cushions, and adding medians

⁴ Examples include traffic signal synchronization projects, intersection signalization, interchange channelization, and interchange reconfiguration.

⁵ Examples include engineering studies, landscaping, and transportation-enhancement projects.

⁶ Examples include safety elements that are part of a larger project.

⁷ Examples include safety elements related to public transit. Additional transit safety projects are included in the Public Transportation Agency Safety section of this document.

⁸ Examples include bicycle and pedestrian projects.

⁹ Total may not match due to rounding.

crosswalk (bicycle box), and the modification of signal phasing to implement a Leading Pedestrian Interval (LPI).

- Regionwide, Caltrans District 11 is delivering the Grouped Projects for Safety Improvements SHOPP Collision Reduction Program, CAL46B, which widens shoulders, constructs retaining walls with safety barriers, removes boulders, and relocates and reconstructs drainage systems to improve safety.

Interagency Coordination

SANDAG coordinates and collaborates on transportation infrastructure-related concerns and projects with local jurisdictions, Caltrans, and the public through taskforces and committees. The PM 1 safety targets were developed in coordination with the Transportation Committee. For more information see Interagency Coordination in the introduction section.

Target Achievement and Future Target Setting

Final observed safety data are available approximately two years after a crash occurs. These data are currently available through 2023. When final empirical safety data are published, FHWA reviews statewide performance relative to established targets. FHWA defines significant progress as performance that meets or is better than targets or is better than baseline for four out of the five safety performance measures. For the years with available data, California has not met FHWA's significant progress definition. As a result, Caltrans developed a Highway Safety Improvement Program Implementation Plan.

SANDAG will continue to update annual safety targets and collaborate with Caltrans, FHWA, and other California MPOs on future safety targets.

Infrastructure Conditions (PM 2)

Target-Setting Process

The infrastructure conditions performance management area, also referred to as PM 2, includes six performance measures on pavements and bridges. The performance measures included in PM 2 are applicable to the National Highway System (NHS) which is depicted in Figure H-1. In 2022, Caltrans established statewide targets for the PM 2 performance measures, shown in Table H-4. The statewide targets were informed by Caltrans Transportation Asset Management Plan, which considers life-cycle costs, risk, and cost-effectiveness. For this performance management area, MPOs like SANDAG provide Caltrans future investment estimates by asset type which helps inform the statewide targets. On February 3, 2023, the SANDAG Transportation Committee approved supporting the statewide targets for pavement and bridge condition established by Caltrans in coordination with MPOs and local agencies using an investment-based approach.

Figure H-1: National Highway System

Source: SANDAG

Targets for Infrastructure Conditions (PM 2) are based on a four-year performance period. The current performance period spans from 2022 to 2025. In addition to the four-year target, a midcycle two-year target is established. At the performance period midpoint, agencies can review and update the four-year target. In 2023 Caltrans and MPOs evaluated the progress to the four-year target and elected not to update any of the four-year targets.

Table H-4: Statewide Infrastructure Conditions Performance Management Targets (PM 2)¹⁰

Performance Measures	Two-Year NHS Targets 2023	Four-Year NHS Targets 2025	Desired Trend
Pavements on the NHS: Interstate	47.2%	49.2%	Increase
Pavements on the NHS: Non-Interstate	21.7%	28.2%	Increase
Bridges on the NHS	49.1%	47.3%	Increase

Source: Caltrans, 2024

Performance Measures	Two-Year NHS Targets 2023	Four-Year NHS Targets 2025	Desired Trend
Pavements on the NHS: Interstate	1.9%	1.7%	Decrease
Pavements on the NHS: Non-Interstate	10.5%	9.0%	Decrease
Bridges on the NHS	5.9%	4.4%	Decrease

Source: Caltrans, 2024

Measures and Methodology

Pavement condition is based on roughness, cracking, rutting, and faulting. The pavement measures are aggregated to roadway lane miles and based on measurements taken for curb lane conditions.

Bridge condition is based on engineering assessment of the deck and support structures. The bridge measures are aggregated to the bridge deck area. This section, including Tables H-5 and H-6, summarizes the calculation and data sources for each performance measure included in the Infrastructure Conditions performance rule.

For performance monitoring, pavement is categorized into asphalt, Jointed Concrete Pavement (JCP), and Continuously Reinforced Concrete Pavement (CRCP). Each category of pavement is assessed using various rating systems as listed below. The pavement category rating system is included in Table H-6.

Asphalt: International Roughness Index (IRI), rutting, cracking percent

JCP: IRI, faulting, cracking percent

CRCP: IRI, cracking percent

¹⁰ Caltrans will present pavement and bridge targets for 2027 and 2029 to the California Transportation Commission later in 2026 for approval. Once approved, the new targets will be incorporated into future RTIP documents.

Table H-5: PM 2 Performance Measure Methodology

Performance Measure	Calculation	Data Source
1. Pavement on the interstate in good condition	Lane miles with all metrics rated as good	HPMS
2. Pavement on the interstate in poor condition	Lane miles with two or more metric rated poor	HPMS
3. Pavement on the non-interstate NHS in good condition	Lane miles with all metrics rated as good	HPMS
4. Pavement on the non-interstate NHS in poor condition	Lane miles with two or more metric rated poor	HPMS
5. Percentage of NHS bridges by deck area in good condition	Deck area of NHS bridges with condition index of 7 or above (deck, superstructure, and substructure) divided by deck area of all NHS bridges	National Bridge Inventory (NBI)
6. Percentage of NHS bridges by deck area in poor condition	Deck area of NHS bridges with any condition index of below 5 (deck, superstructure, and substructure) divided by deck area of all NHS bridges	NBI

Source: 23 CFR 490

Table H-6: Pavement Category Rating System

Category System	Good	Fair	Poor
IRI (inches/mile)	<95	95–170	>170
Rutting (inches)	<0.20	0.20–0.40	>0.40
Faulting (inches)	<0.10	0.10–0.15	>0.15
Cracking (%)	<5	5–20 (asphalt) 5–15 (JCP) 5–10 (CRCP)	>20 (asphalt) >15 (JCP) >10 (CRCP)

Notes: Asphalt – International Roughness Index (IRI), rutting, cracking percent; JCP – IRI, faulting, cracking percent; CRCP – IRI, cracking percent

2025 Regional Plan and 2027 RTIP Investments

The 2025 Regional Plan includes \$125 billion dollars; approximately 27% of that is established for maintenance and operations on highways and local streets and roads. As projects transition from the Regional Plan and are programmed into the RTIP, project sponsors provide information that allows summary statistics of investments on the NHS. The 2027 RTIP includes investments that are anticipated to help preserve, maintain, or enhance the condition of NHS facilities. This includes 14 pavement and 14 bridge projects on the NHS totaling nearly \$345 million dollars in the first four years of the 2027 RTIP. Tables H-7 and H-8 summarize the investments currently programmed in the 2027 RTIP that support the pavement and bridge performance targets, respectively.

Table H-7: 2027 RTIP Pavement Program Summary (FY2027-2030)

Project Phase	Investment (\$000)
Environmental / Preliminary Engineering / Design	\$30,000
Right-of-Way	\$1,000
Construction	\$103,000
Total	\$134,000

Source: ProjectTrak, June 2026

Table H-8: 2027 RTIP Bridge Program Summary (FY2027-2030)

Project Phase	Investment (\$000)
Environmental / Preliminary Engineering / Design	\$18,000
Right-of-Way	\$1,000
Construction	\$192,000
Total	\$211,000

Illustrative Projects

- Regionwide, Caltrans District 11 is delivering the Grouped Projects for Pavement Resurfacing and Rehabilitation SHOPP Roadway Preservation Program, CAL46E, which includes drainage system restoration, system enhancements, and pavement rehabilitation to various parts of the county.
- Regionwide, Caltrans District 11 is delivering the Grouped Highway Bridge Program and SHOPP Bridge Rehabilitation and Reconstruction programs. CAL46D upgrades and reconstructs bridges countywide. In the City of San Marcos, SM56 will provide funding for the Bent Avenue Bridge and Improvement Project, as part of the San Marcos Creek Specific Plan set of projects to construct a new two-lane bridge at Bent Avenue to replace an existing two-lane low water crossing.

Interagency Coordination

SANDAG coordinates and collaborates on transportation infrastructure-related concerns and projects with local jurisdictions, Caltrans, and the public through taskforces and committees. The Infrastructure Conditions performance targets on pavement and bridge conditions were developed in coordination with the Transportation Committee. For more information see Interagency Coordination in the introduction section.

Target Achievement and Future Target Setting

On October 5, 2018, the Transportation Committee approved supporting the two-year and four-year statewide pavement and bridge condition targets established by Caltrans for the first performance period. This performance period spanned from 2018 to 2021. In consultation with MPOs, Caltrans reviewed the statewide data in 2020 and elected not to change the four-year targets. In 2022, [FHWA](#) determined that California made significant progress on Interstate and poor condition non-Interstate NHS pavements based on target achievement. Significant progress was not made for non-Interstate good pavements and bridges conditions, requiring additional reporting by Caltrans.

The second performance period spanned from 2022 to 2025. SANDAG participated in the development of Caltrans' 2022 Transportation Asset Management Plan which informed the second performance period targets. On February 3, 2023, the Transportation Committee approved Caltrans' two and four-year targets for statewide pavement and bridge conditions. Once the full performance period has elapsed, FHWA will determine if California has made significant progress toward meeting the pavement and bridge condition targets. SANDAG continues to collaborate with Caltrans, FHWA, and other California MPOs on monitoring progress towards targets.

The third performance period spans from 2026-2029. SANDAG participated in Caltrans statewide coordination and data collection efforts on anticipated investment that will support PM 2 performance. On July 18, 2025, the Transportation Committee approved regional asset condition estimates.

System Performance, Freight, and Congestion Mitigation and Air Quality (PM 3)

Target-Setting Process

The System Performance, Freight, and Congestion Mitigation and Air Quality performance management area (System Performance), also referred to as PM 3, consists of six performance measures that support three federal programs: National Highway Performance Program (NHPP), freight movement, and CMAQ. The target-setting process and timeframe are specific to each of these programs. This section summarizes the target-setting timeframes, processes, and performance periods for the performance measures included in System Performance.

Three of the performance measures included in System Performance allow SANDAG and all MPOs the option of supporting the state department of transportation's targets or developing and supporting regional targets. For these performance measures SANDAG has elected to support the statewide targets. These measures include the percent of reliable person-miles traveled on the interstate, percent of reliable person-miles traveled on the non-interstate NHS, and percent of interstate system mileage providing reliable truck travel time.

The performance measure related to total emissions reductions by applicable pollutants under the CMAQ Program allows MPOs to establish regional targets based on emissions anticipated to be reduced from CMAQ-funded projects.

The following two performance measures require Caltrans and SANDAG to establish a single, unified target for the urbanized area within the SANDAG planning area. Figure H-2 shows Census Urbanized Area.

- Annual Hours of Peak-Hour Excessive Delay per Capita
- Percent of Non-Single-Occupancy Vehicle (SOV) Travel

Figure H-2: 2010 and 2020 Census Urbanized Areas

Source: SANDAG

The target-setting timeframes for PM 3 performance measures vary by the associated federal program. Table H-9 summarizes the target-setting dates for each of the PM 3 performance measures. On February 3, 2023, the Transportation Committee approved supporting the statewide targets for system performance, freight, and CMAQ established by Caltrans in accordance with the FAST Act.

The CMAQ emissions-reduction measure's four-year performance period follows the federal fiscal year and spans from October 1, 2022, to September 30, 2025. The remaining performance measures follow the calendar year, starting January 1, 2022, and ending December 31, 2025.

Table H-9: Statewide and Regional System Performance Management Target-Setting Approvals

Program	Performance Measure	Dates Targets Established
NHPP	1. Percent of Reliable Person-Miles Traveled on the Interstate	February 3, 2023
	2. Percent of Reliable Person-Miles Traveled on the Non-Interstate NHS	
Freight movement on the interstate system	3. Percent of Interstate System Mileage Providing Reliable Truck Travel Time (Truck Travel Time Reliability Index)	February 3, 2023
CMAQ	4. Percent of Non-SOV Travel	September 16, 2022
	5. Annual Hours of Peak-Hour Excessive Delay per Capita	
	6. Total Emissions Reductions by Applicable Pollutants under the CMAQ Program	

Source: 23 CFR 490, SANDAG

Table H-10 includes the adopted target for each PM 3 performance measure and 2022 baseline data where available. The CMAQ total emission-reduction performance target reflects the anticipated cumulative emission reduction to be reported in the CMAQ Public Access System.

Table H-10: Statewide and Regional System Performance Management Targets¹¹

Performance Measures	Baseline Data (2021)	Two-Year Target 2023	Four-Year Target 2025	Desired Trend
Percent of Reliable Person-Miles Traveled on the Interstate	73.8%	74.3% (+0.5%)	73.8% (0.0%)	Increase
Percent of Reliable Person-Miles Traveled on the Non-Interstate NHS	83.7%	84.2% (+0.5%)	83.7% (0.0%)	Increase
Percent of Interstate System Mileage Providing Reliable Truck Travel Time (Truck Travel Time Reliability Index)	1.60	1.60 (0.00)	1.60 (0.00)	Increase
Total Emissions Reductions by Applicable Pollutants under the CMAQ Program				Increase
San Diego Urban Area (UA) ¹²				
VOC (kg/day)		66	137	
CO (kg/day)		0	0	
NOx (kg/day)		82	168	
Statewide				
VOC (kg/day)	2,551.00	2,862.00	5,724.00	
CO (kg/day)	21,771.00	12,798.00	25,596.00	
NOx (kg/day)	7,213.00	4,317.00	8,635.00	
PM 10 (kg/day)	3,830.00	2,152.00	4,305.00	
PM 2.5 (kg/day)	1,537.00	1,830.00	3,659.00	
Annual Hours of Peak-Hour Excessive Delay per Capita				Decrease
San Diego UA	11.9 hours	11.9 hours	11.9 hours	
Percent of Non-SOV Travel				Increase
San Diego UA	36.20%	36.20%	36.20%	

Sources: Caltrans and SANDAG 2023; National Performance Management Research Data Set ([NPMRDS](#)) [Analytics Tool](#); U.S. Census Bureau, 2012–2016 American Community Survey 5-Year Estimates

Notes: Statewide emissions targets established by Caltrans

¹¹ Caltrans is currently coordinating with Metropolitan Planning Organizations statewide to develop 2027 and 2029 PM 3 targets. Once approved, the new targets will be incorporated into future RTIP documents.

¹² The CMAQ total emission-reduction performance target reflects the anticipated cumulative emission reduction to be reported in the CMAQ Public Access System.

Measures and Methodology

For the reliable person-miles traveled performance measures, the Level of Travel Time Reliability (LOTTR) is first calculated for each applicable roadway segment for four time periods: 6 to 10 a.m., 10 a.m. to 4 p.m., 4 to 8 p.m. on weekdays, and 6 a.m. to 8 p.m. during weekends. The LOTTR is the 80th percentile travel time divided by the 50th percentile travel time. The LOTTR is weighed by the facility segment length, annual traffic volume, and vehicle occupancy value.

Freight movement is assessed by a Truck Travel Time Reliability (TTTR) Index. Reporting is divided into five periods: morning peak (6 to 10 a.m.), midday (10 a.m. to 4 p.m.) and afternoon peak (4 to 8 p.m.) Mondays through Fridays; weekends (6 a.m. to 8 p.m.); and overnights for all days (8 p.m. to 6 a.m.). The TTTR ratio is generated by dividing the 95th percentile time by the normal time (50th percentile) for each segment. Then, the TTTR Index is generated by multiplying each segment's largest ratio of the five periods by its length then dividing the sum of all length-weighted segments by the total length of Interstate.

The Annual Hours of Peak Hour Excessive Delay per Capita is the amount of time spent in congested conditions, which are defined as conditions that result in excess delay at speeds of 20 miles per hour (mph) or 60% of the posted speed limit, whichever is greater. Travel time data is aggregated in 15-minute intervals per vehicle. The morning period is 6 to 10 a.m. on weekdays. The afternoon period is 3 to 7 p.m. or 4 to 8 p.m., providing flexibility to state DOTs and MPOs.

Additional details on the methodology used in calculating the six performance measures included in System Performance are summarized in Table H-11.

Table H-11: System Performance Measure Methodology

Performance Measure	Calculation	Data Source	Desired Trend
1. Percent of Reliable Person-Miles Traveled on the Interstate	Percent of Interstate by length with an LOTTR less than 1.5	National Performance Measure Research Data Set (NPMRDS)	Increase
2. Percent of Reliable Person-Miles Traveled on the Non-Interstate NHS	Percent of non-Interstate NHS by length with an LOTTR less than 1.5	NPMRDS	Increase
3. Percent of Interstate System Mileage Providing Reliable Truck Travel Time (Truck Travel Time Reliability Index)	Weighted sum of reliable segments divided by all segments	NPMRDS	Increase
4. Total Emissions Reductions by Applicable Pollutants under the CMAQ Program	Daily Kilograms of Emission Reductions	CMAQ Public Access System	Increase
5. Annual Hours of Peak-Hour Excessive Delay per Capita	Time of excess delay weighted by average vehicle volume and occupancy by vehicle class	NPMRDS, HPMS	Decrease
6. Percent of Non-SOV Travel	Commute to work totaled by mode, five-year estimate	American Community Survey (ACS)	Increase

Source: 23 CFR 490

2025 Regional Plan and 2027 RTIP Investments

A foundational element of the 2025 Regional Plan is the continued development of a regional transportation system that provides multimodal transportation options to the traveling public and commerce. Fostering travel choices between the places where people live, work, and play supports travel time reliability, promotes non-SOV travel, and reduces excessive delay and pollutant emissions.

Table H-12 summarizes the program investments anticipated to support each of the System Performance measures. Supporting projects were identified by their project title, description, and type. Five interstate projects such as safety, pavement, and shoulder improvements support both Reliable Person-Miles Traveled on the Interstate and Truck Travel Time Reliability Index. Reliability on the non-Interstate NHS is supported by eight projects. CMAQ emission reductions are supported by three projects aimed at Rapid transit, and managed lane development. Sixteen projects support reduction in Annual Hours of Peak-Hour Excessive Delay principally through Intelligent Transportation Systems (ITS) improvement. Percent of Non-SOV Travel is supported by 115 multimodal projects such as pedestrian, bicycle, transit, and managed lane improvements.

Table H-12: 2027 RTIP System Performance Program Summary (FY2027-2030)

Performance Measures	Investment (\$000)
Percent of Reliable Person-Miles Traveled on the Interstate	\$128,000
Percent of Reliable Person-Miles Traveled on the Non-Interstate NHS	\$119,000
Percent of Interstate System Mileage Providing Reliable Truck Travel Time (Truck Travel Time Reliability Index)	\$212,000
Total Emissions Reductions by Applicable Pollutants under the CMAQ Program	\$23,000
Annual Hours of Peak-Hour Excessive Delay per Capita	\$102,000
Percent of Non-SOV Travel	\$1,172,000
Total	\$1,756,000

Source: ProjectTrak, June 2026

Illustrative Projects

- In San Diego County, CAL571 funds preliminary engineering of transit priority lanes along Interstate 805 between State Routes 94 and 52.
- Regionwide, SAN54 funds the implementation and deployment of ITS projects such as Intermodal Transportation Management System, 511 Advanced Traveler Information System; activities include data collection, dissemination, and software upgrades.
- Regionwide, SAN11A funds Regional Rideshare Program, a component of the regional Transportation Demand Management program.

Interagency Coordination

SANDAG coordinates and collaborates on transportation infrastructure-related concerns and projects with local jurisdictions, Caltrans, and the public through established taskforces and committees. The PM 3 targets on System Performance, Freight, and CMAQ were developed in coordination with the Transportation Committee. For more information see Interagency Coordination in the introduction section.

Target Achievement and Future Target Setting

On October 5, 2018, the Transportation Committee approved supporting the statewide targets established by Caltrans for the three reliability performance measures in accordance with the FAST Act. This performance period covered the years 2018-2021. In consultation with MPOs, Caltrans reviewed the statewide data in 2020 and elected not to change the fourth-year targets. In 2022 FHWA determined that California made significant in the areas of Interstate and non-Interstate travel time reliability and freight reliability. For person hours of excessive delay and non-single occupancy vehicle travel, the San Diego urbanized area met the four-year targets and FHWA noted that the region planned and implemented projects that helped meet their target.

On February 3, 2023, the Transportation Committee approved supporting the statewide targets for the three reliability performance measures for the second performance period covering the years 2022-2025. Following the completion of the performance period, FHWA will determine if California has made significant progress toward meeting the targets established for Interstate and non-Interstate NHS travel time reliability and freight reliability measures. SANDAG continues to collaborate with Caltrans, FHWA, and other California MPOs on the monitoring of progress towards targets.

On July 18, 2025, the Transportation Committee approved regional asset condition estimates for the third performance period, which spans from 2026-2029. SANDAG is required to complete performance-based planning and programming including target setting, performance monitoring, and target achievement support for defined federal performance management areas.

FTA Performance Measures

The 2027 RTIP performance on the two performance management focus areas defined by the FTA are summarized below.

Regional Transit Asset Management

Target-Setting Process

Transit Asset Management (TAM) focuses on maintaining transit assets in a state of good repair. The SANDAG planning area includes three providers of public transportation subject to target-setting requirements: MTS, NCTD, and SANDAG. The provider targets are established by each transit agency separately for their service areas during the development of their four-year TAM Plan. The provider targets are updated annually. MPOs, in coordination with providers, are responsible for developing regional TAM targets. MPOs are required to set TAM targets with each update of their Regional Transportation Plan.

The TAM Final Rule includes four asset categories: equipment, facilities, infrastructure, and rolling stock. There is one performance measure for each asset category. Each asset category may contain several asset types, which are calculated separately. Regional TAM targets are required for each asset type. The performance measures are calculated such that a value of zero indicates that the asset type is in a state of good repair. The 2019, 2020, and 2029 regional TAM targets are shown in Table H-13. Coordination of current targets occurred in 2024 and involved multiple meetings with each transit provider. These discussions resulted in a target horizon change. The targets in the 2025 Regional Plan are four-year targets (2029) matching the Regional Plan update cycle. Prior targets were one-year targets. Regional targets are based on historical performance using a weighted calculation, transit provider targets, anticipated investments, and asset age. In October 2024, the Transportation Committee approved 2029 regional TAM targets.

Table H-13: Regional TAM Targets

Asset Category:		Equipment		
		Non-revenue support-service and maintenance vehicles		
Performance Measure:		Percentage of nonrevenue vehicles met or exceeded Useful Life Benchmark (ULB) ¹³		
Asset Type		2019 Regional Targets	2020 Regional Targets	2029 Regional Targets
Automobiles		33.3%	61.7%	0%
Trucks and other Rubber Tire Vehicles		50.5%	50.0%	10%
Steel Wheel Vehicles		0.0%	0.0%	29%

Asset Category:		Facilities		
		Maintenance and administrative facilities; and passenger stations (buildings) and parking facilities		
Performance Measure:		Percentage of assets with condition rating below 3.0 on FTA Transit Economic Requirements Model (TERM) Scale ¹⁴		
Asset Type		2019 Regional Targets	2020 Regional Targets	2029 Regional Targets
Passenger Facilities		0.0%	0.0%	0.0%
Passenger Parking Facilities		0.0%	0.0%	0.0%
Maintenance Facilities		0.0%	0.0%	0.0%
Administrative Facilities		0.0%	0.0%	0.0%

Asset Category:		Infrastructure		
		Only rail fixed-guideway, track, signals, and systems		
Performance Measure:		Percentage of track segments with performance restrictions ¹⁵		

¹³ Useful Life Benchmark (ULB) is a value used with lifecycle cost to assess when an asset costs more to maintain than to replace. MTS and NCTD used the same ULB.

¹⁴ TERM is a five-point scale (1–5) with one signifying poor condition and five excellent.

¹⁵ A performance restriction exists when the permissible speed is less than the guideway's full-service speed. For more details on infrastructure performance, refer to the FTA [Performance Restriction \(Slow Zone\) Calculation](#).

Asset Type	2019 Regional Targets	2020 Regional Targets	2029 Regional Targets
Commuter Rail	2.0%	1.0%	0.17%
Hybrid Rail ¹⁶		0.5%	0%
Light Rail	1.8%	2.0%	3.5%

Asset Category:

Rolling Stock
Revenue vehicles by mode

Performance Measure:

Percentage of revenue vehicles met or exceeded Useful Life Benchmark

Asset Type	2019 Regional Targets	2020 Regional Targets	2029 Regional Targets
Articulated bus	0.0%	0.0%	0.0%
Over-the-road bus	0.0%	0.0%	0.0%
Bus	13.8%	11.7%	5.0%
Cutaway Bus	7.2%	3.7%	10.0%
Light rail vehicle	0.0%	0.0%	1.0%
Minivan	100.0%	100.0%	4.0%
Commuter rail locomotive	71.0%	71.4%	0%
Commuter rail passenger coach	57.0%	57.1%	71.0%
Vintage trolley/streetcar ¹⁷	0.0%	100.0%	100.0%

Source: SANDAG, 2024

¹⁶ The NCTD SPRINTER rail was reclassified as hybrid rail for 2020. Previously it was classified as light rail.

¹⁷ Vintage rolling stock are older vehicles that are not anticipated to improve in their ULB but are used in limited purposes.

To coordinate the development of regional TAM targets, MTS and NCTD provided SANDAG with their respective target values and inventory quantities by asset type. MTS and NCTD target and inventory values were applied in developing regional TAM targets using a weighted average calculation.¹⁸

Measures and Methodology

The performance measures and their calculations are specified in the TAM Final Rule. Additionally, the asset types that are included in each asset category are established by FTA and detailed in the FTA [Asset Inventory Module](#). The infrastructure asset category assesses performance restrictions on rail segments. A performance restriction exists when the permissible speed is less than the guideway's full-service speed. For more details on infrastructure performance, refer to the FTA [Performance Restriction \(Slow Zone\) Calculation](#).

2025 Regional Plan and 2027 RTIP Investments

The 2025 Regional Plan includes \$125 billion dollars in transportation investments; 27% of that is for operations and maintenance and 57% for capital, the majority of which are complete corridor investments that support transit. Transit capital investments include construction of transit facilities and procurement of transit fleet vehicles. Transit operations and maintenance include costs associated with running the transit system, repairs, and preventative maintenance. The 2027 RTIP was reviewed for projects sponsored by SANDAG, MTS, and NCTD that include elements that corresponded to a TAM asset category as shown in Table H-14. The 2027 RTIP includes 42 projects totaling approximately \$1.2 billion dollars in support of TAM targets.

Table H-14: 2027 RTIP Regional TAM Programming (FY2027-2030)

Project Asset Category ¹⁹	MTS (\$000)	NCTD (\$000)	SANDAG (\$000)	Total TAM Programming (\$000)
Equipment	\$—	\$—	\$—	\$—
Facilities	\$17,000	\$165,000	\$24,000	\$206,000
Infrastructure	\$81,000	\$6,000	\$440,000	\$527,000
Rolling Stock	\$530,000	\$16,000	\$1,000	\$547,000
Total	\$628,000	\$187,000	\$465,000	\$1,280,000

Source: ProjectTrak, June 2026

Illustrative Projects

- In the MTS service area, MTS28 funds the purchase of new buses and rail cars to replace existing vehicles or support minor expansions of the fleet. This project helps ensure that the region's transit assets remain in a state of good repair.

¹⁸ The calculation involved multiplying each provider's target by their inventory. The results were added together, divided by the sum of the inventories, and multiplied by 100.

¹⁹ Many projects address multiple TAM priority areas, such as rolling stock replacement and infrastructure upgrades. For Table H-14, each qualifying project was assigned one project asset category that best aligned with the project description.

- In the NCTD Service Area, NCTD05 funds the purchase of new buses and rail cars to replace existing vehicles or support minor expansions of the fleet, ensuring that the region's transit assets remain in a state of good repair.

Interagency Coordination

In 2018, SANDAG, MTS, and NCTD updated their master MOU agreements to include provisions on the sharing of TAM and performance data, including targets, inventory, and asset conditions. SANDAG continues to coordinate and collaborate with the MTS, NCTD, and FTA to support TAM objectives. For more information see Interagency Coordination in the introduction section.

Target Achievement and Future Target Setting

The SANDAG Transportation Committee adopted the 2029 regional TAM targets at its November 15, 2024 meeting. These were ratified by the SANDAG Board of Directors at the November 22, 2024 meeting. As data is shared by MTS and NCTD, in alignment with their annual updates, SANDAG will continue to work with the providers and FTA to monitor progress on achievement of regional TAM targets.

Regional Public Transportation Safety

Target-Setting Process

On April 9, 2024, the FTA published the first major update to the Public Transportation Agency Safety Plan (PTASP) Final Rule (49 CFR §673) regulating how Chapter 53 grantees would have to implement federally mandated safety standards. The rule's effective date was May 13, 2024. The MPO's initial transit safety targets are to be set within 180 days of receipt of the safety performance targets from the transit agencies. The MPO then revisits its targets based on the schedule for preparation of its system performance report that is part of the Metropolitan Transportation Plan (MTP). See FTA's Public Transportation Agency Safety Program page for more information about the Notice²⁰.

The final rule specifically requires transit agencies receiving federal funds to develop a safety plan and annually self-certify compliance with that plan. The National Public Transportation Safety Plan identifies four performance measures that must be included in the transit agency safety plans: number of fatalities, number of injuries, safety events, and system reliability²¹. Each transit agency must make its safety performance targets available to MPOs to assist in the planning process and to coordinate, to the maximum extent practicable, with the MPO in selecting regional transit safety targets.

²⁰ Final Rule: Public Transportation Agency Safety Plans (PTASP), FTA (<https://www.transit.dot.gov/regulations-and-programs/safety/public-transportation-agency-safety-program/final-rule-public>)

²¹ In April 2024, FTA included seven new performance measures in compliance with Safety Risk Reduction Program requirements set by the Bipartisan Infrastructure Law. The new measures are: Collision Rate, Pedestrian Collision Rate, Vehicular Collision Rate, Transit Worker Fatality Rate, Transit Worker Injury Rate, Assaults on Transit Workers, and Rate of Assaults on Transit Workers. The seven new performance measures will be included in the subsequent Regional Plan. The measure previously known as "Safety Events" was renamed to "Major Events" in the 2024 National Public Transportation Safety Plan (NPTSP)

Regional public transportation safety focuses on transit safety events. The SANDAG planning area includes two providers of public transportation subject to the agency target-setting requirement: MTS and NCTD. The provider targets are established by each transit agency separately for their service areas during the development of their four-year Public Transportation Agency Safety Plan (PTASP). The provider targets are updated annually. MPOs, in coordination with providers, are responsible for developing regional public transportation safety targets. MPOs are required to set regional public transportation safety targets with each update of their Regional Transportation Plan.

Staff from MTS, NCTD, and SANDAG reviewed transit safety data from 2015 to 2023 to develop the 2029 regional targets included in Table H-15. Data from the National Transit Database was reviewed with performance measure calculation processes from FTA's PTASP Technical Assistance Center. Historic trends along with the most current observed data informed target development.

Table H-15: Regional Public Transportation Safety Targets

Performance Measure	2020 Regional PTASP Targets			2029 Regional PTASP Targets		
	Fixed-Route Bus	Non-Fixed-Route Bus	Rail Transit	Fixed-Route Bus	Non-Fixed-Route Bus	Rail Transit
Number of fatalities	0	0	0	1	0	4
Fatality rate by 100,000 vehicle revenue miles (VRM)	0	0	0	0.004	0.00	0.02
Number of injuries	150	6	120	105	5	99
Injury rate by 100,000 VRM	0.5	0.1	1.2	0.44	0.13	0.75
Number of safety events	140	7	130	119	7	86
Safety event rate by 100,000 VRM	0.7	0.1	2.3	0.50	0.18	0.65
System reliability	6,000	20,000	15,000	8,000	38,000	39,000

Source: SANDAG – In coordination with MTS and NCTD

Measures and Methodology

The performance measures and their calculations are specified by FTA's National Public Transportation Safety Plan. Additional information on calculation processes is included in FTA's PTASP Technical Assistance Center. The data used is from the National Transit Database. Performance measures relating to fatalities, injuries, and safety events include all reportable incidents with the exceptions of trespass and suicide. System reliability is the mean distance between major mechanical failure by mode.

2025 Regional Plan and 2027 RTIP Investments

Public transportation safety is embedded into every project that touches the region's transit system. Some projects are explicitly focused on safety outcomes while others include safety benefits through procurement, maintenance, or capital improvements. Procurement of new equipment brings the latest safety features, maintenance extends system reliability and keeps safety features operational, capital improvements include safety elements within project designs. Roadway construction projects that focus on safety or include safety elements will also help public transportation safety where the transit network overlaps with the improvements. Investments in roadway construction projects that benefit safety are summarized in the Transportation Safety (PM 1) section of this appendix.

Projects included in the 2027 RTIP investment for regional public transportation safety included new equipment procurement, vehicle and public facility maintenance, transit specific facility upgrades, and communications projects. In the 2027 RTIP 33 transit safety projects were identified totaling \$651 million dollars in investments.

Table H-16: 2027 RTIP Regional Public Transportation Safety Programming (FY2027-2030)

2027 RTIP Public Transportation Safety Funding (\$000)			
MTS	NCTD	SANDAG	Total programming
\$35,000	\$178,000	\$438,000	\$651,000

Source: ProjectTrak, June 2026

Illustrative Projects

- In Chula Vista, SAN261 funds the installation of railroad and highway crossing warning devices along Palomar Street.
- In the MTS service area, MTS28 procures fixed route bus and light rail vehicle replacements. Light rail vehicle procurement includes replacements of high-floor vehicles with low-floor vehicles.
- In the NCTD service area, NCTD05 procures fixed route buses, and the programmatic rebuild of fixed route bus engines and transmissions.

Interagency Coordination

In 2020 and 2021, SANDAG, MTS, and NCTD updated their master MOU to include provisions on the sharing of public transportation safety performance data, including targets. SANDAG continues to coordinate and collaborate with the MTS, NCTD, and FTA to support public transportation safety objectives. For more information see Interagency Coordination in the introduction section.

Target Achievement and Future Target Setting

The SANDAG Transportation Committee adopted the 2029 regional public transportation safety targets at its November 15, 2024 meeting. These were ratified by the SANDAG Board of Directors at the November 22, 2024 meeting. As data is shared by MTS and NCTD, in alignment with their annual updates, SANDAG will continue to work with the providers and FTA to monitor progress on achievement of regional PTASP targets.

SANDAG Funding and Project Selection Process

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Appendix I

SANDAG Funding and Project Selection Process

1.0 Introduction

Federal Guidelines for Congestion Mitigation and Air Quality (CMAQ) funding state Metropolitan Planning Organizations (MPOs), state Departments of Transportation, (DOTs) and transit agencies *"should develop CMAQ project selection processes in accordance with the metropolitan and/or statewide planning process under 23 U.S.C. 134 and 135."* The project selection process should be transparent, in writing, and publicly available. State DOTs and MPOs should develop an appropriate project list of CMAQ programming priorities that will have the greatest impact on air quality.

This document provides that selection process and describes the agency's strategy for applying Regional Surface Transportation Program (RSTP) also known as Surface Transportation Block Grant (STBG) funding to projects. The process will be updated for new federal formula funding types that will be made available through the Infrastructure Investments and Jobs Act (2021).

2.0 Background

Planning and programming actions for federal formula funded projects and programs are guided by the Board-adopted Regional Plan, the SANDAG Capital Improvement Program (CIP) as included in the SANDAG Program Budget, the Regional Transportation Improvement Program (RTIP), and Federal Performance Management Targets.

The Regional Plan provides the long-term vision and goals for how SANDAG will build and support transformative transportation projects for the region. SANDAG's Regional Plan demonstrates how transportation projects and programs in San Diego County conform to State of California and federal air quality mandates for funding eligibility. It identifies strategies to reduce regional greenhouse gas (GHG) and criteria air pollutant emissions (including ozone, CO, and PM2.5).

Unlike many MPOs, SANDAG funds and builds regional capital projects identified in the long-range transportation plan. SANDAG is governed by a [Board](#) composed of mayors, councilmembers, and county supervisors from each of the region's 19 local governments. Supplementing these voting members are advisory representatives from Imperial County, the U.S. Department of Defense, Caltrans, San Diego Unified Port District, Metropolitan Transit System, North County Transit District, San Diego County Water Authority, Southern California Tribal Chairmen's Association, Mexico, and the San Diego County Regional Airport Authority. The CIP is a ten-year action plan for the investments, policies, and system improvements and capital projects needed to advance the Regional Plan vision. The CIP addresses regional economic growth, while improving regional mobility, air quality, economic resilience, and access to opportunity such as jobs, education, health care and recreation.

The RTIP lists the projects, programs and activities that will be funded during the next five years after receiving federal approval. It includes those projects selected for federal formula funds from both the CIP and the Overall Work Program as approved by the Board. SANDAG must adopt a financially constrained RTIP, which also meets other federal requirements, to remain eligible to receive federal and state funding.

Federal Performance Management Targets, adopted by the Board, provide near and mid-term anticipated outcomes for the transportation network. These inform and are informed by planning and programming actions.

3.0 Funding Principles

The following are the funding principles of SANDAG regarding federal formula funds:

- 1) SANDAG's long-established practice for project funding is to spend outside funds before local funds and to spend the least flexible funds first with the objective of providing maximum flexibility to complete more transportation projects sooner and more cost-effectively. All projects in the SANDAG budget, which are eligible for federal funding, will be considered for federal formula funds.
 - a) Priority for new CMAQ and RSTP allocations will be given in the following order:
 - i) Previously approved and underway project phases will be funded to completion with RSTP and CMAQ funds unless additional funds are obtained through a competitive process.
 - ii) Future phases of projects already funded with CMAQ and RSTP will be prioritized for funding in the order needed based on project schedules to complete project delivery milestones.
 - iii) Other on-going project phases (not currently funded with RSTP or CMAQ) that are eligible for CMAQ and RSTP funding will be evaluated and ranked. Funding will depend on project readiness and ability to timely expend the funds.
 - iv) Unfunded and new candidate projects will be evaluated for consideration following project readiness, network connectivity, Board priorities, and evaluation criteria from the adopted Regional Transportation Plan.
- 2) SANDAG also endeavors to expend as much of its annual appropriation of federal formula funds as possible by obligating funds early and competing for additional Obligation Authority (OA) from the state. If possible, SANDAG will request to obligate more than the annual OA to support California in obtaining additional funds in the August redistribution. SANDAG does not, as a matter of practice, attempt to carry over a reserve of federal formula funds.
- 3) Program five years of federal formula funds in the RTIP based on estimated apportionment amounts provided by Caltrans, consistent with how they will be obligated and expended as shown in the CIP.

4.0 Project Selection and Funding Process

- 1) The Board prioritizes the projects, which it will implement through the annual budget process. The budget is guided by the projects in the Regional Plan, which are regional priorities, as well as projects in the [TransNet Extension Ordinance](#), approved by voters in 2004, and amended as needed by the Board.

- 2) Since SANDAG does not conduct a call for projects for federal formula funds, SANDAG applies regional funds to projects which SANDAG implements for the benefit of the region. These projects are included in the CIP and are selected from projects in the TransNet Ordinance and the Regional Transportation Plan.
 - a) TransNet Ordinance - The projects in the TransNet Ordinance can be amended by a 2/3 majority of the Board and the TransNet Ordinance is amended to be consistent with the adopted Regional Plan. The TransNet Ordinance also provides funding to local agencies on a formula basis which is driven by population and maintained miles. Board practice has been to apply 90% of federal formula funds to projects identified in the TransNet Ordinance.
 - b) Regional Transportation Plan - Projects are prioritized in the Regional Transportation Plan. The projects in the Regional Plan are evaluated and prioritized in multimodal project bundles using evaluation criteria developed, through a robust public process, to reflect plan goals. The evaluation criteria encompass federal transportation performance management planning objectives for safety, infrastructure condition, congestion reduction, system reliability, freight movement and economic vitality, environmental sustainability, and reduction of delivery delays. The evaluation criteria are described in Appendix N of the 2025 Regional Plan Appendix T in Attachment N3. The data sources for the evaluation criteria are included in Attachment N1.3 and the detailed methodology for each evaluation criteria indicator is included in Attachment N3. Attachment N4 details performance measure results for the 2025 Regional Plan, including safety (PM 1) peak delay, congestion, and freight (PM 3). The projects selected in the Regional Plan will help the region make progress towards achieving PM targets. Reliability is informed by evaluation criteria Mode Availability and Transit Reliability. Appendix P provides a more detailed discussion of how the Regional Plan is designed to make progress towards achieving PM targets including project selection and funding as well as implementation strategies. This discussion is included for each performance measure.
 - c) CIP - The Region's priorities, established in the TransNet Ordinance and the Regional Plan, combined with project phasing, inform the development and inclusion of projects in the annual CIP. Projects are selected to be implemented in the budget based on the Open to Traffic dates modeled for the Regional Plan and the project development plan of the individual project. For instance, if a project needs to open in 2037 and it is expected to take ten years, then it must be included in the budget by 2027. The Board occasionally establishes additional priorities which would give increased weighting to a project.
- 3) During the budget development cycle, all projects will be evaluated for eligibility for federal funds per the SANDAG funding priorities. Those projects that are eligible will be further evaluated for eligibility for each fund type. If the projects can potentially demonstrate emissions reductions, they will be added to the list of potential CMAQ projects. Recommendations to the Board on funding for projects included in the Capital Improvement Program are made by the Financial Planning, Budgets and Grants department, approved by the Executive Committee and adopted by the Board.

5.0 CMAQ Project Selection

The CMAQ funding program was created under the federal Intermodal Surface Transportation Equity Act (1991) and reauthorized under the Transportation Equity Act for the 21st Century (1998), the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU, 2005), the Moving Ahead for Progress in the 21st Century Act (2012) and the Fixing Americas Surface Transportation Act (FAST Act, 2015) and the Infrastructure Investment and Jobs Act.

The purpose of the CMAQ program is to fund transportation projects/programs, which will contribute to the attainment or maintenance of the National Ambient Air Quality Standards for ozone, carbon monoxide (CO), and particulate matter (both PM 10 and PM 2.5).

According to the latest guidance (Nov 2013) from the Air Quality and Transportation Conformity Team in FHWA's Office of National Environment, in cooperation with the FTA's Office of Planning and Environment, the CMAQ program supports two important goals of the U.S. DOT: improving air quality and relieving congestion – in other words, reducing pollution and adverse environmental effects of transportation projects and transportation system inefficiencies. The CMAQ program provides funding for a broad array of tools to accomplish these goals while ensuring compliance with the transportation conformity provisions of the Clean Air Act Amendments of 1990.

Project Screening

All capital projects in the SANDAG budget will be screened for CMAQ eligibility. This screening will consider the project type from the list below, its current funding levels and project readiness. Projects which are eligible project types will be considered eligible for CMAQ if they can achieve/expect to achieve National Environmental Policy Act.

- 1) Eligibility - The following activities are eligible for funding with CMAQ:
 - a) Transportation activities in the approved State Implementation Plan
 - b) Bicycle and pedestrian programs
 - c) Traffic monitoring, management, and control operations
 - d) Emission inspection and maintenance programs
 - e) Planning and air quality monitoring projects that lead directly to construction or new services or programs that have an air quality benefit
 - f) Public-private partnerships which allow limited eligibility for privately owned or operated alternative fuel vehicles and facilities under certain circumstances
 - g) Extreme low temperature cold start programs
 - h) Other transportation projects or programs not listed above may be considered for funding if endorsed by the air quality control district if the project can be shown to help attain federal air quality standards for the region.

- i) Specific transportation control measures listed in the federal Clean Air Act, which include:

Programs for improved public transit; restriction of certain roads or lanes to, or construction of such roads or lanes for use by passenger buses or high occupancy vehicles; employer-based transportation management plans, including incentives; trip-reduction ordinances; traffic flow improvement programs that achieve emission reduction; fringe and transportation corridor parking facilities serving multiple occupancy vehicle programs or transit service; programs to limit or restrict vehicle use in downtown areas or other areas of emission concentration particularly during periods of peak use; programs for the provision of all forms of high occupancy, shared-ride services; programs to limit portions of road surfaces or certain sections of the urbanized area to the use of non-motorized vehicles or pedestrian use, both as to time and place; programs for secure bicycle storage facilities and other facilities, including bicycle lanes, for the convenience and protection of bicyclists, in both public and private areas; programs to control extending idling of vehicles; employer-sponsored programs to permit flexible work schedules; programs and ordinances to facilitate non-automotive travel, provision and utilization mass transit, and to generally reduce the need for single-occupant vehicle travel, as part of transportation planning and development efforts of a locality, including programs and ordinances applicable to new shopping centers, special events, and other centers of vehicle activity; programs for new construction and major reconstruction of paths, tracks or areas solely for the use by pedestrian or other non-motorized means of transportation when economically feasible and in the public interest.

The guidance document cited above states that MPOs, state DOTs, and transit agencies *"should develop CMAQ project selection processes in accordance with the metropolitan and/or statewide planning process under 23 U.S.C. 134 and 135."* The project selection process should be transparent, in writing, and publicly available. State DOT's and MPO's should develop an appropriate project list of CMAQ programming priorities that will have the greatest impact on air quality.

Ranking Process

- 1) Each CMAQ eligible project identified in the capital budget will be scored on five factors. A project will be given one point for each factor below:
 - a) provides potential emissions reductions
 - b) reduces SOV travel
 - c) reduces delay
 - d) enhances safety
 - e) advances environmental justice
 - f) Projects which have been determined by the Board to be priority projects will be given an additional point
- 2) Next, the rank of each project in the Regional Plan will be determined and the total score will be weighted by the Regional Plan Cost Effectiveness ranking. Projects previously funded with CMAQ, which either have cost increases or have moved to a new phase of work will be assigned the highest ranking.

As the ranking in the Regional Plan incorporates the impact of a project on achieving federal performance management targets, it is anticipated that by funding the highest priority projects, CMAQ funding will support the region in reducing emissions causing Ozone and reducing traffic congestion.

- 3) Finally, funds will be assigned to the highest-ranking projects based on total project need and appropriation levels.

In certain cases, the Board may choose to prioritize different criteria, which may move a project ahead of other projects on the list. In addition, if a project is awarded a discretionary grant which CMAQ is eligible to match, that project may be accelerated in priority to meet the requirements of the grant.

- 4) Once developed, this list will be shared annually with the San Diego Air Pollution Control District (APCD). SANDAG will consult with APCD prior to finalizing the budget to obtain input on the projects selected for CMAQ. This will fulfill SANDAG's requirement to involve the local air quality agency.

The final approved list will be included in the RTIP with each biannual update and will be posted on the RTIP's webpage sandag.org/rtip. The programming of CMAQ and the project list will be reviewed by the Transportation Committee with the RTIP. The Transportation Committee will recommend that the Board adopt the RTIP.

- 5) Changes to funding levels or projects on the list will be guided by the policies governing changes to the program budget and will be incorporated in an RTIP amendment as needed. If additional projects are added to the list during an amendment, an updated list will be posted.

Cost-effectiveness

Projects nominated for CMAQ should make effective use of limited state and federal funds. Projects are weighted by the cost effectiveness adjusted ranking in the Regional Plan. Projects which are in the early stages of development, may estimate cost effectiveness based on the [cost-effectiveness tables](#) as updated by FHWA in July 2020.

In consultation with the APCD, SANDAG has not set a specific policy for cost effectiveness based on cost/benefit ratio or dollars spent per pound of pollutants reduced, this decision will be revisited in yearly check-ins.

6.0 RSTP Project Selection

Under the FAST Act, the long-standing RSTP was converted into the STBG. The STBG promotes flexibility in state and local transportation decisions and provides flexible funding to best address State and local transportation needs. (FAST Act § 1109(a)).

Per SANDAG's funding principles, a project will be funded with RSTP if it is federally eligible per the [guidelines](#), including NEPA clearance. Per the guidance, a project is eligible based on project location and activity. A project must not be undertaken on a local road or rural minor collector unless listed as an exception in the guidance. Eligible activities include:

- 6) Construction of highways, bridges, and tunnels; ferry boats and terminals; transit capital projects; infrastructure-based intelligent transportation systems capital improvements; truck parking facilities and border infrastructure projects.

- 7) Operational improvements and capital and operating costs for traffic monitoring, management, and control facilities and programs. Operational improvement is defined in 23 U.S.C. 101(a)(18).
- 8) Environmental measures eligible under 23 U.S.C. 119(g), 328, and 329, and transportation control measures listed in Section 108(f)(1)(A) (other than clause (xvi) of that section) of the Clean Air Act (42 U.S.C. 7408(f)(1)(A)).
- 9) Highway and transit safety infrastructure improvements and programs, including railway-highway grade crossings.
- 10) Fringe and corridor parking facilities and programs in accordance with 23 U.S.C. 137 and carpool projects in accordance with 23 U.S.C. 146. Carpool project is defined in 23 U.S.C. 101(a)(3).
- 11) Recreational trails projects eligible under 23 U.S.C. 206, pedestrian and bicycle projects in accordance with 23 U.S.C. 217 (including modifications to comply with accessibility requirements under the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.)), and the Safe Routes to School Program under Section 1404 of SAFETEA-LU (23 U.S.C. 402 note).
- 12) Planning, design, or construction of boulevards and other roadways largely in the right-of-way of former Interstate System routes or other divided highways.
- 13) Development and implementation of a state asset management plan for the National Highway System and a performance-based management program for other public roads.
- 14) Protection (including painting, scour countermeasures, seismic retrofits, impact protection measures, security countermeasures, and protection against extreme events) for bridges (including approaches to bridges and other elevated structures) and tunnels on public roads, and inspection and evaluation of bridges and tunnels and other highway assets.
- 15) Surface transportation planning programs, highway and transit research and development and technology transfer programs, and workforce development, training, and education under Chapter 5 of Title 23, United States Code.
- 16) Surface transportation infrastructure modifications to facilitate direct intermodal interchange, transfer, and access into and out of a port terminal.
- 17) Projects and strategies designed to support congestion pricing, including electronic toll collection and travel demand management strategies and programs.
- 18) Upon request of a state and subject to the approval of the Secretary, if Transportation Infrastructure Finance and Innovation Act credit assistance is approved for an STBG-eligible project, then the state may use STBG funds to pay the subsidy and administrative costs associated with providing federal credit assistance for the projects.

- 19) The creation and operation by a state of an office to assist in the design, implementation, and oversight of public-private partnerships eligible to receive funding under Title 23 and Chapter 53 of Title 49, United States Code, and the payment of a stipend to unsuccessful private bidders to offset their proposal development costs, if necessary to encourage robust competition in public-private partnership procurements.
- 20) Any type of project eligible under 23 U.S.C. 133 as in effect on the day before the FAST Act was enacted.

Projects included in the CIP will be eligible for RSTP funding as prioritized in the Regional Plan.

The projects in the Regional Plan were evaluated and prioritized in bundles by corridor. These projects will be implemented in the CIP per project schedules to open within the time frames and conformity windows as established in the Regional Plan. Those projects will then be programmed in the RTIP.

In addition, programs and planning efforts in the Overall Work Program may be eligible for RSTP provided that those planning efforts will lead to surface transportation projects.

RSTP will be applied to projects with available match or if needed to provide required match to state funded projects or projects successfully competing for grant funds where RSTP can be used as a match.

Finally, the Board can choose to supersede the priorities set in the Regional Plan and accelerate a project in the CIP and RTIP based on regional needs.

SANDAG Federal Congestion Management Process

Introduction

The Federal Highway Administration (FHWA) 23 CFR §450.322 requires that each transportation management area (TMA) address congestion management through a process involving an analysis of multimodal, metropolitan-wide strategies. These are to be developed cooperatively to foster safety and integrated management of new and existing transportation facilities that are eligible for federal funding. The requirements specifically state that “in TMAs designated as nonattainment for ozone or carbon monoxide, the congestion management process shall provide an appropriate analysis of reasonable (including multimodal) travel demand reduction and operational management strategies for the corridor in which a project that will result in a significant increase in capacity for single-occupancy vehicles (SOVs) is proposed to be advanced with federal funds.” Additionally, the guidelines state that “federal funds may not be programmed for any project that will result in a significant increase in the carrying capacity for SOVs (i.e., a new general-purpose highway in a new location or adding general-purpose lanes, with the exception of safety improvements or the elimination of bottlenecks), unless the project is addressed through a congestion management process meeting the requirements of this section.”

SANDAG is the designated TMA for the San Diego region. The Regional Plan serves as the region’s Regional Transportation Plan (RTP) and meets the requirements of 23 CFR §450.322. The functional elements of the federal congestion management process include: (1) performance monitoring and measurement of the regional transportation system; (2) multimodal alternatives and non-SOV analysis; (3) the provision of congestion management tools; and (4) integration with the Regional Transportation Improvement Program (RTIP) process. An additional component of the federal congestion management process is periodic review of the process. The SANDAG Federal Congestion Management Process was last reviewed in 2023, no significant updates were identified.

Background

California Proposition 111, passed by voters in 1990, established a requirement that urbanized areas must prepare and regularly update a Congestion Management Program. The requirements within the state Congestion Management Program were developed to monitor the performance of the transportation system, develop programs to address near-term and long-term congestion, and better integrate transportation and land use planning. SANDAG provided regular updates for the state’s Congestion Management Program from 1991 through 2008. In October 2009, the San Diego region elected to be exempt from the state’s Congestion Management Program. SANDAG continues to follow federal Congestion Management Process regulations, which consist of a performance monitoring process and required analysis for projects that increase the carrying capacity of SOVs.

Congestion Management Process Elements

The Congestion Management Process (CMP) is cyclical; successive elements inform subsequent elements in an iterative process. The CMP is reviewed with each update of the Regional Plan for improvements in efficiency, data sources, and strategies. The following elements are a part of the CMP¹: regional objectives, multimodal transportation network, performance measures, data collection, analysis of congestion, strategy identification, strategy implementation, and evaluation. Figure O.1 illustrates these elements paired with corresponding SANDAG processes. The following section describes each SANDAG process within the context of the CMP.

Figure O.1: Congestion Management Process Elements – Federal Guidance/ SANDAG Process

Federal Guidance	SANDAG Process
Develop Regional Objectives	RTP Objectives
Define CMP Network	<i>State of the Commute Report</i> Network
Develop Multimodal Performance Measures	<i>State of the Commute Report</i> Performance Measures
Collect Data/ Monitor System Performance	PeMS, Travel Time Data, MTS, NCTD, SANDAG Passenger and Active Transportation Count Programs
Analyze Congestion	<i>State of the Commute Report</i>
Identify and Assess Strategies	ITS, TDM, TSM, AT, ICMS, New Capacity
Program and Implement Strategies	RTP and RTIP Development
Evaluate Strategy Effectiveness	Ongoing Monitoring for Change

Notes: PeMS – Performance Measurement System; MTS – Metropolitan Transit System; NCTD – North County Transit District; ITS – Intelligent Transportation System; TDM - Transportation Demand Management; TSM – Transportation System Management; AT – Active Transportation; ICMS – Integrated Corridor Management Study.

¹ Based upon the [FHWA Congestion Management Process Guidebook](#) (2011).

Develop Regional Goals

SANDAG updates the Regional Plan every four years, the Board of Directors discusses the Regional Plan's goals, and strategies (introduced in [Chapter 1: Overview](#)).

Given the challenges, anticipated growth, and opportunities that technology can provide to transform our region, the Regional Plan is guided by four primary goals:

- Goals:**
- Convenient** and reliable movement of people and goods
 - Equitable** access to essential needs and opportunities
 - Healthy** communities and environment for everyone
 - Safe** transportation network for all users

Define the Congestion Management Process Network

The CMP requires a multimodal transportation network that is developed regionally to monitor and analyze performance. The CMP multimodal network of access-controlled freeways, highways, railways, and select bus routes, illustrated in Figure O.2, was updated with the 2019 Federal RTP, reviewed for updates in 2023, and continues in this form for the 2025 Regional Plan. This network was developed with input from Caltrans, the County of San Diego, and the 18 cities in the SANDAG planning area.

The freeway and highway corridors are instrumented with equipment that monitors system performance. Caltrans operates this equipment within its PeMS. This system enables SANDAG to monitor and analyze observed data. More than half of the region's vehicle miles traveled are carried by this network of freeways and highway corridors. All railways and select bus routes that are on or closely parallel to highway corridors are also included. Bus routes include *Rapids* 215, 225, and 235.

Figure O.2: Congestion Management Process Network

Source: SANDAG

Develop Multimodal Performance Measures

The CMP network matches the SANDAG State of the Commute (SOC) network, a reporting program that monitors the performance of the transportation network and provides information on freeway, transit, and local roadway use and performance data collected annually. The SOC includes multimodal performance measures that use observed data to monitor the system's performance over time. These measures were developed with input from Caltrans, local jurisdictions, and transit operators. As new data become available, they are evaluated for new performance measures across this network. Current performance measures that are being monitored include:

- Average travel time
- Screenline average annual daily traffic
- Average weekday transit ridership (screenline, select routes)
- Transit passengers per revenue mile (select routes)
- Active transportation counts

Collect Data/Monitor System Performance

Data collected to support the SANDAG CMP include: PeMS, transit operations, count programs, and travel time data. Routine review of performance measures on the CMP network allows SANDAG to determine if there has been a reduction of service. The SOC reporting program compiles these datasets and organizes them for comparison over time. This enables high-level system monitoring.

Analyze Congestion

SOC reporting presents an in-depth analysis of congestion for the CMP network in addition to larger trends that impact travel demand. The SOC includes economic and demographic data, and it provides context for changes to the San Diego region relative to peer cities across the nation. Detailed reports are generated annually. These reports help inform the region's planning and programming processes.

The SOC analysis includes the CMP multimodal performance measures. Each major roadway corridor is evaluated by morning and afternoon peak-period delay, as well as travel time reliability over successive years. Transit is analyzed by load factor and passengers per revenue mile, among other metrics. The regional analysis includes a summary of significant changes in performance, operations, and investments.

The [2023 SOC Report](#) reviews ten years of data to establish regionwide trends in freeway travel, delay, and transit ridership on multiple modes. These and other transportation performance metrics are presented in the context of population, employment, and economic activity growth values. Past SOC reports are available on the SANDAG [SOC web page](#).

Identify and Assess Strategies

Facilities within the CMP network are guided by comprehensive multimodal corridor plans. These plans help identify strategies appropriate for the corridor. This process begins with understanding the characteristics and performance of the corridor and surrounding network. Land use and future growth are also considered when identifying appropriate strategies. SANDAG has developed a suite of strategies for consideration in each corridor plan.

Strategies for addressing congestion can focus on transportation system development, TSM, or TDM strategies. Improvements that focus on transportation system development are those that focus on improving access, providing priority treatments, or providing dedicated lanes that support and increase the use of multimodal travel options. TSM improvements aim to use the existing or future transportation system more efficiently. TDM reduces congestion by decreasing SOV trips and shifting trips to other modes or off-peak travel periods.

SANDAG has identified several proposed strategies that address congestion that include transportation system development, TSM, and TDM. These strategies focus on leveraging existing and emerging technologies to optimize system management and operations for the multimodal transportation system while also considering advancements in transportation services to improve TDM services. Historically, the implementation of these strategies was carried out independently and only addressed project-specific needs; rarely were these systems or services designed and operated to meet the needs of multimodal networks and travelers, and seldomly were they integrated to make the entire transportation system work optimally.

The Regional Plan's undertaking of Complete Corridors, transit, Flexible Fleets, and transportation system management, along with consideration of areas with a high concentration of transportation options, density, and where people travel often, directly addresses the implementation of these strategies. An integrated and multimodal transportation system offers improved access to transportation alternatives for meeting the need for all transportation users to help address congestion, improve system performance, and increase safety. Together, these proposed strategies will result in a transportation system that is greater than the sum of its parts. Each strategy will tackle an aspect of the total system, but the success of each will rely on the success of the others.

At the heart of the proposed congestion management strategies is the implementation of transportation system management which will knit together the region's numerous transportation management systems and will enable Complete Corridors, transit, and Flexible Fleets to work seamlessly and optimize the transportation system for all users. Transportation system management will be the digital network that analyzes data in real time from the region's physical networks, making them all work better—more integrated, more efficient, and most of all, more responsive to help address congestion.

A menu of proposed strategies that will be considered are detailed below. This list is not meant to be exhaustive. These strategies are regularly reviewed for updates and improvements.

Transportation System Management (TSM) Strategies

- Traveler information programs aim to increase awareness and the information available on travel choice and impact so that travelers can actively participate in reducing both network demand and personal trip impact. The program includes education outreach campaigns to raise awareness of the direct relationship that route choice, personal driving habits, and trip timing have on fuel consumption, vehicle operating expenses, and vehicle emissions, and encourage carpooling, transit, bike or walk.
- Smart arterial management focuses on managing arterial roadways (major streets) to reduce delays, resulting in quicker trips and lower vehicle emissions. Improvements to arterial detection and signals will provide the ability to create a traffic signal system that is dynamic and coordinated throughout the region. Improving the flow of traffic on arterial roadways is among the most cost-effective TSM strategies for reducing stop-and-go traffic, cutting overall travel times, and lowering fuel consumption and pollution.
- Freeway management is responsible for deploying systems that improve the operational efficiency of freeway control infrastructure; enabling freeway managers to have greater control over vehicle operating speeds; and facilitating the freeway managers' ability to communicate the impact of events, incidents, and congestion to the traveling public. It also provides freeway managers with greater operational visibility of conditions on and off network. Some of the systems included in this program include traffic detection technologies, closed-circuit television cameras, ramp meters, electronic message signs, and the Advanced Transportation Management System, which provides central monitoring and sign control for managing incidents.
- Transportation technology builds on Integrated Corridor Management to dynamically monitor, control, and influence travel demand, traffic demand, and traffic flow of key corridors. Transportation technology facilitates the use of transportation alternatives through various approaches, including dynamic ridesharing, dynamic speed limits, dynamically priced parking, and predictive traveler information to improve overall highway efficiency.
- The Regional Border Management System serves as the transportation management tool that will manage cross-border traffic and will include border-specific congestion management strategies, including congestion pricing, an approach to lane management, and traveler information strategies.
- Transit management refers to active management of the bus and light rail system in the region. It includes a regional scheduling system, a regional transit management system, positive train control, and centralized train control.

Transportation Demand Management Strategies

- Sustainable Transportation Services is the regional TDM program that coordinates services aimed at increasing the number of commuters who carpool, vanpool, take transit, bike, walk, and telework. This includes the SANDAG Vanpool Program, employer outreach program, support for teleworking, bike encouragement and education programs, and regional campaigns like Clean Air Day and Bike Month.

- Planning for communities with a high concentration of people, destinations, and travel choices are a key TDM strategy. They offer on-demand travel options and supporting infrastructure to enhance connections to high-quality transit services while helping people make short trips around the community on Flexible Fleets. These communities can span one, two, or a few miles based on community characteristics and are uniquely designed to fulfill a variety of travel needs while strengthening a sense of place.
- Flexible Fleets are shared, on-demand transportation services that provide convenient and personalized travel options. While they build on the popularity of services such as rideshare, bikeshare, and scootershare, fleets can also include neighborhood shuttles and delivery services. These fleets provide services for all types of trips, which can reduce the need to own a car.

SANDAG supports these strategies with planning resources for local agencies, developers, and mobility operators. The 2022 Regional Parking Inventory and Behavioral Survey Study and Regional Parking Management Toolbox are two planning products supporting these strategies. The Regional Parking Inventory and Behavioral Survey Study presents parking inventory and parking choice data that provides the basis for the updated activity-based model parking models that more accurately represent parking choices now and, in the future, and can be used to measure the impact of pricing and parking demand management policies. The [Regional Parking Management Toolbox](#) aims to help local governments manage parking effectively to support smart growth and reduce traffic. SANDAG plays a role in providing a Flexible Fleet cooperative agreement for jurisdictions to use and provides opportunities to apply for Flexible Fleet pilot funding.

Program and Implementation Strategies

Corridor managers and planning and programming staff review traffic performance data to identify corridors with reduced performance. Strategies to improve the condition must be context sensitive and fit the corridor's needs. The menu of CMP strategies offers a variety of approaches, and additional strategies are reviewed as requested. Once a strategy is selected, it is programmed through the RTIP. The RTIP is a multi-billion-dollar, five-year program of major highway, transit, arterial, and nonmotorized projects funded by federal and state taxes, TransNet local sales tax, and other local and private funding.

The RTIP serves as a prioritized program designed to implement the region's overall strategy for providing mobility and for improving the efficiency and safety of the transportation system while reducing transportation-related air pollution. This supports efforts to attain federal and state air quality standards for the region. SANDAG supports implementation strategies through a variety of programs and tools. These same programs and tools can be used to help select strategies. A list of implementation strategies is included in Chapter 3 Implementation Actions.

Evaluate Strategy Effectiveness

Evaluation of strategy effectiveness relies on locally observed data as well as larger professional studies. Where possible, SANDAG reviews observed data prior to and after the implementation of congestion reduction strategies. The transition to the instrumented PeMS highway network—and continued collaboration with transit operators—will greatly improve this evaluation process. Professional studies are used to evaluate strategies that are more difficult to isolate. This is often the case with small-scale projects and highly complex projects.

Multimodal Alternatives and Non-Single-Occupancy Vehicle Analysis

In addition to the CMP elements, TMAs that include a nonattainment or maintenance area for air quality are required to conduct additional analysis for projects that add SOV capacity. The SOV Capacity Analysis is limited to projects that add general-purpose lanes on the CMP network that are not addressing an identified safety or bottleneck concern. Projects subject to this analysis are required to demonstrate that appropriate, non-capacity-increasing strategies were evaluated. If this evaluation finds that the strategies do not meet the needs for additional capacity in the corridor, then the project can proceed with adding SOV capacity. This analysis is a requirement to program a capital phase of the project.

SANDAG has implemented CMP checks in its programming process. Project sponsors enter data in an online data portal, [ProjectTrak](#), to request inclusion in the RTIP. Projects that use federal funds and are capacity increasing are flagged for further review. Figure O.3 shows the process for identifying projects that require SOV analysis.

Corridor plans, following the Caltrans Corridor Planning Process Guide and environmental review documentation, have been identified as appropriate SOV Capacity Analysis for the proposed CMP. These documents are uploaded to ProjectTrak for SANDAG review and archival. Projects that advance through this process are to incorporate, per federal regulation, all reasonable TDM and operational strategies into the project.

Figure O.3: Single-Occupancy Vehicle Analysis Process

Appendix K

Public Participation

**2027 Regional Transportation Improvement Program
FY 2027-2031**

Appendix K

Public Participation

It is the policy of SANDAG to encourage public participation in the transportation planning and programming processes. The public involvement program consists of: (1) participation on various SANDAG working groups; (2) opportunities to comment at Board of Directors meetings and public hearings; (3) through the SANDAG public communications program; and (4) special outreach efforts conducted for the Regional Plan.

SANDAG uses policy advisory committees and technical working groups to provide additional opportunities for involvement in SANDAG transportation planning and programming activities by local agency officials and staff, interested groups, and the general public. The following committees and working groups have participated in the development of the RTIP. Meeting notices and agendas are sent to the committee and working group members and other citizen groups and individuals expressing an interest. All committee and working group meetings are open to the public.

Policy Advisory Committees

Transportation Committee

This committee of SANDAG Board members has been delegated additional authority for numerous transportation related issues, including holding public hearings and approving RTIP amendments in addition to continuing its advisory role to the full SANDAG Board on matters pertaining to major transportation projects and transportation policy-level matters. The committee provides recommendations to the Board regarding funding of transportation projects included in the RTIP and TransNet Program. The committee includes a subset of the Board, including Metropolitan Transit Systems (MTS) and North County Transit District (NCTD). Additionally, Caltrans and members of the Southern California Tribal Chairmen's Association act as advisory members of the committee.

Working Groups/Advisory Committees

Active Transportation Working Group

The Active Transportation Working Group makes recommendations and fosters cooperation among the jurisdictions, agencies, and stakeholders within the San Diego region to plan for and support the development of local and regional improvements for active transportation modes (bicycling and walking), including Safe Routes to Transit, Safe Routes to School, facility development, operation and maintenance, education, encouragement, and evaluation.

Independent Taxpayer Oversight Committee

This advisory committee made up of members of the public was created in FY 2008 with the passage of the TransNet extension. Based upon the provisions of the TransNet Extension Ordinance, the Independent Taxpayer Oversight Committee (ITOC) is responsible for reviewing projects proposed for funding with TransNet funds and providing comments to the Transportation Committee and to the Board for consideration when actions are taken on the RTIP. Specifically, the ITOC's role in the RTIP process is provided below:

“Review and comment on the programming of TransNet revenues in the RTIP. This provides an opportunity for the ITOC to raise concerns regarding the eligibility of projects proposed for funding before any expenditures are made. In addition to a general eligibility review, this effort should focus on significant cost increases and/or scope changes on the major corridor projects identified in the Ordinance and Expenditure Plan.”

Interagency Technical Working Group on Tribal Transportation Issues

The purpose of the Interagency Technical Working Group on Tribal Transportation Issues is to serve as a forum for regional tribal governments to discuss and coordinate transportation issues of mutual concern with the various public planning agencies in the region, including SANDAG, Caltrans, the County of San Diego, and the transit operators.

San Diego Regional Traffic Engineers' Council

San Diego Regional Traffic Engineers' Council serves as SANDAG's technical advisory committee on regional traffic engineering matters. Membership includes a traffic engineering representative from each city, the county, and Caltrans.

San Diego Region Conformity Working Group

The San Diego Region Conformity Working Group (CWG) provides federal interagency coordination for the transportation/air quality conformity process and advises on regional and statewide air quality matters. The CWG includes representatives from SANDAG, Caltrans, APCD, the California Air Resources Board, Federal Highway Administration, Federal Transit Administration, and U.S. Environmental Protection Agency.

The Transportation Committee and the various working groups are provided with both written material and staff presentations on the major projects included in the 2027 RTIP. Where appropriate, their comments are noted in staff reports to the Board and may be reflected in the 2027 RTIP or in its subsequent amendments.

SANDAG Board Meetings and Public Hearings

All SANDAG Board meetings are noticed, open to the public, and held in Americans with Disabilities (ADA) compliant meeting rooms served by public transportation. The public hearing notice is published in local newspapers of general circulation as well as in minority newspapers. The Board accepted and released the draft 2027 RTIP, including its draft air quality conformity analysis, for a 30-day public review and distribution at its meeting on July 24, 2026. A public hearing will be held during the Transportation Committee meeting on September 18, 2026.

In addition, each city and the County of San Diego are responsible for providing adequate notice and holding public meetings and/or public hearings as part of their process to develop and submit transportation projects for inclusion in the 2027 RTIP. Pursuant to federal law, the requirements to hold public hearings/notices for federally funded transit projects for MTS and NCTD are herein incorporated as part of the public hearing process for the 2027 RTIP. The public meetings/hearings held by each member agency provide further opportunities for public involvement and participation on specific projects and programs.

Public Participation Policy and Public Participation Plan

While the Public Participation Policy provides the overall guiding principle to ensure public input and involvement, the Public Participation Plan (PPP) establishes a process for obtaining input from and providing information to the public concerning agency policies, programs, projects, and program funding in order to ensure the public is informed and has the opportunity for input so plans can reflect the public's vision. The PPP was developed in response to the requirements set forth in 23 CFR 450.316. A copy of the PPP, as amended, is available on the SANDAG website at sandag.org/ppp.

2027 Regional Transportation Improvement Program
FY 2027-2031

2027 FEDERAL TRANSPORTATION IMPROVEMENT PROGRAM (FTIP): SUBMITTAL INSTRUCTIONS & CHECKLIST

FTIP Submittal Instructions:

MPOs submit Draft and Final FTIPs to Caltrans via email and upload them into the California Transportation Improvement Program System (CTIPS).

<u>Item</u>	<u>Timeline</u>	<u>Task</u>
Draft 2027 FTIP	No later than August 31, 2026	- Submit Draft 2027 FTIP to FTIP/FSTIP Coordinator assigned to your MPO at the start of public review period, including the Performance Measures Reporting Workbook and the Financial Summary Template - Upload Draft FTIP into CTIPS
Final 2027 FTIP	By September 30, 2026	Upload Final 2027 FTIP (and amendments, if applicable) into CTIPS
Final FTIP Web-link	By September 30, 2026	Email Final 2027 FTIP Web-link (and amendments, if applicable) to Caltrans FTIP Coordinator

Draft FTIP Package Submittal Requirements: Email Instructions

- ✓ At the start of the FTIP public review period (no later than August 31, 2026), submit the Draft 2027 FTIP by email to the Caltrans' FTIP/FSTIP Coordinator assigned to your MPO.
 - The Draft FTIP email package must include the Performance Measures Reporting Workbook and the Financial Summary Template using the 2027 Adoption Templates.
- ✓ Caltrans' FTIP/FSTIP Coordinators assigned by MPO:

NAME	REGION/MPO	EMAIL
Vaik Renga	SANDAG, SBCAG, SCAG, SLOCOG	Vaikunthan.Renganathan@dot.ca.gov
Peter Kang	BCAG, SACOG, SRTA, TMPO	Peter.Kang@dot.ca.gov
Jennifer Ashby-Camp	AMBAG, FCOG, KCOG, MTC	Jennifer.Ashby-Camp@dot.ca.gov
Noe Puente	KCAG, MCAG, MCTC, SJCOG, StanCOG, TCAG	Noe.Puente@dot.ca.gov
Rose Agacer-Solis	Rural County Non-MPOs (Alpine, Amador, Calaveras, Colusa, Glenn, Humboldt, Del Norte, Inyo, Lake, Lassen, Mariposa, Mendocino, Modoc, Mono, Nevada, Plumas, Sierra, Siskiyou, Tehama, Tuolumne & Trinity)	Nerie.R.Agacer-Solis@dot.ca.gov

Draft FTIP Package Submittal Requirements: CTIPS Upload

- ✓ At the start of the FTIP public review period (no later than August 31, 2026), submit the Draft 2027 FTIP into CTIPS through the "Draft FTIP" module: [CTIPS Login Screen](#).
- ✓ Notify your FTIP/FSTIP Coordinator once the Draft FTIP has been uploaded.
- ✓ Draft FTIP Submittals in CTIPS must be included as a single PDF file (e.g., files must be combined in advance prior to uploading in the "Draft FTIP" module).
 - Single PDF uploads ensure consistency and reduce processing delays during FSTIP development.
- ✓ The Draft 2027 FTIP must be uploaded in CTIPS to transition from the MPO FTIP to Caltrans' FSTIP. This allows Caltrans, the Federal Highway Administration (FHWA) and the Federal Transit Agency (FTA) to perform the technical review and validation necessary for FSTIP development and ensures consistency with the Regional Transportation Plan (RTP) and air quality conformity analysis.
- ✓ Please contact the CTIPS team for technical assistance: ctips.support@dot.ca.gov.

Final FTIP Package Submittal Requirements (Email and CTIPS Instructions)

- ❑ Submit the Final FTIP package via email by September 30, 2026, to Caltrans' FTIP/FSTIP Coordinator assigned to your MPO (see Step #1).
 - Include amendments (if applicable) with the Final FTIP package.
 - Include the Final FTIP Web-link for your MPO with the Final FTIP package.
- ❑ By September 30, 2026, submit the Final 2027 FTIP package (and amendments, if applicable), into CTIPS through the "FTIP" module: [CTIPS Login Screen](#).
- ❑ Notify your FTIP/FSTIP Coordinator once the Draft FTIP has been uploaded.
- ❑ Final FTIP Submittals in CTIPS must be included as a single PDF file (e.g., files must be combined in advance prior to uploading in the "FTIP" module)
 - Single PDF uploads ensure consistency and reduce processing delays during FSTIP development.

FTIP Checklist:

Verify Final FTIP package includes the following required components. For additional details, reference the 2027 FTIP Development Guidance.

1) Comprehensive Project List

- ☐ Provide sufficient description for individual projects, including total project cost, federal funds, matching funds, implementing agency, corresponding Regional Transportation Plan (RTP) number or RTP page number.
- ☐ Clearly identify Transportation Control Measures (TCMs) projects.
- ☐ Provide detailed listings/back-up listings for grouped highway and transit projects using Location + Limits + Improvement format, and reference CFR section for grouped projects in non-attainment or maintenance areas.
- ☐ Use "SHOPP Advance CON (AC) fund type for SHOPP projects.
- ☐ Use "STIP Advance Construction-RIP/IIP" fund type for STIP projects.
- ☐ Use "TIFIA_S" for STBG eligible projects or "TIFIA_T" for transportation alternatives eligible projects (i.e., projects with TIFIA apportionments).
- ☐ Verify non-federal share match (local funds/toll credits) for CMAQ/STBGP projects.
- ☐ Ensure emergency repair projects comply with 23 CFR § 667.

2) MPO Board Resolution

- ☐ Include signed Board Resolution with Final 2027 FTIP submittal.
- ☐ Confirm compliance with 23 CFR § 450 metropolitan transportation planning.
- ☐ Verify FTIP aligns with MPO's RTP.
- ☐ Ensure FTIP is fiscally constrained with available funding.
- ☐ Confirm compliance with federal and state air quality requirements.
- ☐ Verify FTIP does not delay timely TCM implementation in State Implementation Plan (SIP).
- ☐ Confirm planning process aligns with Performance-Based Planning and Programming and supports performance targets.
- ☐ Verify public participation per MPO's Public Participation Plan (PPP).

3) Federal Performance Measures

- ☐ Confirm FTIP meets federal performance requirements and includes MPO-adopted performance targets.
- ☐ Ensure FTIP supports progress toward targets under 23 CFR § 450.306(d).
- ☐ Link investment priorities to performance targets.
- ☐ Describe project selection process for federal performance measures.
- ☐ Email FTIP Performance Measures Reporting Excel Workbook (2027 Adoption Template) to Caltrans' FTIP/FSTIP Coordinator at start of public review period, and no later than August 31, 2026; resubmit only if changes occur.

4) Performance-Based Planning and Programming (PBPP)

- ☐ Confirm metropolitan planning process aligns with PBPP and project selection

supports performance targets.

5) **Financial Summary Documentation**

- ☐ Ensure financial data covers first four FTIP Federal Fiscal Years (FFYs).
- ☐ Email FTIP Financial Summary Excel Template (2027 Adoption Template) to Caltrans' FTIP/FSTIP Coordinator at start of public review period, and no later than August 31, 2026; resubmit only if changes occur.
- ☐ Include revenue analysis for system maintenance and operations.
- ☐ Add Loan Agreements details if applicable.

6) **Air Quality Analysis and Determination**

- ☐ Include full air quality conformity analysis and determination.
- ☐ Include Conformity Analysis Checklist for MPO TIPs/RTPs.

7) **Federal Planning Finding (FPF) Requirements**

- ☐ Include MPO Grouped Project Certification Letter (2025 FFP #1)
- ☐ Reference "Caltrans Guidance for Programming Grouped Project Listings_09-19-25".
- ☐ Reference "Caltrans' Request for MPO Certification Letter_09-08-25"
- ☐ Reference "Best Practices for Group Project Listings for Transit Projects" when grouping FTA-funded projects. (2025 FPF #2)
- ☐ Include all regionally administered federal discretionary grant-funded projects in FTIP. (FPF #5)

8) **Public Participation Process/Interagency Consultation**

- ☐ Document Public Participation/Interagency Consultation process.
- ☐ Include Tribal Government Involvement and Consultation (if applicable).
- ☐ Include Federal Land Management Agency (FLMA) Consultation (if applicable).

9) **Expedited Project Selection Procedures (EPSP)**

- ☐ Document MPO's EPSP process.

10) **CMAQ and STBGP links**

- ☐ Provide CMAQ and STBGP project selection links.

11) **FTIP Amendment Process**

- ☐ Describe criteria for formal amendments vs. administrative modifications.

12) **Consistency with State Managed Programs Project Lists**

- ☐ Reference latest Highway Bridge Program (HBP) PDF.
- ☐ Reference latest Highway Safety Improvement Program (HSIP) spreadsheet.

13) **Verify links**

- ☐ Verify all links are active and current.

14) **Electronic FSTIP (E-FSTIP)**

- ☐ Ensure compliance with E-FSTIP requirements by submitting FTIP, amendments, administrative modifications, and air quality conformity determinations through CTIPS for approval and inclusion in the FSTIP.
